The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## ADVERTISEMENT to the READER.

**I**T is about nineteen years since my brother, John Nieuhoff, just before his second voyage into the Indies, presented me with his description of China, and certain draughts he had made during his embassy in that empire, which being afterwards published, were soon after translated into six several languages.

My brother had, before that time, not only been in Brasil, and several other places in those parts, but also since that time, has had the opportunity of travelling through a great part of Asia, till 1671. when returning into Holland, he brought along with him all his papers, observations, and draughts, he had collected during his voyages; which, though much coveted by all curious persons, yet, for some reasons best known to himself, he did not think fit to commit to publick view.

But, after his decease, considering with myself, that such useful collections ought not to be buried in oblivion, I thought fit to publish them for the publick good.

As those things which he relates of the revolt of the Portuguese in Brasil, are extracted verbatim out of the records kept during my brother's abode of nine years in Brasil, under the government of the lords, Henry Hamel, Peter Bas, and Adrian Bullestrate, and authentic letters; so the truth thereof admits not of the least doubt from unbiass'd persons.

The vast countries through which my brother travell'd in his life-time, as Brasil, part of Persia, Malabar, Madura, Coromandel, Amboyna, Ceylon, Malacca, Sumatra, Java, Tagowan, and part of China, besides many islands, could not in the least infect him with that disease, so incident to travellers, to relate fables instead of histories, it having been his constant practice, to adhere most religiously in all his treatises, to the naked truth, without the least disguise.

His last voyage to the isle of Madagascar, where he was lost, I have taken partly out of his own letters, partly out of the journal of captain Reinard Claefon, which he brought along with him from thence.

As to his person, I will only add thus much: He was born at Uffen, in the earldom of Benthem, (where his father, brother, and brother-in-law, were all three Burgomasters) of a good family, the 22<sup>d</sup> of July 1618. He was a comely person, of a good understanding, good humour'd, and agreeable in conversation; a great admirer of poetry, drawing, and musick: As he delighted in travelling, so he was thereby become master of divers languages: In what station he lived during his abode in Brasil, and the East-Indies, will best appear by the two following treatises.

TO

## BRASIL.

1640. **I**N the year 1640, I entred into the service of the *West-India* company, and on the 24<sup>th</sup> of *October*, went in the quality of merchant supercargo, aboard the ship called the *Roebuck*, of 28 guns and 130 men, commanded by *Nicholas Selles* of *Durkendam*. We set sail out of the *Texel* the same day, in company of several other vessels bound for *France*, *Spain* and the *Streights*; and pursued our voyage the 28<sup>th</sup> with a favourable gale through the channel betwixt *France* and *England*.

His departure out of Holland.

A violent storm.

On the 29<sup>th</sup> we were overtaken with a most violent tempest, which obliged us to take in all our great sails: It continued from morning to night, when the fury of the winds being somewhat allay'd, we found that we had escaped without any considerable damage; but the sea continued very turbulent all that night. The next day following our seamen catch'd a wood snipe, a wild pidgeon, and several other small birds; which were forc'd into the sea by the violence of the storm.

On the 31<sup>st</sup> we found ourselves under the 45<sup>th</sup> degree of northern latitude. The next morning being the first of *November*, some of our seamen catch'd a sea-hog by the means of a harpoon: It was so big, that four men could scarce lift it into the ship. It's taste was not very agreeable, but rankish, which was the reason our men

did not catch any more of them, though they swam in vast numbers round about our vessel. By sun-set the wind beginning to encrease, we parted from the other ships, bound for *Spain* and the *Streights*, which were not separated from us in the last storm, steering our course south-west. The 2<sup>d</sup> and 3<sup>d</sup> it blew very hard, with thunder and lightning, so that we were forc'd to take in all our great sails, and the ship being very leaky ever since the last tempest, to ply the pump with all our night.

Another most violent storm.

The 4<sup>th</sup> we found ourselves under the 40 deg. 30 min. when about midnight the wind encreased with so much violence, that the air which surrounded us, appearing no otherwise than one continual fire, occasion'd by the lightning, which scarce ever ceas'd all that night. During this calamity we perceived certain small fires or lights fix'd to the mast: They are called *Peaceable's fires* by the seamen. These fires are suppos'd to be certain sulphureous vapours, forc'd by the violence of the winds from the shore into the sea, where being lighted by the violent agitation of the air, they burn till their oily substance be consumed. The seamen look upon them as a good omen, that the storm is going to abate; which prov'd true in effect, the fury of the winds beginning to allay from that

Wild-fire.

that time; and we had the good fortune to discover two leaks near our fore-castle, which else might have prov'd of dangerous consequence.

They pass  
the Bar-  
rels.

The 5<sup>th</sup> we pass'd the *Barrels*, under the 39<sup>th</sup> degree; where according to an antient custom, every one, of what quality or degree soever, that has not pass'd there before, is obliged to be baptized, or redeem himself from it. He that is to be baptized, has a rope tied round his middle, wherewith he is drawn up to the very top of the bowsprit, and from thence three times successively tumbled into the water. There were some who look'd very blank upon the Matter, but others went cheerfully about it, and for a measure of *Spanish* wine, suffered themselves to be rebaptized for the master and the merchant. But this custom is abolished of late years, by special orders from the governors of the company, to avoid broils and quarrels, which used often to arise upon this occasion.

They dis-  
cover two  
'Turkish  
vessels.

Prepar-  
ed for an en-  
gagement.

The 6<sup>th</sup>, as we were steering our course *S. S. W.* with a fresh gale, we descried two vessels, making all the sail they could towards us, whom we supposed to be *Turkish* pirates (as indeed they proved afterwards) it was resolv'd to defend us till the utmost extremity. Accordingly orders were given to clear every thing upon the deck, and to furnish the seamen with musquets, hangers, pikes, and other such like weapons. Every one having taken his station, we put up the bloody flag, and expected their coming under the found of our trumpets. The master of the ship, being all that time very ill of some wounds he had received formerly, which were now broken up afresh; and the commissary *Francis Zeevers*, not being in a condition, by reason of his great age, to remain upon deck, I was fain to undertake the whole management of the ship, and encouraged them to fight bravely for their lives and liberty, ordering them not to fire at all, till they were in their full reach, they being much better mann'd than we.

An en-  
gagement  
with two  
'Turkish  
rovers.

About noon we saw the *Turks* make up towards us with orange-colour'd flags, which however they soon after changed for the bloody flags, and the biggest of them saluted us with two cannon shot out of his fore-castle, without doing us the least harm, but the second time almost shot our fore-mast in pieces. In the mean while we were come so near to one another, that we sent them a good broadside into their ship, which the *Turks* repay'd us immediately; but it was not long before we observ'd the biggest of the two had received a shot betwixt wind and water, which made her keep at some farther distance, till she had

repaired her damage, which gave me opportunity to encourage our people with words, and a good proportion of wine; which they mix'd with some gunpowder, and I, to please them, followed their example.

By this time they returned both to the charge, and saluted us so fiercely with their cannon and small shot, that they took away the roof of our great cabin, and did us some damage in our rigging. I then changed my scimeter for a musquet, and discharged continually upon the enemy, and I found myself sore several weeks after, by the hurt I received from a musquet of one that stood hard by me, which being by a cannon ball forced out of his hands against my body, I fell down stretch'd all along upon the deck, without sense or motion; but having after some time recovered myself, I returned to my post. I then perceived the captain of the biggest *Turkish* ship with a turbant on his head, in the stern, encouraging his men, which made me order those about me, to aim at him with their small shot, which, as I suppose, succeeded according to our hopes, it being not long before we lost sight of him. Notwithstanding this, the heat of the fight increased on both sides, many broadsides passing betwixt us, accompanied with most dreadful outcries and lamentations of the wounded on both sides. However, the *Turks* durst not attempt to board us; whether it were that they thought us better mann'd than really we were, or that they feared we would set fire to the ship, which we threaten'd we would, shewing them a match ready for that purpose. They answered us in *Dutch*, that they would not part with us upon those terms; yet was it not long before we saw them make away from us, having received many shots thro' their ships; and we with a brisk gale, made all the sail we could to be rid of these unwelcome guests, steering a quite different course, which with the advantage of the darkness of the night, brought us quite out of sight of them by next morning.

The *Turks*  
leave the  
fight.

We gave thanks to God for his having delivered us from the danger of slavery, and crowning our endeavours with success against an enemy much stronger than us, the biggest of them carrying twenty-four guns, and the other two; whereas we had no more than eighteen, besides that they were much better mann'd than we. After having taken a view of our ship, and found it sound under water, we betook ourselves to repair the damage we had received during the fight; but whilst we were busy in this work, we were on the 7<sup>th</sup> surprized by so violent a storm, that we were forced to take

Trav-  
elers.

They catch  
abundance  
of fish.

1640. take in all our sails. This put us to a great nonplus, but by good fortune the storm blew soon over, when orders were given to give an Allowance of three pounds and a half of biscuit *per week* to the seamen, all our other bread being become musty by that time. The 10<sup>th</sup> we found ourselves under the 39<sup>th</sup> deg. and 30 min. about 20 leagues off the *Canary Islands*; here we discovered the pike of *Tenariff*, being two leagues and a half high, and accounted the highest mountain in the world. It may be discovered at 60 leagues distance from the shore. Thus we continued our voyage till the 14<sup>th</sup>, without any memorable accident, when we passed the tropick of *Cancer*. About noon we were overtaken by another storm, which made us take in most of our great sails, for fear of the worst, but it lasted not long.

This tract of the sea is called by the *Dutch*, the *Kroos Sea*; by the *Portuguese*, *Mar del Aragaco* (or *Largaco*, or *Suargaco*) i. e. *The Sea of Ducks-meat*, because hereabouts, viz. from the 18<sup>th</sup> to the 30<sup>th</sup> degree, or as some will have it, from the 20<sup>th</sup> to the 22<sup>d</sup> and 23<sup>d</sup> degree of northern latitude, it is found in great quantity, and carried along with the stream: Its leaves are of a pale green colour, like that of parrots, small, thin and carved at the end. It bears berries of the same colour, about the bigness of a pepper corn, that are quite hollow, without any seed within or taste. It is sometimes so closely twisted together, that it stops a ship in its full course; tho' we had the good fortune to pass thro' it without much difficulty, being then about 400 leagues from the coast of *Africk*, where are no islands nor anchorage. It may be pickled with salt and pepper, and used like as we do capers, being accounted a good remedy against the gravel. It is generally found without roots, having only a few thin sprouts, which, as it is supposed, take root in the sandy grounds of the sea; tho' others are of opinion, that it is carried by the violence of the stream from the islands into the sea.

The 18<sup>th</sup>, one of our ships crew died, who was the next day thrown overboard, at which time I observed, what indeed I had heard often before, that the dead carcasses always float with their heads to the east at sea.

The 22<sup>d</sup> we were overtaken by another tempest, called *Travado*, which with horrible thunder and lightning surprizes the ships so suddenly, that they have scarce leisure to take in their sails, and sometimes returns three times in an hour. We catch'd here abundance of fish, such as *Bonytes* of ten foot long, and *Korets*, and a great

lamprey, which we had enough to do to bring aboard; we only took out the brains, being look'd upon as a sovereign remedy against the stone in the bladder, the flesh being of an oily taste.

The 24<sup>th</sup> we saw great quantities of small birds about our vessel, and catch'd one not unlike a crane, but somewhat smaller, it being a very fair day.

The 26<sup>th</sup>, being under the fifth degree, 47 minutes, we were so becalmed that we could not perceive the ship to move, and spent our time in catching of fish, of which we had such plenty, that we chose only the best for our eating; among the rest we met with a fish called the *king's-fish*: For by reason of the impenetrable depth of the sea in this place, the waters are so clear and transparent in still weather, that you may see the fish in vast numbers swimming near two feet deep; so that you need but fasten a crooked nail or any thing else like a hook to a string, and hanging it in the sea, you may catch as many fish as you please. This calm was followed by a most violent storm of rain.

The 30<sup>th</sup> we found ourselves under the fourth degree, 41 minutes, where we saw abundance of *flying fish*.

The 3<sup>d</sup> of *December* we came under the first degree, 30 minutes, where we met with millions of fish, and did catch as many as we thought fit: Some we put in salt, others we rubbed in the belly with pepper and salt, and hung them up by the tail in the sun.

The 4<sup>th</sup>, by break of day, being very clear weather, we saw the island of *St. Paulo*, as it is called by the *Portuguese*, which at a distance represents a sail, which as you approach nearer to it, proves five high rocks. About noon we found ourselves at 53 minutes of northern latitude, taking our course five leagues to the west. Here at several times we catch'd some sea-gulls; those birds make a shew as if they would bite you, but remain unmoveable in the place, till they are caught or kill'd.

The 5<sup>th</sup>, about eleven a clock we pass'd the equinoctial line, so that in the afternoon we found ourselves at five minutes southern latitude, where we had but little reason to complain of cold; it being often so calm here, that ships are forced to spend a considerable time in passing this tract. It is extremely hot here, and great scarcity of good and sweet water, the rain water being not wholesome, but causing the scurvy, by reason of its being corrupted by the violent heat of sun.

About three years after my arrival in *Brasil*, a certain *Portuguese* ship was found adrift under the equinoctial line, without

noctial  
Line.

any living creature in it, which according to the journal, had been six whole weeks under the line. We had a very good passage, and caught abundance of fish, and among the rest a certain fish called the *Blower*, which swallow a considerable quantity of water in their guts, and then at once spout it forth again. They will follow the ships for a long time.

The 8<sup>th</sup> we passed by the isle called *Iba Ferdinando de Neronba*; it being very serene weather, we saw vast numbers of birds, and whole shoals of flying fish, which were followed by the *Bonytes* and *Korets*.

The Isle of  
Ferdinan-  
do.

The island of *Ferdinando de Neronba*, situated under the fourth degree of southern latitude, about fifty leagues from the coast of *Brasil*, was about the year 1630. inhabited by the *Dutch*, but by reason of the vast numbers of rats, which consumed all the fruits of the earth, deserted by them a few years after; it being otherwise a very fruitful island, and abounding with fish, the inhabitants of *Recief* being used to send their fisherboats thither, which return commonly well freighted with fish. The council of *Brasil* did afterwards send a certain number of negroes thither, under the conduct of one *Gellis Vepant*, to cultivate the ground for their subsistence, who likewise stayed there for some time. About a year and a half after, the council of justice banished several malefactors into that island, who being furnished with necessary instruments for cultivating the ground, were forced to seek for their subsistence there.

The 11<sup>th</sup> at night we found ourselves under the seventh degree, over against the province of *Goyana*, about twenty leagues on this side of *Olinda*; with break of day we saw the shore of *Brasil*, but kept out at sea till it was broad day.

The 12<sup>th</sup> it was very foggy, and we kept our course with fair wind and water all along the coast, and arrived before noon safely near the *Recief*, where we cast our anchor at several fathoms depth, after we had spent seven weeks and one day in the voyage.

Their Ar-  
rival in  
Brasil.

After we had returned our thanks to God for his deliverance from the dangers of the sea, and slavery of the *Turks*; I went ashore the same night with the master and commissary in a boat, to notify our happy arrival, and to deliver a letter to count *Maurice*, and the governor of the council. I continued ashore that night, but returned aboard the next day. And,

The 15<sup>th</sup> the pilots conducted our vessel into the harbour of the *Recief*, where we found twenty-eight vessels and two yachts lying behind the *Water Castel*.

1643.

Towards the latter end of August 1643, I received orders from the council to sail

with the yacht called the *Sea-Hog*, laden with fullers-earth to the isle of *St. Thomas*, to exchange it for black sugar, this being the chief commodity transported from thence. My voyage proved fortunate enough, not meeting with any sinister accident, except with a violent tempest of thunder, lightning, and rains, and came the 9<sup>th</sup> of September at an anchor there; the cargo did bear no good price, yet after a stay of fourteen days, I returned with a cargo of black sugar to *Brasil*, where I arrived the 3<sup>d</sup> of October before the *Recief*, after a voyage of near three months.

The isle of *St. Thomas* is of a circular figure, about thirty-six leagues in compass, the high mountains in the midst of that island are always covered with snow, notwithstanding that in the low grounds, by reason of its situation under the line, it is excessive hot. It is very fertile in black sugar and ginger; the sugar-fields being continually moistened by the melted snow that falls down from the mountains. There were at that time above sixty sugar mills there, but the air is the most unwholesome in the world, no foreigner daring to stay so much as one night ashore, without running the hazard of his life; because by the heat of the sun beams such venomous vapours are drawn from the earth, as are unsupportable to strangers. This fog continues till about ten a clock in the morning, when the same is dispersed, and the air cleared, which made us always stay aboard till after that time. This mist is not observed at sea.

The Island  
of St. Tho-  
mas.

The air here is very hot and moist throughout the year, except in the summer about June, when the south-east and south-west winds abate much of the heat of the climate. The vapours drawn up by the sun, occasion certain epidemical intermittent fevers, which carry off the patient in a few days, with excessive pains in the head, and violent torments in the bowels; though some attribute it to the immoderate use of women, and of the juice of *Coco's*. Certain it is, that among a hundred foreigners, scarce ten escape with life, and those seldom live till fifty years of age; though some of the inhabitants, as likewise the negroes (who are all lousy here) live to a great age. Its first inhabitants were *Jews*, banished out of *Portugal*; they are of a very odd complexion. Among the mountains dwell abundance of negroes, who are run away from the *Portuguese*, and make sometimes excursions to the very gates of the city of *Pavaofa*. It is almost next to a miracle, that any people should inhabit so unwholesome a climate; but that the hopes of lucre makes all danger easy.

First Dif-  
ference of  
Latitude

1643. island, is situate upon a rivulet; it contains about eight hundred houses, and three churches. This city, as well as the whole land, was 1641, October 16, conquered by the admiral Cornelius Tel, after a siege of forty days, without any considerable loss; but both he and his lieutenant, as well as several other commanders and many seamen, were swept away by this pestilential air; and of three hundred *Brasilians*, not above sixty escaped with life.

But, before I proceed to give you an account of all the remarkable passages that happened in *Brasil*, since the revolt of the *Portuguese*, and during my stay of eight years there; it will not be amiss to insert a short description of this country.

#### A description of Brasil.

*America* (or the *West-Indies*) is divided into the northern and southern *America*. *Brasil* is part of the last.

The northern *America* borders to the North upon the *Terra incognita*, or rather upon *Hudson's Streights*; to the South and West upon the *South-Sea*, and to the East upon the *Streights of Panama*, the bay of *Mexico*, or *Nieu Spain*, and the *North-Sea*.

It comprehends the following provinces, *Esotiland* and *Labrador*, *Nieu France*, *Canada*, *Bakalaos*, *Nieu England*, *Virginia*, *Florida*, *Nieu Spain*, the provinces of *Mexico*, *Nieu Mexico*, *Tlaskalla*, *Guaxaca*, *Mechoakana*, *Zakaula*, *Kolim*, *Yukatan*, *Tabasco*, *Nieu Galicia*, *Nieu Biscay*, *Chiamella*, *Kuliaka*, *Cimalon*, *Nieu Granada*, *Kalifornia*, *Anian*, *Quivira* or *Nieu Albion*, *Konibas*, *Guatemala*, *Sokonufko*, *Chiapa*, *Vera pas*, *Honduras*, *Nikaragua*, *Kestrika*, and *Veragua*.

The southern *America* is a demi-island in form of a pyramid; the basis of which lies to the North, the point extends to the *Streights of Magellan*, under the 53<sup>d</sup> degree of southern latitude; bordering to the east upon the *Atlantick Ocean*, or *North-Sea*, and to the west upon the *South-Sea*, its whole circuit being of about four thousand *Italian* or one thousand *German* miles. It contains the provinces of *Kasilla d'Or*, *Terra ferma*, called by the *Portuguese*, *Paria*, *Kumana*, *Karibana*, *Brasil*, *Chika* to the east, to the west *Popayan*, *Peru*, *Chili*, besides several inland provinces.

*Brasil* was first discovered by *Pedro Alvaro Kapralis*, a *Portuguese*, sometime before *Americus Vesputius*, viz. in the year 1500. He gave it the name of *Santa Cruz*, which was afterwards by the *Portuguese* changed into that of *Brasil*, from the wood of the same name, which is found there in great quantity, and from thence transported into

all parts of *Europe*, for the use of the dyers.

It is situate in the midst of the *Tropical Zone*, extending to the *Tropic of Cancer* and the *Temperate Zone*.

Concerning its extent from north to south, there is no small difference among the geographers; but according to the best computations, its beginning may be fixed under the second degree and a half of northern latitude, near the river *Para*, and its end under the twenty-fourth degree and a half of southern latitude, to the river *Capibari*, two leagues above the city of *St. Vincent*; so that its whole extent from north to south, comprehends twenty-five degrees, or three hundred seventy-five leagues; some place *Brasil* betwixt the river of *Maranbaon* and *Rio de la Plata*. The extent of *Brasil* from the east (where it borders upon the *North-Sea*) to the west, is not determined hitherto, there being very few who have penetrated so deep into the country; tho' its bigness from east to west may be computed to be seven hundred forty-two leagues; there are however some who extend its limits farther to the east, and to the west as far as *Peru* or *Guiana*, which makes an addition of one hundred eighty-eight leagues. Some make the boundaries of *Brasil* to the north the river of the *Amazons*; to the south *Rio de la Plata*; to the east the *North-Sea*, and to the west the mountains of *Peru* or *Guiana*.

*Brasil* thus limited, is divided by the *Portuguese* into fourteen districts, called by them *Kapitanias*, or Captainships; viz. *Paria*, the first of all towards the north; *Maranbaon*, *Siara*, *Potigi* or *Rio Grande*, *Paraiaba*, *Parnambuko*, *Tarmarika* or *Itamarika*, *Seregippo del Rey*, *Quirimune* or *Bahia dos todos los Santos*, *Nboe-Kombe*, or *os Ilhos*, *Pakata*, or *Porto Seguro*, *Rio de Janeiro* or *Nbeteroya*, *St. Vincent* and *Espiritu St.*

Whilst part of *Brasil* was in our possession, it might conveniently be divided into the *Dutch* and *Portuguese Brasil*. Each of these captainships is watered by some considerable river or other, besides several others of less note; most of these have very rapid currents in the rainy months, and overflow the adjacent country.

The river of *St. Francis*, the largest and most considerable in those parts, is the common boundary of the captainship of *Parnambuko* and *Bahia dos todos los Santos*, or the *Bay of all Saints*. In some places it is so broad, that a six-pounder can scarce reach over it, and its depth is eight, twelve, and sometimes fifteen yards; but it admits of no Ships of burthen, because its Entrance is choak'd up with sands.

Its first spring is said to arise out of a certain

1643.

It is Situated.

Extent.

Its Division.

The River of St. Francis.

1643. certain lake, which being augmented by many rivelets out of the mountains of *Peru*, but especially by the rivers of *Rio de la Plata* and *Maranbaon* exonerates it felt into the sea. Some of our people went in a shallop near forty leagues up the river, and found it of a good depth and pretty broad. If we may believe the *Portuguese*, there are about fifty leagues from the sea, certain impassable cataracts or water-falls, called by them *Kakeeras*; beyond those the river winds to the north, 'till you come to its source in the lake, in which are many pleasant islands, inhabited by the barbarians; as is likewise the shore round about it. They find good store of gold-dust in this lake, but it is none of the best, being carried thither by the many rivulets, which wash the gold-bearing rocks of *Peru*; here is also most excellent salt-petre.

It is observable, that in the summer and those winter months, when it rains but seldom, this river has more water than in the rain season: The reason alledged for it is, the vast distance from its first source, whether the rains that fall from the mountains must first be convey'd by many rivulets: All the other rivers near the *Receif*, are so empty of water during the summer season, that they are rendred quite unnavigable. But the ridges of mountains which lie not far from the sea-shore, exonerate their waters as well here as in *Peru*, backward to the west, and dividing themselves into two branches; the first runs into the north, and joins with the large and most rapid rivers of *Maranbaon*, and of the *Amazens*; the other with the rivers of *St. Francis de la Plata*, and *Janciro*. The waters of these rivers being considerably encreased by many rivulets, they exonerate themselves with so much violence into the sea, that the seamen meet often with fresh water at a considerable distance at sea.

The increase of the waters in this river, during the dry season, may likewise be attributed to the vast quantity of snow among the mountains, which being melted by the heat of the sun occasions the river to transgress its ordinary bounds; which in this point is quite different from other rivers, which commonly in the winter time over-flow their banks.

The Dutch  
Brasil. Six of those *captainships* were under the jurisdiction of the *West-India* company, before the *Portuguese* revolted from the *Dutch*, which they had conquer'd with their Swords, viz. The *captainship*, (it begins on the south-side) *Seregippe del Rey* of *Parnambuco*, *Itamarika*, unto which belongs *Gauiana*, *Paraiba*, *Potigi* or *Rio Grande* and *Siara* or *Ciara*. The *captainship* of *Maranbaon* was 1644, by special command of the

company, left by the *Dutch*. This part of *Brasil* used to be called by the *Portuguese*, the *Northern-Brasil*, as the other remaining in their possession went by the name of *South-Brasil*.

The six *Dutch* *captainships* did extend all along the sea-coast from north to south, in length about a hundred and sixty or a hundred and eighty leagues; for from *Rio Grande*, to the northern border of *Seregippe del Rey*, is a hundred leagues: The two others, viz. that of *Siara* to the north, and *Seregippe del Rey* to the south, make up the rest. Each of these *captainships* contain several other lesser districts, call'd by the *Portuguese* *Fregesias*, and by us *Fregesien*; as for instance, in *Seregippe del Rey*, are *Pojuka*, *Kameragibi*, *Porto Calvo*, *Serinbaim*, and several others. *Fregasie*, comprehends a certain tract of ground, composed of divers villages, rivers, hills and vallies, betwixt each of which is commonly a tract of barren hills, of about three or four leagues in length. Most of the *Dutch* *captainships*, are but indifferently cultivated, because the *Portuguese* used not to manure the ground in those parts, beyond three or four, or at farthest, five leagues distant from the Sea.

The *captainship* of *Seregippe del Rey*, is likewise called *Carigi*, from a certain small lake of that name; it is situate in the southern part of *Brasil*, extending about thirty two leagues along the sea coast, bordering on the north side, upon the river of *St. Francis*, by which it is divided from *Parnambuco*, as on the south side it is separated by *Rio Real*, from *Babia dos todos los Santos*, *Seregippe del Rey*, has among others, a certain *Fregasie*, called *Porto Calvo*, situated betwixt the 9<sup>th</sup> and the 10<sup>th</sup> degree of southern latitude; being encompassed on the north-west side by the *Fregasie* of *Serinbaim*, and the small river of *Pirajouunga*, extending to the south as far as the river *Pareguera*, by which it is divided from the *Fregasie* of *Alagoasi*, containing in all about twelve leagues in length near the sea shore, its bounds on the land side reaching to the unpassable woods.

In this *Fregasie*, is a village call'd by the *Portuguese*, *Villa de bon successo de Porto Calo*, but was formerly called *Portocano Dos quatro Rios*, it being situate at the confluence of the four rivers, *Malcita*, *Tapamunde*, *Commentabunda* and *Monguaba*. It is built upon a rising ground, about four leagues from the sea shore, and by the *Dutch* strengthened with two forts; the biggest of which was called *Bon Successo*, being built all of stone, surrounded with a good counter-carp, with a large basin for fresh water within. The other fort was called by us, the *New-Church*, being created out of the ruins

tuguese, *Nossa Senhora da Presentacao*. Be-  
twixt both these forts, a third was ordered  
to be erected by count Maurice, upon the  
banks of the river, but it lying within the  
reach of musket-shot from the mountains,  
was not brought to perfection.

The village has two streets, the chief of  
which runs parallel with the river, from one  
fort to the other, and is call'd *St. Joseph's-  
street*; it contain'd no more than three houses  
of one story high, and about thirty six others  
cover'd with pantiles, being only built up-  
on the ground. The Portuguese have in  
lieu of their churches, which are demolish-  
ed, when the fortifications were erected,  
built themselves another on the other side  
of the river, where they sometimes hear  
mass. The village is situate in a most plea-  
sant and wholesome air, being cooled by the  
continual breezes from the sea, which are  
not stopp'd by any hills, betwixt them and  
the shore. In the night time they enjoy  
the benefit of the land wind, which drives  
the cool vapours arising from the neigh-  
bouring rivers thither: Formerly there was  
a certain town called *Seregippe del Rey*,  
somewhat higher up the river, in a very  
barren place, of a considerable bigness, and  
well built, with three goodly churches, and  
a monastery belonging to the *Franciscans*,  
but without any fortifications. Above  
this town you see a chapel dedicated to  
*St. Christopher*, whether the *Roman Catho-  
licks* come on pilgrimage.

This *captainship* was first of all reduced  
under the obedience of the Portuguese or  
*Spaniards*, by *Christevan de Barros*; who  
for this his good service, had all the lands  
betwixt the small lake of *Seregippe* and  
*St. Francisco*, granted to him, with full  
power to settle colonies there within a li-  
mited time. This drew many of the in-  
habitants of the *Bay of all Saints* thither; who  
within a few years after laid the foundati-  
ons of this town, by erecting four sugar-  
mills, and building about a hundred houses,  
with four hundred stables for their cattle.  
But this town, with all the circumjacent  
houses, was 1637, the 24<sup>th</sup> of December,  
laid desolate by our people, the inhabitants  
retiring to the *Bay of all Saints*. For the  
*Spanish* general *Benjola* being, 1637, posted  
with a body of two thousand men near  
that place, did with ravaging and burning,  
considerable damage to our colonies, which  
oblig'd count Maurice to dislodge him from  
thence; but being then sick of an ague,  
he committed this expedition to the charge  
of colonel *Schoppe*; for which purpose ha-  
ving gather'd a body of two thousand three  
hundred men, besides four hundred *Bra-  
silians*, and two hundred and fifty seamen

VOL. II.

1643. out of the the adjacent Places, near the  
river of *St. Francis*, *Alagoas*, the Cape of  
*St. Austin*, out of the *Receif* and *Moribe-  
ka*, and given him for his assistant Mr. *John  
van Gieselen*, a member of the great coun-  
cil, he commanded the Dutch admiral  
*Lichtbart*, to cruise with his fleet near the  
*Bay of all Saints*, thereby to draw the ene-  
my out of his advantageous post to the  
sea-shore. The *Spanish* general had no  
sooner notice of our passing the river, but  
tearing to be enclosed betwixt us and the  
fleet, march'd with his body to *Torre Gar-  
cie de Avila*, a place about fourteen leagues  
to the north of the city of *St. Salvador*.

The Dutch general *Schoppe*, hearing of his  
removal, immediately attack'd the place,  
which he laid desolate, and returned with  
incredible swiftness to the south side of the  
river of *St. Francis*.

Here he intrench'd himself, with an in-  
tention to annoy the enemy, by cutting off  
his provisions, and driving away his cat-  
tle; which succeeded so well, that we kill'd  
above three thousand of their horned beasts,  
besides what was carried away on the other  
side of the river; so that what was left by  
the soldiers, was by the inhabitants carried  
to the *Bay of all Saints*; from whence it is  
evident, what vast numbers of cattle this  
country did produce at that time.

The great council took once a resolu-  
tion to re-people that part of the coun-  
try, and agreed for this purpose with *Nun-  
no Olferdi*, councillor of justice in the *Re-  
ceif*, who found means to settle several fami-  
lies there: But the council of nineteen dis-  
approving the matter, it was laid aside.

In the year 1641, count Maurice re-  
duced this place under the obedience of the  
*West-India* company, erected a fort there,  
and surrounded the town *Seregippe del Rey*  
with a ditch. It lies upon a small river,  
betwixt *St. Francisco* and *Real*, which how-  
ever at spring-tide has fourteen foot water  
or thereabouts. Within the jurisdiction of  
this *captainship*, is the mountain of *Tabay-  
na*; from whence several sorts of valuable  
oar was presented to the council of nine-  
teen; but upon proof was found not worth  
farther looking after.

#### The captainship of Parnambuko.

The *captainship* of *Parnambuko*, is one  
of the chiefest and biggest of the Dutch-  
*Brasil*. It extends above sixty leagues along  
the coast, betwixt the river of *St. Francis*,  
and the *captainship* of *Tamarika*. *Parn-  
ambuko* properly denotes the entrance of  
the harbour, which by reason of the many  
rocks and shelves hidden under water, was  
called by the Portuguese, *Inferno Bokko*, and  
broken

1643. broken *Parnambuko*, or the *Month of Hell*. It is subdivided into eleven lesser districts, inhabited by the *Portuguese*, viz. the city of *Olinda*, *Garazu*, *Receif*, *Moribeka*, *St. Anthony*, *Poyuka*, *Serinbaim*, *Gonçalvi d'Una*, *Porto Calvo*, the *Northern Alagoa*, and the *Southern Alagoa*. Among which *Olinda* and *Garazu* were the chiefest.

*Garazu*. The town, or rather the village of *Garazu*, lies at some distance from the shore, over against the Island of *Tamarika*, upon a river of the same name, about five leagues from *Olinda*. It was formerly inhabited by *Portuguese* handicrafts men, but since our taking of *Olinda*, several rich Families settled there; we became masters of the place 1633, in *May*.

*Moribeka*. *Moribeka* lies deeper into the country, more to the south, about five leagues off of the *Receif*.

*St. Anthony*. *St. Anthony* is about seven or eight leagues distant from the *Receif* to the south, near the *Cape of St. Austlin*.

*Poyuka*. The city of *St. Michael de Poyuka*, lies about ten leagues to the south of the *Receif* upon a river of the same name, which disembogues in the sea; on the south side of the *Cape of St. Austlin*. It was formerly a very populous place, and had thirteen sugar-mills.

*Serinbaim*. The village *Serinbaim*, much about the same distance thence with the former, is a very pleasant place, has twelve sugar-mills, each of which produces six or seven hundred *Aroba's*, an *Aroba* making about twenty seven or twenty eight pound weight.

*Gonçalvi d'Una*. The village of *Gonçalvi d'Una*, lies twenty leagues from the *Receif*; it has five sugar-mills.

*Porto Calvo*. The village called *Porto Calvo*, is twenty leagues distant from the *Receif*; it has seven or eight sugar-mills. Here is the castle of *Porocano*, which was not conquer'd by us, till under the government of count *Maurice*.

The towns of the northern and southern *Alagoa's*, are forty leagues from the *Receif*.

Within the district of *Parnambuko*, are two woods, called by the *Portuguese's* the greater and lesser *Palmaisras*, or *Palmtree-Woods*.

The Lesser *Palmaisras*, which is inhabited by six thousand negroes, lies about twenty leagues above the *Alagoas*, being enclosed with woods near the small lake of *Guagububi*, which exonerates it self into the great lake of *Parayba*, six leagues from thence to the north, about four leagues from the lake *Meridai*, to the south of the *Northern Alagoa*, being near that point of land commonly called *Jaragao*. The village consists of three streets, each near half a league

in length. Their huts are made of straw twitted together, one near another, their plantations being behind. They retain something of the religious worship of the *Portuguese*, but have their peculiar priests and judges. Their business is to rob the *Portuguese* of their slaves, who remain in slavery among them, 'till they have redeemed themselves by stealing another: But such slaves as run over to them, are as free as the rest. Their food is dates, beans, meal, barley, sugar-canes, tamar-tow, (of which they have great plenty) and fish, which the lake furnishes them withal. They have twice a year a harvest of barley, which being over, they make merry for a whole Week together. Before sowing time, they light great fires for fourteen days, which may be seen at a great distance. The shortest way from the *Receif* to this *Palmaisras*, is along the lake of the *Northern Alagoa*.

The greater *Palmaisras* is betwixt twenty and thirty leagues distant behind the village of *St. Amar*, near the mountain of *Bebe*, being surrounded with a double enclosure. About eight thousand Negroes are said to inhabit the Vallies near the mountains, besides many others, who dwell in lesser numbers of fifty or a hundred, in other places. Their houses lie straggling, they sow and reap among the woods, and have certain caves whither they retreat in case of necessity. They dress their victuals in the day time, and at night tell over their whole number, to see whether any be wanting; if not, they conclude the evening with dancing and beating the drum, which may be heard at a great distance. Then they go to sleep 'till nine or ten a clock the next day. During the dry season, they detach a certain number among them, to steal slaves from the *Portuguese*. The shortest cut to their habitations, is from the *Alagoas* through *St. Amar*, and so cross the plains of *Nbumabu* and *Koro-ripe*, towards the backside of the mountain of *Warrakaka*, 'till you come to the lake *Paraiba*; along which you pass 'till you reach the mountain *Bebe*, from whence you go directly into the vallies. Under the Government of Count *Maurice*, the negroes of this *Palmaisras* did considerable mischief, especially to the country people about the *Alagoas*; to repress which, he sent three hundred firelocks, a hundred *Mamelukes*, and seven hundred *Brazilians*.

The *Receif*, *Maurice's town*, and *Anthony Vaez*.

The *Receif* is, by reason of its commodious and advantageous situation the strongest.

The two

 ne Northern

1643. est place of all *Brasil*, besides that, it is strengthened and defended by several adjacent Forts: But to give you the most commodious view both of the *Recife*, and the situation of *Maurice's* town, it is to be observed, that the whole coast of *Brasil*, is from one end to the other surrounded with a long, thick, and flat ridge of rocks, which in some Places is twenty, and in others thirty paces broad: However, there are certain passages in this ridge, through which the ships approach the shoar, and some few places, where this ridge is not found at all. Thus a league on this side *Rio doce*, two leagues on the northside of the city of *Olinda*, there is nothing of this ridge to be found; but begins again near *Poumarelle* or *Sexamarido*, and extends to the isle of *Itamarika*. Betwixt the ridge and the continent, you may pass in boats at high water; for at low-tide most of those rocks

appear above water; tho' the tide never fails to cover the same. The rock over-against the *Recife* of *Parnambuco*, is between twenty and thirty paces broad, being not only at spring-tides, but at all other tides overflowed by the sea; it is thereabouts very flat, without any prominencies, and extends for a league from south to north. On the north point is an open Passage for ships to approach the shoar, lying five hundred paces further to the north, than the *Recife* it self. It is but narrow, and at spring-tide not above twenty two foot deep.

Betwixt this rocky ridge and the continent, there is a sandy ridge, or small island extended to the south from *Olinda*, a league in length, and about two hundred paces broad. This is by our people commonly called, *The Sandy Recife*, to distinguish it from *The Stony Recife*.

The Sandy Recife.

On the southern point of this little island, a league off *Olinda*, the Portuguese had built a village, called *Povoacano*, which signifies peopling, or else *Recifo*; it was very populous for a considerable time, 'till the building of *Maurice's* town, in the island of *An-*

*ibony Vaex*. For after *Olinda* was forsaken by its inhabitants, and destroy'd by us, many of them, but especially the merchants, settled in this *Recifo*, or the village of *Povoacano*, where they erected magnificent structures. At our first arrival, we found

ad Anthony

its commo- The Re-  
 the strong- cef.  
 cit

1643. no more than two hundred houses there, which were afterwards increased to above two thousand, some of which are very goodly edifices. We surrounded it with Pallisades on the side of the river *Biberibi*, which at low-water is fordable; and for its better security fortified it with three bulwarks, one towards *Olinda*, the other to the harbour, and the third towards the *Salt River*; upon each of which was raised a good battery with three great cannon. This *Receif* is situate under the 8<sup>th</sup> degree 20 minutes southern latitude.

The derivation of the word *Receif*.

Some derive the word *Receiffo* from the Latin, *recipere* and *receptus* to receive, which after was turned into *Receiffo*, because the ships used to be received betwixt the stony and sandy *Receiffo*, to load and unload their goods. Before the building of *Maurice's* town, we kept here our factories, and all business both of peace and war, was transacted in this place. In the time of the *Portuguese*, all the ships coming out of the sea, did unload on the village of *Povoacano*, or the *Receif*, and the goods were from thence in boats and lighters conveyed up the river *Biberibi*, to the suburbs of *Olinda*.

Before the building of *Maurice's* town, most of the traffick was in the *Receif*, where all the great merchants had their habitations, and from hence the Sugar was transported into *Holland*. To prevent the frauds in the customs, it was surrounded with pallisades, and a goodly hospital was erected for the convenience of the sick and wounded, and the education of orphans, under the tuition of four governors, and as many governesses.

Upon the uttermost point of the stony *Receif*, on the left side as you enter the harbour out of the sea, is a strong and large castle, built of free-stone, surrounded with a very high wall, upon which are mounted many heavy cannon, with suitable artillery and other provisions. When we took the place, we found nine brass, and twenty two iron pieces of cannon within it; so that it seems both by art and nature impregnable; there being no coming near it on foot, at high-water.

About five leagues higher, upon a branch of the great river, lies a small town of little consequence, called by our people, *The New City*, and upon another branch of the same river, opposite to the former, a village called *Atapuepe*.

The island of Anthony Vaez, and Maurice's Town.

The isle of Anthony Vaez.

To the south of the *Receif*, opposite to it, lies the isle of *Anthony Vaez*, so called

by our People, from its ancient possessor. It is about half a league in circuit, being divided from the *Receif*, by the *Salt-River*, or *Biberibi*.

On the east-side of this island, count *Maurice* laid the foundation of a city, which, after his own Name, he called *Maurice's* town or city; the ruins of the churches or monasteries of the city of *Olinda*, furnish'd the materials for the building of it, which were from thence carried to the *Receif*, and so transported to this place.

On the west-side it is environ'd with a morass; and on the east-side wash'd by the sea, which passes the stony ridge. Besides which, it is on the land-side strengthen'd with an earthen wall, four bulwarks and a large moat.

On that side where the fort of *Ernestus* was, the town lay open, and the houses took up a larger compass than those in the *Receif*, but after the revolt of the *Portuguese*, most of those houses were pulled down, and the place drawn into a more narrow compass, to render it more defensible: Yet was the place well stocked with inhabitants, as well merchants as handicrafts men.

*Maurice's* town was on each side guarded by a fort. On the south side by the fort called *Frederick Henry*, or the quinqueangular fort, from its five bulwarks. This fort was besides this, surrounded by a large ditch and pallisades, and strengthened by two horn-works, so that it commanded the whole plain, which at spring-tides used to be overflowed by the sea.

The second fort *Ernestus*, thus called after *John Ernest*, the brother of count *Maurice*, was four-square, with four bulwarks, with a very large ditch; it commanded the river, the plains, and *Maurice's* town. Near this last fort was the garden of count *Maurice*, stored with all sorts of trees, brought thither from *Europe* and both the *Indies*.

Upon the north point of the stony *Receif*, just over against the sandy *Receif*, lies the beforenamed fort, built all of stone, being about a hundred paces in circumference, provided with a good garrison and twenty pieces of great cannon, though in stormy weather the water flies over it on all sides. It commands the harbour, the land fort, the *Bruin Fort*, and the *Receif*.

As the isle of *Anthony Vaez* was joined to the continent by a bridge, so it was thought necessary to join the *Receif* with another bridge to the said island, for the convenience of carriage; the sugar chests being before that time never to be transported to the *Receif*, except at low water, unless the owners would run the hazard of exposing them to the danger of the sea in small boats. 1643. cordingly the great council, with consent of the governor count Maurice, agreed with a certain architect for the building of a bridge with stone arches, for the sum of two hundred fifty thousand florins. But after the architect had consumed a prodigious quantity of stone, and raised the structure near to the height of the banks of the river, finding that at low-water there was still eleven foot water, and despairing to be able to accomplish it, left it unfinished. But the council being unwilling to desist, renewed the work, which had already cost a hundred thousand florins; and by means of many trees of forty and fifty foot long, stopped the current till the bridge was brought to perfection, which was done in two months time, and a certain toll imposed upon all passengers, viz. for an inhabitant two pence, for a soldier and negroe one penny, for a horse four pence, and a waggon drawn by oxen seven pence.

The space betwixt the Sandy and Stony Receif, is properly the harbour, which at high-water has about thirteen or fourteen foot depth, where the ships ride very safe, being defended from the sea by the Stony Receif. The passage betwixt the Sandy Receif and the continent, is called the Salt-River, to distinguish it from the river Kapivaribi, which carries sweet water.

The river Kapivaribi has derived its name from a certain kind of river or sea hogs, which used to be found there, and were by the *Brasilians* called *Kapivaribi*. This river arises some leagues to the west, passing by the *Matta*, or the *Wood of Brasil*, *Majajati*, *St. Lorenzo* and *Real*, where joining with the river *Affogados*, near another river of the same name, disembogues in the sea, near the *Receif*. The river *Kapivaribi* divides itself into two branches; one turns to the south, and passes by the fort *William*, and is called *Affogados*; the other running to the north, retains its former name, continuing its course betwixt the continent and *Maurice's* town, or the isle of *Anthony Vaez* (into which you may pass over it by a bridge) and so to *Waerdenburg*, where it joins with the river *Biberibi*, or *Salt-River*, both which are afterwards mixed with the sea. The two branches of this river, surround the river *Biberibi* on the west-side, and to the east the isle of *Anthony Vaez*. Upon that branch of the river called *Affogados*, is an abundance of sugar-mills, from whence the *Portuguese* used to convey their sugar-chests, either in boats by the way of the river, or in carts to *Baretta*, and from thence in flat bottomed boats to the *Receif*, and to *Olinda*.

A league to the south of *Maurice's* Town upon the branch called *Affogados*, is a four-square fort of the same name, otherwise cal-

1633. led fort *William*; from whence you may pass along a dike to the fort *Frederick Henry*, or *Maurice's* Town. It was a noble structure, surrounded with high and strong walls, a large ditch and palisadoes, with six brass cannon: It defended the avenues to the plains.

About half a league from thence, and at the same distance from the continent, lies another fort on the sea shore, called *Baretta*: This commands the avenues both by sea and land to the cape of *St. Anjir*, and the *Receif*.

Upon that part of the island which lies betwixt the rivers *Kapivaribi*, and *Biberibi*, and betwixt the forts of *Ernestus* and the triangular fort of *Waerdenburg*, were the before mentioned gardens of count *Maurice*, stored with all kinds of trees, fruits, flowers and greens, which either *Europe*, *Africa*, or both the *Indies* could afford. There were near seven hundred cocoa-trees of all sizes, some of which were thirty, forty, and fifty foot high; which being transplanted thither, out of the circumjacent countries, bore abundance of fruit the very first year: Above fifty lemon-trees, and eighteen citron-trees, eighty pomgranate-trees, and sixty-six fig-trees, were also to be seen in these gardens.

In the midst of it stood the seat itself, called *Vryburgb*, a noble structure indeed, which as is reported, cost six hundred thousand florins: It had a most admirable prospect, both to the sea and land side, and its two towers were of such a height, that they might be seen six or seven leagues off at sea, and served the seamen for a beacon. In the front of the house was a battery of marble, rising by degrees from the river-side, upon which were mounted ten pieces of cannon for the defence of the river. About two or three rods from the river, were several large basons in the garden, containing very sweet water, notwithstanding the river all round about afforded nothing but salt-water; besides this, there were divers fish-ponds, stocked with all sorts of fish.

At the very foot of the bridge which is built over the river *Kapivaribi*, from *Maurice's* town to the continent, count *Maurice* had built a very pleasant summer seat, called by the *Portuguese*, *Baavista*, i. e. *A fair Prospect*. It was not only surrounded with very pleasant gardens and fish-ponds, but served likewise as a fort for the defence of the isle of *Anthony Vaez*, and *Maurice's* Town.

Upon the *Sandy Receif*, opposite to the *Sea*, or *Water Fort*, was a strong fort built of stone, called by the *Portuguese*, *St. Toris*, fort. Our people used to call it the *Land Fort*, to distinguish it from the beforementioned *Water Fort*; it defends the entrance of the harbour

1643. About a musket shot thence to the north, lies upon the same sandy *Receif*, a small fort with four bastions, called the fort of *Bruin*; and about a musket shot further to the north, a redoubt, called *Madame de Bruin*: Both these forts were built by the *Dutch*.

The fort  
Bruin.

The fort of  
Waerden-  
burg.

Near the continent, not far from the faltpits, betwixt the *Sandy Receif*, and the isle of *Antony Vaez*, was a triangular fort called the fort of *Waerdenburg*. It was at first a four-square, but afterwards turned by the *Dutch* into a triangular fort, the fourth bulwark being not defensible, by reason of the ground: Those three bulwarks were afterwards changed into as many redoubts, and provided with some brass guns: At high tide it is surrounded on all sides with water.

#### The City of Olinda.

At a small distance from the *Receif*, or *Maurice's Town*, to the north, is the ruined city of *Olinda*, once a famous place among the *Portuguese*; the whole product

of *Brasil*, being from thence transported by sea into *Europe*. The best part of the city was built upon divers hills; towards the sea, on the south side, these hills were pretty plain, extending to the sea-shore, which has a very white sand all along that coast: Towards the land side, or the north, those hills are more steep and craggy, full of thorn-bushes, intermixed with a few orange-trees. These hills are an additional strength to the place, which besides this, was guarded by several bastions to the land side, though by reason of the great variety of hills contained in its circuit, it was a difficult task to bring the fortifications into a regular form. There is a very fair prospect from the higher part of the town, both to the south and north, or to the sea and land side, by reason of the great quantity of circumjacent trees, which continue green all the year round. You may also from thence see the isle of *Antony Vaez*, and *Maurice's town*. The point of land near *Olinda*, is called *Ti-po* by the inhabitants.

is called Ti-

1643. Upon the highest hill within the place, stood formerly a convent belonging to the *Jesuits*, being a magnificent structure, founded by *Sebastian* king of *Portugal*, who endowed it with considerable revenues. It had a very fair prospect, and might be seen at a good distance at sea. Not far from thence was another Monastery belonging to the *Capucines*; and near the sea-shore, another of the *Dominican* friars: Besides which, it had two churches, the one called *St. Salvador*, the other *St. Peter*.

It contained above two thousand inhabitants, besides the clergymen and slaves, among whom were two hundred that were accounted very rich. On the foot of the mountain upon which the city of *Olinda* was built, a strong redoubt was erected, which in the year 1645, was by a serjeant betrayed to the *Portuguese* for a sum of money. About a league from the city, near the water-side, were the suburbs, well stored with inhabitants and packhouses; but destitute of fresh water, which they were fain to fetch from beyond the river.

The whole district of *Parnambuco* abounds in divers kinds of fruits and cattle. The valleys afford good pasturage, and the lower grounds near the rivers, great store of sugar reeds, which are much cultivated hereabouts. The mountains produce richer minerals here, than in the other captainships. During the rainy season the heat is more tolerable here in the day time than the cold nights.

The Cameleon, or Indian Salamander, otherwise called *Gekko*.

This creature, which is not only found in *Brasil*, but also in the isle of *Java*, belonging to the *East-Indies*, and which, by our people is called *Gekko*, from its constant cry (like among us that of the *Cuckoo*) is properly an *Indian Salamander*. It is about a foot long, its skin of a pale or sea-green colour, with red spots. The head is not unlike that of a tortoise, with a straight mouth. The eyes are very large, starting out of the head, with long and small eye-apples. The tail is distinguished by several white rings: Its teeth are so sharp as to make an impression even upon steel. Each of its four legs had five crooked claws armed on the end with nails. Its gait is very flow, but wherever it fastens it is not easily removed. It dwells commonly upon rotten trees, or among the ruins of old houses and churches; it oftentimes settles near the bedsteads, which makes sometimes the moors pull down their huts.

Its constant cry is *Gekko*, but before it begins it makes a kind of hissing noise. The

1643. sting of this creature is so venomous, that the wound proves mortal, unless it be immediately burnt with a red hot iron, or cut off. The blood is of a palish colour, resembling poison itself.

The *Javanese* use to dip their arrows in the blood of this creature; and those who deal in poisons among them (an art much esteemed in the island of *Java*, by both sexes) hang it up with a string tied to the tail on the cieiing, by which means it being exasperated to the highest pitch, sends forth a yellow liquor out of its mouth, which they gather in small pots set underneath, and afterwards coagulate into a body in the sun. This they continue for several months together, by giving daily food to the creature. It is unquestionably the strongest poison in the world; its urine being of so corrosive a quality, that it not only raises blisters, wherever it touches the skin, but turns the flesh black, and causes a gangrene. The inhabitants of the *East-Indies* say, that the best remedy against this poison is the *Curcuma* root. Such a *Gekko* was got within the body of the wall of the church in the *Receif*, which obliged us to have a great hole made in the said wall, to dislodge it from thence.

The strongest poison in the World.

There are also several sorts of Serpents in *Brasil*; such as *Rattle Serpents*, *Double-headed Serpents*, and such like; of which the *Brasilians* enumerate twenty-three, viz. *Boigvaca*, or *Liboya*, *Arabo*, *Bioby*, *Boicininga*, *Boitrapo*, *Boykupekanga*, *Bapoba*, *Kukuruku*, *Kaninana*, *Kurukakutinga*, *Grinipajaguara*, *Ibiara*, *Jakapekoaja*, *Ibiboboca*, *Jararaka*, *Manima*, *Vona*, *Tarciboya*, *Kakaboya*, *Amorepinima*.

Serpents in Brasil.

We will give you an account of those only that dwell in the houses and woods of *Parnambuco*, passing by the rest, as not so well known among us; and it is observable that though some of the *American* or *Brasilian* serpents exceed those of *Europe* in bigness, they are nevertheless not so poisonous.

The serpent of *Boicininga*, or *Boicininga*, likewise called *Boiquira* by the *Brasilians*, is by the *Portuguese* called *Kiskeveda* and *Tangedor*, i. e. a *Rattle*, and by our people a *Rattle Serpent*, because it makes a noise with its tail, not unlike a rattle: This serpent is found both upon the highway and in desolate places; it moves with such swiftness, as if it had wings, and is extremely venomous. In the midst it is about the thickness of a man's arm near the elbow, but grows thinner by degrees towards the head and tail. The belly and head is flattish, the last being of the length and breadth of a finger and a half, with very small eyes. It has four peculiar teeth longer than all the rest, white and sharp like a thorn, which it hides sometimes

The Rattle Serpent.

1643. sometimes within the gums. The skin is covered with thick scales, those upon the back being somewhat higher than the rest, and of a pale yellowish colour, with black edges. The sides of the body are likewise yellowish with black scales on each side; but those upon the belly are larger, four-square, and of a yellow colour. It is three, four, and sometimes five foot long; has a round tongue split in the middle, with long and sharp teeth. The tail is composed of several loose and bony joints, which make such a noise that it may be heard at a distance. Or rather at the end of the tail, is a long piece consisting of several joints, join-

ed within one another in a most peculiar manner, not unlike a chain. Every year there is an addition of one of these joints, so that you may know the exact age of the serpent by their number; nature seeming in this point to have favoured mankind, as a warning to avoid this poisonous creature by this noise. One of these joints put in the fundament causes immediate death; but the sting of this creature proceeds much slower in its operation, for in the beginning a bloody matter issues from the wound, afterwards the flesh turns blue, and the ulcer corrodes the adjacent parts by degrees.

The most sovereign remedy used by the *Brazilians* against the poison of this and other serpents, is the head of the same serpent that has given the wound, which they bruise in a mortar, and in form of a plaster apply it to the affected part. They mix it commonly with fasting spittle, wherewith they also frequently moisten the wound. If they find the poison begins to seize the nobler parts, they use the *Tiproka* as a cordial, and afterwards give strong sudorificks. They also lay open the wound, and apply

cupping-glasses, to draw the venom from thence. Or else they burn it with a red hot iron.

The serpent *Kukuruku* is of an ash colour, with yellow spots within and black speckles without, and has just such scales as the *Rattle Serpent*.

The serpent *Guaku*, or *Liboya*, is questionless the biggest of all serpents; some being 18, 24, nay 30 foot long, and of the thickness of a man in the middle. The *Portuguese* call it *Kobra de bado*, or the

chado, or the  
Roebuck

1643. *Roebuck serpent*, because it will swallow a whole roebuck or any other deer it meets with; and this is performed by sucking it through the throat, which is pretty narrow, but the belly vastly big. After they have swallowed such a deer, they fall asleep, and so are catch'd. Such a one I saw near *Paraba*, which was 30 foot long, and as big as a barrel. Some negroes saw it accidentally swallow a roebuck, whereupon thirteen musqueteers were sent out, who shot it, and cut the roebuck out of its belly. It was of a greyish colour, though others are inclining more to the brown. It is not so venomous as the other serpents. The *Negroes* and *Portuguese*, nay even some of the *Dutch* eat the flesh; neither are its stings look'd upon as very infectious, the wound healing often up without any application of remedies; so that it ought not to be reckoned among the number of poisonous serpents, no more than the *Kaminana*, *Marina* and *Vocia*. This serpent being a very devouring creature, greedy of prey, leaps from amongst the hedges and woods, and standing upright upon its tail, writtles both with men and wild beasts; sometimes it leaps from the trees upon the traveller, whom it fastens upon, and beats the breath out of his body with its tail.

The serpent *Jararaka* is short, seldom exceeding the length of an arm to the elbow. It has certain protuberant veins on the head like the adder, and makes much such a noise. The skin is covered with red and black spots, the rest being of an earth colour. The stings of this creature are as dangerous, and attended with the same symptoms, as those of other serpents. Its body, the head, tail and skin, being before taken away together with the entrails, boil'd in the water of the root of *Jurepeba*, with salt, dill, and such like, is look'd upon as a very good remedy.

The serpent *Boitrapo*, call'd by the *Portuguese*, *Cobre de Cibo*, is about seven foot in length, of the thickness of a man's arm, feeds upon frogs, and is of an olive colour. It is very venomous, and when it stings, occasion the same symptoms as the serpent *Kukuruku*; nay, the wound is accounted past curing, unless you apply the hot iron.

The adder *Ibiara*, by the *Portuguese* call'd *Cobra Vega*, or *Cobra de das Cabeças*, i. e. *The Doubleheaded Serpent*, because it appears to have two heads, which however is not so. They are found in great numbers, lurking in holes under ground. They feed upon pirimires, are of the thickness of the length of a finger, and a foot and a half long, of a silver colour; nothing is more poisonous than the stings of these

creatures, tho' not beyond all hopes of cure, provided the before-mentioned remedies be applied in time.

The serpent by the *Brasilians* call'd *Ibiboboka*, the *Portuguese* call *Cobra de Cerais*. It is very beautiful, of a snow white colour, speckled with black and red spots, and about two foot long: Its sting is mortal, but kills by degrees.

The serpent *Biobi*, call'd by the *Portuguese* *Cabro Verde*, or the *Green Serpent*, about three quarters of a yard long, and the thickness of a thumb; of a shining green colour. It lives among houses, and hurts no body, unless when provoked. Its sting is however full of poison, and scarce curable. A certain soldier being wounded by one of these creatures, which lay hidden in a hedge, in his thigh, did for want of proper remedies, die in few hours after: His body swell'd, and turn'd pale blue.

The serpent *Kaminana* is yellow on the belly and green on the back; its length is about eight hands, and is look'd upon as the least venomous of all. It feeds upon eggs and birds, and the *Negroes* and *Brasilians* eat the body, after they have cut off the head and tail.

The serpent call'd by the *Brasilians* *Ibirakoa*, is of several colours, with white, black, and red spots. The sting of this creature is very poisonous, attended with the same symptoms as that of *Kukuruku*; for it kills infallibly, unless proper remedies be applied immediately. If the poison has not seized the heart, they boil the flesh of the same serpent with certain roots, and give it the patient in wine.

The serpent *Tarciboya* and *Kakaboya*, are amphibious creatures. The first is of a blackish colour, very large, and stings when provoked, but is not very difficult to be cured. The *Kakaboya* is of a yellowish colour, six hands long, and feeds upon tame fowl.

#### Of the Senembi or the Leguan.

Not only in the *Captainship of Parnambuco*, but also all over *Brasil* and *America*, as likewise in the Isle of *Java* in the *East-Indies*, are a certain kind of *Land Crocodile*, call'd by the *Brasilians* *Senembi*, by our people *Leguan*: Some are larger than others, some being three, others four foot long, but seldom exceed five: They are all over covered with scales, which are somewhat bigger on the back, legs, and beginning of the tail, than on the other parts: The neck is about a finger and a half long, the eyes are black and bright, and the nostrils in the hindmost part of the head. Each jawbone is full of small, black,

black, and short teeth; the tongue is very thick: All along the back from the neck to the tail, are small sharp teeth of a greenish colour; they are biggest on the neck, and grow smaller and smaller towards the tail: Under the throat are likewise many of the same kind. The whole skin is of a delicate green, with black and white spots. It has four legs and feet, with five claws armed with very sharp nails: It can live two or three months without food. Its flesh is as white as that of a rabbit, and of as good a taste as that of fowls or rabbits, if it be boil'd or well fry'd with butter. In the head of this creature are certain stones, which are an infallible remedy to break and drive the gravel out of the kidneys, given to the quantity of two drams at a time, or carried on some part of the body.

There are in *Brazil* lizards both great and small; some are green, others greyish, and some four foot long, with sparkling eyes. The *Negroes* feed upon some of them, whom they kill with blunt arrows; they broil them, after they have skin'd them, and eat them without the least harm. Among all those that are found among the thorns and briars, or the ruins of houses, there is but one kind venomous, which is called *Bibora*. They are like the others, but lesser, not exceeding the bigness of a thumb; they are of an ash colour, inclining to white; the body and limbs thick and swell'd with the poison, but the tail short and broad. The wounds given by them are full of a thin stinking matter, with blue swellings, with a pain near the heart, and in the bowels.

There are also certain creatures, called *Tboufand Legs*, as likewise *Hundred Legs*, by the natives called *Ambua*, who bend as they crawl along, and are accounted very poisonous. The first are commonly found in the Houses, and the last among the woods, where they not only spoil the fruits of the Earth, but also plague men and beasts.

Scorpions, by the *Brazilians* called *Jacaiara*, are found here in great numbers, being in shape like the *European* scorpions, but not so pestiferous, and consequently the wounds given by them are easily cured. They lurk in houses, behind old stools, benches and chests. They are exceeding big, no bigger being to be found in any other parts, some being five or six foot long, and of a considerable thickness.

There are such prodigious quantities of pismires in *Brazil*, that for this reason, they are called by the *Portuguese*, *Rey de Brazil*, i. e. King of *Brazil*. They eat all

that lights in their way, as fruit, flesh, fish, and insects without any harm. There is also a certain flying pismire of a fingers length, with a triangular head, the body being separated into two parts, and fastened together by a small string. On the head are two small and long horns, their eyes being very small. On the foremost part of the body are six legs, three joints each, and four thin and transparent wings; to wit, two without, and two within; the hindmost part is of a bright colour and round, which is eaten by the *Negroes*. They dig into the ground like the moles, and consume the feed.

There is another kind of great pismires, resembling a great fly; the whole body of which is about the length of half a finger, and separated into three several parts.

The last part resembling in shape and bigness a barley corn; the middlemost of an oblong figure, with six legs, half a finger long, each of which has four joints: The foremost part, or the head, is pretty thick, in the shape of a heart, with two horns, and as many black crooked teeth: The white of the eyes is inclining to black, the whole composition of the head being the two eyes, placed opposite to one another, resembling the figure of a heart. The fore and hindmost parts are of a bright red colour.

There is another kind of pismire, of a bright black colour, with black and rough legs. It is about the length of a finger, with a large foursquare head, starting black eyes and teeth, and two horns, half a finger longer. The body is also separated into three parts. The foremost of an oblong figure, not very thick, with six legs, each of the length of half a finger; the middlemost very small and square, not exceeding the bigness of a louse; the hindmost is the biggest of the three, of an oval figure, and sharp on the end. These three parts are fastened together with a single string, the *Brazilians* call it *Tapijai*.

There is besides this another pismire, call'd by the *Brazilians* *Kupia*, of a chestnut brown colour; its head being as big as another pismire, with black eyes, two horns, and two tusks instead of teeth. The whole body is covered with hair; it is divided into two parts; The foremost with six legs, being somewhat less than the hindmost; at certain seasons it gets four wings, the foremost being a little bigger than the hindmost, which it loses again at a certain time.

The *Iron-pig* of *Brazil*, called by the *Brazilians* *Kuanda*; and by the *Portuguese* *Ourico Kachiero*, is of the bigness of a large ape, its whole body being covered with sharp

acts of a large  
covered with  
sharp

1643. sharp spikes of three or four fingers long, without any hair. Towards the body those spikes are halfways yellowish, the remaining part is black, except the points, which are whitish, and as sharp as an awl. When they are vexed, they are able, by a certain contraction of the skin, to throw or dart them with such violence, that they wound, nay, sometimes kill men or beasts. Their whole body to measure from the hindermost part of the head to the beginning of the tail, is a foot long, and the tail a foot and five inches in length,

which likewise has always sharp spikes, 1643. the rest being covered with bristles like other hogs. The eyes are round, starting and glistening like a Carbuncle; about the mouth and nose are hair of four fingers length, resembling those of our cats or hares: The feet are like those of apes, but with four fingers only without a thumb, instead of which you see a place vacant, as if it had been cut away. The four legs are less than the hindermost, they are likewise armed with spikes, but not the feet.

This creature commonly sleeps in the day time, and roves about by night; it breaths through the nostrils, is a great lover of fowl, and climbs up the trees, tho' very slowly. The flesh is of no ungrateful taste, but roasted and eaten by the Inhabitants. It makes a noise *Jii*, like the *Luyaert*.

That four-legg'd creature, by the *Brasilians* called *Ati*, by the Portuguese *Prigui-za*, and by the Dutch *Luyaert* (lazy-back) from its lazy and slow pace, because in fifteen days time it scarce walks above a stones throw. It is about the bigness of a

middle-sized fox, its length being a little above a foot, to measure from the neck (which is scarce three fingers long) to the tail. The fore-legs are seven fingers long to the feet, but the hindermost about six; the head round of three fingers in length: its mouth, which never is without a foam, is round and small, its teeth neither large nor sharp. The nose is black, high, and glib, and the eyes small, black and heavy. The body is covered all over with ash-coloured hair, about two fingers long; which are more inclining to the white towards the back. Round about the neck the

1643. the hair is somewhat longer than the rest. It is a very lazy creature, unable to undergo any fatigues, by reason its legs are as it were disjointed in the middle; yet it keeps upon the trees, but moves, or rather creeps along very slowly. Its food is the leaves of the trees, it never drinks, and when it rains, hides itself. Wherever it fastens with its paws, it is not easily removed; it makes, tho' seldom, a noise like our cats.

The *Pijmire-Eater*, is thus called, because he feeds upon nothing but *pismires*; there are two sorts, the great and the small: The *Brazilians* call the first *Tamanduai*, and the last *Tamanduai-Guacu*. It is a four-legg'd creature, of the bigness of a dog, with a round head, long snout, small mouth, and no teeth. The tongue is roundish, but sometimes twenty-five inches, nay two foot and a half long. When it feeds, it stretches out its tongue upon the dunghills, till the *pismires* have settled upon it, and then swallows them. It has round ears, and a rough tail; is not nimble, but may be taken with the hand in the field. The small one, called *Tamanduai-Guacu*, is of the bigness of a *Brazilian* fox, about a foot in length. On the fore-feet it has four crooked claws, two big ones in the midst, and the two lesser on the sides. The head is round, yet pointed at one end, a little bent below; with a little black mouth without teeth. The eyes are very small, the ears stand upright about a fingers length. Two broad black lists run along on both sides of the back; the hairs on the tail are longer than those on the back, the extremity of the tail is without hair, wherewith it fastens to the branches of the trees. The hairs all over the body are of a pale yellow, hard and bright. Its tongue is round, and about eight fingers long. It is a very savage creature, grasps every thing with its paws, and if you hit it with a stick, sits upright like a bear, and takes hold of it with its mouth. It sleeps all day long, with its head and fore-feet under the neck, and roves about in the night

time. As often as it drinks, the water 1643. spouts forth immediately through the nostrils.

They have also a kind of serpents of about two fathoms long, without legs, with a skin of various colours, and four teeth. The tongue is split in the middle, resembling two arrows, and the poison is hid in a bladder in its tail.

The four legg'd creature, called by the *Brazilians*, *Tatu* and *Tatupera*, by the *Spaniards*, *Armadillo*, by the *Portuguese*, *Encuberto*, and by the *Dutch*, *Schild-Verken*, (*Shield-Hog*) because it is defended with scales like as with an armour, resembles in bigness and shape our hogs; there are several sorts of them. The uppermost part of the body, as well as the head and tail, is covered with bony shields, composed of very fine scales. It has on the back seven partitions, betwixt each of which appears a dark brown skin. The head is altogether like that of a hog, with a sharp nose, wherewith they grub under ground; small eyes, which lie deep in the head; a little, but sharp tongue; dark brown and short ears, without hair or scales: The colour of the whole body inclining to red; the tail in its beginning is about four fingers thick, but grows by degrees sharp and round to the end, like those of our pigs: But the belly, the breast, and legs are without any scales; but covered with a skin not unlike that of a goose, and whitish hair of a fingers length. It is generally very bulky and fat, living upon malecons and roots, and does considerable mischief in the plantations. It loves to rout under ground, eats rabbits, and the dead carcases of birds, or any other carrion: It drinks much, lives for the most part upon the land, yet loves the water and marshy places. Its flesh is fit to be eaten. It is catch'd like the *doc* in *Holland* with the rabbits, by sending a small dog abroad, who by his barking, gives notice where it lurks under ground, and so by digging up the ground it is found and catch'd.

Bats.

Wild-  
goose.

The bird  
Toukan.

The bats in *Brasil*, called by the inhabitants *Andirika*, are of the bigness of our crows; they are very fierce, and bite most violently with their sharp teeth. They build their nests in hollow trees and holes.

The bird called by the *Brasilians*, *Ipekati Apoa*, by the *Portuguese*, *Paia*, is no more than a goose; and for that reason by the *Dutch* called a wild goose. It is of the bigness of one of our geese of about nine months old, and in all other respects resembles them. The belly and under part of the tail, as likewise the neck, is covered with white feathers; but on the back to the neck, on the wings and head, the feathers are black intermixed with some green. There are also some black feathers intermixed with the white ones on the neck and belly. They differ from our geese in this, that they are somewhat bigger; their bills resemble rather those of our ducks, but are black, and turned at the end, and on the top of it grows a broad, round, and black piece of flesh, with white speckles. They are commonly found near the river-side, are very fleshy and well-tasted.

The bird by the *Brasilians* called *Toukan*, or large bill, is about the bigness of a wood

VOL. II.

pigeon. It has a crop about the breast of three or four fingers in compass, of a saffron colour, with high red coloured feathers round the edges, which are yellow on the breast, but black on the back and all the other parts of the body. Its bill is very large, of the length of a palm of a hand, yellow without and red within. It is almost incredible how so small a bird is able to manage so large a bill, but that it is very thin and light.

The bird called by the *Brasilians*, *Kokoi*, *The bird Kokoi*, is a kind of a crane, very pleasing to the sight, as big as our storks. Their bills are straight and sharp, about six fingers in length, of a yellowish colour inclining to green. The neck is fifteen fingers long, the body ten, the tail five: Their legs are half-ways covered with feathers, about eight fingers in length, the remaining part being six and an half. The neck and throat is white, both sides of the head black, mixt with ash-colour. On the far and undermost part of the neck are most delicious, white, long, and thin feathers, fit for plumes: The wings and tail are of an ash-colour, y<sup>e</sup> mixt with some white feathers. All along the back you see long and light feathers, like those

G

on

1643.

1643. on the necks, but are of an ash-colour: Their flesh is very good, and of a grateful taste. There is another kind of these birds, which is somewhat bigger than a tame duck. Its bill is straight, and sharp at the end, of the length of four fingers and a half, with a double set of teeth both above and below: The head and neck (which is two foot long) resembles the crane, with black eyes enclosed in a gold coloured circle. The body is two foot and a half in length; the tail, which stands even with the extremity of the wings, four fingers. The bill is of an ash colour towards the head, the rest yellow, inclining to green. The head and upper part of the neck are covered with long pale yellowish feathers, intermixt with black. On the back and wings it hath ash coloured feathers inclining to yellow; but the legs and feet are dark grey: The flesh of this bird is eatable, and tastes like that of a crane.

Jibiru ga-  
aku.

The bird called by the *Brasilians*, *Jibiru Guaku*, and by the *Dutch*, *Schuur Vogel*, or barn-bird, has no tongue, but a very large bill, near seven foot and a half long; round and crooked towards the end, of a grey colour. On the top of the head is a crown of white and green feathers. The eyes are black, behind each of which are two great concavities instead of ears. The neck is ten fingers in length, one half part of which as well as the head, is not covered with feathers, but with an ash-coloured, whitish, rugged skin. This bird is of the bigness of a Stork, with a short black tail, which stands even with the extremities of the wings. The other part of the neck, and the whole body, is covered with white feathers, and those on the neck very long ones: The wings are likewise white, but mixt with some red. The flesh if boiled, after the skin is taken of, is good food, being very white, but somewhat dry.

*Brasil* produces incredible quantities of other wild fowl of all sorts, both great and small, some of which live among the woods, others in the water, but are very good food.

Of the best kind are the thrushes, called by them *Bamodi*; Pheasants of divers kinds, called by the *Barbarians*, *Magnagu*, *Jaku*, and *Arakua*.

*Mouton* is a bird of the bigness of a peacock, but has black feathers, the flesh is very good and tender. Because this country is full of fruit trees and woody places, it produces abundance of sparrow-hawks, and other hawks, called by the *Portuguese*, *Gavilón*, and by the *Brasilians*, *Teguata* and *Inage*, which are always at enmity with the chickens and pigeons.

Among those that live both in the water and upon the land, the wild ducks claim the

precedency; some of those are smaller than the *European* ducks, others much exceed them, being as big as a goose. They have also a sort of snipes, called *Jakana-miri* and *Jakana-guaku*. Besides these there are cranes, quails and ostridges, and many others of that kind; the flesh of which is eatable, but not very toothsome.

The rest of these birds are very greedy after the amber-greese, which is thrown ashore by the boisterous sea, which they devour before the inhabitants can come thither to gather it. They have also abundance of *Parrots*, or small parrots, these never speak; but their parrot are extraordinary fine and large, some of which learn to speak as distinctly as a Man. I have seen some of these parrots express every thing what they heard cried in the streets very plainly; and among the rest I saw one, which if put in a basket upon the floor, would make a dog that belonged to the same house, sit up before the basket, crying out to him, fit up, fit up, you nasty toad. Neither did this parrot leave off calling and crying, till the dog came to sit up before the basket. It was afterwards presented to the queen of *Sweden*.

There is among the rest a certain small bird, no bigger than a joint of a finger, which notwithstanding this, makes a great noise, and is catched with the hands whilst it is sitting among the flowers, from whence it draws its nourishment. As often as you turn this bird, the feathers represent a different colour, which makes the *Brasilian* women fasten then with golden wires to their ears, as we do our-rings. The birds here are never destitute of food, which they always meet with either among the flowers or fruits of the trees, which are never spoiled here during the winter season.

The rivers and lakes of *Brasil*, as well as the neighbouring sea, furnishes them with great store of all sorts of fish, which are accounted so wholesome here, that they are even allowed for those that are troubled with agues. The standing waters near the sea-side, which sometimes are quite dried up, produce abundance of craw-fish, tortoises, shrimps, crabs, oysters, and divers others of this kind, which are all very good food.

There are abundance of fish in *Brasil*, common to the sea and rivers, especially during the rainy season; when a great quantity of the river water being conveyed into the sea, the sweetness of the water allures the fish into the rivers, where meeting with abundance of green weeds (the product of the bottom of the rivers) they never return to the sea.

Among the river fish the chiefest are, the *Duja*, *Prajuba*, and *Akara-Puku*, the last

1643. of which resembles the best and largest of our perches.

*Brasil* produces also various kinds of insects, some of which are of four fingers length, and an inch thick. They have likewise silk worms, called by the *Brasilians*, *Ifokuku's*, and their silk, *Ifokurenimbo*.

There are also divers sorts of fire-flies, 1643. which are likewise found in the *East-Indies*, where we shall give you a further account of them. Besides these, there are many sorts of other flies, hornets, wasps, and bees: some of which produce honey, some none at all.

Among other kinds of spiders there is one of a prodigious bigness, which is always found either in dunghills, or in the concavities of hollow trees: They call it *Nbanduguaka*. These creatures weave cobwebs like other spiders; the skin is rough and black, provided with sharp and long teeth. This creature if provoked wounds with its poisonous sting, which is so small as scarce to be visible, and raises a blueish tumour, which is very painful, and if care be not taken in time, occasions an inflammation, attended with such dangerous symptoms as prove afterwards incurable.

Near *Rio St. Francisco* are vast numbers of a certain small insect not unlike our crickets; I have been very curious to get sight of this creature, to satisfy myself as to its shape, and resemblance to others of this kind; but though it makes a very shrill

noise, which resembles that of our crickets, I was never able to see any of them; for as soon as you approach they desist, so that you are at a loss which way to look. They sing sometimes for a quarter of an hour without intermission. In the island of *Java* in the *East-Indies* it is commonly heard in the months of *February* and *June*. At last I had the good fortune to get one of these creatures into my hands, by means of a certain *Chinese* woman; after I had often been in search of it, both within and without the city of *Batavia*. The *Javanese* set two of these little creatures a fighting together, and lay money on both sides, as we do at a cock-match.

There are also abundance of ravenous wild beasts in *Brasil*, such as tygers, leopards, &c. The tygers are extremely savage here; they fall upon beasts, and sometimes

1643. than a crocodile they have miri and cranes, of that e, but not

Ballar, or  
Kabitto.

1643. times upon men, of whom several were killed by them in my time. A certain *Portuguese* had a sugar-mill very pleasantly situated near a wood, whither we used to go to divert ourselves sometimes. The *Portuguese* sitting one time with four more of his friends in the house, with the windows drawn up for the convenience of the land air, a dog belonging to the house, who had ventured too far into the adjacent wood, was pursued by a tyger, so that to save his life he leapt into the window to seek for shelter near his master; but the tyger closely pursuing him, leapt also through the window into the room, where the door being shut, he tore two of those there present in pieces before the rest could make their escape, and afterwards went his way.

There is another sort of savage beast in those parts, called by some of our people, *Jan-over-Zee*, or jack beyond sea, which surpasses all others in nimbleness, and tears all to pieces it meets with.

*Cattle.* *Brasil* has also great plenty of cattle, but the flesh will not keep above twenty-four hours after it is dress'd. The *Dutch* cut off the fat, and cut the lean in thin slices, and dry it in the sun like fish. No butter is to be made here, because the milk turns to curds immediately; the *Dutch* butter is drawn out of a vessel like oil.

*Hogs.* Their hogs are small and black, but very well tasted, and wholesome; there is another kind of amphibious hogs, by the *Portuguese* called *Kapiverres*, they are very near as black as the others, and good food.

*Antes.* There is another four legg'd creature in *Brasil*, called by the inhabitants *Taperete*, and by the *Portuguese*, *Antes*; its flesh has the taste of beef, but somewhat finer. It is about the bigness of a calf, but shaped like a hog; it sleeps all day among the woods, and seeks for belly-timber in the night: Its food is grass, sugar-reeds, cabbages, and such like. They have likewise good store of goats, called by them *Pakas*, and *Kotias*, and hares and rabbits, which don't give way in goodness to those of *Europe*. There is also an excellent kind of lizards, called by the inhabitants, *Vuana* and *Teju*, which are accounted a dainty bit.

*Fish.* The fish in *Brasil* are no less considerable for the supply of our plantations, than the cattle, which are on the coasts of *Brasil*, but especially in *Parnambuko*, where they are found in such plenty, that at one draught they catch sometimes two or three thousand fine fish, in the four or five summer months, for during the rainy season, they catch but few. There are certain districts along the sea coast whither the fish most resort; some of those belong to the inhabitants, the rest to the company, and are farmed at a cer-

tain rate *per annum*. The lakes as well as the bays, are stored with an incredible multitude of fish; the first are by the *Portuguese* called *Alagons*; and the best they produce are the *Sindia*, *Qyeba*, and *Noja*, all without scales. And though the fish which are caught in the lakes are not so much esteemed as the river-fish, nevertheless are they not much behind them in goodness, because these lakes are not always standing waters, but intermixt with several rivers. Some of these fish they dry in the sun. The chiefest of this kind are those called by the *Brasilians*, *Kurima Parati*, and by the *Dutch* inhabitants *Herders*. They abound no less in sea-fish of all sorts. The fish called by the *Brasilians*, *Karapantangele*, which is not unlike our perch, has the preference among them. And as the rivers furnish infinite numbers of fish, so they are generally fatter and better tasted than the sea-fish. Those which are caught in those fisheries near the sea-shore, are for the most part salted, and carried from thence into the country, for the use of the sugar-mills, which cause great plenty among them.

The craw-fish, which are in great quantities near the rivers and in the marshy grounds, serve likewise for food to the *Brasilians* and negroes, and some of our people like them tolerably well.

It is further to be observed, that whereas a considerable number of cattle, during the war was run astray out of the parks into the forests and woods beyond the river of *St. Francis*, it was thought convenient by the great council of the company here, to agree with certain persons to catch this cattle, and bring it to the *Receif*, in order to be killed for the use of the inhabitants. The time of the said contract being expired, it was consulted whether the same should be renewed; but it being apparent that there were not enough left to quit cost, the same was laid aside, and this resolution sent to the council of nineteen. For in the mean while the inhabitants near *Rio St. Francisco* and *Rio Grande*, having applied themselves to the breeding of cattle, their parks were so well stocked by this time, that they not only furnished the inhabitants of the *Receif*, but also the sugar-mills, with plenty of meat, which was bought at the rate of three and four pence *per pound* in the country; besides that, they provided the garrisons with the same for a twelve-month, after the store-houses of the *Receif* were emptied; and notwithstanding this, the inhabitants of those parts were not out of debt, when those of *Parnambuko* and *Parayba*, were involved over head and ears; which shews what advantage they reap from the breeding of cattle; and that if the

1643. the *Dutch Brasil* had continued in peace, those parks might have furnished all the garrisons with meat, without impairing their stock for breeding; which, together with the great plenty of fish, are the two main pillars of the state of *Brasil*.

Notwithstanding all which, it is certain that the inhabitants of the *Dutch Brasil* cannot be provided with sufficient maintenance, without a yearly supply from *Europe*, as well eatables as other commodities, as has been found by experience, to the great detriment of the company; after our store-houses were exhausted by the several expeditions against *Angola*, *Meranbaon*, and other places.

In the rivers and lakes here are also found crocodiles, by the *Brazilians* called *Jakare*, and in the *East-Indies*, *Kaymans*. They are like the *African* crocodiles, but not quite so big, seldom exceeding five foot in length. They lay twenty or thirty eggs bigger than geese eggs, which are eaten by the *Brazilians*, *Portuguese* and *Dutch*, as well as the *fish*.

In the seas near the coast of *Brasil*, they meet also sometimes with great lampreys. Before the bridge from the *Receif* to *Mauvice-town* was built, one of this kind of a considerable bigness did lurk near that passage, where the boats used to pass over from one side to the other, and snatched all that fell in his way, both men and dogs that swam sometimes after the boat, into the water: But at a certain time, by the sudden falling of the tide, being got aground with the foremost part of the body, he was with much ado brought ashore.

The district of *Pernambuco* does also abound in various sorts of fruits, as well as all the other parts of *Brasil*, of which we shall say more hereafter.

Upon the captainship of *Pernambuco*, borders to the north the captainship of *Tamarika*, which owes its name to an island of the same name, being the chiefest part of this district, which however extends near thirty-five leagues along the sea coast on the continent.

The island of *Tamarika* lies two leagues to the north of *Pomerello*, in the sea; being parted from the continent by the river *Tamarika*, its most southern point lying under the 7<sup>th</sup> degree 58<sup>m</sup> southern latitude. It is from south to north about two leagues long, and its circuit near seven. To the jurisdiction of this isle did also belong *Goyana*, *Kapavaribi*, *Terukupa*, and *Abray* on the continent. Formerly it had but few inhabitants, and scarce any houses, though it is a very pleasant isle, and tolerably fertile, producing *brasil-wood*, *coco nuts*, *cotton*, *sugar-reeds*, *melons*, and such like; be-

VOL. II.

1643. sides wood for firing, and fresh water for the conveniency of the *Receif*: It abounds likewise in wood both for building of houses and shipping. This island was much infested with wild beasts, which did great mischief to the sugar reeds: This moved *Peter Pat*, director of the captainship of *Tamarika*, to make his application to count *Maurice* and the great council in 1647, to know their pleasure, whether they should dispose of those beasts by contract, to such as would be at the charge of catching of them, or whether they should be taken and killed for the use of the garrisons; but this was rejected by the council, who enjoined the inhabitants not to kill those beasts in the open fields, unless they should break into their plantations, it being for the interest of the company to preserve them in case of a necessity: The damage which from thence might accrue to the sugar reeds, being to be prevented by surrounding their plantations with pales and stakes.

The island is look'd upon as of the greatest consequence to us, it having been proposed by some to transfer the seat of the *Dutch-Brasil* from the *Receif* thither; but the directors of the company did not agree to it, considering that at that time this island was quite desolate; whereas upon the *Receif* were store-houses, magazines, ware-houses, and such like buildings ready to their hands, besides that the place was much more pleasant, fertile, and stronger; and the harbour much more convenient for ships: The river *Tamarika* on the other hand being not navigable, but for small vessels, by reason of the shallowness of the harbour, which was noted for shipwrecks. The defect of fresh water in the *Receif*, in which this isle abounds, may be supplied from the river *Biberibi*; besides that, they had several basons with fresh water within the *Receif*, for their present use. During the war with the *Portuguese* we were sensible of the conveniencies we received from this island, by reason of its strength both by art and nature, which might serve as a safe retreat upon all emergencies; besides, that its preservation was absolutely necessary for the *Receif*, which was supplied from thence with fish, and several other sorts of provisions.

Upon the banks of the river at the south entrance of the harbour, we had built a quadrangular fort, called *Orange*. It was provided with a goodly wall, but the ditch was not very deep, and for the most part without water, for which reason it was strengthen'd with palisadoes. On the north-side we had a hornwork, but much decayed; within the body of the fort was a powder-vault, and other conveniencies for the bedding

The consequence of this isle.

1643. bedding of soldiers. Several batteries were raised upon the walls, mounted upon six brass and as many iron great guns. In the island near the entrance of the river, close by a morass full of thorn-bushes, was a small town, most inhabited by soldiers, called by the Portuguese, *Nossa Senhora da Concepciao*. Upon a hanging rock, just by, was an old redoubt erected by the Portuguese, called by the same Names, which together with the whole island, was taken by the Dutch, under the command of colonel Schop from the Portuguese, and the place, after his name, called *Schop's Town*. This fort was afterwards by the Dutch closed up on the backside towards the church, so that it afterwards served both for the defence of the town and the harbour, as the *Blockhouse* on the north-side cover'd the gates. There were then eleven pieces of cannon mounted upon it. At the north entrance of the harbour, was another redoubt, which defended that passage on that side, with three iron cannon. One Mr. Dormont, governor of *Itamarika*, found under the before-mention'd rock, in 1645, as he was digging a well, a spring of fresh water, which proved very useful for the garrison, because it could not be cut off by the enemy.

Somewhat higher up the river *Tamarika*, lies an island called *Magiope*, where are found abundance of *Mandiboka* roots. You may go quite round this island in barks; it having a kind of a harbour on both ends, viz. to the south and north, but the first is the best; because there arises from the northern shore of the continent, a shelf, which reaches very close to the island, the channel betwixt both not having above ten or twelve foot water. The only harbour fit for use thereabouts is the south-entrance of the river, which makes *Tamarika* an island, where ships that drew fourteen or fifteen foot water, may pass through; there is no convenient anchorage. That end, where the river returns into the sea, is by the Dutch called the northern-entrance, and by the Portuguese *Katuamma*.

Betwixt *Pomerello* and the river *Tamarika*, a river comes from the continent, fit for barges, called *Marafarinha*; and half a league within the mouth of the river *Tamarika*, another falls likewise from the continent called *Garaffou*, but is of little moment. From thence to the north, are several other rivers near the sea-shore, which are navigable with barges, for the convenience of the sugar-mills, of which there are several thereabouts.

A league and an half further to the north of the north-entrance of *Tamarika*, is a noted point of land called by the Portuguese,

*Punto Pedra*, surrounded with a Reef, betwixt which you may pass with barges and yachts.

A league further to the north from this point, and three leagues to the north-west of *Tamarika*, is the small river *Goyana*, under 7 deg. 46 min. which discharges in two branches in the bay; at the entrance lies a great rock, where is great store of sea-fowl. Before it lies a great Reef, but within are so many shelves that renders the passage very dangerous.

About two leagues and a half beyond the river *Goyana*, to the north, is a great river, called *Auyay*, but the entrance is so choak'd up with sands, that there is scarce any passage for barges. This river sends forth several branches into the country, upon one of which to the north, lies the village of *Maurice*, and upon the southern branch the village *Auyay*.

Among others, *Porto Francisco* lies in a creek three long leagues to the north of the river *Auyay*; and five leagues to the north-west of the same river, an unnavigable river called *Grammana*, besides several other rivulets.

About a league and a half to the north-west of the river *Grammana*, is the *Cabo Blanco*, or *White Cape*, and three leagues from thence to the north-west, the cape of *Parayba*, being a long point of land, with a large adjacent bay. The whole coast from *Pomerello* to the cape of *Parayba*, is cover'd with reefs or rocks, which lying for the most part about half a league from the shore, and the water between them being generally very smooth, affords an easy passage to barges, even in tempestuous weather; when it is almost impossible for ships to pass without the rocks, by reason of the violence of the current from the northern and the southern winds, which blow there continually.

Three leagues within the mouth of the river *Goyana* is a town of the same name, where is kept the court of judicature of this captainship. There are five or six sugar-mills thereabouts, situated upon the banks of the river, for the more commodious transportation of sugar in barges to *Pernambuco*. This country produces likewise brasil-wood, ginger, cotton, and *Indian* nuts; the people called *Peiguaves* inhabit here; tho' this whole tract of land, as far as *Cabo Blanco*, is not very populous, having only a few villages, inhabited by the *Brazilians*.

The isle of *Tamarika* has several landing places on the river-side, the chiefest are: *Os Markos* and *Pedreiros*, where the river is narrowest; *Tapasma* and *Kamboa* of *Domingos Rebeiro*; the great *Makqueira* and

The pass near the north-entrance of *To-*  
*powa*, and the island *Taposoka*, where with  
one single ship you may defend the pas-  
sage from the rivers *Tujukapape* and *Masse-*  
*vandaku*, as likewise from the sea. For the  
rest, the shore all along the river being  
very marshy and full of *Manga* trees, is  
of a very difficult access. The shore to-  
wards the sea-side is very flat, but woody,  
which together with the sands, that are at  
some distance in the sea, makes the ap-  
proach of ships very dangerous on that  
side. Formerly the court of judicature of  
the *captainship* was kept in this island, but  
was afterwards transferred from thence, as  
we told you before, to the Town of *Go-*  
*yana* and *Kapivaribi* on the continent, be-  
cause these places were both more popu-  
lous, and more sugar-mills were built there-  
abouts, the ground being much better here  
than in the island. In my time there were  
five judges belonging to this court, three  
of which lived at *Goyana*, and the other  
two in the isle of *Itamarika*. However,  
this court was afterwards likewise remov-  
ed from *Goyana*. In the year 1641, Mr.  
*Peter Pas* was director of the *captainship* of  
*Itamarika* for the *West-India* company, and  
captain *Sluiter* commander in chief over  
the soldiers.

This *captainship* has derived its name  
from the capital city, which has borrow'd  
hers of the river *Parayba*, upon which it  
is situate. It is one of the most northerly  
*captainships*, about five leagues distant from  
the sea. It was formerly in the possession  
of the *French*, who were 1585, chased from  
thence and several other harbours, by the  
*Portuguese* general *Martin Leytan*.

Five leagues upwards the river *Parayba*,  
is a city founded by the *Portuguese*, and  
after *Philip* king of Spain, called *Filippen*  
and *Nossa Senhora de nives*, otherwise *Pa-*  
*rayba*, from the river *Parayba*; which name  
was by the *Dutch*, after they had in No-  
vember 1633, conquered the whole *cap-*  
*tainship*, changed into that of *Frederick's*  
*Town*, after *Frederick* Henry prince of *O-*  
*range*. This city had been but lately built  
by the *Portuguese*, and had several stately  
houses with marble pillars, the rest being  
only of stone. Here is kept the court of  
judicature of this *captainship*. Before the  
time of the rebellion of the *Portuguese*,  
this place was inhabited as well by the  
*Portuguese* as *Dutch*, being much frequen-  
ted by the inhabitants of the circumjacent  
country, was used to exchange their su-  
gar for what other commodities they stood  
in need of, which was afterwards from  
thence transported to other places.

Within the mouth of the river *Parayba*, 1643.  
were three very considerable forts. One  
on the fourth-point, by the *Portuguese* cal-  
led *Catharine*, but by count *Maurice*, after-  
wards named *Margaret*, after his Sister. It  
was defended with five goodly battions,  
and a hornwork without.

The fort called *St. Antonio*, by the *Por-*  
*tuguese*, was built upon a small island,  
which by a narrow breach was separated  
from the north-point. This is only the  
remainder of a large four square fort, for-  
merly erected by the *Portuguese*, which  
was afterwards rased by the *Dutch*, part  
of it having been wash'd away by the ri-  
ver. It is surrounded with palisadoes and  
a good ditch, supplied with water from  
the beforenamed branch of the river: The  
Walls are very strong, and upon a battary  
are mounted six iron pieces of cannon. It  
may be defended by the cannon both from  
the city of *Parayba*, and from the fort *Mar-*  
*garet*, lying just opposite to it on the  
south-side, which is the reason it was al-  
ways but carelessly guarded by the *Por-*  
*tuguese*.

The third fort lies upon a triangular  
island, called *Restinga*, not far from thence,  
more upwards the river. It was strength-  
ened with palisadoes, and upon the batte-  
ries were mounted five brass, and as many  
iron pieces of cannon.

The *captainship* of *Parayba* is watered  
and divided by two considerable rivers, viz,  
the *Parayba* and *Mongoapa*, otherwise call'd  
*St. Domingo*. The great river of *Parayba* *The river*  
lies under the 6<sup>th</sup> deg. 24 min. four leagues *Parayba*.  
to the north of *Cabo Blanco*, and discharges  
itself in two branches into the Sea, being  
separated by a large sand-bank: One is  
called the northern, and the other the  
southern entrance. From the last extends  
a rocky-ridge as far *Cabo Blanco*, and with-  
in the river lies a sand-bank quite cross to  
the fort *Margaret*. This river is very  
shallow during the summer time, but in  
the winter season, the waters rise to that  
height that they overflow all the adjacent  
countray, sometimes to the great loss of  
men and cattle.

Two leagues beyond this river to the  
north, is a bay which affords a very safe  
station to the largest ships. It is by the  
*Portuguese* called *Porto Lucena*, and by the *Porto*  
*Dutch* the *Red-Land*, the grounds being *Lucena*.  
red hereabouts. There is very good an-  
chorage here at five and six fathom water,  
and the country near it affords very good  
fresh water; which is the reason why the  
*Dutch* ships bound for *Holland* from the  
*Receif*, used to stay for one another com-  
ing in this bay, and to provide themselves  
with fresh water.

Half

1643.  
River  
Mongoa-  
pa.

Half a league further to the north, under 6 deg. 34 min. the river *Mongopa*, or *Mongoanawapy*, exonerates it self into the sea: This river is much larger towards its source than at the mouth; the banks on both sides being full of briers, bushes and *Munga* trees. Before its entrance lies a *Recess*, and at the very mouth two dangerous sand-banks; it has three fathom water at low tide.

About two small leagues to the north of the river *Mongopa*, is a bay called by the Portuguese *Bahia de Treycano*, or *Treafon*, where, at about a league distant from the shore, is eleven or twelve fathom water. Five leagues to the north of this bay, you meet with the river *Barra Conguon* or *Konayo*, which is scarce passable for Yatches. About a league and a half from thence is large bay of about two leagues in length, called *Pernambuko*; and five leagues beyond it to the north, the river *Jan de Sta*, or *Efftan*.

The natives of *Parayba* inhabit about seven villages, the chiefest of which is call'd *Pinda Una*, which in 1634, contained about fifteen hundred inhabitants, where each of the others had scarce three hundred; each of these comprehending not above five or six very long buildings, with a great many doors, but very small ones.

The chief commodities of this captainship are sugar, brasil-wood, tobacco, hides, cotton, and such like. The sugar-reeds did bear extremely well, because they were transplanted into fresh grounds. Whilst the district of *Parayba* was under our jurisdiction, there were above one and twenty sugar-mills on both sides of the banks of the river, eighteen of which sent away every year four thousand chests of sugar. Near the river-side, the country is low and plain, but not far from thence rises by degrees, and affords a very agreeable variety of hills and valleys. The flat country, which is also the most fertile, is distinguished into several divisions, some of which have borrow'd their names from small rivers which run thro' them; as for instance, *Gramamma*, *Tapoa*, *Tibery*, *Ingeby*, *Monguappe*, *Incery*, *Kamaratuba*, and several more. All those countries are extremely fertile, occasion'd by the overflowing of the river *Parayba*. Their products are, sugar, barley, turky-wheat, potatoes, ananas, coco-nuts, melons, oranges, citrons, bananas, pakovas, markomas, cucumbers, and all other necessaries for the sustenance of men and beasts. They have here a kind of wild pears, called kajous, which are very juicy and well-tasted; within is a certain bean or small nut, the rind of which is bitter, but the kernel sweet,

It is fertile.

if roasted in the ashes. The pear is very cooling, but the nut has a contrary quality.

Towards the end of November 1634, the Dutch undertook the expedition against *Parayba*, their forces being embarked in thirty two ships under the command of colonel *Schoppe*, *Artisjeski*, *Hinderfon*, *Stachouwer* and *Carpentier*. The whole fleet was divided into two squadrons, the first consisted of one and twenty ships, in which were nineteen hundred and forty five men, the other of eleven yachts, with four hundred and nine men. *Schoppe* was the first that landed six hundred men, and advanced towards the enemy, who betook themselves to their heels, leaving their arms and cloaths behind them; *Anthony Albuquerque* their general, himself scarce escaping their hands. In the mean while, the rest being likewise got a shore, three companies, under the conduct of *Guifer Ley*, marched directly to the fort of *Margaret*, and intrencht himself near the fort, whilst *Schoppe* kept all along the shore, and *Artisjeski*, posted himself on the right-side, in sight of the garrison: At the same time Mr. *Lichtbart* attack'd the fort in the small island *Restinga*, which he took by force, and put the garrison to the sword. By this time *Schoppe* had rais'd a battery against the fort, from whence he so freely gall'd the besieged, that their commander *Simon d'Albuquerque* surrendred the place. Hereupon the fort of *St. Antonio* was summon'd to surrender, *Maglianes* the governor desired three days delay, which being denied, he march'd away secretly by night, leaving the place to *Lichtbart*, who found there five great brass pieces, and nineteen iron pieces of cannon.

The same night our forces march'd towards the city of *Parayba*, being sixteen hundred strong, and having pass'd a small branch of the river called *Tambra Grande*, made themselves masters of it without any opposition: The Spanish general *Baniola*, who commanded there with two hundred and fifty men only, having left the place before, and being retired to *Goyana*, after he had either sunk or nail'd up the cannon, set fire to three ships and two warehouses, in which were consumed three thousand chest with sugar. The fort of *St. Catharine* being much decay'd, was order'd by count *Maurice* to be repaired, and the ditch to be enlarged and deepen'd; giving it the name of *Margaret*, after his Sister. The fort of *St. Antonio* was rais'd, for the greatest part, there being only one bulwark left for the defence of the north-point of the river. The fort *Restingas* was order'd to be surrounded with new palisades

does, and the convent of *Parayba* fortified with a wall and outwork; and the command thereof given to *Elias Markman*, together with the government of the whole captainship.

The captainship of *Potigi*, or *Potingi* or *Poteingi*, is otherwise, by the Portuguese, called *Rio Grande*, from a river of the same Name: The Dutch call it *Norib-Brasil*, in respect of the more southern captainships of *Brasil*. It borders to the south upon *Parayba*, and to the north upon the captainship of *Siara*; tho' the Portuguese geographers extended its bounds as far as the illad *Maranbaon*.

The French were once masters of this captainship, 'till 1597, they were chased from thence by the Spanish commander, *Feliciano Creza de Karvalalho*. It has four divisions, named after so many rivers, that run through them; viz. *Kunbao*, *Goyana*, *Mumpobu* and *Potegy*. And tho' this district has been much neglected by the Portuguese, yet does it produce plenty of wild-fowl and fish, which are so luscious, that they commonly eat them only with lemon-juice or vinegar, without oil. There is an incredible number of fish in the lake *Goraires*; besides which, abundance of *Farinha* is planted here. This part of the country stood us in good stead during the late rebellion of the Portuguese, our garrisons in *Parayba*, and other places, being supplied from thence with good store of flesh and fish.

River Rio  
Grande.

Above the river *Rio Grande*, is a town of no great moment, call'd *Amsterdam*; the inhabitants live by planting *Farinha* and *Tobacco*, and fishing. Higher up in the country live some *Moradores* or husbandmen, who cultivate the grounds; but on the north-side of *Rio Grande* are but few inhabitants.

The river *Rio Grande*, i. e. the Great-river, is so called by the Portuguese from its bigness, but by the *Brasilians*, *Potigi* or *Poteingi*. The mouth of this river lies under 50 deg. 42 min. southern latitude, three leagues from *Punto Negro*, coming from the west-side of the continent. It disembogues four leagues above the fort *Keulen*, called by the Portuguese, *Tres Reyes*: It bears ships of great burthen; but the river *Kunbao* in the same captainship is only navigable with barges and yachts. The bays of this captainship are, *Babia Formosa*, *Punto Negro*, *Ponto de Pisas*, and the Bay of *Marin Tussen*. The Bay of *Ginapabo* lies beyond *Rio Grande* to the north; and beyond that a river call'd *Gnasavi*, upon which, near the mouth lies the village *Atape Wappa*. Near to the north you meet with the river *Siria Afixui*; and near the village of *Natal*, and the fort of

VOL. II.

*Tres Reyes*, passes a river called the *Crofs-River*, which arises out of a small lake in *Rio Grande*. Over against the same fort, a fresh river falls into the great river, betwixt two land-banks, and not far from thence another salt-water river.

The fort *Keulen* was four-square, built upon a rock or point of a *Reccif*, at some distance from the shore, at the mouth of the river *Reccif*; being surrounded with water, as oft as it's flowing water, so that at high tide there is no coming at it but with boats. In the midst of this fort is a small chappel, where in 1645, and 1646, our people found a wall about a foot and a half wide on the top, but at the bottom three feet, cut within a rock, which brings fresh supplies of good and sweet water every tide; with an ordinary tide two hundred and twenty five, and at spring-tide about three hundred and fifty quarts; which is more than sufficient for the use of the garrison, in case of siege. The fort is built of a square stone; being towards the shore defended with two half bastions, in form of hornworks. In the year 1646, there was an artillery of twenty nine, as well brass as iron pieces of cannon in the place, and provided with a good under-vault, and convenient lodgments for the soldiers.

This fort was in 1633, taken by the Dutch, under the command of *Matthias van Keulen*, one of the governors of the company, who being assisted by several noted captains, viz. *Byma*, *Klo-penburg*, *Lichtbart*, *Garlzman* and *Mansfelt van Keulen*, set sail thither with eight hundred and eight men, embarked in four ships and seven yachts, and made himself master of it, and the whole captainship at the same time; since which it changed its name *Tres Reyes*, into that of *A. Alen*, from the commander in chief of this expedition.

The *Tapoyers* (or mountaineers) use commonly twice a year, especially when the dry season puts them in want of fresh water, to make an inroad into this captainship; there being a constant enmity betwixt them and the Portuguese. It happen'd in July 1645, that these *Tapoyers* being advertised that the Portuguese intended to revolt from us, and had actually begun the same in *Pernambuko*, did, under the conduct of one of their leaders, called *Jacob Rabbi*, after several provocations given them by the Portuguese, make an incursion into *Kunbao*, where they killed thirty six Persons in a sugar-mill belonging to one *Gonsalvo d'Oliveira*. From thence they marched to a certain place, where the Portuguese had cast up a line for their defence, which they made themselves masters of, and put

1643. the *Portuguese* to the sword. The *Brasilians* told us, that this had been done in requital of what had been done to some of those mountaineers by one *Andrew Vidal* in *Serinbaim*, after quarter given them before, of which we shall say more hereafter. Since which time, the *Portuguese* have laid this tract desolate, which the *Dutch* once had a mind to re-people, and to put it in the same condition as the *Portuguese* had possess'd it, but for want of people that design was vain to be laid aside.

*Siara*. The captainship of *Siara* is one of the most northerly districts of *Brasil*, bordering upon *Maranbaou* to the north upon the river *Siara*. It is of no great extent, its whole compass being not above ten or twelve leagues.

The river *Siara*, which rises deep in the continent, disembogues about seven leagues and a half to the north of the bay *Mangorypa*, under 3 deg. 40 min. southern latitude.

The native inhabitants of this captainship, according to the report of those that have frequently visited it, are very large of stature, with ugly features, long hair and black skin; except the space betwixt the eyes and mouth. They have holes in their ears, which hang downwards upon the shoulders; some make holes in their lips, some in their noses, in which they wear stones as an ornament. Their food is *Farinba*, wild-fowls, fish and fruit. They drink most water, but make likewise a certain liquor out of *Farinba*; and of late began to be used to drink good store of brandy, tho' it was expressly forbidden to bring it into the villages, to keep them from the excessive use of strong liquors. The country produces sugar-reeds, chrystal, cotton, pearls, salt, and several other commodities. Ambergrease is also found on the sea-shore.

The inland part of the country was in 1630, governed by one of their own kings, call'd *Algodoi*; in some respect tributary to the *Portuguese*, who had built a fort upon the river *Siara*, and made themselves masters of the whole sea-coast thereabouts; notwithstanding which they were in continual broils with one another, 'till 1638, this fort and the whole country was taken by the *Dutch* from the *Portuguese*, in the following manner.

Count *Maurice* and the council, being solicited by the natives of that country, to make themselves masters of the *Portuguese* fort on that side, and to deliver them from the oppression they lay under at that time, they offering their assistance, and giving two young lads of their best families, as pledges of their fidelity, this expedition was resolved upon. The chief

command over the Troops design'd for this exploit, was conferr'd upon colonel *John Garfman*, a man of more than ordinary conduct in martial affairs, tho' as the case then stood, this enterprize was not likely to meet with any considerable difficulties; being assured of the assistance of the *Brasilians*, who bore an old hatred to the *Portuguese*, and were acquainted with the strength and condition both of their forces and places. *Garfman* being provided with ships, men, ammunition, and all other necessaries requisite for such an expedition, set sail towards the river *Siara*; where being met by the *Algodoi*, or king, with white ensigns in token of peace; and having landed his men, two hundred of the natives joined with them. With those he marched directly to the fort, which after a brave resistance from the *Portuguese*, who killed some of his men, he took by storm; and made most of the garrison prisoners, among whom were some commanders of note: They found good store of cannon and artillery in the place.

Since that time, the *Dutch* built a small fort upon the *Siara*, unto which they gave likewise the name of *Siara*, which was provided with a garrison of betwixt thirty and forty soldiers only; not so much for the defence of the country, as to maintain a good correspondency with the *Brasilians*, who being very numerous in those parts, might do us considerable service in time of war. It was upon this consideration, that the great council always commanded their officers, sent thither, to cultivate a good understanding with them; and at several times sent them some small presents, which, however proved ineffectual in the end, for in 1644, they attack'd and kill'd several of our men at *Komesay*, (a place about thirty leagues from *Siara*) as we shall hear anon.

For the *Brasilians* being, in 1641, increased to such a number in *Siara*, that the villages thereabouts were not able to contain them without great inconvenience, whereas the district of *Rio Grande* was almost destitute of inhabitants, and consequently not in a condition to oppose an enemy; one *Andrew Ulijs* propos'd to the great council, to build a village in *Rio Grande*, for the use of such as intended to settle there out of *Siara*, desiring to be constituted chief of the said village. Count *Maurice* and the great council, being informed of the inclinations of those *Siara*, who were willing to settle in *Rio Grande*, their ancient place of abode, and considering the benefit that was likely to accrue to the company, from the settlement of those *Brasilians*, so near at hand, granted *Ulijs*'s request, wishing him to bring thither

1643. thither as many of the *Brasilians* of *Siara* as he thought convenient, for the compass of a village of which he was made chief or captain. Things being thus settled, they chose, with the approbation of our directors, certain chiefs or heads out of the most ancient families of each division, called *Residors* by the *Portuguese*, and certain judges; as for instance in *Goyana*, *Domingoi*, *Fernandes*, and *Karapeva*; in *Parayba*, *Peter Potts*; and in *Rio Grande*, *Antonio Perapeva*. Notwithstanding all this, the *Brasilians* of *Siara* revolted against the *Dutch* in 1644. surprized the garrison in the fort, which they razed, and killed the commander in chief, *Gideon Morritz*, with the whole garrison, besides all the women belonging to the salt-pits near the river *Upanemna*, who were all cut in pieces by these *Barbarians*.

A certain master of a ship, with a captain, lieutenant, and some soldiers, who happened to come ashore in a boat to fetch some fresh provisions, being ignorant of their treachery, were also put to the slaughter, three seamen having the good fortune to escape with their lives into the wood.

Some laid the cause of this rebellion at the door of the *Portuguese* and *Brasilians* of *Maranbaon*, bordering upon them; but if we search into the true source of this evil, it must be attributed to the miscarriage of our own officers, who by their hard usage, had forced the inhabitants to revenge themselves for the injuries received at their hands.

Thus much concerning the *Captains/ships* of the *Dutch Brasil*; we will in the next place give you an account of all the memorable transactions that happened betwixt the *Dutch* and *Portuguese* in *Brasil* during our stay there; after I have represented to you the excellency and convenient situation of this country, together with the ecclesiastical estate of the *Dutch Brasil*.

excl.  
ary of  
null.

*Brasil* is a country excellently well qualified by nature for the producing of all things, which are generally found in the *West-Indies*, under or near the same climate; except, that hitherto no gold or silver mines have been discovered here worth taking notice of. But next to gold and silver, the sugar claims the precedence here before all other commodities. Among all the harbours and places of the *West-Indies*, there is not one that can compare with *Brasil*, either for the product, or convenience of transportation of sugar; the whole coast of *Brasil* being full of small rivers, which flowing through the adjacent valleys, disembogue in the sea; from whence the sugar-mills built in the

1643. valleys reap the benefit of saving vast charges, which else must be bestowed upon labourers and carriages; whereas these rivers drive the mills, serve for the transportation of sugar to other places, and furnish them at an easy rate with what commodities they stand in need of; all which conveniences, as they are not to be met with in any other place of the *West-Indies*; so, no sugar-mills could be erected there with any prospect of profit. The exportation of sugar from *Brasil* into *Europe* and *Africa*, is likewise performed with much more ease than from any other places in the *West-Indies*; for the situation of *Brasil*, (being the most eastern part of all *America*) is such, as could not be more conveniently contrived by human art or nature for the transportation of so general and agreeable a commodity as sugar, into all the other parts of the world; considering those two excellencies of *Brasil*, together with its vast extent, it is most certain, that, provided it were well peopled, it might command both the *Norib* and *Ethiopian* seas, and spread its commerce over all parts of the world; nay, it might extend its conquests both to the east and west, or at least establish factories there for the convenience of traffick. To prove which, it is to be observed:

That all *East-India* ships, both going and coming, must pass by the coast of *Brasil*; and as those ships in their voyages thither, are often forced to touch upon this coast, so in their return, nothing could be more commodious for them, than to be supplied with fresh provisions here. From *Brasil* you may sail in fourteen days to the *Caribbee* islands, and in the same time, or a little longer, to *Sierra Leona* on the coast of *Guinea*. It is impossible to enter deep into the great south sea, (whereabouts a great part of the terrestrial globe remains as yet undiscovered) unless you take in fresh provisions and firing in *Brasil*, or expose yourself to the greatest hazards imaginable in so long a voyage, as is sufficiently evident from the journals of *Oliver Van North*, *Spilbergen*, *le Maire*, and *John P'Heremite*. And experience has taught us, since *Mr. Brewster's* voyage to *Chili*, how easy the passage is betwixt *Brasil* and the south sea; for he lost not so much as one ship out of four, and very few died in the whole voyage.

*Brasil* enjoys likewise the advantage of a very wholesome climate; for tho' it lies betwixt the equinoctial line and the *Tropic of Capricorn*, and consequently is subject to burning heats, yet are the same much allayed by the winds, that blow out of the east from the sea, their free passage being

The whol-  
some-ness of  
its climate.

1643. being not interrupted by any mountains or islands; which is the reason, that in *Brasil* the same distempers are rarely to be met with which reign so frequently in *Angola*, *Guinea*, *St. Thomas*, and several other places, where the east winds cannot afford them the same advantage. A plague is a thing unknown in *Brasil*, in which it excels all other countries; tho' they are not free from continual putrid fevers, caused by the hot and moist air, and the excessive use of raw fruits.

Those that are bound for the coast of *Brasil* ought to have a special regard to the season of the year, which regulates the winds and stream thereabouts; and to be very careful to sail above the harbour whither they are bound; for if they miss and come below it, they lose their aim, and must stay till the next turn of the wind and stream. For it is observable, that on the coast of *Brasil*, the stream runs from *February* till past *July* constantly northerly, during which time there is no passing from the north to the south; but after those months are past the stream turns, and from the beginning of *September* to the latter end of *November*, runs as violently to the south as it did to the north before, and consequently there is no sailing from the north to the south, no more than before from the south to the north. The winds here turn with the stream; and at the beginning of *March* blow south-south-east, and south-east. And like as the stream changes its current till *September*, so the winds continue in the east, and blow till that time out of the east-south-east. For there are but two winds that reign along this coast, viz. the south-east and north-east winds; according to which ships must regulate their course here.

The ecclesiastical state of the *Dutch Brasil* was in my time thus ordered:

Before the insurrection of the *Portuguese*, there were to the south of the *Receif* five protestant churches; viz. in *Rio St. Francisco*, *Porto Calvo*, *Serinbaim*, the *Cape St. Austin*, and *St. Anthony*; though these were seldom altogether provided with ministers, because that some or other of them returned into *Holland*, after their limited time was expired. In the isle *Tamarika* and fort *Orange*, was at that time a minister, one *John Offringo*, who lived formerly in the town of *Schop*, and at the same time preached in the church of *Igarassu*, which was afterwards left by the *Dutch* and possess'd by the *Portuguese*. In *Rio Grande* preached one *John Theodora Polheim*. In *Parayba* were formerly two ministers, whilst the town of *Frederica* was as yet under the *Dutch* ju-

risdiction, but after the revolt of the *Portuguese* the place was left by the inhabitants, and *Henry Harman* was the only minister in those parts. In the *Receif*, *Maurice's* town, and the circumjacent forts, which contained about 400 protestants, *Dutch*, *French* and *English*, were three ministers, who preach'd in the *Dutch* tongue; *Nicholas Vogel*, *Peter Ongena*, and *Peter Grib*. Besides these there was a fourth called *Jodocus Alkett*, who formerly had been minister of the *Cape of St. Austin*, but now was employed either aboard our fleet, or upon any land expedition. The *French* church here remained without a minister, after the departure of *Joachim Solaer*, so that they were forced to be contented with reading of certain chapters of the bible, and prayers every *Sunday* morning. The *English* minister was one *Samuel Batcbelour*, who 1646 return'd likewise to *England*; about which time there were seven *Dutch* ministers in the *Dutch Brasil*. Our religious worship was both in its doctrine and practice regulated exactly according to the prescription of the synod of *Dort*, and peculiar care was taken for the education of the youth, for which purpose the catechism was every *Sunday* in the afternoon explained, both in the *Receif* and *Maurice's* town. Four times in the year the holy sacrament was administered, those who desired to be partakers of it, being obliged to make their confession before the church-council, or the ministers, who entered their names in a book; and if they came from abroad, published their names to the congregation; and in all other respects the church discipline was carefully observed. The church-council was composed of six church-wardens, besides the minister, these met duly once a week, and if any business of moment happen'd, such as choosing a minister, &c. they called the deacons, who were likewise six in number, to their assistance. Out of the deacons were every month chosen two, who (besides their ordinary business) were to visit the sick and wounded, and to provide for them if necessity required. They also took care of the orphans, to have them instructed in reading and writing. In the same manner the other churches were regulated, with this difference only, that the number of church-wardens and deacons was less, in proportion to the number of their respective congregations. Thus much of the ecclesiastical state.

Besides those living creatures we have given you a description of before, there are divers sorts of bees in *Brasil*, call'd *Eiruku's*, which settle upon the trees in a most surprizing manner. They are not unlike

unlike our bees, but somewhat smaller, and swarm chiefly among the woods. The *Brasilians* distinguish them into twelve different kinds; viz. *Amanakay-Miri*, *Amanakay-Peu*, *Aibu*, *Mumbuka*, *Pixuna*, *Urutueta*, *Tubuna*, *Tujuba*, *Eiruku*, *Eixu*, *Kubiara* and *Kurupireira*; the last of which are in no esteem among them.

The bees *Eiruku* are the largest of all, and produce a very good honey, though it is not commonly used. They make their combs within the hollowness of trees, which the *Brasilians* draw from thence by the means of a hollow pipe. The bees called *Eiku* and *Kopy*, are smaller and of a blackish colour; they make holes from without, in the bark of the trees, in the nature of bee-hives; and the comb within is all of white wax; this is now counted the best thing, but is not gathered in the same quantity as the former; besides that these bees sting very furiously. The bees *Tbanbuka* are likewise small, of a yellowish colour; they fix their combs on the top of the highest trees, and afford the best honey, which is in great quantities transported from hence to *Europe*, where it is sold very cheap. It is little inferior in goodness to the *European* honey, and of a good substance, transparent and of an agreeable scent. It is accounted very balsamick, corrects the sharp humours in the intestines, and especially in the kidneys, and provokes urine. They make of this honey metheglin, which is very strong, and will keep a great while: You may also make meat with this honey without boiling, only mix'd with some spring water and expos'd to the weather.

*Brasil* produces likewise several sorts of balsams; the best of which is called by the *Brasilians* *Kopaiba*, from the trees from whence it comes. *Kopaiba* is a very high wild tree, with an ash-coloured bark, which spreads at the top into many branches. The leaves are about half a foot long, sometimes larger, sometimes lesser, which in the midst of the branches stand opposite to one another, but on the end like other leaves. At the end of the great branches are abundance of lesser sprouts full of leaves, out of which comes forth the blossom, and afterwards berries, not unlike our laurel-berries. They are green at first, but as they ripen turn black and sweet. Within is a round hard stone, the kernel of which is white, but mealy, and not fit to be eaten. The berries ripen in *June*, when the *Brasilians* suck the juice out of them, and throw away the stone and skin. The apes take great delight in this fruit.

The oily and odoriferous balsam, in which this tree abounds, drops every full

VOL. II.

moon, provided you cut a slit through the bark as deep as to the pith, in such quantity, that in three hours time you may gather above twelve *Mengelu*. But if that does not drop immediately, the slit is made up with wax; and within fourteen days after, they are sure the balsam will come in great quantity. This tree does not grow so plentifully in the captainship of *Pernambuko*, as in the isle *Maranbaon*, from whence this balsam is transported into *Europe*. The balsam is hot in the second degree, of a thick oleaginous and resinous substance. It is very stomachic, and a good remedy against the cholick, occasioned by cold, externally applied to the affected parts; some few drops taken inwardly strengthen the bowels, and stop the overflowing in women, the looseness and involuntary emission of seed in men; against which distempers it likewise is used in clysters or by syringing. Thus far concerning the sole *Dutch Brasil*; we will now proceed to give you an account of what passed during our abode there.

In the year 1640, Mr. Henry Hamel, one of the directors of the *West-India* company for the chamber of *Amsterdam*, and Mr. Dirck Kodde Vander Burgh (both persons excellently well qualified for the management of the *Dutch Brasil*, and of great experience in affairs of commerce) were at the request of the council of nineteen, sent to *Brasil*, and arrived there on the 8<sup>th</sup> of *August*, the two preceding directors or counsellors, *Matthias Van Keulen* and *John Gijfeling*, resigned their places to them, and with them the chief management of the *Dutch Brasil*, under the government of *John Maurice* count *Nassau*.

At the time of their arrival in *Brasil*, there were under the jurisdiction of the states the following *Captainships*: *Pernambuko*, *Ilamarika* (unto which belongs *Goi-ana*) *Parayba*, *Rio Grande* and *Siara*, being the northern part of *Brasil*: The southern part, which contained the *Captainships* *Babia*, *Ileos*, *Porto seguro*, *Spirito Santo*, *Rio Janeiro* and *St. Vincent*, remained under the *Portuguese*, who inhabited the country as far as *Rio de Plate*. Not many months after the island of *Maranbaon* was joined with the *Dutch Brasil*, but the charges we were fain to be at to defend it against the *Portuguese*, those of *Para* and the natives, which over-balancing the profit the company was likely to reap from thence, it was thought most expedient to quit the same; which was done accordingly in the year 1644, or rather to confess the truth, by the combination of the *Portuguese*, those of *Grand Para* and the natives, we were forced to abandon it.

1643. Before the arrival of those new directors a fleet had been sent to the *Babia*, to land some men there, and to destroy all with fire and sword; which after they had put in execution, and returned to the *Receif*, the same fleet under the command of admiral *Jol* and *Cornelius Liebtart*, was by special command from the council of nineteen in *Holland* ordered to the *West-Indies*, to lay in wait for the *Spanish* plate fleet of *Terra firma* and new *Spain*; but they returned without doing any thing, 1640 in *December*, having lost four or five ships in this voyage. Colonel *Koën* was much about the same time sent with a body of soldiers into the captainship of *Rio Real*, to bridle the *Portuguese*, by making a diversion in their own territories; but those troops being but indifferently supplied with necessities in an enemies country, and forced to undergo great fatigues; they were so much weakened that it was thought advisable to recall them out of *Rio Real*, and to assign them quarters of refreshment in the garrisons. Major *Van Brande* had worse success than all the rest, for being sent abroad with a party to fetch in some cattle, was put to the rout, and he himself taken prisoner.

The Dutch military in their design upon the Spanish plate fleet.

In the mean while that our whole fleet was waiting for the *Spanish* plate fleet on the coast of *America*, and we consequently were not in a condition to undertake any thing at sea; our directors had all the reason in the world to fear, that the *Portuguese* would take this opportunity to revenge their loss, by destroying our sugar-mills, which made them leave no stone unturned to secure the *Dutch Brasil* and its inhabitants, against the attempts of the enemy: And considering that a great part of our security depended on the good inclinations of the *Portuguese* living among us, it was thought convenient to call an assembly of the chiefest *Portuguese* inhabitants of the three captainships of *Pernambuco*, *Ilmarika*, and *Parayba*, towards the latter end of *August*, to concert measures how to defend their sugar-mills and fields against the incursions of the enemy.

The most effectual means that could be pitched upon in this assembly were, to provide their forts with good garrisons on the borders, and to secure the sugar-mills, by putting a certain number of soldiers in or near them, for the security of the adjacent fields. This was put in execution accordingly, and the officers had strict charge to keep a watchful eye upon the least motion of the *Portuguese*, notwithstanding which it had not the desired effect; because those *Portuguese* who lived at a considerable distance from us, and near the enemies frontiers, durst not give timely notice

of their approach; besides that many among them having a constant hatred to our nation, did favour the enterprizes of those parties that burnt the sugar-fields and plundered the mills, served them sometimes for guides, and had their share in the booty; which obliged our people to be at a constant charge of a strong guard to conduct their goods, and defend them against any sudden attempts. Such an incursion was not long after made by the *Portuguese* into our territories. For in *November* the viceroy, the marquis of *Montelvano* sent two barges full of soldiers to burn our sugar-reeds in the plains, which they effected, but durst not go too far, or attempt any thing against our mills, for fear of the soldiers quartered thereabouts; who could not prevent their burning in the fields, as being done in the night time. The *Dutch* were the greatest losers by it, because they had generally the greatest share in those fields and mills, besides that the *Portuguese* spared those of their own country-men; all which brought a great damp upon trade, every one being afraid to venture in any business, where he might lose all his substance in one night, and that perhaps by the hands of a single person, whereby the revenues of the company were greatly impaired, and their charges increased, being forced to maintain twenty or thirty soldiers for the defence of any considerable plantation or sugar-mills; which prevented them from bringing a sufficient body of men into the field, to make head against the enemy. This was the state of the *Dutch Brasil* towards the latter end of 1640.

The twenty-second of *December* in the same year, Mr. *Adrian van Ballestraete* arrived at the *Receif* from *Middleburg*, in the quality of director of *Brasil*, so that now the great council being complete, the best expedient to obviate all these difficulties, was judged to consist in our fleet; pursuant to this resolution, all our ships were ordered to the *Babia*, to make the enemy sensible that we were in a condition to be even with them, and thereby to facilitate the negotiation that was in hand, for the surceasing of burning on both sides. The council of nineteen having also sent express orders to cruise with some ships before *Rio Janeiro*, from whence the *Spanish* ships used generally to return into *Spain*, about the month of *May* or *June*, some of the biggest ships were ordered that way to intercept if possible the *Flota*, the rest being left near the *Babia*.

But whilst our commissioners were treating with the viceroy about the surceasing of burning and plundering, a certain *Portuguese*, *Paulo de Kunba* by name, committed

1643. unheard of cruelties, with murdering, plundering and burning, in the open country, which made count Maurice write the following letter to the viceroy.

Count Maurice's letter to the vice-roy.

Count Maurice's letter to the viceroy.

THE barbarities lately committed by Paulo de Kunha, with burning, murdering, and plundering in the open country, give me great reason to fear, that your last obliging letter was designed for a complement, without any reality. The confidence I had in your excellency's sincerity, made me recal our ships and forces from your territories, to take away all means of offence: But the long stay of our deputies affords great occasion of suspicion, that your intention is only to amuse us, which has obliged me to dispatch a vessel to let them know that in case the treaty is not brought to a conclusion, to return without delay, it being our intention that the said negotiation should not be continued longer. Your excellency will there dismiss them, together with our two hostages, as we are resolved to send back to you Martin Ferreira, left with us as hostage from your excellency, his companion being dead of late.

Hereby, by the mediation of the clergy living under our jurisdiction, but especially by the indefatigable care of Dirck Kodde Vander Burgh, who was sent thither for that purpose, the treaty was brought to a happy conclusion in February 1641, by virtue of which, all destruction by burning and plundering were to cease on both sides; which being published by proclamation, the Portuguese were ordered to quit our dominions, whereby we reapt this advantage, that now we might turn all our forces where we found it most expedient.

The treaty against burning concluded.

In June 1641, count Maurice and the great council received advice of the ten years truce concluded betwixt the states of Holland and the king of Portugal, with all the articles thereunto belonging, which were published by proclamation in all our captainships, and all acts of hostilities ceased on both sides; the Dutch living in good understanding with the inhabitants of the Bahia, giving them all the demonstrations of friendship, sufficient to convince the Portuguese that they had not the least reason to fear any infraction on their side.

The great council being willing to improve this interval of peace for the advancement of traffick, and the benefit of the company, gave all imaginable encouragement, in proportion to the circumstances of time and place, to all the inhabitants of what nation soever, for the cultivating the lands, which had this good effect, that the masters of the sugar-mills rebuilt their

mills, and the husbandmen betook themselves with so much eagerness to the cultivating of their sugar-fields, that they borrowed considerable sums, upon a prospect of sure gain, which would over pay their debts; as without question it would have done in a short time, if by the treachery of the Portuguese they had not been disappointed in their hopes. The next thing to be taken in hand, was to make such wholesome laws as were thought most expedient for the establishment and increase of commerce, both in the Recife and other places, and to improve the domains and other revenues belonging to the company, during this time of truce.

Trade then began to flourish apace, so that some time after the truce, the merchants and factors sold more commodities than had ever been known either before or since. Many millions were dealt for in a little time, the merchants and factors being contented to sell to those who would pay some money in part, though there were buyers enough who would and could buy for ready cash.

The finances of the company in Brasil were in so good a state by the extraordinary care of the great council, that 1640 and 1641, they bought considerable quantities of sugar upon the publick account, which they sent to Holland. In the Recife and Maurice Town. we saw several goodly structures erected by the inhabitants, who lived in great plenty and magnificence, every one looking upon his debts as secure, and having a fair prospect to increase his riches, by the flourishing state of commerce and improvement of the lands.

The flourishing state of Brasil.

But this was of no long continuance, for in the beginning of 1643, things began to appear with a quite different face; for the magazines of the company being exhausted by several expeditions against Angola, &c. and having received no supplies in their stead out of Holland, as they used to do before, the great council was obliged to make use of what was due to the company, for the payment of the garrisons and other officers, and consequently to force their debtors to prompt payments.

Its decay.

For at the beginning of the government of the new directors, the company had a considerable naval force upon the coast of Brasil, their magazines were well provided with provision and ammunition, and they maintained a good number of soldiers. The great council of the Dutch Brasil relying upon their strength, did with consent of count Maurice, send in 1641, several fleets with soldiers to Spirito Santo, Rio de Janeiro, the isle of Maranhao, Angola, St. Thomas, and other places thereabouts, to attack

The Dutch ships ordered to the Bahia.

1643. tack the same, which succeeded according to expectation; but their magazines were greatly exhausted by those expeditions. Besides this, the merchants in *Holland* began to call upon their servants and factors for considerable sums of money, in return of what they had received from them; who being obliged to send all the money they could bring together from their creditors, to their masters in *Holland*; this occasioned great scarcity of ready money, and consequently no small detriment in traffick, which continuing thus from time to time, there arose such a general scarcity of money, as is scarce to be imagined; many of the masters of the sugar-mills, that had no ready money to satisfy their debts at the appointed time, being forced to take up money upon credit, and to pay three or four *per cent per month*, which reduced many of them to such an extremity in a little time, that they were neither able to pay the principal nor interest.

Upon the arrival of the three new directors, or members of the great council in 1640, viz. *Henry Hamel, Kodde, and Bullestraete*, they found that the inhabitants, but especially the *Portuguese* of the *Dutch Brasil*, by buying of sugar-mills and plantations, as well as negroes and other commodities, had run themselves much in debt; having bought their negroes not only at three hundred pieces of eight *per head*, but also given most extravagant prices for all other sorts of commodities, and purchasing whole warehouses without making a just account how to be able to pay for them. This was done by the *Portuguese* in hopes of the good success of those great fleets they understood were equipping in *Spain*, to reduce *Brasil* under the king's obedience, which they supposed would free them from all their debts; which the factors not being aware of, and blinded with the prospect of vast profit, sold their goods to the *Portuguese* without reluctance. But the design of the *Portuguese* vanishing into smoke for that time, they were forced to pay; but new supplies of all sorts of commodities being sent out of *Holland*, they bought on a-fresh, heaping debts upon debts, till failing in their payments, their credit began also to fail with the merchants, who now began to urge for satisfaction of their debts. For the country traders being urged by the factors and merchants, who received those commodities from their correspondents in *Holland*, was obliged to call to an account the *Portuguese* unto whom he had sold the goods. And because the *Portuguese* had not bought those commodities from the *Dutch*, but with an intention never to pay for them, the country trader who was obliged to pay the merchants in the *Receif*, saw himself re-

duced to ruin, the *Portuguese* having not wherewithal to satisfy their debts.

Thus through the unwariness and mismanagement of those factors, whom the merchants in *Holland* had intrusted with their goods, such a confusion was introduced, as tended to the great detriment of their correspondents in *Holland*. All the business at that time lay among the lawyers, and in the courts of judicature, which considering the chargeableness of law-suits in *Brasil*, tended to their farther ruin; for when they had obtained sentence and execution against the debtors, the greatest difficulty was, how and which way to lay the execution; most of the *Portuguese* suing for protection from the regency, which if they could not obtain, they lived incognito; especially those who had no lands or effects, or if they had, it was no easy matter to find out where they were. Besides that, if the creditors executed their executions upon the lands, they were forced to be the buyers themselves, and to live in the country to manage the lands, a thing altogether inconvenient to the merchants, who had other business upon their hands in the *Receif*. Such as were cast into prison must be maintained there at the charge of the creditor, which in process of time amounted to such a sum, that they themselves were fain to solicit the releasement of their debtors, and to make the best composition with them they could.

Besides these inconveniences, there have happened of late several others, viz. a Mortality among the negroes. great mortality of the negroes and *Brasilians*, by a certain infectious distemper, incident to the natives, called *Bexigos*, resembling our small-pox in *Europe*. Most of these negroes were bought at the rate of three hundred pieces of eight, and consequently their loss drew after it the ruin of the planters, who also complained much of vermin, and several inundations that had done considerable damage to the sugar-fields. This confusion in traffick introduced no small broils among the inhabitants themselves, who in case of non-payment, threw one another in prison without mercy, and endeavoured to prevent one another by clandestine means, to get in their debts before the rest; offering considerable abatements and rewards to such as would undertake surrender or transport their effects; and those divisions were not a little fomented by some ill minded persons, to the prejudice of the government; many of those, who either by unwariness or other mismanagement lost their debts, laying the fault thereof at the door of the regency and of the courts of justice, vainly imagining that what they had lost by their own neg-

left or want of care, should be made good by the publick purse; especially if it happened so, that the same persons were indebted to the company as well as private persons, there arise great contentions about the preference.

The debts of the company did also increase every day, which at last amounted to some millions: For the directors, which before the year 1640 had the management of affairs in *Brasil*, did sell most of the confiscated estates, sugar-mills, and merchandizes, as well as the negroes bought on account of the company in *Africa*, upon credit, so that their books were filled with debts, but their cash empty of money. The succeeding members of the great council, Mr. Hamel, Bulleste, and Kodelle, did leave no stone unturned to correct this custom, and to sell their commodities for ready money, or otherwise to exchange them for sugars, thereby to ease the company in the great charge they were forced to be at in their several expeditions; and it is certain, that in 1640, 1641, and 1642, they sent such vast cargoes of sugar to *Holland*, that the like had never been known before in *Brasil*. Notwithstanding which, by the vast numbers of negroes that were imported, after our conquest of *Angola*, the company fell more and more in debt, by reason their debtors were very dilatory in their payments. The council of nineteen sent express orders to remedy this evil, by selling the negroes for ready money, or exchanging them for sugar; but this could not be put in practice, because there was no body who would buy upon those conditions, so that the price of the negroes falling daily lower and lower, and these being a great burden to the company, and subject to distempers and mortality, this order was fain to be revoked, unless they would see the negroe trade dwindle away into nothing; for the inhabitants being for the most part such as had bestowed most part of their substance in their sugar-mills, plantations, and negroes, they could not pay ready money, but were forced to deal upon credit, till they could reap the benefit of their labour.

The members of the great council did therefore take all imaginable care to call upon their debtors exactly at the time of their sugar-harvest, and ordered their officers in the country to seize upon some of them on account of the company.

From hence arose nothing but law-suits, sentences, executions, and imprisonments: The members of the great council thinking it not below their station, to go sometimes in person into the country to promote the payment of the debts owing to the company. But this had a contrary effect, for the

merchants and factors began to be extremely dissatisfied, that the company should seize upon the sugar in the mills, without letting them who were creditors as well as they, have their share in them. This occasioned not only murmurings, but also threats, and complaints to the council of nineteen, where they misrepresented these transactions under the worst colours they could, hoping thereby to deter the officers of the company from doing their duty. The great council having taken the matter into mature deliberation, and fearing, not without reason, that in time it might occasion a general discontent, they left no stone unturned to satisfy the minds of the people, by finding out means to have their debts satisfied. It was propoised by several understanding persons, that the company should undertake to satisfy the debts of private persons, either by way of payment or exchange; in lieu of which the masters of the sugar-mills should surrender to the company every year, the whole product of these mills, till they had satisfied all their debts: And to make the same the more effectual, for the general benefit as well of the company and sugar-mills, as the merchants and factors, it was agreed, that certain articles should be agreed upon for that purpose; the greatest advantage the company pretended to reap by it being, that they should have a fair opportunity of recovering some of their debts, which were given over for lost. These agreements were wonderfully pleasing to the council of nineteen, who in the year 1645, on the 16<sup>th</sup> of June, sent their approbation of a second agreement made with one George Homo Pinto (which indeed was of as great consequence as all the other contracts together) to the great council as follows:

*Approbation of the Agreement.*

Concerning the agreement by you (meaning the council) on the 14<sup>th</sup> of December last, made with George Homo Pinto, we have had several debates, which we find to have been brought to a conclusion, with the previous advice and approbation of the councillors of justice and of the finances, so that both in respect of the same, and of the great benefit that is likely to accrue thereby to the company, we have thought fit to approve of the said Agreement; recommending to you the execution of it, with the same zeal as you have shewn your conduct and circumspection in the whole management of these contracts.

That these agreements were by all people, that had any knowledge of those affairs, looked upon as greatly for the interest

1643. rest of the company, is most evident from hence, that several other merchants that were sensible of this advantage, made agreements with their debtors much upon the same terms as the company had done; which that it may be put beyond all doubt, we will give you a copy of one of those agreements, from whence it will plainly appear with how much circumspection the council proceeded in this matter, betwixt the company, the masters of the sugar-mills and their debtors.

an agree-  
ment.*

**M**R. Peter John Bas, and John van Ratfield, counsellors of justice of Brasil, by special commission from the West-India company, and John van Walbeek, assessor of the great council, did appear before us on one side; and Manuel Fernando Cruz, Sieur de Ingenho Tapicura, in behalf of himself and his heirs, as also Benjamin de Pina for ten thousand six hundred guilders; Isaac de Costa for thirteen thousand one hundred and eight; Joseph Abenacar for four hundred ninety; Simon de Vale for three hundred twenty-five; Gasper Francisco and David Brandao for eleven hundred thirty-three; Abraham de Tovaer for one thousand; John Parente for three hundred and fifty; John Mendonça de Moe-ribeca for four thousand three hundred fifty; James Gabay for one thousand and fifty; More de Leon for six hundred; Balthazar de Fonseca for six hundred; Simon Gomes de Lisboa for five thousand nine hundred ten; Bartholomew Rodrigues for nine hundred; and Daniel Cardoso for nine hundred and ten guilders; the whole amounting to forty thousand five hundred twenty-six guilders, being all creditors of the said Manuel Fernando Cruz, and for the most part debtors to the company on the other side, who profess and declare to have agreed among themselves, that the beforementioned Manuel Fernando Cruz, shall pay to the company the full sum of sixty thousand seven hundred ninety five guilders, viz. nineteen thousand two hundred sixty nine guilders upon his own account, being by him owing to the said company, and the remaining sum on the account of his creditors, which proportionably to their respective debts, ought to be discounted for with him by the said company, upon the following conditions.

I. That the whole debt is to be satisfied in the three next following years, the first payment to begin in January 1645, and if it happen, that in one year a less share be paid than in the other, the whole is to be made good in the last year.

II. That no discounts shall be entred in the books of the company, 'till after the payment

of the due proportion appointed for each respective term or time. 1643.

III. That the creditors of those with whom they have entred into articles of agreement, as well as the debtors of the company, shall not be discharged of their debts in the books of the company, but in case of failure or delay of payment, either of the whole sum or part thereof, all the respective appointed times, shall stand engaged and answerable, each for his respective debt, unless they give other security to the company; but those creditors who have no debts in the books of the company, shall have liberty to transfer other debts, or else to receive their share in two years time, either by assignments or in Negroes; but not in any commodities imported from abroad, or sugar to be exported, provided nevertheless that the articles of agreement be fulfilled, or otherwise the sum be put to their own account immediately, in which case they are to allow eighteen pound per cent. and nevertheless be liable to see the agreement put in execution.

IV. Those who are entred into articles of agreement shall be obliged to engage both their body and goods for the performance thereof, but especially to deliver an inventory of their personal estates, confirm'd by oath; besides which, they are to give such securities as shall be approved of by the great council; with renouncing the beneficium ordinis, divisionis & excusationis, as well for each respective payment at the appointed times, as the whole sum in general.

V. These before-mention'd securities are to be persons well-qualified, of good substance, not involv'd in debts, but especially in the company's; and shall be warranted by the magistrates of their respective places of abode.

VI. Publick notice is to be given to all persons, who have any bonds, bills, or accounts, or other engagements relating to the personal estates (which shall be named or specified) of such as are entred into those articles, that within the space of three weeks they are to produce the same, or else to be excluded from the benefit thereof, 'till after the expiration of the time mentioned and appointed in the said agreement.

VII. That he, who has engaged himself in such an agreement or contract, shall not be permitted to contract new debts, unless with the consent of the great council; otherwise the same to be void and null, of which publick notice shall be given. Neither shall be alienate any sugars by land as remains, under the penalty of restitution to be made with full interest and charges.

1643.

The creditors shall be obliged to surrender and renounce all their pretensions, engagements and actions to the company; neither shall they lay any claim upon that score of precedence or otherwise.

Whenever it shall be judged requisite, by the great council, to send a certain person to the ingenho of any person entered into such an agreement, for the better security of their debt, and the receiving and sending away the sugar, allotted to the company, he shall be obliged to find him with victuals and lodgings in his ingenho; but the company shall pay him for his pains.

Pursuant to which, the before named Manuel Fernando Cruz, with the advice and consent of his before-mentioned creditors, has obliged himself in general, and by these presents, obliges and engages his person and estate, both real and personal, without any reservation or exception; but especially the before-named Ingenho Tapicura, with all its appurtenances, according to the inventory thereunto affixed and confirmed by oath; which Ingenho Tapicura, he declares to be free from any pre-engagements, with all the grounds, sugar-fields, pasturages, woods, and other things thereunto belonging, viz. eight brass caldrons, ten tachos and ten parvos, besides several other copper vessels belonging to the said ingenho; twenty slaves belonging to the said ingenho, and Manuel Ferdinando Cruz, his house and sixty oxen. And for the better performance of this agreement, Senhor John de Mendose dwelling at Moiribeca, and Manuel Gomes des Lisboa, living in Moquiaxe, have, after certificates obtained from the magistrates of their respective dwelling-places, engaged themselves, and do by these presents engage themselves as securities for the whole debt, and as debtors for each and every part thereof, promising to indemnify the company of all actions, suits, or other pretensions which may be made against them on the account of any other creditors of the said Manuel Ferdinando Cruz, not mention'd or engaged in this agreement; as likewise, that no sugar shall be surreptitiously convey'd away or alienated: That in case of non-payment, the company shall be hereby fully empowered to recover their damages with interest and charges, upon their persons and estates; they renouncing by these presents all exceptions, ordins, divisions & excusationis, as likewise all other pretensions of privileges tending to the invalidity of this contract. The before-named creditors also, in general, and every one of them in particular, declare that they have given in a true account of all their respective pretensions upon the said Manuel Fernando Cruz, neither that they do demand any other sum or sums of him, but what have been specified there under their respective names; promising to be well satisfied

with what has been stipulated, and, if put in execution accordingly, to renounce all actions or private engagements, discontents or preference in favour of the company; and that in case of non-payment they will be obliged to make good and restore to the said company, not only each particular sum paid at certain limited times, but also the whole, in the same manner, as if the said agreement had never been made betwixt them; leaving it to the discretion of the company, whether they will lay their actions against Manuel Fernando Cruz and his securities, or against themselves and their estates; under the condition they were in before the conclusion of this agreement; the benefit of actionem cessam being allowed them against the said Cruz and his securities, for the recovery of their just debts. In witness and confirmation of which we have granted these our letters, as usual in such cases, sealed with the ordinary seal of the court of justice, and signed by the secretary of the council. Translated in the Receit, 23<sup>d</sup> September 1644.

In the same manner all the other contracts were made and penn'd; the contents of which amounted in the whole to two million a hundred and twenty five thousand eight hundred and seven gilders, which were due from the farmers to the masters of the sugar-mills, and from those again to the company.

The chief, if not the only reason, why these agreements were resolved upon, was, (as we said before) the intolerable vexations and exactions put upon the masters of the sugar-mills by their creditors, who, unless these masters paid them at the rate of two or three per cent. interest per month, made immediate seizure of their negroes, oxen, coppers, and other necessities belonging to the sugar-mills; so that the masters of these sugar-mills being reduced to a necessity of paying such exorbitant exactions, or else to see themselves entirely ruined, began to defend their plantations and mills by force, so that things seemed to tend at that time to a general insurrection, if the same had not been prevented, by entering into those contracts; by which means the masters of the sugar-mills being freed from the oppressions of their creditors, and in lieu thereof now become debtors to the company, and time given them to employ their mills for the payment of their debts, at certain limited times, and that at the rate of one per cent. interest per month only, all pretensions and occasions of a revolt were thereby removed, at least for that time; the first term of payment being set out for a considerable time.

For what reason these agreements were made.

1643. To make this the more evident, these following heads deserve our particular observation: That the company and the merchants, being creditors of the masters of the sugar-mills, endeavouring at the same time to force them to the payment of their debts, by executions. This occasioned from the year 1647 to the time of the making of those contracts, such a confusion, as must needs have tended to the total destruction of the sugar-mills, and consequently of the merchants and company; which induced them to apply themselves to the great council, to find out some means, by way of discount, or otherwise, to put these debts into the company's hands.

The councillors of justice did not at first agree in all points to these proposals, but at their meeting on the 12<sup>th</sup> of August 1644, being better convinced of the matter, and that the company was sufficiently secured and benefited thereby, the next following day did not only approve of the same, but also were of opinion, that some things might be rather mitigated for the Advantage of the masters of mills and their creditors, than not to relieve them at this juncture; so that the conditions were the 10<sup>th</sup> of November 1644, agreed unto with the consent of the councillors of the court of justice and the finances.

Pursuant to these, the great council took care that publick notice should be given of these agreements made betwixt the company and certain private persons, by which every one was forewarned not to sell any thing upon credit to them, without the consent of the great council; and their creditors summoned to make good their debts within three weeks time, or else to be excluded from the benefit of the contract, 'till after the time therein limited was expired. From all which it is sufficiently demonstrable, with how little appearance of truth some have attempted to insinuate, that these contracts were prejudicial to the company, and had given no small occasion to the ensuing revolt of the *Portuguese*; when it is beyond all question, from what has been said before, that these were the only means to prevent those calamities, wherewith the masters of the sugar-mills, and the farmers or country planters, were over-whelmed all that time, who were forced to let their mills stand still, and leave the ground uncultivated; all which, as it tended to the utter destruction of the sugar-mills, so the company sustained an irreparable loss, viz. thirty eight pounds *per cent.* yearly in *Brasil*, and thirty seven pounds *per cent.* in *Holland*, which being seventy five pound *per cent.* did altogether arise from the use of the sugar-mills.

Besides this, there were not a few of those merchants that were creditors of the sugar-mills, that were considerably indebted to the company, who plading insolvency, by reason of the non-payment of their debtors, the company would have been considerable losers by them, unless by this way of discounting they had found means to recover those desperate debts. All which moved the great council to make a virtue of necessity, and with the advice of the masters of the sugar-mills and their creditors, and the approbation of the council of nineteen, to enter upon those articles; which could not be in any wise detrimental to the company; tho' some malicious persons have objected against them, that (supposing there had been no revolt) these masters would not in twenty years, nay, perhaps never have been in a condition to wrong the company, what they had laid out upon their account; when it is sufficiently known that the great council never paid one farthing of ready money for them on the account of the company; besides that for the satisfaction of the company, twenty five sugar-mills were engaged, which one with another, affording from two hundred and thirty to two hundred and fifty chests of sugar yearly; if the company had drawn but a hundred and forty or a hundred and fifty chests from each, the same would have amounted to four hundred and twenty thousand gilders; from whence it is evident, that not to include the sugar-mills, their coppers, oxen, and other Instruments thereunto belonging, the sum of two millions one hundred and twenty five thousand eight and sixteen gilders, being the total sum of the debt owing to the company by virtue of these contracts, might have been satisfied without much hazard; the *Portuguese* masters of the sugar-mills, being by this expedient left in the quiet possession of their mills, and eased from the oppressions of their creditors, and our hopes were not a little increased by the industry of the inhabitants of the country, who finding themselves now at ease, applied themselves with so much assiduity to the improvement of their plantations, for the better satisfying of their debts, that in 1645 there was such a fair prospect of a plentiful harvest of sugar, as had not been known in many years before.

But it seems as if the *Portuguese* out of an in-born hatred to our nation, who had conquered them, were resolved not to rest satisfied, 'till by underhand practices and plots they had undermined our government. Add to this, that many of them having involved themselves over head

1643. and ears in debt, and seeing no way to satisfy their creditors, were become desperate, and more forward to run the hazard of an open revolt (in hopes of assistance from Portugal) than to undergo the unavoidable necessities of poverty; which made some of them frankly tell our people afterwards, that in case they were disappointed in their hopes of succours from the *Babia*, they would seek for aid in Spain or Turkey.

Towards the latter end of the year 1642, there were rumours spread abroad of a Plot contrived by the Portuguese against the state when they were disarmed, and their arms brought into the magazines, which however they got again under some pretence or other afterwards, they living very quietly among us, for fear, as I suppose, of our garrisons, and that they were not then sufficiently assured of succours from the *Babia*. But it will not be amiss to trace the true origin of this revolt.

The 13<sup>th</sup> December 1642, one John Fernandes Vieira, alderman of Maurice's-Town, appeared in the great council, count Maurice being present, where he told them, that he had been informed by certain Jews, how he and his father-in-law Beringel were suspected in Holland, of having sent letters by a son of the said Beringel to the king of Portugal, tending to the detriment of the state. He did not deny to have sent a letter by the said person to the king of Portugal, but containing no more than a recommendation of the said Beringel's person, to help him him to some employment under the king: This he offered to prove by his copy, which being produced, there was found nothing material in it, but a congratulation to the king upon his accession to the crown, and a recommendation of the said Beringel; Vieira further proposed, that he thought it absolutely necessary, for the safety of his estate, to have the Portuguese disarmed, as likewise the captains de Campo, with those under their jurisdiction, the Negroes, *Brasilians*, *Mulatts* and *Mamaluks*.

There was also a letter sent by the council of nineteen, dated 1<sup>st</sup> June 1642, to count Maurice, containing in substance, that one John van North, who had served for fourteen months in the quality of a cadet in *Brasil*, had declared to them at Amsterdam, that he had been a servant in a sugar-mill belonging to John Fernandes Vieira, where after a stay of two months, he was entreated by Francisco Beringel Labrador, to go with his son Antonio Dandrado Beringel, as an interpreter to Holland, and from thence to Portugal; which upon great

promises he accepted of, and they set sail on board the Ship called the *Love* from *Brasil* for Zealand, and afterwards from *Ulfsteden* went to *Lisbon*. He said, that this Antonio Dandrado Beringel, after a familiar conversation of three weeks, had told him that he was sent with a letter sign'd by John Fernandes Vieira, Francisco Beringel, Bernardin Kartwailho, John Biferro and Lewis Bras Biferro, in which they gave to understand to the king of Portugal, that they were well provided with men, money and arms, for the reducing *Brasil* under his obedience. The council added, that the king of Portugal had made the said Beringel a captain, for this piece of service, and that therefore they desired count Maurice and the great council to keep a watchful eye over them, being sensible what an aversion the Portuguese did bear to the Dutch.

At the meeting of the great council of *Brasil*, 16<sup>th</sup> February 1643, count Maurice assured them, that he had received intelligence, that some of the chiefest of the Portuguese had resolved to surprize our garrisons in the country, at Moribeca, St. Anthony, and some other places, and to put them to the sword, which was to be put in execution upon one of their saints days, when they used to meet in considerable Numbers. Those who had the chief management of this affair, had their dwelling-places in the *Vargea*, who had proposed to surprize likewise the *Recife*, not questioning that if they could make themselves masters of it, the other garrisons in the country would be easily reduced; and consequently the company not able to subsist long in *Brasil*, without soldiers and traffick.

Hereupon it was taken into deliberation, whether 'twere best to secure the heads of this rebellion immediately, or to delay it 'till a more convenient time, for fear of allarming the whole country by their Imprisonment: The last was resolved upon, because they did not think themselves as yet sufficiently assured of their designs, and did not question, but that by the secret intelligence count Maurice was to receive of their transactions; they might prevent them. It was however judged advisable to draw the garrisons out of the country into the *Recife*, which was strengthened with new palisades, and the old wooden battery repaired; a ship was also ordered with several great chaloups, the first on the sea-side, the others in the river, to defend the avenues of the *Recife* with their cannon. There were likewise divers letters sent by private persons, some without names, to count Maurice and the great

1643. council, confirming the traiterous designs of the *Portuguese*; among others, one Mr. *Van Els* sent a letter to count *Maurice*, dated at *Serinbaim* the 20<sup>th</sup> of *March* 1643, importing, that he had it from sure hands, that a certain *Mulat*, of the company of *Austin Hardojo*, being asked by certain inhabitants of that *Pregeſie*, what buſineſs they had thereabouts, had told them, that they had been to carry letters to ſome perſons living near the *Receif*, adding, that in a ſhort time they would ſee that place taken without any effuſion of blood, either of the *Dutch* or *Portugueſe*.

In December 1643, *Don Michael de Krafſto*, *Don Baſtian Manduba de Sonbo*, and *Don Antonio Ferdinandes*, three ambaffadors from the count *Sonbo* in *Angola*, arrived in the *Receif*, in the ſhip call'd the *Arms of Dort*; they had but one ſervant each, but brought along with them ſeveral negroes with golden collars, as a preſent to count *Maurice*, beſides a great number of other Negroes for the company.

*Arbelleſe*  
for the count  
of Sonbo  
admitted to audi-  
ence.

Being admitted to audience by count *Maurice* and the great council, they deſired in the name of their Maſter, not to ſend any aſſiſtance to the king of *Congo*, whom they feared would attack them before long, notwithstanding they were at that time both engaged in a war againſt the *Portugueſe*. They received for answer, that the council would write to Mr. *Nieuſland*, their director there, to interpoſe his authority and mediation, in order to maintain a good correſpondency, and remove all occaſion of conteſt betwixt the king of *Congo* and their maſter, they being both confederates of the States: The ſaid Earl ſent likewiſe a letter to count *Maurice*, in which he deſired leave to buy a chair, a cloak, ſome enſigns of war, ſome apparel, and ſuch like things. The great council writ alſo a letter, as well to the king of *Congo*, as to the count of *Sonbo*, exhorting them to peace, and ſent them the following preſents in the name of the company.

#### To the King,

A long black velvet cloak, with ſilver galloons.

A ſcarf edged with ſilver lace.

A velvet coat.

And a caſtor-hat with a ſilver hatband.

#### To the Count,

A red velvet elbow-chair, with gold fringes.

A large velvet cloak, with gold and ſilver galloons.

A ſcarf with a gold and ſilver lace.

A velvet coat.

And a caſtor-hat with a gold and ſilver hatband.

1643.

They were entertained with all imaginable civility, during their ſtay here: They were very ſkillful in playing with the backſword; in the management of which, they made moſt terrible poſtures and faces. They underſtood *latin* very well, and made ſeveral learned harangues in the ſame.

The 13<sup>th</sup> of *October* 1644, a certain Jew, *Freſch ſul-*  
called *Gaspar Francisco de Kunba*, with two others of the chief of the ſame fraternity, gave notice to the great council, that they had been credibly informed by ſome Jews, who converſed and kept frequent correſpondence in the country, that the *Portugueſes* were plotting againſt the *Dutch-Braſil*, telling the council the reaſons upon which they founded this ſuſpicion. The council, after having returned thanks to theſe elders for their care, reſolved to leave no ſtone unturn'd to diſcover the deſigns of the *Portugueſe*; and having received certain intelligence, that they expected ſome arms and ammunition to be brought them by ſea, they ordered the 12<sup>th</sup> of *October* 1644, the yacht called *Nieuwbouſe*, with a galliot and a challoop, to cruize along the coaſt of *Dutch-Braſil*, to obſerve what veſſels did approach the ſhore.

The 11<sup>th</sup> of *May* 1644, count *Maurice* left the *Receif*, in order to his return to *Holland*, after he had been eight years governor of the *Dutch-Braſil*. All the citizens and chief inhabitants, both of the *Receif* and *Maurice's* town, appeared in arms, making a lane from the old town to the water-gate, of whom, as he paſſ'd by, he took his leave with all imaginable demonſtration of kindneſs. At the gate he mounted on horſe-back, and being accompanied by the great council, the councilors of juſtice and all the military officers, as far as *Olinda*, he there once more took his leave of them in particular, the *Sieur Bulleſtraet* remaining only with him, being deputed by the regency to conduct him on board the ſhips deſign'd for his transportation. They did not ſet ſail from the *Red-Land* 'till the 22<sup>d</sup> of *May*, with a fleet of thirteen ſhips, on board of which were a good number of ſoldiers, leaving only eighteen companies for the defence of the *Dutch-Braſil*. Mr. *Bulleſtraet* return'd the 26<sup>th</sup> to the *Receif*.

On the 22<sup>d</sup> of *April*, not long before the departure of count *Maurice*, the commiſſion from the governors of the *West-India* company, according to a reſolution taken at their meeting the firſt of *July*

1642,

Count  
Maurice  
abdicates  
the govern-  
ment.

Takes his  
leave.

1643.

1642, concerning the government of *Dutch-Brasil*, and dated the 22<sup>d</sup> of May 1643, was read in the great council, by which the members thereof were to have the administration of the government 'till further orders. Accordingly count Maurice having appointed a day to invest them with the administration of the government, he ordered (with the consent of the said council) an assembly to be called on the 6<sup>th</sup> of May, of the counsellors of justice, of the magistrates, the ecclesiastical council and ministers of Maurice's Town; of the commanders in chief both by sea and land, the chief officers of the company, the officers of the militia, and the chief men among the *Jews*.

Count Maurice abdicates the government.

All these being at the appointed time met in the great hall of the *Stadtbuis*, he told them, that since their high and mighty offices the states, his highness the prince of *Orange*, and the council of nineteen, had been pleased to grant him leave, after a stay of eight years among them, in the quality of governor of the *Dutch-Brasil*, to return into *Holland*, he had called them together, to return them thanks for the many services, each in his station, had done to the company; as likewise for the obedience, fidelity and respect they had always shewn to his person; telling them, that from this minute he resign'd the government into the hands of the great council, requiring and desiring them, in the name of the states, the prince of *Orange*, and the council of nineteen, to shew them the same obedience, fidelity and respect they had done before; whereupon count Maurice having congratulated the council, and the rest there present done the same, he took his leave of them in the hall, and immediately after in the council-chamber, of the members of the great council, giving them most hearty thanks for their faithful council and assistance upon all occasions, and for the respect and deference they had always shewn to his person; telling them, that since this would be the last time of his appearing in their assembly, he had drawn up a memorial, which might serve them as a guide, for the better administration of the government; and that, if they thought it convenient, he should be ready to discourse with them, and enlarge further upon that subject. The members of the great council returned him their unfeigned thanks, wishing him a happy voyage, and good success in all his undertakings, and recommended themselves and the whole *Dutch-Brasil* to his care hereafter. Before the breaking up of the assembly, it was debated in the presence of count Maurice, which of the

members should have the precedence there as president, or whether the same should be taken by turns, the same being not determined in their commission: After several arguments *pro* and *con*, it was agreed, that things should remain, in respect of this point, in the same condition as had been usual before, in the absence of count Maurice, viz. for every one to keep his rank without any priority 'till further orders from the council of nineteen; to wit, first Mr. *Dirk Hamel*, then Mr. *Bullestraete*, Mr. *Kodde Vander Burgh*, &c.

The next thing the great council took in hand, was to inquire more narrowly into the designs of the *Portuguese* against the government; to effect which, it was resolved in January 1644, to send *Gilbert de Wit*, councillor of the court of justice, and captain *Dirk Hoogstrate*, then commander in chief in the *Cape of St. Austin*, to *Antonio Telles de Sylva*, then governor of the *Bahia*, with the following instructions, dated the 15<sup>th</sup> of the same month; to comply with the governor (after the delivery of their credentials) in the name of the great council, with a sincere promise and assurance of friendship, and good neighbourly correspondence. After this, they were to represent to him, that many of the subjects of the *Dutch-Brasil*, after having contracted considerable debts there, both with the company, and other inhabitants, did retire into the *Bahia*; wherefore they desired, that for the promoting of justice, they would either detain those bankrupts in prison, or at least give timely notice of their coming thither, to the *Dutch* government, whereby their subjects might be enabled to prosecute them at law: But their real errand was to be instructed underhand in the following points.

Enemies sent into the Portuguese-Brasil, and their instructions.

I. What forces the *Portuguese* had at that time in the *Bahia*, and the other southern provinces.

II. What number of ships.

III. What number of ships were expected there out of *Portugal*.

IV. How the negro's trade stood affected, and from what places they were brought thither.

V. Whether there was any commerce betwixt them and the inhabitants of *Bonas Aires*.

VI. In what condition their places were thereabouts; of all which they were to give the best account they were able to get, after their

Takes his leave.

1643. *their return to the great council, they were also charged by word of mouth, to make diligent enquiry who were the persons that underband encouraged the so much feared rebels of the Portuguese in the Dutch Brasil, and what aid or assistance they were to have from them; and to desire the governor not to permit for the future that such of the Dutch soldiers as deserted out of the Recife, and went by land to the Bahia, might from thence be transported into Portugal, but be stoped and sent back to the Recife.*

*Their arrival at St. Salvador.*

These envoys arrived safely the 8<sup>th</sup> of February 1644 in the Bahia, and dropt their anchor towards the evening near the city of St. Salvador, and the castle of St. Antonio, where two officers came on board them, to enquire from whence they came, and by whom, and to whom they were sent, in order to give an account thereof to the governor Antonio Telles de Sylva. The next following day they were complimented in the name of the governor by major Domingo Delgados, and captain David Ventura, who told them that he intended to send his chaloop with the first opportunity to fetch them ashore. About three a clock in the afternoon, the same officers with three or four more, came with the chaloop to fetch them; and they were no sooner landed but found several horses ready for them to mount upon, which they did, and were conducted up a high hill, all over covered with spectators, to the governor's palace. In the outward hall was a strong guard of soldiers, in the second several ensigns and other inferior officers, in the third apartment they met with nothing but captains and lieutenants, and in the fourth with colonels, general officers, some clergymen, and the governor himself; who after having received them at the door, desired them to sit down next to him, upon chairs set for that purpose. The envoys then began their harangue, in which they told him, that they were extremely glad to find him in good health at this time, when they were sent by the great council of the Dutch Brasil, to assure him of their good inclinations, to maintain a good correspondence and friendship with him, and of their hearty wishes for his majesty's, his own, and the government's prosperity; to preserve which, they were ready to contribute all that lay in their power. Then they told him that they had several things to propose to him, when he should think convenient to receive them; the rest of the discourse run upon mutual complements and news. After which, the envoys were again accompanied by the governor to the door of the apartment, where he ordered the beforementioned Domingo Delgados and David Ventura, to conduct them to a certain large

*Are admitted to audience.*

house finely furnished, in Bishops-street, and to entertain them at his charge; which though the envoys refused, alledging it to be contrary to the intentions of their masters, yet were forced to accept of the same, and were very magnificently entertained at supper.

The next morning about eleven a clock they went again to the palace, and after having desired a second audience, were received in the same manner as before. Every one being ordered to withdraw, besides the secretary of the governor; the envoys made their propositions to the last, which they delivered to him in writing in Portuguese, recommending the same to his consideration, as tending towards the maintaining a good and firm correspondence betwixt them. To which the governor gave this general answer, *That he should always endeavour to cultivate a good understanding and correspondence with us, pursuant to the strict and reiterated orders he had received for that purpose from the king his master. And that concerning the propositions made by them to him, he would assemble his council of war and justice, and afterwards impart to them his answer.* Then they were by Domingo Delgados reconducted to his own house, where they were very well entertained the same day at dinner, and the next by the governor himself.

The 17<sup>th</sup> they had another audience from the governor, who told them in very obliging terms, *that he had consulted the matter with his council, and could give them no other answer but what was contained in this letter,* which he delivered to them, and told them the contents thereof; whereupon our envoys told him, that since thereby a door was left open for rogues and vagabonds, they hoped he would at least order that the names of such as fled to the Bahia might be taken notice of, that the great council of the Dutch Brasil might not remain quite unsatisfied, whither they were fled; which he promised to do. After some further complements and mutual assurance of friendship, they parted for this time.

The 22<sup>d</sup> they took their leave of the bishop, and several other persons of note, unto whom they owed any obligations, and last of all of the governor himself, being conducted thither by many persons of quality and officers; they returned him thanks for the civilities and respect he had been pleased to shew them, wishing both him and his Portuguese majesty a long and happy reign, and victory against the *Cajicians*. The governor returned their complements, and conducted them out of the room, ordering several negroes to attend them down the precipice of the hill, upon which the city is built, with chairs; but the envoys choosing

choosing rather to go on foot, they were in the same chaloop they came in ashore, carried back under the sound of musick on board their yacht. The Portuguese officers after having taken their leave, returned to the city, and ours made the best of their way to the Recife, where they arrived safely not long after.

The letter delivered to them by the governor, was as follows.

*The Governour's Letter.*

*G*ilbert de Wit councillor of your court of Justice, and Dirk Hoogstraten commander in chief on the Cape of St. Austin, your lordships deputies, whom I received according to their quality and merits, have delivered your letter to me, and proposed such other matters as they were empowered to treat with me about. Though I endeavour nothing so much as to cultivate and maintain in the strictest manner, our neighbourly good correspondence, yet am I constrained at this time frankly to acknowledge, that it is not in my power to give your lordships any more satisfactory answer than this, in hopes that the many proofs you have had of my sincere inclinations, will serve as a plea with your lordships, to assure you, that I shall always be ready in all points depending on my government, to give the same proofs both of obedience and fidelity to the king my master, whose pleasure is, that the truce should be observed inviolably; and of my sincere intentions, and the esteem I have for your lordships friendship, desiring nothing more than that you furnish me with an opportunity of giving real demonstrations of my readiness to serve you; whom I recommend to the protection of God almighty.

Bahia, Feb. 14.  
1645.

Signed,

Antonio Telles da Silva.

Concerning the six points mentioned in their secret instructions, they made the following report to the great council.

*Report of the envoys to the council.*

**I.** THAT the Portuguese forces in those parts were generally esteemed to be less or more betwixt three and four thousand men, without the Brasilians and negroes. But that upon the most exact enquiry they could make, they had found them to be not above three thousand, including the Brasilians and negroes, and their garrisons both to the north and south, as far as Rio Janeiro. These consisted of five regiments, viz. three of Portuguese, under the colonels John Darauge, Martin Soares, and N. N. the fourth of Brasilians, under a Brasilian colonel, Antonio Philippo Camarao; and the fifth of negroes, under the com-

VOL. II.

mand of negro Henricio Dias. These two last regiments, amounting both not to above three hundred men, were divided in the garrisons to the north, about Rio Real on our frontiers; they being the scum and off-casts of all their territories, and consequently not to be quartered near the capital city, there having of late been some broils among them in the garrisons, whither officers were dispatched to compose them. The three Portuguese regiments consisting of about two thousand seven hundred men, kept garrison in St. Salvador, and the circumjacent forts, except two companies, one of which quartered about Rio Real, the other in the island Morro St. Paulo; and about one hundred fifty more, which were disposed in the captainships of Os Ilheos, Porto Seguro and Spirito Sancto; so that the garrisons of St. Salvador and the circumjacent forts, consisted in at least two thousand three hundred, each company consisting of one hundred men less or more, all chosen men and well clothed; four companies mounted the guard every night, one at the palace, at each of the two gates one, and the fourth in the water-forts without the city.

**II.** Of their naval strength they gave a very slender account, being more considerable in number than force, as consisting only in fifty small vessels and yachts, not in the least fitted for war; neither could they observe the least shew of preparations tending that way; their aim being only to protect their ships bound to the Portuguese coasts, against the insults of the Castilian and Denmark privateers, and the Turkish rovers. It was, as they said, upon this account, that, during our stay there, two stout Portuguese ships fit for war, manned with six hundred men, and provided with good store of ammunition, arrived in the Bahia, under the command of Salvador Correda-fa, with orders to go directly from thence to Rio de Janeiro, and to fetch all ships ready laden from thence to the Bahia, from whence they were to convoy these as well as such other vessels as they found ready there, to the coast of Portugal; for which reason also all the vessels which otherwise used to go according to their own convenience, were ordered to stay for the said convoy. That news was brought by the said two ships, that the king of Portugal had forbid the building of Caravels and other such like small vessels, instead of which they were to build ships of better defence against the insults of an enemy at sea. From whence the envoys said they supposed would arise this inconvenience to the Portuguese, that the freights and convoy money paid for the commodities transported from Portugal to the Portuguese Brasil, and for the sugar transported from thence to Portugal must encrease, and consequently would not be able to sell the last at the same price the Dutch did, considering especially that they must be

N

confi-

1643. considerable losers both in their interest and time, where they were forced to tarry for their convoys, whereas they used formerly to make the best of their way home.

III. They had observed, that though the inhabitants of the Bahia expected the coming of those ships at their first arrival, yet several vessels arrived there, both from the Portuguese coast and the islands before the rest.

IV. They concluded the negro trade to be very inconsiderable there, they having scarce ever heard it as much as mentioned; but because the price of a good negro did not at that time amount to above three hundred guilders, they supposed them pretty well stocked with them; those which were of late brought there being brought thither from Cape Verde and Arder. They further reported, that when on wednesday being the 8<sup>th</sup> of February, they entered the Bahia, they met two ships of good bulk, carrying about twenty guns each, and well mann'd going out, which upon enquiry were told them to be bound for Portugal, but could not learn to what harbour there, which together with some other reasons, made them suspect that they were intended another way, in which we found ourselves not deceived, when on the 22<sup>d</sup> of February, just as they were ready for their departure, they understood from Mulat Juliana, and of two monks, that these two ships were sent with men to Angola, for the security of the inhabitants of Masagao, who being but small in number, were sorely afraid to be set upon by the negroes of the country, and having desired the governor's assistance, who ordered those ships and the men to go in the night time, and to endeavour to reach Masagao unperceived by any, and without committing any hostilities against the Dutch. Whether and how far this might be true, time would shew, but they had all the reason in the world to believe, that it was upon their score of concealing this expedition, as well as some other matters from them, that immediately after arrival (though they were not informed of it till near the time of their departure) that no Dutch or Germans should appear, as much as in the sight of the envoys, much less discourse with them; which was observed with that strictness that they really imagined there had been no Dutch there; but found afterwards that they had been all (how many they knew not) carried on board the Portuguese vessels, to prevent their keeping any correspondence with us and our ships crew; to which end also, six centinels were placed in two boats lying near our yacht, during the time of our stay here, under pretence of protecting our vessel, but in effect to prevent any body from coming on board us, pursuant to the orders of the governor.

V. That the inhabitants of the Bahia and the other Portuguese captainships, had not the least commerce at this time with those of Bonas Aires. That immediately after the revolution in Portugal, those of the Bahia had attempted to go thither, but were treated as enemies by them; so that it was their opinion, the place would either soon, or was already totally ruined for want of commerce; all their livelihood consisting in the traffick from the coast of Brasil thither, which falling away, no silver could be transported thither from Peru; it being not probable that the Spaniards would run the hazard of passing along an enemy's coast, when they had a safer way to transport their treasures from the West-Indies.

VI. That they could not get the least certain information concerning the designs carried on betwixt some of the inhabitants of the Bahia, and those of the Dutch Brasil against the last; besides which they gave them a general relation of what they had been able to learn, concerning the condition of the city of St. Salvador, its inhabitants, governor, and some other matters relating to the country thereabouts.

The rumours which in 1640 were noised about concerning the treacherous designs of the Portuguese inhabitants against us, being for that time vanished into smoke, the same was revived, and their designs began to be discovered in February 1645, viz. That confiding in the promised succours from Bahia, they intended to rise in arms against us, looking upon this juncture as the most favourable for their purpose, since count Maurice with the greatest part of our fleet, and a good number of soldiers were returned to Holland, from whence no fresh supplies were come of late into Brasil. The great council not being ignorant of this, were indefatigable in their care, to leave no stone unturned to find out the ring-leaders of this rebellion, so as to charge them effectually with this crime, and find out sufficient cause for their commitment. They sent out several of their officers into the country, as spies, to sound the inclinations of the people, and whether they could meet with any one who incited the rest to an insurrection. The like he did on the other side of the river of St. Francis, and in Kamaron's camp, whither they had sent certain persons to investigate their designs, and to learn what preparations they made for war, and whether they were intended against Pernambuco, but were not able to find out any thing, upon which they could make any sure account. Being nevertheless sensible that those forewarnings were not altogether groundless, and knowing the Por-

1643. *Portuguese* to be of so haughty a temper (besides the difference in religion) that they would scarce let any opportunity slip of withdrawing themselves from the obedience of their conquerors; they writ the 13<sup>th</sup> of February 1645 the following letter, concerning the designs of the Portuguese to the council of nineteen.

*A letter from the great council to the West-India company.*

Most noble and right honourable,

*A letter from the great council to the West-India company.*

**D**URING the government of his excellency count Maurice, there were already several of the inhabitants of this state entred into secret cabals to rise in mutiny against us, in hopes of assistance from the Bahia; their business was to insinuate into those that were well affected to them, after their good success in Maranhao, that our forces being considerably weakened by the strong detachments sent to the garrisons of Angola, St. Thomas, and others, a fair opportunity was offered them, to withdraw themselves from our obedience, and to enjoy their former liberty under their own king. They were not a little encouraged in their design, imagining the same might be carried on without any great difficulty, when they found that of late we had received no supplies either of meat or other provisions, or of soldiers from Holland, whereby the storehouses of the company here being exhausted, the garrisons of the forts were forced to be supplied from time to time with farinha and fresh meats out of the country, they judged, if they could once be masters in the field, they must of necessity fall into their hands; as it happened in 1640 to the Spanish garrisons in Portugal, who for the same reason were not in a condition to hold out against the Portuguese; being besides that feasible that unless we would too much weaken our garrisons, we had no sufficient number of troops left to appear formidable in the field. These and other such like insinuations have been frequently spread among the Portuguese, by those, who finding themselves most uneasy under our government, hoped for a change of their affairs, by changing their masters; which however wrought no considerable effect, as long as his excellency continued in the government, partly because we being forewarned of their designs, kept a watchful eye over all their actions, partly because our sea and land forces being much more considerable at that time than they are now, they had but little prospect of succeeding in their enterprize, which therefore they judged most convenient to defer till after his excellency's departure, which as it was sufficiently known before hand, so they were sensible that thereby our forces both by sea and land must be considerably weakened, and consequently would furnish them with a fairer opportunity of put-

ting their so long rejected design in execution; the more, because that many of the Portuguese who relying hitherto upon the authority of count Maurice, as the only means to keep the soldiers in awe, being now put in fear of the executions and exorbitancies likely to be committed by the covetous officers and rapacious soldiers, would be forced to join with them against us. After the departure of his excellency for Holland, the cabals have instead of divine things increased every day; they have been very diligent in getting information concerning the strength of all our garrisons, with an intent to carry on their designs before we could be reinforced with supplies of men and provisions from Holland; to effect which, they have by messengers sent to the Bahia, solicited for succours of men and arms, of which as it seems they have no small hopes. There is great reason to believe that the journey of Andrew Vidal from the Bahia hither, in August last, undertaken under pretence of taking his leave before his return to Portugal, in order to serve the king there, was founded upon no other motive than to inform himself most narrowly concerning the true state of affairs here, in order to give a verbal account thereof in the Bahia and afterwards in Portugal; as likewise to sound the inclinations of the inhabitants, and to animate such as he found well disposed for his interest, with hopes of speedy succours from the Bahia; we have since received secret intelligence that he has been present at several of these cabals. But though they were greatly encouraged with these hopes of good success, by reason of the diminution of our forces and scarcity of provisions, they were not very forward in venturing upon this enterprize, being sensible that their design having taken vent, we made all necessary preparations against them; besides that many of the Portuguese inhabitants, being beyond their expectation, well satisfied with the government of the great council, did rather chuse to live quietly and securely, than to engage in so dangerous an enterprize. So that things remained without any considerable alteration at present; and as matters stand now we are not able to find out sufficient cause to satisfy ourselves whether they proceed in the same design. Their chief design as we are credibly informed was laid against the Recife, which they intended to surprize, upon a certain day appointed for the sale of negroes, when the inhabitants of the country flocking thither in great numbers, they did not doubt but with the assistance of our own negroes, who are for the most part papists, to make themselves, masters of the place, not questioning but if this succeeded, the rest would soon be forced to yield. But in this they were prevented, by the strong guards we took care to post in the Recife on those fair days.

The

1643. The chief ringleaders, as they are specified to us, are John Fernandes Vieira, and his father-in-law Francisco Beringel, with several others, whom we would have committed to prison, if we could have had more certain information against them; but though we left no stone unturned to find out the truth, yet could we not meet with sufficient motives to induce us either to imprison them, or to proceed again to the general disarming of the inhabitants, we having received certain intelligence, that so soon as we should attempt it, we must expect no less than a general insurrection, which considering our own magazines and store-houses were so ill provided, and no sufficient force could be drawn out of the garrison to secure the open country, would have drawn after it very ill consequences for our nation, especially those living at some distance from our forts, who thereby, as we had reason to fear, might have been exposed to the danger of being massacred by the Portuguese. It is evident from the information given to your lordships in Holland, and transmitted to us, that the subjects of the king of Portugal themselves are encouraged and animated against us; wherefore it will be absolutely necessary to be very cautious, and to hasten the supplies we have so often requested at your hands. Upon the first information we received, that toward the south of the Recife the Portuguese intended to land some men or arms, we sent the 13<sup>th</sup> of October a yacht, the Enckhuysen with another galliot and chaloup to cruise thereabouts, but they returned after some time without being able to discover any such thing. The next intelligence we had was, that a fleet was equipping in the Bahia, to transport some forces, for the assistance of our rebellious subjects; to find out the bottom of this design, we thought we could pitch upon no better expedient than to send thither Mr. Gilbert de Witt and Dirk Hoogstraten with certain instructions, of which we have enclosed the copy, who set sail the 22<sup>th</sup> of the last month. Being further informed that a certain Portuguese captain with an ensign and three soldiers have been lately dispatched from the Bahia to our captainships, to endeavour to stir up our subjects to rebellion, with assurance of succours from thence; we have employed all necessary means to find them out and get them into our hands. We shall not be wanting in any thing, which according as occasion presents, may contribute to the preservation of this state.

Recife 13<sup>th</sup> February, 1645.

The 4<sup>th</sup> the great council were informed by letter from Inac Rasiere and captain Blewbeck, written at Parayba, that a rumour was spread thereabouts that Kamaron

chief commander of the *Brasilians* in the *Bahia*, was on his march from *Sertao* to *Siara*, to join with the *Brasilians* inhabiting thereabouts, to attack with their united forces the inhabitants of the captainship of *Rio Grande*. Whereupon the council sent orders to *Hans Vogel*, governor of *Serezippo del Rey*, to get intelligence and send them speedy word whether *Kamaron* with his camp were still in *Rio Real*; and if not, whither he had taken his march, or whither he intended to take it. They also sent word to the inhabitants of *Parayba*, that they should be very diligent in enquiring after the cause of this rumour, and send them intelligence accordingly. The 15<sup>th</sup> of May they received an answer from *Hans Vogel*, dated the 25<sup>th</sup> of April at *Serezippo del Rey*, wherein he told them that pursuant to their orders he had sent a serjeant with some soldiers to *Kamaron's* head quarters, about ten leagues from *Serezippo del Rey*, under pretence of looking for some deserters; who after their return reported, that his forces consisting of two hundred Portuguese and one thousand two hundred *Brasilians*, were still in the same place, busied for the most part in cultivating some plantations, *Kamaron* himself being then in the *Bahia*, to assist at the solemnity of their easter; from whence they conjectured, that the rumour concerning his march was only a fiction. But two days after the same rumour was renewed by two passengers coming from *Rio St. Francisco*, and being landed by one *John Hoen*, a master of a vessel near *Kandelaria*; but upon a more strict enquiry made by the council, the said master of the vessel declared, that on the eighth of the same month, when he left *Rio de Francisco*, there was no news of *Kamaron's* march.

The 30<sup>th</sup> of May 1645, a letter without a name was delivered to the great council by one *Abram Markado* a jew, subscribed only *plus ultra*. This letter being translated out of the Portuguese the same night, the contents thereof were, that three unknown persons gave them notice that a good body of troops were come from *Rio Real* into *Parayba*, with an intention to join with a discontented party there, and to surprize the Dutch forts; with advice to seize upon the person of *John Fernandes Vieira* their chief ringleader.

The letter is as follows,

*A letter of intelligence to the council.*

WE stand amazed you are so secure, when it is reported that the *Matta* of *Parayba* is full of soldiers, come thither lately from *Rio Real*, who consisting in a good number of negroes, mulats, and Portuguese, with  
Kamaron

1643. Kamaron at the head of them, began their march in the month of March, expecting now to be joined by other troops, which hitherto were stop'd by the overflowing of the rivers. Their aim is to encourage the inhabitants to take up arms, which done, they expect considerable succours from the Bahia, both by sea and land, wherewith they pretend to block you up in the Receif, intending to fix their camp either at Olinda, or in the Vergea, and quarter the soldiers in the Fregesies thereabouts. They boast that their forces are already considerably encreased by those who are indebted to the company, and other vagabonds, and threaten'd to massacre all such of your subjects as refuse to join with them. A certain person of note and reputation belonging to the same camp, has given us this information, in order to communicate it to your lordships to be upon your guard, which we do accordingly by these presents. The same person told us, that John Fernandes Vieira was the chief ringleader of this insurrection, who maintains the rebellious crew in the Matta, as they meet together, till a certain day appointed for their rendezvous, when they are with their joint forces to attack all the Dutch forts and out-guards at once. We were also told, that the said Vieira does not sleep in his house, and is always upon his guard; so try which, you have no more to do than to send some to take him, with his servants and factors; which if you could do they would be all amazed, and make an open confession, which may be done without the least bazard; for if you miscarry in the attempt, it will nevertheless not redound to your disadvantage. We conjure your lordships to take care of this poor nation, for fear they should be forced to join with the rebels against you. We judge it therefore absolutely necessary to undertake the business without delay, with all imaginable secrecy; for if they find themselves discovered, they will begin the game immediately; so that strong guards ought to be put in the outworks, and in the harbours of Kandelaria and the Receif. We advise your lordships to oblige the inhabitants forthwith to surrender their arms, to order all the masters of the sugar-mills, with their planters, to appear in the Receif, especially those of the Fregesies of Vergea, Garassu, St. Lorenzo, St. Amaro, Moribeca, de Cabo, Pojuka, and Serinhaim, with assurance that they shall not be molested for any debts there; and when they are come, to detain them till they see what is further to be done, under pretence of securing them against the attempts of the rebels in the country, by which means you will both secure the government, and oblige many private persons. The same method ought to be used with those of Parayba, where they may be detained in the fort, as well as those of

Vol. II.

Porto Calvo in that place. Thus if you can get the chiefest into your hands, the design will dwindle away to nothing. We beseech you not to send away any more soldiers before you have made a full discovery of the rebellion, and provide your forts with good garrisons; whither we would also have all the Dutch inhabitants to retire for fear of being massacred. We three being faithful subjects of your lordships, have now satisfied our consciences in proposing your remedy, which consists in the taking of Vieira, which must be undertaken with great secrecy and foresight, he being, as it is said, continually upon his guard. Your lordships will be sensible without our advice how much it concerns them, not to divulge to any, from whom they have received this information; and we assure you, that we will not fail to give further intelligence of what we are able to learn by way of letters; and one time or other, we shall make no difficulty to let you know, who these three faithful subjects are. If we had been present, we could have declared no more than we have done in this letter. Your lordships must take effectual care against their attempts without delay, the approaching feast being the time appointed for the putting it in execution. We have sent you immediate notice after it came to our knowledge: We advise you likewise to seize upon Francisco Beringel, Vieira's father-in-law, and Antonio Kavalanti; and in short, all the chiefest of the Vergens, and other places. Signed,

A. Verdade.

Plus Ultra.

Hereupon the great council called Paul de Linde, president of the council of justice, vice-admiral Cornelius Liebtbart, and lieutenant colonel Garfman, into their assembly, to consult unanimously what were best to be done at this juncture for the preservation of the Dutch Brasil; when by this, as well as several other letters and intelligences, they were forewarned of the approaching danger; and notwithstanding they were much in doubt, whether they ought to make any certain account upon a letter written without a name; yet considering all the circumstances of this, as well as several other informations, it was judged absolutely necessary to provide for the safety of the Dutch Brasil, against any attempt of an enemy.

I. By providing all the forts with meal for two months.

II. By giving immediate notice to all commanders of forts to be constantly upon their guard.

III. To write to John Listry, chief commander

O

commander

mander of the *Brasilians*, to keep his people in readiness with their arms in the villages, to be ready to march upon the first orders from the council, we being not in a condition to take the field without them.

IV. To send abroad their spies in all corners, even into the woods, to get intelligence whereabouts the enemies troops are, and to give timely notice of what they are able to learn to the council.

V. It was agreed, to summon *John Fernandes Vieira*, the chief ringleader of the intended rebellion, and his securities, *Francisco Beringel*, *Vieira's* father-in-law, and *Bernardin Karvalbo*, unto the *Receif*, under pretence of making a second agreement with him, which he earnestly desired; by which means they should secure his person, know the whole bottom of the *Portuguese* design, and consequently be the better able to prevent it. A certain broker called *Koin*, who solicited this agreement for *Vieira*, was prevailed upon to undertake this task, which he might do without the least suspicion; but the *Whit-tide* holidays put some stop to it for the present. With the same care the great council employed all possible means to get the other persons of the *Vergea*, suspected to have a hand in this rebellious design, into their hands, under some pretence or other, they being not likely to be taken by force, because they did not lodge in their mills and houses in the night time, and by day were so strictly upon their guard, that they could not possibly be surprized.

The 31<sup>st</sup> of May, vice-admiral *Liebart*, and *Henry Haus*, a lieutenant, offered to undertake the delivering of *John Fernandes Vieira* to the council, which they intended to effect, under pretence of giving him a visit, and going a fishing with him in the lake *Leois Bras Bijerra*.

Further  
advice con-  
cerning the  
in-surrec-  
tion.

The 9<sup>th</sup> of July, the great council received advice by a letter from Mr. *Koin*, governour of *Rio St. Francisco*, dated the 1<sup>st</sup> of June, that *Kamaron*, with a small body was passed the river *St. Francis*; therefore he desired some assistance of men, with suitable ammunition.

The same was confirmed by another letter, dated the 27<sup>th</sup> of June, with advice, that as yet no enemy had appeared within sight of the fort.

Frequent intelligence being likewise sent to the council, that in the *Malta* of *St. Lawrence*, and some other distant places, considerable numbers of soldiers from the *Babia*, of *Mulats* and *Negroes*, were gathering in a body, they sent several small bodies thither, under command of such as

were well acquainted with that country, 1643. who all unanimously reported, that they could meet with no soldiers, *mulats*, or any other vagabonds thereabouts.

The 12<sup>th</sup> of June, the director *Moucheron* sent further advice, that he had been credibly informed, by letters dated the 8<sup>th</sup> of the same month, from *Rio St. Francisco*, that *Kamaron* and *Henrico Dias*, with six companies of *Brasilians*, *Mulats*, and *Negroes*, were pass'd the said river; and that just as he was concluding his letter, two inhabitants of the *Algoas* had given him to understand, that some of them had been at their houses for some meal; the copies of which letters he sent to the council, who did now not in the least question, but that their aim was upon the *Dutch Brasil*, especially since they were forewarned by several letters from *St. Antonio*, that the inhabitants thereabouts seem'd to prepare for a revolt.

The council finding their project of taking *Vieira* by craft, not to succeed, because he and the securities of his father-in-law, *Francisco Beringel*, and *Bernardino Karvalbo*, could not be cajoled into the *Receif*, under pretence of renewing their former contract, and looking upon him as the chief ringleader of this revolt, they ordered *Joachim Denniger*, a lieutenant, with a good number of soldiers, to the mill and house of the said *John Fernandes Vieira*, to bring his person from thence to the *Receif*. Accordingly *Denniger* advanced with his soldiers towards the evening near the mills, which he surrounded, and about midnight unexpectedly entered both the house and mills, making a most strict search throughout all the rooms and corners, but to no purpose. In the morning he withdrew at some distance, but return'd the next night, when after having made another search, but in vain, he was informed by one of his *Turkish* slaves, and some *Negroes*, that neither *Vieira*, nor his father-in-law *Beringel*, had slept in their houses these last three weeks; that sometimes they came thither on horseback, but after a very short stay went their ways again. *Denniger* likewise search'd the houses of *Antonio Kavalkanti* and *Antonio Bijerra*, but to as little purpose as those of the former, being informed by their *Negroes*, that they had absconded for some weeks before.

In the mean while, the council sent divers parties abroad, under the command of *Hans Kainer*, *Slodiniski*, and *Cunraed Hill*, all which, after their return, agreed in this, that there were no enemies there as yet, especially not in the *Malta*, where they met with no body but those

The great council finding themselves altogether disappointed in their hopes of taking *Vieira*, resolved to secure immediately the persons of *Francisco Beringel*, *Vieira's* father-in-law; *Bernardino Karvalbo*, and his brother *Sebastian Karvalbo*, *Lewis Bai*, *Amaro Lopez*, and *John Pessoa*, being persons suspected to have a hand in the conspiracy, inhabiting the *Vergea*. In the more distant provinces were ordered to be seized

In *St. Amaro*, *Antonio de Bulbous*.

In *St. Antonio*; *Amador d'Arouja*; *Pedro Marinbo Falcão*; *Antonio del Rasto*.

In *Pojuka*; *Kornero de Morais*; father *Frey Lewis*; and *Francisco Dias del Gado*.

In *Serinbaim*; *John Albuquerque*, son-in-law of *Pero Lopez de Vera*.

In *Porto Calvo*; *Rodrigues de Barros Pimentel*.

In *Iguaraka*; *John Pimenta*.

In *Ilamarika*; father *Lawrence d'Alkumba*.

And in *Rio Grande*; *John Lestán Navarro*.

But it being most of all to be feared that the inhabitants of *Parayba*, who were much indebted, would revolt before all the rest, *Mr. Paul de Linge* was sent thither immediately in the quality of director, with full power to act both in that and the *Captainship of Rio Grande*, as he should find it most expedient for the company, with express orders to press 100 men out of the ships, with proportionable provisions, immediately after his arrival there, which were to be disposed in the fort of *St. Margaret*, both for its defence, and to keep the inhabitants in due obedience.

And considering that the scarcity of provisions was one of the main obstacles to be surmounted on our side, which as the case then stood, would more and more increase, unless we could remain masters of the field, from whence we drew most of our provisions, and to over-awe the discontented inhabitants, it was judged requisite, to form a small camp near *S. Lawrence*; and accordingly the two lieutenants *Huykquesloot* and *Hamel* were order'd thither with 35 men each, the first from *Iguaraka*, the last from *Moribeka*, as likewise captain *Wilschbut*, with 50 men more from the *Receif*; *John Lijtry*, commander in chief of the *Brasilians*, was likewise ordered to join them with all possible speed, 300 *Brasilians* under their own commanders.

The same day (being the 12<sup>th</sup>) after a view was taken of the fortifications of *Moribeka* town, the same were ordered to be repaired, and news being brought, that

*John Fernandes Vieira* had been seen in his mill the same night, the council endeavour'd with all possible care to have secured his person, but in vain; it being certain, that (according to the depositions made by his steward of the mill, called *St. John*, before the publick notary *Indik*, in the *Receif*, 21 Jan. 1647.) near six months before the breaking out of this insurrection, he had never slept one night in his house: And whenever he happened to be there in the day-time, he remained for the most part in a turret on the top of the house, from whence he could have a prospect at a great distance; if his business called him below, he put some body else there to keep the watch; who, if they saw but two or three persons come that way, gave immediate notice thereof to him; and if any *Dutch* in a body were discovered, he retired instantly into the adjacent woods. He had likewise placed some Negroes at a certain distance from the house, who were to give notice of the approach of any unknown persons that way.

The 13<sup>th</sup> *Sebastian Karvalbo* and *Antonio de Bulbous*, were brought in prisoners to the *Receif*, the rest who were sensible of their guilt, having escaped their hands; the first being examined the same night by the assessor of the court of justice, *Mr. Walbeck*, concerning the intended conspiracy, gave him the following account by word of mouth.

## HIS CONFESSION.

THAT he was one of those three, who a few days ago, had by way of letter given an account of an intended conspiracy in the *Vergea*, to the great council, the ring-leader thereof being *John Fernandes Vieira*, who, with the rest of his Portuguese accomplices, relied upon the succours promised them from the *Bahia*; with what he had judged most proper for obviating the same. That the whole design of this conspiracy was laid open to him by means of a certain writing, in form of an association, which was delivered to him by a Portuguese servant of the said *Vieira*, together with a letter, in which he desired him to subscribe the same, there being no more than two who had subscribed it at that time, viz. *John Fernandes Vieira*, and *Lewis da Costa Sepulveda*. The contents of this association were, that they promised to rise in arms against this state, and to sacrifice their lives and estates for the recovery of the *Dutch Brasil*, under the obedience of the king of Portugal. That indeed he had signed the said association, but given immediate notice thereof to *Ferdinando Vale* and a third person besides; and that he, together with *Mr. Vale*,  
bad

prisoner.

1643. had caused the beforementioned letter, directed to the great council, to be delivered to Merkado the physician. That the insurrection was intended to extend all over Dutch Brasil, but that the inhabitants of the Captainship of Parayba were most to be feared, as being most indebted, and consequently bearing an ill-will to our government. That their main design was to surprize one of our forts, on or near the sea-side, whereby they might secure themselves a place to receive succours from the Bahia; from whence they expected to be assisted with two men of war, and three or four frigates. That he had signed this association barely out of fear of Vieira, who had threatened those that should refuse with no less than death, and had caused several to be murdered upon that account.

His confession agreeing in all points with what *Ferdinando Vile* had deposed before, and being all that time forely afflicted with the gravel, he was dispensed with from any further examination.

The council being by this deposition of *Karvalho* fully convinced of the treachery of *Vieira* and his adherents, it was resolved to attempt once more the taking of the said *Vieira*, if perhaps he might as yet lurk somewhere or other near the *Recife*, and of his factor *Mor Manuel de Sousa*, engaged in the same design; as likewise of *Antonio Bezerra* and *Amaro Lopez*, both inhabitants of the *Vergea*, but in vain. Those who were sent upon that errand, bringing back no other satisfaction, than that they were not to be met with thereabouts, and that besides that, *Antonio* and *Manuel Kavalkanti*, *Antonio Bezerra*, *John Pessoa*, and *Cosmo de Krafte*, were the same day retired out of the *Vergea* to the *Matta*. The same day captain *Wiltsebut* was ordered to seize the publick notary, *Caspar Pereira*, dwelling in *St. Lawrence*, who was supposed to have drawn the beforementioned association; and it was resolved to send a pardon to *Antonio Kavalkanti*, and *John Pais Kaeral*, who having a great family at home, might thereby be prevailed upon to quit the party of the rebels, whereby we should both weaken that of the enemy, and get a further insight into their designs. *Antonio de Bulbous* being examined at the same time, ingenuously confessed that he had not the least knowledge of the conspiracy; *Sebastian Karvalbo* being, notwithstanding his former confession, detained prisoner upon suspicion till the 4<sup>th</sup> of *August*, was, at his request, dismissed by the great council, after having given sufficient proof that he was one of the three who writ the letter concerning the intended conspiracy to the council.

Karvalho  
discharged

The 14<sup>th</sup> of *June*, orders were given to all the inhabitants of the *Recife*, and those living upon the back of the river, to surround their dwelling places with palisadoes, under forfeiture of 200 gilders. And to render the companies the more compleat, and expose our men to as little danger as might be of being surprized by the enemy, all the safeguards were commanded to be withdrawn by Mr. *Haus*, near the *Recife*, and in *Serinhaim* by captain *Fallo*, who was likewise ordered to remove the garrison of *Huna* to another place of more strength. The better to supply the scarcity of provisions in the forts, which for want thereof might be in danger of falling into the enemies hands, orders were dispatch'd to the chief commanders, to seize upon what quantity of *Farinha* (or meal) they stood in need of for the use of their respective garisons among the inhabitants of the country, which they were to be paid for by the commissaries of the company. It was also thought necessary, that for the greater security of *Maurice's* town, the ditches of the fort *Ernestus* should be made larger, as likewise the *Quinqueregular* fort, which was put in execution by *Haus*, as vice-admiral *Lichtbart* took care to have two spy ships posted one betwixt the *Quinquangular* fort and the fort *Bruin*, the other beyond *Baretta*, to prevent any surprize on that side at low tide; it was also resolved not to let any ships or boats go out of the *Recife*, without a pass from the great council. The major of the city militia was ordered to keep the rest of his officers with the soldiery in readines against the 17<sup>th</sup>, to pass the review, the same day being also appointed to the garrison for that purpose; several new commanders were also chosen for the militia, instead of those that were ready to return into *Holland*. The same day *Paul Linze* set out on his journey into *Parayba*, being furnished with fifteen hundred soldiers for necessary occasions; and *Bernardino Karvalbo*, who had absconded for some time, had, at his request, leave granted him to come to the *Recife* to answer for himself.

The 15<sup>th</sup> *John Pessoa*, master of the sugar-mill *Pantello*, one of those that were ordered to be secured, desired leave also in a letter to the council, to appear before them, his flight being occasioned not by his guilt, but only fear, which was granted him, as well as the request of father *Lawrence Alcumba*, upon the same account.

On the 16<sup>th</sup> early in the morning, we received secret intelligence, that *Andrew Vidal*, at the head of 1000 *Portuguese*, and *Kameron* with d'Indeos *Rondelas*, and *Hen-*

ry

1643. *ry Dias* with a body of arm'd Negroes, had posted themselves above *St. Anthony*, near the sugar-mill *Topekura*. The same day *John Karnero de Maris*, and *Francisco Dias del Gato*, both masters of sugar-mills in the district of *Pojuka*, ordered to be apprehended, were brought prisoners to the *Recife*, and *Amador da Rouje*, and *Pero Marimba Falkao*, inhabitants of *St. Anthony*, who had hitherto absconded, did ask permission to come to the *Recife* to answer for themselves, which was easily granted.

Our camp removed to Moribeka.

It was then taken into deliberation by the great council, whether, according to the last intelligences received of the enemies designs, it were not most expedient to remove our small camp from *St. Lawrence* to *Moribeka*, which after some debates, was agreed upon accordingly, thereby to secure the passage of the river *Sangea*, and consequently to remain masters of the country as far as the cape of *St. Augustin*, from whence both the camp and the *Recife* might conveniently be supplied, both with *Farinha* and cattle; whereas on the contrary, if the enemy should be possessed of it, he might (as had been done in the former wars) cut off all supplies coming from the south to the *Recife*.

Pursuant to this resolution, orders were sent to captain *Wilfcbut* to march immediately to *Moribeka*, to expect there the coming of the *Brasilians*, and some further succours: In the mean while, to post himself in the church, and to fortify the same against any sudden attack: And the aldermen of *Maurice's* town were ordered to buy up the necessary provisions, both of *Farinha* and cattle about *Moribeka*, for their use. A proclamation was also issued, commanding all the inhabitants of *Serinbaim*, *Pojuka*, *St. Antonio*, and *Moribeka*, without any exception, to repair well armed, both horse and foot, with all possible speed to *St. Antonio*, there to lit themselves for the defence of the open country, under the command of colonel *Gaspar Vander Ley*, and lieutenant colonel *John Heck*: Those that were not able to maintain themselves at their own charge, being to receive their provision from the company, like other soldiers: The said colonel and lieutenant colonel offering at the same time, to furnish fifteen hundred *Aquera's* or measures of *Farinha*, for the use of our garrisons, for ready money.

The same day the great council received a letter from *Antonio Kavalkanti*, (unto whom they had lately sent his pardon) in which he protested, that neither he nor the rest of the inhabitants of the *Vergea* were concerned in any cabals against the state, their flight being occasioned only by fear of

being imprisoned upon suspicion, raised against them by their enemies. The answer of the council was to this effect, That if he knew himself innocent, he should return to his mill, this being the only means to recover his former reputation.

The great council having great reason to suspect, that *Kamaron* would endeavour to bring the *Brasilians* under their jurisdiction over to his party, resolved, in order to secure them in their interest, to treat with *Lilyry*, their commander in chief, to persuade them, to send their wives and children into the Isle of *Tamarika*, under pretence of securing them against any attempts of the enemy, to which they might in all probability be exposed in the open villages; but in effect, to keep them as pledges of their fidelity.

The same day the council received secret intelligence from *Antonio d'Oliveira*, that the succours sent to the rebels from the *Babia*, consisted in a considerable number of *Portuguese*, under the command of the brother of *Kavalkanti's*, of four hundred *Brasilians*, under the command of *Kamaron*; three hundred *Indos Redeltas* from *Serica*; and fifty Negroes, under command of *Henry Dias*.

On the same 16th of June, Mr. *Slote-niski*, ensign of the guards, was sent abroad to be at the campaign, with eleven firelocks, and twelve *Brasilians*, who returning the 24<sup>th</sup> of June, gave the following account to the great council. That he took his way from the *Recife* directly to *St. Lawrence*, and from thence directly to the village of *St. Michael*; where being joined by his *Brasilians*, he marched thro' *St. Francisco* to *Kajura*, from thence to *Geyta*, and so further through the *Matta* to *St. Sebastian*, where all the inhabitants had left their houses. At *St. Sebastian* he passed the river *Topikura*, and coming to *John Fernandes Vieira's* park, met there with good able hories. The Negroes told him, they had orders from their master to fly from before the *Dutch*, but to furnish the *Portuguese* with what they desired. From thence he marched to *Antonio*, and in his way thither did light upon a house belonging likewise to *John Fernandes Vieira*, where he found about fifty or sixty sheep, with good store of poultry, intended for the use of the sick belonging to those rebels, or those come to their assistance from the *Babia*. They forewarned him not to advance too far, he being likely to meet some troops in the park belonging to the fathers of *St. Bento*; but coming thither found both the *Portuguese* and Negroes fled. From thence he marched to a house belonging to *Michael Fernandes*, who a-

1643.

Number of those sent from Bahia to the Recife.

EngenSloteniski, sent abroad, and his account.

1643. above three months before had been ordered by John Fernandes Vieira, to provide a sufficient quantity of *Farinha* for the use of the succours expected from the *Babia*; which he lately had transported from thence to *Pedro de Alkumba*, where was the rendezvous of two companies of the rebellious inhabitants, where the said Michael expected a good store of cattle, bought up by Vieira for their use, according to the information of a Negro, brought by *Sloteniski* to the *Receif*. Near the park of *Don Pedro d'Alkumba*, he met with the same Mulat who had shot captain *Waldeck*, and with two *Hollanders* who had committed murder, and were never pardoned. John Fernandes Vieira had promised to be with them against *Midsummer* day. From thence *Sloteniski* marched directly to *Vna*, and so further to *St. Luce*, but met with no body there except one monk, and so returned to the *Receif*.

On the 17<sup>th</sup> of June it was resolved by the great council, with the consent of the council of justice, to issue a proclamation for a general pardon, except some few ringleaders of the rebellion.

The proclamation was as follows.

A PROCLAMATION for a general pardon.

THE great council of Brasil makes known to every body, whom it may concern, that they being sensible, to their grief, how many of their subjects, having been misled by some of the ringleaders of the rebellion, have left their mills, wives and children for fear, as has been insinuated to them, of being disturbed, plundered, and killed by our stragling parties: We being willing to provide against it, and to contribute as much as in us lies, to the prosperity of our subjects, and their estates, have thought fit to publish their intention, to be, to defend and protect the inhabitants of the open country, against all evil intention'd persons to the utmost of their power. And to reduce those who have left their habitations, to obedience, and prevent their utter destruction, we promise our pardon to all such as shall within five days after sight of this our proclamation, make their personal appearance in the *Receif*, not excepting those who have been actually engaged in the said rebellion (unless they are among the number of the chief ringleaders) provided they leave the rebellious party, and return to their former obedience; and that they shall enjoy the quiet possession of their mills and lands as before, under our protection, under condition however, that they shall be obliged to take a new oath of allegiance to the state. Those on the contrary, who shall persist in their rebellion, or shall assist the rebels

under what pretence soever, are hereby declared enemies of the state, who have forfeited their lives and estates, whose persons and estates shall be liable to be prosecuted with fire and sword, &c.

This proclamation being immediately translated into the Portuguese tongue, was sent in the morning to *St. Antonio* and the *Vergea* to be published there; several copies were also distributed among the friars, in order to publish them from the pulpits, and cause them to be affixed to the church doors.

The 18<sup>th</sup>, good store of provision and ammunition was sent to the fort *Keulen*, and *Rio Grande*, and the garrisons of both these places forewarned to keep upon their guard. At the same time the proclamation of pardon was sent thither to be published; and *Antonio Parayba*, chief of the *Brasilians* in those parts, was summon'd to keep his *Brasilians* in readiness with their arms, whenever they should be commanded to give proofs of their fidelity to the company.

The 19<sup>th</sup> of June, two inhabitants of *Porto Calvo*, that were landed but the same morning in a small boat on the *Receif*, brought news to the great council, that *Kamaron*, at the head of the *Brasilians*, and *Henry Dias*, with his armed Negroes, consisting in seven companies, had posted themselves in the *Algoaz*, near the sugar-mill *Velbo*; that their number was increased since to four or five thousand men, by the conjunction of those who were passed the river *St. Francisco* through the *Malta*, and that they had begun to commit open hostilities; so that now the council had not the least reason to doubt any further of the design of the Portuguese. The commander of *Porto Calvo* sent word much to the same purpose, and that he prepared for a vigorous defence. The first effects of this insurrection broke out in the district of *Pojuka*, and considering that our whole force there consisted only in 30 men, under *Jacob Flemming*, a lieutenant, orders were sent him to retreat to *St. Antonio*, there to defend themselves with their joint forces. The first beginning of hostilities was made by those of the *Pojuka*, by seizing upon two boats, all the passengers of which they took prisoners, and slew them afterwards, except one seaman, who had the good fortune to escape. This done, the inhabitants both of the village and the open country, chose for their head *Tabatinga Amador d'Arravio*, whereby they cut off all communication with the cape *Auslin* by land, and all about to the south, besides that, the on the said cape could

The 20<sup>th</sup> of June, a *Brasilian* arrived very early in the morning in the *Receif*; his errand to the council was, that he being sent by *John Blaar*, from *Porto Calvo*, with letters to the great council, was set upon by those of *Pojuka*, near *Kamboa*, who took from him the said letters, and kill'd his companion. For the rest he told them, that *Kamaron* was posted in the district of *Porto Calvo*, and that captain *John Blaar* was in the fort. A council being called to consider of the best means to secure the *Dutch-Brasil* against any attempts of the enemy, the first thing that fell in debate was, whether, according to the general advice of those of the inhabitants, who wish'd well to our government, it were not most expedient for our defence, to form a camp to make head against the enemy in the field; who, if once master of the open country, would force the inhabitants to join with him, and cut off our provisions, without which we could not subsist long. The next thing to be taken into consideration was, where to find forces for this camp, the garrisons being so weakly manned, as not to be able to spare any, and the body under captain *Wilschut* consisting only of one hundred and twenty men, besides the three hundred *Brasilians*, to be joined with him. Considering therefore that the whole force in the *Allegas*, consisted only of two companies under the command of *Muceron*, a number not any ways proportionable to the extent of so large a tract of ground; it was judg'd most convenient to make a virtue of necessity, and to draw them from thence to the *Receif*, as indeed they had been ordered before. But their way by land being cut off by the rebels of *Pojuka*, a vessel, which lay ready to go out a cruising, was ordered to *Porto Francisco*, with orders to *Muceron*, to embark forthwith those forces aboard her, without having any regard to the baggage; but the rest, which could not be put aboard the vessel, should be sent by land to *Rio Francisco*, to reinforce captain *Koin*, for the better defence of that place. Captain *Fallo* was likewise ordered to march with the garrison of *Serinbaim* to *St. Antonio*, it being not likely that the troops in *Serinbaim* should be able to make head there, after the coming of *Kamaron* into *Porto Calvo*, it being an inland country.

The same day forty new-listed soldiers were sent to *Tamarika*, under command of captain *Peter Scullin*, master of the sugar-mill *Harlem*; because this island was of the greatest consequence to us; and the garrisons of the fort *Orange*, and the town

of *Schop*, consisting each of one company, were very weak, and the armed inhabitants did not amount to above one company more.

The same day Mr. *Bas* and Mr. *Van de Voerde*, counsellors of the court of justice, were ordered to examine *Gaspar Pereira* the publick notary, concerning his drawing of the instrument of association; as likewise *John Kaviero de Maris*, *Francisco Dias Delgado* masters of sugar-mills, in the district of *Pojuka*, and *Sebastian Karvalbo*, concerning what they knew of the intended conspiracy.

*Karvalbo* declared a second time, at the house of lieutenant colonel *Haus*, that some days ago (he could not remember exactly which) a certain *Portuguese* servant, whom he knew not, did come to him in the name of *John Fernandes Vieira*, with a letter, in which the said *Vieira* desired him to sign the enclosed writing drawn in form of an association, to take up arms against the government, as soon as they should receive any succours from the *Babia*, which at that time was subscribed only by *John Fernandes Vieira* and *Lewis da Costa Sepulveda*; but, as he supposed, was to be carried to most of the inhabitants. He further declared, that he refused to sign the said writing upon the bare letter of *John Fernandes Vieira*, and the hand-writing being unknown to him, he sent both the letter and instrument of association back by the same lad that brought it, with his answer by way of mouth, that he could not subscribe it. Having more maturely weighed the matter, he sent the same evening to his friend *Fernando Vale*, to desire him to give him a meeting the next morning upon the hills of *Garapes*; which being done accordingly, it was agreed among them to give notice of this conspiracy to the great council, in a letter without a name. This letter, with the subscription of *plus ultra*, was writ by *Vale*, and about ten days after given him to read in a bakers house in the *Pont-street*, and afterwards given to *Abraham Mercado* the physician, who delivered it to the great council.

The same day, the 20<sup>th</sup> of June, the great council received a letter from Mr. *Ley* and *Hoek*, dated at *St. Antonio*, importing, that the whole *Fregezie* had taken up arms, and made sixteen or eighteen *Dutch* inhabitants prisoners; that they had fortified the church against those of *Pojuka*, whom they did not question to force from thence, provided they received any succours from the *Receif*. The council having taken the whole matter into serious deliberation, and considering with them-

fession of  
Karvalbo.

1643. selves, that, as the case then stood, they had no great reason to fear any rebellion in the north, in *Parayba* and *Rio Grande*, as long as our fleet remained near the *Red-Land*, and judging it highly necessary to bring the rebels in *Pojuka* to reason, and by their punishment to deter the rest from attempting the like; they ordered lieutenant colonel *Haus*, with a detachment of a hundred men, to march the next morning to *Meribeka*, there to join with captain *Wilschbut* and the *Brazilians*, and to continue their march to *St. Antonio*; from whence they were with their joint forces to go directly against the Rebels of *Pojuka*, to reduce them to obedience; it being otherwise to be feared that they would cut off all communication betwixt the *Receif* and the garrisons to the south. This expedition proved so successful, that the rebels were put to flight, and lieutenant colonel *Haus* made himself master both of the town and convent, forcing them to quit all the passes thereabouts; and forty prisoners were released, whom they had loaded with irons in the said monastery. But having received intelligence of the approach of *Kamaron* with his whole Body against him, he desired further succours from the great council to keep the field; but the garrison of the *Receif* being too much weakened already, they could send him no other reinforcement 'till the expected succours should arrive from *Holland*.

A. J. 62.

The 21<sup>st</sup>, it was resolved by the great council, to proclaim a general fast all over *Dutch-Brazil*, to be kept the 28<sup>th</sup> of June, to return thanks to God Almighty for the great mercy shewn to them on several occasions, but especially of late, in the timely discovery of the treacherous designs of their enemies, who intended to have surprised them when they were least aware of them.

Scheme of the Portuguese Plot.

The design of this conspiracy was laid thus by the *Portuguese*: They intended in the *Whitsuntide* holidays to make solemn rejoycings, with feasting, tournaments, and such like, on occasion of several weddings appointed for that purpose, unto which were to be invited all the chief men of *Dutch-Brazil*, both civil and military; whom, after they were flushed with wine, they intended to murder, in imitation of the *Sicilian vespers*, or the noted *Parisian wedding*; not questioning but that, when the heads of the *Dutch-Brazil* were cut off, the rest, when attack'd at once in divers places, would fall an easy prey into their hands. But being prevented in this bloody design for that time, *Midsummer-day* was pitcht upon, as most proper for the execution of it, when the ships were departed

out of the harbour of the *Receif*. For the *Portuguese* were not ignorant, that we having received no fresh supplies, especially of gun-powder, for a considerable time out of *Holland*, our magazines were but very indifferently supplied both with ammunition and provisions; and that consequently we must soon be reduced to great extremity, if they were masters of the field: They knew also, that all our ships, except two, were ready to sail with the first fair wind, being already fallen down to the *Red-Land*; thus being sensible of our weakness, the *Portuguese* propos'd to themselves no less than the conquest of the whole *Dutch-Brazil* at one stroke. But the whole design being discovered before *Midsummer-day*, it vanish'd into smoke, both sides betaking themselves to decide the matter by arms.

The *Portuguese* pretended not so much the Allegiance due to their king, as liberty of conscience; notwithstanding which, we have all the reason in the world to imagine, that this insurrection was undertaken not only with the knowledge, but also at the instigation of the court of *Portugal*, and of those of the *Babia*; it being very improbable, that *Kamaron*, *Henry Dias*, and the rest of the ring-leaders, should without the approbation of the king of *Portugal*, have attempted to attack us by open force. Besides this, *Mucheron* declares to have read in a *Portuguese* commission these words: *It is revolt and war undertaken for the honour of God, the propagating of the roman catholic faith, for the service of the king and common liberty*: He further adds, that he has heard several *Portuguese* say, that if they miscarried in their design of chasing us out of *Brazil*, to destroy all with fire and sword, thereby to bereave us of all future prospect of receiving any benefit from those lands; which done, they would retire with their wives and children to the *Babia*, or settle in some more remote place, where they might be secure against any attempts of the *Dutch*. There have indeed been some, who, considering the unsettled estate of the king of *Portugal*, and the odd fancy of his reign, have thought it very improbable, he should involve himself in a war with us, or have given his consent to this insinuation, but the event has sufficiently contradicted that opinion.

The 22<sup>d</sup> of June a letter was delivered to the great council, signed by *John Fernandes Vieira*, *Antonio Kavalkanti*, *John Pessoa*, *Manuel Kavalkanti*, *Antonio Bezerra* and *Cosmo de Castro Pajos* in which they complained, that they being a considerable time ago accused by the *Jews* of a treache-

1643. rous design against the government, had been great sufferers upon that score; that now they being informed by the same Jews that they were in danger of losing all their mills and lands, to be given to certain *Hollanders*, who were sent for, for that purpose, they desired that the time of five days appointed in the last pardon might be prolonged, as being too short for a business of such moment, and that the said pardon might be granted without exception; which they refusing to grant, they did hereby protest before God and all the *Roman catholic* princes, that they thought themselves innocent, and not in the least guilty of all those miseries which might ensue from this refusal hereafter.

The coun-  
cil debates  
the matter.

The 23<sup>d</sup> in the morning the council was assembled, to consider of the said letter; where after several harangues upon the present state of our affairs and the enemy's design against us, they were divided in their opinions, some being for granting a general pardon, without the least exception, as the case stood with us at present, when we were destitute of sufficient provision, ammunition and men; others maintained, that a letter which contained so many notorious untruths deserved not the least answer; others were of another opinion. Whilst they were thus debating the matter, letters were brought to the council, written by lieutenant colonel Haus from *St. Antonio*, that he was ready to attack the rebels of *Pojuka* the next day, not without hopes of good success, so that the council considering of what moment the event of this action was to their affairs, resolv'd to adjourn the said debate 'till the next day, when they hoped to know the issue of the whole enterprise.

The 28<sup>th</sup> of June, *Mucheron* arrived with his two companies in the *Receif*, from the *Allegas*, where it was resolved to dispose his own company in the *Quinqueregular* fort, of which, as a place of great consequence, he was made commander in chief; the other of captain *William Lambert* was put in the fort *Ernestus*.

Good news  
out of Pa-  
rayba.

By letters from *Paul Linge*, governor of *Parayba*, dated the 25<sup>th</sup> of June, we received advice, that the inhabitants thereabouts offered to give him fresh assurance of their fidelity, by taking a new oath of allegiance, and that he did not observe the least motion towards an insurrection.

*Jacob Daffine* master of the sugar-mill *Supapema*, who had been abroad with a good party, made his report to the council, that he had been at several sugar-mills, where he had met with about two hundred of the enemies troops divided into divers small bodies, composed of *Portuguese*,

Vol. II.

mulatts and negroes, under the command of *Amador de Araujo*, *Antonio de Crajo*, one *Taborda* and *Henry Dias*.

The 29<sup>th</sup> of June, by special commission from the council, *Balthazar Vander Veerden* examined *Antonio d'Oliveira*, concerning the design of the *Portuguese* form'd against our government. He declared, that about the beginning of this present June, being then at the house of *Sebastian de Karvalbo*, together with *Francisco d'Oliveira*, *Bernardin Karvalbo*, and the before-named *Sebastian de Karvalbo*, a certain *Portuguese* very well known to them all, delivered to him a letter, directed to all the persons there present, with another piece of writing unsealed, which he began to read; but finding the contents to be, that the underwritten persons promised to be, and declare themselves faithful subjects of the king of *Portugal*, and that *John Fernandes Vieira*, *Francisco Beringel*, *Antonio de Sylva*, and several more, whose names he would not look upon, had signed the same, he returned the said writing, and refused to subscribe the same, telling his son at the same time, *You ought rather to suffer your hand to be cut off, than sign this paper*; and so went his way immediately, not any one of all there present having subscribed their names at that time: He protested he knew not the hand-writing. After a more serious consideration, he thought it requisite to make a discovery of it, which he did accordingly within two days after, to *Matthew Reex*, desiring him to give an account of it to the great council; he declared further that the said writing was signed by above one hundred of the inhabitants.

Before-ex-  
amination  
and confes-  
sion of  
Antonio  
Oliveira.

The 30<sup>th</sup> of June one *Digos Lopes Leyte*, who was not long ago taken prisoner by the *Brasilians*, was examined by Mr. *Bullestrate*, *Dormont* and some other military officers. His confession was, that at the first beginning of the design of the *Portuguese* against this state, they had sent a letter to the governor of the *Babia*, *Antonio Telles de Silva*, to crave assistance from him, which if he refused, they would seek for aid in *Spain*; and if they did not succeed there, they would rather surrender themselves to the *Turks*, than endure any longer the ill treatment they met with from the *Hollanders*. That nevertheless he had heard many dire imprecations made against *John Fernandes Vieira*; that he deserv'd no less than the gallows, he having raised this rebellion for no other end, than thereby to free himself from the vast debts he owed to the company.

Digos  
Lopes  
Leyte ex-  
amin'd.

The same day it was agreed to send abroad a party of twelve soldiers and eight *Brasilians*, to fetch a good quantity of *Fa-*

rinba

Q

1643. *rinba* from *St. Lawrence*, who were put to the rout near that place, so that very few escaped. At the same time the council received the unwelcome news, that some of the inhabitants of *Iguarapu* had taken up arms against them.

In the beginning of *July* it was resolved to draw the fortifications of *Maurice's Town* into a narrower compass, and to add a new line with a breast-work. This task was performed by the negroes belonging to the inhabitants of *Maurice's Town* and the *Receif*, under the conduct of vice-admiral *Lichtbart*, who took care to have the same perfected, according to the model drawn by the engineer.

The same day advice was brought, that *John Lawrence Frances*, and *John Dias Leyte*, inhabitants of *Iguarapu*, made it their business to incite the inhabitants to an insurrection. Captain *Sluyter* sent also word from *Tamarika*, that about eighty men, and one hundred ten women and children, all *Brasilians* of the villages of *St. Michel* and *Nassau*, were come into that island for shelter, and that the *Brasilians* of *Otta* intended to do the like. The magistrates and chief *Portuguese* of *Goyana*, gave the council fresh assurances of their fidelity, provided they might in case of necessity be allowed to retire into the said island, which was granted, and thanks given them for their loyalty. The magistrates of *Iguarapu* advised, that *Vieira* had caused a declaration to be affixed in the sugar-mills of *Gonsalvo Novo de Lira*, which they had order'd to be torn down, and sent a copy of it to the council, assuring them, that they would take all possible care to keep the inhabitants thereabouts under obedience, tho' they found some of them much inclined to a revolt.

Fernandes  
Vale ex-  
amined.

At the same time *Fernandes Vale* was examined by *Mr. Vander Voerde* and *Mr. Bas*; he declared, that having received a letter from *Sebastian de Karvalbo*, to meet him the next morning upon the hills *Garapes*, because he had something to communicate to him, concerning no less than their estates, lives and honour; he without mentioning any thing of it to his wife or brother, went thither on horse-back, accompanied only by a boy; notwithstanding he happened at that time to be afflicted with the gravel; there he met *Sebastian Karvalbo*, with one boy only, who told him, that he having received a letter, with another writing, containing a project of an insurrection to be undertaken against the government, he thought it absolutely necessary, to give notice thereof to the great council; and that he desired him to write a letter accordingly to the council; he be-

ing pretty well versed in the *Dutch Tongue*. That *Vale* ask'd him, whether any body besides himself knew of the matter, unto which he answered, that his Brother *Bernardin* did, whose opinion was likewise to disclose it to the council; hereupon they returning each to their respective homes, *Vale* writ a letter in *Portuguese*, pursuant to the instructions he had received from *Karvalbo*, for whom the said letter was left to peruse in a baker's house, on a publick fair-day for the sale of negroes; after which he had sent the said letter inclosed in another, to *Dr. Markado*, desiring him to see the same carefully dispatch'd to the great council, without mentioning the contents thereof.

The great council receiving frequent intelligence, that the *Portuguese* from the *Babia* intended to send a fleet to the assistance of the rebels, it was resolved to send orders to the four ships, the *Amsterdam*, the *Blackmore*, the *North-Holland*, and *Groningen*, then at anchor near the *Red-Land*, in order to their return to *Holland*, to return forthwith to the *Receif*; the government standing in great need of their assistance, to prevent the conjunction of the forces from the *Babia* with the rebels. They received also letters from lieutenant colonel *Haus*, dated at *Pojuka* the 26<sup>th</sup> of *June*, assuring them, that he had granted passes to above two hundred persons that were returned to their duty; that two or three of the ring-leaders, excepted in the last pardon, sued for the same favour; and that he had caused one *Franko Godinho*, one of the chief of the rebels, taken by his people, to be hanged on the gallows he had erected himself; that *Amador d'Araouje* being gone from thence with a hundred and fifty men to the *Vergea*, to join with *Vieira*, he expected their orders whether he should follow him, he looking upon it as a faint to draw him from thence. He further told them, that with the *Brasilians* and their wives and children, he was above five hundred strong, and that unless they were soon supplied with provisions from the *Receif*, they should consume all the cattle thereabouts.

The great council sent an answer the same night to lieutenant colonel *Haus*, requiring him to grant free pardon to all who should desire it, not excepting the ring-leaders themselves, thereby to weaken *Amador d'Araouje* and his party. That with what forces he could spare in *Pojuka*, (after sufficient provision made for the defence of the garisons, according to their own discretion) he should march to the *Receif*, in order to attack *Vieira*, where they need not fear but to be able to subsist upon what the said *Vieira* had laid up for the use of the expected

But whilst lieutenant colonel *Blaar* was employed in securing *Pojuka* against their attempts, those of the *Vergea* strengthened themselves with all possible diligence; to further which, *John Fernandes Vieira* and *Antonio Kavalanti*, who stiled themselves the heads of this war, did not only affix their declarations round about *Maurice's Town*, and in *Iguarassu*, inciting the inhabitants to rebellion, by promising them considerable succours from the *Babia*, but their parties also, which they sent frequently abroad, forced those of the open country to take up arms, killing such as refused. The same was practised by *Amador d'Araonje* in *Pojuka*; so, that what with provisions, what with threats and force they got together a considerable body in the *Vergea*, we being not in a capacity to prevent it, because what forces we had were in *Pojuka*.

But judging it absolutely for our interest to stop as much as possible these proceedings, it was resolved to arm some of the lusty young fellows with firelocks, which they were furnished withal by the citizens, (there being none in magazines) and to join with them a detachment of the garrison, besides a hundred *Brazilians*, that were lately arrived under *Peter Potti*.

Pursuant to this resolution, captain *John Blaar* received orders to put himself at the head of three hundred men, with whom he was to march with all imaginable secrecy from the *Receif*; and by lying in ambush near the passes, to endeavour to intercept some of the enemies Troops, not questioning, but that out of the Prisoners, they should be able to learn where *Vieira* was posted with his main body, and of what strength both he and the succours from the *Babia* was reputed to be among them. He had strict orders not to molest any of the inhabitants, who were not in arms, but to protect them and their estates, and to receive those who sought for mercy, and bring them into the *Receif*. Orders were also sent to lieutenant colonel *Haus* to march with what forces could possibly be spared out of the garrisons to the south, to the *Vergea*, in order to join with captain *Blaar*, and endeavour to attack the heads of the rebels, which if they could once put to the rout, might be a means to quench the whole fire of rebellion, and to restore peace to the *Dutch-Brazil*.

The first of July it was debated in council, whether all such persons as were suspected to have a hand in the conspiracy, ought not to be granted to all that desired it, without exception. The last was resolved upon as conducting most to the quieting of the subjects minds.

The 2<sup>d</sup> in the evening, the council received advice from captain *Blaar*, that he was posted at *Mongioppe*, with an intention to attack the enemy, wherever he met them.

The 3<sup>d</sup> he marched to *Iguarassu*.

The 4<sup>th</sup> they received letters from lieutenant colonel *Haus*, from *St. Antonio*, importing, that after having left a garrison in *Pojuka* under lieutenant *Flemming*, and one hundred *Brazilians* in *St. Antonio*, he was ready to march to the sugar-mill *Velbo*, and from thence to *Moribaca*; where he would expect their further orders.

At the same time the inhabitants of *Goyana* having fortified themselves in a certain house, belonging to *Listry* their chief magistrate, they desired the council to furnish them with forty muskets, for the use of such among them as were unprovided with arms. Their request was granted, and positive orders sent at the same time to *Servaes Karpentier*, to take this opportunity to disarm all the *Portuguese*, either by fair or foul means; to effect which, he should keep the *Dutch* together in a body as much as possibly he could; his answer was, *he would endeavour to disarm the Portuguese by fair means, he wanting power to do it by force*. Besides which, he gave notice in his letter dated the 11<sup>th</sup> of July, that every thing remained quiet hitherto in *Goyana*, but that the *Brazilians*, (contrary to his express orders) claiming a prerogative to be commanded by none but their own officers, pursuant to a decree of the council of nineteen, had in their passages to *Tamarika* plundered several of the *Portuguese* inhabitants.

Most of the rebellious *Portuguese* had left their wives and children in their houses and mills, which as it tended to their no small conveniency, so some of the faithful *Portuguese* inhabitants did propose on the 3<sup>d</sup> of July to the great council, whether it would not be for our interest to oblige those wives and children to quit their houses and mills, and to send them after their husbands. Several reasons were alleged for it.

I. Because the rebels being encumbered with their families, must of necessity make greater consumption of *Farinha*, and other provisions, which would oblige them the sooner to alter their measures, and to change their places.

II. That thereby they would be much disheartened, for fear of a vigorous attack.

III. That they would not be able to march or to change their camp so conveniently as before, or to lurk in uninhabitable places.

IV. That by the removal of these women, who served them as spies by the help of

1643.

The condition of Goyana.

Captain Blaar sent abroad with some troops.

1643. of their negroes, we should take away all opportunity from them, to be informed of our designs.

All which reasons being well weighed, the following proclamation was published.

*A Proclamation for the removal of the rebels wives and children.*

**T**HE great council of Brasil, by the authority of the states general of the united provinces, his highness the prince of Orange, and the West-India company, make known unto every body, that whereas many of those, who have sided with the three head rebels, John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, against this state, have left behind them their wives, children and families, which hitherto continue in their former dwelling places; we do by these presents strictly command all the wives and children, whether male or female, whose husbands and fathers are engaged with the rebels, to leave their respective houses within six days after the publication of this proclamation; and to repair to their respective husbands and fathers, or else to incur the penalties due to rebels; it being our resolution not to take the same into our protection; nay, to take away our safe-guards from all such of our subjects as shall be found to harbour or conceal these before-said wives, children, and their effects, unless the husbands and fathers of these wives and children shall within the limited time of six days, return to their dwelling-places, and sue for pardon to the council.

Thus decreed in the assembly of the great council of Brasil.

About this time near one thousand Brasilians, among whom were three hundred and sixty nine men, the rest women and children, being retired to the isle Tamarika, to shelter themselves against the rebellious Portuguese, Mr. Dermont counsellor of the finances, was sent thither in the beginning of July, as supreme director of the territory of Iguarassu, to secure that island, which was of so great consequence to the state, in our interest.

The 5<sup>th</sup> of July, a proclamation was issued against the three chief rebels, John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, declaring their lives and estates to be forfeited, offering a reward for the apprehending of them, as follows.

*A proclamation for apprehending the three head rebels.*

**T**HE great council of Brasil, by authority of the states general of the United Provinces, his highness the prince of Orange, and

the West-India company, send greeting: Be it known by all, that whereas we are fully satisfied that John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, setting aside their allegiance, have a considerable time ago entered into a conspiracy against the state, sending their letters throughout several Provinces of our jurisdiction, to excite our subjects to a revolt; that they have gathered and still are gathering forces to maintain their treacherous designs against this state, forcing our faithful subjects to join with them, threatening with death such as refuse to enter into this rebellion; nay, having caused several, as well Hollanders as Brasilians, to be murdered upon that score: That they have affixed and published declarations in several places, tending to the disquieting and disturbing the minds of the subjects of this state, with the name and title of governors of this war (whereas they ought to have stiled themselves faithless traitors) covering their villainous designs under the name of the divine majesty, besides many other misdemeanours, whereby they have rendered themselves guilty of high treason. It is for these reasons that we thought it our duty to declare the above named John Fernandes Vieira, Antonio Kavalkanti, and Amador d'Araouje, and by these presents do declare them enemies of this state, disturbers of the publick peace and our good subjects, rebels and traitors against their lawful magistrates; and to have forfeited all their privileges, rights, lives, and estates; and as such, we grant not only free leave to every one to apprehend or to kill the said John Fernandes Vieira, Antonio Kavalkanti, Amador d'Araouje, but also promise a reward of one thousand Charles's guilders, to such or such persons as shall do so signal a piece of service to the company, as to apprehend either of those persons, so as they may be brought to justice, and the like reward to any person who shall kill either of the said traitors, besides his pardon for any offence he may have committed before; and if he be a slave, his liberty, together with the reward. We also strictly command by these presents, all the inhabitants of this state, of what quality, degree or nation soever, that they shall not presume to assist the said rebels with arms, provisions, money, men, and ammunition, or harbour, conceal, or advise them in any respect, or keep the least correspondence with them, under pain of being declared traitors, and to be punished as such with the utmost rigour, &c.

Whilst the great council were thus endeavouring to quench the flame of rebellion, they received frequent intelligence, that besides the succours already come to the rebels from the Bahia by land, by way of Rio St. Francisco, they expected a considerable fleet from thence; it was resolved

Deputies sent to the governor of the Bahia.

Their instructions.

Arrives in the Bahia.

1643. to send once more some deputies to the governor *Antonio Telles da Silva*, to represent to him that *Kamaron* and *Henry Dias* being under his jurisdiction, their entering in an hostile manner into the *Dutch Brasil*, could not be interpreted otherwise than a breach of the truce concluded betwixt the king of *Portugal* and their high and mightinesses the states general.

Deputies  
just to the  
governor of  
the Bahia.

The persons pitched upon for this purpose were *Baltazar Vander Voerde*, counselor of the court of justice, and *Dirk Hoogstrate*, then commander in chief to the cape of *St. Austin*, who being looked upon at that time as a very loyal person, was sent for the 4<sup>th</sup> of July, leaving *Barent Van Tichlenborgh* to command in his absence. *Francis Krynen Springapple* was appointed their secretary, and *Gerrard Dirk Laet*, *Alexander Sylve*, and *Jacob Swearts*, to attend them as gentlemen.

Their in-  
structions.

Their instructions were, to lay open to the governor the true reason and occasion of this insurrection, and the ringleaders thereof, who would never have dared to attempt it without the hopes of succours, which were sent them by land through *Rio St. Francisco*: They were to search into his intentions as near as possibly they could, and to desire him to recal *Kamaron* and *Henry Dias* with their troops out of the *Dutch Brasil*, and to punish them according to their deserts. If they found the governor not inclined to give them due satisfaction, by recalling those troops either by publick proclamation, or sending some person of authority to bring them back, or by giving them some other real demonstrations of his sincere intention before their departure, they were to protest to, and to declare themselves innocent of all the damages, murders, and rapines as well against the *Hollanders*, as *Portuguese* and *Brasilians*, already committed or to be committed by those forces. They were to declare to the governor, that they would look upon it as an open breach of peace and act of hostility, of which they must give an account to their masters, who, without question would know how to make themselves amends for the damages sustained; and to protest once more, that the *Dutch* declared themselves innocent of all the miseries which must ensue from their taking up arms for their own defence, after their so reasonable request had been rejected.

Arrive in  
the Bahia.

Accordingly they set sail the 9<sup>th</sup> of July 1645, from the *Recif*, in the ship called the *Rœbuck*, and coming to an anchor the 17<sup>th</sup> in the *Bahia*, were in the name of the governor *Antonio Telles da Silva*, complimented aboard their ships by several

VOL. II.

*Portuguese* gentlemen, from whom they asked leave to come ashore, having several matters of moment to propose to him in the name of the great council of *Brasil*.

The next day being the 18<sup>th</sup> of July, about noon, lieutenant colonel *Andrew Vidal*, and captain *Pedro Kavalkanti*, with some other officers, came in a brigantine to fetch them to the palace; where, after the first complements, they delivered their credentials, telling the governor, that out of those he would understand that they were sent to treat with him of certain points, which they were ready to propose either now or whenever he should be disposed to receive them. The governor, after the usual return of complements and perusal of the credentials, told them, that he was ready to hear them whenever they pleased; whereupon they proposed,

Are admit-  
ted to au-  
dience.

That some *Portuguese* subjects of their high and mightinesses the states general of the *United Provinces*, have entered into a cabal, in order to take up arms and attack *Pernambuko*; to effect which, they have by certain letters solicited their fellow subjects to enter into a rebellion, and provided themselves with arms, in hopes of succours from abroad. That in the beginning of May, *Kamaron* and *Henry Dias* with their *Brasilians* and negroes, and some *Portuguese*, being on their march in an hostile manner to *Pernambuko*, *John Fernandes Vieira*, *Antonio Kavalkanti*, and *Anador d'Araonje*, with other *Portuguese* their accomplices had no sooner notice of their coming, but they absconded from their houses, gathered what forces they could, some by force, some otherwise, published their declarations, styling themselves governors of this war for the public liberty; all which they undertook upon hopes of being backt by foreign troops. That through God's mercy their masters did not want power to protect their faithful subjects, and to punish the rebels according to their deserts: But as they could not comprehend what it was that could induce these foreign troops to enter their territories in time of peace, in order to aid their rebellious subjects against them, so they were at a stand how to deal with them. That the great council as well as all the rest of the inhabitants, being too well acquainted with his excellency's extraction, exquisite knowledge in state affairs, and the good neighbourly correspondence he had always cultivated with our government, than to harbour the least thought that he should give the least encouragement to any of his subjects, to aid rebellious subjects against their sovereigns: That they were sensible he would use all

Their pro-  
position.

R

possible

1643. possible means to prevent it. It was for this reason that they were sent by the great council to give his excellency notice of the hostilities committed by Kamaron and Henry Dias, desiring that he would be pleased not only to command them not to assist the rebels with their troops, but also to retire out of Pernambuco and the other captainships under the Dutch jurisdiction; that so the rebels being disappointed of their assistance, might be sooner reduced to their former obedience, and our subjects enjoy the benefit of the truces stipulated betwixt his present majesty of Portugal, Don John IV. and their high and mightinesses the states general. All which, the great council of Brazil, highly recommended to his excellency's consideration, in a letter which was then delivered by the deputies to the governor, which is as follows.

*A letter from the great council to the governor of the Bahia.*

IT is sufficiently known to your excellency with what strictness the truce betwixt his majesty of Portugal and the high and mighty the states general of the United Provinces, has been observed in all its circumstances by the inhabitants of the Dutch Brasil, even according to the constitution of those of the Bahia and other places, who have of late passed through our captainships; neither have we ever received the least complaints upon that account, either from the king your master, or from your excellency; all which gave us sufficient reason to believe that you would not in the least consent that your subjects should attempt any thing contrary to the said truce. And though some of the Portuguese inhabitants, subjects of the states, laying aside their allegiance, have taken up arms and are risen in rebellion against this state, as soon as Kamaron and Henry Dias at the head of their Brasilians and negroes, besides some Portuguese, did without licence or the least encouragement from us, enter our territories, contrary to the law of nations, and joining with the rebels, exercised open hostilities against our subjects, not like soldiers but robbers and thieves; yet can we not be persuaded that those troops should have made this attempt by order or consent of his majesty of Portugal or your excellency, against us your confederates.

Thanks be to God we don't want means to bring our revolted subjects to reason, and to destroy those foreign troops; but to shew to all the world how ready we are to fulfil the reiterated command of our masters, to maintain inviolably the truce betwixt his majesty and them; and to remove all sinister in-

terpretations which might be made in foreign courts upon this head, as also to give sufficient opportunity to his majesty of Portugal and your excellency, to convince the world that you have neither consented to nor abetted this conspiracy, we in the name of their high and mightinesses the states general, his highness the prince of Orange, and the governors of the West-India company, have sent Mr. Balthazar Van Voerden, councillor of the court of justice, and Dirk Hoogstrate, commander in chief on the cape of St. Austin, as our deputies to you, with full power to propose these points to you, and to desire you forthwith to recall the said Kamaron, Henry Dias, and other leaders, with their troops, within a limited time out of our territories, either by publick proclamation, or such other means as your excellency shall think most forcible or expedient, and to punish them according to their deserts; and if they refuse to obey, to declare them open enemies to his majesty; it being impossible for us to conceive, how due satisfaction can be given without it to their high and mightinesses, to the prince of Orange, and the West-India company, which nevertheless we ought and do expect from your excellency.

Subscribed, Your excellency's  
Well-meaning friends,

On the side stood, Henry Hamel,  
A. Van Ballestraten,  
From the Receiv, P. J. Bas,  
July 7, 1640. J. Van Walbeck,  
and  
Henry de Mucheron.

The governor gave immediate answer to the deputies propositions, that he was so far from sending any succours to the rebels that he had not had the least knowledge of it. That the Brasilians and negroes were disbanded by his majesty's order, and that these as well as the Portuguese among them, that were come to the assistance of the rebels, could be in no great numbers, consisting (as he supposed) in some vagabonds, or others, who having committed misdemeanours in the Bahia, had taken this opportunity to shelter themselves, and flee from punishment, as it frequently happened that such like persons did come to the Bahia from Pernambuco, which nevertheless had given him not the least suspicion of the councils sincerity. He told them that he was extremely glad to understand the good confidence their masters reposed in him, of maintaining the truce concluded betwixt his majesty of Portugal and their high and mightinesses the states general, assuring them

1643.

Their se-  
cond audi-  
ence.

The gover-  
nor's second  
answer.

1643. them that he never should be prevailed upon to act contrary to it, for fear of hazarding his life. And that if he had any such intention, he did not want means to attempt it by the assistance of the *Brasilians*. But that he had never had any thoughts that way, notwithstanding he had been provoked to it by the *Dutch*, who since the truce had taken a *Portuguese* ship and carried it to the *Recefs*, which by the bravery of the *Portuguese* was delivered from the *Hollanders*, and they and the ship brought to the *Babia*; the *Dutch* mariners being dismissed without any punishment. He told them further, that he was not insensible what an opinion their masters entertained of his sincerity; and that he had reason to believe, that they had at this time as they had done before, sent their deputies chiefly to feel his pulse, to enquire into his strength, and to dive into his designs. That however, he would communicate the letter to his council, and give them a speedy answer, in order to their return home, pursuant to the request of their masters. Then the governor arising from his seat, the deputies took their leave and returned aboard.

The 19<sup>th</sup> in the morning they were sent for a shore by a lieutenant, and brought to the house of lieutenant colonel *Pedro Korea de Gama*, where they dined in company of *Andrew Vidal* and *Paulo de Kunba*. Towards the evening they were again conducted to the palace, where the secretary desired them to tarry a minute, because his excellency was busy with closing his letters; after some stay they were introduced to the governor, who told them, that he had understood the contents of the letter, which he found altogether agreeable to the propositions made to him the day before by way of mouth by them, which consisted chiefly in two points.

First, the good opinion their masters had of his sincere intention, in maintaining a good correspondence with them, in order to maintain the truce betwixt his majesty and the states general, and the confidence they had of his not being concerned in the rebellion, either by encouraging or assisting the same. Wherefore he desired they would continue in the same sentiments, because he never had made the least infraction of the said truce, neither ever thought of any thing like it, nor suffered any of his subjects to act contrary to it; notwithstanding, said he, the *Hollanders* have broke the same in several respects, viz. in their expeditions against *Angola*, *St. Thomas*, and *Marinbo*; by the plundering of *Pedro Cesar Mines*, who had

been basely used during his imprisonment, 1643. not like a man of quality, being forced to shelter himself among the woods after his escape. They had also taken a *Portuguese* ship in his own harbour. Neither did the inhabitants of *Pernambuco* want reasons of complaint as well as the other captain-ships; he had understood out of several letters from thence, how the *Jews* were always busy in forging accusations against them, which were taken for truths; and when the *Portuguese* had thereupon absconded themselves out of fear, the *Tapoyers* or mountaineers were armed against them, among the rest they had caused a poor hermit to be hanged. The great council had always given him sufficient proofs of their suspicion, the last embassy being intended to no other purpose (as captain *Heogstrate* could testify) than to dive into his designs and strength. Thus it was reported and believed, that *Andrew Vidal* and *Paulo de Kunba*, with several other officers, were sent by him into *Pernambuco*, though they saw them here before their eyes.

Upon the second point, concerning the troops said to be sent to *Pernambuco*, he gave for answer, that they must be some *Brasilians* and negroes lately disbanded, who were of little account, as we were sensible ourselves: That if a few *Portuguese* were among them, they must be supposed to be criminals who were fled from justice; that he was not unwilling to call them back by proclamation, but feared that he should be but slenderly obeyed, by a sort of people who could not be kept in obedience within his own jurisdiction. That to satisfy our request, and to remove all reasons of complaint, he intended to send his deputies shortly to *Pernambuco*; all which he had more clearly expressd in his letter to the great council, wherewith he would, according to the request of our masters, dispatch us with all imaginable speed.

The deputies replied, that their masters had never entertained any suspicion of his excellency, neither had they given any orders to dive into his designs; but always had a favourable opinion of his firm adherence to the truce, as might be evidenced by Mr. *Andrew Vidal*, who during his stay with them, had liberty to go where he pleased, without any attendance but his own. That what he objected concerning the accusations of the *Jews* was of no moment, the same being never hearkned to, the intended insurrection being discovered by persons of unquestionable credit. That *John Fernandes Vieira*, *Antonio Karvakkanti*, and others their adherents, had always been protected

A reply of the deputies.

1643. protected against any false accusations, and had free access to all the counsellors of the court of justice, and those of other colonies, as well as the chiefest among the *Dutch*, so that they had no reason to abscond out of fear for the *Tapoyers*, who never were intended to be employed against them. That they did not know of any hermit that was hanged by them, but remember'd that in an engagement with *Amador d'Aracaje*, such a one was shot by the *Brazilians* as he was ringing the bell to give the alarm.

They further told him, that tho' they had no orders to treat with his excellency upon any other points than those that concern the rebellion, they could easily make it out before all the world, that *Angola* and the other places were conquered according to the rules of war, without the least infraction of the truce, it having been expressly stipulated, that the war should continue in those parts till the same was published there. The *Brazilians*, Negroes and *Portuguese* were come in considerable numbers into our territories, not like disbanded soldiers, but well armed, and their coming was not unexpected, but well known to the rebels; but the council was not so much concerned for their number, as to be satisfied under whose authority they had taken up arms against them, that they might deal with them accordingly. But however it was, they desired his excellency to believe, that their masters would be extremely glad to understand his good inclinations, that thereby the effusion of humane blood might be saved; intreating him to send his deputies forthwith with the necessary instructions.

The governor promised to send his deputies soon after their return to *Pernambuco*, telling them, that as he thought himself secure of the good neighbourly correspondence of their masters, so he was resolved to continue in the same on his side. What he had proposed for the rest, had been only by way of discourse, not with an intention to enter into a dispute concerning the legality or illegality of it; tho' it appear'd very odd to him, that they should assist his master at home, and at the same time wage war with him in other parts, under pretence that the peace was not published there; and what had passed with *Pedro Caesar de Mines* was a thing not justifiable in his understanding.

After the usual compliments he arose from his seat, telling them, that he would send the letter directed to the council to them aboard the next day, and so our deputies returned aboard their ship. The 20<sup>th</sup> in the morning the secretary of the

1643. governor came aboard our vessel, with the governors letter to the council, which he delivered to the deputies, requesting in his master's name, to send him a translation of the letter from the council to the governor out of the *Dutch* into the *Portuguese*, subscribed with their own hands; which they did, and having delivered the same to the secretary, he took his leave and returned ashore.

Our people set sail the same day about noon from the *Babia* to *Pernambuco*, where they arrived the 28<sup>th</sup> in the afternoon before the *Receif*, and gave an account the same day of their negotiation to the great council, unto whom they also delivered the letter written by *Antonio Telles da Silva*, and directed to them. The contents of which are as follows.

*The governours letter to the council.*

1643. *MR.* Balthazar Vander Voerden, coun-  
cellor of justice, and captain Dirk Van  
Hoogstrate, commander in chief on the Cape  
of St. Austin, your lordships deputies have  
delivered your letter to me, in which you are  
pleased to give me notice of the revolt of some  
of your subjects against you. I received this  
news as I ought to do, and should not have  
been able to receive it without the greatest  
surprize and discomposure of mind, if I had  
not been assured in my conscience, that your  
lordships did not in the least imagine, that  
this insurrection could derive its source from  
our government; and, tho' I could upon this  
occasion enter upon a long recital of the pro-  
ceedings of my government, tending from its  
beginning till now, to a sufficient justification,  
in the eyes of all the world, and of the greatest  
kings and princes of christendom, that the said  
good correspondence has been maintained as  
strictly on our side, as the same is pron.<sup>d</sup>  
in your lordship's letter: But rather than  
give the least occasion of disgust or difference,  
by enlarging myself upon those heads, in which  
your subjects have expressly and manifestly vio-  
lated the truce concluded and ratified betwixt  
the king my Master, and the States General  
of the United Provinces, I will sacrifice the  
same to the interest of our common neighbour-  
hood, rather than to enter upon a particular account  
of these miscarriages, in the expedition of An-  
gola, at a time when the States General did assist  
the crown of Portugal with their naval force,  
when our ambassadors residing in the Receif,  
were told, that these troops were not intended  
to be employed against any of his majesty's  
barbours, but in the West-Indies, tho' at the  
same time they were embarked for the conquest  
of Angola. The same may be said of the tak-  
ing of the isle of St. Thomas, and the city  
Luy de Mapanha, and the seizing of a Por-  
tuguese

1643. guese ship upon our coast, laden with su-  
gar from Spiritu Sancto. The commissary  
Greening was dispatch'd thither, under a pre-  
text of buying of Farinha, but in effect to  
sound my inclinations, as he himself confesses,  
when he says in a certain letter of his, I  
was sent thither with this commission, but  
rather to feel his pulse and try his friend-  
ship, than that we were in want. The un-  
faithful dealings of the directors of Angola  
in the capitulation with the governor Pedro  
Cesar de Mines; the razing of our fort Ara-  
val in Bengo; the base treatment put upon  
the said governor, being a person of quality,  
and a general of his majesty's, are matters  
altogether inconsistent with the rules of war,  
nay, with humanity itself, and contrary to the  
practice not only of the more civilized nations  
of Europe, but also the Barbarians them-  
selves. Of the same stamp was the answer  
given by your council to our ambassador, who  
urging a cessation of arms in the kingdom of  
Angola, was answered, that the same had  
no dependency on our jurisdiction, quite con-  
trary to the sincere intentions always observed  
by me in all our transactions with you; for  
no sooner did your lordships make complaints  
to me against one captain Augustino Conda-  
go, and one Domingo de Rocha, who ha-  
ving carried away a barge with sugar, had  
brought her into the harbour of our city, I  
sent back the said vessel immediately, and put  
the captain in prison till he was sent over to  
his majesty. And that time being informed,  
that two soldiers living under my jurisdiction,  
whose names were John de Campos, and  
Domingo Velho Sigismundo, had commit-  
ted some injuries in your captainship of  
Pernambuco, I caused them to be hanged im-  
mediately, looking upon it as a duty not to be  
dispensed with by me, for the maintaining of our  
mutual good correspondence: All these before-  
mentioned infractions having never been able  
to make me forgetful of the reiterated orders  
of his majesty, viz. To improve the effects of  
the peace and alliances made betwixt him and  
the States General, to our both sides satisfac-  
tion: I must at the same time confess, that  
looking upon myself as a soldier, (abstracted  
from the consideration of the interest of the  
state, and the duty of a subject) I thought I  
ought not to take tamely so many affronts,  
and to let slip so many fair opportunities of  
doing myself justice; much beyond what can  
be supposed to arise from the conjunction of a  
few unarmed Portuguese, a few discontented  
Negros, and some rebels, whose protection can-  
not, as I said before, come in any competi-  
tion with the several opportunities and provo-  
cations pass'd by on our side before, for the  
common interest; and that consequently our  
government cannot as much as be conceived to  
be the hidden cause of this rebellion, as your

VOL. II.

lordships themselves are pleas'd to confess; 1643.  
neither would I have enter'd upon a recital  
of those particularities, if I had not thought my  
self oblig'd both in duty and affection, to give  
this satisfaction to you. To give you the true  
account of the absence of Henry Dias, you  
must know, that one night he left his guard  
in Rio Reael, and pass'd over to your side;  
Don Antonio Philippo Kamaron, captain  
of the Brasilians, being sent after him, and  
not returning, I judg'd that they were gone  
towards Mocambo, to attack the Palmairas  
of Rio St. Francisco, which made me (to  
avoid all suspicion of being concerned in any  
thing that might tend to the breach of peace)  
send two jesuits to persuade them to return,  
but in vain, they refusing to obey, either for  
fear of punishment, or that they were already  
engag'd with the rebels, (as I now am apt  
to believe they were) so that I have heard  
nothing from them since, except what I have  
understood out of your lordships letter. The  
Portuguese under your jurisdiction have sent  
to me the reasons which mov'd them to this  
insurrection, imploring my assistance, as sub-  
jects of the king my master; they told me,  
that they stood in fear of being sacrificed to  
the fury of four hundred Tapoyers, sent for  
that purpose from Rio Grande; to avoid  
which, and dreading your lordships anger,  
awaken'd against them by the false accusa-  
tions of the Jews, (the most perfidious and  
irreconcilable enemies of Christendom) had  
rather chos'n to expose themselves to a most  
miserable flight, leaving behind them their  
wives and children, than to endure the hard-  
ships of a tedious imprisonment. I could  
scarce have imagin'd, that you could be so  
far mis'd by the fictions of a people so much  
despised by all other nations, as to be persua-  
ded by them, that certain persons were sent  
from hence into your territories, who have  
been seen here by your deputies. And tho' I  
am apt to persuade myself, that some of the  
Portuguese would, as the case now stands,  
be glad to embrace our protection, it being  
much more natural to be oppress'd by ones  
own king or prince, than by foreigners: Yet  
when I seriously reflect upon your lordships  
proposals made by your deputies, viz. to oblige  
captain Kamaron and Henry Dias, to re-  
turn to the Bahia, and to use all other pro-  
per means to bring the revolted Portuguese  
to reason; when I say, I seriously reflect up-  
on the publick calamities on one side, and  
how destitute I am of suitable means at pre-  
sent to satisfy your desires, I cannot but be  
infinitely concerned thereat; being sensible  
that these captains will not be brought over by  
persuasions; and wanting means to reduce  
them to obedience, who have now settled them-  
selves at so great a distance among the woods  
and forests. But as I am ready to conform  
S myself

1643. myself in all respects to your lordships desires, to convince you of the sincerity of the Portuguese nation, which is such, that no opportunity, tho' never so great of promoting their own interest, does ever stand in competition with what they think they owe to their confederates: I am willing to take upon me the office of a mediator, in order to endeavour to appease these troubles by my authority; for which end I intend to send to you with all possible speed, certain persons of known ability, with sufficient instructions and power, to the rebellious to return to their duty; which, if they decline, such measures may be taken as will force them to it; which, as I hope, may serve as the most effectual means to restore tranquillity to your dominions, and to cultivate the good opinion and correspondence betwixt us; which I wish God Almighty will be pleased to continue betwixt these two nations, by a perpetual tie of amity.

Bahia, July 19,  
1645.

Signed,

Antonio Telles da Silva.

Mr. Hoogstrate at the same time gave a secret verbal account to the great council, that soon after their arrival there, *Andrew Vidal*, captain *Paulo Kunba*, and *John de Sousa* came to them, the last of whom sat himself down near him, (Mr. Hoogstraten) enquiring secretly after his uncle *Philip Pays Baretto*, whether he was among the mutineers; to whom he gave for answer, that he was still in his mill. After which, the table-cloth being laid, *Sousa* was invited to stay at dinner with them, which he refused; because, as he said, he was upon the guard: Before dinner was ended *Sousa* came back, and after the table-cloth was taken away, invited Mr. Hoogstrate and *Kunba* to smoke a pipe with him in a back room, whither they went, but were followed by the secretary, Mr. *Springapple*. As they passed through a gallery, *Paulo de Kunba* took *Springapple* a little on one side; and in the mean while, *Sousa* told Hoogstrate with a loud voice, that he was surprized to hear that his uncle *Philip Pays* had not sided with the rest: Unto which Hoogstrate answered, *That he thought he did very wisely to keep himself quiet, because it was likely to turn to no account. That is your opinion*, reply'd *Sousa*, *but have a little patience; and, because I know you to have always been a friend to the Portuguese, I can assure you it will turn to a considerable account. And it is upon this score, I advise you, like a friend, to provide for your own safety and your family. You may rest assured, that if you will engage to do a piece of good service to the king my master, and*

*Sousa*.

to the governor, you shall want neither money, sugar-mills, places, nor preferments. Mr. Hoogstrate appearing somewhat discomposed at this discourse, told him, *That though he was not unwilling to do the king and governor what service he could, he did not know what sort of service he meant. Unto which, Sousa replied, I am sure you are able to do good service to the king; but then, says Hoogstrate, you must tell me how: That I will, answered Sousa, are you not governor on the cape of St. Austin? Unto which Mr. Hoogstrate said, Yes, I am; then, replied Sousa, all that is required of you, is, to surrender the said fort, with all its works, into the king's hands, that we may land our men thereabouts: If you will promise to do it, you shall have a very ample reward, and be made commander in chief of our forces. Mr. Hoogstrate gave for answer, that these were things of such a nature, as were not consistent with his oath and honour. Their discourse being interrupted at that time by the coming of another person into the gallery, *John Sousa* and *Paulo Kunba* went out another way. Mr. Hoogstrate told his secretary, Mr. *Springapple*, with a discomposed look, *What is the meaning of these dogs, do they take me for a traitor? He was going on to say more, when Sousa and Kunba returning into the gallery, took him aside, and told him, That he might be sure every thing should be performed that had been promised him; that if he wanted any money he should have it immediately, and for the rest, they would introduce him alone to the governor, to receive the confirmation of it from his own mouth. Mr. Hoogstrate reply'd, What you desire is not in my power to perform, if I would never so fain; because I am promised to have a commission of mayor immediately after my return, and then I shall certainly be employed in another place. During this parley, Mr. *Vander Voerde* entered the gallery in company with Mr. *Andrew Vidal*, who entertained him all the while the others were talking together, till Hoogstrate taking his opportunity as they were walking together, whispered Mr. *Vander Voerde* in the ear, *I wish I was well rid of them, to talk with you in private, for I know not what their design is; I am afraid they will either kill or detain me here. Mr. Vander Voerde would willingly have made a reply, but could not, by reason Sousa and Kunba, and Pedro Korre de Gama, (the last of which understood Dutch) were so near them; so that he thought it the safest way to dissemble, and to pretend as if they had been talking about some indifferent matter. Mr. Hoogstrate then told Sousa, that he had a great mind to pay a visit to Donna *Katharine de Melo*, mother-in-law***

1643. law of Philip Pays *Souza*; he answered him, that he would ask the governor, who having given his consent, *Hoogstrate* went thitherward with *Souza*, and at his going out of the gallery, whispered *Vander Voerde* again in the ear, *They have catch'd a mackerel, for I intend to set the hypocrite to the life.* As they were walking along the street to madam de Melo's house, *Souza* and *Kunba* repeated their former discourse, endeavouring to encourage *Mr. Hoogstrate*, by hopes and promises of great reward, both from the king and governor, with whom they said he should confer in private concerning the point in hand, and that in the following manner.

After their return from madam de Melo's, to the house of *Pedro Korre de Gama*, where *Vander Voerde* expected their coming, *Kunba* was to go privately to the governor, to agree with him, that when *Mr. Vander Voerde*, *Hoogstrate*, *Souza*, and *Kunba*, should come to speak with him, he should by his secretary, desire them to stay a little while. In the mean while, *Souza* was to ask *Mr. Hoogstrate* to take a glass of wine with him, and under that pretence bring him to the chamber of the confessor of the governor, where they were to have this private interview. Accordingly, *Paulo de Kunba* went to the governor, whilst *Hoogstrate* and *Souza* were returning to *Pedro Korre de Gama's* house; when *Souza* entertained him with nothing else, but the probability of succeeding in their enterprize against the *Dutch Brasil*, telling him, that the governor stay'd only for the coming of *Salvador Korre de Saa* and *Benevides*, who were expected with four galleons from *Rio Janeiro*, besides some other ships; and that twenty five hundred men were designed for this expedition, besides those already in arms in *Pernambuco*, who were to be sent from the *Bahia*, and to be landed on the Cape of *St. Austin*; This is, said *Souza*, the governor's request to you.

Scarce were they returned to the house of *Pedro Korre de Gama*, when *Andrew Vidal* came and told them, that the governor was ready to receive them; so they went to the palace, where they were no sooner come within the antechamber, but the governor's secretary came to desire them to tarry a little, the governor being busy with closing some letters. So whilst some *Portuguese* were entertaining *Mr. Vander Voerde* near the window, says *Souza* to *Mr. Hoogstrate*, Come, shall you and I take a glass of wine in the mean while? Which *Mr. Springapple*, secretary of the embassy understanding, told him, that he would go along with them; but *Paulo de*

*Kunba*, and some other *Portuguese* taking him aside, kept him in discourse, whilst *Mr. Hoogstrate* was conducted by *Souza* into the confessor's chamber.

Within a few minutes after, the governor *Antonio Telles da Silva*, entering the room, saluted *Mr. Hoogstrate* very courteously, and setting himself in a chair near him, order'd the chamber to be lock'd, no body being present besides themselves but *Souza*. The governor then told *Mr. Hoogstrate*, that he had always taken a particular notice of his character, of his being a friend to the *Portuguese*, that he hoped he would continue in the same opinion, and would not refuse the offer made him by *Don John de Souza*, in the king's and his name; their intention being not to enter into a war with the *Dutch*, but only to repossess themselves of what of right belonged to the present king of *Portugal*, *Don John IV.* and that if count *Maurice of Nassau* had stay'd any longer in this country, he himself would have been instrumental in bringing this matter about. *Mr. Hoogstrate* answered the governor, that he should be glad to understand what it was he could serve him in; You have, says he, understood that from *Mr. Souza*, and I desire you to turn absolute *Portuguese*. *Mr. Hoogstrate* told him it was beyond his power, because immediately after his return, he should be provided with a majors commission, and consequently not be employed in the same place: Unto which the governor reply'd, You need not question any place of honour or profit among us, but it will perhaps not be convenient to discourse together upon this point at present, for fear *Mr. Vander Voerde* should suspect us: But I intend to send two ambassadors, (of which *Mr. Paulo de Kunba* is to be one) to your government, who shall be empowered to treat with you further upon this account. And, says he, giving his hand to *Mr. Hoogstrate*, rest assured in the name of the king my master, that whatever *Mr. Paulo de Kunba* shall promise you will be punctually observed and performed.

Then the governor took his leave, telling him that he would not detain him any longer, for fear of creating a suspicion in his colleague, and so retired into his own apartment. But *Mr. Hoogstrate* and *John de Souza* were no sooner return'd from thence, but the governor sent for the said *Mr. Hoogstrate* and his colleague *Mr. Vander Voerden*, to confer with them, concerning their proposals, made in the name of the council of *Dutch Brasil*: As they were walking thither, *Mr. John de Souza* told again to *Mr. Hoogstrate*, with a low voice, and why are you obliged to accept of the majors

1643.

*Mr. Hoogstrate's private interview with the governor.*

1643. majors commission? It is an easy matter for you to tell them, that you would rather continue governor of the place where you now are; and be satisfi'd that when you come among us, that you will not want any employment fit for a good soldier as you are. Mr. Hoogstrate being not a little moved with this discourse, was more desirous to get aboard their vessel, as soon as possible he might, to get an opportunity of communicating the whole matter to Mr. Vander Voerde; which he did accordingly, as soon as they were entered the cabin, the door of which he ordered to be lock'd immediately.

The Dutch debate, whether to employ the Tappoyers.

In the mean while, viz. the 5<sup>th</sup> of July, it was debated in the council of the Dutch-Brazil, whether for the security of the country, they should not want the assistance of the Tappoyers, under their king John Durey, dwelling in Rio Grande; who for that purpose had gathered a good body near Kunbau, especially since the Portuguese committed all manner of barbarities against the Dutch, and had summon'd the barbarians called Rondeles, from the Babia.

But considering the devastations which must needs ensue upon the march of those barbarous people in the flat country, it was thought convenient not to come to any certain resolution upon this point, 'till they had advis'd with lieutenant colonel Haus, to whom a letter was dispatched, immediately upon that account.

On the 7<sup>th</sup> of July, the said Mr. Haus sent word to the council, that he intended to march the same day from Moribeka, and after being joined with captain John Blaar, to attack the enemy at St. Lawrence; but by another letter of the 16<sup>th</sup>, written by captain Blaar, they were informed that the rebels continued very strong at St. Lawrence, expecting a certain reinforcement from the Matta, where they had forced the people to take up arms for them; desiring a succour of fifty men, to drive them from thence. Hereupon the council dispatched messengers both to Blaar and Haus, ordering them to join their troops, and to rout the rebels near St. Lawrence, on which in a great measure depended the preservation of the Dutch-Brazil.

Haus and Blaar ordered to march.

The 7<sup>th</sup> of the same month the council received also a letter from lieutenant Flemming, dated at Pojuka, in which he advertised them, that he had received certain intelligence, that Kamaron was marching against him, and that two companies were already come to the sugar-mill of Pikdora. Hereupon orders were sent him, that if he found himself not in a condition to keep the monastery for want of provisions, he should at the approach

Lieutenant Flemming ordered to retire to St. Antonio.

of Kamaron's troops retire to St. Antonio, the better to make head against the enemy. The same day ensign Harpsin marched with a detachment of ninety soldiers and thirty Brasilians, of the garrisons of the Recej and Kamarika, to Ajama and Jagoaribi, in quest of the rebels, but meeting with none returned about noon, and the same evening directed his march towards Haus.

The 8<sup>th</sup> of July the council having received advice from Haus that they intended the same day to march from the sugar-mill of St. John Ferdinando Vieira to attack the rebels at St. Lawrence, if they would abide his coming, it was resolved to send as many forces as possibly they could spare to his relief, considering that the preservation of the whole Dutch-Brazil depended on the success of this expedition; and accordingly two companies of foot, of Mueberan and Blaar were ordered to march thither, not questioning but that before their arrival Haus would be join'd by captain John Blaar; and in effect the next following day they received advice from Mr. Haus, that he was ready to join with the said Blaar.

The 10<sup>th</sup> of July, the council gave an account by letters to Haus, what intelligence they had received concerning the posture of affairs in St. Antonio and Pojuka, with orders to send as many firelocks and Brasilians as he could possibly spare to their relief, to keep the passage from St. Antonio to Pojuka and Sevenbain open; without which all communication betwixt them and the Recej would be cut off by the enemy. Two letters of John Fernando Vieira and Antonio Kavalcanli were the same day read in council, in which they complain'd of the severity of the two last proclamations, but were not thought fit to be answer'd; especially since Amader d'Araouje had about the same time retired from the pass of Pinderama.

Two days before, viz. that the council had received letters from Mr. Heck, dated the 25<sup>th</sup> of June, at Rio Grande, intimating that hitherto there had not happened any commotions in those parts, that however he had disarmed the Portuguese, and that the Tappoyers appeared to be well inclined to the government: Orders were sent him to cultivate a good understanding with the Tappoyers, for which purpose they sent some presents to John Durey their king, and that the council approved his disarming of the Portuguese. On the same day father Imanuel, Lewis Bras, Imanuel Ferdinand de Sa, Kaspar de Mendoza, Furtado and Jeronymo de Rocha, all Portuguese inhabitants of the Dutch-Brazil delivered their

Haus ordered to send relief to St. Antonio.

Revolt in Pojuka.

1643. their petition to the council, requesting, that the time of six days appointed by the last proclamation, for the wives and children of the revolted *Portuguese*, to leave the country, being expired, they might be allowed to stay in their habitations at least, 'till the ways, which at that time were rendred unpassable, by the overflowing of the rivers, were somewhat mended. But considering that the *Portuguese* rebels forced the inhabitants by threats and other unusual methods to take up arms against the government, their request was not granted.

The petition of the Portuguese rebels refused.

The 13<sup>th</sup> of July the council were advertised by letters from *Haus*, dated the 12<sup>th</sup>, that he had passed the river *Kapivari*, and marching thro' the *Matia* to the sugar-mills of *Arnao d'Ollanda*, had met with four hundred rebels, who at the approach of his troops were fled to *Moribeka*, with the loss of some of their men, from whence they might without any opposition march to the *Matia of Brasil*, and that he was ready to march directly to *St. Lawrence*, where he would expect the further orders of the council. They immediately dispatched their orders to him, to pursue and rout the flying rebels with all possible speed, before they could make head again, which done, he should fix his head quarters, in such a place where he was sure he might be supplied with provisions out of the adjacent country; their magazines being so exhausted, as not to be in a condition to supply his troops. *Haus* had already in some measure taken effectual care of this point, having in the mean while sent a reinforcement of one hundred foot, and a company of *Brasilians*, under the command of captain *Tallo*, to Mr. *Ley* governor of *Moribeka* and *St. Antonio*. The council also ordered the governor of the Cape of *St. Austen* to strengthen the fort with palisadoes; and at the same time received Advice from Mr. *Ley* from *St. Antonio*, that the rebels under *Amador d'Araouje* and *Pedro Marinho Falkao*, had posted themselves within sight of them, in the new sugar-mill, but as soon as he received the expected succours, he did not question to chase them from thence, *Amador d'Araouje* having in vain attempted to force those of *Pojuka*, to take up arms against the government.

The rebels flee before Haus.

He received also intelligence from Mr. *Carpenier* out of *Goyana*, that things remained in quiet there as yet: But whilst *Haus* was busy in making head against the rebels in the *Vergea*, *Petro Marinho Falkao* having declared himself head of the rebels of *Pojuka*, had gathered a body sufficient to block up the garrison of *St.*

Revolt in Pojuka.

*Antonio*, who had no other supplies of provision, but what they received from the circumjacent country; so that the council being sensible of the danger, sent immediately orders to *Haus*, to hasten to the relief of that place; who, accordingly directed his march the same night to the sugar-mill of *Lewis Bras*, leaving captain *Wilschut* with a company of soldiers, and all the sick, behind at *St. Lawrence*.

The council received also advice by letters from *Paul de Linde*, dated the 12<sup>th</sup> of July at *Parayba*, that things were as yet quiet thereabouts, but that with much ado he had hitherto kept the *Brasilians*, inhabiting the villages, from plundering the *Portuguese* inhabitants, who were extremely dissatisfied, because some of the *Brasilians* and *Tapoyers*, that had done them considerable mischief, were discharged out of custody. They ordered him to take all possible care to keep both the *Brasilians* and *Dutch* inhabitants, who were both for plundering the *Portuguese*, from doing any mischief to them; for which reason the council sent the following proclamation to be publish'd there.

#### A PROCLAMATION.

WE the members of the great council, having received frequent complaints, that many of the faithful inhabitants of the country, who lately have taken a new oath of allegiance to the government, are plundered and robb'd by the soldiers and volunteers; and being resolved to maintain them in the possession of their estates and goods, have for that reason granted them safeguards, and taken them into our peculiar protection; do hereby forbid all our officers and soldiers, as well as the other inhabitants under our Jurisdiction, to attempt to plunder any of the inhabitants, provided with such safeguards, or to endamage them any otherwise, either in their goods or persons, upon pain of corporeal punishment.

The 15<sup>th</sup> of July in the evening, the council was advertised by Mr. *Ley*, that the rebels had kill'd some soldiers of the garrison of *St. Antonio*, that were sent abroad to fetch some cattle from the sugar-mill *Gurapou*, and had so closely block'd up the place, that no provision could be brought thither; and as they were not provided with necessaries for above a few days longer, they were in the utmost danger of being lost. Lieutenant colonel *Haus* being expected the same evening with his troops at *St. Lawrence*, orders were dispatched thither for him to go either in person, or at least to send as many able soldiers as he could bring together, under

1643. the command of captain *John Blaar*, to the relief of *St. Antonio*, the council being of opinion, that the safety of the *Cape of St. Austen*, and of all the southern provinces, depended on the preservation of this place; for which reason, they also ordered captain *Falbo*, who was expected about the same time with a company of soldiers, and as many *Brazilians* at *Moribeka*, to march directly to *St. Antonio*, and to stay there 'till further orders; of all which they sent advice to Mr. *Ley*, and Mr. *Heck*. *Haus* having, pursuant to these orders, directed his march to *St. Antonio*, (notwithstanding the weariness of his soldiers tired by a tedious march) *Pedro Marinbo Falkao* had no sooner notice of his approach, but he raised the blockade of *St. Antonio*, and with his body of rebels gathered out of the three districts of *St. Antonio*, *Pojuka* and *Moribeka*, to the number of six hundred, joined with the rebels in the *Vergea* of *Moribeka*.

The blockade of *St. Antonio* raised.

The 17<sup>th</sup> of July the council were advertised by *Haus* in a letter dated at *Moribeka*, that having received a message from Mr. *Ley* and Mr. *Heck* out of *St. Antonio*, with advice, that in *Puerto de Gallinas*, two boats with ammunition were landed by *Pedro de Kunba*, he had sent thither captain *John Blaar*, and ensign *Hartstein*, with a good body of his ablest soldiers and *Brazilians*, he himself not being in a condition to follow with the rest, disabled by their late marches; for which reason he had put them into quarters of refreshment in *Moribeka*, where he would expect their further orders, as not judging his presence necessary at the *Receif*, now the enemies were fled before him.

Orders were thereupon dispatch'd to him by the council the 19<sup>th</sup> of July, to keep his head quarters in *Moribeka*, the better to keep a watchful eye over the rebels that were retired into the woods; and to be the nearer at hand to succour either *St. Antonio* or *Pojuka*, for which *Moribeka* lay very convenient; but if the enemy should become too strong for him, he should retreat towards the *Receif*. Advice also was sent him, That *Amador d'Araouje*, *Pedro Marinbo Falkao*, *John Pais*, and *Kabral*, were with the rebels they had gathered in *St. Antonio* and *Pojuka*, march'd the day before in the morning from *d'Ingenio Moreno Gardo*, to join their troops with those of *John Fernandes Vieira*.

The council likewise received several letters from *John Hoek*, *Rudolph Baro*, and *James Rabbi*, dated the 5<sup>th</sup>, 6<sup>th</sup> and 7<sup>th</sup> of July, concerning the present state of affairs in *Rio Grande*, and that they being threatened with an invasion by *Kamaron* on the south side, and by the *Brazilians* of *Siara*

and *Maranbaon* from the north, they had disarmed all the *Portuguese* and laid up their arms in the fort of *Keulen*. They had also by the advice of king *John Duwy*, taken into custody a certain *Portuguese* called *Antonio Vetello*, with his son, being accused by the said king *Duwy* of having had a hand in the murder committed upon the *Dutch* in *Siara*, and in the conspiracy of the rebels. They further complained of the ill practices of the *Portuguese*, who fought by all means possible to oppress the *Dutch* thereabouts; adding withal, that king *Duwy* was ready with his *Tappers* to fall upon the *Portuguese*, as soon as he received orders for that purpose, which had made many of the *Portuguese* fly out of *Parayba*.

About the same time, near one thousand *Brazilians*, viz. three hundred and sixty nine men, the rest women and children, being fled for shelter into the isle of *Iamarika*, where they were maintained out of the magazines, it was resolved the 21<sup>st</sup> of July by the council, to send thither Mr. *Liftry*, to take effectual care, to ease the company of that burthen, that they might be engaged to provide themselves out of their respective *Aldeas*. Things were as yet quiet about that time in *Iamarika*, *Goyana* and *Parayba*, by the good conduct of Mr. *Paul Vander Linze*, governor of the last. For as soon as the fire of rebellion began to break out in the *Vergea*, *Pojuka*, and in *Olinda*, the council being advertised that they ought to keep a watchful eye over those of *Parayba*, where several were suspected of being conscious of the design, they sent the 13<sup>th</sup> of July, *Paul de Linze*, one of the Assessors in the court of Justice thither, with an ample commission, to endeavour to keep the inhabitants in obedience, and to act for that purpose, as he should find it most conducing to the publick security. He was no sooner arrived there, but he made it his chiefest care to provide the forts with sufficient garrisons, ammunition and provisions, which he took from the ships then lying in the road, behind the *Red-Land*: He further took care to secure all the suspected persons, and summoned the rest to take a new oath of allegiance to the government, which they did accordingly.

The council used the same precaution in the district of *Pojuka*, in the *Vergea*, *Goyana* and *Goyana*, where they obliged such of the inhabitants as had not left their dwelling-places to take a new oath of obedience. But the late succours sent thither from the *Babia* frustrated all these endeavours.

On the 24<sup>th</sup> of July, Mr. *Ley* came with credentials from *St. Antonio* to the council.

Orders sent J. Haus by the council.

1643. unto whom he made the following propositions.

I. That whereas several young and able men, living near *St. Antonio*, had not lifted themselves pursuant to the proclamation issued for that purpose, they desired orders might be sent for all those living in the jurisdiction of *Maurice's Town* and *St. Antonio* in the open country, to be obliged to take up arms for the defence of the country.

II. To oblige all such young men as were not able to serve as volunteers, at their own charge, to lift themselves for soldiers, and to instruct them in martial discipline.

III. That perhaps it might not be unadvisable to draw the garrison out of *Porto Calvo*, to appear the more formidable in the field.

IV. To divide our land forces into two bodies, the better to maintain themselves in the open country; whereas now upon the least motion of the enemy, our whole force was obliged to follow them; and that the garrison of *St. Antonio* should be reinforced with such a number, as to be able to send abroad a good party, for the convenience of fetching the necessary provisions out of the country.

After mature deliberation, the council was of opinion as to the

Their resolutions.

I. That the young inhabitants of *St. Antonio*, *Pojuka*, and *Maribeka*, ought not to be forced to serve in the fort *St. Antonio*.

II. That they would empower *Mr. Ley* and *Heck*, to take as many of the young men as voluntarily offered themselves into the service for four months, at nine guilders per month, and one months advance money.

III. They were absolutely against the leaving of the fort *Porto Calvo*, but that ought to be defended to the utmost.

IV. What concern'd the dividing of their land forces in two bodies, they would advise with colonel *Haus*, but they approved of the proposed reinforcement of the garrison of *St. Antonio*, for reasons by them alleged.

Lieutenant *Haus Vogt*, by his letters dated the 18<sup>th</sup> and 27<sup>th</sup> of July, at *Seregipto del Rey* advised the council, that he had sent a detachment towards *Kamaron*, who could not get fight either of any *Portuguese* or *Brasilians*, but that they had taken a single *Portuguese*, who was charged with letters to be carried to *Rio St. Francisco*: He told them, that *Kamaron* with some troops was march'd through *Rio St. Francisco* into the captainship of *Seregipto del Rey*; and that three or four small vessels or caravans, with some troops under the

command of *Andrew Vidal*, were sail'd from the *Babia* to *Maranbaon* and *Siara*. He likewise sent the letters found upon the said *Portuguese* to the council, by which it appear'd, that the first foundation of this revolt had been laid among those of the *Babia*, or at least that they had been made privy to it, and that they had provided these succours. For among others, there was a letter from the bishop of that place, to a certain friar of the *Receif*, in which he told him, that he hoped to be with him before long; whereupon the *Fiscal* was ordered to examine the matter, in order to find out the bottom of this correspondence betwixt these two clergymen.

In the mean while the *Tapoyers* of *Rio Grande* (according to *Mr. Linge's* letter of the 19<sup>th</sup> of July) had murder'd thirty five *Portuguese* in the sugar-mills of *Kunba*, who being of the number of those that had rendered their arms, pursuant to the proclamation, this caused no small terror among the rest of the *Portuguese* thereabouts, and especially in *Parayba*, where they left their habitations, so that it being to be fear'd they would associate with the rebels, under pretence of self-defence, *Mr. Linge* desired a reinforcement of soldiers to keep the *Tapoyers* in awe. The council therefore commanded *Mr. Astellen* and captain *William Lambert* with his company of foot, besides twenty fusileers, and a detachment of fifty men out of the garrisons of *Parayba* and *Rio Grande*, to take care of the *Tapoyers*, and to conduct them to the *Receif*, *Jacob Rabbi* their commander was ordered to march along with them, and *Rudolph Baro* appointed to provide them quarters upon the road.

*Haus* having by this time sufficiently refreshed his troops, writ a letter dated the first of August to the council, in which he desired their orders to go in quest of the rebels, and to attack them before they could be reinforced with their expected succours; which being granted him, he attack'd them in *d'Ingemo* of *Baltazar Moreno*, with such success, that he beat them from place to place; 'till on the 3<sup>d</sup> of August they retired to their entrenchment upon a high steep hill, accessible only in one place. Notwithstanding which, he relying upon the bravery of his soldiers, and hoping thereby to put an end to the war, attack'd them vigorously in this advantageous post; but the rebels being superiour to him both in number and in the strength of their camp, his forces were repulsed with the loss of one hundred men, (some say five hundred) among whom was captain *Lor*. After this defeat, *Haus* being sensible that the enemy expected daily

a fresh

1643. a fresh reinforcement from the *Bahia*, required to the *Receif*, where he knew his troops were absolutely necessary for the defence of the place.

Two Portuguese  
convinced  
to death.

Rebellion  
in Serin-  
haim.

On the first of *August* *Gonsalvo Kabral de Kalkos*, was by the court of justice condemned to death, having at the instigation of *John Fernandes Vieira*, undertaken to head the rebels in the captainship of *Goyana*. The same fate attending one *Thomas Pais*, an inhabitant of *Tienpio*, who had endeavoured to raise some troops for the said *John Fernandes Vieira*. The same day the great council received advice out of *Serinheim*, (the letters being sent privately in the night time in a small boat down the river to the sea-side) that the rebels began to be very numerous thereabouts, that they were masters of the river, had flaved all the boats, and plundered *Ingenue Fermoza*, where they carried away the negroes, and kill'd the beasts belonging to the *Dutch*, but spared those of the *Portuguese*. The council being sensible that nothing but force would be able to reduce these rebels to their duty, and that they were from time to time reinforced from the *Bahia*, whereas the *Dutch* troops diminish'd daily, they resolved the first of *August*, to send Mr. *Balthasar Vander Voerden* councillor of justice to *Holland*, to represent to the council of nineteen there, the true state of the affairs of the *Dutch-Brazil*, and to solicit prompt succours. Accordingly the said Mr. *Vander Voerden* having taken his leave of the council, set sail the next day, with the rest of the ships that lay ready to sail for *Holland*, being instructed with sufficient power and credentials from the council; as follows.

Mr. Vander Voerden sent with a credential into *HOLLAND*.

Most noble, honourable, and most prudent lords.

Notwithstanding the rebels make not the least use of the royal authority, but cover their revolt with the cloak of godly liberty, we were always of opinion, that this rebellion of our Portuguese inhabitants has not only been undertaken with the consent of the king of Portugal, or at least of his governor of the *Bahia*, but also encouraged and fomented by his authority and conduct. For how can it be supposed that *Kamaron*, *Henry Dias*, and the other ringleaders, should have dared to attempt to attack us by force of arms without his approbation? It was likewise our constant opinion, (considering the present unsettled state of Portugal, and the alliance betwixt that king and the states of *Holland* against Spain) that he would be sure never to acknowledge the transgressions of the heads of the re-

billion, and the succours sent them, to have been done by his authority, lest the breach of faith and all its ill consequences might be one time or other laid at his door, 'till he thought himself sure in the entire conquest of the *Dutch Brazil*. Our guests has since proved more than too true, for *Antonio Telles de la Silva*, governor of the *Bahia* (as is evident from his answer to our letters here inclosed) denies to have had the least knowledge, much less any hand in the contrivance or the conduct of this conspiracy, laying the blame of this insurrection upon their ring-leaders, who refused to obey his orders; and offering to send certain commissioners to appease the fury of the rebels; and in case they should refuse to comply, to force them by the king's authority to lay down their arms. But how little agreeable this offer of putting an end to this rebellion, is to his real intention, is apparent out of the report made by Mr. *Vander Voerden* and captain *Dieterick Hoogstrate*, under-written by their own hands; in which you will find these express words of the governor: That the *Brazilians* and negroes were disbanded by his majesty of Portugal's particular order. The abstracts of the several inclosed letters sent from the *Bahia*, and taken from the messenger by our forces in *Seregippo*, will put it beyond all doubt, that several inhabitants of the *Bahia*, and among them the *Bishop* himself, had already in May last some knowledge of the intentions of *John Fernandes Vieira*, and his accomplices; add to this the depositions of captain *Dieterick Hoogstrate* subscribed by himself, concerning the propositions made to him in private, which he was managing the company's business there, in the quality of one of our deputies; which as it directly contradicts the governors answer to us, so it unravels the whole secret of his real intentions. And for as much as all these things are sufficient forewarnings to us, that the rebels will be constantly supplied from the *Bahia*, whereas we on the contrary must expect to be weaken'd more and more in every respect, we judged it absolutely necessary and requisite for the service of our state, to send to you the members of the council of nineteen, Mr. *Balthasar Vander Voerden*, councillor in our court of justice, to give you a verbal account of the deplorable state of our affairs here, in a more ample manner, than the same may be express'd in writing, not questioning, but your lordships will thereby be encouraged to send us a speedy and sufficient succour, to re-establish our affairs here, and to deliver your faithful subjects from the imminent danger that threatens no less than the ruin and loss of their lives and estates, and desiring you to give a favourable reception to the said Mr. *Balthasar Vander Voerden*.

1643. Immediately after the departure of the two beforementioned envoys, Mr. Vander Voerden and captain Hoogstrate out of the *Babia*, being the 20<sup>th</sup> of July, the governor Antonio Telles de Silva, ordered all the sea and land men that could be got together in haste, to be embark'd in twelve ships ready fitted out for that purpose; with necessary ammunition, arms and provision, for the intended invasion. Hieronymo Serrao de Payva had the supreme command over the fleet, as the colonel Martin Soares Moreno, and Andrew Vidal de Nigreiros had over the land forces, both officers in the service of the king of Portugal. The orders given to the admiral by the governor, dated the 20<sup>th</sup> July, contained in substance, that the great council of the Dutch-Brasil having notified to him the insurrection of the Portuguese inhabitants of Pernambuco, he had judged it expedient to equip his fleet, in order to put a speedy stop to those disorders; because he was willing to comply with the said councils request, in respect of the sincere friendship and correspondency betwixt the crown of Portugal and them, which he had strict orders from his majesty to observe; whereas it is evident, that the great council of the Dutch-Brasil in their letter to Salvador Korrea de Saa Benavides, of the 13<sup>th</sup> of August expressly declare, never to have desired any assistance from the governor of the *Babia*, against the rebellious Portuguese inhabitants.

The further Instructions given to the said admiral Payva were, that he should directly steer his course from the *Babia* to Pernambuco, keeping about twenty or thirty leagues distance at sea, from the shore; that coming to the tenth degree he should approach the shore, and if he found the wind to blow hard from the south, before he came to the before mentioned height, he should be very careful not to pass beyond the lands point in the night time. After having taken a view of the country, he should, with the advice of his best pilots, endeavour to land his men in the most secure place he could meet with thereabouts, either at *Una*, *Lagamar* or *Tamandare*; being three leagues to the south of the isle of *Alexo*. But if they could not make any of these harbours, they should enter at *Porto Doffer*, *Nambous* or *Lagamar* of *Marakaïpe*, lying two leagues to the north of *Alexo*. But if notwithstanding all their endeavours, they also should miss their aim in those places, to make themselves masters of *Porto de Galinhas*, and to land their men betwixt that place and *Barra Grande*. After they had landed their men, with the necessary am-

Vol. II.

munition and provisions, he should set sail to the bay of *Pernambuco*, in order to deliver with his own hands the governors letter to the lords of the great council.

Accordingly the said fleet set sail towards the latter end of July from the *Babia*, and in few days after arrived in the Bay of *Tamandare*, betwixt the rivers *Olina* and *Formosa*, about four or five leagues beyond *Alexo* and *Serinbaim*. They were no sooner come to an anchor there, but the colonel Martin Soares Moreno, and Andrew Vidal de Nigreiros land'd the 28<sup>th</sup> of July one thousand eight hundred or two thousand landmen, among whom were many reformed officers well appointed, and great store of arms, ammunition, and other necessaries.

The first of August, towards evening, three ships with five small vessels appeared in sight of the *Recife*, steering their course to the north, whereupon the council dispatch'd their immediate orders to the two ships, the *Zoutlandia* and the *Zelandia*, to make all the sail they could after them, to observe what course they steer'd, and to prevent their landing of men. About the same time an advice-boat arrived from admiral *Lichtbart*, with letters to the council, intimating, that he had seen the said ships, and that he supposed their intent to be, to land some men on the south of the cape of *St. Austin*, for which reason he desired them to send him some ships, and grant him leave to take as many of the garrison of *St. Antonio* as he should judge necessary to attack the enemy; of all which immediate notice was given to the northern parts, to be upon their guard against any sudden surprise.

But the next following day those ships being got out of sight, several masters of small vessels, that had been near them at sea, reported, that they were heavy freighted ships, which by the strong north winds were forced near the shore, so that it was concluded that they had steered their course towards Portugal.

Immediately after admiral Payva set sail from the bay of *Tamandare*, and meeting with the fleet under the command of admiral Salvador Korrea de Saa Benavides, which was latterly failed out of the port of *Rio Janeiro*, he returned with him into the said harbour, and on *St. Lawrence's* day with their joint forces sailed from thence towards the bay of *Pernambuco*.

The first news the council received of it was on the 11<sup>th</sup> of August, by a master of a small vessel called, *John Hoen*, bound for *Seregippo del Rey*, and by commissary *John Barentz*, with advice that they had seen a fleet of twenty eight or thirty ships off of

Unc. or Rio Formosa, and that three of them had purified them, and discharged some of their guns upon them. Much about the same time they received letters from major Hoogstrate, from the Cape of St. Austin, and the fort Vander Dussen, intimating, that Andrew Vidal, Henry Dias and Paul de Kunba were landed at Una, and marching to Serinbaim, had made themselves masters of the place, where they had given quarter to the Dutch, but cut to pieces all the *Brasilians*.

The council advised the Receif.

The council hereupon took immediate care to send some ammunition and provisions to the said cape, having already, for the better security of that place, ordered Mr. Ley and Mr. Hoek, two days before, to leave the fort of St. Antonio, and to retire with the garrison to the cape of St. Austin, before they were enclosed by the enemy. That two ships, the *Deventer* and the *Elias*, which were in the harbour unlading their goods and provisions brought along with them for the service of the company, were ordered to be equipped immediately, in order to join with the other five ships that lay at anchor in the road, viz. the *Ulrecht*, the *Zaalandia*, *Ser Veer*, the *Zoutlandia*, and the *Golden-Dee*. The same Night advice of all what pass'd was sent to colonel Haus, with orders to be upon his guard, and to retire with his troops to the sugar-mill belonging to Mr. P'ek, or any other convenient place, from whence he might be able to maintain a communication with the Receif. Letters were also dispatch'd to Mr. Dermout in *Itamarika*, to Mr. Carpentier in *Goyana*, and Mr. de Linge in *Parayba*, to advertise them of the enemies arrival.

To supply the want of sea men, many labourers were impress'd aboard the ships, as were likewise thirty-five land soldiers of Moucheron's company, who had spoiled their fleet by their last long march; and out of the ship *Elias* were a thousand pounds of gunpowder, and out of the *Douchter* six hundred, sent a shore for the use of the garrison.

Not long after dinner time the enemies fleet, consisting of twenty-eight or thirty ships, appeared in sight of the Receif, where they cast anchor to the north of four of our ships and a yacht, which lay in that road; so that the next following night was spent in ballasting the two ships, the *Elias* and *Deventer*, and in fitting them for the sea. The next morning with break of day the Portuguese admiral who carried the white flag, sent Martinho de Rebeira and Balthazar de Castilho, as his deputies aboard the Dutch admiral Cornelius Lichtbart who brought four letters, viz. two

from the governor of the *Bahia*, Antonio Telles de Silva, the first dated the 21<sup>st</sup>, and the second the 22<sup>d</sup> of July, the third from the Portuguese admiral, Salvador Korrea de Saa Benavides, and the fourth from Jeronymo Sarrao de Pavia, dated the 12<sup>th</sup> of August; besides another letter from the before-mentioned governor, directed to John Fernando Vieira, Anthony Kawalkanti, and the other heads of the Portuguese rebels.

Letters sent to the council.

Admiral Lichtbart carried the said deputies ashore, in order to deliver the letters to the council; which being translated, were read at the meeting of the council the 14<sup>th</sup> of August, as well those of the governor from the 21<sup>st</sup>, 22<sup>d</sup>, and 24<sup>th</sup> of July; as from Salvador Korrea de Saa Benavides, commodore of the Portuguese fleets, and Jeronymo Sarrao de Pavia, who had landed Andrew Vidal with his men near Rio Formosa.

The first letter was as follows.

The first letter.

PURsuant to your lordships letter, and the propositions made in your behalf by your deputies, Mr. Balthazar Vander Voerden councillor of justice, and Dieterick Hoogstrate governor of the Cape of St. Austin, in which you requested the recalling of the troops under Henry Dias; I being desirous to fulfil my promise, sent to you in my answer by the most effectual means that I could possibly think of, have sent you the two colonels Martin Soares Moreno, and Andrew Vidal de Negreiros (both persons of unquestionable conduct and prudence) to the captainship of Pernambuco, with full power and instructions, to reduce the revolted Portuguese to their due obedience, for which reason also I have sent a letter to the said rebels, to exhort them to the remembrance of their duty, and to lay down their arms. Which that it might prove the more effectual, I have sent thither sufficient force, which may be serviceable to your lordships, to reduce those that remain obstinate to reason, and to chase the rebellious troops out of your dominions. I hope that with God's assistance this may prove an effectual means to quench the fire of rebellion, to restore the peace of Brasil, and to increase the good understanding and friendship which has been established betwixt both these nations. We recommend you to God's protection, remaining,

Bahia, July 21, 1643.

Your lordships affectionate servant,  
Antonio Telles de Sylva.

The second letter of the said governor to the council runs thus,

1643.

*The second letter.*

I Have dispatched my orders to colonel Jeronymo Sarrao de Pavia, captain-major of our fleet (whicb I have sent to your assistance) to deliver these presents to you, immediately after the landing of the forces aboard the said fleet, and to offer in my name all the assistance he is able to give you, pursuant to my command and your lordships request. I am very ready to embrace this opportunity to give you these marks of my zeal for your welfare, especially in contributing what in me lies to the reducing of your revolted subjects to their obedience. Neither do I in the least question, but that by this expedient the flames of an intestine war will be quenched, beyond all hopes of being ever rekindled hereafter; and that I shall have the satisfaction of having been instrumental to answer the expectation of your lordships, pursuant to the proposals made to me upon that account in your behalf. So recommending you to God's protection, I rest

Bahia, July  
22, 1645.

Your lordships  
affectionate servant,  
Antonio Telles de Sylva.

Besides these he sent another letter by Don Salvador Korrea de Saa Benavides, admiral of the Portuguese fleet, directed to the council of Dutch Brasil, as follows,

*The third letter.*

While I was endeavouring to satisfy the request made to me by your ambassadors, and busied in embarking the forces designed for your service, under the command of the two colonels Martin Soares Moreno and Andrew Vidal de Nigreiros, together with colonel Jeronymo de Payva, captain-major of the forces, Salvador Korrea de Saa Benavides admiral of this state, and a member of the council of transmarine affairs, established by authority of the king my master, happened to arrive by God's peculiar direction, with his fleet from Rio de Janeiro, in the Bahia, in order to conduct them to Portugal. But being desirous to redouble my efforts, as well in the conduct of his person as in the strength of his fleet, to render the whole the more serviceable to your lordships, I thought convenient to send the said admiral with the fleet under his command, in conjunction with the rest, to the revolted captainship, not questioning but that by his prudent conduct and authority, he will be very instrumental in restoring the peace in your dominions, according to our utmost wishes, and I live in hopes, that this may serve as real demonstrations of the good understanding

and friendship I am willing to cultivate betwixt these two states, both as a just friend and good neighbour. I recommend you to God's protection.

Bahia, July  
25, 1645.

Your affectionate servant,  
Antonio Telles de Sylva.

The chief contents of these letters tended to persuade the great council of the Dutch Brasil, that the governor of the Bahia had, pursuant to the request made by the deputies of the said council to him, sent certain land forces under the command of the two colonels Martin Soares Moreno, and Andrew Vidal de Nigreiros, aboard the fleet commanded by Jeronymo Sarrao de Payva, in conjunction with the whole fleet of Rio de Janeiro, under the conduct of admiral Korrea, to assist them both by sea and land, as is evident from the words of the preceding letters: He also requested by his deputies, viz. captain Martinbo de Rebeira, and auditor-general Baltasar de Kastilho, that the great council would be pleased to acquaint the king his master with it, in a particular letter from them to his majesty.

What deserves our particular observation in his letter to John Fernandes Vieira, and the rest of the rebels is, that he calls them *the king's subjects, unto whom he has sent this succour for their defence*; yet with this restriction, in order to reduce them by all gentle means to their former obedience to the Dutch government. It being evident that the propositions made by our deputies to the governor Telles tended to no other purpose than to engage him to recall Kamaron and Dias, and such others as were come to join with the rebellious Portuguese, out of the Dutch Brasil, and in case of refusal to declare them rebels and enemies to the king of Portugal; but he directly contrary to the intention and request of the said council; had instead of recalling them, sent these forces to their succours; and instead of leaving them to the disposal of the council, had caused them to be landed in a remote place, where the said Kamaron and Dias were with their forces at that time. Neither was the council ignorant of their intention, in sending a fleet into the road of the Recife at this juncture; tending to no other end than to back the revolted rebels in their design, and to encourage the rest to take up arms against them.

The council was fully satisfied as to this point, when they received advice from the cape of St. Austen, that the garrison of Serinbaim had been forced to surrender to Andrew Vidal after his landing thereabouts.

Their

The contents of these letters.

1643. Their chief debate then turned upon this point, by what means this fleet might be removed from the road of the *Receif* and our coasts; considering that the whole naval force of the *Dutch* then ready to sail, consisted only in five ships, viz. the *Utrecht*, *Zelandia*, *Ter Veere*, *Zoutlandia*, and the *Golden Doe*, not very well manned, and but indifferently provided with ammunition, especially with gunpowder, and few soldiers could be drawn out of the neighbouring garrisons; whereas the *Portuguese* fleet consisted at least in eight or ten stout ships, the admiral being a two-deck ship, resembling at a distance one of their large galleons, so that the attacking of them appeared to be a hazardous enterprize. After mature deliberation it was unanimously resolved in the said council, to return thanks to the admiral *Salvador Correa de Saa Benavides*, for the offered succours against the rebels, and to tell him the reasons that obliged us to desire him to retire with his fleet out of our road, as will more at large appear out of the following letter: It was thought convenient to dispatch the said letter immediately, and whilst we staid for his answer, to use all possible diligence in equipping the two beforementioned ships, the *Deventer* and *Elias*; that if the *Portuguese* refused to comply with the councils request, we might be in a condition to attack them, and to drive their fleet from our coast, without which we saw but little probability to make our party good against the rebels, as long as they were backed by constant supplies from the *Bahia*. It was also taken into consideration whether it were not expedient to detain one of the *Portuguese* deputies till such time that *Jeronymo Sarrao de Payva*, should according to the request of the council, come ashore in the *Receif*; but this proposition was rejected, for fear of furnishing the *Portuguese* with a new pretence of staying in our road: Mr. *Gilbert de Wit* and *Henry Moucheron*, both members of the council of justice, being ordered to carry the said letter, they went aboard the *Portuguese* admiral the same evening, unto whom they delivered the following letter to *Salvador Correa de Saa Benavides*.

*A letter from the council to the Portuguese admiral.*

WE understand both out of your lordship's letter and those of the governor *Antonio Telles de Sylva*, delivered to us by captain *Martin de Rebeira*, and the auditor-general *Balthazar de Castilho*, as also by the verbal assurances given to us by them in your

1643. your behalf, that your coming with the fleet into our road is with no other design than to assist us with your authority and council in bringing the rebels to reason, for all which we return our hearty thanks to your lordship. But at the same time we cannot forbear to represent to you, that the coming with so considerable a fleet in this juncture, gives us no small cause of jealousy, not only because we never requested any such assistance, but also by reason that instead of recalling *Kamaron* and *Henry Dias* with their troops, the two colonels *Andrew Vidal* and *Martin Soares Moreno*, have under pretence of reducing the rebels to obedience, landed their men and ammunition without our knowledge, in a far distant place, and consequently for the defence of the revolted *Portuguese*; whereas (pursuant to his excellency the governor's promise to us) this reduction might have been much better obtained by a severe proclamation, to oblige them to return to the *Bahia*; or at least the before-mentioned colonels ought to have made their first addresses to us. These proceedings have, contrary to your lordship's intention, drawn this ill consequence after them, that many of the inhabitants imagining no otherwise than this fleet was intended for the assistance of the revolted *Portuguese*, have also begun to take up arms, in order to join with them; which obliges us to return our thanks to your lordship for the offered succours, desiring you would be pleased with all possible speed to retire with the fleet out of the road; which, as it will undeceive the inhabitants concerning the sinister interpretations of your lordship's intentions, so it will serve as an effectual means to keep them in quiet, which at this juncture will work upon us a singular obligation. What relates to your lordships request to take in fresh water and fuel here, being ill provided with both by reason of your sudden departure from the *Bahia*, we should be very ready to comply with it, were it not for the before alledged reasons, and the badness of the season, which would make it very tedious, which obliges us to beg your excuse for this time upon that account. His excellency *Antonio Telles de Sylva* having told us in his letter that he had ordered *Jeronymo Sarrao de Paiva*, immediately after the landing of the infantry under *Martin Soares Moreno* and *Andrew Vidal*, to give us in person a full account with what power he was instructed by his excellency, we desire your lordship to send the said *Jeronymo Sarrao de Paiva* without delay to us, to confer with him concerning the instruction he has received from his excellency, in relation to the sending and landing of these officers and land forces. For the rest, we refer ourselves to our deputies, councillors in our court of justice here, unto whom we desire your lord-

J. Lichthart.

Receif, Aug.  
13, 1645.

This letter was pitched upon by the before-mentioned great council, as the best expedient at this juncture, till by the conjunction of the *Deventer* and *Elias*, we might be put in a probability of dislodging them by force, if they refused to retire at the council's request.

The Portuguese fleet leave the road.

The 14<sup>th</sup> by break of day we saw the whole Portuguese fleet under sail, and for the most part out of sight; and considering that the boats, which carried both ours and the two Portuguese deputies, would scarce be able to overtake them, and that our deputies in their return were to give an account to our admiral on board his ship, whether, pursuant to the council's letter, the Portuguese admiral had consented to send *Jeronymo Sarrao de Paiva* to the *Receif*, in order to open his instructions to the great council, which they had now all the reason to believe he would not, they dispatched immediate orders to our admiral *Lichtbart*, to make all the sail he could with the ships under his command after the Portuguese, to observe their motions, and to endeavour to come up with the flag ship, on board of which was the said *Jeronymo Sarrao*, to desire him to return with his ships to the road of the *Receif*, in order to confer with the council in person, concerning his instructions. But after mature deliberation, the whole proceedings of the Portuguese, and the letters of the governor of the *Babia* concerning the pretended reduction of the rebels, being looked upon as meer amusements, orders were sent to our admiral *Lichtbart*, to oblige all the Portuguese ships he could meet with to strike, and to treat them for the future like enemies.

A letter to the council from Rio Grande.

The 28<sup>th</sup> of August the council was advertised by letters dated the 20<sup>th</sup>, at the fort of *St. Magaret* in *Rio Grande*, from the governor of *de Linge*, that twelve of the enemies ships, after having landed some forces near *Tamandare*, were come into the bay of *Traikona*; and that according to

the deposition of a certain Portuguese prisoner from on board the said fleet, they intended to land likewise some men thereabouts, provided they might be joined by the rebels from the *Matta*; but if they failed to come, they would return to the *Babia*. Whereupon orders were sent to *Mr. de Linge*, to bring what forces he was able together, either of soldiers, *Tapoyers*, or *Brasilians*, to prevent their landing, and their conjunction with the rebels in that captainship.

The next thing under debate was, whether it were not convenient to send some ships under the command of admiral *Lichtbart* that way, to attack the Portuguese, after various consultations, it was agreed to stay till all the ships might be got ready for that service, to supply the want of seamen by good able labourers from the *Receif*, and so to render ourselves as formidable at sea as possible could be.

In the mean while the said admiral *Lichtbart* set sail the 1<sup>st</sup> of September with four ships and a yacht only, he himself being in the *Ulrecht*, but was forced by stress of weather (in which the *Zelandia* lost a mast) and for fear of the rocks, to come to an anchor not far from the Portuguese, who endeavoured to gain the wind of him. *Mr. de Wit* and *Moucheron* returned also with their boat, having not been able, by reason of the violent winds to overtake the Portuguese, but had put their deputies on board a small vessel to sail after their fleet.

The same day the council received letters from *Mr. Hoogstrate*, *Ley*, and *Heck*, from the cape of *St. Austin*, that the enemies had posted themselves in the sugar-mills *Salgado*, *Surbague*, and other places thereabouts; and because the Portuguese fleet, which had been seen off of the bay of *Traikona*, appeared again in sight of the *Receif* the same evening, it was thought expedient to order admiral *Lichtbart* immediately to go on board the *Ulrecht*, and with that and the ship *Ter Veere* and two smaller vessels, to keep a watchful eye over the Portuguese: Care was also taken to get the ship the *Overysfel* ready against next day, not questioning that when joined by this and the *Zoutlandia* and *Golden Doe*, which were sent abroad for intelligence, they should be able to cope with the Portuguese, or at least to force them out of the road. The next morning early the Portuguese fleet might be plainly discovered from the *Receif*, but our admiral was not able to stir by reason of the contrary winds; nevertheless the *Zoutlandia* and the *Ter Veere*, which came from the south a cruising, made all the sail they could to

The Dutch admiral sets sail from the Receif.

1643.

1643. escape the *Portuguese*, which they did, being much the nimbler sailors, and joined our fleet.

The 4<sup>th</sup> of September major Bayert and Mr. Volbergen, complained to the council, that Mr. Vierbergen count Maurice's steward, had made it his business to give it out, that they being impowered to cut down certain trees, and some part of the flabbling and gardens, for the better fortifying of the fort *Ernestus*, had transgressed their commission, in cutting down many of the great trees, with an intention, as he said, to ruin the whole plantation; whereas they declared, that they had been very careful in preserving as much as possible could be, all the largest cocoa-trees that stood not in their way; that by these rumours the rage of the populace had been raised to that pitch that they had much ado to appease them, they being for the cutting down not only of all the trees, but also for the pulling down of the whole palace of count Maurice; all which they desired to be registered in the publick records, to serve them for a legal defence in due time and place.

In the mean time our admiral *Lichtbart* being gone out in pursuit of the *Portuguese* fleet, met with them in the bay of *Tamandare*, consisting of seven ships, three smaller vessels, and four barks, the rest being sent laden with sugar to *Portugal*. He was not as yet joined by all the ships from the *Receif*; but being resolved not to let slip this opportunity of attacking the enemy, sent the 7<sup>th</sup> of September advice to the great council, that being come in sight of the enemies fleet near the bay of *Tamandare*, consisting in all of eleven vessels, he was resolved to attack them there, desiring them to send as many ships as possible they could immediately. Hereupon it was resolved to join the two ships the *Deventer* and *Elias*, with the *Unicorn* and *Leyden*, then lying ready in the road and bound for *Holland*, and such tenders as were at hand, and to send them forthwith to the admiral *Lichtbart*. Pursuant to these resolutions, the whole next following night was spent in manning the said ships, but were the next morning detained for some time by the contrary winds.

The same day orders were given to all the soldiers and inhabitants of the isle called *Antonio Vaez*, to provide themselves with baskets filled with earth; and palliades were planted from the point of the *Receif* next to the river, to the utmost point near the sea-side, and five great guns were planted upon a certain wreck, from whence they could command the sea-shore

as far as to the fort of five bastions.

The 8<sup>th</sup> of September, the *Dutch* admiral having ordered the red flag to be put up, boarded the *Portuguese* admiral carrying sixty guns and three hundred men: He behaved himself very valiantly, having posted himself at the entrance of his cabin with a flaming sword in his hand, wherewith he killed three or four, but having received several wounds, was at last forced to yield. The rest of the ships following the example of their admiral, had likewise boarded the *Portuguese* ships; but these seeing the flag taken down from the admiral (a dismal signal of her misfortune) they lost all hopes, and threw themselves headlong into the sea, to escape the fury of the fire and sword; whither being pursued by the *Dutch* in their boats, many perished before they could reach the shore. Above seven hundred *Portuguese* were killed in this action, besides a great number of prisoners, among whom was the admiral himself: Three ships were taken and sent to the *Receif*, the rest were set on fire, being not in a condition to be carried off, because they had cut their cables and were run ashore, where the *Portuguese* had planted some cannon upon batteries, which so annoyed our people, that fearing they might run aground within the reach of the enemies cannon, they set fire to them, and with much ado got their ships clear from among the shelves. After this engagement I returned to the *Receif* to take care of my affairs there, and the admiral sent an express in a fisher-boat, with the following letter to the council of the *Dutch Brasil*.

*A letter from the Dutch admiral to the council.*

NO sooner were the ships *Leyden*, the *yacht* and the *Doe*, arrived last night, near the point of *Tamandare*, but pursuant to the result of the council of war, it was resolved to enter the next morning within the bar, which was performed in the following order: First the ship *Utrecht* admiral, second the *Ter Veere*, third the *Zelandia*, fourth the *Overyssel*, fifth the *Zoutlandia*, followed by the *Doe* and *Leyden*, and the *yacht*, the *Unicorn*, the tenders being ordered to be at hand as occasion should require. Being come within the bar, we found the enemy seven sail strong, besides three small vessels and four barks; and that they had planted several pieces of cannon upon two batteries on the sea shore. We received a very warm salute both from their ships and batteries, and several volleys of small shot; notwithstanding which, the ship the *Utrecht* courageously laid the *Portuguese* admiral on board

Jeronymo Sarrao de Paiva the Portuguese admiral is our prisoner, and at present in my ship, being sorely wounded, whom I intend to deliver up to your lordships so soon as I shall come to the Recife; in the mean while, I intend to send back the Leyden and the Unicorn to morrow morning, according to your lordships directions. And so far as much as there is likely to be no more action hereabouts, the enemy having strengthened themselves near the sea-shore, I will with the first opportunity return to the Recife, where I hope to give in person a more ample account of the whole action; I recommend your lordships to God's protection. In haste,

From the ship the Utrecht, within  
the bay of Tamandare, September  
9, 1645.

Your lordships servant,

Cornelius Lichtbart.

The Portuguese admiral Sarrao de Paiva in his letter dated the 18<sup>th</sup> of September, gave the following account of his engagement to the two colonels Martin Soares Moreno and Andrew Vidal Negreiros.

The Portuguese admiral's letter to Andrew Vidal.

IT being the general discourse here in the Recife, which is likewise come to my ears, that it is reported by you there, how the Dutch admiral John Cornelius Lichtbart, did before the beginning of the last engagement enter the bay with a white flag, thus surprizing our people, killed many of them in cool blood. I thought myself obliged to acquaint you, that indeed two days before the said engagement, a yacht and a bark with white flags, appeared at the entrance of the bay, at which one of our small vessels and a bark shot three cannon shot. But that day when the admiral entered the said bay, he had put up both the Dutch and red flags. Neither is it true what had been said of their killing our men in cool blood, there being not one man slain aboard my ship, but during the heat of the engagement, five or six that had hid themselves below deck having received quarter, and a soldier sorely wounded ordered immediately to be looked after with all care imaginable. Neither was there a stroke given after the yielding of the ship, but every body treated and provided for

according to his quality and present necessity. The reason why so few had quarter given them was, because most leapt over-board, the sea men first, and then the soldiers, I being not able with sword in hand to keep them from chusing rather to perish in the sea than to stand in out aboard the ship. Two or three persons of note seeing me sorely wounded, freely gave me quarter, without knowing either my person, or being asked it by me, a convincing argument that they would not have refused the same to all the rest that would have begged quarter. I must confess myself so much obliged to the humanity and generosity of the admiral, that it is not to be express in writing. Besides that it is unquestionable that we first shot at them, both from our ships and batteries near the sea-shore. I have given you a true account of the whole matter, of which as I have been an eye witness myself, so I don't question you will give an entire credit to what I have written to you on this account. God protect you for many years.

Recife, Sept. Jeronymo Sarrao da Paiva,  
18, 1645.

Andrew Vidal sent a letter in answer to this by one of our drummers (sent to the enemy upon some errand) dated the 20<sup>th</sup> of September as follows:

His answer to the admiral's letter.

WE are sufficiently satisfied by your lordships letter, that instead of being entertained according to your merits, you receive the same ill treatment with the rest of our countrymen, though considering that your case is different from the rest, you ought to have been treated in another manner, your lordship being come without the least intention of waging war against them (which they ought to have made due reflection upon) but only as you were going to convey some ships homeward, did at their own request, land our forces in that captainship, considering the ill usage and tyrannies our subjects have received at their hands, we are afraid we cannot promise your lordship a much better entertainment, of all which murders committed in cool blood, we have taken so circumstantial an account, that we are sure we shall be able to justify our cause and ourselves, both to the states of the United Netherlands and the rest of our allies; for we have fished up many of our Portuguese with bullets and stones tied to their legs and necks, some had the good fortune to be saved as they were swimming ashore, but many were burnt alive in the wrecks of the ships, the intention of these gentlemen being without question

1645. question, by making so general a slaughter among their fellow christians, to cut off from us all hopes of returning home: of all which they will be obliged to give one day a severe account, both to God almighty and those who shall require satisfaction for it at their hands, it being our constant opinion, that they never will be able to justify their cruelties, and the mischief done to our people, either before God or the king our master. We hope your lordship will rest satisfied in this present condition, and put your trust in God and our king, who are still alive to demand a severe satisfaction from them. God protect your lordship.

From our quarters at St. John in the Vergea, Sept. 29, 1645.

signed  
Andrew Vidal de Negreiros.

A certain lieutenant belonging to the enemy, called *Francisco Guemes*, came along with the same drummer, with a letter from the said *Andrew Vidal* directed to the great council, the contents of which were as follows.

Andrew Vidal de Negreiros's letter to the great council.

I Received your lordships letter at Iguaracu, wherein you seem to be extremely disgusted at the killing of some *Brasilians*, with their wives, by our soldiers; under pretence that the absolute command over them belongs only to you, which I cannot but be much surprized at, when I consider that your lordships in your proclamation, wherein you command not to give quarter to any Portuguese inhabitants (though natural subjects of the king my master) you alledge among other reasons, because they had received their birth and education in this captainship (which however was first conquered by the Portuguese kings at the expence of many of their subjects) whereas now you would impose this hardship upon the same inhabitants, to give quarter to those *Brasilians*, who not long ago have been maintained and instructed in the catholic faith, as being their vassals, and consequently not yours, but the king my master's subjects. Your lordships ought to remember, that you are not in possession of this country by right of succession, or any other legal pretension, but solely by force of arms. We desire your lordships to take effectual measures concerning the methods to be observed in the carrying on of this war, which we hope will be managed so by your prudence, as that quarter may be allowed to the inhabitants of our nation; if not, I shall be obliged to act as I find it most consistent with my honour, to take satisfaction for these injuries. We

1645. desire also to put a stop to the murdering of the women, children, and ancient people, in cool blood, as has been done lately at *Tihicupapo*, *Rio Grande* and *Parayba*. God protect your lordships.

From our quarters at St. John, September 29, 1645.

signed,  
Andrew Vidal de Negreiros.

The great council returned with the consent of the members of the court of justice, and colonel *Garfinan*, an immediate answer to the said letter, wherewith they sent the said lieutenant in company of the drummer, back the same evening.

But we must look back to their proceedings: After *Andrew Vidal de Negreiros* and *Martin Soares Moreno* had landed their men, to the number of eighteen hundred or two thousand, the 28<sup>th</sup> of July 1645, with good store of arms and ammunition, near *Tamandare*, betwixt *Olina* and *Formosa*, they were soon after joined, not only by four companies which had taken their way by land from the *Babia*, but also by the troops under the command of *Kamaron* and *Henry Dias*, who had hitherto kept *Porto Calvo* blocked up by their forces. From thence they directed their march to the city of *Serinbaim*, and laid siege to the fort in which there was only a garrison of eighty Dutch soldiers and sixty *Brasilians*, commanded by *Samuel Lambert* and *Cosmo de Moucheron*. Two days after their arrival near *Serinbaim*, the enemy posted themselves in the *d'Ingenio* of *Daniel Hobn*; about which time *Henry Dias* was seen in *Serinbaim*, notwithstanding the Portuguese commanders *Andrew Vidal* and *Moreno* disowned to have any correspondence with them at that time: The said commanders had also sent the captain major *Paulo de Kunka* before to summon the said fort, which he did accordingly by his letter dated the 2<sup>d</sup> of August at the sugar-mill of *James Peres*, and directed to *Samuel Lambert*.

The summons sent to the fort of *Serinbaim*.

I Am come to this sugar-mill by special orders from *Martin Soares Moreno* and *Andrew Vidal de Negreiros* our governors, they being very busy at present in landing their men; they have sent me before to prevent all mischief that otherwise might happen betwixt you and us, and if in the mean while you will join your forces with ours, or retire with them to some other place, you may safely do it, I being ready to furnish you with passes for that purpose, the before-mentioned governors being

An account of their proceedings since their landing.

1645. being come with an intention to put a stop to the present insurrection. God protect you.

From the sugar-mill in St. Antonio, August 2, 1645.

Paulo de Kunha.

Two days after the before-mentioned commanders in chief sent another letter to Samuel Lambert, very little different from this.

*A second summons from the Portuguese commanders.*

WE suppose you not to be acquainted with the intention of our coming, which makes us to be the less surprized at your standing upon your defence. The great council of the Dutch Brasil have sent an embassy to our governor general by sea and land, Antonio Telles da Sylva, to desire his excellency to make use of his authority and forces to appease the insurrection in this captainship, which request being readily granted, in order to be serviceable to the council, and to free the Portuguese from the outrages they suffered in their houses and families, we were sent to land our forces near these sugar-mills of Rio Formosa; which having been done accordingly, and ready to march further into the country, we thought fit to acquaint you with our intentions, which in all probability may have reacht your ears, the same having been published in several places by our proclamations, of which we send you one, desiring it may be affixed on the church of Serinham. We desire you therefore to lay by your arms to remove all suspicion; not questioning but that we shall meet with a favourable reception on your side, as we on the other hand shall make it our main endeavours to restore tranquillity among the revolted Portuguese by all gentle means that possibly may be used; assuring you at the same time, that in case you refuse to concur with us in this design, you will cause no small displeasure to the great council of the Dutch Brasil. God protect you.

From the sugar-mill of Formosa, August 4, 1645.

Martin Soares Moreno,  
Andrew Vidal de Negreiros.

The next following day Paulo de Kunha came in person before the place with a body of soldiers and boors, provided with arms from on board the fleet, and after having invested the place, cut off the water of the fountains and rivers from the besieged. In the mean while Rowland Carpenter and Daniel Hobn had been sent away with passes by the commanders of the Portuguese forces, who embarked their heavy cannon on board Carpenter's vessel, in order

Vol. II.

to carry it up the river Formosa. Within five days of the arrival of Paulo de Kunha, the whole force of the enemy appeared in sight of Serinham in battle array, and closely blockt up the fort. The Dutch garrison was inconsiderable in proportion of the enemies strength, who had so well guarded all the avenues leading to the place, that they were soon reduced to want all manner of necessaries, especially water. Besides this, many of the circumjacent inhabitants and volunteers went daily over to the enemy, who gave them an account of the condition of the fort; and notwithstanding they had sent several messengers to the Receif, they had heard nothing from the council for two months last past; so that being without all hopes of maintaining their post, they judged it more for the interest of the company to preserve the garrison, which might be serviceable in other places, where there was sufficient want of good soldiers, than rashly to expose themselves to the fury of the enemies sword: Accordingly Samuel Lambert, Cosmo de Moucheron, and La Montagny, who commanded in the fort, upon the second summons made by the enemy, entered the 6<sup>th</sup> of August into a capitulation with the Portuguese, of which Moucheron gave an account in person the 15<sup>th</sup> of August to the council, and delivered it the 20<sup>th</sup> of August to them in writing.

WE the Portuguese commanders make known to every body that we were sent into this country at the request of the great council of the Dutch Brasil, to appease the revolt and troubles arisen among the Portuguese inhabitants. But at our landing here, being informed that notwithstanding this request and our good intention, the Dutch had murdered many Portuguese in cool blood (it being evident that they had cut to pieces several Portuguese, who were inticed into a church for that purpose) and that they had formed a camp to oppose us, which ought to be a caution to us, not to leave any strong holds behind us, whilst we are marching towards the Receif, we have thought it necessary to enter into this capitulation, till such time that we may have the opportunity of concerting new measures with the great council, of which the articles are as follows:

I. The commanders Samuel Lambert and Cosmo de Moucheron shall have leave to march out of the fort and castle, with the garrison, with ensigns displayed, all their arms, matches burning, &c.

Y

II. They

*The fort of Serinham blockt up by, and surrendered to the Portuguese.*

1645. II. They shall be permitted to march along the road with their ensigns, and swords drawn, and shall be safely conducted by one or more captains, who also shall be obliged to provide them carriages and boats, for the transportation of their persons and goods to the *Recife*.

III. The *Portuguese* oblige themselves to restore to *Moucheron* all what has been taken from him, and belonged to him before the siege.

IV. They also oblige themselves to engage the inhabitants of the city as well as those of *Kumara*, to pass by all past injuries either by word or deed; and that such of the *Dutch* as are willing to continue there, shall be maintained in their possessions in the same manner as the *Portuguese* are; and shall enjoy the same privileges, and their own religion, provided they do not preach in publick, and pay due reverence to consecrated places. They shall be at liberty to traffick with the *Portuguese*, and call in their debts as before, neither shall they be obliged to take up arms against the states of the *United Provinces*.

V. The *Dutch* officers shall restore to the *Portuguese* all their *Brasilians*, with their wives and children, as being subjects of king *John IV.* whom God preserve; and what relates to their reception and entertainment, is to be left to the discretion of the chief commanders of the *Portuguese*.

Upon these conditions they shall be obliged to surrender the fort, with every thing thereunto belonging, this afternoon, but are permitted to provide themselves with necessaries for their journey, which they shall have liberty to perform at their own leisure.

signed,  
*Andrew Vidal de Negreiros,*  
*Alvaro Fregejo d'Albuquerque,*  
*Diogo de Silveira,*  
*Joões Laurezo,*  
*Freire Betenkor,*  
*Supplido Alouko de Verkofo,*  
 and  
*Sebastião de Guimares.*

Immediately after the surrender of the fort, *Moucheron* entered into a long discourse with the *Portuguese* commanders, about their proceeding, which he told them were far different from what the governor pretended in his letters, to wit, the appeasing of the revolt of the *Portuguese* inhabitants, according to the request of the great council. They answered him

1645. with tergiversations, telling him that they would be very careful not to act contrary to the peace establish'd betwixt the king his master and the states general. But it was not long before they began to lord it over the country, by taking such as were in the least suspected to them into custody, and taking an account of those of the *Dutch* that had married *Portuguese* women; nay they erected a court of Justice of their own, and forced *Moucheron* to sell his slaves for the fourth part of what they were worth. They had so little regard to the late articles, that they caused thirty *Brasilians*, part of that garrison, to be tied to the *Palisades*, where they were strangled; the *Portuguese* alledged in their behalf, that they had suffered death for certain crimes they had confessed themselves, tho' it is more probable they were made sacrifices to the discontented *Portuguese* inhabitants, that had made heavy complaints at the *Brasilians*. However, about thirty of them were spared, and bestowed upon the officers to carry their baggage, and their wives given to the inhabitants. The *Portuguese* made *Alvaro Fregejo d'Albuquerque* governor of the city and fort, and made one *Francis de la Tour*, a *French* deserter, captain over forty deserters, who had taken service among them.

They also raised three companies out of the *Portuguese* boors, or inhabitants, commanded by *Pedro Fregejo*, *Ignatius Ferrer* and *Immanuel de Mello*, which were put into *Serinbaim* for the defence of that place, where they also caused two *Jesuits* to be baptized, called *Jacquo Franco* and *Juac Navaro*. Most of the *Dutch* who had any possessions or sugar-mills thereabouts had safe-guards allow'd them, so that none, except two, who came to the *Recife*, left that captainship, of which they had sufficient reason to repent afterwards, being very ill treated by the *Portuguese*, as shall be shewn more at large hereafter.

The 15<sup>th</sup> of *August* in the afternoon, the garrison of *Serinbaim*, consisting of thirty two men (the rest having staid behind) arrived in a bark at the *Recife*; and their commander in chief appear'd the same day before the council, where he gave an account of the reasons that moved him to surrender the place, notwithstanding which he was ordered to be examined by a court-marshal, to answer the same: The ensign who had conducted the garrison to the *Recife*, delivered the same day a letter to the said council, from *Martin Soares Moreno*, and *Andrew Vidal*, dated the 8<sup>th</sup> of *August*, intimating that they were come into the *Dutch-Brazil*, by special command from the governor of the *Babia*, and exasperating

directions for restoring tranquility among  
them. The letter from *Martin Soares Mo-  
reno* and *Andrew Vidal* was as follows.

*A Letter from the Portuguese Commanders  
to the council.*

WHEN your lordships found your selves  
entangled by a dangerous conspiracy  
among the Portuguese inhabitants of this cap-  
tainship, you made your applications to *Anto-  
nio Telles da Sylva*, governor general of  
*Brasil*, desiring him to make use of the most  
effectual means he could to appease this rebel-  
lion. About the same time the inhabitants of  
this country by one unanimous voice implored  
his aid and protection against those many of-  
fences, plunderings, murders and ravishments  
of women they groaned under; being resolved  
with joint consent to arm themselves with  
sticks (the use of arms being taken away from  
them by their tyrannical governors) against  
those oppressions, and to defend their honour  
to the last gasp; not questioning but that *God  
Almighty* would take vengeance for the blood  
of so many innocent people. They represented  
to his excellency, that he was obliged by his  
station to assist them in this extremity, as they  
were his countrymen; but, if that should not  
be prevailing enough, reasons of state would  
induce him, not to force them to despair by de-  
nying them his aid; which if he did, it should  
be at the peril of his head, and that he must  
give a severe account of it before *God Almighty*,  
and others, if they should be constrained to  
beg that from a foreign power, which they  
could not obtain from their countrymen. The  
governor having taken all these pressing rea-  
sons into mature consideration, and in respect  
both of your lordships request, and the heavy  
complaints of the Portuguese, made it his chief  
care to find out the most effectual means (which  
your lordships seem'd to leave to his discretion)  
to appease this revolt. Being sensible that the  
revolt of the Portuguese inhabitants had taken  
deep root among them, and was likely to prove  
more universal against your government, he  
judged it most expedient, to send thither certain  
persons with such forces as he thought might  
either by their prudence, and, if that fail'd,  
by force of arms, restore the so much desired  
tranquility. It is upon this account, my lords,  
we are come to this place, in order to employ  
all our force and assistance, according to your

request, pursuant to the peace establish'd be-  
twixt these two nations, in regard of which  
we value not the expences we have been put  
to upon this occasion. But we scarce had set  
foot ashore, when our ears and hearts were  
struck with the doleful outcries of forty inno-  
cent catholic Portuguese, murdered in the  
church of *Rio Formoso*, whither they were  
enticed for that purpose, by those that were in  
your service, without the least respect of age  
or sex, the very babes being by the natives bar-  
barously murdered, as they were lying on their  
mothers breasts. Neither have the sighs and  
groans of many noble maids escap'd our ears, that  
were ravish'd in the *Vergea* and *St. Lawrence*,  
by the *Brasilians*, not to mention here what  
barbarities have been committed in *Pojuka*,  
where is the sight of many a hermit and inno-  
cent babe who were slaughter'd in a cave.  
Neither have they abstained from holy and  
consecrated places; they have cut to pieces the  
images of the saints, and strip'd the queen of  
heaven, the virgin *Mary*, our blessed lady, of  
all her apparel; things so enormous, and ne-  
ver heard of before, enough to create horror  
and astonishment in a generous heart. And  
notwithstanding your lordships had desired the  
governor general to interpose his authority, you  
did form a camp, which continues in the field  
to this day; and we being obliged by our orders  
to come to you upon the *Reccif*, we judg'd it  
not convenient to leave any armed power be-  
hind us, which in time might prove the occa-  
sion of great inconveniences to us; we shall  
endeavour to shew all due respect and kindness  
to your subjects, and carry the garrison of *Se-  
rinheim* along with us, 'till matters may be  
concerted betwixt your lordship and us, for the  
service of god and the state. In the mean  
while, we most earnestly desire a stop may be  
put to the outrages committed by your soldiers  
hitherto, to avoid all occasion of a rupture on  
your side; we protest on the other hand, in the  
name of *God* and *John IV.* the king our  
master, whom *God* preserve, as also in the  
name of the states general, whose power *God*  
encrease, that we desire nothing so much, as  
the continuation of the late establish'd peace,  
which shall be the guide of all our actions;  
of which we have brought along with us an  
authentick copy, to serve us as a sufficient jus-  
tification by all the princes of Europe. And that  
your lordships may be satisfied in the reality of  
it, we have sent you enclosed a copy of the pro-  
clamation publish'd by us, at our landing in  
in this captainship.

God preserve your lordships.

*Serinheim,* *Martin Soares Moreno,*  
Aug. 8, 1645. *Andrew Vidal de Negreiros.*

The before-mentioned proclamation runs  
thus:

Their

1645.

## Their PROCLAMATION.

WE the commanders in chief of the Portuguese forces, Martin Soares Moreno, and Andrew Vidal de Negreiros, make known to all persons and inhabitants of the captainship of Pernambuko; that the great council of the Dutch-Brazil, having by a letter sent to the governor and captain general of Brazil, given advice of the revolt arisen among the Portuguese of this place; desiring to endeavour the appeasing of this rebellion by his assistance; for which purpose the said governor now having sent us with a sufficient force into this captainship, we command all the Portuguese, of what condition and quality soever, to appear peremptorily within eight days after the publication of these presents before us, in order to restore tranquility among them, pursuant to the request of the lords of the council of the Dutch-Brazil. We also hereby intreat the said lords, in the most friendly manner that can be, pursuant to the tenour of the strict alliance there is betwixt both these nations, to stop the further persecution of the Portuguese, or any other warlike executions; and that if any of their soldiers presume to act contrary to it, they may, upon complaint made thereof to them, be severely punished.

I Alexes Antunes have penned this proclamation, and I Franco Bravo Desembarquador have approv'd it.

Martin Soares Moreno,  
Andrew Vidal de Negreiros.

The great council resolved to give a short answer to the said letter, and to refute the proclamation by another; and considering, that the origin and cause of all those troubles and misdemeanours were laid at the door of the council, they ordered the two councillors of the court of justice De Wilt and Moucheron, in conjunction with Mr. Walbeek assessor in the same court, to answer the same, and thereby to represent to the council of nineteen in Holland, that they were occasioned by the rebels and their adherents.

In the month of August the troops lately come from the *Babia* marched from *Serimbaim* to *Pojuka*, and so to the *Cape of St. Austin*, where being join'd by the forces under the command of *Kamaron* and *Dias*, and the inhabitants, they resolved (after our men had quitted *Pojuka* and the city *St. Antonio de Cabo*) to attack the fort *Vander Dussen* on the *Cape of St. Austin* from the land side; pursuant to which resolution they posted their troops all along both sides the river.

The Portuguese besiege the Cape of St. Austin.

2

The council in the mean while being forewarned of the enemies design, had ordered the 2<sup>d</sup> of August, Mr. *Adrian Bullstrate*, one of their own members, and admiral *Lichtbart*, to go thither with all speed, and to take effectual care that nothing might be wanting for the defence of the place. They were for that end to take a full view of the fort *Vander Dussen* and all its outworks, and to consider whether the redoubt upon the hill call'd *Nazareth*, and the battery at the entrance of the harbour might be repaired for the better defence of the fort. Accordingly Mr. *Bullstrate* and admiral *Lichtbart* left the *Receif* the 5<sup>th</sup> of August, and arrived the same evening in the fort *Vander Dussen*, where having executed their commission, Mr. *Bullstrate* returned the 9<sup>th</sup> of August to the *Receif*, where he gave the following account to the council.

That he left the *Receif* the 5<sup>th</sup> of August, in the morning about nine a clock, and came the same evening to the fort *Vander Dussen* on the *Cape of St. Austin*.

That the 6<sup>th</sup> of August, after forenoon sermon was ended he rid with the admiral, and some other officers, to the hill of the *Cape of St. Austin*; where having taken a view of the harbour, he found the stone-redoubt in a condition to be repaired, without any great charge, the cannon upon the batteries nail'd up, but the works towards the sea-side in pretty good order.

That he had ordered a draught to be made, to surround the redoubt with pallisadoes, to raise a battery within it, to build a guard-house, and to widen the ditches: He also had ordered a stone breast-work, (for want of wood) to be made on the back-side of the battery, with a row of Pallisadoes, and a guard-house; and that with the first fair weather, they should set on fire all the bushes and brambles on the said hill, and clear the ground round about the church *Nazareth*.

Upon view of the fort *Vander Dussen*, he had commanded the major *Hoogstrate* with all possible speed to put it in a good posture of defence, the admiral having already taken care to have it surrounded with pallisadoes. That on the 7<sup>th</sup> of August, having paid off the garrison, and those belonging to the artillery, he passed through very difficult ways to *St. Antonio*, where he likewise paid off the soldiery, visited the retrenchment, and put every thing in the best order he could.

That he had bargained with certain persons to repair the said redoubt on the hill call'd *Nazareth*, and the stone breast-work, the building of two guardhouses, and surrounding both the works with pallisadoes

Mr. Bullstrate and admiral Lichtbart sent to the Cape of St. Austin.

An account of their transactions.

1643.

1643.

liladoes, according to his draught, for nine hundred guilders, the whole to be compleated within three weeks time. Here it was he had the first notice of the landing of some forces from the *Babia*, near *Rio Formosa*, by the same fleet which the week before was seen off of the *Receif*: But not being able to get any sure intelligence, he had sent a messenger to lieutenant *Montangie*, then commander in *Serinbaim*, to give him a true account of the matter, and in what condition he and his garrison were at that time; encouraging him by fair promises, all communication by land being already cut off betwixt them. Here he also listed thirty eight volunteers that offered their service.

That the 8<sup>th</sup> of *August* he left the said place, and notwithstanding the badness of the weather, rid cross the hills of *Hegendos* to the sea-shore, where meeting with the admiral, they went together up the river *Sangado* with the tide, as far as *Calandaria*, where they staid for some time, and received the news, that in the last encounter betwixt colonel *Haus* and the rebels near that hill, above two hundred of the last, among whom were some officers, were slain, and about forty or fifty on our side. One *Melchior Alvares* came on purpose to tell them, that about three hundred of the revolted inhabitants were inclined to accept of a pardon, which he referred to the council.

That being ready to take horse in order to his return to the *Receif*, a certain soldier of our troops, that had been left behind, complained that he had been stripp'd stark naked by the servants of the ferryman of the river *Sangado*, who had wounded and beat him miserably. *Melchior Alvares* was ordered to take care of his wounds, and captain *Pistor* to go with twenty of his men in quest of these villains; who, coming to the ferry, beset the house, took the ferryman and his three sons prisoners, but the *Mulat*, who had committed the fact, escaped their hands.

That he pursued his journey on horseback towards the *Receif*, notwithstanding the violent rains, and not without great danger pass'd the river the same night near the fort *Amilia*.

That on the 9<sup>th</sup> of *August*, he was advertised by some negroes belonging to *Mojos Navarre*, whom he had sent with letters to *d'Ingenio Surjacque*, that an ambush had been laid for them near *Candelaria*, but the enemy durst not attack them, their negroes being all such as were taken prisoners, and afterwards made their escape to us.

Vol. II.

Major *Hoogstrate* sent advice by his letters on the 13<sup>th</sup> of *August*, to the council, that the garrison and volunteers of *St. Antonio* being safely arrived on the *Cape of St. Austin*, they were now about two hundred and eighty strong, viz. two hundred and seventeen soldiers and gunners, and sixty three volunteers. That immediately after our garrison had left *St. Antonio*, *Kamaron* and *Henry Dias* had posted themselves with their troops in the sugar-mill *Algodais*, near that place, where they expected to be join'd by *Martin Soares* and *Andrew Vidal's* forces, safely arrived from the *Babia*. That he expected every day to be besieged, and fear'd nothing so much as want of fresh water, the spring being cut off by the enemy.

Hereupon immediate orders were given by the council to send thither thirty barrels of water, some ammunition and provision, and what else should be requisite for a vigorous defence of the place, which was sufficiently provided before with soldiers. The next following day they received intelligence from Major *Hoogstrate*, *Mr. Ley*, and *Mr. Heck*, that the enemies troops had taken post in the sugar-mill *Salgado Zuvisique* and other circumjacent places. The council rely'd much upon the bravery and fidelity of the offices within the fort, from whom they promised themselves a very vigorous defence, they being all persons who had advanced themselves in their services, and were in expectation of better preferments, viz. Major *Hoogstrate*, *Caspar Vander Ley*, formerly a captain of horse, *John Hick*, and *Albert Gerritsen Wedda*, an old captain belonging to the company: But their unfaithfulness and covetous temper overbalanced all these considerations; for the said major *Hoogstrate*, commander in chief, with the consent of *Caspar Vander Ley*, and *Albert Gerritsen Wedda*, treacherously and villainously sold and surrendered the said fort to the *Portuguese* the 23<sup>d</sup> of *August* for the sum of eighteen thousand guilders, besides some other rewards promised them upon that account. They went over with the whole garrison to the enemy, who made *Hoogstrate* colonel of a *Dutch* regiment, raised out of these and other soldiers of several nations, that had deserted our service. Thus this strong hold was betray'd to the *Portuguese*, by a person who owed his whole fortune to our company.

*Martin Soares Moreno* gave the following account of the surrender of this fort to the governor *Antonio Telles da Sylva*, in his letter dated from the hill of *Nazareth*, Aug. 26, 1645.

Z

A letter

1645.

Advice from the Cape of St. Austin.

1645.

A letter to the governor of the Bahia, concerning the taking of the Cape of Puntael.

Sunday the 23<sup>d</sup> of this month, God Almighty, through his mercy, has put us into the possession of the fort of the cape of Puntael, which was besieged by Andrew Vidal de Negreiros: The next day we were rejoiced with the money sent to us by your lordship, and the wine presented to me in particular, part of which I have bestowed upon entertaining some of our friends, who are merry with me at this time.

We have made an excellent bargain, for besides the importance of the place, and its artillery, we have got the very flower of their soldiers; besides that, this will be like a signal to the rest to follow their footsteps.

John Fernand Vieira has raised on saturday last the sum of four thousand ducats for our use, though not without force, but it was very welcome to us at this time, when we were upon striking up the bargain for the better fortifying of this place, the harbour of which is not inferior to that of the Recife: But I will not trouble your lordship any longer with this point.

Not long after the surrender of the fort, a bark appeared in sight, sent to us by relief from the Recife. We sent captain [name] with a well arm'd bark out again, who took her with thirty five men, an good store of gunpowder and bullets, all which will prove very serviceable to us.

I kindly desire your lordship, that in case you send a messenger with this news to his majesty, captain Damian de Lankois may be employed upon that errand, it being very probable, that the king, besides a good present, will reward him with some honourable employment.

Last night we received advice, that the fleet under Jeronymo de Paiva was entered the bay of Tamandare; I am sorely afraid they will be attack'd by the ships sent thither from the Recife, notwithstanding we have desired him several times to come into our road.

Kapivara is gone from that place by land to the Bahia, perhaps he has given him notice that we are masters of the cape; if he thinks fit to bring his fleet to this place, he is safe, if not, it lies at his door. 'Tis discouraged here, that the ship the Bishop is missing, perhaps he has a fancy to convoy Salvador Korta some part of the way.

I cannot forbear to let your lordship know how much you stand indebted to major Dieterick Hoogstrate, and the rest of the commanders of the fort. We have promised to the first a commandery of Christ. I beg of your lordship to make my promise good to him in his majesty's name, as soon as possible may be, he being a person who will be ready to do

us all the further service he can. We have for the present engaged him with some presents of less moment, of which we shall give an account to you hereafter. Captain Vander Ley has likewise deserved well of us, and so have all the rest that had married Portuguese women: It is reported here that he is a person of note in his country: We have likewise promised to him a commandery of Christ, and a yearly pension for one of his sons: We hope your lordship will not refuse to make good our promise, because his sons are born of a Portuguese woman: The name of the eldest being John, and the youngest Caspar Vander Ley. The rest are at present at their habitations, as soon as they return we must engage them with some promises, of which we will give an account to your lordship. They are all of consequence to us, having married Portuguese women. I hope your lordship will be well satisfied with this piece of service, for John Fernand Vieira sometimes brings us more money in an hour, than the conquest of the cape costs us. He is at present in the Vargea among the Barbarians, and we in the fort on the cape, till we have got every thing in readiness. Kapivara is about three days ago gone by land, possibly he may be with you before the bark which carries this letter; I wish it may arrive in safety, and to your lordship a long life for the defence of this state. Signed

Martin Soares Moreno.

Martin Soares Moreno, and Andrew Vidal de Negreiros, had in the mean while sent seven or eight letters from the Cape of St. Austlin, dated the 23<sup>d</sup>, 30<sup>th</sup>, and 31<sup>st</sup> of August, and the 2<sup>d</sup> and 6<sup>th</sup> of September, in which they advertised the admiral Paiva, that they were in possession of that cape, desiring him by all means to come with his fleet into that harbour. The first of the two last letters was thus written.

Letter from the Portuguese commanders to admiral Paiva.

MY LORD,  
WE are got now into the possession of the harbour of Nazareth, and that, as the saying is, without casting an anchor; which is the reason we intreat you likewise to come with your fleet thither, where you may careen your ships, and provide yourselves with fresh provisions, men, ammunition, and all other necessities, till such time we shall mutually agree in what is further to be undertaken for the service of God and his majesty. The enemy has hitherto but one ship of strength at sea, the rest being of no consequence; neither are they for engaging with you at this time, but endeavour to cut off your communication with the sea coast. My lord, you have

1645. have given so many proofs of your courage before this time, that this retreat will not abate any thing from the fame of your victories: On the other hand, you have to consider, that you are answerable for so many thousand lives of those that are in your fleet; wherefore we desire you once more to come hither with the fleet, and such officers as are under your command, where you will meet with a very kind and comfortable reception. But being sensible that it would be a gross error in us, to urge a matter so evident in itself, any further, to so great a commander as you, we live in hopes of your coming, where we intend, in the bay of Nazareth, to receive the blessed sacrament, which name we have given to the fort, having among other things found a mass book here, which is of no small service to us.

God preserve your lordship.

Puntael, the 2<sup>d</sup> of Martin Soares Moreno, and  
Sept. 1645. Andrew Vidal de Negreiros.

The contents of the second letter to the same Admiral, are as follows:

YOUR lordship being already acquainted with our being masters of the Puntael (cape) we hope you will take the first opportunity of coming to us; the enemies having two squadrons of ships at sea, with one fire-ship, to force you from this coast, which has been discovered to us by a letter writ at the Recceif, and directed to the governor, and taken by us in a bark design'd for the relief of that place, of which we thought fit to give you immediate notice, that you might take your measures according to your wonted prudence. These Dutch gentlemen have, by their treacherous dealings, oblig'd us to have recourse to open force, and we desire your lordship to repay them in their own coin, with fire and sword, as they do to us. If you design to come hither, it must be done speedily, all delay being dangerous at this time. We have a true copy of this letter in our journal to serve for our justification hereafter.

God preserve your lordship.

Dated in the Puntael of the blessed sacrament, September the 6<sup>th</sup>, 1645.

Martin Soares Moreno, and  
Andrew Vidal de Negreiros.

An account of the surrender of the cape of St. Austin, and of the further transactions betwixt us and the Portuguese, was sent in a letter by Caspar da Costa d'Abreu, from the said cape to his friend Domingos da Rocha, an inhabitant of the Bahia, which runs thus:

I Wish this letter may find you in good health, as I who am your faithful comrade desire; I am in a tolerable good condi-

tion in the Puntael of Nazareth, which after a siege of twenty days was surrendered to us at an easy rate, because those who commanded within the fort had Portuguese wives, and their estates thereabouts. The captain of horse was the most forward of all in surrendering the place; they have obtained what conditions they demanded, and a gratuity of four thousand ducats besides. We found in the fort three hundred Dutch, of their best troops, and twelve brass pieces of cannon, four of which were four and twenty pounders, and provisions for three months; so that if they had not come with us to a composition, it would have cost us abundance of men, whereas now we have gain'd the place with the loss of one single man, who was kill'd by a random cannon shot. We made ourselves masters of a bark, firing from the Puntael, before its surrender, in which was a gentleman with several hundred men that were going to the Recceif. This gentleman and another of Serinhaim (being both magistrates in their respective places) were delivered up to the inhabitants, who soon kill'd them, notwithstanding one was married with a Portuguese woman; for they having been heard to say, that they hoped to wash their hands in the blood of the Portuguese, the women were so much exasperated against them, that they soon dispatch'd them, according to their desires. The prisoners are for the most part detained at St. Anthony, in order to be sent to the Bahia; but many among them have taken service with us. We suppose the number of the dead and Dutch prisoners amount to near thirteen hundred: We have not seen the squadron under Salvador Korrea de Saa; we are afraid some misfortune has befallen him; some of our ships were cruising hereabouts, but within these three or four days none of them have appear'd on this coast. The Dutch have a fleet of twelve ships at sea, it is well if they don't venture a brush with us. The Recceif with all its forts are invested, Lawrence Karneiro is at Porto Calvo; the Jews report, that orders are come to take all the Dutch forces out of Rio Grande, Paraiba and St. Francis, in order to transport them to the Recceif. There is no great harmony betwixt the Jews and Dutch, the first pretending that the others intend to sell the country. Four of their head officers, which are our prisoners, are ordered to be sent to the Bahia, and among them their master of the artillery. The same day that we were become masters of Puntael, a bark arrived there from the Recceif with orders to keep it to the last extremity; we took the bark with good store of ammunition and provision, worth in all about fifteen hundred ducats.

Sept. the 5<sup>th</sup>,  
1645.

Caspar da Costa d'Abreu.

From

1645. From this and the following letters, it is apparent, that major Hoogstrate had laid the foundation of his treacherous design of betraying the cape of St. Austin to the Portuguese, long before; to wit, ever since he with Mr. Baltasar Vander Voorde was sent to the governor of the Bahia, Antonio Telles de Sylva. Thus a certain serjeant fold a redoubt near the city of Olinda to the enemy for three hundred gilders.

At the beginning of the siege of the cape of St. Austin, Andrew Vidal de Negreiros sent two letters to major Hoogstrate, Ley and Hick, by one John Guomes de Mello, dated the thirteenth of August; in the first of which the said Vidal complains of the ill treatment and murders committed upon the Portuguese by the Dutch; in the second he requests them to declare, pursuant to the promises made by Hoogstrate in the Bahia, for the king of Portugal, and to deliver the fort into their hands.

Two letters from Vidal to Hoogstrate.

The first was as follows:

I Am come this morning to the village of St. Antonio de Cabo, in hopes of receiving news from you and captain Ley. I give by these presents notice to you, that we are sent hither by order from the governor Antonio Telles de Sylva, with no other intention than to appease the troubles lately arisen in this country, pursuant to the request of the council, of which you are a sufficient witness. No sooner were we arrived at Tamandare, but we received many informations directly contrary to what we expected to meet with here; viz. That in Rio Grande thirty seven inhabitants had been murdered, many virgins deflower'd, and the image of the virgin Mary grossly misused by the Dutch; things so abominable in themselves, that it is scarce to be imagined so brave a nation should be guilty of such enormities. Whilst I am writing this letter, news is brought me, that the Dutch have caused many of the inhabitants of Goyana to be murdered, tho' I can scarce give credit to it; for supposing this to be true, we could not avoid giving assistance to these miserable people, tho' they were the most despicable of all nations, considering they crave our help, and are not only christians, but also subjects of the king our master, whom God preserve. Whilst the council was in expectation of the issues of the intended accommodation, they have surprized and killed many of the inhabitants, which obliges us, to require you in the name of God, of his majesty, his bigness and the states general, not to give any occasion for a rupture, but to maintain the late concluded peace to the utmost of your power, as we are ready on our side, to con-

cert all possible measures with the commander in chief of this place, which may tend to the tranquillity of both parties. The bearers hereof are captain John Guomes de Mello, and lieutenant Francis Guomes, who we desire may be dispatched back with all possible speed. God preserve you for many years.

August 13,  
1645.

Andrew Vidal.

The second letter was written thus:

The second letter.

YOUR promise made to us in the Bahia, and what has since been told by captain Ley to John Fernandes Vieira, and captain John Guomes de Mello, encourages us to proceed in our former design, not questioning but that both you and captain Ley will not in the least recede from the engagement you have been pleased to oblige us with, and to tie us to your service. We are come into this country at the head of three thousand chosen men, back'd by two squadrons of men of war well equip'd, one of which has not as yet appear'd on this coast, the other you have seen yourself pass by the other day. I hope this may serve as a means to set the poor miserable inhabitants at liberty; and as both they and we wish for nothing more than to see you embrace our side, that we may not want an opportunity to give you more evident proofs of our respect and affection towards you, so we desire you not to entertain the least sinister suspicion of us; we being ready (for the performance of which we by these presents give you our words) to accomplish in every point, what has been promised to you, by John Fernandes Vieira, and John Guomes de Mello. And I for my part assure you, that I will not fail to perform and agree to whatever you shall further demand upon this occasion.

The inhabitants of the place shall be provided with passports, and protected by us, in the same manner as the commander of Serinhaim, Carpenter, and some others were; and we expect the same at your hand. And that you may be sure whom to treat with upon this account, we have sent to you John Guomes de Mello, who is intrusted with the whole matter; which if you refuse to do, we must take such measures as we shall judge most expedient for us. In the mean while God preserve you for many years.

St. Antonio de Cabo,  
Aug. 13, 1645.

Your affectionate friend

and servant,

Andrew Vidal de Negreiros.

Major Hoogstrate, Mr. Hick and Ley, sent an answer to this letter immediately, containing

Hoogstrate  
answers  
this let-  
ter.

1645. containing in substance, that they were not in the least concerned in the outrages committed by the *Tapoyers* against the *Portuguese*, and seemingly refused to treat with de Mello. It runs thus:

*His answer to them.*

WE have received your letter sent by John Guomes de Mello, out of which we understand, that you are come to St. Antonio. We are extremely well satisfied, that the governor Antonio Telles da Sylva has undertaken to appease the tumults arisen in these parts, and don't question but that your presence will contribute much towards the accomplishment of it. The affronts and outrages you speak of by the *Tapoyers* and Dutch soldiers put upon the inhabitants, as they were committed solely against our will, so I can assure you, that no body, not so much as the least child, has been suffer'd to be misused upon our accounts, so that these complaints must not be made to us, but ought to be refer'd to the council. The treaty you propose with captain John Guomes de Mello, and lieutenant Francis Guomes, is beyond our province and power, so that we earnestly desire you not to use any further solicitations to us upon that account. So we kiss your hands, recommending you to God's protection. We rest

Your servants and good friends,

Caspar Vander Ley,  
D. Van Hoogstrate,  
John Hick.

Hoogstrate  
discovers  
these let-  
ters.

Major Hoogstrate took care to send these two letters, together with their answer to the council, with repeated assurances of their constant fidelity; whereupon the great council confirm'd Hoogstrate in his government, and exhorted Ley and Hick to persevere in their brave resolution, which they would in due time take care to reward with better preferments. This discovery of the enemies letters being look'd upon as an undeniable proof of Mr. Hoogstrate's sincere intentions, had such an influence upon the generality of the people, that there was scarce any body but what thought himself secure of his fidelity and duty. Nevertheless, as these temptations could not but raise some jealousy in the minds of the council, they thought fit to send colonel *Haus* to the *Receif*, to order him to the Cape of St. *Austin*.

The council in the mean while, being by *Vidal's* letters to Hoogstrate sufficiently convinced, that the intended recalling of the rebellious troops were nothing but amusements, sent immediate orders to their ad-

Vol. II.

miral *Lichtbart*, that for the future he should treat all the *Portuguese* ships he could meet with as enemies.

The 15<sup>th</sup> of August, colonel *Haus* being come to the *Receif*, propos'd to the council, that he judg'd it absolutely necessary for the service of the state, that since by the succours come from the *Babia* to the assistance of the rebels under Martin Soares *Moreno*, and Andrew *Vidal*, they were grown very strong and numerous, the troops encamped in the field should be drawn into the *Receif*, because they being besides the *Brasilians*, not above three hundred strong, they might easily be cut off in a place where they could not be seconded from the *Receif*, where they were wanting for the defence of that place, which being the capital of the whole Dutch *Brasil*, would in all likelihood be attack'd with the utmost vigour by the enemy.

Against this opinion many reasons were alledged too.

I. By so doing they must quit all the open country from whence they were now supplied with cattle and meal, which they stood highly in need of, till such time that they could receive new supplies from *Holland*, and that in such a case they must expect the enemy immediately at their gates.

II. That thereby the number of the enemy would be encreased, the inhabitants of the country being freed from the dread of our troops, would join with them against us.

III. That by so doing we must leave the *Tapoyers*, that had taken up arms at our request, and were to be joined by our troops near *Macchiape* or *St. Antonio*, to the enemies mercy. To this it was answer'd,

1. That as to the supplies of cattle and meal from the country, they should be in a much better condition to be furnished withal, when their forces could be sent abroad into all circumjacent parts of the country, whereas now they were forced to remain in one certain place. Besides that, we being masters at sea, might embark at any time a certain number of men, and land them where we found it most convenient, which would oblige the enemy, instead of besieging the *Receif*, to divide his forces for the defence of the country. What related to the increase of the enemies forces, by the accession of the *Portuguese* inhabitants of the country, was to be look'd upon as of no great consequence against us; it being more for our interest to see them appear as declared enemies than dissimbling friends; it being generally known, that their inclinations were bent for their countrymen, and that notwithstanding all

A a their

1645. their specious pretences, they mis'd no opportunity of giving intelligence to the enemy of what passed among us; whereas, if they were once declared enemies of the states, we should have a fair opportunity of seizing upon their cattle, provisions, and other moveables, for the use of the *Receif*; which being thus provided, would discourage the enemy from attempting to reduce it by famine.

What was alledged concerning the danger of the *Tapeyers*, was acknowledged to be of no small moment; but considering they had received no news as yet of their motion, it was not judged of such vast consequence as to be put in balance with the welfare of the whole *Dutch Brasil*, which depended in a great measure on the safety of these troops.

After mature deliberation of the whole matter, it was resolved, on the 15<sup>th</sup> of *August*, by the council, with the approbation of the members of the court of justice, that considering the danger the troops were exposed to, and that on their safety depended the preservation of the *Receif*, they should with all possible speed march thither, and that only fifty men should be left in the house of *de Wit*, under captain *Wiltscbut*, in order to command some part of the circumjacent country, and to serve as a retreat for our parties that should be sent abroad to fetch in cattle, and *Farinha*, or meal.

Pursuant to this resolution, colonel *Haus* went thither on horseback the same day, to put it in execution the same evening, if possible he could, or at furthest the next morning. But it seems colonel *Haus* was so neglectful, as to delay the march of these troops not only that afternoon, but also the whole next following day; and instead of retreating towards the *Receif*, tarried in the same sugar-mill, without having the least intelligence of the enemies approach; so that on the 17<sup>th</sup> of *August*, being surprized by the troops of *Andrew Vidal*, much more numerous than his, before they could betake themselves to their arms they were put to the rout. The council being advertized, that colonel *Haus* with his troops were attacked by the enemy in the sugar-mill of *Mr. de Wit*, they call'd the city militia to their arms, *Mr. Bullestrate* and *de Bas* went to the house *Bavista*, from whence, as being near at hand, they might give the necessary orders, according as they should receive advice from *Haus*: And twelve firelocks were posted in this house for the better security of the bridge cross the river. *Dieterick Hamel*, and the counsellors of justice, took care to look after the *Receif*. Immediately after, word being brought to the coun-

Colonel  
Haus put  
to the rout.

cil that colonel *Haus* had been overthrown, and was retired to the house of *de Wit* belonging to the sugar-mill, it was consulted, whether by any means they might be able to relieve him; and, tho' by reason of the weakness of the garrison, it was no easy matter to do it; nevertheless, it was resolved, with one hundred volunteers of the inhabitants, and one hundred and fifty soldiers, to attempt his relief. But before this could be put in execution, a certain *Brasilian* that had been present at the whole action, and having, by changing his clothes with a *Portuguese*, found means to escape to the *Receif*, brought the unwelcome news, that colonel *Haus*, with the forces under his command, had surrendered the house belonging to the sugar-mill, and themselves, upon promise of quarters, at discretion.

It was generally believed, that this misfortune was chiefly occasioned by colonel *Haus*'s own neglect, who did not, till it was too late, put the soldiers into a posture of defence, which was afterwards confirmed by the deposition of *William Jacobson*, late captain lieutenant of colonel *Haus*'s own company, made before the great council the 6<sup>th</sup> of *July*, 1646.

It was not till the night before our defeat, that colonel *Haus* received the first intelligences from a prisoner, a *Negro*, that the enemy with a strong body were broken up from *Moribeka*. The next morning, one of our safe-guards brought word to the colonel, that the enemy was passing the river; and soon after, the colonel's groom, who had been to water his master's horse in the said river, came in a full gallop, telling him likewise, that the rebels were passing the river, so that we soon after heard them fire upon our advanced guard, who retired immediately to the main body. Colonel *Haus* did not call the soldiers to their arms, or caused the alarm to be given, until the enemy came within sight of us, and charged our out-guard, when we first began to skirmish with them: But they charging us with their more numerous forces in the front, whilst *Kamaron* with his troops endeavoured to cut off our retreat to the *Receif*, which we were not able to prevent, by reason of the smallness of our number, *Haus* ask'd captain *Wiltscbut*, *Blaer* and *Lijtry*, *What was best to be done?* *Wiltscbut* answered, *You never ask'd our advice before, do what you think best.* Whereupon *Haus* ordered to retreat to the house of *Mr. de Wit*: Captain *Blaer*, who expected no quarter, being on the other hand for fighting our way through to the *Receif*. The house was bravely defended for

1645. four hours, but at last powder and ball beginning to fail, because half a barrel of gunpowder (which was all they had left) blew up by accident, they surrendered at discretion to *Andrew Vidal*, under condition to have their lives saved, as well for themselves as the *Brasilians* among them, which agreement being signed by *Vidal*, and two or three more of the chief commanders of the *Portuguese*, was delivered to colonel *Haus*. Notwithstanding which, the *Brasilians* were cut to pieces by the inhabitants, with the consent of the *Portuguese* commanders, as soon as we had quitted our post in the house. The *Brasilian* women seeing their husbands murdered before their faces, dash'd most of their childrens brains against the walls, for fear they should fall alive into the hands of the *Portuguese*. All the *Dutch*, about two hundred and fifty strong, among whom were colonel *Haus*, captain *Blaer* and *Liftry*, were made prisoners of war, and were for the first four or five days kept in the sugar-mill of *Haag*, when *John Fernandes Vieira*, and many of the inhabitants solicited *Andrew Vidal*, to deliver the said prisoners up into their hands, with an intention to kill them, but *Vidal* refused to grant their request, and caused them forthwith to be sent by land to the *Babia*: They were indifferently well treated in their journey thither; but such as either by reason of sickness, or any other accident, were left behind, fell into the inhabitants hands, who cut them to pieces, and would have done the same with all the rest, had it not been for their convoy. After their arrival in the *Babia*, an account being taken of their names, they had certain quarters assigned them, and thirty-one pence halfpenny per week for their pay, and a measure of meal for every ten days.

They had liberty to walk up and down within the city where they pleased, except colonel *Haus*, captain *Wiltsebut*, and *Liftry*, who were confined to their lodgings, and durst not, without special leave, talk with any body. Colonel *Haus* was at last sent to *Portugal*, and *Wiltsebut* and *Liftry*, in June 1647, put on board a ship, with two hundred and thirty *Dutch* prisoners; about sixty of our men took service among them there, but they refused the natives of *Holland*.

The enemies being greatly encouraged by these successes, and their strength increasing daily by the great concourse of the *Portuguese* inhabitants, who in the captainships of *Parayba* and *Goyana*, which hitherto had remained in quiet, and engaged themselves to the government by a

new oath of allegiance, now also took up arms against us; so that it was thought convenient to recall our garrisons out of those parts.

But to return to the cape of *St. Auſtin*, after the surrender of which the garrison was carried to *St. Antonio*, where they were forced to deliver up their arms. Among the rest of our prisoners there, was *Jhuze Zeevers*, afterwards vice-admiral of *Holland* and *Wijlfrifland*, *Abraham Van Millingen*, and *John Broeckbujen*, both still living in *Holland*. Major *Hoogſtrate* address'd himself to them, endeavouring to bring them over to the *Portuguese* side, by the allurements of captain, lieutenant, and ensign's places, telling them, that it would now be in his power to promote them to much higher employments; but when he saw them refuse his offer, he swore they should repent it. At the same time he prefer'd three *Dutch* men, to wit, *Wijfel Smith*, formerly his lieutenant; *Alexander Bouckolt*, and *Claes Claefen*, a native of *Amsterdam*, to captains places; the last of these three being an intimate friend of *Zeevers* and *Broeckbujen*, told them, and confirmed it by many oaths, that he had taken service among them for no other end, than to get an opportunity of returning to us. They had also liberty given them to walk abroad, but not without a guard to keep a watchful eye over all their actions.

Not long after, the *Portuguese* provider *Mor* sent for *John Broeckbujen*, and after the first compliments were pass'd, told him, that if he would serve the king of *Portugal* in the quality of commissary-general, he should go along with him to the camp, where he should receive one hundred guilders per month, and be welcome to his table besides; and that if he refused his offer, and stay'd behind, he would be in danger of being murdered by the inhabitants. He reply'd, that being engaged by his oath to the company, he could not break it, though with the hazard of his life. And (said the provider) will you chuse rather to serve a company of mob than a king? We are just now upon the point of executing a design which is insaluble, and then you will begin to see that the king's cause is the justest, and will be crown'd with success for ever. Then he gave him a cup with brandy, of which after *Mr. Broeckbujen* had taken a good draught, he took his leave, and return'd to his comrades, unto whom he gave an account of what had pass'd betwixt them.

These had in the mean while been inform'd by some *Portuguese*, that this design was upon the isle *Iamarika*, and being certain that the council did not fore-

see

1645. see this danger, they were contriving all possible means to give them notice of it, but could not pitch upon any person fitly qualified for this undertaking. At last, *Isaac Zweepers*, by vast promises of reward, prevailed so far upon a *Dutch* trumpeter, call'd *Martin Stomp*, that he undertook to carry this piece of news in person to the council, and at the same time to request the releasing of the *Dutch* prisoners still remaining at *St. Antonio*. Every thing being agreed upon betwixt them, the trumpeter took his leave of Mr. *Zweepers*, and set out on his journey to the *Receif* about midnight, leaving his wife and children behind him. Mr. *Zweepers* and Mr. *Broekbusen* appear'd very well satisfied, but nevertheless were in their hearts not a little concerned for the issue of this enterprize.

A *Dutch* trumpeter discovers the enemies design upon *Iltamarika* to the council.

They would often call upon the trumpeter's wife to enjoin her silence, and ordered her, that if any enquired after him, to tell them that he was run away from her, in order to take service in the camp in the *Verges*.

Some days after they met with one *Peter Ritsiu*, formerly baker to the garrison of the cape of *St. Austen*; *Broekbusen* having a mind to feel his pulse, and finding him not averse to such a task, he at last with fair words prevail'd upon him to undertake the same journey the trumpeter had done before; that in case he should miscarry, which they much feared he might, the council might nevertheless be advertised of the enemies intended expedition against *Iltamarika*. The baker having desired a certificate from them, testifying, that he never had taken service among the *Portuguese*, prepared himself for his journey, which he intended to begin with the first dark night.

A baker sent upon the same errand.

The same night they were forewarn'd of a design against their lives, by a certain *Italian* call'd *Jacomo da Perugalbo*, so that *Zweepers* and *Broekbusen* guessing, not without reason, that some of the *Portuguese* had got scent of their sending away the trumpeter and baker, thought it not advisable to stay longer in this place, but to ask leave from colonel *Pedro Marinba Falkabo*, to go to the *Algodais*, where they could not want conveniency to go along with the rest of the prisoners, that were intended to be sent to the *Babia*, which was readily granted.

Is seized.

In the mean while, the baker having taken the first opportunity to set out on his journey, was met by two *Portuguese* in the fugar-mill *Trapicba*, who having found the beforementioned certificate about him, carried him prisoner to *St. Antonio de Cabo*, where being put to the torture, it made such a noise among the inhabitants, that

they all rise up in arms, protesting, they would not be satisfied till they had fetch'd *Zweepers* and *Broekbusen* from the *Algodais*, and cut them to pieces; for which purpose they also obtained seven soldiers from *Pedro Marinba*, and had certainly put it in execution if captain *Ley* had not opposed it; for as good luck would have it, they happened at that time to be in his fugar-mill, and the baker had stood it out bravely, without discovering the matter. The next morning captain *Ley* gave them a visit, telling them what had happened, and says he, to *Broekbusen*, What is your meaning by this? but he having no great confidence in *Ley*, denied every thing to the utmost.

But the 2<sup>d</sup> of October the whole design was likely to have been discovered by the imprudence of the beforementioned trumpeter's wife, who being got drunk, told some of her acquaintance, that her husband was gone to the *Receif*. She was carried a prisoner to the cape of *St. Austen*, where she was miserably tortured, but being a resolute woman, would not confess any thing: It was however major *Hoogstrate*'s advice, that the *Portuguese* ought not to keep the *Dutch* any longer in *Pernambuco*, but that all such as refused to take service among them, ought to be sent to the *Babia*. Accordingly all the *Dutch* prisoners then about the cape and *St. Anthony*, were sent to the *Algodais*, where every one was ask'd by colonel *Pedro Marinba*, whether they would take service under the king of *Portugal*, and such as would not, should be sent forthwith by land to the *Babia*, a tedious journey; besides, that they ran the hazard of being murdered by the way. Many took service for fear, but *Zweepers* and *Broekbusen* being ask'd again, whether they were not willing to serve the king, they answered, they would rather die than bear arms against their own nation.

The 5<sup>th</sup> of October, all the prisoners under a convoy, both of soldiers and boors, were carried from the *Algodais* to *Pojuka*. But scarce were they come thither, when *Zweepers* was ordered to be sent back to the cape of *St. Austen*, where he was put to the rack, to extort from him a confession concerning the trumpeter's journey to the *Receif*, who, as they supposed, had discovered their design upon *Iltamarika*; but not being able to bring him to make the least discovery, they sent him, after an imprisonment of five weeks, to the *Babia*.

In the mean while Mr. *Broekbusen*, with the rest of the *Dutch* prisoners, had been forced to travel day and night till the 28<sup>th</sup> of November 1645, when they came to a castle call'd *Tapiao*, on the sea-shore of the

1645. *Babia*, about half a league from the city of *St. Salvador*, after a dangerous journey: They were carried in ten boats to the city, on that side where it is best fortified, the *Portuguese* being not willing to let them have a fight of the fortifications on the land side, Mr. *Broekbusen* was by order from the governor *Antonio Telles da Sylva*, made a prisoner in a citizen's house, and the soldiers disposed into quarters. The next day they heard the drums beat up for volunteers, every one being invited to serve the king of *Portugal*, of what nation soever, except the *Dutch*.

1646. The next following year, on the 18<sup>th</sup> of January 1646, *Zweers* and *Broekbusen* intercepted a letter writ by *Hoogstrate* to *Hondius*, concerning several transactions to be communicated to the governor, of which captain *Ley* having got scent, gave immediate notice thereof to the governor the first of February, who threatened them with no less than the gallows, sent them to a loathsome prison; with strict orders that no body should be permitted to speak with them, nor that pen, ink, or paper, should be allowed them; nay, whilst the clerk was setting down their names, a captain came and told them from the governor, that they were the traitors who kept correspondence with the *Dutch* in the *Recess*; and ordered that a sentinel should be set at the prison door, to keep the inhabitants from laying violent hands upon them; for as they were carrying to prison, they made a horrible noise, crying, *To the gallows with these impostors and traitors*. They remained five whole days in this prison, without any victuals or drink, till being almost spent with hunger and thirst, they got leave to write to the governor, representing to him their deplorable condition; who gave immediate orders that victuals should be given them for the future: The *Portuguese* keeper being afraid, that if they should give them plenty of victuals at first, it might turn to the danger of their lives, was so cautious, as to send them no more than each a piece of bread well dipt in wine at first, and after some hours, such another, but something bigger, till by degrees their stomachs were restored to their former digestive faculty.

The last day of February the governor gave publick audience (which is done three times every year) for the releasing of those that are prisoners on the king's account. Upon this occasion a free access was likewise granted to our people to the governor. They passed thro' the anti-chamber, lined on both sides with his guards, into the room of audience, adorned with damask hangings of divers colours: Here they found the go-

VOL. II.

1646. vernor sitting in an elbow chair, on the right-side of which stood the royal throne, raised four steps higher from the ground than the governor's seat, which was surrounded upon the floor with very fine tapestry. Just behind him stood his secretary, and some halbardiers; on both sides sat several counsellours and lawyers, their heads covered, and behind them the officers of the army, all uncovered. The governor, as soon as he saw our prisoners, gave them a sign to come nearer, which they having done accordingly, Mr. *Broekbusen* upon his knees, spoke to him thus: *We suppose your lordship not to be ignorant, that now for a whole month we have been detained in a miserable prison; without being conscious of any crime committed against you, unless it were, that we have detained the letter your lordship knows of; if in this we have committed a fault we beg your lordship's pardon.*

And (replied the governor) supposing you had done such a thing in Holland? Upon which *Broekbusen* answered, *That his lordship would be pleased to remember that it was no more than a private letter, and not directed to his lordship*; the governor after having paused for a little while, gave immediate order for their discharge; from that time they had liberty given them of walking abroad, but were fain to carry themselves very swimmingly, for fear of the inhabitants, who kept a watchful eye over them.

The 7<sup>th</sup> of May, *Isaac Zweers* and *John Broekbusen* were carried on board a yacht called the *St. Francis*, in order to be conveyed to the isle of *Terceira*; and as they were the first *Dutch* prisoners that were sent to that island, every body looked upon it no otherwise than a pretence to throw them over board after they were come at sea. Here they met with worse treatment than before, being forced to stand to the pump during the whole voyage, and yet were ready to be starved, notwithstanding the sea-men caught more fish than they could consume. At last the 28<sup>th</sup> being arrived in the road near *Terceira*, they saw within an hour after a *Dutch* ship coming to anchor near them; they called to the ship till the master sent some of his people aboard them, unto whom they made their complaints, and understanding that the master was a native of *Nieuwendam* called *Martin Peter Honing*, they began to be a little cheerful, tho' the *Portuguese* would not allow them to go aboard the *Dutch* ship. But the 29<sup>th</sup> being left alone with the steer-man and only one boy in the vessel, they found means to go in spite of their keepers, aboard *Martin Peter Honing*, who promised to see them delivered. The same afternoon *Moor* the governor of this

1646. this and the adjacent islands, residing in *Terceira* sent for *Zweers* and *Broekhusen*, and told them that he had received a letter from the governor *Antonio Telles da Sylva*, in which he desired him to detain them prisoners in the castle for a twelve month; but that he did not think himself obliged to follow his directions, he having no other dependance but on the king, who being not concerned in this war, his orders were to send all the prisoners brought thither to *Portugal*; that they might rely upon it, and for their present sustenance, till a ship should be ready to go, ordered them nine rix dollars.

And from  
terrace to  
Portugal.

The 13<sup>th</sup> of June they met with a master of a French vessel, who offered to carry them without any reward to *Portugal*, which they willingly accepted of: Here they met with many of their fellow prisoners, who had imagined no otherwise but that the *Portuguese* had thrown them over board. They continued here till the 10<sup>th</sup> of September, when Mr. *Zweers* and *Broekhusen* embarked themselves at *Lisbon* aboard a man of war called the *Prince Henry*, and at last, the 4<sup>th</sup> of December, after a thousand dangers and miseries, which they had sustained since their departure from the *Dutch Brasil*, arrived safely in the *Maese*.

Arrive  
safely in  
Holland.

But we must return towards the *Receif*. The unexpected defeat of colonel *Haus*, put all the inhabitants of the *Receif* under a great consternation; but the council left no stone unturned to put the place with all the adjacent forts, in a condition to make a vigorous defence, in case it should be attacked by the enemy; and that every thing might be performed with the best order that could be, *Peter Bas* was constituted commander in chief in the *Receif*. Admiral *Lichtbart* was to take care of the batteries, and artillery thereunto belonging; *Henry Moucheron* was made commander in *Maurice's town*; all their thoughts being now bent upon the defence of these places, which before they judged out of danger.

Prepara-  
tions in the  
Receif.

The stables and out-houses for the use of the negroes, as likewise the walks and gardens belonging to count *Maurice's* house being no small impediment to the fort *Ernestus*; it being to be feared that under favour of these houses and trees, the enemy might unexpectedly surprize the fort and *Maurice's town*, and the inhabitants earnestly requested the pulling down of those stables, out-houses and trees, and what else might prove dangerous to the place; orders were given to Mr. *Valbergen* and major *Bayert*, commanding in the fort *Ernestus*, to see the same put in execution, with as little damage to the house as possi-

bly could be. The houses near the fort *Bruin* were likewise ordered to be pulled down, and the horn-work belonging to it, to be levelled at the request of the citizens. Many negroes were also employed under the conduct of major *Beck* and the captain of the city militia, to break down all the houses in *Maurice's town*, which lay too near the new retrenchments. All *Portuguese* prisoners were ordered to be distributed in the ships, and several volunteers who had committed many outrages in the country, and were detained in custody, were taken into service for three months. A rumour being spread abroad that 18 of the enemy were come into the *Affagados*, a company of citizens were got in readiness to assist them, but it proved not true.

The same day the ship called the *O-range-tree* arrived near the *Receif*, being come out of the *Maese* the 21<sup>st</sup> of May with thirty-five foldiers for recruits. The watches were so disposed, that in *Maurice's town* Mr. *de Wit* and *Raelfield* (besides the ordinary offices) and in the *Receif* Mr. *Aldrick* and *Valbergen* should go the rounds.

The ship  
the O-  
range tree  
comes from  
Holland.

*Baltazar Dortmund*, governor of *Itamarika* sent advice to the council the 17<sup>th</sup> of August that *Kavalkanti* was with some troops come to *Iguaraku*, and had summoned the *Brasilians* to join with him in four days, under forfeiture of their lives.

The 19<sup>th</sup> the citizens presented a petition, shewing the necessity of having the house of count *Maurice* pulled down, as hindring the prospect from the fort *Ernestus*, and if once possessed by the enemy, they might from thence annoy both the fort and the *Receif* itself with their cannon. But the council having advised with Mr. *Walbeck*, admiral *Lichtbart*, *Aldrick de Wit*, *Raelfield*, *Moucheron* and *Valbergen*, thought fit not to agree to it for that time, being in hopes that it might be made useful for their defence. Mr. *de Wit* and *Hamel* were commanded to go from hence to each house in *Maurice's town*, and to take an exact account of what negroes were able to bear arms, and to furnish them with musquets, and pikes; the same charge was given to admiral *Lichtbart*, and captain *Baribolomeu Van Collen*, for the *Receif*. All the sick that were in a state of reconvalescency in the castle were likewise ordered to be armed for its defence.

At the same time an answer was sent to Mr. *Dortmund*, with orders to draw as many *Brasilians* as possibly he could into the isle of *Itamarika*, and to provide him self with as much cattle and meal (*farinha*) as he was able to get out of the adjacent places; but that if he found himself not in a condition to maintain the whole island,

Mr. Carpenter was likewise forewarned to be upon his guard, and to retire in time into the isle of *Itamarika*, with his soldiers and *Brasilians*, if he found the inhabitants ready to take up arms against him.

The 19<sup>th</sup> at night a party went abroad to get intelligence, but met with no enemy. Some negroes were also sent towards the enemies quarters to know their strength. The same evening the council received a letter by lieutenant *Francis Meades* from *Andrew Vidal*, in which he testified his readiness still to maintain the peace, complaining at the same time of outrages committed by our soldiers, as may be seen out of the following letter.

*A letter from Vidal to the council.*

WE have sent you advice before by lieutenant *Manuel Antonio*, of our arrival in this captainship, by orders from the governor *Antonio Telles da Sylva*, and at your own request, in order to restore tranquillity here by the most effectual means we could devise. We also did represent to your lordships the many innovations and unaccountable proceedings which had reached our ears, by the lamentable cries of several noble ravished virgins, and the doleful complaints of the inhabitants of *Rio Grande*, where forty persons of note together with a priest, and the other day two more in the *Salinas* were murdered in cool blood. I can scarce mention without horror (and the respect every one ought to have to sacred places forbids me to particularize) the outrages committed against the images of saint., and especially that of the mother of God, and sacrileges committed by your soldiers: All which considerations, together with that we found you in a warlike condition, with your troops in the field, natural rights of self defence established by the constant custom of war did teach us, not to leave an armed power behind our backs, which upon occasion might have proved fatal to us, before we could come to a resolution in conjunction with your lordships, what measures were best to be taken for the re-establishment of that tranquillity which was the only aim of our coming into these parts; according to which we have regulated ourselves in our march towards the *Reccif*, till we come to the town of *St. Antonio de Cabo*, where having caused *John Fernandes Vieira* to be taken into custody, under a guard of twelve soldiers, we were surprized at the vast numbers of inhabitants, children, women, and religious men, who to shelter themselves from the outrages and robberies committed against

1646. them by captain *Blacr* in the *Vergea*, came to seek for shelter among us. They gave us an account how that the said captain not satisfied with having plundered their houses, had carried away three of the noblest ladies of the country, after they had been grievously disgraced before; the inhabitants being exasperated by these violences, did (against our will) leave our camp so suddenly, that whatever haste we made to march after them, we could not overtake them before they were engaged with some of your troops, in the sugar-mill of *Isabel Gonçalves*, which they intended to have set on fire, had it not been for our men, who were forced to interpose betwixt them and your soldiers, to their no small danger and our loss, as being exposed to the volleys of your small shot, which consisted for the most part of bullets cut in pieces and made four square. As the hostilities committed daily against our troops, afford fresh occasions of revolt among the inhabitants, so we cannot but lay before your lordships the late proclamation and ratification of peace betwixt us, protesting now and for ever in the name of God, *John IV.* our king, as also in the name of the states general and all our allies, that your lordships will not let things come to a rupture, and not give us new cause of acting offensively, or to declare war against you. We cannot longer dissemble our opinion, that the reiterated complaints of the inhabitants, may at least in some measure serve for an excuse, if not a justification of the proceedings of *John Fernandes Vieira*, concerning whom we are sufficiently satisfied that his first intentions were only to afford protection to some innocent persons threatened with destruction; which though it was in his power to do, yet did he retire from place to place with his forces, in hopes of avoiding any engagement, till forced thereunto by necessity, he was constrained to repel force by force. We beg of your lordships to take this letter into serious consideration, being of so much consequence, to our both sides safeties; for it seems as if heaven itself were offended at our proceedings.

God preserve your lordships.

*Andrew Vidal de Negreiros.*

*From de Ingenio of St. John Baptist de Venies, Aug. 19, 1645.*

An answer from the council was sent the next following day by the same lieutenant.

*The council's answer.*

OUT of our answer to your letter dated at *Scrinheim* the 8<sup>th</sup> of august, you may sufficiently see that the protestations made both by the governor *Antonio Telles da Sylva*, and by yourself, concerning the maintaining of the

1646. *the peace betwixt his majesty of Portugal and the states general of the United Provinces, were never looked upon by us as sincere, or to be relied upon, since your actions did in no wise agree with your words. The treacherous proposals made to one of our deputies, to betray one of our best strong holds into your hands; the landing of so formidable a force in our territories without any knowledge, under pretence of a misinterpreted sense of our letter to his excellency; the coming with a strong fleet into our road; the taking of the fort of Serinhaim; the slaughter of so many Brasilians our subjects in cool blood; the summons sent to the cape of St. Austia for a surrender, nay the attacking and surprising of our troops, who were forced to keep in the field, for the bridling of our rebellious inhabitants; all these, we say, cannot by any unbiass'd persons be looked upon otherwise, than manifest infractions of the said treaty, and open hostilities. We on our side can without the least contradiction to truth positively declare, that our armament was not in the least intended against his majesty of Portugal, but against the rebels and their adherents; which we were compelled to, when we saw many armed troops to penetrate into our territories cross the river St. Francisco. The surprising of some of our barks in the Salgados; the taking of the house Marecape, and making our safeguards prisoners there, as well as at Cambao, and several other places; the gallows that were erected on purpose to terrify our inhabitants into a compliance with the revolted party; the killing of three of the said inhabitants of Pojuka in cool blood, and the surprising of several of our soldiers and Brasilians sent to St. Lawrence to fetch farinha; the plundering of the houses and shops of several tradesmen in the country, with many such like violences committed by the revolted party; and what is the worst, before ever we appeared in arms, but endeavoured by proclamations of pardon and of maintaining them in their possessions, to divert the danger; all these actions, we say, will not admit of any other interpretation but of open hostilities.*

How can it be supposed that in the station we are, we could after all those provocations and slights of our kind offers, desist any longer from drawing the sword? Whatever in the mean time has been transacted contrary to the custom of war, has been done without our knowledge and intention, being occasioned by the treacherous dealings of the rebels, and consequently to be looked upon as deserved punishments, rather than the consequences of a just war; besides, that neither his excellency Antonio Telles da Silva, neither you nor any body else, has any legal power to call us to an account concerning the government or punishment of the subjects of the states general,

no more than the king of Portugal is answerable to us for what is transacted upon that account in his kingdom or other dominions.

Notwithstanding which we would have you not in the least lay the before-mentioned crimes and violencies at our door, we are so far from having encouraged or commanded the Tapoyers to kill the Portuguese inhabitants in Kunhao, that for these several years last past we have endeavoured to prevent it; for having, by the ill treatment they had received from the Portuguese, been exasperated against them, they were for killing most of the inhabitants of that captainship, and had actually put it in execution, had we not interposed our authority, and ordered our garrisons to take them into their particular protection. What you say of ravishing of women, is not only beyond our knowledge, but even beyond whatever we heard of before, having taken all imaginable care to prevent such violences by our proclamation, published for that purpose. It is known to all the world that we afforded our peculiar protection to the women of de Ingenio, of St. Arnout d'Orlanda, and what concerns the taking of the ladies by captain John Blae, was, as we are informed, done with no other intention, than to exchange them for his wife, or at least to keep them as hostages for her, he having received intelligence that she was very ill treated by you at Serinhaim. The rebels themselves made the first step towards those robberies and rapines that have been committed by our soldiers since; which however cannot come into balance with those cheats, frauds and rapines, wherewith those rebels have defrauded and robbed their creditors of their debts and goods; notwithstanding which we have by granting safeguards and otherwise done all what in us lay to prevent the same.

The late murder upon the person of the Sallinhas was committed the 17<sup>th</sup> of August, without our knowledge, to our great dissatisfaction by the flying Brasilians, who being enraged at the killing of their men, women and children at Serinhaim, without any distinction of age or sex, took this opportunity of revenging themselves. You may easily guess that the papers dispersed by Antonio Kavalkanti at Iguaracu, have also contributed a little to this enterprize.

Of the bullets mentioned by you to have been used in the last encounter, we have more reason to complain than you, it being our constant order not to recede from what is the custom of war in these cases.

The courtesy shewed in saving and receiving our soldiers, we are ready to acknowledge, and to return upon the like occasion, desiring you would send us back your resolution upon this point by the same drummer.

It being evident from what has been acknowledged, that all the past misfortunes ought to be

Preparation against the Enemies coming to the Relief.

In Maurice's Town and other forts.

1645. be imputed to the rebels, unto whom we endeavoured by all requisite means to restore tranquillity and peace; but they persisting in their rebellious designs, deserve rather condign punishment than the least excuse at your hands. For which reason it is that we protest before God and the whole world, against the proceedings of his excellency Antonio Telles da Sylva, and what else has been committed by yourself contrary to the treaty concluded betwixt his majesty of Portugal and the states general of the United Provinces; not questioning but that upon the receipt of these presents, you will retire with your forces to the Bahia, and thereby put an end to the further violation of the said treaty. Thus expecting your answer, we rest, sir,

Receiv. Aug.  
20, 1645.

Yours, &c.

Preparation  
tion a-  
gainst the  
Enemies  
coming to  
the Re-  
ceiv.

The same night word being brought that some of the enemies troops were advanced to Olinda, notice was given to all the circumjacent forts, to prepare for a vigorous defence, and two batteries ordered to be raised on the back-side of the dwelling-place of the negroes, from whence they might command the avenues to the Receiv along the river-side. Several volunteers lately come from the flat country, were incorporated into one company under the command of secretary Hamel, as captain, and Jeronimo Holman their lieutenant: Two advanced guards were placed, one betwixt the fort Bruin and the triangular fort; the second betwixt the last and count Maurice's plantation: Part of the bridge of Boavista was broken down, to hinder the enemies passage that way; and considering the importance of the triangular fort, a detachment of twenty six soldiers out of several companies was ordered to reinforce the garrison there. The same care was taken for the security of Maurice's Town, Antonio Vaez, the fort Ernestus, the quinquangular fort, and all the rest.

Major Bayeri was ordered to have the remaining walls of count Maurice's tables pulled down, because they hindered the prospect from the fort Ernestus; and Henry Vermeulen was commanded to employ thirty negroes in clearing the plantation of count Maurice and the ditches from all rubbish; and the before-mention'd Bayer, ordered to remove the pallisades from the said gardens, and to put them round his fort. The engineer Pisseer had orders given him to set a row of pallisades on that side of the fort of Ernestus, where it fronts the before-mention'd gardens, and to extend them five rods into the river. And this fort being not sufficiently stored with heavy cannon, commissary Stiebt was to carry thither

VOL. II.

two great pieces, then planted at the bridge-foot, and instead of them to place there two culverins; likewise the entrance of the channel of Maurice's Town was flopt by a double row of pallisades. The members of the council, in conjunction with those of the court of justice, took another view of the suburbs of Maurice's Town, to consult whether it were best to maintain or to desert that post, but the resolution thereof was deferred till the next day. Two great cannons were planted in the Syquanquar-Fort, to command the river-side; and in consideration that the hornworks belonging to that fort, required a considerable number of men for their defence, the governor of the fort was ordered to have the same levelled by his Brasilians and soldiers, and one hundred negroes; and the woods betwixt the said fort and the Afogados, were ordered to be cut down by the Brasilians belonging to the fort, when it was also resolved to draw the fortifications of Maurice's Town into a narrower compass, and to repair the walls round the Receiv; so that by the indefatigable care of the council, all the fortifications both of the Receiv and the other adjacent places, were put into such a good posture of defence, that the enemy, tho' very strong, durst not attempt any thing thereabouts for that time. Mr. D rimand had drawn near 1400 persons into Itamarika, 700 of which being women and children, he desired some supplies of provisions, but for the rest, had put the island in a good posture.

Mr. Linge, by his letter dated in Parayba the 22<sup>d</sup> of August, sent advice to the council, that after notice given him of the defeat of colonel Haus, he had judged it most convenient to remove the garrison and inhabitants of Fredericia into the forts; that however the Portuguese were pretty quiet as yet, notwithstanding his whole force consisted not in above four hundred soldiers, one hundred inhabitants, and fifty Brasilians, among whom were a good number of sick and maimed men; and that the Tapoyers had slain about twelve or fourteen labouring countrymen. Major Hoogstrate, Ley and Heck, had not long before given notice to the council, that they had burnt all the houses, but especially the magazine and church without the fort, for its better defence, and that the enemy had posted themselves on the hill of the cape, and on the southern island.

On the 25<sup>th</sup> of August, upon another review of the fortifications of Maurice's Town, the same were ordered to be brought forth with to perfection.

The same day the council received letters from Mr. Linge, by the way of Itamarika, dated

1645.

1645. dated the 15<sup>th</sup> and 19<sup>th</sup> of August, in Parayba, that William Barents had sent him advice from Kunbaa the 14<sup>th</sup> of August, that he and Rudolph Bawn had a troop of Tappoyers ready for our service, every thing being very quiet thereabouts; but that the said Tappoyers had carried away all the cattle belonging to Peter Farcharson, which had occasioned no small scarcity of fresh flesh thereabouts.

It was also judged absolutely necessary by the council, to take into their serious consideration the present condition of the forts in Rio St. Francisco and Seragippo del Rey, which being provided but with slender garrisons, and all communication cut off betwixt them and the Receif, and in great danger of being lost; it was judged absolutely necessary, after the defeat of colonel Haus, to endeavour the preservation of them, and consequently of the whole Dutch-Brazil, by removing them from thence to the Receif.

To accomplish this with all imaginable security, Mr. Walbeck was deputed by the great council to the council of war, to know their opinion, by what means these garrisons, as well as that of Porto Calvo, might be with safety brought to the Receif, or whether, considering that they would be forced to leave their cannon behind them, they should be ordered to defend themselves to the last extremity, in hopes of receiving speedy succours from Holland for their relief.

The council of war, having well weighed the whole matter, unanimously agreed upon the following resolution.

*The resolution of the council of war.*

**T**HAT it was their opinion, considering the capital city was in danger for want of a sufficient garrison, the garrisons of the before-mention'd forts, which in all probability could not make any long resistance, ought to be taken from thence with as much ammunition and cannon as could be done, and carried to the Receif. But in regard that the fort of Porto Calvo lay pretty deep into country, where the river was very narrow and shallow, the garrisons of Rio St. Francisco, and Seragippo del Rey, were to pass that way in order to join them, and that they should bury or break their cannon.

By order from the council of war, Aug. 24, 1645.

Signed,  
Kornelis Bayer,  
Albertus Oosterman,  
L. Van Harkema,  
John Denning,  
Samuel Lambartz.

Rene de Mouchy.

Accordingly two barks, with the ship Zelandia, were ordered for the execution of this enterprize, to Rio St. Francisco.

The last day of August, one of the captains of these two barks return'd, and gave an account, that he being advanced into the river of Rio St. Francisco, within a league of the said fort, he received so warm a salute of small shot from a Portuguese vessel full of firelocks, that he was forced to return, without being able to penetrate any further up the river; that the other bark being discouraged thereat, durst not venture to go to Seragippo, but that they thought fit to retreat back with the ship Zelandia; he further added, that it would be very difficult to put this design in execution, unless they were provided with some galliots and yachts well armed.

Pursuant to this advice, the council ordered the yacht called the *Sprew*, with three other barks thither, to join with the ship Zelandia, for the more effectual execution of this design.

They set sail from the Receif the 2<sup>d</sup> of September, captain William Lambartz commodore. He return'd with the said yacht, and the Zelandia, the first of October, to the Receif, where he gave the following account of his expedition to the council.

We came the 22<sup>d</sup> of September within a half league of the fort of St. Maurice, where we met with a bark, which at the discharge of one of our cannon, sail'd away before us up the river. As we were in pursuit of her, we espied another small vessel, in company of the bark belonging to John Hoek, both full of soldiers: We saw the first of these two run ashore, and the soldiers landing, who skirmish'd with an opposite party for the defence of the vessel: Our yacht under favour of our cannon, boarded the said vessel, with an intention to set it on fire; but finding it laden with the baggage of our soldiers, fell to plundering first; and soon after espied a boat with a white flag, making all the sail they could towards them: Major Pappenheim, late commander of the fort of Rio St. Francisco, and Mr. Hoek, were in this boat, being sent by the enemy to let us know, that if we set fire to the vessel, he would cut all the prisoners with their wives and children to pieces, so that we desisted from it. They gave us an account, that the said fort had been forced to surrender three days before, for want of wood and provisions, after a siege of twenty six days: That the Portuguese having taken a serjeant with four soldiers of the garrison of Seragippo, had killed the soldiers, and sent the serjeant back with a convoy of two hundred men, to fetch the garrison of Seragippo, which had

had not above four days provision left, from thence. That about eight days before the surrender of the fort, colonel Haus, captain Listry, and captain Wilschut pass'd by that way in their journey to the *Babia*, whither they, pursuant to their capitulation, were to be carried with the rest of the prisoners, and from thence to *Portugal*; and so further to *Holland*, without any other loss except their baggage, being for the rest indifferently well treated. They further added, that the *Portuguese* not long ago detach'd two hundred men to the island of *Melchior Alvares*, in hopes to cut off the retreat of our men, and to prevent their excursions, but came too late, our people being retired before. That the enemy had likewise made themselves masters of the fort dos *Ajagados*, where Mr. Bullestraete being made a prisoner, was now on his way to the *Babia*. Captain Lambartiz hearing this account, thought it his best way to retreat towards the mouth of the river, where having spent two days in refitting his ships, he returned the first of October to the *Receif*.

The garri-  
sons of the  
three forts  
forced to  
surrender.

Are carri-  
ed to the  
*Babia*.

The same ill success attended us at *Seregiippo* and *Porto Calvo*; for the council having sent a bark with provisions to their relief, the same, contrary to her orders, came to anchor before *Rio St. Francisco*, where being seized by the enemy, the garri-son of *Seregiippo* being thereby disappointed in their hopes, were forced to surrender after they had spent all their provisions. After this misfortune, there was not the least probability left of saving the garri-son of *Porto Calvo*, which lying deep into the country, the river was not navigable thereabouts by reason of its narrowness; and that the enemy was master of the field on both sides, so that they were likewise obliged to surrender for want of necessaries. The garri-sons of these three forts, were contrary to their capitulation, (by virtue of which they were to be conducted to the *Receif*) carried prisoners to the *Babia*; but those that could not follow the rest, by reason of sickness, or otherwise, were cut to pieces by the *Portuguese*.

The Portu-  
guese kill  
all the  
Dutch in  
their ser-  
vice.

Many of the soldiers belonging to these as well as other garri-sons, and of the troops under colonel Haus, dreading the danger of the land-journey to the *Babia*, did take service among the *Portuguese*; but captain Nicholas Nicholson being sent with sixty four of these *Dutch* to prepare an ambush for some of our forces, took this opportunity to join with us, which exasperated the enemy to that degree, that they disarm'd all the *Dutch* that had taken service there, and murdered them in cool blood; the like they did with the *Dutch* inhabi-

taints that had staid behind in the country. 1645:

In the mean while the captainship of *Parayba*, through the good conduct of their governor Paul de Linge, remained in obedience, at least in outward appearance, 'till the 25<sup>th</sup> of August 1645, when the inhabitants, having received intelligence of the defeat of colonel Haus, and the surrender of the *Cape of St. Austin*, and being at the same time encouraged by the succours of five companies, and good store of arms, sent to them by Vidal from *Pernambuco*, they began also to take up arms, with an intention to cut off the communication be-  
tween the garri-son in the Monastery of *St. Francisco*, as the inhabitants of *Fredericia*, (a place of no strength) and the forts near the sea shore; but Mr. Linge shrewdly sus-  
pecting their design, did with consent of the rest of the officers there, order all the citizens with their effects, and the before-  
mentioned garri-son to withdraw within these forts, to prevent their being surpris'd by the *Portuguese*, and to serve as an addi-  
tional strength for the defence of the forts; for which reason also the *Brasilians* inhabit-  
ing with their families in those parts, were  
commanded to intrench themselves under the cannon, which served for outworks to them. The enemy finding themselves by the conjunction of these forces, disappointed in their design of making themselves  
masters of *Parayba* by force, had recourse to their wonted artifice, not questioning, but they might have the same success in purchasing the forts of *Parayba*, as they  
had had at the *Cape of St. Austin*. To en-  
compass which, they sent in September 1645, one Ferdinand Rodrigo de Bulbaus, clerk of the court of justice of *Parayba*, with a let-  
ter directed to the commander in chief, Paul Vander Linge, offering him the sum of 19000 gilders, if he would surrender the said fort into their hands. But this message had not the desired effect, the messenger being by order from Mr. de Linge taken into custo-  
dy and hanged the next day; of which he sent notice to the council the 16<sup>th</sup> of  
September. In the mean while, (according to Mr. de Linge's letter from the 6<sup>th</sup> of Sep-  
tember) five companies more of the ene-  
mies troops, making in all about three  
hundred Men, were arrived in *Parayba*,  
which being join'd by the ablest of the in-  
habitants, had posted themselves near *Ti-  
bery*, where they had published by procla-  
mation, for every one to repair to his sugar-  
mill, under pain of forfeiting the same.

Result is  
Parayba.

Their mes-  
senger  
hanged.

The Passage betwixt the *Ajagados* and the *Quinquangular-Fort*, where the cattle belonging to the *Receif* were kept at pasture, being much infested by the enemies parties, one of which had taken good part of

1645. of it, a small wooden fort was ordered to be erected in the most convenient post, for the security of the meadows thereabouts.

Sometime before, viz. the 26<sup>th</sup> of July, orders were sent from the council to *Servaes Carpenter*, to disarm the inhabitants of *Goyana*, who thereupon petitioned the said council to be excused from surrendering their Arms, considering that thirty seven *Portuguese* of *Kunbau*, who had been disarmed, were murdered by the *Tapoyers*, and that they were daily in fear of the same treatment, 'till they were further removed from their borders. The council answered, that the murder committed upon these *Portuguese* had been done without their knowledge, and contrary to their orders; that in case they persisted in their allegiance, they had nothing to fear from the *Tapoyers*, whilst they were under their protection; neither ought they to imagine that the disarming of them, was done with an intention to leave them a prey to the *Tapoyers*, but for our own security, and to furnish them with a plausible excuse not to join with the rebels, whenever they should be prompted therunto by them. At the same time they repeated their orders to *Mr. Carpenter*, not to desist from disarming those of *Goyana*, notwithstanding their petition to the contrary, but that he should be very careful, that neither the soldiers, nor *Brazilians* of *Marni* might be burthensome to them. The council also deputed *Mr. Astelle* and captain *William Lambartz*, with letters to *John Dwy* and *Karakara*, the first king, and the second commander in chief of a troop of the *Tapoyers*, with presents to all the rest of their commanders, in order to engage them to join with us, they having complained of their not having been presented, like as *John Dwy* was before; accordingly the said *Mr. Astelle* and captain *William Lambartz* having taken their leave the 28<sup>th</sup> of August of the council, took shipping for *Parayba*, in order to go from thence to *Kunbau* to treat with the *Tapoyers*.

The Members of the Court of Justice and the council of war, in conjunction with the magistrates, having represented to the great council the absolute necessity of having the houses in *Maurice's Town* pull'd down and laid level with the ground; an order of the said council was publish'd the 29<sup>th</sup> of August by beat of drum, enjoining the inhabitants to pull down such houses, within the space of two days, and in case of failure, every body to be at liberty to break down the same for his use; the house of *Mr. Rechteren* only excepted, which was to be converted into a redoubt, for the defence of the adjacent plain. The same

day *John Denninger*, lately lieutenant to colonel *Haus*, succeeded captain *Blaar*, now a prisoner with the enemy, in his command; and many negroes offered to serve the company under a captain of their own choosing.

The 30<sup>th</sup> of August, captain *William Lambartz*, with part of his forces return'd to the Recef from *Parayba*, where he gave the council an account of his negotiation: That not without a great deal of trouble they at last obtained two hundred *Tapoyers* from their king *John Dwy*, who pretended that he dreaded an incursion from one of his neighbours, who in the absence of his troops might perhaps kill him with all his family, and demanded at the same time, that all the *Portuguese* might be killed in *Parayba*. That he marching with these *Tapoyers* into the said captainship of *Parayba*, they actually slew all the *Portuguese* they met with in their way, to the number of one hundred persons, and plunder'd their houses; and as soon as they found him prepared to appease them, one half of them, with what negroes and other booty they had got, return'd home; but continuing his march with the rest thro' *Goyana* towards the Recef, the *Tapoyers* did no sooner understand, that they were likely to meet with some opposition by the way, but they followed the footsteps of the rest homewards; so that he was forced to retire with all speed to the fort of *St. Margaret* in *Parayba*, from whence he returned by sea to the Recef. Hereupon the council dispatched some letters the 16<sup>th</sup> of September for *Rio Grande*, directed to king *John Dwy*, *Jacob Rabbi* and *Rudolf Baro*, exhorting them to join their arms with ours, for our mutual defence, and to chase the *Portuguese* that were on their march thither, from thence.

The 13<sup>th</sup> of September 1645, *Jeronymo Serrao da Paiva*, late admiral of the *Portuguese* fleet, (made prisoners in the late sea engagement in the bay of *Tamandare*) appeared before the council, where being examined concerning the designs of the governor of the *Babia* in sending a fleet, and landing his forces in the Bay of *Tamandare*, as likewise concerning the fleet under the command of *Salvador Correa de Saa*, he refused to give any other answer, or to make the least confession, except that he was sent with the said fleet and forces to offer his assistance to appease the revolt arisen among us. He desired also leave to send a letter by a drummer to the colonels *Martin Soares Moreno* and *Andrew Vidal*, about the exchanging of his person, and some other *Portuguese* Prisoners, which was granted.

1645. Some of the citizens having conceived a jealousy, as if their pressing circumstances and the need they stood in of present relief, had not been sufficiently represented to the council of nineteen in Holland, it was thought fit by the council to communicate the contents of the two last letters to them for their satisfaction.

The 19<sup>th</sup> of September, about noon, our whole fleet retired from the bay of Tamandare into the road of the Recife, with two men of war, and two small vessels taken from the enemy; where I was arrived long before, having left them, immediately after the engagement. The same night *Servaes Carpenter* who died the day before, was interr'd. The same day the yacht call'd the *Doe*, and one of the small vessels taken from the enemy, and call'd by us the Recife, were sent out a cruising to the Cape of St. Austín, to prevent the enemies receiving any supplies by sea thereabouts.

Company  
 of Fusiliers  
 erected.

The council being sensible that the enemy made it their chiefest endeavour to drive away their cattle, and to prevent them, by strong parties from fetching of wood and fishing, a company of fusiliers was order'd to be erected out of other companies, who were to be commanded by captain *Renbagh*, and to serve as a constant guard against the enemy's flying parties. The 21<sup>st</sup> of September, the following proclamation of pardon for such as had taken service with the enemy, was publish'd.

#### A PARDON publish'd.

THE great council of the Dutch-Brasil being made sensible, that many of their subjects being fallen into the enemies hands, have either for fear of being killed or transported, and out of other considerations, taken service among the enemies troops, and considering that most of them have been inveig'd by their commanders, and perhaps are in a fair way of repenting of their error, have thought fit, by these presents to grant our pardon to all such as shall return to our service, for all past offences; with our promise, that they shall receive the advantage of the same station they were possess'd of among us before; and such as are willing to return to their native country, shall have passports granted them for that purpose; from the benefit of which pardon, are however excepted *Dirck Hoogstrate*, and the other traitors, who being commanders of forts, have treacherously delivered up the same to the enemy.

By this time the enemy had block'd up all the avenues by land, leading to the Recife, in hopes to reduce us by famine, having posted both all the Portuguese forces sent to their aid from the *Babia*, and the

1645.  
 rebellious troops, from the city of Olinda to the *Baretta*, in the form of a half-moon; and made about half a league from the fort of *Affagados* an entrenchment provided with six pieces of heavy cannon, brought hither from *Porto Calvo*; but durst not attack us by force, knowing we were prepared for their reception.

Mr. *Dortmund* having by his letters represented to the council, the necessity there was of sending one of their members to provide for the security of *Itamarika*, and to keep the *Brasilians*, (consisting of 1500 men, women and children) by his authority in their duty against the solicitations of *Kamaron*, who left no stone unturn'd to bring them over to his side; they desired Mr. *Bullestrate* to take upon him this province; who accordingly the 23<sup>d</sup> of September, set sail thither in the ship the *Deventer*, and returning the 29<sup>th</sup> of September to the Recife, gave the following account to the council.

Mr. Bulle-  
 strate sent  
 to Itama-  
 rika.

He arrived about noon at the entrance of the river *Maria Farinha*, where being informed by *John Vos*, master of a bark, that the enemy had twice attack'd the city of *Sboppe*, and continued before it still, he went into a challop, with five or six seamen to the fort *Orange*, but was no sooner espied by the garrison, but they desired him not to come nearer, they being still smartly engaged with the enemy upon the hill, and doubtful of success: Whereupon he sent two seamen, with a letter to Mr. *Dortmund*, who being encouraged by the reward of two reals, brought an answer from him the same night, intimating that the enemy, had been forced to retire.

An account  
 of his pro-  
 ceeding.

The 25<sup>th</sup> of August, by break of day, he went in a challop to the city of *Sboppe*, and finding that the enemy, what with the brave resistance made by the garrison, what with fear of this ship, had abandon'd not only the city, but also the whole island, he ordered the fortifications to be forthwith repaired, and to be put into a good posture of defence.

For the enemy perceiving, that it was in vain to attack us upon the Recife, sent great part of their forces, embark'd in 8 boats and a bark against *Itamarika*, the 20<sup>th</sup> of September; where having surprized, and vigorously attack'd our forces posted on the hill near the city, (our deserters making the first attack) that they the third time made themselves masters of it, forcing our troops to retreat into their entrenchment of the church.

The Portu-  
 guese at-  
 tack Itama-  
 rika.

About three days after, viz. the 23<sup>d</sup>, Mr. *Bullestrate*, as we told you, arrived in the ship *Deventer*, to give the necessary orders for the defence of the place; and to keep the *Brasilians* in awe, he brought along with

D d him

1645. him some volunteers chosen from among the citizens, the garrison of the *Receif* being so weak as not to be readred useless by any further detachments; besides that there were 400 *Brasilians* capable of bearing arms at *Itamarika*. He was charged by the great council, and the members of the council of war, to watch above all things for the defence of the fort *Orange*, which was to be maintained to the last, if they were not able to keep the whole island on the hill.

Mr. *Bullestrate*, after his arrival there, found it absolutely necessary to preserve likewise the city of *Schoepe*, from whence the said fort must be supplied with wood, its situation being such, as that so long as we were masters at sea, we could maintain a correspondence betwixt the said fort and city; for which purpose also, the yacht call'd the *Golden-Doe*, had her station appointed betwixt the fort *Orange* and the hill, to maintain the passage of the river between both. But to return to the siege of the city: The enemy made three vigorous attacks upon the entrenchment on the hill, but was repulsed with the loss of 150 kill'd; tho' a barber, who after the fight deserted them, made their loss amount to 450. *Kamaron* and *Hoogstrate* were wounded, and we had only 15 kill'd and 16 wounded. The *Brasilians* lately transported thither, from the villages of *Goyana*, *Iguaracu*, and other places, behaved themselves to a miracle upon this occasion, tho' it must be allowed, that the arrival of Mr. *Bullestrate* did not a little cool their courage, which made them abandon the island in the night, betwixt Sunday and Monday.

Abandon  
it again.

Further  
consultations  
about  
the safety  
of *Itama-  
rika*.

The 2<sup>d</sup> of *October* the great council entered upon a second debate concerning the preservation of *Itamarika*, they having received certain intelligence, that the enemy had undertaken the last expedition against that island, upon hopes of being seconded therein by certain persons of our party, with whom they kept a secret correspondence; and tho' they were in the dark upon whom in particular to fix the intended treachery, yet did they think it conducing to the safety of that so important place, to remove captain *Sluyter* with his company from thence, and in their stead to send thither the company commanded by captain *William Lambartz*, and to entrust him with the supreme command of all their forces there, which was put in execution accordingly the next day. The entrenchment round the church and the fort *Orange*, were also ordered to be strengthened with palisadoes; and the first, pursuant to the advice of *Garstman* and *Dortmund*, I ordered to be surrounded with a counterfence, within the

compass of which a company of *Brasilians* were lodged, with their wives and children, and the rest to be employed in the defence of the fort *Orange*; so the redoubt which commanded the place, from which the fort was supplied with water, was ordered to be repaired against a sudden attack, with which the fort could not long subsist, hold out against an enemy.

Letters were about the same time delivered to the council, dated the 5<sup>th</sup> of *October*, by Major *Anstijn de Magerbaas*, sent by *Andrew Vidal*, to treat about the exchange of prisoners; he told them, that since admiral *Serraes de Paiva*, had by two several letters solicited his release, he desired that the same might be exchanged for other soldiers, or be ransomed by *Antonio Telles da Sylva*, governor of the *Bahia*. He desired also that a cartel might be agreed upon for the exchange of the soldiers; and that in the mean while such of the *Portuguese* inhabitants, as were prisoners with us, might be released for reasonable ransom, which was not accepted of by the council.

In the mean while, (pursuant to the letters from the commander in chief of *Rio Grande*, and *John Hoek* of the 6<sup>th</sup> of *October*) *Jacob Rabbi*, with a small troop of *Tapoyers* and *Brasilians*, in conjunction with 30 *Dutch* inhabitants, made themselves masters of the seat of *John Lestian*, with the slaughter of 15 *Portuguese*. But they had not the same success at *Fernandes Menda's* house in *Poti-gi*, which being defended by 50 *Portuguese*, they were repulsed with some loss.

The enemies finding themselves disappointed in their design of gaining *Parayba* by treachery, did again apply all their care to block up all the avenues leading to the *Receif*, in hopes of reducing it by famine. This occasioned many skirmishes, in which the *Brasilians*, who got the greatest part of their provision out of the country, did a considerable mischief to the *Portuguese*; who for their greater security built a fort in *Pernambuko* (as they likewise did in the *Vargea* of *Parayba*) near the sugar-mill of *George Huomo Pinio*, but slightly fortified, and not able to hold out against any vigorous attack. In *Rio Grande* the *Tapoyers* plaid the matters over the *Portuguese*; for as we told you before, that according to their custom they entered the said captainship in *July* 1645, when being informed of the rebellion of the *Portuguese* in *Pernambuko*, they out of an in-born hatred to that nation, attacked the 16<sup>th</sup> of *July* some of them in the sugar-mill of *Kunbae*, and killed every soul of them, the *Dutch* inhabitants thereabouts not being strong enough to prevent it. From thence the *Tapoyers* marched to *Monpobu*, *Goyana*, and

*Rio Grande*, where finding a body of *Portu-  
guese* entrenched with pallisadoes in the  
nature of a *Palanka*, they forced them in  
conjunction with some *Brasilians*, to sur-  
render, under condition that their lives  
should be saved, provided they did not  
give any further occasion of disturbance.  
But some of the *Portuguese* flying after-  
wards into *Parayba*, the *Tapoyers* looking  
upon this as a breach of the late treaty,  
did with the beforementioned *Brasilians* a-  
gree to put the rest to the sword where-  
ever they met with them, which they did  
accordingly, the *Brasilians* exclaiming a-  
gainst the tyranny committed upon thirty  
or forty of their comrades, who by  
*Andrew Vidal's* order, were tied to pallisadoes  
in *Serinbaim* and strangled, which had  
this good effect, that *Rio Grande* for that  
time was entirely purged of the rebellious  
crew, except some few who escaped their  
hands. Their estates and cattle were af-  
terwards disposed for the benefit of the  
company, and others their creditors, which  
furnished the publick magazines with good  
store of flesh, at a very seasonable time.  
The *Portuguese* being sensible that we drew  
considerable supplies of provisions from  
that country, endeavoured to prevent it  
by sending several bodies of their troops  
thither, but were always forced to retire to  
*Parayba*, whither they carried as much  
cattle along with them as they could.

According to the deposition of captain  
*Nicolas Nicholson* (who came over to us the  
12<sup>th</sup> of November, as we shall see anon) the  
four companies of Dutch quartered in the  
*Vargea*, were as follows.

The company of *Nicolas Nicholson*, 63  
men, and among them 23 musquets.

The company of *Alexander Buckball*, of  
43 men, among whom 36 musquets.

The company of captain *Anthony*, who  
was mortally wounded in a late engage-  
ment, consisting of 36 men, and among  
them 32 musquets.

The company of *John de Wilt*, of 40 men,  
but miserable wretches, and among them  
only 12 musquets.

Besides these they had two other Dutch  
companies in *Goyana*, one commanded by  
*George Peterson* of 17 men, all pikes, the  
other by *La Cour* of 19 men, likewise most  
pikes. They had also two more in *Paray-  
ba*, one under the command of captain *Peter  
Gendre* of 19 men, most pikes; the se-  
cond by *Edward Verfman* of 20 men, among  
whom was but one musqueteer: So that the  
whole number of these eight companies, a-  
mounted to no more than 257 men; their  
colonel was *Hoogstrate*, and *Francis la Tour*  
late alderman of *Serinbaim*, major, a pro-

1645. felt enemy to the *Hollanders*. Most of the  
*Dutch* prisoners were put under a necessity  
of taking service with the enemy, being  
otherwise in danger of being murdered in  
their way to the *Babia*, as it happened to  
42 prisoners taken at the cape of *St. Au-  
stin*, who were all slain in the sugar-mill  
*Konjan*, near *Serinbaim*. He further de-  
clared, that the enemies forces in the *Vergea*,  
consisted of about 700 men sent from the  
*Babia*, divided into nine companies, well  
armed with musquets and firelocks. That  
besides these, they had about 100 men, ga-  
thered from among the *Portuguese* inhabi-  
tants, they having forced all the young men  
from the fouth of *Huma*, as far as *St. Law-  
rence* to take up arms; some being armed  
with firelocks, others with musquets they  
had taken from us; they were for the most  
part mulats, and an undisciplined rabble,  
commanded by *John Fernand Vieira* as co-  
lonel, and *Anthony Dias* (who came from  
the *Babia*) their major. Their captains most  
in esteem among them were, *Simon Mendes*,  
*Domingos Fagundes*, and *John d'Albuquerque*.  
*Kamaron* commanded 100 *Brasilians* armed  
with blunderbuffes, and *Dias* 200 negroes  
(among whom 50 were ours) provided with  
very good guns; besides some *Tapoyers*.  
Each soldier had for his daily allowance,  
a pound of meat, and about a pint of farin-  
ha or meal, and 12 gilders per month; a  
captain 120 gilders, an ensign 42, a ser-  
geant 21, and a corporal 15 gilders per  
month. But they only paid the Dutch  
troops with ready money, the account with  
the *Portuguese* from the *Babia* being made  
up but once a year. They were at that  
time busy in raising of a fort with four  
small bastions and a powder house, be-  
twixt *Bierbrom's* sugar-mill and *Casa de Sa-  
brodo*, upon each of which were to be  
mounted three pieces of cannon, eight  
pieces having been brought for that pur-  
pose from *Porto Calvo*, among which were  
five of metal. Round about this fort the  
soldiers from the *Babia* had their quarters  
assigned them, except the company com-  
manded by *John de Magebais*, which was  
quartered in the *Baretta*, with four Dutch  
companies, viz. the Dutch that were in the  
sugar-mill of *Bierbrom*, and those com-  
manded by captain *Peter Kavalkanti*, and  
*Anthony Jaconio*, and two or three compa-  
nies of the *Portuguese* come from the *Ba-  
bia*, in the sugar-mill *Brito*; the rest being  
*Portuguese*, *Mulats*, and other idle fellows  
they had forced to follow them from the  
fouth. These were armed for the most part  
with firelocks and musquets, the rest with  
pikes, *Andrew Vidal*, *John Fernand Vieira*,  
and major *Hoogstrate*, were at that time in  
the *Casa de Sabrodo*; all these consisted not

1645. in above 600 men. About the sugar-mill of *John de Mendance* were quartered three companies, two at the house of *Sebastian Karvalho*, and two more in the sugar-mill of *Mengao*. The rest were posted in the *Salinas*, *Baretta*, and the city of *Olinda*. Some of *Kamaron's* troops were in the sugar-mill of *Van Scholl*, and in the house of *John Kordero de Mendoje*, upon the bank of the river, being their advanced guard; *Henry Dias* with his troops had his post in the house of *Mr. Luffelen*. The redoubts belonging to the city of *Olinda*, were manned only with 17 soldiers.

In November the great council received intelligence, both by letters from *Paulo de Linge* out of *Parayba*, as also by several deserters, that the enemy had sent 400 men, 200 of which were soldiers, the rest inhabitants, from *Rio Grande* into *Parayba*, to make themselves masters of the open country, or at least to drive away the cattle; whereupon it was resolved, with consent of colonel *Garjman*, to endeavour to hinder the execution of the enemies design.

The 12<sup>th</sup> of November, captain *Nicholas Nicholson*, a native of *Amsterdam*, came, as we told you before, over to us to the *Receif*. He was among other prisoners of the cape of *St. Austen*, carried from thence to *St. Antonio*, where he took service among the *Portuguese*, but with no other intention than to desert them upon the first opportunity; he being intrusted with a captain's commission, to command a company of *Dutch* soldiers forced to list themselves from among the prisoners they had taken, was ordered, at the recommendation of *Hoogstrate*, and *Albert Genitz Weddo*, with the approbation of *Vidal* and *John Vieira*, to lye in ambush for some of our people in the *Salinas*, with a detachment of 60 men, out of the four *Dutch* companies in their service; and four more companies were ordered for a reserve, to assist him upon all occasions. The supreme command of the whole body being committed to him, he approached as near as he could with his *Dutch* to the fort *Bruin*, where he took the opportunity to pass the river by break of day, and to go with them (they being all willing to follow) over to us to the said fort. Captain *Nicholas Nicholson* had the command over the said company confirmed to him by the council, they being all willing to enter into their service: But the enemy had no sooner notice of it, but they disarmed all the *Dutch*, and under pretence of sending them to the *Babia*, caused them to be murdered by the way, with their wives and children.

The 2<sup>nd</sup> of November, the council had received advice from *Mr. Linge* from *Parayba*,

that *Andrew Vidal* had entred that captainship with 200 men, and that *Kamaron* had by letters strongly solicited *Peter Petty*, to desert our service with his *Brasilians*; but had received a smart refusal, the council sent him two pieces of fine linnen cloth as a reward of his fidelity. For it ought to be observed, that the *Portuguese* when they first began to take up arms against the government, did with letters and great promises, tempt the *Regidors* or commanders of the *Brasilians* to join with them, but they were so far from hearkening to them, that they sent all the letters written upon that account, both by *Kamaron* and the rest of the rebellious ringleaders, without opening to the council, thereby to avoid all suspicion of keeping any correspondence with the enemy, *Peter Petty* being a near kinsman of *Kamaron*; and ever since that time they have behaved themselves so well upon all occasions, and have done such considerable mischief to the *Portuguese*, by plundering and killing them, wherever they could meet with them, that we had not the least reason to mistrust the sincerity of their intentions.

The said *Mr. Linge* did also send word (November the 4<sup>th</sup>), that the enemy had attempted nothing as yet; and from November 14, that a party of 300 of our people being joined by some *Brasilians* of *Parayba*, had engaged 800 of the enemies troops, whom after a smart engagement they put to the rout, with the slaughter of a good number of their men. The *Brasilians* being encouraged by this success, did over-run all the flat country, and meeting with a good number of *Portuguese*, who were merrymaking upon *St. Martin's* eve in the sugar mill of *Andrew Dias de Tigeireda*, they attacked them so furiously, that after a slender resistance they put them all to the sword, even the son of the said *Tigeireda* himself, and a priest, without giving quarter to any body, except to a very beautiful maiden; who though almost distracted at the death of her father, and some of her other relations, that lay wallowing in their own blood, had such a powerful influence upon the hearts of these *Barbarians*, that they brought her a prisoner safely to the fort of *Parayba*.

The 21<sup>st</sup> of November towards the evening, 360 soldiers (20 of whom were taken from the *Receif*) set sail in small boats to the bay of *Traican*, and continued their march the same night, under the command of lieutenant *Berge*, justice *Hoek*, and the receiver-general of *Pernambuko*, towards *Kunbaos*, in order to attack the enemy that were lately come into *Rio Grande* from *Parayba*; but these enemies having got some intel-

1645. intelligence of our designs, were retired from *Kunkao* to a retrenchment among the bogs, which being accessible but in one place, they so warmly saluted our forces that would have forced them from thence, with their shot, that they were obliged to retreat with the loss of some dead and wounded, to the castle of *Koulen*, partly to refresh their men, partly to prevent their penetrating deeper into the council.

The 4<sup>th</sup> of December it was resolved to send the ship the *Overyffel*, and the yacht called the *Sprew*, towards the *Babia* a cruising, to get intelligence of their naval strength thereabouts, and to endeavour to take some prizes. The 5<sup>th</sup> of December the great council sent for all the commanders of the *Brasilians*, to inform them, that they had received considerable supplies of powder, ball, and all other sorts of ammunition, by the ship called the *Swan*, with letters from *Holland*, that they were equipping a considerable fleet for their relief, at which the *Brasilians* were extremely rejoiced; the *Portuguese* commanders having made it their business to persuade them, that no such thing was expected from *Holland*.

The same evening a *Brasilian* deserter declared, that all the *Dutch* were killed by the rebellious inhabitants, and their wives and children made slaves. The same thing was confirmed by a negro deserter, concerning captain *Bockholt*; who having taken service with the enemy, and being afterwards suspected by them, had caused him to be murdered, as they had done with all the rest of the *Dutch* in their service, who were slain in their way to the *Babia*.

The 7<sup>th</sup> of December it was resolved in council, to erect four companies of fusiliers, the same being found by experience to be more serviceable at this juncture, for which purpose the companies of colonel *Garfman*, captain *Jurian Remberger*, captain *Nicolas Nicolson*, and captain *John Taylor*, were pitched upon before all the rest.

In the same month of December, a certain *Portuguese*, *Gasper Goncalves*, was taken by the *Brasilians* in the island of *Itamarika*, sent on purpose to persuade the *Brasilians*, that the *Dutch* intended to deliver them up to the *Portuguese* for a certain sum of money, and they to retire with their effects into *Holland*, which caused no small commotion among the *Brasilians*, who began to give credit to the relation. And because *Goncalves* had spread this rumour abroad some time before the arrival of *Caspar Honnybousje* (who the 28<sup>th</sup> of August was appointed commander in chief of the *Brasilians* of *Itamarika* instead of *Lisby* taken prisoner by the enemy) he was hardly put to it how

Vol. II.

to remove this jealousy from among them. *Jacob Rabbi*, pursuant to his letters of the 11<sup>th</sup> of December, was about the same time preparing to enter 80 leagues further into the country towards the *Tapoyers*, to solicit their assistance: He at last came to *Oyeye*, son-in-law of king *Duwy*, who promised, in case those of *Siara* would send their troops to us, he would endeavour to raise as many of his vassals as he could; but king *Duwy* excused himself under pretence that many of his troops died by sickness in the *Sartan*.

The night before the 27<sup>th</sup> of December, the enemy had by means of a boat, fastened two puppets with fire-works to the ship called the *Swan*; but being discovered as soon as it took fire, was soon quenched without doing any damage to the vessel, which made the ships to be constantly upon their guard for the future.

The 30<sup>th</sup> of December two such puppets found by two soldiers in a small boat near the fort *Bruin*, were presented to the council. This boat, which questionless was sent on purpose to fasten these puppets to some ship or other, being discovered by the centinels, the men quitted the boat, leaving the said puppets behind them.

Mr. *de Lange*, by his letters dated the 30<sup>th</sup> of December from the fort *St. Margaret* in *Parayba*, advised, that a certain negro who had deserted the enemies quarter of *St. Andrew* had declared, that the enemy had built two large barks in order to transport 300 men in each, in order to attack *Peter Potty* commander of the *Brasilians* in his entrenchments. That *Kamaron* had been near three weeks in *Parayba*, the enemies troops consisting thereabouts in 16 companies; but that they had many sick among them for want of provisions, and that they had drawn all their forces out of *Rio Grande*.

The 6<sup>th</sup> of January 1646, *Peter Bas* one of the members of the great council, did by order from the said council, set sail with the two ships the *Lichtbart* and the *Receif* and a bark called the *Blue-Boar*, towards the captainships of *Parayba* and *Rio Grande*. His instructions were, to consult with Mr. *Linge* commander in chief in *Parayba*, and the rest of the officers there, how to put the intrenchments and other works of the *Brasilians* into a posture of defence. From thence he was to go to *Rio Grande*, there to take an exact account both of the real estates and chattels of such *Portuguese*, as by reason of their being engaged with the rebels, were forfeited to the company; he was also to use his endeavours to have those goods which were upon that account concealed or embezzled, restored for the benefit of the said company. He was also

ordered

1645.

The Portuguese endeavoured to fire the Dutch ships.

Mr. Bas's commission.

1645. ordered to act in all other respects, but especially in providing for the security of the captainship and the fort, as he found it most consistent with our present interest, and to exhort the inhabitants to remain steadfast in their duty, and not to neglect the cultivating of the grounds and breeding of cattle.

The 12<sup>th</sup> of January, *Peter Dunkerke* arrived from *Parayba*, where he had been a cruising before the *Receif* in the ship *Hamel*; he brought a letter from Mr. *Linge*, dated in the fort *St. Margaret*, the 11<sup>th</sup> of January, who sent also one Mr. *Steinbuisen* to the council, he having deserted the enemy when they began to kill the *Dutch* in their service. This *Steenbuisen* brought advice to the council, that *Kamaron* with 500 well-appointed soldiers, was marched out of *Parayba* into *Rio Grande* to be master of the field there; and consequently to keep our garrisons from being supplied with cattle and farinha from thence. He further added, that the enemy were in want of meat, oil, and other necessaries; but that the inhabitants flattered themselves, that for want of provisions, we should shortly be obliged to surrender our forts into the hands of the *Portuguese*. This being likewise confirmed by Mr. *Linge*'s letter dated the 10<sup>th</sup> of January, a council was called against the 13<sup>th</sup> of January, *Dirk Hamel*, and Mr. *Bullestrate* being present, both members of the great council, besides the assessor *Walbeck*, as likewise lieutenant colonel *Garfman*, Mr. *Raetsfeld*, Mr. *de Witt*, *Alrich*, *Volbergen*, and *Sams*, in order to deliberate concerning the present exigency, considering, that in case we should, by the enemies being masters of the field, be bereaved of the supplies of cattle and farinha of *Rio Grande*, at a juncture when *Itamarika* and *Parayba* are closely beset by their troops, it would be next to an impossibility to maintain ourselves in the possession of the *Dutch Brasil*, till the arrival of the expected succours from *Holland*. It was therefore taken into consideration, whether this captainship might be best secured by a powerful diversion, or by endeavouring to drive him from thence. But being sensible that the enemy were so powerful near the *Receif*, *Parayba*, and *Itamarika*, as not to be attack'd in any of these places, without exposing the whole *Dutch Brasil* to an imminent danger, it was resolved, that in order to attempt the relief of the captainship of *Rio Grande*, Mr. *Dortmund* should be ordered to send 60 soldiers under the command of captain *Welling*, and 100 *Brasilians*, in the barks sent him for that purpose, from *Itamarika* to *Rio Grande*: At the same time orders were dispatch to Mr. *Linge*, com-

An account of the enemies' design.

Consultations held hereupon.

Their resolution.

mander in the fort *St. Margaret* in *Parayba*, to send the same number of soldiers under lieutenant *Bresman*, and of *Brasilians* to *Rio Grande*, to join with the rest that were to rendezvous there. These forces consisting of 120 soldiers and 200 *Brasilians*, set sail the 19<sup>th</sup> of January for *Rio Grande*, and were thought sufficient to oppose the enemies designs on that side.

Mr. *Dortmont* and *William Lambartz*, by a letter dated the 15<sup>th</sup> of January, gave notice to the council, that they had sent a body of 60 soldiers and 100 *Brasilians* abroad, as far in the *Aldea* by *Oubus*, and from thence to the sugar-mill *Arraripe*, but did not meet with any enemies in that part of the country, tho' they had several guns discharged at them from among the woods; so that they return'd to *Itamarika* by the way of *Tapasima*.

Mr. *Linge* not long after sent advice by his letter dated the 22<sup>d</sup> of January, at the fort of *St. Margaret* in *Parayba* to the council, that *Peter Potty* with 150 *Brasilians* had attack'd the enemy 400 strong in the *Aldea* of *Magrebe*, and put them to flight with the loss of 20 killed, and many wounded, whereas they lost but one *Brasilian*.

The 29<sup>th</sup> of January it was resolved in council, to bring the ships the *Elias*, *Orange-Tree*, *Deventer*, *Omlandia* and the *Swan*, into the road of the *Receif*, to be ready upon all occasions, in case the enemy should again appear at sea.

Mr. *Bas*, pursuant to his letter from the castle of *Keulen* in *Rio Grande*, dated the 23<sup>d</sup> of January, could not, by reason of a tempest, land his forces at *Kunbao*, in order to join them with those under captain *Rbineburgb*; but was forced to land his forces the 14<sup>th</sup> and 15<sup>th</sup> near *Peringi*. In the mean while *Kamaron* having found means to break in through the *Matla*, had surprised many of the inhabitants in their *Fazendas*, and kill'd them without distinction of age or sex: He had since posted himself with his forces, consisting of 400 soldiers, as many *Brasilians*, and 80 *Tapoyars*, under the command of *Antonio Jacomo Besterro*, at a house of *Henry Hamme* in *Mompabou*, to cut off the provisions from us. Our forces consisting of about 1000 soldiers, *Brasilians* and *Tapoyars*, march'd the 23<sup>d</sup> of January to a house of *John Lefsun Navarre*, to attack the enemy, and to force them to quit the captainship of *Rio Grande*. Besides these *Jacob Rabbi* and the sons of king *Duwy*, were the 19<sup>th</sup> past, by the fort *Keulen*, at the head of 60 *Tapoyars*, and were daily follow'd by others, that came to our assistance. Mr. *Bas* solicited also some supplies of provisions, of which they stood in great want, there being above 1500 *Brasilians*

The Portuguese defeated.

Mr. Bas gives an account of his proceedings.

1643. Consultations held hereupon.

Their resolution.

Colonel Garfman sent to Rio Grande.

1643. *filins*, men, women and children, lodged under the castle. He desired also some money, ammunition, linen and silks to present to the *Brasilians* and *Tapoyers*; all which, together with some pieces of red-cloth, was sent him by the council.

According to this advice, it being much to be feared the enemy would scarce stand the brunt in *Rio Grande*, but retire into *Parayba*, it was taken into serious consideration the 29<sup>th</sup> of *January*, whether it would be advisable, in case the enemy should be forced by our troops, or voluntarily retreat into *Parayba*, to pursue them thither, and thereby endeavour the recovery likewise of that captainship: But considering that by reason of the weakness of our garrisons, we were not in a condition to send any further succours from the *Receif*, *Itamarika* or *Parayba*, without running a manifest hazard to our troops there; whereas, on the contrary, the enemies did not want opportunity to relieve theirs from the adjacent places of *Parayba*, and that we lived in daily hopes of succours from *Holland*, it was judged the best way, that the welfare of the whole *Dutch-Brasil* ought not to be put to the hazard by such an enterprise as this.

Accordingly orders were sent to Mr. *Bas* and the rest of the commanders of our troops there, to act with all imaginable caution, and rather than expose our men, in following the enemy into *Parayba*, to be contented with the recovery of the captainship of *Rio Grande*.

The 30<sup>th</sup> of *March*, colonel *Garfman* was by special order from the council sent a second time with some Troops to the captainship of *Rio Grande*, to inform himself, whether any troops of the enemy were posted in that captainship, and in what number; his instructions were, that so soon as he had received intelligence of the enemy, he should, with what forces he was able to bring together, endeavour to stop their progress. But if he found himself not strong enough to oppose them, he should send speedy advice thereof to the council, that they might send him speedy succours, and that he was to take all imaginable care not to engage the enemy, before the arrival of the said succours. But if he found the enemy already so strongly entrench'd as to be master of the country, without any hopes of forcing them from thence, the defence of the fort *Keulen* should be his chiefest care, as likewise of the *Brasilians*, with their wives and children, and since, in case the said fort of *Keulen* should be in danger of being attack'd by the enemy, it would be of ill consequence, to have these women and children enclosed within the fortifica-

tions, for fear of want of provisions, he was strictly ordered to transport them in time, to some place of security, such as *Siara*, or the like, where they might be able to subsist, and be secure against any attempt from the enemy. He was ordered also in his return to the *Receif*, to take *en passant* (if it could be done without inconvenience) a view of the fortifications of *Itamarika* and *Parayba*, in order to give an account of their condition to the council.

But to return to Mr. *Bas*: According to his letters dated the 30<sup>th</sup> of *January* from the fort *Keulen*, captain *Rhinebergh* had with his body made six several attacks upon the enemy, who was retired from *Mompabou* and *Kunbao* into a bog, without being able to force their entrenchments; we lost about 100 kill'd and wounded in this action, and retreated to the house of *John Leytan* with order to get some cattle, which was very scarce thereabouts, our forces feeding most upon fishes, which they caught by the help of two large nets; 28 of our wounded men were brought to the *Receif*, with advice that notwithstanding this unsuccessful attack on our side, the enemy were retreated into *Parayba*. Mr. *Bas* also solicited some fresh supplies of men and Ammunition, in order to pursue them into *Parayba*, but the resolution upon this head was defer'd 'till they should hear further from Mr. *Bas*. The 7<sup>th</sup> of *February* it was resolved by the council with the approbation of admiral *Liebtart* to equip the *Hollandia* and the *Swan* together with the yachts, the *Flight*, the *Hamel*, *Bullestrate* and *Lichtbart* for cruising. By letters from Mr. *Linge*, dated the 11<sup>th</sup> of *February* at the fort *Margaret* in *Parayba*, the council was advis'd, how that, according to the deposition of a negro deserter, *Kamaron* was come with all his troops into the city of *Parayba*, with an intention to attack our forts on that side; an answer, with what was thought necessary for this present purpose, was immediately sent back in a bark by the council. By another bark sent by Mr. *Bas* from *Rio Grande*, they were advertis'd, that he lay still encamped with his troops near the house of *John Leytan*, where with much ado he could get provisions for them, the enemy being still posted at *Momguappe*, and guarding all the avenues into the country; that he had sent several spies abroad, to get intelligence concerning the present posture of the enemy. The 17<sup>th</sup> of *February* the ship the *Swan* and the yacht call'd *Bullestrate* were order'd to go out a cruising; the 18<sup>th</sup> the yacht the *Flight*, and the 20<sup>th</sup> the ship *Hollandia* set sail for the same purpose. The ship the *Overyssel* was also

1645.

Their retreat.

Colonel Garfman sent to Rio Grande.

Advice from Mr. Linge.

1645.

1645. also ordered to go out, to serve for a spie ship on the coast of Parayba.

The 21<sup>st</sup> of February the council received a letter from Mr. de Linge, dated the 18<sup>th</sup>, in the fort of St. Margaret, intimating that he had heard nothing since of the enemy. Yet that he wish'd the forces he had sent to Rio grande might be returned with all convenient speed, to make use of them for the defence of his forts, in case of an attack. The 24<sup>th</sup> of February a party under command of captain Killion Taylor and captain Nicholas Nicholson, were sent abroad towards the island of the Barette to get some prisoners, but they return'd the 20<sup>th</sup> to the Receif, having met with no body except with a man, at a considerable distance. Another party which had taken their way towards Olinda and Bracco de St. Jago, but with the same success, the enemy having only shewn himself at a distance, as they were returning to the fort Bruin. The 27<sup>th</sup> of February the enemy appeared with a strong body in the Salinas, but being saluted by some cannon-shot from the fort Bruin, retired without attempting any thing.

In the mean while, according to Mr. Linge's letter, from the 2<sup>d</sup> of March, three barks with soldiers were arrived in Parayba from Rio Grande, so that the rest, under the command of Mr. Bas, being 500 in number, might be hourly expected at the Receif. He further advised, that he had seen no enemy of late, but being informed that a considerable body lay encamp'd in a valley near the village of Magarebbe, he had ordered thither 120 soldiers, and 100 *Brasilians*, to beat up their Quarters, and to get some prisoners. In effect the 4<sup>th</sup> of March, he, with his troops consisting in 500 Men, arrived from Rio Grande at the Receif, and the 5<sup>th</sup> of March gave the council an account of his expedition.

The 9<sup>th</sup> of March in the night, the enemy appeared in three bodies near the fort Prince William, and gave us several volleys of small shot, but being answered with our cannon retired immediately. The same day a party of 50 men were sent abroad under lieutenant Mos to get intelligence; being met by two companies of the enemy, a sharp encounter ensued, our forces retiring without any considerable loss, under the fort Wardenburgh, and the enemy retreated at the discharge of some of our cannon. By letters from Mr. Linge, dated the 8<sup>th</sup> of March at fort St. Margaret in Parayba, the council received the unwelcome news that the enemy in Rio Grande had by a pretended flight drawn the 5<sup>th</sup> of March lieutenant John de Vael with 48 soldiers, who were too eager in the pursuit of them, into an ambush, where they had kill'd 30 of

them, tho', according to the report of some deserters that were present at the engagement, not without considerable loss also on their side; *Kamaron*, *Andrew Vidal* and some other *Portuguese* officers of note were also present. About the same time 15 *Brasilians* surpris'd five men, six women and eight children, in an entrenchment seven leagues above *Iguaracu*, called *Papeku*.

In the mean while the *Tapoyers*, who according to their custom, come once a year, about midsummer, from among the mountains, some hundreds strong, into the captainship of Rio Grande, were, after they had carried away all the horses and mares they could light on, retired to the hills; a thing very fortunate for us, for without it our garrisons would not have been able to subsist there. Provisions growing every day scarcer in the Receif, it was agreed the 6<sup>th</sup> of March by the council, to send the *Brasilians* raised in Rio Grande with a company of fusileers to *Itamarika*, to ease our magazines of that burthen, whilst they might provide themselves with *farinha* roots in that island. Much about the same time the two majors *Bayer* and *Pijoor*, appear'd before the council, intimating, that being informed that the citizens began to murmur at their staying at home, pretending that they were sufficient to guard the forts; for which purpose, as it was reported admiral *Lichbart* had offered 300 men, they were come on purpose to offer their service, and were ready to take the field with those few forces they had left in the garrison; tho' they at the same time protested, that they were of the same opinion, which had been approved some days before, to wit, that this undertaking, by reason of their small number, would be full of danger, and yet not answer the end of bringing provisions into the Receif. Admiral *Lichbart* being thereupon ask'd whether he had made any such offer, he declared not to have spoken any thing like it, his ships being so ill mann'd, that he could spare no men for any other service.

The night before the 13<sup>th</sup> of March, the enemy appear'd both on the other side of the river and the dike leading to the fort Bruin, discharging their musquets and blunderbusses at our sentinels, but upon the first salute from the cannon of the fort retired. The same they did near the fort of *Affagado*. The same evening betwixt nine and ten a clock they made an attack upon the wooden fort, built betwixt the *Affagados* and the *Quinquangular-Fort*, for the defence of the plain, which they continued 'till one a clock, cutting down some palisades, and bringing great store of dry reeds, in order to set it on fire, but in vain,

being

Parties sent abroad without success.

1645.

Proposit. ons about the taking of the field.

Great store of *farinha* roots brought to *Itamarika*.

Ships sent out a cruising.

The *Portuguese* raised a wooden fort near the Receif.

1645. being forced to retreat with the loss of some of their Men; on our side two were kill'd, and four or five wounded, among the last was lieutenant *Casper Ferdinand van Grol*, who received two dangerous wounds. The next morning the broken palisadoes were repaired, and another row ordered to be set beyond the first, and footangles to be laid betwixt both. The 17<sup>th</sup> of March the bark call'd the *Parayba* coming from *Siara*, brought advice, that the *Brasilians* were gone from *Siara* to *Kameji*, having refused to return to *Rio Grande*, for fear they should be call'd to a severe account there for the murder of several inhabitants, committed by them before.

By the same bark Mr. *Linge* sent advice from the 14<sup>th</sup> of March, that the enemy had appeared of late in a considerable body near the northern fort, but was retired now, but whether to *Rio Grande* or *St. Andre*, he was not able to tell. They had spoil'd all the *farinba*-root fields in the *Aldeas* *Magarebbe*, and thereabouts; so that the *Brasilians* being for the future to be furnished with provisions out of the magazines, he desired a supply of wine and oil: Immediately advice hereof was sent to *Dorimund* commander in chief of *Itamarika*, and some ammunition, besides 1000 gilders in ready money. The same sum was transmitted to Mr. *Linge* in *Parayba*, and a barrel with oatmeal, a pipe of wine, a hog-shead with oil, and another fill'd with dry peas, besides good store of ammunition. He was also ordered to send the *Brasilians* back to *Rio Grande* for defence of that captainship, and to get intelligence whether the enemy had directed his march thither, in order to oppose his designs.

Good store of *farinba* roots brought to *Itamarika*.

Ship sent out a cruising.

In the mean while admiral *Lichtbart* (pursuant to his letter of the 21<sup>st</sup> of March to the council) had embark'd some soldiers and *Brasilians* in *Itamarika*, and taking his course to the north-entrance of the river, was got up as far as to the isle of *Tapevo*, from whence they had brought back a great quantity of *farinba* roots, for the use of the *Brasilians* in *Itamarika*, and of the magazines there.

The 30<sup>th</sup> of March it was resolved, with the approbation of admiral *Lichtbart*, to send the following ships a cruising before the *Babia*; the *Ulyssingen*, the *Ter Veer*, and the yachts, the *Greyhound*, the *Heemfede*, *Sprew* and *Bullestrate*; and on the 6<sup>th</sup> of April the *Swan*, the *Zouteland*, the *Flight*, and the yacht the *Lichtbart*, were ordered to go a cruising before the *Cape of St. Austin*, and set sail the 10<sup>th</sup> of April accordingly.

The 31<sup>st</sup> letters were brought to the council, dated the 25<sup>th</sup> of March in *Rio Grande*, intimating, that *Paulo de Kunba*

VOL. II.

and *Kamaron* were entred *Kunba* with 800 men, among whom were 300 musqueteers, to carry away the cattle from thence to *Parayba*.

But, according to colonel *Garfman*'s letters to the council, upon his arrival, which was the 4<sup>th</sup> of April, the enemy were already retired out of *Rio Grande*, without undertaking any thing against our people, who consisting only in 400 soldiers and 300 *Brasilians* lay encamp'd near the house of *John Leston*, yet they carried off some cattle.

About the same time they received letters from Mr. *Linge*, that the enemy had made several false alarms near the forts, without attempting any thing. And in effect in June, they did not appear any more thereabouts.

In the year 1646, the 5<sup>th</sup> of April in the night, *Jacob Rabbi* was at the instigation of lieutenant colonel *Garfman*, near *Potosi*, about three leagues distant from the cattle of the same name, villainously shot with two bullets, as he was going home from one *John Miller*'s house, where he had been entertained that evening in company with colonel *Garfman*. *Rabbi* had a considerable time before (as he had declared to his friends) suspected the treachery of *Garfman*, and was for that reason just upon his departure out of *Rio Grande*, in order to shelter himself among the *Tapoyers*. The council repented this villainy to the highest degree, since, considering that this *Jacob Rabbi* was in great esteem among the *Tapoyers*, and his wife a *Brasilian*, it was to be feared, that this would exasperate both the *Tapoyers* and *Brasilians* against us. So that *Garfman* returning the 19<sup>th</sup> of March to the *Receif*, after he had given an account of his expedition to the council, was by their particular order, the 24<sup>th</sup> of March, taken into custody, and sent on board the *Hollandia*, major *Bayert* being ordered in the mean time to supply his place. This *Jacob Rabbi* a native of *Germany*, had been employ'd by authority of the states general, his highness the prince of *Orange*, and the company, to engage and keep the *Tapoyers* in the interest of our government, in which commission he had acquitted himself so well, that he brought these *Tapoyers* several times, out of the mountains (their habitations) to our assistance. His dwelling-place was in the fort *Keulen* in *Rio Grande*, where he had married a *Brasilian* woman. *Casper Honybousse*, commander of the *Brasilians* in *Itamarika*, being slain in the last engagement in that island, Mr. *Vincent van Drillenbergh*, was, at their request, constituted their commander by the council.

The Port- tuguese a- tack a second fort near the Receif.

1646. The 17<sup>th</sup> of April, some papers were delivered to the council, which had been dispersed by the enemy, to debase our soldiery; in return of which, they sent abroad their summons, upbraiding such of their subjects as were in the enemy's service, with treachery, and exhorting them to return to their duty. It was also agreed to publish a copy of a letter delivered by the Portuguese ambassador at the Hague to the states general from the king his master; with the answer of the states to the said letter: For since the king of Portugal in this letter did disown the war, and the proceeding of Antonio Telles da Silva, and his sending of his troops into the Dutch-Brazil, they did not question but by this means to open the eyes of the Portuguese inhabitants, not to flatter themselves with vain hopes of assistance from Portugal; besides, that we were in hopes thereby to sow the seeds of mistrust betwixt them and the Portuguese commanders from the Bahia.

The 24<sup>th</sup> of April, two Portuguese companies commanded by captain Lawrence Kerner and Peter Kavakanti, consisting of about 40 men each, marched from the Vargea and the city of Olinda to Iguarassu.

They were headed by Vidal and Hoogstrate in person, who having got intelligence that admiral Lichtbart and John Nicuhoff were gone to Itamarika, to get some farinha roots. The 25<sup>th</sup> of April, as they were marching from Iguarassu, a certain German chirurgeon, named Christopher Mars, who was formerly taken prisoner by them, happening to stay somewhat behind, whilst he was piling, was surprized by one of our parties near Tapasino. Upon examination by Mr. Walbeck, he declared, that not long ago there were nine companies of the enemies forces quarter'd in the Baretta, the city of Olinda, and in the mills of Bierboom and Brito; each company consisting of betwixt 40 or 50 men. That there were five companies more, much of the same strength, posted in the Salinas, and Henry Dias with 200 mullets and negroes in Gaspar Cox's house, but they had then no forces in the Vargea.

That after Nicholas Nicholson was come over to us with his troops, Martin Soares Moreno had caused 260 Dutch, both soldiers and inhabitants, (among whom were six women and two children) to be killed by a company of the country militia, in the woods of Tabatinga, betwixt Sibero and Doriba, in their way to the Bahia, besides those killed by his order in other places, amounting in all to 300.

By this time there began to be great scarcity of meat in the Recife, notwithstanding which, the garrisons in the outworks, as

well as the *Brasilians* in Itamarika, with 1646. their wives and children, were to be supplied from thence; and the farinha roots being either all taken up before by our own people, or else destroy'd by the enemy, in the island Itamarika: To supply this pressing necessity, it was resolved by the great council, to send a detachment of 400 men in barks to St. Lawrence de Praja or Tujukapa, to fetch mandinka or farinha roots from thence. This detachment was composed out of these following troops.

Out of captain Nicholas Nicholson's company 9 men.

From the Zynguangular-fort 25.

From the Affogados 25.

Out of the company of captain William Lambartz 50.

Volunteers from Itamarika 30.

*Brasilians* 150.

The 29<sup>th</sup> of April the council was, by letters from Itamarika, advertised, that our forces being sent abroad to fetch some farinha, had chased the enemy out of two or three entrenchments; but they retiring into another, surrounded with a deep ditch, they were there also with more courage than conduct attack'd by our troops, being forced to retire with the loss of 16 kill'd and 26 wounded, among whom was captain William Lambartz: The enemy had likewise not a few kill'd on their side. Mr. Dortmund, commander in chief of Itamarika, therefore desiring to be supplied with meal, his magazines being quite exhausted, the council sent thither the first of May, 20 barrels with meal, two with oatmeal, two with dry pease, besides a pipe of wine and brandy, and 1000 guilders in money, for the use of the *Brasilians*.

The 3<sup>d</sup> of May the council received advice by a letter dated the 2<sup>d</sup> of May from Mr. Dortmund, that the enemy had carried away ten Negroes, four belonging to the company, the rest to one Mr. Sculin, and four other men from Itamarika; and that the *Brasilians* there had been so far debauched by their intregues, that they retired into a wood, and being twice summoned to rejoin our troops, had refused so to do. That at last, Mr. Apirissius, (Minister of the *Brasilians*) having been sent to reduce them to their duty, either by persuasions or threats, his arguments were so prevailing, that they return'd quietly, alledging for their excuse, that they were forced to fly thither for want of subsistence. Hereupon Dortmund desired fresh supplies for his magazines, that a person of authority might be sent thither, and that another company might be put in place of that of captain Vosterman, his men being ready to revolt.

Mr. Bulle-  
strate sent  
to Itamar-  
rika.

To remove all these obstacles, it was resolved immediately to dispatch thither Mr. Bullestrate, a member of the great council, who was to agree with certain private persons, to provide our garrisons with fish, and to act in every thing there; as he should find it most expedient for the service of the company.

Accordingly Mr. Bullestrate set sail the 4<sup>th</sup> of May, in the yacht the *Greyhound*, and arrived the same day in the afternoon in Itamarika, where having executed his commission, he return'd the 10<sup>th</sup> of May to the *Recife*, and gave the following account to the council: That he had taken a view of the city of *Sboppe*, and the fort *Orange*, both which he had ordered to be strengthened; as also, to fortify the old brick-house, formerly the *Stadthouse*, with pallisades, against any sudden attempt; that he having call'd before him all the commanders of the *Brasilians*, had represented to them that we were in daily expectation of a powerful succour from *Holland*, exhorting them to remain steadfast in their duty, and to keep their soldiers under the best discipline they could; he had also presented their commander with cloth for a suit of clothes, and the rest with some wine and money, which they very thankfully accepted: He had *En Passant* taken a view of the plantations of *Conrad Pauli*, where he had found about 160 cocoa-trees cut down by the *Brasilians*, being forced by famine to feed upon the fruit; the like they had done in several other places; that he had endeavour'd to treat with several private persons for a certain quantity of fish to be delivered at the *Recife*; but could meet with none that would accept his offers; they alledging, that most of their negroes being either run away or taken by the enemy, they did catch no more fish but what they could readily sell in the island, without the charge of salt and transportation; that he had likewise propos'd to the commander in chief of the *Brasilians*, to give them for the future money instead of meal; and that they were to be furnished with three nets to catch fish for their own use; that the commander promis'd to propose it to the rest, and gave him some hopes that they would accept of the said offer.

To supply the present want of provisions, which began to be scarcer and scarcer every day in Itamarika, Parayba, Rio Grande, and the *Recife*, by reason that the expected supplies from *Holland* were not as yet arrived, and we were closely block'd up by land; it was thought fit to give all imaginable encouragement to the fishing trade; for which purpose the two members of the great council, Mr. Hamel and Mr. Bas, or-

dered the 7<sup>th</sup> of May, to buy up as much yarn as possible could be got to make fishing nets of, which afterwards stood us in good stead.

A certain *Portuguese*, who had committed manslaughter in *Angola*, and was fled from thence to the *Recife*, having accused John Vieira d'Alagoas, he was by order from the council taken into custody.

This *Portuguese* declared, that the said Vieira had delivered to him a certain piece of parchment, written in characters, and a box, wherein were several other papers, in order to carry them to the enemy, which parchment and box he produced in the presence of the members of the council. John Vieira denying the matter, was put to the rack, but continued resolute in his denial; till at last, the key of these characters being found among his papers, and a certain Jew having deciphered these letters, it appear'd, that he had given an account of the whole posture of our affairs to the enemy, with directions how to make themselves masters of the *Recife*; so that finding himself discovered, he confess'd that he had written and delivered these cyphered papers to the *Portuguese*, and was executed the 29<sup>th</sup> of May.

The magazines being by this time almost exhausted, there being scarce provisions left for a few weeks, it was propos'd by the council to the majors, *Boyer* and *Piskoor*, that considering it was not advisable to exasperate the soldiery at this juncture, by retrenching their allowance of bread and other eatables, whether instead of a pound of meat, they might not be prevail'd upon to take six-pence, by this means to preserve that small store of flesh they had left, which these two majors undertook to propose to the soldiers, not without hopes of succeeding in their project, and that nobody might be excepted from bearing his share in the publick calamity, it was ordered that the loaves which used before to weigh a pound and half, should be reduced to one pound weight, and that each citizen and others depending on the company, nay the members of the great council themselves, should have an allowance only of two loaves per week; the same was to be given to all seamen, captains, lieutenants and ensigns; but the rest, from the serjeant to the common soldier, should have three pounds of bread allow'd them per week.

Mr. Linge advis'd from the 1<sup>st</sup> of May, out of *Paraiba*, that the enemy had not attempted any thing against the forts, and that a party of *Brasilians* was gone abroad towards *Tapoa*, in hopes to take some prisoners. Much about the same time the council received advice, that colonel Garf-

To

1646. *man*, without orders from the council, had endeavoured by some presents, to draw the *Tapoyers* into *Rio Grande*, under pretence of keeping them at hand, to enter into a confederacy with the new members of the great council that were expected from *Holland*.

The council being not a little surprized at this undertaking, since by the coming of the *Tapoyers* into that captainship, they should be disappointed of a considerable part of those supplies they received from thence; they sent word to *Rudolph Barro* to leave no stone unturned to draw the *Tapoyers* by fair means back to their habitations, but that if they would send some of their commanders to the *Receif*, all imaginable satisfaction should be given them concerning the murder of *Jacob Rabbi*; and the more to engage *Barro* to do his utmost, a present of wine, brandy, and some toys, was ordered to be sent him. For as the case then stood, it was absolutely necessary for us to remain masters of *Rio Grande*, till the arrival of the succours from *Holland*; the vast numbers of *Brasilians* that were fled to *Itamarika*, having consumed all sorts of provisions there to that degree, that that island could not only not send any supplies to the *Receif*, but most of the women and children of the *Brasilians* must be supplied out of the magazines there; so that *Rio Grande* was the only place left from whence they received a considerable quantity of *Farinha* and cattle, which in some measure abated the scarcity of provisions in the *Receif*, and by the prudent conduct of the council, was the chief means that the place continued in tolerable good health till the arrival of the succours, which without it, it would in all humane probability have been impossible to be done; and no question but this captainship might for a considerable time after, have furnished the garrisons to the south with necessities, had it not been for the following accident.

The expected succours from *Holland* being detained by the winter season and contrary winds, the *Brasilians* of *Gojana*, who with their wives and children had sheltered themselves in *Itamarika*, were reduced to the greatest extremity for want of food; for after they had consumed all what the island could afford for their subsistence, and all the avenues by land being block'd up by the enemy, they had no other supplies but what they received from our magazines: These being now exhausted to such a degree, that each citizen had but one pound of bread allowed him *per week* (which however at that rate would not hold out above fourteen days longer) the council was under an absolute necessity to have it proposed to the *Brasilians*, to retire with

their wives and children (in all about 1200) to *Rio Grande*, where they might subsist some time upon what the country afforded. Accordingly they writ to Mr. *Dortmund* the 1<sup>st</sup> of May, and sent Mr. *Walbeck* thither in person, to persuade the *Brasilians* to send at least 500 women and children, with a certain number of their men, to *Siara* and *Rio Grande*, there being at that time in all near 1500 *Brasilians*, men, women and children in that island, among whom were only 500 fit to bear arms, under the command of *Caspar Honybouse*, who had each scarce a pound of bread allow'd them *per week*.

Provisions, as I told you before, growing daily scarcer and scarcer, by reason the succours from *Holland* were detained beyond all expectation, by contrary winds; a general council was call'd, where the three numbers of the great council Mr. *Hamel*, Mr. *Bullestrate* and Mr. *Bas*, being present, as likewise admiral *Liechbart*, and the two majors *Beyert* and *Pijstor*, the following points were taken into debate.

First of all, the sending of the *Brasilians* from *Itamarika* to *Rio Grande*, being look'd upon as unavoidable, immediate orders were given to get the necessary transport vessels ready for that purpose. It was also taken into consideration, whether it were not feasible to gather a sufficient force out of the forts, who in conjunction with the *Brasilians*, might attack some place or other, from whence to provide ourselves with *Farinha*; but to this it was objected by the majors *Beyert* and *Pijstor*, that the garrisons of the forts could not be weakened by any detachment, without running a great hazard; besides that it was a hard matter to pitch upon any place where there was any store of *Farinha*, the enemy having either consumed, spoiled or carried it away before; so that we must expose our men to an apparent danger, without a sure prospect of interest; for, supposing we should be successful, the quantity that might be got, would not be sufficient to maintain our garrisons for any considerable time. It was however agreed to take an exact account of all the garrisons, to see whether upon an occasion something might be undertaken for the service of the state. Accordingly these two majors, *Beyert* and *Pijstor*, having presented a list of these forces the next day to the council, it was concluded that no troops could be spared out of the forts, except it were out of the *Affagados*, but they were but few in number. At the same time it was resolved to send captain *Niger* with his company of *Brasilians* to *Rio Grande*, and the *Omlandia* and *Greybound* yacht were ordered forthwith to sail

Further debates about the attacking of the enemy.

The council of *Rio Grande* to the Dutch.

1646. *faü* to *Iamarika*, to transport the *Brasilians* to *Rio Grande*.

*Further details about the attacking of the enemy.*

The 30<sup>th</sup> of May the council, the admiral, and two majors, entered into a second debate, whether it were possible to attack the enemy, and in what place: Against which it was alledged, that their chiefest force was at present in the *Vergea*; but supposing it was not, no *Farinba* was to be got there, because they were supply'd with it themselves from far distant places. That the *Farinba* fields nearest to the *Receif* were about *St. Lawrence*, at least five leagues from thence; that the nearest *Farinba* fields to the south were about *St. Antonio* and *Moribeka*, where by reason of the strength of the enemy, and the great distance from us, there was no probability of encompassing our design; and that the *Farinba* fields to the north were likewise at such a distance from the sea-side, as could not in any likelihood answer our expectation. It was further taken into consideration, whether some forces might not be spared in *Iamarika*, but it was carried in the negative, because since the *Brasilians* were ready to depart for *Rio Grande*, it was not advisable to expose the rest of our troops there to a hazard. After serious deliberation, what forces possibly could be raised out of the forts, (their places being in the mean while to be supplied by the inhabitants) it was found that the *Affugados* could furnish about 70 or 80 men, the quinquangular fort, and *Maurice's* town the same number, and that of *St. Antonio Vaez* about 50. But, considering that the city militia of the *Receif* consisted only of six companies of 70, or at the most 80 men each, and that they were obliged to be upon the guard every night there (the place being without a garrison) if a considerable number of them should be employed in the forts, this must needs expose the capital place, which the enemy chiefly aimed at, to an imminent danger. The seamen being not above 250 in all, could likewise not be employed in that service, unless we could leave our ships quite unmann'd and useless. So that after many arguments on both sides, it was agreed to chuse the securest way, and according to the orders of the council of XIX in *Holland*, to expect the succours from thence with patience, and in the mean while to provide for the security of our forts.

The same day the council received letters from Mr. *Walbeck*, that some of the *Brasilians* of *Iamarika* had deserted, a rumour being spread among them, that we intended to leave them to the mercy of the *Portuguese*, which had put all the rest into a great consternation, but that Mr. *Dor-*

VOL. II.

*mund* had convinced them to the contrary. Mr. *Walbeck* and *Dortmund* had in the mean while represented to the *Brasilians*, that they being many in number, and consequently very ill provided for at this juncture, whether it were not best for them to go for some time to *Rio Grande*. They were at first averse to his proposals, for fear of being deserted by us, nevertheless the urgent necessity of providing for their sustenance, and to shew their compliance with the governments orders, were so reconciled with them, as to resolve to go to *Rio Grande*, provided they might be furnished with convenient transport-ships, provisions, and some ammunition for their defence, and fifty men of regular troops. Mr. *Dortmund* having again solicited for provisions, some were sent (sufficient for fourteen days) immediately, with some gunpowder, bullets, and other ammunition.

Accordingly above 1200 *Brasilians*, most women and children, whose husbands and fathers had been slain in our service, embarked aboard the *Omlandia* and some yachts, a pound of salt-cod fish being allow'd to each for the whole voyage without bread. At their arrival in *Rio Grande* they were so emaciated by famine, that they appear'd more like dead carcases than living bodies, and laid hold of every thing they could meet with to satisfy their greedy stomachs, so that in a little time they consumed all the *Farinba* that was left there.

Mr. *Linge*, by his letters from the 25<sup>th</sup> of June sent advice to the council, that there appear'd no enemy at that time in *Parayba*, but that ten *Tapoyers*, vassals of king *John Duiwy*, being come into *Rio Grande*, had shewn themselves extremely dissatisfied at the murder of *Jacob Rabbi*, whereupon it was resolved to reconcile their king to our interest by the following presents:

200 guilders in ready money.  
1000 Ells of *Osnabrugh* linnen cloth.  
100 gallons of *Spanish* wine.  
Two casks of brandy.  
40 gallons of oil, and a barrel with powdered beef.

The *Brasilians* in garrison in the fort, the *Bruin*, the *Quinquanguar*, and some other forts, being dissatisfied at their being detained there for eight months last past, petitioned the council the 12<sup>th</sup> of June, to be sent back into *Rio Grande*.

The opinion of the two majors being ask'd thereupon, they advised, that considering they did no extraordinary service there they might well be spared; so that it was resolved the 14<sup>th</sup> of June in council, to pay them their arrears, and to send them

*Presents sent to king John Duiwy.*

*The Brasilians depart from the forts near the Receif.*

1646. back to *Parayba* and *Rio Grande*, to inhabit their villages as before.

In the *Quinquangular* fort, the company of *Immanuel Barros* was order'd to keep guard instead of the *Brasilians*, who were commanded to depart the 20<sup>th</sup> of *June*. The 11<sup>th</sup>, 12<sup>th</sup>, 13<sup>th</sup> and 14<sup>th</sup> of *June*, the enemy shot in the night-time very fiercely against the fort *de Affagados*, a redoubt call'd *Kirk*, and the house *Boavista*.

The 15<sup>th</sup> of *June* it was propos'd to the council by admiral *Lichtbart*, and the two majors, *Beyert* and *Pistoor*, to beat up the enemies quarters in the house of *Immanuel Kavalkanti*, and in the *Baretta*, with the following troops.

The company of captain *Killian Taylor*, 40 men.

The company of captain *Nicholas Nicolson*, of 70 men, which were to be joined by captain *de Niger* with 30 men out of the fort *Frederick*, with lieutenant *Mos* from the fort *Ernestus* with 10 men, and lieutenant *Katnar* from the fort *Prince William* with 20 men.

In all 200 men.

A project  
to beat up  
the enemies  
quarters.

About 100 volunteers were supposed to be raised from among the citizens, under the colonel *Walbeck*, and *Immanuel Baros* with his Negroes, consisting in 50 men, these joined with the other 200, would make up a body of 350 men, to be commanded in chief by major *Pistoor*, and to be conducted by sea by admiral *Lichtbart* to their landing place, viz. the regular troops to the south of the *Baretta*, and the Negroes upon the island on the north-side, from whence they might break thro' the marshes to the *Affagados*, and so further to the house cross the river, where they were to make a false attack, whilst the troops landed at the *Baretta*, assaulted them from before; the admiral, with his transport vessels, to lay ready all this while to receive them, and to secure their retreat upon all occasions. This proposition being approved of by the council, partly to animate our soldiers, partly to get at least some provisions for the sick, it was resolv'd to be put in execution the next day, but the wind proving contrary, and afterwards the tides being unseasonable for the convenient landing of our men, this project was laid aside, especially when instead of 100 volunteers, scarce 25 offered themselves for this service, notwithstanding the council gave them all imaginable encouragement, by promising them to receive the same treatment as the other servants of the company had, in case they should be wounded or come to some other misfortune.

Is laid  
aside.

In the mean while, the enemy having been informed by some of our deserters,

that by the departure of the *Brasilians* from *Itamarika*, the garrisons there were much weakened, they thought fit to lay hold of this opportunity, to land such a force there, as should be beyond our power to drive from thence. The 15<sup>th</sup> of *June*, with the break of day they surprized our spy ship there, call'd the *Sprew*, with several barks and boats at the entrance call'd *Pasfoos*, (*Markers*) they got three prisoners, the rest escaping with the loss of two of their comrades kill'd.

The ship before *Tapasima* was set on fire by our own people, leaving the galliot, that lay hard by, to the enemy, after they had taken out all her men, who went aboard the yacht call'd the *Golden Doe*, lying before the north entrance. They landed with about 2000 men in chalops and other transport vessels, and *Andrew Vidal* and *John Ferdinand Vieira*, writ the same night the following letter to Mr. *Dortmund*, commander in chief of *Itamarika*, which they sent by a boy they had taken prisoner in the *Sprew*.

#### Their letter to Mr. DORTMUND.

Most honourable and most brave,

YOU are doubtless not unacquainted with the resolution of the inhabitants of this country to retrieve their former liberty; to effect which they neither want power nor any other means; but their chief aim being to encompass their design without effusion of blood, we thought fit to let you know that we are ready to attack you in this island with all our forces, unless you will prevent it by a treaty. For being sensible that you are past'd all hopes of relief, we were willing to advise you to treat with us, according to the custom of war, used in such cases; that, in case hereafter things should fall out contrary to your expectation by the fury of the conquering sword, you may not lay the fault thereof at our doors; for which reason it is, that we offer to you and the rest of the commanders there, all their arrears due to them from the company. Whereupon we expect your answer to-morrow.

From our head quarter,  
June 25, 1646. *Andrew Vidal de Negreiros*,  
*John Ferdinand Vieira*.

The 17<sup>th</sup> of *June* the council received advice from Mr. *Dortmund* of their landing, desiring prompt succours, without which he would not be in a condition to maintain the island against them. It was therefore taken into debate, whether it were possible for us to bring together such a force, as without much hazard might be able to force the enemy from thence, but 'twas carried in the negative.

Consultations about the relief of Iamama.

For it was alledged, that without manifest danger, not above 200 foldiers could be taken out of the forts of the *Receif*, which number was not sufficient to attack the enemy, who had already entrench'd himself there, with hopes of success: And, considering that these forces must be transported thither by sea, we wanted ships (there being at that time not above two barks at the *Receif*) both to convey them thither, and to cut off the communication with the continent to the enemy. Besides, that at least fourteen days provisions were required for this expedition, in case the enemy should stand his ground, which at this juncture was not to be done, unless we would leave the magazines of the *Receif* quite empty; there being then no possibility of attempting its relief, the next thing under consideration was, whether the entrenchments on the hill might be defended or not? Against the maintaining of it was objected; that without fresh supplies of provisions this fort could not hold out a week, especially since the enemy, by cutting off the pipes of the spring that furnished them with fresh water, would soon put them under a necessity of coming to surrender; when it was evident, that they might post themselves betwixt the fort of *Orange* and this hill, and consequently prevent their receiving any supplies from thence.

Whether the fort on the hill was to be defended.

Besides that the hill being of a considerable compass, was the more difficult to be mention'd by our forces, the fort itself being irregular, and but slightly fortified on that side, especially where the old church-wall, making up part of the courtain, would not be proof against the enemies cannon, and consequently expose the whole fort, with the garrison, to the mercy of the enemy: So that it being beyond all dispute in the enemies power to cut off all communication with the fort *Orange*, it was unanimously resolved and ordered, to leave the said entrenchments, and to retire with the garrison, and what provisions and ammunition they had, into the fort *Orange*, before their retreat was stop't by the enemies troops; it being past all doubt, that in case they could maintain themselves in that fort, they could at all times, if they were masters of the field, recover the hill and the whole island.

Some gunners turn'd traitors.

The council were the more forward in coming to this resolution, because they had received certain information, that the enemy, who knew the importance of the fort *Orange*, had gain'd some of the gunners and volunteers of the fort by presents, who had engaged to assign them a place where it was easiest to be attack'd, whereabouts they were to charge the cannon with gun-

powder only, to facilitate their attack: Two of the gunners were hang'd the 23<sup>d</sup> of *June* for this treachery, the rest made their escape to the enemy. For the better preservation therefore of this fort, our people left the entrenchments upon the hill the 21<sup>st</sup> of *June*, where the enemy posted a strong body of their troops immediately after. The council likewise ordered the yacht the *Heemfede*, to cruise in conjunction with the *Golden Doe*, before the north entrance of the island, to keep open free communication for us with our garrison, and to prevent the enemy from receiving any succours that way; and at the same time some provisions were sent thither for the use of the garrison.

But whilst things were thus transacting with various fortune, tho' for the most part to our disadvantage, and the so long expected succours from *Holland* not arriving, the want of necessaries encreased more and more every day in the *Receif*, to such a degree, that whatever was found fit for sustenance, either in the publick magazines, or with private persons, was apply'd to the common use; which however amounting to no more than one pound of bread a week for each single person, many died for hunger; their legs beginning to swell first, which was the forerunner of certain death: Cats and dogs, of which we had great quantities, were look'd upon as dainties at that time; and you might see the Negroes digging the half-rotten bones of dead horses out of the ground, and to gnaw them with incredible eagerness; neither was the want of fresh water less insupportable, by reason of the heat of the climate, and the constant use of salt meats, all springs that were dug being brackish. The poor slaves, who had the least share of what was left, look'd so ghastly and wild with their eyes and jaws sunk, as appear'd terrible to the most undaunted men. At last (notwithstanding all the care taken by the council) things came to that pass, that the allowance of one pound of bread per week was fain to be taken away from the inhabitants, and allotted the soldiers; who, by the enticements of the *Portuguese* beginning to desert apace, had two pound of bread allow'd them, as long as there was any left; but when all was spent, and no remedy was to be found against this lingering evil, it was proposed by the council, and unanimously resolved, rather to die bravely than to starve, and to fight their way through the enemy. The foldiers were to lead the van, the women, children, sick, and other unable people to keep in the middle, and the members of the great council, with the inhabitants to defend the rear: The *Jews*

Great famine in the Receif.

were

For

1646. were above all the rest in a desperate condition, and therefore resolved rather to die with sword in hand than be burnt alive, which is their doom in *Portugal*.

But when we were just reduced to the last gasp, all horses, cats, dogs, and rats being consumed, and a few quarters of *Farinha* sold at the rate of betwixt 80 or 90 gilders per quarter, which however could not suffice for above two days longer, on the 22<sup>d</sup> of *June*, (a day never to be forgotten) we saw two vessels with *Dutch* colours making all the sail they could towards the *Receif*: They had no sooner cast there anchors, and giving us the signal by the discharge of three guns each, that they came from *Holland*; but you might have read in all our faces the sudden joy we conceived at this relief in our last extremity:

The *Receif* relieved.

There was no body that could stand upon his legs for want of bread, but did crawl to the harbour where you might hear the cries of the people weeping for joy at a great distance. These two ships, call'd the *Falcon* and *Elizabeth*, were freighted for the chamber of *Amsterdam*, and had left the *Texel* the 26<sup>th</sup> of *April*; they brought us the welcome news, that we might hourly expect the whole convoy. The captain of the *Elizabeth* told me himself, that having a very fair wind one day, he said to his crew, *I am sure they are in great extremity at the Receif, God send us fair wind and weather to relieve them in time*, which happened thus accordingly. The captains were each presented with a golden medal, with the following inscription; *The Falcon and Elizabeth did relieve the Relief*.

Mr. Bas sent to I-tamarika.

The 23<sup>d</sup> of *June*, Mr. *Bas*, a member of the council was sent to *Iamarika*, to assist in the defence of the fort; by his letters of the 28<sup>th</sup> he advised, that the enemy continued still in his post on the hill, and that he had sent abroad some spies to get intelligence. The 7<sup>th</sup> of *July*, the said Mr. *Bas* return'd to the *Receif* with the companies commanded by captain *Blewcock* and *Cunrad Held*, leaving the two companies of *Reinard Sikkema* and *Dignus Bysterman* there in garrison. The enemy had some days before, after having blown up the fort on the hill, and set fire to their camp, left the island, carrying along with them all the cannon, and among them two brass ones. For when they saw that we were reinforced with several ships from *Holland*, they did not think fit to abide there till we should stop their passage back by our vessels; neither were they insensible, that without being masters of the fort *Orange*, they could not promise themselves the possession of the island, the south entrance being commanded by the

said fort, and the north passage by our yachts.

The 29<sup>th</sup> of *June*, the council received advice from our head quarter at the house of *John Leflan*, in *Rio Grande*, that two sons of king *John Duwy*, with 23 *Tupoyers*, were sent thither by their father, to assure our people of his good inclination and service; but they refused to come into the fort *Keulen*, before they had spoken with *Rudolph Baro*, who had been sent for upon that account. About this time several merchants set out some privateers, but as this could not be done without great charge, and there were but few ships at sea of the *Portuguese*, this turn'd to no great account, and consequently continued not long. A very odd accident happened to me much at the same time: For some of the labourers, who were employed to unload a vessel belonging to the company, were got so drunk, that they had kill'd a man, and hurt several others, by letting a pipe of wine fall upon them: I went thither to prevent any further disorder, but was no sooner entered the ship, when on a sudden I found the silver galleons upon my coat turn black, and myself bereaved of my sight, which however I recovered by degrees in a few days after, the cause of which I attributed to the strong exhalations of the wine, that had been closed up for a considerable time before. Much about the same time a difference arose betwixt the officers of the army and the city militia, about the chief command of the head guard in the *Receif*, which the city officers laid claim to.

But to return to our so long expected succours.

The reiterated letters from the council of the *Dutch Brasil* to the states general, and the directors of our company, wherein they presented their dangerous condition to them, had had such an influence upon the first, that they advised the directors of the company, to send us a reinforcement of 5 or 6000 men, and a good fleet; for which purpose they sent them 25 companies of their regular troops, and gave leave for the raising as many more, as in all amounted to 4000 land soldiers, besides seamen and volunteers.

This fleet consisting of a good number of brave ships, was ready to set sail in *November* 1645, but by reason of a sudden and hard frost, were detained in the road of *Ulyssingen*, till *February* 1646. One Mr. *Bankert*, admiral of *Zealand*, had the chief command of this fleet, and at the same time the following five gentlemen, who were appointed members of the great council of the *Dutch Brasil*, and were to relieve the old ones, were sent to their stations there;

Some ships arrive from Holland, at the Receif.

1646. to wit *Walter Schonenberg* president, *Micael Van Goch* Penionary of *Vlyssingen*, *Simon Van Beaumont* fiscal of the city of *Dori*, *Henry Hacks*, and *Mr. Trowens*, two great merchants of *Amsterdam*, and *Mr. Heremite* a lawyer of *Dori*, their secretary. One *Sigismund Shoppe*, formerly under count *Maurice*, and who had commanded the land forces of *Dutch Brasil*, was now sent in the quality of commander in chief of these forces; he was a most experienced captain, and who always kept a strict discipline among the soldiers.

Never did any fleet sent from *Holland* to *Brasil* meet with so many unfortunate accidents as this, during the six months they were at sea. For within two days after they had left the *Dutch* coast, they were forced to cast anchor in the *Downs* opposite to *Newport*, where they lost two of their ships by stress of weather. After a stay of three days, the winds being somewhat allayed, the squadron under *Mr. Van Goch* set sail again, but was two days after again forced into *St. Helens* in the isle of *Wight*: Three days before their arrival a rich *Dutch* ship, valued at two millions of livres, then lately come from *Brasil*, was lost among the rocks, so that of 300 persons, no more than 30 were saved. Here they were detained by foul weather and contrary winds seven weeks, when another *Dutch* ship coming from *Brasil*, chanced to cast anchor near them, and told them, that their countrymen in the *Receif* were drove to the last extremity; nay, that perhaps the place was surrendered by this time, they having no more than two months provisions left at the time of his departure. Hereupon it was resolved to continue their voyage with the whole fleet, notwithstanding the winds were against them; but on the coast near *Portland* were again overtaken by a violent storm, in which they saw a *Scotch* ship with 200 persons in her perish. The fleet under *Mr. Van Goch* came with much ado to an anchor behind a rock, where they staid till the fierceness of the tempest being allayed, they prosecuted their voyage. But scarce were they got through the channel, just as they were entering the *Spanish* sea, but a difference arose betwixt *Mr. Van Goch* and *Mr. Beaumont* about the flag, the *Zelanders* (in a council of war held for that purpose) allotting the precedence to *Mr. Van Goch*; whereas the *Hollanders* pretended the same to belong to *Mr. Beaumont*; but *Mr. Van Goch* persisting notwithstanding to claim the precedence, *Mr. Beaumont* gave a signal to the *Holland* ships to follow him, and so bid adieu to *Mr. Van Goch*, who after a troublesome and tedious voyage, in which he lost many of his men by sickness, and e-

specially by the scurvy, he arrived the 14<sup>th</sup> of *July* with his ship in the road of the *Receif*, being the first of the five new lords of the council that arrived in the *Dutch Brasil*. The 31<sup>st</sup> of *July* 1646, the ship the *Bluecock*, and the *Vlyssingen* of *Zealand*, came likewise to an anchor there; in the first came *Mr. Trowens*, and in the last colonel *Sigismund Shoppe*.

The 6<sup>th</sup> of *August* the said colonel gave an account to the members of the council, how pursuant to their orders, he was advanced with 450 men as far as the fort of *Olinda*, to discover the countenance of the enemy, and to take some prisoners; that they had made a shew of attacking us, but after some slight skirmishes retired, and with a body of their troops marched thro' *Bracer de St. Jago*, to cut off our retreat; but our people forced them to retreat again with the loss of several of their men killed and wounded; whereas we had but one wounded during the whole action, besides colonel *Shoppe* himself, who received a slight hurt on his leg.

The 8<sup>th</sup> of *August* the *Arms* of *Dori*, and in it *Mr. Beaumont*, arrived before the *Receif*, he was conducted the next day with all imaginable respect to the *Receif*.

The 12<sup>th</sup> late in the evening *Mr. Walter Schonenberg*, president of the new council, and *Henry Hacks*, arrived in a bark from the north in the *Receif*, where they were received by all the citizens and soldiers in arms; they had been forced to leave their ship called the *Middleburg*, before the north entrance of *Iamarika*, as likewise the *Dolphin*, laden with provisions on account of the chamber of *Zealand*, both which were seen the 30<sup>th</sup> of *July* off of *Olinda*, but being forced back by contrary winds, the last of these two did not come to an anchor near the *Receif* till the 13<sup>th</sup> of *August*.

The same day a certain negro deserter coming to the *Receif*, brought information that the enemy intended to erect a fort on the pass of the *Baretta*, to prevent our excursions into the open country; whereupon it was resolved, with unanimous consent of *Mr. Schonenberg* and the whole council, as likewise with the approbation of colonel *Shoppe* and admiral *Lichtbart*, to prevent the enemies design by fortifying and maintaining the said pass, as being the only inlet we had left for the recovery of the whole *Dutch Brasil*, all the other passes being so strongly fortified by the enemy, as not to be attempted without great hazard.

Accordingly the said colonel *Shoppe* marched the same night with all the forces he could bring together, ordering the boats laden with materials for the intended fortifications, to follow him the next tide.

VOL. II.

1646. The colonel at his arrival having soon chased the enemy from thence, and possessed himself of the house of the *Baretta*, sent for immediate orders to the council, to know whether he should continue in that post all night; who, with the approbation of the new president *Schonenberg*, dispatched Mr. *Bullestrate* thither immediately to take a view of it, and to make his report accordingly; he returned the 14<sup>th</sup> against night, and reported to the council, that he had found the work there very far advanced already, and the fortifications in such a state, that they would soon be in a posture of defence against any attempts from the enemy.

The 13<sup>th</sup> of August *Rudolpb Baro*, who, as we told you, was sent with some presents to *John Dawy* king of the *Tapoyers*, brought a letter from the said king dated the first of July, to the council, wherein he thanked them for their presents, and desired they would be pleased to send him some iron weapons, he being then in war with the *Pojuku's*, and that after he had humbled them, he would march with all his forces against the *Portuguese*.

By this time the president *Walter Schonenberg*, and the other members of the new great council being arrived at the *Receif*, and having delivered their commissions from their high and mightinesses the states-general, his highness the prince of *Orange*, and the council of *XIX.* constituting them joint governors of the *Dutch Brasil*, the late members of the said council, to wit, *Henry Hamel*, *Bullestrate*, and *Peter Bas*, ordered all the colleges and other persons of note to be called together, to be present at the installment of the future lords of the council.

Accordingly all the members of the court of justice, and of the finances, next the magistrates and commissaries of *Maurice's town*, then the ministers and church council, together with the sea and land officers, the heads of the *Jews*, and last of all the factors and book-keepers of the company, being assembled, Mr. *Walbeck* told them in the name of the council, that Mr. *Henry Hamel*, Mr. *Bullestrate*, and *Peter Bas*, had called them together, to lay down in their presence the reins of the government, and to surrender the same to Mr. *Schonenberg* and the rest of the lords appointed by their high and mightinesses, by his highness the prince of *Orange*, and the council of *XIX.* for the supreme management of the government of the *Dutch Brasil*; returning them their hearty thanks for the services each in his respective station had done to the government, and for their constant fidelity during these intestine commotions, exhort-

ing them to persevere in the same obedience to the new council; whereupon the new president and other members, having received the congratulations, first of the old council, and then of the other colleges, they from thence forward transacted every thing by their own authority, tho' they in all affairs of moment took the advice of the said members of the old council, during their stay in *Brasil*; for which purpose they desired them the 20<sup>th</sup> of August, to appear every day at eight a-clock at their assembly, and to assist them with their counsel for the better management of the affairs of the company. The 19<sup>th</sup> of August Mr. *Trowens* died late at night.

The 3<sup>d</sup> of September was appointed for a general muster of all the forces in garrison in the forts near the *Receif*. Mr. *Heck* and commissary *Zweers*, were ordered to take a review of those in the fort *Ernestus*, *Wardenburg* and *Boavista*. Mr. *Beaumont* and *Moucheron* in the fort of *Anthony Vaez* and *Maurice's Town*, Mr. *Van Goch*, *Hamel*, and *Alrich* at the *Receif*, and of those belonging to the artillery. Mr. *Raetzfeld* and *Croewanger* at the *Baretta* and adjacent quarters. Mr. *Volbergin* and commissary *Strick* in the forts *William* and *Frederick Henry*. Mr. *Bullestrate* and *de Witt* in the fort *Bruin* and the land and sea fort.

The 4<sup>th</sup> of September, a pardon being agreed upon by joint consent of the old and new council, the same was the 6<sup>th</sup> day sent by a drummer to the enemy, with a letter to the *Portuguese* commanders from the *Babia*, desiring them to withdraw their forces.

The 10<sup>th</sup> of September being appointed for a review of the militia of the *Receif* and *Maurice's Town*, the same was found to consist of 700 men; they received the thanks of the old council for their faithful services during the present intestine war, and then returned their thanks to them for their prudent management of the government.

The 13<sup>th</sup> of September the letters written by the *Portuguese* colonel the 11<sup>th</sup> of September, in answer to ours of the 6<sup>th</sup>, were read in the great council, filled with untruths and fictions of their own invention. They pretended that they were prevented by the inhabitants from retiring to the *Babia*, besides that they wanted transport vessels, their ships being detained in the bay of *Tamandare*, and that they must expect the king's orders for that purpose.

They took also a great deal of pains to magnify their strength. The 12<sup>th</sup> and 13<sup>th</sup> of September several letters were dispersed abroad by the *Portuguese*, directed to justice *Daems*, to *Matthew Bek*, *Baltazar de Fonseca*, *Duarte Sarayva*, *Caspar Francis da Co-*

sta,

The members of the old council surrender the government.

1646. *Jo*, being all merchants, and written by John Fernand Vieira, in which they again exaggerated their own number, and spoke very despitably of ours, threatening, that in case they should be forced to quit the country, they would destroy all with fire and sword, as they had already done in some parts of Parayba. The contents of these letters were as follows.

*A letter from Vieira to some merchants in the Dutch-Brasil.*

Experience has without question convinced you sufficiently of the reasons that moved us to undertake this war, and the success we have met with is an ample testimony that God was pleased to inflict this punishment upon our enemies, for the many outrages committed against the inhabitants of this country. This is however in a great measure to be attributed to the general consent of the said inhabitants, who having now forced themselves from the tyrannical yoke of their oppressors, ought to exempt from me, who, tho' unworthy, am appointed the chief manager of this war, to be back'd in so brave a resolution. I would not have you be ignorant of our strength, which, in comparison of yours, exceeds all that can be said upon that head; I will only tell you that as by our quitting the captainships of Parayba and Goyana, we are considerably encreased in number, so it is most evident from thence, that the inhabitants chose rather to lose their possessions, than to endure any longer the indignities that were put upon them, which was the true cause of their insurrection, and not (as it is given out among you) because they were unable to satisfy their creditors; because they left more than what would have paid their debts. But if it should happen so, that the said inhabitants should not be able to maintain themselves by force of arms, they are resolved to lay all the other captainships desolate in the same manner.

Having therefore well weighed the reasons which seem to promise us a good issue of this war, I thought myself obliged as a friend, to advise you that that party is back'd by reason and the unanimous resolution of many thousands; for, I can assure you, we are at least 14000 strong besides the negroes and Tapoyers, dispersed in several places from Rio Grande as far as Rio St. Francisco. Kamaron commands 600 musqueteers, Henry Dias 800 negroes, 200 Minos and 700 Tapoyers; and those of the Sertan are at our devotion; whenever we are pleased to call for them; but above all the rest we have God on our side. We are not ignorant, that before the arrival of Mr. Sigismund Shoppe your whole force consisted not in above 600 men, and that the succours come along with him do not a-

mount to above 1200 more; most of which are boys, and the rest either dead or sick. You see I am well acquainted with your strength, having kill'd and taken prisoners about 2600 of your best soldiers, and 500 Brasilians, besides the wounded that were carried to the Receif; when our troops had no other arms than pointed sticks and clubs. These are blessings from heaven, for if we were able to perform these things without powder and ball, what may not be expected from our forces, now they are strengthened with good troops, and provided with sufficient arms and ammunition? All which I confirm to you upon my word, to be nothing but the real truth, and had it not been in respect of those colonels sent from the Bahia, and of his majesty of Portugal, I had by this time been master of the Receif, or some of the forts, or at least I might have done much greater mischief: But if matters are not brought to a happy conclusion, I am resolved to act like a desperate man, and not to leave any sugar-mills, cattle or negroes in the country, but will rather turn all to ruin and destruction, before we will be compelled to submit again to your obedience.

As these presents may serve as a warning to you, so, I hope you, and the rest of the merchants will not delay to enter with us into such articles of agreement, as may be most conducive to the preservation of your Possessions; for I would have you call to mind that there are many ingenios (mills) reduced at present to such a state, as not to be likely to be in a condition to be used these ten years next to come. The Vargoa is in no better condition than Parayba and Goyana, and the cattle (without which the mills cannot subsist) destroyed in most places.

Colonel Sigismund Shoppe, I suppose, pretends to keep the field against us, as he did in the last war, but he will find himself egregiously mistaken, because the inhabitants will not be of his side, for if I should hear of one that was, I would cause him to be hanged immediately. You alledge that we are vassals of the company, but when was ever any conquered nation treated thus as we were, worse than the vilest slaves, of which you are sensible as well as we; so that being forced to break our chains, we don't owe you any further obedience. If we had not been in hopes of this opportunity, we would long before have implored the assistance of the king of Spain or France; and if those had fail'd us, to have had recourse to the Turks and Moors. I desire you not to throw away this letter, because experience will convince you of the truth of it; and that we shall pursue the same methods here, as we have done in other places; wherefore I would have you not give credit to any body, except to those that come in person from those places; I having told them nothing but the bare truth, which

you

1646. you will find in effect thus: In the prosecution of this war, I hope you will consider, what is most for your interest, in which I am ready to serve you; for tho' your governors don't direct their letters to me, 'tis I that have the chief management of this war, and under my command the power of the colonels came from the Bahia, extending no further, than over those troops they have brought along with them. A Royal de bon Jesus September 11 1646.

On the 10<sup>th</sup> of this Month, the before-mentioned colonels having sent an answer to a letter directed to them from your council, by one of our captains; several ensnaring questions were ask'd him concerning the present war, which he perhaps not answering according to their expectation, they replied more like drunken cowards than soldiers; if they will be pleased to come out and tell me these things, I will try whether their swords are as nimble as their tongues are, and teach them what respect is due to the messengers of those persons who have the supreme command here. This I write to you at present, but shall not fail in due time to make my words good by the sword, of which your people feel the daily effects as often as they dare to come out of their forts. Pray be not deceived, for Brasil is not allotted to you; not questioning but that God will bless our arms, and if we happen to die, we shall lose our lives in the defence of our holy religion and liberty; and all those that have refused to accept of our offers, will pay for it with the loss of their lives, possessions and debts.

A Royal, Sept.  
12, 1646.

Signed,

John Fernand Vieira.

The 14<sup>th</sup> of September a man of war, call'd the *Ter Veer*, equipped by the chamber of Zealand, (aboard of which was colonel *Hinderfon*) arrived before the *Receif*, after a voyage of 14 weeks. The 24<sup>th</sup> of September the enemy caused some pamphlets to be dispersed, promising in very haughty terms a general pardon, and a composition of their debts, in case we would leave the island. The 27<sup>th</sup> of September colonel *Shoppe* returned with some troops from *Goyana*, by the way of *Itamarika*; I had not met with any enemy, but had found all the sugar-mills burnt in the first place, but the sugar-reed and farinha fields in a pretty good condition; we received afterwards further information, that the sugar-mills of *Goyana*, were not quite burnt down. The 27<sup>th</sup> of October a conference was held betwixt the old council and Mr. *Van Goch*, unto whom they imparted their advice concerning several matters relating to the state of the *Dutch-Brasil*, and especially to the planting of the *mandioka* or *farinha* roots,

Colonel  
Shoppe  
returns  
from Co-  
yana.

A confe-

and Mr.  
Goch

and the killing of cattle, which they advised to be done with great circumspection, *Brasil* being not able to subsist without a considerable number of oxen, which were continually employed in carrying of sugar-reeds, wood and other necessities to the mills.

For the planting of *farinha* roots they proposed *Itamarika*, *Rio Grande* and *Parayba*, which countries were thought sufficient to supply their present occasions; provided it were done before the season was elapsed.

In the mean while colonel *Shoppe* having made several, but for the most part, unsuccessful attempts upon the enemy; our forces were thereby so diminished, that we were not in condition to make head against the *Portuguese* near the *Receif*; which made our council take a resolution to endeavour the recovery of *Rio St. Francisco*, the execution of which being committed to the management of colonel *Hinderfon*, proved more fortunate for us, he meeting with little resistance thereabouts.

Accordingly the 24<sup>th</sup> of October the following ships; count *Eano* admiral, *Loanda* vice-admiral, the *Arms* of *Dort* rear-admiral, the *Bluecock*, the *Watchful-Dog*, the *Greyhound*, *Eagle*, the *Star*, *Heemstede* and the *Flight*, with eight barks, set sail under the command of admiral *Lichtbart*, and colonel *Hinderfon* to the south. The 17<sup>th</sup> of November the council received advice, that our troops under colonel *Hinderfon* were safely landed at *Korassippa*, and marching from thence to *Rio St. Francisco* and the fort *St. Maurice* had met with no opposition from the enemy, who had begun to raise the said fort. That they had been seconded by the small vessels, which had followed them up the river, which our forces had passed, and were marched to *Seregippe del Rey*, having left some behind to repair the fort; and that four *Portuguese* had requested their pardon, which was promised them. Whilst our forces were employed thereabouts, I was ordered thither to take care of the necessary provisions (of which there was great plenty) for our troops; having accordingly caused my cargo to be embarked aboard a ship call'd the *Brownfish*, *Francis Frantz* master.

I set sail the 24<sup>th</sup> of November. We were carried with a brisk gale as far as the mountains call'd by our people the *Saddle-bills* from their shape, the coast all thereabouts being white sand downs. About half an hour after sun-set we saw our selves off of the Bay of *Tamandare*, and from thence continued our course with a fair wind, which in two days after brought us happily to the entrance of that great river, which

1646. is so broad at the beginning that a fix-pounder can scarce reach cross it; it falls with a very soft current into the sea, its waters being low in the winter, but encrease in the summer, perhaps by reason of the snows that are melted by the heat of the sun. About 50 leagues from its mouth is a great cataract or water-fall, surrounded by a great many islands; the sea at its entrance meeting in tempestuous weather with the current, are so boistrous, that they strike terror into the stoutest mariners, and carry away great pieces of the continent along with them. We entered the said river, but were forced to cast anchor immediately after sun-set, for want of an east wind to carry us higher up, which commonly begins to blow thereabouts at three in the morning. The country appeared very pleasant on both sides, and we saw abundance of wild beasts near the river-side, and several huts made of straw. We were detained near 24 hours upon a sand-bank, which after we had passed, we came at last to the village called *Penedos*, situate upon a high hill; here we landed with our boats, and found a few houses which were rebuilt by our people, the rest being burnt by the enemy before their flight. In the fort was formerly (in the time of the *Portuguese*) a church, which we turn'd into a magazine; it was surrounded with a goodly wall, the river passing by it on the north-side, where the hill is very steep.

Admiral  
Lichtbart  
dies.

The 30<sup>th</sup> of November admiral *Lichtbart* was seized with a sudden and violent illness, occasion'd by his drinking too much cold water, after he had over-heated himself before; he was carried into a boat with three soldiers under the command of an officer, lower down the river, but soon after lost his senses, and in my presence expired. The next day his corps being put in a coffin was carried aboard the *Golden-Star*, being conducted by the chief officers there present, and four companies of soldiers to the river-side, who gave three salvo's with their muskets, as did the cannon from the fort and ships, in order to his interment at the *Receif*.

Mr. Nieu-  
hoff in  
danger of  
being  
drowned.

Towards evening as I was going aboard our ship the boat overturned by the swiftness of the current, and had I not been a good swimmer, I had infallibly been drowned; the master threw out a great cable over-board, by the help of which, and God's mercy I got safely into the ship. The soldiers in the mean while scower'd the country, and brought 700 oxen, (of which there was great plenty) and 300 calves into our quarters, having been at pasture in one of the adjacent Islands of the river, under the guard of some soldiers; they were not extraordinary fat, but tolerable good meat.

The soldiers huts were for the most part 1646. planted on the north-side of the hill, which being composed of branches and leaves of trees took fire accidentally the 3<sup>d</sup> of December, with such fury, that in a quarter of an hour the whole quarter was in a flame, notwithstanding that the alarm was given immediately, by the beating of drums and the sounding of trumpets; some soldiers that were then swimming in the river, lost all their cloaths by this accident. It was well it happened by day; for if it had been in the night it would have put us under a great consternation, it being generally reported, that it had been done by treachery.

There was at that time a plentiful crop of tobacco upon the circumjacent fields, but was not quite fit for reaping, which must be done at a certain season, before the low grounds overflow'd. The colonel desired me to provide those who had lost all, with new cloaths, and to deduct it out of their pay; but I told him, that I being only a factor, could not do it without special order from the council, some having but little pay due to them. The 25<sup>th</sup> of December we received intelligence that the enemy began to appear in a considerable body, whereupon the companies of captain *Cousin*, *Scbut*, *Gyfeling*, *la Montayne*, and of a *Brasilian* captain, call'd *Tomee*, were sent in quest of them, with orders to set their stables on fire, and bring the cattle to our quarters. The next following Monday word was brought us, that our troops were so narrowly enclosed by the enemy, that it was feared scarce one of them would escape with life. Whilst we were in a great consternation, not knowing what resolution to take, a *Brasilian* brought us the unwelcome news, that our whole body was routed and dispersed, and captain *Scbut*, *Cousin* and *La Montayne*, kill'd upon the spot. He had scarce finish'd his doleful relation before a *German* foldier, who had escap'd the fight, by his bleeding wounds and his words gave us a confirmation of what had been told us before, with this addition, that captain *Gyfeling's* lieutenant, *La Montayne's* ensign, and one *Kilmet*, belonging to captain *Scbut*, had fought their way through the enemy, with about 30 soldiers, and would soon be here. This mishap was chiefly attributed to the fool-hardiness of our troops, who contrary to colonel *Hinderfon's* command, having at once discharged all their muskets against the enemy, fell in pell-mell, without any regular order, with sword in hand upon the enemy, which the enemy perceiving, retreated back and drew them into an ambush. Towards night we saw several soldiers miserably wounded with darts come to our quarters, some who had

li thrown

1646. thrown away their arms, were forced to cast lots for their lives, the misfortune of which fell upon a *Dutchman* and a *Brazilian*, who being tied to a stake to be shot to death, were however pardon'd by the colonel. Captain *Gyseling's* lieutenant, who came without his arms to the fort, was sent immediately to the *Receif*, where his sword was broke over his head, and he declared incapable of serving the company for the future, notwithstanding he had done them faithful service for seven years last past.

By this time I was sent for to the *Receif*, so that after having taken my leave of the colonel and Mr. *Dames*, I embarked on board the *Bat* the 16<sup>th</sup> of *December*, and we were the same evening with a fair wind and stream carried to the mouth of the river. It being a fine moon-light night we catch'd abundance of *Zaggers* as we call them, a fish of a very good taste, and continued our course with a brisk gale: Not far from the rivers mouth we met with four of our ships, who told us they were to fetch provisions, but in case they could not, were to return forthwith to the *Receif*. The 18<sup>th</sup> we advanced but little, the ships being not out of sight of us, near the rivers mouth, but did catch more fish than we were able to eat. The 20<sup>th</sup> we were likewise becalmed, and we perceived the moon to be half eclipsed for the space of two hours. The next following day we failed to near to *St. Antonio*, that we could see them walking along the sea-shore. Towards night we discovered *Porto Calvo*, about 30 leagues from *Rio St. Francisco*. We were often becalmed, but caught abundance of *King's-fish* and *Codds*, and saw fires in many places along the coast. The 24<sup>th</sup> of *December* we came so near to the cape of *St. Austin* that we discovered five ships and seven row-barges in the harbour; we might have reached some of those that went ashore with our shot, had it not been for the sand-bank which hindred our nearer approach. About noon we came before the *Receif*, but it was so foggy that we could scarce discover the water fort, nevertheless we ventured in, and I got ashore immediately, with an intention to give an account of the state of affairs in *Rio St. Francisco* to Mr. *Schonenburgh*, being conducted thither by colonel *Shoppe*, who happened to meet me immediately after my landing.

The 27<sup>th</sup> of *October* the enemy had laid two ambushes in the way to the fort *Prince William*, beyond the redoubt *Kik*. They did not stir till towards noon, when perceiving a company of our soldiers marching along the dike, they fired so briskly upon them, that they killed 11, wounded 12, and took three prisoners; yet not with-

out the loss of some on their side.

In the mean while the *Tapoyers* being much exasperated at the murder of the before-mentioned *Jacob Rabbi* their commander, had left our party; the council did what they could to appease them, imprisoned and banished *Garjman* the author of it, and confiscated his estate, notwithstanding which, the *Tapoyers* could not be prevailed upon to join with us as before.

The 18<sup>th</sup> of *November* Mr. *Van Goch* entered into a conference with the members of the old council, whether it might not be feasible to embark what forces we were able to spare on board our great ships, and to attempt to make a powerful diversion to the enemy by attacking them in some place or other. But those of the old council having represented to him the danger of this enterprize if it should miscarry, whilst they were blockt up in the *Receif*, the further debate thereof was deferred till the next day. It was then proposed, upon second thoughts, that in case we could bring all our forces together, something of moment might be undertaken without manifest hazard, whereby to oblige the enemy to withdraw his forces from the *Receif*; but Mr. *Van Goch* apprehending no small danger in case we miscarried, they came to no resolution for that time.

It being found by experience that all our promises of pardon had proved ineffectual, it was proposed by Mr. *Van Goch* the first of *December*, whether it were not most expedient to give no quarter for the future; unto which it was answered, that very seldom quarter had been given by us, and few prisoners were taken, and that the enemy had likewise killed most of our people that were fallen into their hands, but they judged it not convenient to refuse quarter to all without distinction, which would induce such of the inhabitants as had remained quiet hitherto, to betake themselves likewise to their arms.

The 23<sup>d</sup> of *November* we laid an ambush for the enemy near the fort of *Assagados*, who being by some few sent out for that purpose, engaged in a skirmish, and pursuing our men with great eagerness under the cannon of the fort, were set upon by those lying in ambush, who killed and wounded many of them.

The 12<sup>th</sup> of *December* the corps of the late admiral *Lichtbart* was interr'd, one company of the city militia, and two of soldiers appearing in arms upon that occasion, gave him three salvoes with their musquets.

The 30<sup>th</sup> of *December* the *Eagle* yacht brought letters to the council, dated in *Rio St. Francisco* the 4<sup>th</sup> of *December*, intimating, that in an island a little above the fort

1646. fort, one colonel *Rebellis* was arrived with 200 men from the *Babia*; and that they expected another reinforcement; as well from thence as from the *Vargea*; that our people being sent higher up the river, had attackt some of the enemies troops, but they made their escape to the other side, leaving their arms and clothes behind them.

1647. The 2<sup>d</sup> of January 1647, colonel *Shoppe* who had been with 300 fusileers in *Goiana*, returned to the *Recife*, giving an account that he had taken a view of all the rivers thereabouts, but met with no enemy.

The 5<sup>th</sup> of January the council received an account of the beforementioned action in *Rio St. Francisco*, viz. Five companies of our forces being sent to *Orambou*, to beat up the enemies quarters; they met with a body of 100 men, whom they attackt and put to flight; but soon after our forces were attackt by a much stronger body, who put them to the rout, with the loss of 150 men; of our officers one captain was killed, and five taken prisoners, viz. captain *Samuel Lambart*, *La Montagne*, *Gerrit Schut*, *Kilian Taylor*, *Daniel Koon*, and three lieutenants, *Joost Koyman*, *Anthony Baliart*, *Jeronymus Hellemen*, and one ensign.

The 8<sup>th</sup> of January Mr. *Van Goch*, in the name of the new council, advised with those of the old, that it being resolved among them to send for a considerable number of their forces out of *Parayba*, in order to gather a body of troops for some important design, they desired to be informed concerning the present condition of the said captainship; and whether the city of *Parayba* and *St. Andrew* might be defended by a small garrison; whereupon those of the old council replied, that the town of *Fredricia* had no fresh water but what they must fetch at a miles distance, and consequently might be cut off by the enemy; the same thing might be done at the passage leading to the river-side; besides, that there was no fortifications belonging to the place but the monastery, which was of no great consequence, and the *Guarte Domai-ges* church, which had been fortified by the enemy in this war. As to *St. Andrew* it was no more than a sugar-mill about four hours distant from the city of *Parayba*, situate upon the bank of the river; that the communication of this place with the fort of *St. Margaret* might easily be cut off by the enemy, as being likewise about four leagues from thence, but it might be relieved from the water-side, and yet not without great difficulty. Mr. *Van Goch* told them he would make his report thereof to the council.

The 12<sup>th</sup> of January the council received advice, that the enemy were with a strong body of troops entred *Parayba*, and advan-

cing very near to the sugar-mill of *St. Andrews*, had in the night time surpris'd some *Dutch* and *Brasilians*, to the number of 50 men, women and children, of which they had killed some, and ript up the womens bellies.

The 13<sup>th</sup> of January some pamphlets were again dispersed by the enemy, containing in substance, that since the inhabitants of the *Recife* were now beyond all hopes of further relief, it would be their surest way to come to an accommodation; for they resolved to venture all before they would lay aside their design; but if all failed they would destroy the whole country, and so leave it: They exhorted them not to be deceived by the insinuations of those who belonged to the company, and called them rebels; they being no more to be stiled so than the *Dutch* themselves, who had asserted their liberty against *Spain*.

The 17<sup>th</sup> of January four negroes belonging to one *Iaac de Ralssier*, who had been taken prisoners some days before in *Parayba*, came over to us into the *Recife*, and brought advice, that the enemy, after having tarried but a little time in that captainship, where they had killed five *Dutch* men and some *Brasilians*, were retired from thence.

The 22<sup>d</sup> of January early in the morning, the enemy began to batter the wooden fort near the *Baretta*, from a battery on the bank of the fourth side of the river which he continued the whole day, but desisted at night; the garrison having been reinforced about noon with five companies of soldiers, and some provisions; because Mr. *Hamel*, one of the members of the old council, did represent to Mr. *Van Goch*, that tho' the fort itself was so inconsiderable, as scarce to be worth the trouble of defending it by a good garrison, yet at this juncture, when the enemy had made his first attempt upon it, it would not be advifeable to desert it, for fear of giving encouragement to the enemy to attack the other forts; but that on the contrary, as long as they did meet with a brave resistance here, they would not be so forward to attempt others; especially since we had the conveniency of relieving them with boats at high-water, with low-tide by land by the way of the sandridge; and that we might annoy the enemy with the cannon from our yachts in his trenches, as we had done that day. About the same time a map was ordered to be made, shewing the true situation of the *Recife*, with the turnings and windings of the adjacent rivers and marshes, as far as the *Baretta*, for the better instruction of the council.

The 24<sup>th</sup> of January in the morning, news was brought that the enemy had raised the

1647. siege of the fort of the *Baretta* the night before, and carried off all their cannon, being sensible that as long as they could be annoyed from the sea-side, and we be able to reinforce them daily with fresh troops, they could promise themselves but slender success: But besides that our people were to struggle against the enemy and famine, they were frequently troubled with desertions, many of our soldiers, nay even to the sergeants and other officers, who begun to despair of our ease, running over to the enemy, even at that time when the before-mentioned ships the *Faulcon* and *Elizabeth* were in sight of the *Receif*.

Now the members of the old council began to prepare in good earnest for their return to *Holland*, they had already in December 1646, solicited Mr. *Schonenburgh* president of the new council, to order some ships to be got ready to transport them thither, and the *Vlyssingen* had been appointed for that purpose; but the same being not as yet returned from cruising, they applied themselves the 25<sup>th</sup> of January 1647, to Mr. *Van Goch*, and told him, that whereas according to their commission, one of them should return after the expiration of three years, they had continued in *Brasil* these six years, Mr. *Kodde* having indeed been ordered to return about that time, but his place not being supplied by another, he died before his departure: That they had for these three years last past, solicited their return, and had two years ago received promises of being relieved by others; which had not been performed till within these few months, to the great prejudice of themselves and their families: Mr. *Van Goch* promised them to take effectual care to have the ships got ready, and to send for the ship the *Vlyssingen*, in order to their return home. At the time of the accession of the new council to the government, and the departure of *Henry Hamel*, *Adrian Bullestrate*, and *Peter Bas*, late members of the great council, the following forts remained still in the possession of our *West-India* company.

The fort *Keulen* at the mouth of *Rio Grande*, provided with 28 brass and one iron cannon.

The redoubt of *St. Antonio*, on the north-side of the river of *Parayba*, with six iron pieces of cannon.

The fort *Reslangues* in an island of the same name within the river *Parayba*, with four brass and five iron pieces of cannon.

The fort *Margaret* on the south side of the river *Parayba*, with 14 brass and 24 iron pieces of cannon.

The fort *Orange* in the isle of *Itamarika*, with 6 brass and 7 iron pieces of cannon.

*Nassé*: *Senhora de Conceitiao*, an old battery upon the hill of *Itamarika*, with two brass and eight iron pieces of cannon.

The redoubt called *Madame de Bruin*, three iron pieces of cannon.

The fort *Wardenburgh*, alias the *Triangular Fort*, betwixt the *Bruin* and the *Receif*, the first provided with four brass and five iron pieces of cannon; the last with 14 brass guns.

The *Land Fort*, alias *St. John's*, with 11 iron guns.

The *Water Fort*, at the mouth of the river of the *Receif*, with seven brass guns.

The fort *Ernestus*, with 5 brass and 3 iron pieces of cannon, and the battery with five brass and two iron pieces of cannon.

The *Receif*.

*Maurice's Town* upon the island of *Anthony Vaz*.

The fort *Frederick Henry*, alias the *Quinquangular Fort*.

The redoubt of *Stone* near this fort.

The redoubt *Kiik*, betwixt the fort *Frederick Henry* and the fort *Prince William*.

The fort *Prince William* upon the river *Affagados*.

The forts then in possession of the *Portuguese*, and taken by them from the *Dutch*, are these;

*Seregipto del Rey*, *Rio St. Francisco*, and *Porto Calvo*, being reduced by famine, were rased by the *Portuguese*, being sensible that our people could not maintain themselves there without erecting of new ones, which was not to be done without a vast charge. Near the point of *Tamandare*, the place where the *Portuguese* from the *Babia* first of all landed their men; and where afterwards their fleet was beaten by ours, the enemy laid the foundation of a fort for the security of that harbour, where ships of great burden might safely ride at anchor.

The 23<sup>d</sup> of January, Mr. *Beaumont* was sent by the new council to confer with the late members concerning the present condition of *Rio St. Francisco*, and what was best to be done there: They answered him as before, that the fort as it was now, could do but little service, and that therefore it would be worth our consideration, whether the proposals made by them in writing, might not now be put in practice. The said Mr. *Beaumont* further proposed, whether it would not be requisite to erect an earthen redoubt for the defence of the *Receita*; unto which those of the old council replied, that considering the vast charge and the small benefit which could be expected from it, the same might be more conveniently built in some place or other, to facilitate our passage into the open country. *Beaumont* was of opinion, that there-

1647. by the enemy would be prevented from advancing to the fort *Frederick Henry*; but the old members told him, that notwithstanding we had now a fort on the *Baretta*, we could not hinder the enemies coming upon that island near the fort, unless we would keep a considerable force there for that purpose; that we need not fear their transporting any cannon thither, because their retreat might be cut off at high tide; neither could they from thence do any mischief to the *Receif*, it being evident, that the shot of our biggest cannon in the fort *Frederick William* could not reach the said island. The same evening Mr. *Van Goch* and *Hack*, came to tell the members of the old council, that the *Hollandia* and *Ulyssingen* would be ready in a little time, in order to conduct ther. to *Holland*, the *Ulyssingen* being ordered for. hwich to return from the *Babia*, whither she was sent a cruising.

By this time the enemy had block'd us up so closely in the *Receif*, that on the land side we durst scarce look without the gates; and a certain *Portuguese* had prepared us a worse entertainment, having invited all our chief commanders abroad to his daughters wedding, during which time the enemy were to have surprized the city; but this design being timely discovered by some *Portuguese* and *Jews*, miscarried.

About the 15<sup>th</sup> of *October*, the *Portuguese* began to rebuild the fort *Bon Jesus*, as it is call'd by them, but by us *Altena*, on the other side of the river. We had some notice of it by deserters, but could not discover the truth of it, because they kept us from advancing that way by their cannon, and the place was surrounded on all sides with woods; but as soon as they had caused them to be cut down, we discovered it both by sight and the roaring of their cannon, which thundering incessantly against the city, caused such a consternation, as is not easy to be express'd, most people sheltering themselves in vaults, to avoid the fury of the enemies cannon. Of this I saw a most miserable spectacle in a certain young lady, a niece of the late admiral *Liechbart*, who being come to visit one of her acquaintance, lately married, had both her legs shot off by a cannon bullet, which at the same time kill'd the new married woman upon the spot. At the outcry of these miserable wretches, I ran thither instantly, my house being just by, where I was an eye-witness of their misery, the poor young lady grasping my legs with such an agony, that she could scarce be pull'd off with all the strength I had; it being a most doleful spectacle for me to see the floor covered with the legs and arms of these miserable wretches; the poor young lady died like-

VOL. II.

wife within three days after. It was not long after that I narrowly escaped the same misfortune; for whilst I was talking with some of the inhabitants of the city, as I was going the rounds, two of them were kill'd by a cannon bullet, and another had both his hands shot off as he was lighting his pipe. Nay we were forced to remove all the ships out of the harbour for fear of being sunk. Colonel *Shoppe*, in the mean while, had made himself master of and destroyed *Taperika*, 2000 *Portuguese* only having saved themselves by flight; but by the many unsuccessful encounters we had with the *Portuguese*, our forces decreasing daily, whereas theirs encreased, colonel *Shoppe* was ordered to command colonel *Hinderfon* to leave *Rio St. Francisco*, and to join him in *Taperika*; but this stood us but a little stead, being not long after obliged to leave likewise *Taperika* for the relief of the *Receif*. All our force consisting of about 1800 men, being now come to the *Receif*, (where they had not provisions for above seven months left) it was several times taken into consideration, what was best to be done at this juncture. Colonel *Shoppe*, with some other officers, were of opinion not to hazard an engagement, our forces being so much inferior to the enemy, but to stay for a more favourable opportunity; but it was carried by the majority to venture a general salley for the relief of the *Receif*, the chief command thereof being given to colonel *Brink*, because colonel *Shoppe* was not as yet cured of his wounds he had received in a late encounter. Our forces marched towards evening as far as *Guerapes*, a place fatal to us the year before by the defeat of our people, the fields thereabouts being as yet covered with their bones. The *Portuguese* no sooner perceived us to be upon the march, but they left the fort *Altena*, of which we having got notice, possess'd ourselves of it immediately, and thus drew the thorn out of our foot. But the 16<sup>th</sup> of *May* prov'd the most fatal of all we had seen for many years before in *Brasil*. For though our forces attack'd the enemy with bravery, and maintained the fight with great oblinacy for some time, yet the enemy, flush'd with their number and late success, with 2500 of the best men, at last forced our men to give way, and afterwards to fly, being pursued by 150 *Portuguese* horse; so that both in the fight and flight, we lost above 1100 men, among whom were colonel *Brink*, and almost all the rest of our commanders: We lost also 19 colours, and all our cannon and ammunition we had carried along with us. It was not till five days after before leave could be obtained to bury our dead,

1647. which began to corrupt and stink most nauseously, by reason of the burning heat of the sun. This was the last effort we were likely to make in the field; all our future care being for the preservation and defence of the *Receif*, unless we should be supplied with fresh succours from *Holland*; but the same arriving but slowly, most people began to fear, that in case God Almighty did not send us some unexpected relief, we should be at last forced to leave that place likewise to the mercy of the enemy: The great council laying the fault of our late misfortunes upon the council of war, and these again upon them, alledging, that the soldiers were ill provided for, and wanted

their pay. As for myself, being sensible that things would be worse and worse every day, I thought it the safest way for me also, to desire a passport for my return to *Holland*, which at last, with much ado I obtained, and so prepared every thing for my voyage. But before I leave *Brasil*, I ought to give you a short account of the products of the said country.

The captainship of *Pernambuco* and *Brasil* in general, being not only well stored with cattle, but also with several sorts of herbs, trees and fruits, we will give you a short view of them, and begin with the *Mandioba*, and its root, call'd *Mandioka*, *Mandioba* unto which the *Brasilians* stand chiefly ip- root.

debted for their sustenance. The most parts of *America* are ignorant hitherto of wheat or any other grain, instead of which nature has furnished them with a certain shrub, the root of which dried and powdered, and afterwards boil'd and bak'd as we do our bread, is the common food of the inhabitants of *America*. This shrub grows in vast plenty every where, being by the *Brasilians* called *Maniba* and *Mandioba*, and its root *Mandioka*. There are divers kinds of it, distinguished by the *Brasilians* by different names, but the root is in general called *Mandioka*. Their leaves are small, green and long, pointed at the end, which grow upon large stalks or branches, each of which

has five, six, or seven leaves, growing in a cluster, resembling a star, call'd by the *Brasilians* *Manikoba*. The stock or stem is distinguished by certain knots, not above an inch thick, but generally six, sometimes seven foot high, from whence sprout forth several branches, which producing again lesser stalks, bear the before-mentioned leaves: It bears a small flower of a pale yellow colour, and of five leaves only, with small stalks within, which at last turn to seed. The root *Mandioka* resembles our parsnip in shape, being two or three foot long, and about a man's arm thick, but grows thinner towards the bottom. Its outward rind resembles that of a hazel-tree, but

This shrub grows in dry, barren and sandy ground, its nature being so averſe to moiſture, that they are obliged to plant it only in the ſummer months, where it is moſt expoſed to the ſun. For this purpoſe it is, that the inhabitants cut down the woods on the hills and in the plains, which they burn, and ſo prepare the ground for the production of this root: Theſe fields are by the *Braſilians* called *Ko*, by the *Portugueſe* *Roza*, or *Chokas*, and by our people *Roffen*. Theſe fields are turn'd up into ſmall round hills like mole-hills; the *Portugueſe* call them *Montes de Terra Cavada*, or *Hollowed Hills*; the *Braſilians* *Kujo*. Theſe hills they make about two foot and a half aſunder, each being about three foot in circumference, and half a foot high, that the rain-water may be carried off with the more eaſe. In each of theſe hills they commonly plant three ſmall takſ of this ſhrub, of about nine, ten inches, or a foot long, without leaves, notwithstanding which they grow and ſoon bear freſh leaves, and in time produce new roots, which cannot be tranſplanted, becauſe no ſooner are they taken out of the ground, but they begin to putrify and ſtink. After theſe takſ have been about ten days in the ground, they begin to bud and produce as many freſh takſ as they have knots; each of theſe takſ is about a finger long, from whence ſprout forth many leſſer ones of a purple colour. The fields muſt be three or four times a year cleared of the weeds, which grow in great plenty amongſt it, and choak it up before it comes to its full growth. The ſmall takſ and leaves of theſe ſhrubs are mightily infeſted by the *Pifmires*, and like- wiſe coveted by the wild-goats, oxen, horſes and ſheep, for which reaſon they are very careful to fence theſe plantations with ſtalks and branches of trees: The bees, coneyſ, and ſome other *Braſilian* creatures are mighty fond of the root, which takes no harm, tho' the ſhrub be ſtrip'd of all the leaves, provided the root itſelf be not touch'd. This root does not come to its full perfection till a year after the planting of the takſ, tho' in caſe of neceſſity they may be drawn in ſix months, but afford but little *Farinba*. Each ſhrub produces two, three, four, nay ſometimes twenty roots, according to the goodneſs of the ground, and after they are come to full maturity, will keep two or three years under ground; but it is much more ſafe to take them up at the years end, for elſe many of them will rot; nay, if the ſeaſon happens to prove very wet, they muſt of neceſſity be drawn tho' they are but half ripe.

The root, after it is taken out of the ground, will not keep above three days, but ſtinks, take what care you can; for which reaſon they ſeldom draw more at a time than they can make immediately into *Farinba* or meal. That kind of *Mandioka*, commonly called *Mandibuka*, grows faſter and ripens ſooner than any other, and affords the beſt *Farinba*; it thrives beſt in ſandy and hot grounds. But that kind which is moſt generally uſed is called *Mandikparata*, and grows indifferently in all grounds. The *Farinba* is prepared thus: The root after it is taken out of the ground is purged from its outward rind by a knife, and waſh'd in fair water: Then the end of the root is held cloſe to a wheel of about four or five foot diameter, which being covered round the edges with a copper or tin plate full of ſharp ſmall holes, not unlike a nutmeg-grater, and the wheel being turn'd round continually, grates the ſaid root into ſmall particles, which fall into a trough underneath. The wheel is by the *Braſilians* called *Ibecem Babaca*, and by the *Portugueſe* *Roda de Farinba*, or the flower wheel; the trough the *Braſilians* call *Mukaba*, and the *Portugueſe* *Koche de rater Mandiboka*. But the poorer fort are ſain to be contented with a hand-grater, called *Tapiti*. The root thus grated is put into a bag, made of the rinds of trees, about four inches wide, called by the *Portugueſe* *Eſpremeouro de Mandiboka*. This bag with the root is put into a preſs, and all the juice preſt out, (it having a venomous quality) which is by the *Braſilians* called *Maipoera*, or *Muni- puera*, and by the *Portugueſe* *Açoa de Mandioka*, i. e. *The water of Mandioka*. The next thing to be done is to beat the root through a ſieve, called by the *Braſilians* *Urupema*; and then to lay it upon a copper plate, or earthen pan, over the fire, and to ſtir it continually with a wooden ſpoon or ſpatle till it be quite dry. This pan or veſſel the *Braſilians* call *Vimovipaba*, and the ſlice *Vipucitaba*. The *Farinba*, before it is quite dry, is called by the *Braſilians* *Vitinga*, and by the *Portugueſe* *Farinba Relada*; but when it is completely dried and fit for keeping, the *Braſilians* call it *Viata* or *Viccia*, and the *Portugueſe* *Farinba Seca*, or dry meal; or *Farinba de Guerra*, war-meal, becauſe it is moſt uſed in time of war. For the more it is dried the better it keeps, but never keeps good above a year, the leaſt moiſture being apt to taint it; which is the reaſon, that both the *Portugueſe* and we, in imitation of the *Braſilians*, bake biſkets of it upon a grate iron, with hot coals underneath, for the magazines.

The juice *Manipuera*, which is preſs'd out

1647.

How the  
Farinba is  
prepared.

1647. out of the root *Mandioka*, put into a vessel, gets in two hours time a white settlement at the bottom, call'd by the *Brasilians* *Tipioka*, *Tipiaka*, and *Tipiabika*: This dried, affords a very white meal, called *Tipiocui*, which bak'd into cakes as before, call'd by them *Tipiacika*, taste as well as wheaten bread. This juice is also boil'd to pap, and eaten, and serves likewise instead of starch or paste. The *Portuguese* take this pap, mix it with sugar, rice, and orange flower-water, which they make into a conserve of a delicious taste; they call it *Marmelada de Mandiboka*. The juice *Mandiga* or *Manipuera*, is of a sweetish taste, which is the reason the beasts covet it, but commonly die soon after they have drunk of it, it being pernicious, nay mortal, both to man and beast. If the juice be kept twice 24 hours it produces worms, called by the *Brasilians* *Tapucu*; yet it has been found by experience, that this juice loses its pernicious quality after it has stood 24 hours, there being many of *Brasilians* who boil and drink it without any harm. The root *Mandioka* is likewise immediately after it is taken out of the ground, sliced in pieces, and laid in fresh water for four or five days, when it begins to be soft, it is called *Puba*, or *Mandiopuba* and *Mandiopubo*. This the wild *Brasilians*, inhabiting the deserts and woods, roast in the ashes and eat; because it is done without much trouble. The same *Mandiopuba*, roasted before the fire, is called *Kaarima*, which being afterwards beat to powder with a wooden pestel in a mortar, they call *Kaarimaciu*; of this they make a pap with boiling water, which seasoned with some *Brasilian* pepper, or *Nbambi* flowers, affords a very good dish, especially with the addition of some fish or meat, when it is called *Minguipiinga* by the *Brasilians*, who look upon it as one of their best dainties. It is also very wholesome, for this *Kaarima*, and the flower *Tipiaka*, boil'd in orange-flower-water, and sugar, to the consistency of a syrup, affords a very good antidote. They make also a kind of starch of the flower called *Kaarima*, which they call *Minguapomonga*; as likewise very fine cakes, by mixing it with water, butter, and sugar. There is a kind of meal prepared from the dregs of the *Mandioka*, or *Mandiopubo* root, thus steeped in water, call'd by the *Brasilians* *Vi-puba*, and *Viabirurn*, and by the *Portuguese* *Farinha Fresca*, or fresh flower, and *Farinha d'Agua*, or water flower. It is very well tasted, but will not keep above 24 hours. But if you make it up with water into balls or rolls, and let them dry in the sun, they will keep good for a considerable time: These they call *Viapua* and *Miapetika*. The

1647. *Tapoyers*, and almost all the other *Brasilians* prepare it thus, and afterwards mix it with another meal, called *Viata*, which affords it a more agreeable taste.

The *Mandioka* root is likewise prepared thus: After it has been cleaned and cut in thin slices, they beat it with a wooden pestel, and squeeze the juice of it out with their hands only, which being dried, they call *Tina* and *Mixakuruba*; another way of preparing the *Mandioka* root is, to cut it into pieces, of about two fingers long, and two inches thick, which without being squeezed, is exposed to the sun, and afterwards beat to powder in a wooden mortar, call'd by the *Brasilians* *Tipirai*, by the *Portuguese* *Farinha de Mandioka crua*, or the flower of raw *Mandioka*: The pieces before they are beaten to powder are very white, and may be used instead of chalk. Out of this flower they make very good white bread and biscuits, call'd *Miapeta*, the last of which are chiefly used in the camp, because they will keep a great while.

Out of the root *Apimakaxera*, the *Brasilians* boil a certain pleasant liquor not unlike our whey, call'd by them *Kavimakaxera*. The same root, chaw'd and mixed with water, furnishes them with another liquor they call *Kaon Karazu*. The cakes made from the flower of this root, laid in a cask with water, till it ferments together, affords them likewise a sort of strong and very good beer.

All these different kinds of *Mandioka* roots, if they be eaten fresh prove mortal to mankind, except that call'd *Apimakaxera*, which roasted, may be eaten without danger, and is of a good taste. But all sorts of beasts, both wild and tame ones, don't only feed upon the said roots and leaves, without the least hurt, but also grow fat with them, notwithstanding that the juice of both is mortiferous as well to men as beasts. The *Negroes* and *Brasilians* bruise the leaves of the *Mandioka* in a wooden mortar, which being boil'd, they put oil or butter over it, and eat it like as we do our spinach; this is sometimes done by the *Portuguese*, likewise and the *Dutch*, who make a kind of sallot of the same leaves. The *Brasilians* prefer the bread made of the *Mandioka* root before ours, but it is not so natural to the *Europeans*, it being, if used in a great quantity, pernicious to the nerves and stomach, and corrupts the blood. About three bushels of this meal, (at the rate of two gilders per bushel) will suffice a strong labouring man for a whole month, and a piece of ground planted with this root, produces four times the quantity, as if it had been sown with wheat. There is a certain kind of *Mandioka* root call'd *Pi-tinga*,

Kalabassia.

The tree  
Imaraku.

1647. *tinga* by the *Brasilians*, the flower of which cleanses and heals old ulcers. This root is likewise found in the isle of *St. Thomas*, and in those of *Hispaniola*, *Cuba*, and others thereabouts, and in most parts of the continent of *America*; the inhabitants of which call it *Tuka* and *Kassave*, and those of *Mexico* *Quaukamoib*, and the bread which is made of the flower, *Kazabis*, *Kazabi*, or *Kakavi*. The *Mandioka* root is originally the natural product of *Brasil*, and from thence transplanted into other parts of *America* and *Africk*. Its flower furnishes all the inhabitants of *Brasil*, as well the *Portuguese* and *Dutch*, as the natives and negroes with bread, which next to wheat is the best of all, so that our soldiers would rather chuse to have their allowance in *Farinha*, than wheaten bread out of the magazines. Since the war in 1645, the price of the *Farinha* was risen to three or four gilders per bushel, which, as it tended to the utter destruction of the sugar-mills, so by special orders from the great council of the *Dutch Brasil*, all the inhabitants of the open country were enjoined, under a severe penalty, to plant a certain quantity of *Mandioka* yearly, in proportion to their abilities, by which means the price of the *Farinha* was so considerably abated, that three bushels were sold for two shillings ready money, at the *Receij*, and for less in the country.

Kaaoe or  
Herba  
viva.

*Brasil* produces a certain herb call'd *Kaaoe* by the *Brasilians*, by the *Europeans* in *Latin*, *Herba viva*, because it seems to shrink when you touch it, and so it does likewise about sun-set; its seed has been transmitted into *Europe*, where it grows to its full perfection.

Kalabasses.

The *Kalabasses* are a kind of pompions, their rind, if dried, being so thick and strong, as to serve for materials for cups, porringers, and such like utensils. But what is most surprizing is, that they always grow of a different shape, some being long, others round, others oval, some thick before, others at the end. They blossom and bear fruit once a month, the blossom being yellow, mix'd with green; the pulp is white at first, but turns to a violet colour; they are of a tolerable pleasant taste, but very unwholesome, by reason they are too astringent.

The tree  
Imaraku.

The tree call'd *Imaraku* by the *Brasilians*, is of a middle size, its trunk round, and its bark grey, covered with small thistles of the same colour. Its branches sprout forth on the top, with broad leaves of an oval figure, edged likewise with small thistles or thorns. There is also another kind of *Imaraku*, much larger than the former, call'd *Kakabu* by the *Brasilians*, and *Kar-*

Vol. II.

don by the *Portuguese*. This sprouts forth first of all in the form of a large octangular leaf, upon which grow crosswise many thorns; this produces other leaves of the same kind, each being three, nay sometimes six foot long, and of the thickness of a man's arm. By degrees the first leaf turns into a woody substance, of a greenish colour, but somewhat spongy; those leaves that grow next to this stem are instead of branches, which produce other leaves. The stem bears only one large white flower, the fruit of which is of an oval figure, and of about twice the bigness of a hens-egg, of a dark brown colour, and fit for use. This tree grows to a great height. There is also another kind of *Imaraku*, being altogether the same with the former in respect of its largeness, blossom and fruit, except that its leaves are of a triangular figure.

What the *Brasilians* call *Pako Kaatinga*, *Pako Kaatinga*, the *Portuguese* commonly call *Canodo Mato*, or wild reed or canes. The stem or stalk is like that of other canes, about an inch thick, containing a white marrow or pith, of a sweetish taste, on which grow leaves of eight or nine inches long, and three inches broad, shaped like a tongue, smooth and pale green on one, and covered with a white woolly substance on the other side. The fruit of which is not unlike a pineapple, about ten inches long, growing on the top of the stem; it is divided into several partitions, which opening by degrees, a pale grey flower appears betwixt each, containing underneath twenty or more grains of a black shining seed. The stalk chew'd draws the rheum from the head, and breaks the stone in the bladder. It is look'd upon as an excellent remedy against the involuntary emission of the seed throughout *Brasil*, and cures it in eight days time.

All over *Brasil*, but especially in the isle of *Ilamarika*, grows a certain tree call'd *Kasjui* or *Kasjou*, bearing a fruit of the same name. Its leaves are dark green, broad and round, interspersed with many small veins. It bears two different blossoms and fruits. The white blossom which appears in the lower branches, produces a juicy spongy fruit like an apple, of a very cooling and astringent quality: But the red blossom on the top a kind of chestnut. The *Brasilians* draw no small advantage from this tree; out of the apples they make a very good cyder, call'd by them *Kasjouwy*, which is sourish, but if mix'd with sugar, makes it as pleasant as *Rbenish* wine, and has this excellency; that tho' it soon seizes the head, yet it passes off without any harm. The other fruit they eat like as we do our chestnuts.

Among the products of the *West* and *East-*

L 1

1647. *East-Indies* is a tree call'd *Papay*, by the *Javanefes* and *Dutch*, and *Pinguacu* or *Ma-moeira* by the *Americans*; and sometimes intituled with the name of the *Melonree* by our people, by reason of the resemblance of its fruit to our melons. This tree is of two different kinds, to wit, the male and female. It grows and perishes again in a short time; its trunk being so spongy that it may be cut as easy as a cabbage stalk; the leaves it bears are very large and broad, not unlike our vine leaves, growing on long stalks; and the top of the tree, and covering the fruit, which hangs in a knot, and is green at the first, but turns yellow at last, resembling in shape a pear, but of the bigness of our small melons, unto which its pulp resembles both in colour and taste, when come to maturity, but whilst they are green, they are boil'd with meat, and give it a tart taste.

*Chili Lada*  
or *Brasil*  
pepper.

The red pepper, known by the name of *Brasil pepper*, and call'd *Chili Lada* by the *Brasilians*, grows on knotty stalks of about five or six foot high; the rind being a dark green, distinguished with white rings, from whence shoot forth small crooked branches of a hands breadth in length, bearing a small white flower, which produces a green husk, and turns red by degrees as it ripens, with a certain seed within it, being as hot and biting upon the tongue as the common brown pepper, and so does the husk. In the *East-Indies* they preserve it, and call it *Acizar*, and use it raw in their fish sauces. In *Brasil* they cut two or three of these husks whilst they are green in slices, and mix them with oil and vinegar, or some limon juice, to acuate their appetite, but it is too hot for those that are not used to it, which is allayed by a good quantity of salt. This kind of pepper grows likewise in the *East-Indies*, in the island of *Java*, in *Bengala*, and several other places. I have seen it also in some of our gardens in *Holland*. There is another shrub which grows frequently in the *East-Indies*, not unlike this in shape and bigness, which bears a yellow flower; it is call'd *Halika Kabus* by the *Arabians* or *Alkekengi*, and sufficiently known in these parts. The flower produces a small bladder which contains the fruit and seed, they are not so big as ours. The *Indians* and *Chinese* mix it with a certain fruit call'd by them *Poma d'Oro*, *Tamatas* by the *Portuguese*, and *Melanfana* by the *Italians*; they also eat it with *Chili Lada* or *Brasilian* pepper. The *Portuguese* cut the *Poma d'Oro* and the husk of the *Brasilian* pepper in thin slices, which being mix'd with oil and vinegar, they eat as a sallat, and look upon it as a proper remedy to cut the rough flegm of the stomach, a distemper very

common in those parts. The *Brasilians*, as well as the *Dutch*, chew this pepper for the same purpose, but it is very burning upon the tongue.

The sugar canes or reeds, call'd by the *Brasilians* *Viba*, are the product both of the *West* and *East-Indies*, but grow in great plenty throughout all *Brasil*, but especially in the captainship of *Pernambuko*. They are of two different kinds, one bearing small, the other larger leaves. The last, which is accounted the best, sprouts up into a long stem of the thickness of a child's arm, the leaves growing all on the top in a cluster, being of an oval figure, and a dark blue colour. The rind is distinguished by certain joints or knots; the other kind bears small leaves from the top to the bottom. The sugar-canes are propagated from their small sprouts, which being put in the ground like our vines, grow up to the height of twelve foot, if they are planted in good soil, and are kept free from weeds. Six months after they have been planted, a brown seed appears on the top, then it is fit to be cut; for if they stand longer in the ground their juice diminishes, dries up, and turns sour. The juice, if taken immediately after it is drawn, causes a looseness. The low grounds are much more convenient for the planting of sugar-reeds than the hills, especially near the river side, where the banks are often over-flown by the stream. There are a certain kind of winged worms, call'd *Guirapeakoka* by the *Brasilians*, and *Pao de Galinha* by the *Portuguese*, which are great enemies to the sugar-canes, especially in moist grounds, where they gnaw and consume the roots. The sugar, which is the product of these canes, is not procured without a great deal of toil and labour, in which for the most part are employed slaves, under the tuition of certain overseers, appointed by the masters of the sugar-mills, who were for the most part *Portuguese*, the *Dutch* being hitherto not arrived to the utmost perfection in that art. In the captainship of *Pernambuko*, many fine *Ingenbo's* or sugar-mills, with their adjacent plantations were erected for this purpose, amounting in all to above 100 in number, and the labourers, negroes, and other *African* slaves thereunto belonging, to near 40000. The whole yearly product of sugar of the *Dutch Brasil*, is computed to be betwixt 200000 and 250000 chests.

In the year 1642, one *Gillin Vonant Indig.* brought some indigo seed from the *American* islands into *Brasil*, who having certain lands assigned him near the small river *Mercera*, and being provided with all other conveniences by the special command of

the

*Sugar-*

*reeds.*

*Indig.*

*Fertility*  
of *Brasil*.

1647. the great council, erected several plantations for the producing of *Aniel* or *Indigo*: But it being found by experience, that the pisimires consumed most of the leaves, the said Mr. *Venant*, by employing many labourers and negroes, to destroy these pisimires with burning and digging, at last so well cleared the ground, that the *Indigo* came to its full perfection, several patterns of which were sent into *Holland*. Mr. *Venant* having made an agreement with Mr. *Christopher Eversbettel* to instruct him in the most necessary points relating to the coagulating the indigo, he was treating with the great council concerning certain grounds for the planting of indigo, so that there was a fair prospect of bringing this design to a considerable perfection here, if the same had not been prevented by the intestine war.

The wild *Aniel*, which grows in *Brasil* in great plenty, has a great resemblance to the true indigo in outward appearance, but affords no good colours. Some pretend to have seen also a kind of wild cochenille in *Brasil*, and the ground would produce good store of cotton, but that the inhabitants draw much more profit from the sugar-plantations.

Some ginger is likewise planted in *Brasil*, but not in such quantities as to be transported to other parts, no more than the *Mecbaconna*, *China* and some other medicinal roots; and the *Herba de Cubra* or *Herba de Nossa Senhora*, which is look'd upon as an infallible remedy against the gravel; and the root call'd *Paquoguanba*, which is the universal medicine of the *Brasilians*. There are also many transplanted hither from other parts, as ginger, tobacco, rice, cotton, turkey-wheat, *Aniel*, or indigo, and the sugar-reeds were first of all transported by the *Portuguese* from the *Canary Islands*. The fruits in daily use among the inhabitants, are *Ananas*, *Bananas*, *Mangaba*, *Akaju*, *Ara-kou* great and small, *Guajaba*, divers kinds of *Murukuja*, *Ibapiranga*, *Mazaxanduba*, *Akaja*, *Araliku*, *Guitakori*, *Biringela*, *Mama-on*, *Coco-nuts*, and several sorts of Indian figs. The roots chiefly in use, are the *Bataias*, *Nbambi* and *Umbi*, and the *Indian* acorns, call'd *Tembi*, which are of a delicious taste.

Fertility  
of Brasil.

The whole country of *Brasil* is extremely fertile and pleasant, being watered by many rivers and standing waters, most of which arise from the hills, and pass through spacious plains, the last of which are clayey and marshy grounds, (call'd *Vargeas* by the *Portuguese*) which produce all sorts of fruit: but especially sugar-canes in great plenty. Their meadows and pasture grounds do not appear so pleasant in the summer as

in the rainy season, when they are very green; wheat and rye grow soon rank here, which is occasion'd partly by the nature of the soil, partly by the heat of the sun; to prevent which they never let their grounds lie fallow, and manure them with sand instead of dung. The same must be observed with all other foreign seeds here, that require to be kept a considerable time under ground. In *February* and *March* (which is the rainy and winter-season of this climate) they sow their seeds, and that towards evening, not by day time, or about midnight. They take great care not to plant any thing too deep under ground; for whatever is planted beyond the sun-beams, seldom produces any fruit, which our people have learned to their cost. There is a remarkable difference betwixt the seeds and fruits which are produced on the hills, and those of the marshy grounds, as to their time of ripening; tho' the coco and palm-trees are transplanted here without the least regard to their age, bigness, or the season, and grow very well. Most of their own trees and shrubs bear flowers and fruits throughout the whole year, so that at one and the same time, you enjoy the benefit of the spring, summer and winter; the like is observable in the vines, citron, limon, and other trees, brought by the *Portuguese* from *Angola* into *Brasil*, and in several roots, pot-herbs, and other fruits, transplanted thither by the *Dutch*. Those who covet ripe-grapes throughout the whole year, do only prune their vines at divers times, which produce a fine grape, and a wine as sweet as molasses. The worst is, that they are much infested by the pisimires, which suck all the juice, and leave nothing but the husks to the owners; several other sorts of trees have been transplanted thither from *Holland*, which thrive extremely, and bear very good fruit.

The standing waters of *Brasil* are for the most part covered on the surface with green shrubs and herbs, that they appear rather like land than water, and feed both land and water fowl. At the entrance of most of their rivers, (where you meet with vast quantities of oysters and crabs) the country is so overstock'd with a certain kind of a tree call'd *Guaparaba* or *Mangle* by the *Brasilians*, that they render it impassable for travellers. In sho., the whole *Brasil* is well stored with trees, shrubs and useful woods, there being scarce a place, either in the vallies or rising grounds, which are clayey, or among the hills, which don't produce something that is useful, and that in such plenty, that the *Portuguese* after their first arrival here, were forced to cut their way through these trees with incredible

*Brasil*  
wood.

The stem or trunk of this tree is knotty, of a very agreeable scent, and sometimes two or three fathoms thick: Its leaves are dark-green, and small, thorny at the end, and grow on small stalks; the bark, which is about three inches thick, is generally taken from the trunk, before it is fitted for sale: It sprouts from its own root, and produces neither blossom nor fruit. Most of these trees grow about 10 or 12 leagues from the sea-side, where they cut them down, take off the bark, and carry them upon waggons to the sea-shore, from whence they are transported into *Europe* for the use of the dyers chiefly; the *Brasilians* call this tree for its excellency's sake, *Ibirapitanga*. After the *Dutch* had conquered part of *Brasil*, they found great store of this wood ready cut and fitted for use by the *Portuguese*, who sold it to the *Dutch* company; since which time it was cut down promiscuously by the *Portuguese* as well as the *Dutch*, and such vast quantities of it were transported in 1646, and 1647, that the members of the great council of the *Dutch-Brasil*, Mr. Henry Hamel, Bullestrate and Codd, being made sensible of the destructive methods that were made use of in cutting this wood, which must in time have tended to the utter extirpation of these trees, did by their proclamation regulate these abuses. They have another kind of very fine wood in *Brasil*, called by the *Portuguese*, *Pao Santo*, as likewise those call'd *Guayba*, *Vio Wood*, *Massaranduba*, cedar, and divers others woods fit for cabinet-work. The tree call'd *Tataiba* by the *Portuguese*, the wood of which the *Portuguese* call *Pao Amarello*, affords a yellow colour for the Dyers. The bark of the tree *Araiba* is of an ash-colour, but boil'd in water gives a red tincture. The tree *Jakauranda*, or *Jaturiba*, or the white-cedar, as well as several other Trees, furnish the inhabitants with materials for building, being very hard and durable. The *Brasilians* make also matches and a kind of hemp out of the bark of some trees.

The Timbo or Tibo.

The most barren places of *Brasil* do produce a certain kind of trees without leaves, which they call *Timbo* or *Tibo*; out of these they make hoops, by reason of their flexibility, and the bark serves the ship-carpenters instead of hemp.

Their fuel.

The *Brasilians* light their fires by striking two pieces of wood, of the trees *Karaguata Guacu* and *Imbaiba* together, as we do with our flint-stones and iron. The first

is a tree of an admirable nature: Its stem grows 14 or 15 foot high, which being come to its full perfection, bears yellow flowers on the top, and abundance of large long and thick leaves. Out of the stem they make sticks to hang their mattresses on, the leaves afford the fishermen stuff for yarn to make nets of; and out of the leaves issues a certain unctuous liquor, which serves instead of soap. The trees and woods of *Brasil* are never seen to be covered all over with leaves at a time; but whilst some cast their leaves, you see others bring forth new ones; nay, sometimes one tree is half covered with leaves, and bare on the other side. *Brasil* likewise abounds in shrubs and reeds, some of which creep along the grounds, whilst others twist themselves up to the top of the highest trees, which affords a very agreeable spectacle at a distance, and a pleasing shadow to men and beasts, tired with the heat, hunting, or any other exercise.

Among other fruits, *Brasil* produces very fine oranges of divers kinds; the other vegetables, which besides the *Mandika* root, serve for the sustenance of the inhabitants, are rice, millet, *Patatas*, *Ananas*, *Bananas*, melons, pumpions, water-melons, cucumbers, beans, figs, *Bakewas*, *Marakuya*, *Man-gavas*, *Arataku*, *Ape*, cabbages, radish, lettuce, purslain, parsley, chervil, carrots, &c.

Nothing is so much in request among the *Brasilians*, as the *Akaja*, a kind of wild apple, which furnishes them both with food and drink, being very juicy; so that this tree seems by kind nature to have been planted here for the peculiar comfort of the inhabitants: It spreads its branches round about in a great compass, but does not grow to that height as many other trees in this country: Its wood, which is very solid, is very fit for the building of ships, from whence issues a very clear gum in the summer-season. Its leaves, which are red, resemble those of our walnut-trees, especially when they first sprout forth in the spring, but are of a much finer scent, which they never lose but by being distill'd. The blossom is a flower consisting of five small leaves, which grow to the number of about a hundred in one cluster; each of these flowers has a stalk, with a small head in the middle. At their first coming out, which is in *September*, they are very white, but turn soon after to a rose colour; they are very odoriferous, and fill all the circumjacent grounds with their agreeable smell. This tree bears a double fruit, viz. an apple, and a chestnut: The apple is of an oval figure, very juicy; its pulp spongy, full of kernels, and of a tartish taste. The juice taints linen with a certain

1647.

The Akaja.

Palm-tree.

1674. certain colour, such as we call iron-molds; which is never to be taken out, but returns as often as these trees stand in blossoms; it is of a whitish colour after it is first prest out, and tartish, but changes both its colour and taste by fermentation, and becomes very strong. The rind of the apple, which is very thin, is white mixt with red. The chefnut, which grows on the top of the apple in the shape of a lambs kidney, is covered with a thin skin, over which grows a thick ash-colour'd shell, full of a hot, sharp and burning oil, which bites the tongue; To correct which, they roast the chefnut in the ashes, break the shell with a hammer, and eat the pith or kernel, which tastes better than a common chefnut, and will keep good for several years. The *Brasilians* are so fond of this fruit, that they often fight for it; then they encamp among these trees, and remove not 'till they have consumed all thereabouts, unless they are forced thereunto by the enemy. They number the years of their ages by this tree, because it bears fruit but once a year, which ripens towards the latter end of *December* or in *January*, there being none to be found on the trees after *February* in *Pernambuco*. About the time the sun returns back from the tropick of *Capricorn*, it commonly rains in *Brasil*, which the inhabitants call the rains of *Akojix*, for, if the same happens to be moderate, they promise themselves great plenty of this fruit. The chefnuts are hot in the second degree; if eaten raw with wine and salt, they taste like walnuts, but if roasted or preserved with sugar, they are of a delicious taste. The oil which is taken out of the shell, is an excellent remedy against the hair-worm; it is hot in the third and fourth degree, and frequently applied to cancers and other malignant ulcers. The gum, powdered and taken in a convenient vehicle, opens the obstructions of the womb. The juice of the apple furnishes them with good cyder.

There are many sorts of palm-trees to be met with in *Brasil*, some of which grow wild, some are planted and cultivated by the inhabitants. Among the first the palm-tree call'd *Pindava* by the *Brasilians*, which grows very tall, claims the preference, of which there are whole woods to be seen in the open Country. In the more remote and unfrequented places, grows a certain palm-tree called *Karanatbam* and *Anasbekairi* by the *Brasilians*, and by an *Arabic* word among the *Portuguese*, *Tamar*, or date, which this fruit resembles. The tree grows as high as a common date-tree, its wood is red and very solid, but of no great use. The bark is grey, which from the ground upwards to a certain part of the tree is distinguish'd by

Vol. II.

many scales, which are largest at the bottom, and small by degrees, 'till about the middle of the tree they quite disappear; these scales being nothing else but the remnants of the branches, which fall off by degrees, as the tree grows higher; and continue only towards the top, spread round about the stem, like the *African* date-tree, but much finer. Each of these branches is about two or three foot long, flat on two sides, and cover'd with small thorns, they grow to a vast thickness. At the end of each branch grows one single leaf, which is very large and green; pleated like a fan, and about the middle divided into several other leaves, like those of the common date tree; each of these last is about two foot long. Betwixt those branches, on which grow the leaves, spring forth other branches of four or five foot in length; and these again are full of other white sprouts, which bear flowers, with three pale yellow leaves; these produce a fruit of the bigness of an olive, which is green, bitter and not eatable, but turn black when they ripen, which is in *February*. The *Brasilians* call this fruit *Tirade*, and eat it raw; but our people never took any fancy to it. With the leaves they cover their huts, and make baskets of them. The palm-tree call'd *Pindava* by the *Brasilians*, has instead of the bark a white and rough wooden substance, which contains a spongy sulphurous substance, out of which the *Brasilians* prepare a strong lee. This tree is for the rest but of small use, being rather esteem'd for ornaments sake, by reason of its height and fine spreading branches, which however furnish the inhabitants with leaves to cover their huts, and to make baskets of; the *Portuguese* plant them near their walks and arbours, and round their churches. The leaves of this tree do not hang downwards like those of the coco-tree, but stand upright. Just by these leaves sprout forth certain branches, on which hang bunches of flowers, which produce the fruit, resembling in shape and bigness one of our largest hen-eggs, being sharpat the end, and fasten'd to the bunch on the other like the pine-apple. The outside is of a green yellow colour, inclining to a chefnut; being composed of a hairy substance like that of the coco-nuts, but not near so thick, scarce exceeding in thickness two egg-shells. Under this shell is an insipid saffron yellow pulp, which however is used by the negroes, who eat it with *Farinha*. Within this pulp is a hard nut, of an oval figure, not unlike the coco-nut, of the same thickness, but without holes; it contains a pith or kernel, as white and big as a walnut, but is not near so sweet as the coco-nut; they are eaten both by the natives and strangers, who are furnished

1647.

1647. with them throughout the whole year, and call'd by the *Brazilians Inajamira*, i. e. the small coco-nut. The kernels of these nuts furnish them likewise with a white cooling oil, which is used instead of our oil of roses, and when fresh drawn mix'd among their filets, but when decay'd, in their lamps. The shell affords an oil of the same nature, but not altogether so cooling. Out of the top of the tree flows a fine and odoriferous gum, used here instead of *Gum Arabick*; they also pick a certain pith or marrow out of the top, which has a taste like our walnuts, and when eaten with bread and salt is accounted very nourishing.

Coco-trees.

There also grow coco-trees in *Brazil*, call'd by the natives *Inajaguacuba*, and the fruit *Inajaguacu*. They are very different from the just now mentioned *Pindava* tree, their trunk or stem being seldom straight, but commonly crooked, sometimes from 7 to 14 foot thick, and 50 foot high; it is without branches, having only 15 or 20 leaves round the top, each of 15 foot long. They have also good store of the common date-trees both male and female. The vast quantity of pismires wherewith *Brazil* abounds, are great enemies to all the products of their grounds, which they endeavour to destroy by fire and water; it is farther to be observed, that some fruits as well as creatures, which are accounted venomous in *Europe*, are commonly eaten in *Brazil*, as on the other hand certain things are poisonous there, which are not in *Europe*. For they have a kind of frogs and some fishes which are extremely poisonous; whereas a certain sort of great pismires and adders, toads, worms and wild rats are eaten by the natives, without any harm.

The food of the *Brazilians*.

The most universal food of the *Brazilians*, is the flour made of the *Mandioka* root, called by them *Vi*, and *Farinha de Mandioka* by the *Portuguese*, as has been shewn more at large before. They feed also upon the flesh of several wild beasts and birds, crabs, craw-fishes, fruits, herbage; their meat whether boiled or roasted they eat half raw. They boil in earthen pots called *Kamu*, which they make themselves. Their flesh they roast thus; they dig a hole in the ground, the bottom of which they cover with leaves of trees, and upon them lay the meat to be roasted, which being covered with the same leaves, they throw sand or earth upon them. Upon this they light a good fire, which they continue till they think it sufficiently roasted. If they hit it right it eats very well, exceeding in goodness all other roasted meats, they call it *Biaribi*. Their fishes whether roasted or boiled they eat with *Inquitaya*, that is, salt and pepper. They boil their crabs or craw-

fishes without salt, and eat them with *Inquitaya*. Small fishes they wrap in leaves, and roast them in the ashes. They take the flour of the *Mandioka* root with their 3 hindermost fingers of the right hand, and so throw it into the mouth; in the same manner they do with beans and such like things; they eat often both day and night, they having no set times for their meals, without the least noise, or any drink, which they reserve till after they have done. They seldom use any spoons, but instead of that their fingers, or some oyster-shell or other serves their turn. The flesh of several wild beasts is much in esteem among the *Brazilians*; as for instance, that of the greater and lesser wild-boars; they have a bunch like a camel on their backs, and are very good food, as well as the flesh of the river pigs, called *Kapiverres* by the *Portuguese*, which is of a very agreeable taste,

Their drink.

The most general and most wholesome liquor used among the *Brazilians*, is their river or fountain water, which by reason of its coolness is a great refreshment to such as are tired by the heat, or the fatigues of other exercises; this is chiefly to be understood of their spring-water, which, though used here in great quantities, never causes any griping in the guts, or other inconveniences in the bowels, but on the contrary occasions a good appetite, and is soon evacuated by sweating.

The waters of the rivers *Paray* and *Paratybi*, are accounted a good remedy against the stone and gout, which is the reason that many arrive to the age of above 100 years, who drink nothing but those waters, and are never troubled with any of those distempers; for those who are advanced in age are as nice in the different tastes of those waters, as the *Europeans* in their wines; and they look upon those as indiscreet who use the waters without distinction. For, since most of their springs arise among the high eastern hills, they receive no addition either from the snows or any metallic bodies, and being well digested and purged from their dregs by the heat of the sun-beams, they are very clear and wholesome; tho' it must be confess'd that in the winter months some waters, by reason of the rains, are not fine and cool as during the summer-season. The negroes make sometimes a nasty mixture of black sugar and water only, without the least fermentation, which they call *Garapa*; this as it is very cheap, so both men and women sit at it for 24 hours together, spending their time in drinking, singing and dancing, but seldom quarrel, unless they have conceived some jealousy of one another. Sometimes they add to it some leaves of the *Akaju*-tree, which by reason

1647.

son of their hot quality make it the more heady. The *Portuguese* and *Dutch* frequently made a kind of forbette of water, sugar and lemons. Others pour water upon certain herbs, others put a lemon only in water. But besides these, the *Brazilians* know how to make wines or cyder out of several roots and fruits, which they drink at their merry meetings; especially of the *Bakovas*, *Ananas*, *Mangaba*, *Janipaba*, *Karaguta*, &c. For tho' the vines here bear grapes 3 times a year, nevertheless are they not sufficient to furnish them with wine. They make a kind of cyder, called by them *Koti*, of the apple *Akaju*; these they stamp in a wooden mortar and squeeze the juice out with their hands; which after it is settled they strain; it appears at first like milk, but turns to a pale colour in a few days; its taste is tartish, and apt to seize the head if drunk in any quantity; after some time it turns sour, and makes very good vinegar. The wine or liquor called by the *Brazilians* *Apy*, is made two different ways: First, the slices of the root *Aipimakakara*, a kind of *Mandioka*, are chewed by old women till they are as fluid as a pap, which they call *Karaku*; this they put into a pot, and boil it with a good quantity of water, stirring it continually till they think it fit for expression, which done, they call it *Kaviaraku*, and drink it luke-warm. Or else they take the same root purged and sliced in thin pieces, which they stamp and boil with water as before, which produces a whitish liquor, not unlike our butter-milk or whey; they drink it likewise warm, its taste being agreeable enough; they call it *Kacimakaxera*, tho' both kinds are generally comprehended under the name of *Apy*. The liquor called *Pakeby* is made out of the fruit of the tree *Pakobete*. What the *Portuguese* call *Vinho da Millo*, is a liquor called *Abaty* by the *Brazilians*, and made of barley or *Turkey* wheat, called *Maiz* by the *Indians*; the liquor *Nandi* has also derived its name from that excellent fruit called *Nana* of *Ananas*, being the strongest of all their wines or cyders. There is another sort of liquor called *Vinho da Batatas* by the *Portuguese* because it is made of the root *Bataias*: The natives call it *Jetici*. Thus the liquors called *Beutingui* and *Tipiaci* are both made out of the *Farinha* of the *Mandioka* root, viz. of the *Beju* and *Tepioja*.

The *Brazilians* are also great admirers of *French* or *Rhenish* brandy, called by them *Kacitata*, and swallow it very greedily as often as they can come at it. They are no less fond of tobacco, the herb of which they call *Peima*, and the leaves *Petimaoba*. After they have dried the leaves in the air, they lay them before the fire, to render

them the more fit for cutting. They smoke in pipes made of the shell of the rut *Pin-doba*, or of the *Urukuruba*, *Jocara*, *Aqua*, or such like; to wit, they cut a hole in one end of the shell, take out the kernel, and after they have polished them, put a wooden pipe or a piece of reed in the hole. The *Tapoyers* use very large pipes made of stone, wood or clay, the holes of which are so big that they contain a handful of tobacco at a time. Sometimes the *Brazilians* make use of our *European* pipes, called by them *Amrupetunbuaba*, and *Broken Katunbaba* by the *Portuguese*, and *Katgebouw* by the *Dutch*. Whenever the *Tapoyers*, especially those inhabiting the villages, descended from the *Tapoyers* called *Kariri*, prepare the liquors *Akavi* and *Apy*, it is done at the same time; then a day being appointed for a general merry meeting, they meet early in the morning at the first house in the village they belong to, where they consume most of the liquor, and make themselves merry with dancing; this done they go to the next house, where they play the same game, and so from house to house, till nothing be left or they can drink no longer. When they find themselves overcharged with liquor; they spew and fall to drinking again, and thus he who can spew and drink most, is accounted the bravest fellow of the company.

On the coast of *Brasil*.

On the north-west coast of *Brasil* are several considerable salt-pits: That near the house called the *Desert*, is about three or four leagues distant from the river *Aguarama*, of which one branch extends to the east, and discharges its water in this salt-pit with a spring-tide, which is here commonly with the new-moon. It is about 550 paces from the sea-shore, and receives no other water but from the river *Aguarama*. There is no bay or harbour near it, but only a flat sandy bottom for about half a league distance from the shore, where you may anchor at three fathom deep. The land-wind which constantly blows on this coast, commonly ceases towards evening, so that the vessels take the opportunity of the night to load salt. This salt-pit produces every month a certain quantity of salt, provided they be careful to shut their sluices as soon as the same is filled with water, for else they are in danger of losing what they had got before, by the next high-tide. To the east of this salt-pit are the famous rocks called *Baxos*, which at low-water may be seen from thence; they extend about three leagues deep in the sea; but don't begin till about a league from the shore, betwixt which and the rocks there is a passage, where you have ten foot depth at low-water. It ebbs here with the lowest tide about eight foot, and

1647.

Salt-pits.

a west-

1647. a west-south-west-wind raises the water to the highest.

About five or six leagues to the west of the house called the *Desert*, is the great salt-pit *Karwaratama*, which receiving its water from the sea, and being detained by sluices, produces very good salt in three weeks time. Five leagues further to the west is the river *Marilouva*, the second in rank in those western parts, but has not above twelve foot water at high-tide. On its east point, not above half a league within the mouth, is a very convenient salt-pit: These salt-pits are computed to be manageable with the assistance only of 10 or 12 negroes, 10 christians, and about 30 *Brazilians*, and to afford 2000 tuns of salt *per annum*, which may be transported from thence into the other parts of the *Dutch Brasil* in small barks, during the summer season. About half way betwixt *Rio Grande* and *Sicara*, as likewise in *Siara*, near the river *Wapanien*, are likewise several *Saltua's* or salt-pits.

Traffic of Brasil.

The chief traffick of *Brasil* consists in sugar, *brasil-wood*, and such like; as also in tobacco, hides, preserves, ginger, and cotton, which grows wild here, some indigo was likewise planted there before my departure; but among these, the sugar and *brasil-wood* are staple commodities. For since the tobacco began to be transported into *Holland* from the *American* islands, the planting of it was neglected in *Brasil*, where labourers wages being excessive high, they could draw much more profit from the sugar, of which, according to computation, betwixt 20000 and 25000 chests were yearly made only in the sugar-mills of the *Dutch Brasil*, if the harvest proves very good.

The peopling of Brasil.

The inhabitants of *Brasil* may at present be divided into free-born subjects and slaves; and these again consist of divers nations, both natives and foreigners. The free inhabitants of *Brasil* were the *Dutch*, *Portuguese*, and *Brazilians*, the last the natives of the country. But the *Portuguese* did not only surpass all the rest, at least ten to one in number, during my abode in *Brasil*, but also were in possession of all the sugar-mills and lands, except what was possess'd by a very few *Dutch*, who had applied themselves to sugar-planting, but were for the most part ruined by the intestine war, being forced to leave all behind them in the country: Besides those of the free inhabitants, who made it their business to manure the grounds, there were many merchants, factors, and handicrafts men: The merchants sold their commodities generally with vast profit, and would have questionless been rich men, had they not vented their goods upon credit to the *Portuguese*, who were re-

Free inhabitants of Brasil.

solved never to pay them, as the event has sufficiently shewn. The handicrafts men were able to get three, four, five, nay six guilders a day, so that many returned very rich to *Holland*. Those that kept publick houses and chandlers shops were likewise great gainers here, and carried off abundance of ready money. The officers in the company's service whether civil or military, were likewise punctually paid, which made many who had lived in the country before the beginning of the civil war, and had served the company before, take service again, who were all entertained according to their respective qualities and former stations.

Among the free inhabitants of *Brasil* that were not in the company's service, the *Jews* were the most considerable in number, who had transplanted themselves thither from *Holland*. They had a vast traffick beyond all the rest, they purchased sugar-mills and built stately houses in the *Recife*. They were all traders, which would have been of great consequence to the *Dutch Brasil*, had they kept themselves within the due bounds of traffick.

The Jew.

The slaves of *Dutch Brasil* were either negroes or natives of the country; the last of which were either bought in *Maranbaon* being prisoners of war, or from the *Tapoyers*, who likewise had made them captives, and otherwise, according to their custom, would have put them to death. For it being resolved immediately, at the first entrance of the *Dutch* in *Brasil*, that none of the natives should be made slaves (except they were either bought from the *Tapoyers* or brought from *Maranbaon*) the *Brazilians* were settled in certain villages to enjoy their own liberty under certain limitations, and permission was given them to assist the *Portuguese* in the management of their mills and grounds, for certain wages appointed for that purpose; by which means many *Alencas* or villages were filled with *Brazilians* in *Parayba* and *Rio Grande*, who during the time of our government enjoyed the sweets of a perfect liberty.

The slaves of Brasil.

Vast numbers of negroes of divers nations were entertained in the *Recife*, and the open country, for the manuring of the ground, and working in the sugar-mills of the *Portuguese*, which could not be done without them, by reason of the extremity of the heat of the climate, and the incredible toils they are fain to undergo; so that in my time near 40000 negroes were employed in the sugar-mills betwixt *Rio Grande* and *St. Francisco*. Most of these negroes are brought hither from the kingdoms of *Congo*, *Angola*, and *Guinea*; a black thinning skin, flat nose, thick lips, and short curled hair, is their chief beauty. The lustiest and most

1647. most laborious used in time of good trade, to be sold in *Brasil* for 70, 80, or 100 pieces of eight, nay sometimes for 1400 or 1500 gilders, but these understood something more than ordinary: But when trade began to decay, they were sold for 40 pieces of eight. There was scarce a *Hollander* of any substance but what had several of these slaves. They are most miserably and beastly treated by the *Portuguese*, though at the same time it must be confess'd that it is absolutely necessary they should be kept under a strict discipline; for they are full of rogueries, superstitious to the highest degree, and forerers: They would often pretend to tell us what ships were at sea from *Holland* for *Brasil*, tho' they were yet on the other side of the line, and how to recover stolen goods. I remember I happened once to be at a friend's house of mine, when I saw an old negro enter the kitchen, who came thither to cure a negro slave of his illness, which he told us was occasioned by witchcraft. He made the patient rise from his chair, and taking a piece of wood from the fire-hearth, he ordered him to lick three times with his tongue that end which was burning hot with the glowing coals. The same end of the wood he afterwards extinguish'd in a basin of water, and rubb'd the coals in it, till it turn'd as black as ink. This he ordered the sick negro to drink off at a draught, which he did accordingly, and was immediately seized with a slight griping in the guts. This done he rubbed both his sides, and taking hold with his hand of a piece of flesh and fat above the hip, he made an incision there with a knife he pull'd out of his pocket, of two inches deep, out of which he drew a bundle of hair and rags, with a little of the black water that was left he washed the wound, which soon after was healed, and the patient cured. They are very dextrous at swimming and diving, and will fetch a single piece of eight from the bottom of the sea, where it is very deep. They are also excellent fishermen, and get a great deal of money by it. They tie three or four great pieces of wood together, this they manage with one oar, and upon it go a good way into the sea, where they catch great quantities of fish with their hooks, and so return. It happened in my time, that a certain negro, who was very expert in fishing, was sold three times in a little while; this he took so much to heart, that the next time he went thus out a fishing, he tied a stone to his leg and drowned himself. Another negro having conceived a hatred against his master cut his throat, cut out his tongue, and made a house-of-office of his mouth, according to his own con-

VOL. II.

feccion; he was broke alive upon the wheel, which he endured with an incredible obstinacy. A negro woman was brought to bed in my time of a child, the hair and skin of which were not black, but red. I saw also a young lad born from negro parents, whose skin was white, and his hair and eye-brows the like, but curl'd, with a flat nose like the other negroes. Sometimes I have seen old negroes with long grey beards and hair, which looks very fine.

The natives of *Brasil* consist of divers nations, distinguished by their proper names, *liana* to wit, the *Tubinambos*, *Tobajaras*, *Petignaras* and *Tapujas*, or *Tapuyers*, or *Tapoyers*. The three first use one and the same language, and differ only in the dialect; but the last are subdivided into several nations, differing both in manners and tongue. The *Brasilian* men, which lived among us and the *Portuguese*, are middle-sized, strong and well made, with broad shoulders. They have black eyes, a wide mouth, with black curl'd hair, and a flat nose; the last of which is not natural to them, but the parents, looking upon it as a great beauty, squeeze their childrens noses flat, whilst they are very young. They paint their bodies, and some likewise their faces with divers colours; they have generally no hair about the mouth, tho' some have black beards. Their women are likewise of a middle stature, well limb'd, and not ill-featur'd; they have likewise a black hair, but are not born black, but by the heat of the sun-beams, acquire by degrees a yellow brown colour. The *Brasilians* come soon to maturity, and arrive to a great age, and that without distempers; they also seldom become grey, which is likewise observable in many *European* inhabitants here, who come to the age of 100 or 120 years. This must be chiefly attributed to the temperature of the climate, which is such, that in former times many *Spaniards* that laboured under some lingering distemper, whether in *Spain* or the *East-Indies*, used to come to *Brasil* to partake of the benefit of that excellent air and water; 'tis true, most of the children of foreigners are troubled with lingering sicknesses, so that scarce one in three arrives to a state of manhood; but this must not be attributed to the air, but rather to the bad nourishment. Few cripples or crooked people are to be met with among the *Brasilians*, they being generally very strait and nimble, which is the more admirable, because they never do their children up in swathing cloths, except their feet, looking upon it as unwholesome.

Before the *Dutch* got footing in *Brasil*, the *Portuguese* had made all the natives their slaves, and look'd upon it as the greatest

N n

piece

1647. piece of policy quite to extirpat: them, which they did so effectually, that where is about 100 years ago, the captainships of *Rio Grande* alone could raise 100000 fighting men, scarce 300 were to be met with in 1645 and 1646, which had created a mortal hatred in the *Brazilians* against the *Portuguese*; tho' it must also be confess'd, that the late war and some epilemical distempers did sweep away many of the natives. The remainders of them liv'd in certain *Aldens* or villages assigned them for that purpose, where they had their plantations; besides which they served the *Portuguese* in their sugar-mills for a certain monthly pay, which furnished them with clothes and other necessaries. Their huts are made only of wooden stalks, covered with palm-tree leaves. They can't endure the yoke of slavery, nor any toil, especially the *Tapoyers*; they live very quietly among one another, unless they get drunk, when they sometimes sing and dance day and night. Drunkenness is a vice belonging to both sexes here, of which they are so fond, as to be past remedy, tho' this

occasions often quarrels and other enormous vices among them. They are likewise much addicted to dancing, which they call *Guan*; they have several ways of dancing, one of which is call'd *Urukapi*; they commonly sing whilst they are dancing. The children divert themselves with divers sorts of games, one is call'd *Kurupirara*, another *Gualbipaie*, and a third *Guaibiquaibuku*. They will sleep sometimes a whole day and night, and would not stir then if they did not want victuals. Near their hammocks they keep a fire day and night, in the day to dress their victuals, in the night to allay the rawness of the air, which here is colder than in most parts of *Europe*, because day and night is almost of an equal length here throughout the year.

The inland *Brazilians* of both sexes, go <sup>their</sup> quite naked without the least covering. But those inhabiting nearer to the sea-shore, who converse with the *Dutch* and *Portuguese*, wear only a shirt of linnen or callicoe; tho' in my time, some of the chieftest among them began to take a pride to cloth themselves after the *European* manner. The wife

constantly follows her husband wherever he goes, even in the war. He carries nothing but his arms, but the poor woman is loaden like a mule or sumpter-horse. For besides a great basket which is tied to her back, (call'd by them *Patigna*) she has an-

other upon her head, with all the household stuff in it, or a great basket with flower; besides which several other smaller vessels hang on both sides, wherewith they take up water for their drinking. The child is carried in a piece of callicoe, which is fastned

After all this, she carries a parrot or ape in one hand, and leads a dog in a string with the other. Thus they proceed on their journey, without any farther provision except a small quantity of *Farinha*; the hedge or open fields serve instead of inns, which furnish them with necessary food, as the rivers and springs with drink; and so does the tree call'd *Karagata*, which contains always some rain-water within the hollowness of its leaves, to the great relief of travellers, who in some barren places, do often not meet with a river or spring for 12 leagues together. Towards night they hang their hammocks on trees, or else fasten them to stalks neatly; they make a fire to dress their victuals, and against the rain defend themselves with palm-tree leaves. When they are at home, the husband goes commonly in the morning abroad with his bow and arrow, to shoot some wild beast, or catch birds, or else to the sea-side, or next river a fishing, whilst the women are employed in the plantations; some women go abroad with their husbands and carry home the prey. The wild beasts are caught by them in a different manner; some they kill with arrows, others they catch in pits dug for that purpose, and covered with the leaves of trees, under which is hidden some carrion, the scent of which draws them to the pit; this they call *Petaku*. They make also certain wooden traps, and use divers other ways of catching the wild beasts, each of which they distinguish by their proper names. To catch birds they use three sorts of snares or nets, call'd by them *Jukana*; the first sort catches the birds by the feet, this they call *Jukanapirara*; the second entangles them by the neck, which they call *Jukanajuprara*; the third ensnares their bodies, call'd by them *Jukanapitereba*. They kill the fishes with arrows, or catch them with fishing hooks, their baits being commonly worms, crabs, or some small fishes. They bait the water where they intend to fish, with the leaves of *Japikai*, or with *Tupotiana*, *Tinguy*, or with *Tinguiri*; sometimes with the fruit call'd *Kururuape*, the root *Magui*, or the bark of the tree *Anda*, which make the fish swim on the surface of the water like dead, when they take them with a kind of a sieve, call'd by them *Urupema*, made of cane or reed, which they call *Uruguiboandipia*. Their sea-fish they catch with iron hooks, the bait being some carrion; they go a good way into the sea, only upon three pieces of wood fastened together, which they call *Igapeda*, and the

*Portuguese Jangada*; the wood is commonly of the tree *Apiba*.

The *Brasilians* are not burthened with much household-stuff, their hammocks being their chiefest care in this kind; they call them *Ini*, are wrought of cotton like net-work, of about six or seven foot long, and four broad. When they are going to sleep, they fasten them either to two beams of their huts, or else in the open air to two trees, and some distance from the ground, for fear of some obnoxious creatures, and to avoid the pestiferous exhalations of the earth. The *Tapeyers*, call'd *Kariri*, have very large hammocks, of 12 or 14 foot long, which contain four persons at a time. The *Portuguese* women make some very fine hammocks, wrought with divers figures in them. In lieu of dishes and cups they use the *Kalabassick*, cut in the middle, which are painted without with a certain red colour, call'd *Uruku*, and within with black. Their cans, cups and mugs, are likewise *Kalabasses* of divers kinds, call'd *Kuite*, *Jaroba*, and *Kribuka*. One of the biggest of these *Kalabasses* hold 30 or 35 quarts; this the *Brasilians* call *Kuyaba*, but when cut thro' the middle it is called *Kuipeba*. The poorer sort make certain knives they call *Iluque*, of stone, as also of cane, which they call *Taquoaquia*, but the better sort use *Dutch* knives. Their baskets they make of palm-tree leaves, they call them *Patigua*; they have also some made of reed or cane, these are with one general name call'd *Karamemoa*. They make also large broad baskets of reeds and branches twisted together: These they call *Panaku*, and are chiefly used for the carrying of the *Mandioka* root. In their journeys they always make use of the *Patigua*, but the *Panaku* is used by the slaves and negroes in the *Receif* for the convenience of carriage.

The arms of the *Brasilians* are only bows, arrows, and wooden clubs. Their bows, which they call *Guirapara* and *Virapara*, are made of very hard wood, called *Guirapariba* and *Virapariba*: The bow-strings are made of cotton twisted, and by them call'd *Guirapakuma*; the darts they call *Uba*, and are made of wild cane. The points of these darts are either of wood hardened, or of fish teeth call'd *Jacru*, or of bones or cane well sharpened; some have several points, others but one.

Being not in the least acquainted with arithmetic, they compute the number of their years and age by the chestnuts which grow on the fruit *Akaju*, which chestnuts they call *Akaguakaya*, as likewise *Akajuti* and *Itamabara*, of which they lay one by every year, this tree producing fruit but once each season, viz. in December and January.

1647. *nuary*. They begin the computation of their years with the rise of a certain star, call'd by them *Taku*, or the *Rain-star*, which is always there in *May*; they also call the year by the same name.

Their religion.

The most barbarous of the *Brasilians* inhabiting the inland countries, scarce know any thing of religion, or an almighty being. They have some knowledge remaining of a general deluge, it being their opinion, that the whole race of mankind were extirpated by a general deluge, except one man and his own sister, who being with child before, they by degrees re-peopled the world. They know not what God is, nay, they have no word expressing the same, unless it be *Tuba*, which signifies as much as something most excellent above the rest; thus they call the thunder *Tubakununga*, i. e. a noise made by the supreme excellency, for *Akununga* implies as much as a noise. They are unacquainted with heaven or hell, tho' they have a tradition among them, that the souls don't die with the bodies, but that they are either transplanted into devils or spirits, or else enjoy a great deal of pleasure with dancing and singing in some pleasant fields, which they say are behind the mountains. These fields are enjoyed by all the brave men and women, who have kill'd and eaten many of their enemies; but such as have been idle, and never did any thing of moment, are tortured by the devil, unto whom they give many names, viz. *Anbanga*, *Jurupari*, *Kurupari*, *Taguaba*, *Temoti*, *Taubimama*. They have however some sort of priests among them whose business is to sacrifice, and to foretell things to come; these are especially consulted when they are to undertake a war or journey; they call them *Paye* and *Pey*. They dread spirits to the highest degree; they call them *Kuripira*, *Taguai*, *Macabara*, *Anbanga*, *Jurupari*, and *Marangigona*, tho' under different significations: For *Kuripari* implies as much as the God of the mind or heart. *Macabara* the God or patron of travellers; *Jurupari* and *Anbanga* signify the devil; *Marangigona* implies as much as the *Manes* or remainders of the soul after death, which are so much dreaded by the *Brasilians*, that some of them upon an imaginary apparition of them, have been struck with sudden death. They don't perform any worship or ceremony to those spirits, except that some pretend to appease their wrath by certain presents they fasten to certain stakes fix'd in the ground for that purpose. Some of the *Brasilians* acknowledge the thunder for the supreme being, others the *Lesser Bear* in the firmament, others some other stars. The *Potiguaras*, a nation a-

mong the *Brasilians*, are accounted such forerers, that they bewitch their enemies even to death: They call this manner of witchcraft *Anhamombikab*. The *Brasilians* that lived among the *Portuguese* and *Dutch*, did in some measure follow the christian doctrine, but so coldly, that few, when they come to an advanced age, shew much zeal for it; because the fundamental articles of our faith are not easily imprinted in them, unless in their tender years, and when they are remote from their parents. However several of the *Dutch* ministers, viz. Mr. *Dorelaer*, and after him Mr. *Thomas Kemp*, have had good success in: converting many of the *Brasilians* in the *Aldeas* or villages where they preached, the last of these two being well versed in the *Brasilian* tongue. Neither were *Dionysius Biscearia*, an honest old *Castilian*, and *Johannes Aprius*, less remiss in performing their duty to instruct these infidels. There were likewise three *Dutch* schoolmasters among them, who taught their young people to read and to write, but these were forced to leave their *Aldeas* or villages during the last intestine commotions raised by the *Portuguese*.

Many distempers which are common in *Europe* are unknown in *Brasil*: They use nothing but simple remedies, and laugh at our compositions. They are very dextrous in applying their remedies, especially their antidotes: They draw blood by suction with horn cups, by scarification, or opening a vein; instead of a lancet they use the tooth of a lamprey, call'd by them *Kakaon*, without which no body stirs abroad. So soon as any one of their acquaintance is fallen ill, they all meet, each offering his remedy, which he has found good by his own experience: Then they begin to cut and slice the most muscular parts of the body, either with the thorns of the tree *Karnaiba*, or with fishes teeth, till they have drawn as much blood as they think fit, and for that purpose suck the wounds with their mouths, by which means they pretend to draw all ill humours from the affected part. Vomiting they procure by means of the leaves *Karnaiba*, which being twisted together, they force down the patients throat. When all these pretended remedies prove ineffectual, they proceed to no others; but after some consultation, quite despairing of his recovery, knock him on the head with their clubs, looking upon it more glorious to be thus bravely delivered from their misery, than to expect death till their last gasp. They exercise as much barbarity upon the dead carcases of their friends as of their enemies; upon the first out of love, against the last out of revenge; for they tear them to pieces with

their

1647. their teeth, and eat the flesh like a dainty bit.

Their child bearing.

The *Brasilians* women are extremely fruitful, have very easy labours, and rarely miscarry: For no sooner is a woman delivered, but up she gets to the next river, and without any farther help washes herself there: In the mean while the husband keeps the bed for the first 24 hours, and is made as much of as if he had been lately brought to bed. The mothers lament the death of their infants with howling and crying for three or four days.

How they welcome their friends.

They receive their friends after a long journey with open arms and tears, and beating their foreheads against their breasts, in remembrance of the misfortunes they have undergone during their absence. Tho' the *Brasilians* were always supposed to be descended from the race of men-eaters, yet by their conversation with us and other nations, many of them have laid aside their barbarity, and are become as affable and civilized as most of the *European* nations.

The Tapoyers.

The *Tapoyers* inhabit the inland country of *Brasil* to the west of these countries in the possession of the *Portuguese* and *Dutch*, betwixt *Rio Grande* and the river *Siara*, as far as *Rio St. Francisco*. They are divided into several nations, distinguished both by their language and names: For the *Tapoyers* bordering upon the utmost confines of *Pernambuco*, are called *Kariri*, under their king *Ceriankejou*; the next to them the *Karirivau*, whose king was *Karapoto*; then the *Kariryon*, and so farther the *Tararyou*; the last of which were best known unto us, *Janduy* or *John Dwoy* being their king; tho' some of them lived under the jurisdiction of one *Karakara*. Divers were govern'd by other kings, viz. *Prityaba*, *Arigapagn*, *Wabafewojng*, *Tsering*, and *Dremenge*. Those under king *John Dwoy* inhabit to the west beyond *Rio Grande*, but change their habitations pretty often: About *November*, *December*, and *January*, when the fruit *Kajou* begins to ripen, they come towards the sea-side, because little of it is to be met with in the inland countries. The *Tapoyers* are very tall and strong of body, exceeding both the *Brasilians* and *Dutch* both in strength and tallness by the head and shoulders. They are of a dark brown colour, black hair, which hangs all over their shoulders, they only shaving it on the forehead as far as to the ears. Some are shaved according to the *European* fashion; the rest of their bodies they keep without hair, even without eye-brows. Their kings and great men are distinguished from the vulgar by the hair of their heads and their nails; the first their kings wear shaved in the shape of a crown, and

Vol. II.

have very long nails on their thumbs; but the king's relations or other officers of note, wear long nails on all their fingers, except their thumbs; for long nails is accounted a peculiar ornament among them. The *Tapoyers* are very strong; prince *Maurice* being one time in a humour to try their strength and skill in fighting with a wild bull, caused one to be brought within his outward court, which was surrounded with palisadoes, in order to engage two *Tapoyers* appointed for that purpose.

There was a great concourse of people to see this spectacle, when on a sudden two *Tapoyers* (the rest with their wives being only spectators) came in stark naked, without any other arms but their bows and arrows. The bull saw them no sooner enter, but he made towards them, who being extremely nimble, avoided the strokes he made at them with great dexterity, and in the mean while so gall'd his flanks with their arrows, that the beast roar'd most terribly, and being all in a foam, set upon them with all his vigour, which they avoided by retiring every foot behind a tree that stood in the middle of the court, and from thence continued to pierce his sides with their darts, till finding the beast begin to languish by the loss of blood, one of the *Tapoyers* got upon his back, and laying hold of his horns, threw him upon the ground, and being seconded by his comrade, they both kill'd the bull, roasted him under ground, with a fire above it, according to their custom, and feasted upon the meat, with the other *Tapoyers* there present.

The *Tapoyers* of both sexes, from the king to the common fellow, go quite naked, only that the men hide their privities, by tying the yard in a little bag or net made of the bark of trees; this they close up with a small ribbon call'd *Takogaynbaa*; when they want to piss they untie it, and are more cautious in exposing their privities, than some of the *Europeans*: In the same manner do the rest of the *Brasilians* inhabiting the inland countries. The women of the *Tapoyers* cover their privities only with a handful of herbs, or a small branch of a tree, with the leaves on them: This they thrust barely under a small cord or rope which is fastned round their middle like girdles: In the same manner they cover their backsides, but so carelessly, that both before and behind, great part of both is exposed to view; they change it every day. The men wear also a kind of garland made of the feathers of the bird *Guara* or *Kaninde*, upon their heads, from which certain feathers of the tail of the bird *Arara*, or *Kamud*, hang down behind upon the back; some only

1647.

Their sitting.

Their sitting.

O o

tie

1647 *habit of y Tapoyars*

tie a cotton string round their hands, in which some red or blue feathers are fastned behind; this they call *Akanbuaçaba*. They have also cloaks made of cotton-thread, and woven like a net; in each of the holes they stick a red feather of the bird *Guara*, and intermix them with black, green, and yellow feathers of the birds *Aakukaru*, *Kazinda*, and *Arara*, which lie as close together as fish scales: There is a kind of cap on the inside of this cloak, which with the rest covers the head, shoulders, and the body, somewhat below the middle, so that it is worn both for ornament and conveniencies sake, it being proof against the rain; they call these cloaks in their tongue *Guara Abuku*. They also fasten certain combs of birds with wild honey to their foreheads, these they call *Aguana*.

If their fathers or mothers die, they pull every hair out of their heads; they have holes in their ears so big, that you may thrust a finger into them; in this they wear either a bone of an ape call'd *Nambipaya*, or else a piece of wood, wrapt up in cotton-thread. The men have holes in their under lips, in which they wear either a crystal, smaragd or jasper, of the bigness of a hazel-nut: This stone they call *Metara*, and if it be green or blue, *Meta-robi*; but they are most fond of the green

ones: They have also holes in their cheeks on each side of the mouth; in these the married men wear a piece of wood of the bigness and thickness of a good goose-quill: Sometimes they wear a stone in it call'd *Tembekoareta*: In the holes of their nostrils, some have also such like sticks of wood, which they call *Apiyati*: Their bodies are all over painted with a certain juice of brown colour, squeezed out of the apple *Janipapa*; this is even used among the women and children. Besides this, they stick feathers of divers colours with wild-honey or mastick to the skin of their bodies, which make them appear at a distance like large birds; this they call *Akamongui*. Thus they adorn their arms with garlands made of red and yellow feathers of several birds, call'd *Aguamiranga*; sometimes they mix corals among them, which they call *Arakoaya*. They make also a kind of bracelets of the rind of the fruit *Aguay*; these they wear round their legs, and make a noise when they are dancing. Their shoes are made of the bark *Kuragua*, and call them *Miapakabas*. Some nations of the *Tapoyers* use no bows or arrows, but throw their darts with their hands, but the *Kariri* have bows. Their clubs are made of very hard wood, are broad on the top, and full of teeth or bones, well sharpened

at

1647. at the end. Round the handle they wind a piece of callicoe, or some other stuff, and at the end a bush of feathers of the tail of the bird *Arara*; such another bush is fastened round the middle; they call them *Airabebe* and *Jairabebe*. Their trumpets which they call *Kanguenka*, are made of mens bones; but those called *Nbumbugaky*, which are much larger, are of horn; they have also another sort made of cane, called *Membrapara*. The *Tapoyers* are not so good soldiers as the rest of the *Brasilians*, for upon any smart encounter they trust to their feet, and run away with incredible swiftness. They neither sow nor plant, not as much as the *Mandioka* root, their common food being fruits, roots, herbs, and wild beasts, and sometimes wild honey, which they take out of the hollow trees. Among all other roots they are extremely fond of a certain kind of wild *Mandioka* root, which rises up to the height of a small tree. Its stem and leaves resemble the other *Mandioka* root, but it is not near so good; the inland *Brasilians* call it *Cuguaçuremia*, but those inhabiting near the sea-shore *Cuamandiiba*.

They eat also mens flesh; for if a woman happens to miscarry they eat the child immediately, alledging, that they cannot bestow a better grave upon it than the belly, from whence it came. The *Tapoyers* lead a kind of vagabond life, like some of the *Arabians*, though they always remain within their certain bounds, within the compass of which they change their habitations according to the different seasons of the year; they dwell for the most part among the woods, and live upon hunting, in which perhaps they excel all other nations; for they will shoot a bird flying with their arrows. So soon as a woman has conceived, she abstains from her husband; after she is brought to bed, she goes into the next wood, where she cuts the child's navel-string, with a shell, boils it afterwards with the after-burthen, and eats them both. She washes her self and the child every morning and evening, neither does her husband keep her company, as long as she gives suck, unless he has but one wife. If a woman be discovered to have had an unlawful commerce with another man, her husband turns her away, but if they are catch'd in the act, he may kill them both. The mothers take extraordinary care that the nuptials of their daughters are not consummated 'till after they have had their monthly times, which they give notice of to their physicians, and these to the king, who then gives them license to go to bed with the bridegroom, who pays his acknowledgment to her mother,

for the care she has taken of her daughter. If a young maiden be marriageable, and yet not courted by any, the mother paints her with some red colour about the eyes, and thus carries her to the king, who orders her to sit down near him upon a carpet, and blows the smoke of tobacco in her face. After which he thrusts his yard into the woman's privities, and if any blood comes forth, he licks it up, which is esteem'd a singular honour among them. For the rest of the *Tapoyers*, are the worst of all the other *Brasilians*, being ignorant of any thing that relates to God or religion; neither will they receive any instruction of that kind. They have certain priests or rather force-ers, who pretend to foretell things to come, and to raise spirits, which they say appear to them in the shape of a fly, or any such like insect: When these spirits disappear, the women make most horrible cries and lamentations, in which consists the main point of their devotion. They avoid night journeys, for fear of serpents and other venomous creatures, neither will they set on a journey 'till the dew be dried up by the sun-beams. Several nations of the *Tapoyers*, especially those under king *John Dwey*, liv'd always in a good correspondence with the *Dutch*, unto whom they afforded at divers times considerable assistance; tho' they did not submit to their jurisdiction, but were governed by their own kings. King *John Dwey* had 60 children by 50 wives, tho' sometimes he had not above 14 wives at a time; these *Tapoyers* having a mortal hatred to the *Portuguese*, used to kill them wherever they could meet with them. And thus much may suffice concerning the manners, way of living, cloaths, &c. of the natives of *Brasil*; I will now proceed to give you an account of my voyage back into *Holland*.

Being sensible, as I told you before, that things grew worse and worse every day with us here, I with much ado got leave to depart, and accordingly the 23<sup>d</sup> of July 1649 I went aboard the ship call'd the *Union*, mann'd with 80 sailors, under the command of captain *Albert Jants*, a native of *Groningen*. We set sail the same day in company of the *Blue-Eagle*, and a yacht call'd the *Brasilian*. We left the city of *Olinda* to the south-west in the evening; the 25<sup>th</sup> we were under 3 degrees 6 min. with a north-north-east course, we sail'd that day about 28 leagues. The next day we pass'd the line, with very fair weather and wind; we continued our course without any remarkable accident 'till the 1<sup>st</sup> of August, when about noon we found our selves under 2 deg. 46 min. having sail'd 29 Leagues in the last 24 hours. The same evening

1647.

1649.

The author's return to Holland.

1649. we saw the first time the north-pole star, after we had pass'd the line. The 2<sup>d</sup> of *August* we sail'd 23 leagues with a fresh gale, and found our selves under the 11<sup>th</sup> deg. 13 min. We continued this our course with a fair wind, 'till the 16<sup>th</sup> of *August* when we were becalmed, we did not advance above 60 leagues that day, being under the 26 deg. we found it exceeding hot. The 20<sup>th</sup> of *August* we had but a slender south-east wind, we found our selves under 29 deg. 45 min. we were much troubled with heat, for want of the cool winds, that the knives in the cabin were so hot, that nobody could hold them in his bare hands, nor any one could touch the deck of the ship with his hands or feet. We continued our course thus 'till the 29<sup>th</sup>, when being under 38 deg. 46 min. we made about eight leagues that day. The 3<sup>d</sup> of *September* being under the 40<sup>th</sup> deg. 18 min. we espied a sail which we found to be a vessel bound for *Virginia*. Towards evening we were forced to stay sometime for the *Brasilian* yacht, she having lost one of her masts. The next following day in the morning we discover'd the island of *Corfu*, whither we directed our course.

The Flem-  
ming  
Islands.

*Corfu* and *Floris* are two of the nine islands, the *Dutch* commonly call the *Flemming Islands*. The biggest is *Tercera*, being about 16 leagues in compass. It is very rocky, but fruitful, producing a considerable quantity of oxen, and abounding in canary and other birds. Here is a spring that turns wood into stone, and several hot-springs, in which you may boil an egg. The ground seems to be full of concavities, which is the reason of the many earthquakes here, which over-turn and destroy houses, men and beasts. The island call'd the *Peake* has a rock which reaches to the very clouds, and which as some suppose, may be parallel'd for its height to the peake of the *Canary Island* itself. Betwixt the coast of *Brasil* and the said Islands, the compass bears due south and north. We were gone eight degrees farther to the west, than we intended. About noon we found our selves under 40 deg. and 34 min. We continu'd our course without any remarkable accident, 'till the 16<sup>th</sup> of *Sept.* when we supposed our selves to be not far from land, which we discovered the same evening to the north north-east of us. The 17<sup>th</sup> we were becalm'd, and catch'd more fish than we were able to eat. The 18<sup>th</sup> we discover'd the *Isle of White* to the north of us, whereabouts one of our ships was separated from us; not long after we saw the point of *Dover*. The 19<sup>th</sup> we pass'd by *Dunkirk* and *Ostend* with a brisk gale, and about noon safely arriv'd in the road of *Flussingen*. I got imme-

The an-  
chor ar-  
rives at  
Flussin-  
gen.

diately ashore, and after having refreshed myself for five days, I went to *Middleburg*, where I likewise continued five days. From thence I continued my journey over *Dort*, *Rotterdam*, *Delft* and *Harlem* to the famous city of *Amsterdam*, from whence I undertook this *West-India* voyage 1640. From *Amsterdam* I went to *Zwell*, the birth-place of my father *John Nieuhoff*, and so to *Ben-then*, my native countrey, where I met with my parents in good health, after so many fatigues of a tedious voyage; whilst I was at *Benhem* my father died 1651, the 15<sup>th</sup> of *May*, in the 85<sup>th</sup> year of his age, being lamented by all, by reason of his good qualifications.

Some troublesome people laid the loss of the *Dutch-Brasil* at the door of the members of the great council, viz. *Henry Hamel*, *Adrian Bullestrate* and *Peter Jande Bas*, who left *Brasil* 1647. It was alledged that the before-mentioned contracts made with the *Portuguese* had given them great opportunity of a revolt; for which it was said the said members had received great sums of money; but it being evident that the succeeding members of the great council having taken cognizance of that affair before their departure, Nov. 6, 1646, and in *March* 1647, they were fully cleared of these accusations, the same having been transacted by special orders of the council of *XIX.* in *Holland*; besides, that the revolts which were about the same time in agitation in *Angola*, *Africa*, and the island of *Ceylon* in the *East-Indies*, where no such contracts were made, do sufficiently testify that the foundation of this intestine war was laid in *Portugal*, long before the contracts were set on foot. What is more surprising is, how the *Portuguese*, considering we were pretty well provided with forts and garri-sons, durst think of such an attempt; but the reason is plain, for what they wanted in strength or otherwise, they were supplied with from the *Bahia*.

The motives that induced the *Portuguese* to this revolt, were the recovery of their liberty, the difference of their language and manners from ours; but especially of religion, which our people endeavoured to establish in *Brasil*; these with some other concurring circumstances, such as our present weakness and the disposition the states were in at that time, to be fairly rid of *Brasil*, gave them sufficient encouragement for this attempt. It has been the opinion of some, that the first sparks of this rebellion might soon have been quenched by seizing some of the heads of the *Portuguese* faction; but it being apparent from the records, that nothing was left unattempted upon that account, tho' without any

the *Dutch*.

What in-  
duced the  
*Portu-  
guese* to re-  
bel.

1649. any considerable success, the same cannot be imputed to the neglect of the government; the true reasons of the loss of *Brasil* were the slender garrison, and the inconsiderable number of *Dutch* inhabiting there; nothing being more obvious, than that a conquered country must be maintained, either by a sufficient military force, or strong colonies; the last of which was the constant practice of the ancient *Romans*, who besides this back'd them with good armies to keep the conquered nations in obedience. Another way of establishing themselves in a conquered country, tho' a very barbarous one, was introduced by the *Spaniards* and *Portuguese* in *America*, who by destroying the ancient inhabitants, and planting colonies of their own, saved themselves the charge of keeping many forts and garrisons for their defence. Neither of these was sufficiently observed by the *Dutch*, after their conquest of the *Dutch-Brasil*; for according to their agreement made with the *Portuguese*, the last were left in the entire and quiet possession of all the sugar-mills, plantations, and grounds thereunto belonging, whereby the *Dutch* subjects were in a manner excluded from getting any considerable footing in the open country, especially, since such of the sugar-mills as happened to fall into the companies hands, by forfeiture or otherwise, were sold promiscuously to both nations, and commonly at such excessive rates, that the *Dutch* durst seldom venture upon them; the taxes laid upon every thing belonging to the sugar-mills, and upon the sugar itself, being so great, that little profit was to be reap'd from thence, unless the sugar sold at a very dear rate; whereas on the contrary, we ought after the example of the *Spaniards*, to have endeavoured to draw our subjects into *Brasil*, by the granting of considerable immunities of honour and other advanta-

ges. The military force of the *Dutch* in *Brasil*, was likewise not duly regarded; for whereas according to a just estimate made in 1641, by count *Maurice*, 7076 men were absolutely requisite to maintain the *Dutch* garrisons there, the states of *Holland* instead of following his directions, did after the conclusion of the ten years truce with *Portugal*, order the great council of the *Dutch-Brasil*, to reduce their forces there to 18 companies of 150 men each, and tho' several remonstrances were made upon that head to the contrary, the truth of which was verified by the event; yet the succours sent from *Holland* arrived so slowly, that after my departure things grew worse and worse every day, and the *Dutch* had lost all their strong holds 1654. For the *Portuguese* began to blow up the *Receif* by sea, with 16 ships, and to besiege it by land 1653, in *December*, with such success, that our people being constrain'd by hunger, and the garrison refusing to fight, were forced to surrender the place with all its circumjacent forts to the enemy; since which time the *Portuguese* have remained in the entire possession of *Brasil*, the same being confirmed to them by the peace made the 6<sup>th</sup> of *Aug.* 1660, betwixt *Portugal* and the states of the united provinces, in which, among others these following points were agreed upon.

That the crown of *Portugal* shall be obliged to pay to the states the sum of 80 tons of gold, either in ready money or sugar, tobacco or salt, or else assign the said money upon the *Portuguese* customs.

That the places taken on each side should remain to those, who were then in possession of them.

And that a free trade should be allowed to the *Dutch* in *Portugal*, *Africa* and *Brasil*, without paying any more customs than the native *Portuguese*.

VOYAGES

AND

TRAVELS

TO THE

EAST-INDIES.

1653.

The au-  
thor's de-  
parture to  
the East-  
Indies.

**A**FTER a short stay in my native country, I resolv'd to take a view of the *East-Indies*, and accordingly embark'd at *Amsterdam*, on board the ship call'd the *Calf*, carrying 24 guns, under the command of *Cornelius Just*. The 23<sup>d</sup> of *August* 1653, we set sail from the *Texel*, in company of four ships more, viz. the *Peace*, the *Lamb*, the *Golden Drake*, and the *Nacden*, steering our course towards the north of *Ireland*, not thinking it safe to pass thro' the channel of *England*. The 24<sup>th</sup> we steer'd our course north by west, under 54 deg. 46 min. toward evening we cast anchor at 13, and in the night found 17 fathom water. We continued the same course the 25<sup>th</sup>, under 55 deg. 59 min. 23 fathoms water, and from thence farther till the 29<sup>th</sup>, under 28 deg. 24 min. Then we took a north-east course with a brisk gale. The 30<sup>th</sup>, with break of day we discovered at about 6 leagues distance *Helland*, lying at the northern point of *Scotland*, and found ourselves about noon under 60 deg. 3 min. latitude, and 18 deg. 49 min. longitude. The 1<sup>st</sup> of *September* we were under the latitude of 62 deg. 40 min. and 19 deg. 2 min. longitude: We steer'd our course with a brisk gale to south-west by west, betwixt the *Fairo* islands and *Helland*. The 4<sup>th</sup>, being overtaken by a violent storm, we lost sight of one of our

ships call'd the *Lamb*, under 60 deg. 11 min. We continued the same course till next day, when about noon we discovered the isle of *Kilda*, under 59 deg. at 6 leagues distance to the south-west of us, the island lying to the west of *Scotland*. Thus we pursued our voyage for the most part with stormy weather till the 13<sup>th</sup>, when we lost our small sail at the prow of the ship: We found ourselves about noon under 50 deg. 1 min. the weather continuing very stormy, but on the 17<sup>th</sup>, under 46 deg. 27 min. all our rigging was torn to pieces by a violent storm, in which we got out of sight of all our company. The 19<sup>th</sup> we descried two sail which we guess'd to be our own, as one of them prov'd afterwards to be the *Lamb*. The 20<sup>th</sup> we continued our course with a brisk wind to the south-west, and under 43 deg. 25 min. discovered the *Cabo Finis terræ*, or the point of the lands end of *Spain*, at about 5 leagues distance as we supposed. The same evening we met with the ship the *Lamb*, which as the master informs us, had lost sight of the ship the *Peace*, in the last storm, and had her main-mast and all her sails brought by the board. Thus we sail'd forward with a strong gale till the 30<sup>th</sup>, when we found ourselves under the 30 deg. 20 min. and discovered the *African* coast about five leagues to the south-west of us, with a variable wind. 1653.

The isle of  
St Vin-  
cent.

pla

1653. of October, we continued the same course under the 28 deg. 51 min. of latitude, and 57 deg. of longitude; all along the isle of *Lancerotta*, one of the canary islands, we descried a ship, but were not near enough to see what she was. The next day we found ourselves about 40 leagues to the north north-east of the islands *Fretevanture* or *Forteventum*, under 27 deg. 45 min. and sail'd thus in 24 hours, 40 leagues among the *Canary* islands. The 7<sup>th</sup> a brisk north wind carried us near 20 leagues forwards to the 19 deg. 14 min. In the evening we found but 14 fathoms water, and a small bird settled upon our ship, tho' we judg'd our selves above 100 leagues from land. The 9<sup>th</sup> we were under 17 deg. 41 min. and towards evening saw land to the south-west of us. The 10<sup>th</sup> with break of day we discover'd the isle of *St. Vincent*, one of the salt islands, about five leagues to the south-west; we steering our course south-west, betwixt this island and that of *St. Anthony*. About noon we cast anchor in the bay of *St. Vincent* at four fathom water, in a sandy bottom, and provided ourselves the same day with a whole boat full of fresh water and seven goats; I went in another boat to

The isle of  
St. Vin-  
cent.

the isle of *St. Anthony*, to fetch some fresh provisions, but could get none. The 15<sup>th</sup> our ships crew catch'd 10 tortoises, and those of the *Drake* as many. The 18<sup>th</sup> I was sent ashore to complement the governor of *St. Vincent*, who received us very kindly, and furnish'd us with an ass to carry us back to the harbour. All this while we catch'd abundance of fish; and the 20<sup>th</sup> sent some on shoar with some toys, which they exchanged with the inhabitants of *St. Vincent*, for oranges, limons, bekoras and pompions. The same day the ship the *Rose*, bound for *Brasil*, came to an anchor in the same bay. Mr. *Wilsbut* the elder, commander in chief of the land-forces, came on board us, being much surpris'd to meet with me there. Being by this time provided with as many necessaries as we were able to get, we were ready to set sail, but were detained by contrary winds 'till the 25<sup>th</sup>. The isle of *St. Vincent* is a rocky and barren island, affording nothing but a little grass for the sustenance of wild goats. It is about five leagues in circuit, under the command of a *Portuguese* governor, who was then a *Malabar*, one born of a christian father and a negro mother.

1653.

The inhabitants here are negroes, transplanted hither from several parts to catch wild goats, the skins of which they send to Portugal, and the flesh they can't consume they

1653. they throw away. They lead a wretched life without women. All their water is brackish, and of a taste like salt-peter, except what they gather at the foot of the highest rock in bags of goat-skins, which being always covered with clouds on the top, sends a considerable quantity of rain water down to the bottom by small natural channels. The governor's residence is on the other side of the great rock, not far from the sea-shore, near 3 leagues from the harbour. His officers live in huts cover'd with tortoise-shells, among trees, the shadow of which defends them against the excessive heat of the sun-beams: I went in company of some belonging to our ship, up to the top of the highest rock to take a view of the country; my companions stay'd about half way, but I with much ado got to the top, where I had a full prospect of the island, but lost my hat by the violence of the wind, and was forced to lay upon my belly, for fear of tumbling down the precipice. The inhabitants relate a ridiculous story of a king's daughter turn'd into a serpent here. As I was coming down and met with the rest of my companions in the place where I left them, we saw at some distance a great number of crows, which made us hasten thither, and found them busy in picking the flesh of a living tortoise which was turn'd upon her back; we found above 300 eggs within her, which one of our company kept for his own use, but the flesh was carried on board for the use of the sick.

The island of St. Anthony.

The island of *St. Antony* lies at about 3 leagues distance, just opposite to *St. Vincent*. On the foot of the east-point of this island, is a small sandy bay, fit for small vessels only, call'd by the *Portuguese*, *Et Pracaden Siniao*, whereabouts are about 30 huts inhabited by *Portuguese* and negroes, who sustain themselves most by fruit; of which they had no great store formerly, but of late years they have great plenty, which were transplanted thither by the industry of the *Portuguese*; the isle being full of high barren rocks. The vines bear here twice a year, as well as most other fruit-trees; they abound in wild-fowl of all sorts, but especially in wild-goats. We found the heat so excessive about noon, that it was insupportable: At our first arrival, they refused to supply us with refreshments, but after some time they began to be more pliable, and furnish'd us with what fruits we wanted.

The salt islands.

These islands commonly call'd the *Salt Islands*, being ten in number, are thus call'd from the great quantity of salt they produce, and lies about 160 leagues from the *African* coast, being first discovered by the *Portuguese* 1572, who inhabit there to this day.

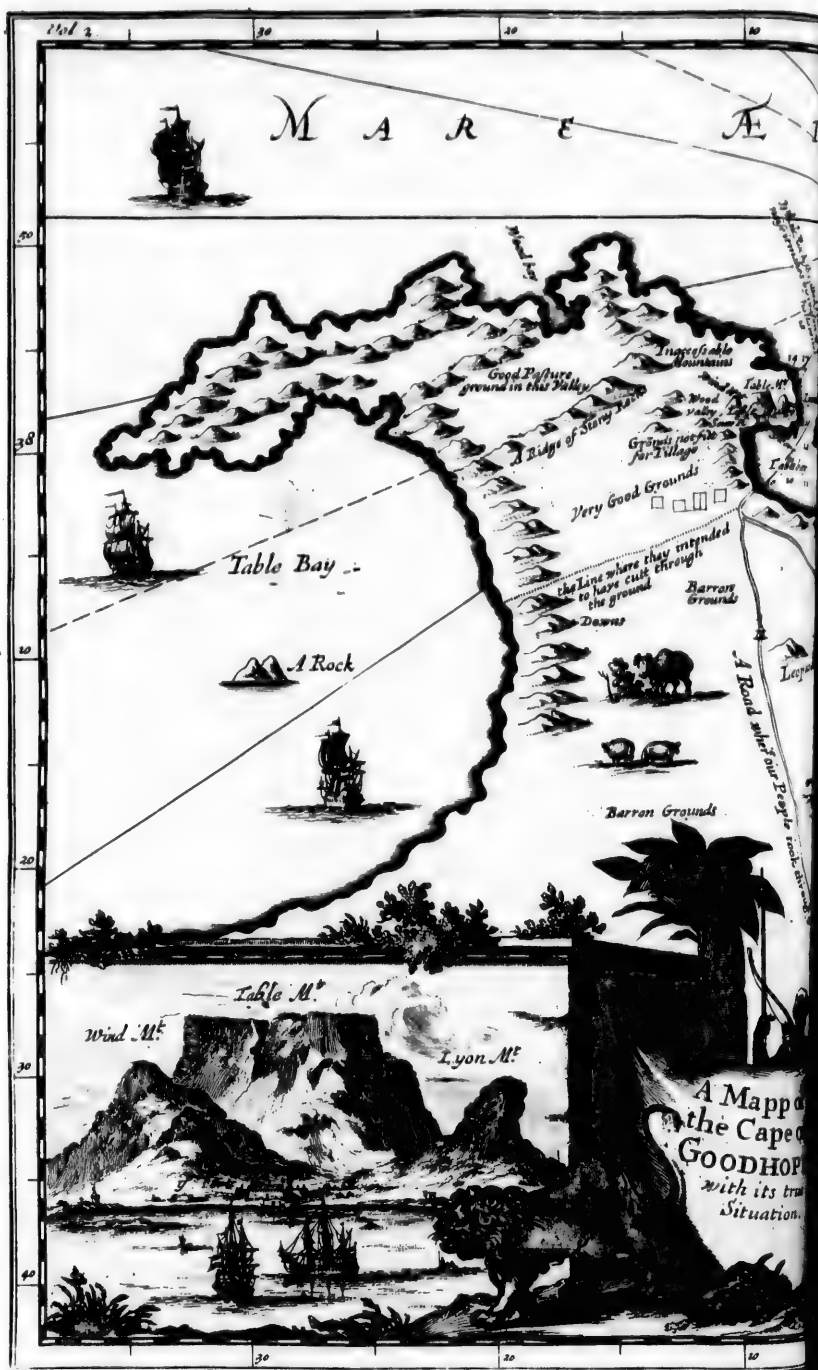

We set sail again the 26<sup>th</sup> with a moderate north-north east wind, and pass'd by the *Illa Blanco* or *White-island*; so call'd from its white colour, being the last of the ten, under 15 deg. 11 min. At first we had a brisk gale, but were soon becalm'd, and advanced very little that day and night. The next following day we had a more prosperous wind, and discover'd land the next morning, at about 10 leagues distance, under 14 deg. 16 min. The 3<sup>d</sup> of *November*, we advanc'd no more than 3 leagues, because the wind slacken'd under the 8 deg. 11 min. Thus we continued our course, but very slowly till the 18<sup>th</sup>, when we found our selves under 5 deg. being forced much farther to the east than we expected: We were continually afflicted with calms till the 1<sup>st</sup> of *December*; so that oftentimes we did not make above 3, 4 or 6 leagues a day, and without meeting with any thing remarkable, found our selves under 2 deg. 15 min. The 8<sup>th</sup> in the morning we pass'd the line, and the next day were under 50 min. southern latitude, and under 353 deg. 10 min. longitude: Here we were overtaken by a violent *Travado* from the east, with violent storms and rains, which much endamaged some of our small sails, being about noon under 1 deg. 37 min. We often saw small black clouds, which in an instant increased prodigiously, and were the certain fore-runners of tempests. For the rest we had favourable wind and weather all this month, and found our selves under 33 deg. 52 min. of southern latitude, and under 358 deg. 36 min. longitude, the sun setting 14 deg. 3 min. north-east; in the mean while our ship's crew began to be much afflicted with the scurvy for want of fresh water. The 1<sup>st</sup> of *January* we sail'd with a moderate gale under 34 deg. 58 min. about 39 leagues in 24 hours. The 3<sup>d</sup> we pursued our course east to the north, under 35 deg. 38 min. latitude, and 6 deg. 29 min. longitude: The 6<sup>th</sup> we continued the same course with a very brisk gale under 35 deg. 4 min. till the 22<sup>d</sup>, with strong winds and tempestuous weather; when in the morning under 31 deg. 36 min. we discovered land at about 3 leagues distance, to our no small satisfaction; we found 58 fathoms water and a rocky bottom; and in the afternoon 55 fathom sandy ground; we were forced to return deeper in sea, and in the afternoon approached nearer the shoar, but were forc'd to turn back again into the main. The next day about 7 or 8 leagues from the continent, we found a sandy bottom at 80 fathoms depth, and saw abundance of birds; we had very misty weather for some time, during which we lost the *Drake*. The 25<sup>th</sup> towards evening we got sight again of the

*They ar-  
rive in the  
Table  
Bay.*

1653. Drake about 7 or 8 leagues from the shore, under 32 deg. 38 min. without being able to fathom the bottom of the sea. We continued this failing to and from the shoar till the 28<sup>th</sup>, but could not make the *Cape of good Hope*, tho' we advanced within a league of the land among the rocks, not without great danger, being then under 32 deg. 58 min. we were therefore oblig'd to choose the main again, to our great dissatisfaction, being so disabled by the *scurvy* and especially the *scurvy*, that we had scarce hands enough left to manage our ship: Our surgeon was a *German* by birth, a very able person, but never used to the sea before, was so much surpris'd at it, that he confess'd he never had seen the like, and that few of them would recover; but I told him, that in case we could make the cape, he would find a remarkable alteration in a weeks time, as soon as they touch'd the land, and receiv'd suitable refreshment, which accordingly proved true. The 29<sup>th</sup> and 30<sup>th</sup> it was very tempestuous weather, when we lost sight again of the *Drake*; we were forced to keep the open sea 'till the 2<sup>d</sup> of February, when we found our selves under 34 deg. 39 min. southern latitude, and 36 deg. 32 min. longitude. The 3<sup>d</sup> being overtaken by a storm from the south-east, we were forced to leave the shore again, which continued the next day with such violence that we lost our main-sail. The 4<sup>th</sup> we pursued our course with a brisk gale under 33 deg. 40 min. when we again discovered land at about 6 or 7 leagues distance. Towards evening we came within a league of *Dassen* (*Doe Island*) at 60 fathoms depth, but were forced to put to sea again, the shore being all along very rocky here: Thus we made to and from the shore 'till the 8<sup>th</sup>, when we saw the *Table Mountain* about 9 leagues to the south-west of us, and the isle of *Dassen* 2 or 3 leagues to the N. W. we found hereabouts 30, 36 and 40 fathoms water, about half a league from the shore in a sandy bottom; we did all we could to make the *Robben Island* (*Rabbit Island*) but being becalm'd, were fain to put to sea again. The 9<sup>th</sup> we were not above 2 or 3 leagues from the *Table Mountain*, and about noon being favour'd with a brisk S. W. wind got happily into the *Table Bay*, where we cast anchor at five fathoms depth in a sandy bottom. Here we met with the galliot the *Fix*, *John Zymentz* master. Mr. *Rietbeck*, Dutch governor of the *Cape of good Hope*, sent us immediately a chaloop with fish on board, and a pilot to conduct us into the harbour. We had lost 8 of our ships crew in this voyage, and had about 40 sick, besides which the rest were so much afflicted with the *scurvy*, that un-

Violent  
scurvy.

They ar-  
rive in the  
Table  
Bay.

less we had received some seasonable re-  
freshments, we could scarce have held it out  
much longer. I went immediately a-shore  
in company of the captain *Cornelius Just*,  
and brought back good store of mustard-  
leaves which were dress'd for the ship's crew.  
Much about the same time the fiscal came  
a-board us, to forbid all commerce with  
the *Hottentotes* or natives, and to carry a  
shore, without special leave from the gover-  
nor; we were also supply'd with more fresh  
water, which is very good and easy to be  
got thereabouts. The 12<sup>th</sup> we saw the ship  
the *Drake* making the bay, but was forced  
to cast anchor behind the *Robben Island*,  
by reason of the violence of the wind; we  
were then busy in fishing, but the wind  
blowing hard from the land side, could catch  
none. The 14<sup>th</sup> the tempest being some-  
what allay'd, we approach'd as near the  
shore as we could; when we got sight of  
the top of the *Table Mountain*, which is ve-  
ry often covered with small clouds, a cer-  
tain preface of tempestuous weather. The  
same day we went to our former employ-  
ment of fishing, and catch'd as much in one  
draught as the chaloop was able to carry,  
the governor having 14 wheelbarrows full  
for his share. They were for the most part  
mulletts, which swim in shoals along the  
shore of this bay. It was not 'till then the  
*Drake* came into the harbour, having lost  
20 of her crew and 50 sick, and the rest  
being so much disabled by the *scurvy*, that  
according to their own confession, if it had  
lasted thus 14 days longer, they must have  
left the ship to the mercy of the wind and  
sea: We were all this while very busy in  
fishing as often as the weather would per-  
mit; but the 19<sup>th</sup> it blew so hard, that we  
were forced to make use of all our Anchors.  
The 22<sup>d</sup> we spent in providing ourselves  
with fresh water and fuel, the last of which  
our carpenters cut down near the banks of  
the *Sali-River*. The 23<sup>d</sup> I, in company  
of some others, went cros the mountain as  
far as the *Fresh-River*, to see whether we  
could meet with some wild-fowl, we saw  
some negroes with about 300 head of cat-  
tle, but at the first sight of us they retired.  
The fields hereabouts were all covered with  
white lilies and tulips; we saw also abun-  
dance of partridges. Being informed that  
a *Rhinoceros* was fallen into the boggs, the  
governor *Rietbeck* sent some fusiliers thi-  
ther to kill him, but the musquet ball not  
being able to penetrate his thick hide, they  
were forced to cut a hole in it first, and so  
to shoot it to death; the horn is preserv'd  
there to this day, and sometimes used instead  
of a cup. The 1<sup>st</sup> of March we had very  
fair weather, notwithstanding which, few of  
our ship's crew were fond to go on shore,  
every

1653. every thing being there at an excessive rate; as for instance, a quartern of *Arack* was sold for six-pence; of brandy for twelve-pence; a water-melon about the bigness of a coconut for half a ctown. The next day being informed that a whale was got on shoar in the *Salt-River*, the governor and his lady, our master of the ship and I, went thither to see it, it was a very large one; we got upon the back of it, whilst the trumpet sounded merrily, and the negroes were buſied in cutting great pieces of the flesh which they buried in the sand in order to eat them. The 6<sup>th</sup> the governor sent some of his soldiers to the *Hottentots*, to endeavour to exchange some of their cattle for copper, tobacco-pipes and such like baubles, but they retired at first sight. The 9<sup>th</sup> it was very calm and fair weather, which made most of our crew go on shore to wash their linen, having received orders to be ready to sail the next day; for which reason also good store of cabbage and two sheep were brought a board, a slender provision for such a number of men, but it was impossible to get more for that time. During our stay here, we fetch'd daily two sacks full of cabbage and mustard-leaves, which being boiled with bacon, was served twice a day, this being the best refreshment we were able to get. The *Cape of Good Hope* is situate under 34 deg. 20 min. southern latitude, which jets out into the sea like a demi-island being to the north joined to the continent by a strait neck of land, with a bay on each side, very convenient for anchorage. The *Table Bay*, which has borrow'd its name from the *Table Mountain*, is about 4 leagues in compass, so that a whole fleet of ships may safely enter, or go out with any wind, except the north-west wind. Near the shore of this bay, upon the banks of the *Fresh-River*, the *Dutch East-India* company has erected a quadrangular fort, call'd the *Good Hope*, well provided with artillery and a good garrison, in which, at this time, Mr. *Rietbeck* was commander in chief; and had his habitation there, with a well-planted garden of about 15 acres round about it. Upon the banks of the *Salt-River* is likewise a small redoubt. Behind the fort of *Good-Hope*, all along the banks of the river, are many fine plantations or gardens, which produce cabbages and such-like herbage, being cultivated by certain *Hollanders* who have settled there, and pay only a small annual acknowledgment to the governor for the use of their grounds, which are for the most part clay, and consequently fruitful, tho' in some parts they are likewise rocky and sandy. Near the sea-shore is great store of small wood, tho' the natives assure us, that deeper in the

country they have trees of a vast bigness. Their gardens produce likewise olives, oranges, apricocks and peaches; the fields grafs and some herbs and flowers; nay, they would bear very good wheat, rye, rice, and barley, were they manur'd as they ought to be. Their field herbs are great and small, some with knotty roots, houseleek and some other pot-herbs, besides tulips and white-lilies, &c. They have also here a certain root which the *Hottentots* roast and eat instead of bread, and sometimes make flour of them; some taste like our potatoes or chestnuts, tho' they have others that are much sweeter, not unlike our anniseed. The *Dutch* have planted many thousands of vines on a hill adjacent to the fort, they bear very plentifully, but the wine is of a crab-like taste. The worst of all is, that the winds which arise from the clouds in the mountains, blow in the summer, especially about July, with such violence, that they tear up all by the roots, at which time it is very dangerous landing at the cape. For the rest the air is very wholesome here, being always clear, and neither too hot nor too cold. Their winter is in June and July, when it freezes sometimes, that you may see ice of the thickness of the back of a large knife. In October, November, and December, there blows always a south wind, which produces a cool air, as the north wind does in *Holland*; and in this season they are troubled with violent rains, which however render their ground very fruitful.

This country likewise abounds in all sorts of wild and tame creatures: They have here birds they call *Pinguwys*, *Flamingos*, *Antenayas*, *Alkatraces*, *Faylons*, *Gavoytoys*, *Garagians*, &c. The *Pinguwys* are short legged, and may soon be taken, but are not to be forced from their nest without a good stick, because they will bite and defend themselves there to the utmost. They abound also in partridges and pheasants, geese, quails, crows, sparrows of divers kinds, rock-ducks with yellow necks, teal, wood and water snipes, and a kind of demi-ducks; there is also a sort of black birds here of the bigness of a small goose or large duck, call'd by us cormorants, wild peacocks, blue, white and black cranes. The white ones are indifferently large, the black ones of the bigness of our sea-gulls, living for the most part in the marshes; they have a kind of reed-birds with red necks and legs, monkeys, hawks of divers kinds, ravens, magpies and very large ostriches, which can reach with their long necks a man on horse-back. They are gray, and run with their wings spread as swift as a horse; they live upon herbs, but sometimes devour likewise stones, copper and iron. They

1653. have likewise certain birds not unlike our geese, which lay eggs without yolks, as big as a common goose egg. They are so full, and taste so much like fish, that they are not eatable. Another kind of geese they have somewhat less than ours, tho' their legs are larger, with grey spots all over their bodies; they are not to be tam'd, because they kill any other bird that comes within their reach.

The Pingu-  
wys.

Formerly the sea-shore used to abound with certain birds call'd *Pinguwys*, both black and white; their skin is very hard, and are of the bigness of an ordinary goose. They live both upon land and in the water; they have a fin on each foot, which makes them swim very swiftly after their prey the small fish, which is the reason their flesh is of a rank taste, and scarce eatable, unless it be seven times boil'd in fresh water, and afterwards fry'd with butter; they make their nest, and lay their legs in hollow places in the sand.

The Fla-  
mingos.

The *Flamingos* is a very fine bird, resembling a crane, but with a crooked bill. They are pale red, tho' some of their feathers are half white and half black, but the uppermost feathers which cover the rest, are of a rosy colour.

Their oxen are very fat and thick set, with long crooked horns, tho' some have their horns bent back close to the neck; others have no horns at all, they are generally a foot and a half taller than our oxen. Among other creatures they have here those they call *Sea Cows*, being much bulkier than an *European* ox. They are without horns, but have long ears and round eyes, with a short tail, thick legs and feet like an elephant. They have no hair upon their bodies, but prodigious large teeth. They feed upon grass, which they find in the marshes near the lakes, where they duck under water as long as they please, so that they are seldom to be seen or catch'd. The flesh is like other beef, but somewhat coarser; when it is salted, it appears and keeps like the ordinary *Dutch* salted beef.

They have likewise here what they commonly call *Iron Pigs*, with long spikes, which by drawing the skin together, can shoot at those that come too near them with such force, as to wound them mortally. A dead lion was once found here, with such a spike sticking in the breast, which had questionless caused his death. The skin is hung up, and to be seen in the fort to this day. They abound also in hares, wild goats and rabbits; and deeper in the country they have tygers, lions, wolves, leopards, *Rhinoceros's*, deer, cows, calves and rock-does. They have plenty of sheep, which the inhabitants exchange for copper, tobacco, to-

bacco-pipes, and such like baubles. They bear no wool, but hair like our goats; their legs are long, and the tail consists of one long and thick piece of fat, which weighs sometimes 20 pound and above.

On this cape is also a certain creature call'd a *Jackal*, being betwixt a fox and a dog, with grey hair; it roars frightfully in the night time, being very greedy after men's flesh, so that it will dig sometimes ten foot deep to come at a dead carcass: It is said to be the most quick-scented of all creatures, and by its scent to discover any carrion that is near at hand to the lion. Among others, they have likewise a certain wild beast in shape and bigness like an elephant, but with two horns on the top of the nose; its tail is likewise like that of an elephant, but has a bush of black hair on the head where it joins to the neck, with two straight and round horns, with short mouse-coloured hair all over the body. On the top of the *Lions Mountain*, (so call'd from its resemblance to a sleeping lion) are great numbers of baboons, which are so unlucky, that they will sometimes with stones, force those who ascend the mountain to turn back. However, most of your ravenous beasts, such as lions, leopards, wolves, jackals and tigers, are but rarely to be met with near the sea-shore, where they are almost rooted out by the inhabitants; a certain reward being set for every one that kills any of these beasts, of which several skins hang up in a gallery of the fort. They have also sea and land tortoises in great quantities, and the woods furnish them with plenty of honey, which the bees hide in the deepest hollowness of the trees. Neither are they without dogs, which are commonly of a red colour, and have short tails.

There is here a certain kind of fish call'd by the *Dutch* the *Hottentots* fish, because the *Hottentots* are very dextrous in taking them. They are very fine fishes, and taste like our cods. Formerly they used to catch abundance of seals, but now most of their fishes are unknown to us. In the *Table Bay* are also whales in abundance, but they are too lean to afford any considerable quantity of oil. Near the sea-shore you meet with the fish call'd by *Latines* *Torpedo*, by the *Greeks* *The fish* in the same sense *Naroe*, by the *Spaniards* *Hugia*, and by the *Dutch* *Krack Fish* or *Lazy Fish*, not because of its laziness in swimming, but of its hidden qualities, which as is reported, consists in this, that when it finds itself in distress, it sends forth a certain juice, which seizes the fishermen with a cramp in all their limbs. The inhabitants here are call'd *Hottentots* by the *Dutch*, by reason of their stammering.

The men here appear for the most part naked,

1653. naked, having only a kind of a cloak made of doe, sheep, or rabbit skins sowed together, hanging from their shoulders down to their buttocks, fastned under the chin with a ribband, with the rough side outward in the summer, and the same turn'd inside in the winter. When they are travelling they wear over this another cloak with the rough side outwards. Their shoes are made of *Rhinoceros* skin without any heels, tied together on the middle of the feet with two leathern straps. In the night time, or in rainy weather, they wear caps of lamb skins with the woolly side inwards. Their privities they cover with a piece of tiger's skin or such like, which is tied behind with two leather strings. In their hair, which is shaved in some places of the head, they twist small copper plates, horns, and pieces of coral. The women wear cloaks of lamb skins like the men, with the rough side inwards, tho' somewhat longer; besides which they cover their bellies and buttocks, as also their privities, with another four-square skin. On their heads they wear caps of doe, sheep, and rabbit skins, tied round about with a broad sheep-skin strap. Their shoes are the same with the men. Such men or women as are rich in cattle, grease not only their bodies and faces, but likewise their cloaks and caps with suet, but the poor wear no cloaks at all; so that greasiness is among them both an ornament and a token of riches. In both ears they wear strings of coral, each weighing commonly four ounces; about their necks copper beads, round the arms they wear an ivory ring, and a strait copper ring about their wrists. When the women go abroad, they commonly have an empty leathern bag hanging down from their shoulders, in which are only some baubles, but if they have a young child it is carried in this bag. They wear stinking guts twisted twice or thrice round their legs for an ornament, or else dried guts, which serve them as a defence against pricking of thorns, and make a rattling noise when they are dancing and merry making. The men wear them likewise about the neck, and hang their tobacco-pipes and other toys in them.

*Their arms.* The arms chiefly used among the *Hottentots* are javelins, being sticks of 3, 4, or 5 foot long, pointed at the end with a sharp broad piece of iron; these they make themselves, and use them with great dexterity. They have also some bows and arrows, but are as yet quite ignorant of the use of fire arms. When they go abroad they carry this javelin, call'd by them *Affagaye* in one, and an ostrich feather, or a small stick with a wild cat's tail on the end, in the other hand, wherewith they defend themselves against the gnats and other insects.

The *Hottentots* are very nasty and awkward in eating, for they are ignorant of any thing that relates to cookery, but devour raw pieces of flesh or carrion, as greedily as dogs. The guts themselves they swallow down without washing or dressing, after they have only squeezed them a little. For want of carrion they eat dead stinking fish, such as they meet with near the sea-side, mussels and such like. They kill no cattle except it be rendered usefule by sickness or age, except it be a sheep against a wedding dinner. The flesh of sea-dogs or rabbits is a dainty with them, which they devour either quite raw without cleansing, or sometimes broil it a little upon coals. They cut and eat the bacon of dead whales which happen to be cast ashore with great eagerness; nay they drink the oil which is drawn from thence by the heat of the sun, like water. Some bury pieces of this bacon in the sand for their future use. However their best and daily food are certain roots, not unlike our large potatoes, which the women dig up near the rivers and in some other places, those they eat either broil'd or boil'd. They are very eager after our wheat or rice bread which is baked there, and willingly exchange it for cattle.

Their chief drink is water, or milk which their cattle affords them. 'Tis incredible how fond they are of brandy or *Spanish* wine, but a small quantity makes them drunk, when they baul out fearfully, and are very unruly.

Those inhabitants near the cape are of a brown olive colour, like the *Mulats*, which however is not their natural complexion, but acquired by art, for they broil certain herbs with grease, wherewith they besmear their bodies and faces to make them swarthy, it having been found by experience, that a girl, which was carried into the fort immediately after she was born and brought up there, proved of the same complexion with the best of our *European* women. They are of opinion, that in case they don't frequently besmear themselves thus from that time of their birth, they shall be subject to the dropsy, a distemper to which many of the *Africans* are most subject, as the *Abissines* have one thigh swell'd twice as thick as the other. Upon the arrival of our ships on the cape, they get into the cook's room, and with the fat and black of the kettle, besmear their hair and faces to make them shine the better; this being look'd upon as a great piece of beauty among them, tho' it makes them smell very rank, especially if they put grease into the gashes which they make in their skin for that purpose, when you may smell them at 100 yards distance.

*Their constitution and habit of body.* They are generally lean, short and ugly, yet

1653. yet they have black quick eyes, and very good white teeth. Their noses are somewhat flat, tho' not always, and the lips, especially the uppermost, very thick. Their foreheads are broad but wrinkled, and the hair of the men is curl'd and short like lambs wool, but very nasty and greasy. The women have thicker hair than the men, the last of which pull out all their hair upon their chin. The men have very well made legs, but slender calves, and are so nimble as to be abl. to out-run a strong bull, and stop him in his full career. The women especially have very fine and small feet, with flat bellies and round buttocks; their hands are very well shaped, but their fingers and nails very long. The mens privities or yards are very large, but have only one stone; for so soon as a male child is born, the mother cuts out the right stone to make it the more fit for running, and afterwards gives it some sea-water and tobacco. The women, especially those that are married, have long breasts which are always bare, and when they are suckling their infants, hang backwards over their shoulders. The inside of the womens privities are so relaxed that they hang out. Their chiefest riches consist in their cattle, which they never kill but when forced thereunto, either by sickness or age of the beast.

They stammer much in their speech, and bluster out their words like a turkey-cock; they make use of no letters, neither do they know what writing and reading is; some however have been taught to speak, read and write *Dutch*, which shews them to be apprehensive enough. For the rest of the *Hottentots* are so very stupid, that they are not able to form to themselves the least idea of attacking or defending a strong hold; a house of brick, such as is proof against fire, being as profitable against them as the best fort, for if you enclose them in a house, and only shut their doors and windows fast, they are as safe here as in the strongest prison, having not the least sense to open them for their deliverance, in which they are inferior to beasts, which commonly endeavour to deliver themselves from bondage. Notwithstanding the *Hottentots* are so stupid, and in my judgment, the most wretched nation upon earth, there are some among them that want not cunning, especially if they are brought up to it; an instance of which we saw in our time in two young fellows, who were carried from hence to *Batavia*, where they were instructed in speaking, reading and writing of *Dutch*. One of them was employed as a servant by the general director, *John Maai Zuicker*, and after some time was sent back to the cape to serve as an interpreter there. I met with him at my first

VOL. II.

return from the *East-Indies*, among the *Hottentots*, and ask'd him whether he would not rather be with us where he lived much better? he told me, he would rather be with his own countrymen. I understood afterwards, that this fellow had proved the occasion of great mischief and differences among the *Hottentots*, and that several had been kill'd in the quarrel on both sides. At last he fell again into the hands of the commander of the cape, who banish'd him to the *Robben Island*, where he died. Theft they punish with a bastinado, and so they do murder, not out of any regard to God Almighty, but for custom's sake. They talk of one *Hunumma*, who has the disposal of rain and fair weather, but they pay no adoration to him.

Marriage is in pretty good esteem among them, tho' a man marries as many wives as he pleases. The maid, as soon as she is betrothed, performs the oath of fidelity in the following manner: The mother cuts of the first joint of her daughters little finger, which is tied to her future husband's finger, this they bury, and afterwards kill a cow for their wedding dinner. The maids are distinguish'd from the married women by green twigs which are twisted round their legs; these are taken off at the wedding day, and instead of them the dried guts of the cow kill'd for the wedding dinner put on; these when they dance make a noise, which seems very agreeable to them.

'Tis true the *Hottentots* are the most barbarous upon earth; notwithstanding which, I can't agree with those that will not allow of any religious worship among them; it being the opinion of all learned men, that no nation is so barbarous but what has something of religion, be it true or false. For they adore the moon with unusual outcries; and it is not improbable but that they pay the same devotion to the sun, because they follow its course as much as is possible, by changing the pasture of their cattle; for when the sun comes to the tropick of *Capricorn*, it has been observed that they feed their cattle on the south-east side of the rivulet, but when the sun returns to the tropick of *Cancer*, they go to the north-side; if it happens to rain very hard, they shelter themselves in their huts, seem to be fearful, and don't creep out till it be fair weather. Then they begin to be very merry, lifting up their heads and eyes to heaven, which is interpreted by us as a kind of thanksgiving; for when they are asked why they hide themselves during the rain, they answer, that the *Great Captain* being incensed against them, does punish them with this element, which he knows to be contrary to their nature. By this *Great Captain* they question-

R r

less

1653. less understand the supreme Being; for if you speak to them of God, they are unwilling to hear it, and punish such among them as make use of it; alledging that it is not sufficient to express the glory of the supreme Being. If you talk of the devil they point to the ground. Concerning the resurrection, they are of opinion, that those that die near the cape, shall arise again behind the mountains: But perhaps all this they may have learned from the *Portuguese* and *Dutch*. They frequently skirmish with one another, commonly for the convenience of pastorage, so that sometimes six or seven are left dead upon the spot.

Divers nations of the Hottentots.

The *Hottentots* are divided into several nations, known by different names. Those inhabiting near our fort are by the *Dutch* call'd *Capemen*, but in their own tongue *Cbouriequa*; they are the most cunning of all the rest, by their frequent commerce with the *Dutch* and other *Europeans*; they live for the most part upon roots, fish and mussels. Somewhat deeper in the country live those commonly call'd *Tobacco Thieves*, because they used to steal the tobacco out of the fields, which is the reason the *Dutch* plant no more tobacco there; in their own tongue they are call'd *Korrochoukon*. There is another fort call'd *Chemakwa*, much more potent and richer than the *Capemen*, yet don't approach in power to the *Cockukas*, who living still deeper in the country, are accounted many thousand strong, and have vast herds of cows and sheep; they were then under the jurisdiction of two captains, the first call'd *Odojey*, the other *Monomana*. The first of these two had married the sister of our interpreter's wife in the fort, and being invited thither by Mr. *Rietbeck*, the governor, he at last, after much enquiry concerning his quality, for fear of demeaning himself, gave him a visit. They rid out together a hunting, when *Odojey* had the misfortune to be set upon by a fierce lion, who certainly would have torn him to pieces, had not his followers kill'd the lion with their javelins; however he did not escape without being sorely wounded on the neck, the flesh was all torn from one of his shoulder blades, and his face all miserably maul'd: Being judged past recovery, the governor offered him his own surgeon, but he would not accept of him, trusting more to those of his own nation; tho' the skill of these surgeons among the *Hottentots* reaches no farther than to cure a green wound, which they scarce ever perform without leaving a great dent or seam. They carry their remedies about them, and commonly have a parrot or some such creature (not unlike our mountebanks) along with them. Their herbs they keep in tortoise shells, but the roots, claws, teeth, and

horns of beasts (these being the ingredients of their physical preparations) are fastned to a string, which they in the same manner as our tooth-drawers hang about the neck.

There is another nation of the *Hottentots* call'd by the *Dutch* *Sardiniamen* or *Saldanbas* (from a bay of that name) the natives call them *Krijegoekwa*. Some of the *Hottentots* relate, that to the north-east of those call'd *Cockukas*, there is a potent nation dwelling in stone-houses, that they are not black, and governed by the same laws as we are. Some suppose them to be a people inhabiting the mountains of the moon, but considering they are said to understand gold and silver, and to agree in many other things with the *Europeans*; our people judge them to be a colony of the *Portuguese* that have transplanted themselves thither from *Mozambique*. The *Dutch* have several times attempted to find out a passage thither by land, but without success, having always been forc'd to turn back for want of water. They also talk much of two other nations call'd *Ileukunqua* and *Groeman*. The *Hottentots* or inhabitants here are not subject to one head, and what reverence they pay to their captains, is more out of custom than any sense of duty; they have no fix'd habitations, but lead a vagabond life like the ancient *Scythes* and *Arabians*, carrying their wives and children along with them. They are not very desirous of gold and silver, unless some few that converse with the *Dutch*, and know the convenience of buying from them what they stand in need of; for otherwise copper is in the greatest esteem with them. Boats they have none, being extremely fearful of water, and therefore venture seldom farther than to their knees. They are of a very lazy temper; most of their traffick consists in cows and sheep, which they exchange for copper and corals; but after the bargain is struck, they expect an additional present of tobacco, pipes and brandy, which has been introduced among them by foreigners. The seamen do also sometimes swap with them for ostrich feathers, and small tortoise shells call'd *Harego*. It is to be admired how they should make so much account of copper, which they daily tread under their feet, it being certain that very good copper mines are to be found hereabouts. The *Dutch* have at divers times attempted several land journeys into the country; as for instance, in the year 1660, when they discovered two nations, viz. the *Ilunba* and *Namakkawa*; they supposed to have not been very far from the *Portuguese*, because they thought to have heard a cannon shot at a distance. The inland country swarms with wild fowl, such as wild geese, ducks and teal, but they are so shy as not

1653.

1647.

The Table Mountain.

Table Bay.

Robben Island.

1647. to come within reach of a gun, which is the reason that the governor's huntman sets up small huts of green boughs, from whence he shoots them, this being the only way to come at them. Among the mountains are abundance of rocks, and some of them contain fresh water in their concavities. Several of our people as they were going one day up the mountains to take a view of the circumjacent country, found a certain rock-stone of four fathom long, and one and a half broad, being hollow in the middle, of the depth of a quarter of a yard, where they met with good store of fine fresh water. Here are oltriches of an extraordinary bigness; they are so swift as to outrun a horse when they set up their wings, and thus by the help of the wind are forced forward, no otherwise than a ship under sail. Their large legs and feet are a great addition to them, by the help of which they trot on with such a force and nimbleness that like a horse running down a hill, they are scarce to be stopt. The same way of setting up their wings has been observed in the tame swans. But before we leave this cape, I will give you a short account of the *Lions Mountain*, the *Table Mountain* and *Table Bay*, as likewise of the *Robben Isle*.

The Table Mountain.

There are two very high mountains near this cape, viz. the *Table Mountain* and the *Lions Mountain*. The first is so call'd from its flatness on the top like a table, being about two leagues high, but small in circumference, and for that reason of very difficult access. It is divided from another adjacent mountain, call'd the *Devil's Mountain* by a vast cliff. Towards the sea-side it is bare, without any grafs or trees, but on the land-side you see very agreeable woods, with many tall strait trees fit for building; and towards the foot abundance of lesser trees for fuel. Among the rest are a great store of wild almond-trees, but the fruit is very bitter; and if we may believe the *Hottentots*, poisonous; wild pine-trees are here likewise in abundance, they grow very tall, but bear nothing but a husk.

Table Bay.

The *Table Bay* is situate under 34 deg. and some min. about 5 leagues more to north, this being the most southern point of *Africa*. It is a very fine bay, thro' on the south-side of the *Robben Island* are some rocks call'd the *Whale*; a large ship may anchor in this bay, from 9 to 7 fathom water, but yachts at 4 or 5 fathom in a good sandy ground. There is however no trusting to a single anchor, by reason of the blustering south-east winds which blow often here.

Robben Island.

At the entrance of the *Table Bay* you see the *Robben Island*, thus call'd from the vast quantity of *Sea Robben* (*Sea Rabbits*) which

are found here. It is not very high, and about two leagues in circumference. In the towns some rabbits have been put by the inhabitants which thrive very well. The ground produces a certain herb in great plenty; it has yellow leaves almost like cowslips, which fatten the sheep exceedingly.

To the north-east of the *Robben Island* lies the *Dassen Island*, under 34 deg. 33 min. It has got its name from the vast numbers of *Dassen* (*Does*) which formerly were found there, but are of late years much diminish'd. It is about a league in compass, and produces likewise many sea rabbits and *Pinguwys*. It is inhabited by four families only with their slaves, whose chief employment it is to breed pigs and poultry, and to draw oil from the sea-rabbits, which they sell to the inhabitants living in and near the fort. Before the bay of *Saldanba* are several small islands, where those of the *Dassen Island* have their liberty of fishing and hunting; they catch vast quantities of partridges, mullets and other fish. The two chief rivers of this cape are the *Salt* and *Fresh Rivers*. Besides these there is another rivulet, which arising from among a neighbouring wood, exonerates itself in the *Salt River*. It is not above 12 or 14 foot broad, but very deep. Not far from the source of this, arises another rivulet among the marshes near the *Wood Bay*. It runs south-east thro' the downs, (which extend as far as *Cabo falso*) and disembogues itself into the sea.

No place in the world is more subject to storms than the *Cape of Good Hope*, so that it would be impossible for ships to abide here, had not nature provided against these inconveniencies by the several commodious bays that are here. Among those the bay of *Saldanba*, commonly call'd *Sardinia*, is none of the least consequence, where ships may ride safely at anchor without the least danger, and were it not for the want of fresh water, it might claim the preference before the *Table Bay* itself. The winds blow generally throughout the year very hard here, but especially the south-east wind, which blows from *October* to *April* (call'd the *South-East Monsoon*) and tears so terribly thro' the cliff, (betwixt the *Table* and the *Devil's Mountain*) that except the country and ground were very smooth and hard here, it would be impossible for any ship to ride it out; from *April* until *October*, the north-west wind blows with not much less violence, (call'd the *North-West Monsoon*) but yet not altogether so fierce as the south-east wind, there its violence is more observable on the land-side of the cliff. The main difference betwixt these two winds here is, that the south-east wind always produces dry weather, whereas the north-west wind brings rains,

1653.

1653. rains, which are very pernicious to the fruit.

By what signs to discover the nearness of the cape.

So soon as you come near the sight of the cape, under the 34 deg. of southern latitude, you meet with certain signs and tokens, by which you may discover whether you are far from land or not. I don't much wonder that some of the ancient authors who have given us an account of the *Indies*, affirm, that when they were at a loss to find out whether they were near land or not, they used to let fly some birds, and according to their flight, to direct their course. Tho' this is out of date now, yet certain it is, that the birds are the best guide as to those who sail to the *East-Indies*: For at a great distance from the cape, whilst you are yet in the open sea, you meet with a peculiar kind of small sea-gulls, which foretell you your approach to this cape. But as these come abroad sometimes above 100 leagues or more at sea, they are but uncertain fore-runners, but when you see another kind of large spotted sea-gulls appear, by those that are acquainted in these seas call'd *Cape-Birds*, with speckled wings, you may hope to see land in a very short time, and if you meet with some turtle doves, this puts it beyond all doubt. If you find anchorage at 40 or 50 fathoms depth, in a white sandy ground mix'd with red, you may conclude yourself to be upon the sandridge of the cape d' *Aguillas*, tho' you see no land. If you come to the west of the *Cape of good Hope*, you will find, besides the aforementioned *Cape-Birds*, certain hollow roots growing among the rocks in the sea, the leaves of which swim upon the water; the *Portuguese* call them *Trombas*, and they are to be met with in vast quantities in the *Table Bay*, just under the fort, which the chaloups and boats are very careful to avoid, they being so entangled together, that there is no breaking thro' them with oars: It is likewise found in the seas of *Japan*, and in great esteem among the inhabitants, who make pickles of these leaves, and use them as the *Europeans* do cucumbers, or the *Indians* their *Astjar*.

The *Hottentots*, a barbarous generation, were so ill-natur'd at that time, that they would not exchange an ox or any other sort of fresh provisions with us, nay they made the spring or places where we used to fetch our fresh water, muddy; we fell rough upon some of them, but they being much stronger than we, pelted us with stones and made us retire; I was at that time with a gun upon the *Table Mountain*, but could not come time enough to their assistance; but the next day several of us went well arm'd to give them another visit, and to fire at them in case they pretended to make any

opposition, but they no sooner discovered our arms, but fled with wife, children, and their cattle.

After we had stay'd there about three days ashore, we set sail the 13<sup>th</sup> of *March* from the cape, steering our course westward, in hopes to get sight of the ship the *Drake*; but not meeting with her, we chose the open sea, and advanced about 60 leagues from the *Table Bay*, under 34 deg. 20 min. southern latitude: We continued our voyage with pretty good success till the 18<sup>th</sup>, when about noon we found ourselves under 38 deg. 26 min. southern latitude, and 33 deg. 27 min. longitude. The compass shew'd due south and north. The two next following days proved very rainy and blustering, and the 27<sup>th</sup> it thundered and lightened very hard, with strong winds and much rain, which ending at last in a violent storm, oblig'd us to take in all our sails, under 39 deg. 20 min. southern latitude. The 1<sup>st</sup> of *April* we found ourselves far to the north, being forced by the stream, and the weather continued windy and rainy, as it had been ever since the 27<sup>th</sup> of *March*; we found ourselves then under 39 deg. 21 min. of latitude, and 95 deg. 30 min. of longitude, and had sail'd 36 leagues in the last 24 hours. The same night the winds began to rise to that degree, that we were fain to take in our main sail, which continued to the 3<sup>d</sup>, when the compass was changed to 15 deg. N. W. The 7<sup>th</sup> we sail'd 44 leagues with a moderate gale, under 38 deg. 13 min. The rains and strong winds continued till the 13<sup>th</sup> in the morning, when it began to clear up, and sail'd that day and night 46 leagues under 36 deg. 30 min. latitude, and 98 deg. 42 min. longitude. Then it began to be blustering weather again. The 15<sup>th</sup> we found the rising of the sun at 24 deg. N. W. this being the first time since the 4<sup>th</sup> of the last month, by reason of the strong weather. About noon we were under 35 deg. 14 min. of latitude, and 104 deg. 40 min. longitude; having sail'd 34 leagues in 24 hours. Towards evening it began to be calm, but continued not long, the winds and rains infesting us by turns, till the 1<sup>st</sup> of *May*, when we found ourselves under 12 deg. 18 min. latitude, and 124 deg. 46 min. longitude: We then proceeded in our voyage with a good brisk gale till the 3<sup>d</sup>, when in the night we were overtaken with a violent *Travado* with thunder and lightning, which continued till the next following day. The 6<sup>th</sup> of *May*, early in the morning, we descried the coast of the isle of *Sumatra*, about 4 or 5 leagues from us, and to the leeward a sail under 5 deg. 22 min. In the night the wind blowing from the land-side, we were forced to take

1653.

take our course to the south. By the 9<sup>th</sup> we had not advanc'd above 6 or 7 leagues along the coast of *Sumatra*, being continually pester'd with *Travadoes*, thunder and lightning; all our endeavours were to get above the flat point of the straits of *Sunda*. The 12<sup>th</sup> we had pretty fair wind and weather, and about noon found ourselves under 6 deg. 5 min. In the afternoon we sail'd forward with a moderate gale, within a league and half of the forementioned point to the N. N. E. of us, where we found 16 fathom water. The next day we found ourselves about three leagues from the said point. The 14<sup>th</sup> we saw the *Imperial Island*, at about three leagues distance, and the next following day discover'd to the south-east to east, about 5 or 6 leagues from us the *Princes Islands*, under 60 deg. 45 min. where we were becalm'd all the rest of the day. The 17<sup>th</sup> we found ourselves under 17 deg. 10 min. about two leagues from these islands, and toward the evening saw the utmost point of land of the isle of *Java*, at 4 or 5 leagues from us; the 18<sup>th</sup> we were becalm'd again, and the following day advanc'd within two leagues of the point of *Java*; and 2 or 3 leagues of the *Princes Islands*. We endeavour'd to have pass'd betwixt them, but were prevented by a *Travado* from the east. The 20<sup>th</sup> being under 60 deg. 41 min. we were at 6 leagues distance from the said islands, and kept in sight of them the 21<sup>st</sup> and 22<sup>d</sup>, with an intent to pass by them on the 23<sup>d</sup>, but being becalm'd came to an anchor the same night at 30 fathoms depth; the stream did run here very strong to the S. W. The 24<sup>th</sup> we were directly opposite N. N. E. to the isle of *Java*, and the same evening, a boat with all sorts of refreshments came aboard us from thence, which was very welcome to us, after so tedious a voyage: We came soon after to an anchor at 30 fathoms water, the stream running so strong here, that we were forc'd to remain here this and the next following day; during which time, several other boats with fresh provisions came aboard us. The 26<sup>th</sup> we set sail again, but by reason of the violence of the stream could not advance far, so that we were forced to cast anchor again, at 25 fathoms depth, where we continued all the next day. The 28<sup>th</sup> we set up our sails again, but were forced soon after to cast anchor, having the *Iulo* (the isle) *Baly* to the N. E. Great *Pulo modi* to the E. and the lesser *Pulo modi* to the S. of us. Towards evening we set sail again, but whatever we did could not reach the road of the so long wish'd-for city of *Batavia*, being forced to come to an anchor about half a league from the isle of *Rotterdam* at 11 fathoms water. The 30<sup>th</sup>

VOL. II.

we put up our sails once more, but with no better success, being oblig'd to cast anchor again, which put us in mind of what betel us lately on the *Cape of good Hope*, where we met with the same ill success before we could double the cape. However, the wind turning fair in the afternoon, we arriv'd the same afternoon about four a clock, (after a very tedious voyage, in which we had many sick) before the city of *Batavia*, where we cast anchor at four fathoms and a half depth. The next day I went ashore, and took up my lodgings in that famous city, at one Mr. Gerard *Uffens*, till further orders. In the mean time I was very curious in taking an exact view of this city and the circumjacent country: Whilst I tarried at *Batavia*, an embassy was sent from the general director *John Maczruicker* and the other directors of the *East-India* company, to the *Cham of Tartary*, who some few years before had conquered the most potent empire of *China*, to treat about a free commerce betwixt the two nations, which had several times before been attempt'd and fought for by the *Dutch*, but was as often refus'd by the *Chinese*. *Jacob de Keijser* and *Peter de Goyer* being appointed ambassadors, two yachts, viz. the *Kaukerk* and *Bloemendaal*, man'd with 90 men, and provided with several fine presents for the emperor were got ready for their transport, and I was order'd to go aboard the *Bloemendaal* in the quality of steward.

The ambassadors embark'd the 14<sup>th</sup> of July 1655, and set sail the same day from the road of *Batavia*. The 4<sup>th</sup> of September they arriv'd in the city of *Kanton*, and the 4<sup>th</sup> of May 1656, in the city of *Nanking*, and the 16<sup>th</sup> of July at *Peking*. After some stay there, they return'd the 21<sup>st</sup> of November to *Nanking*, to *Kanton* the 28<sup>th</sup> of February 1657; and came into the road of *Batavia* the 21<sup>st</sup> of March, where they gave an account of their negotiation to the *Dutch* council of the *Indies*: Of all which I have given you an ample account in my *Chinese* voyage, publish'd first in *Low Dutch*, and since translated into several other languages, and printed at *Amsterdam* for *Jacob Meurs*, with many cuts and draughts of places, living creatures, fruits and other remarkable things.

After my return from thence, eight ships were order'd to be equip'd and laden for *Holland*, viz. the *Pearl*, *Prince William*, the *Orange*, the *Crowned Lion*, *Achilles*, *Malacca*, the *Ulysses* and *Hector*. The command in chief of this fleet was conferr'd upon Mr. *Koenes*, then first director of the council of the *Indies*, who embark'd aboard the *Pearl* of 700 tons, man'd with 180 men, and provided with 26 guns. At his

1658.

1658. request I went aboard along with him in the *Pearl*, which carried the flag, in order to my return into *Holland*, tho' my appointed time was not expired here. We set sail the 22<sup>d</sup> of *December*, and the last day of *March* 1658, arrived safely without any remarkable accident, (except that we met with some *Travados*, which foundly tost our ship) at the isle of *St. Helens*.

He returns

via towards  
Holland.  
Arrived at  
St. Helens.

The isle of *St. Helens*, is situate under 16 deg. 15 min. of southern latitude, at a great distance from the continent, lying at least 350 leagues from *Augusta*, the next place of all. It is very surprising to conceive so small an island at so vast a distance at sea, round about which there is scarce any anchorage, by reason of the vast depth of the seas. It is about seven leagues in circum-

1658.  
The  
St. Helens.

ference, covered all over with rocky hills, which in a clear day may be seen 14 leagues at sea; the valleys being stor'd with all sorts of trees: So that tho' this island is not very large in its compass, yet it comprehends a large tract of ground by reason of those hills. It has many fine valleys, among which the *Church-Valley* and the *Apple-Valley* are the most remarkable. In the *Church-Valley*, you see to this day the ruins of a chapel, formerly belonging to the *Portuguese*; the whole valleys are planted with lemons, oranges, and pomegranate-trees. At that time the island was destitute of inhabitants, but since the *English* have made a settlement there. After the *Portuguese* left it, a certain hermit, under pretence of devotion, used to kill great numbers of wild goats here, and sell their skins, which the *Portuguese* having got notice of, they

removed him from thence. At another time certain negroes with two female slaves were got into the mountains, where they encreased to the number 20, till they at last were likewise forc'd from thence. The valleys are excessive hot, but on the hills it is cool enough: tho' the heat is much tempered by the winds and frequent rain showers, which fall sometimes several times in a day; which, with the heat of the sun-beams, renders the soil very fruitful. It abounds in fine and cool springs, which fall down from the tops of the hills, the water being as clear as crystal, and exonerating itself at last into the sea, it is very pleasant to behold the seamen at their arrival here, to drink, wash and bath themselves in these spring waters. Most of the fruits and beasts which are produced here in great plenty, have been first brought hither by the *Portuguese*.

After  
*Holland*,  
here and

1658. *luguse*; as for instance, orange-trees, (of which you may see whole woods) pomegranate-trees and others, which bear fruit throughout the whole year. Here are likewise, mustard-leaves, parley, purslin, wintercress and other such-like herbs, which are very good against the scurvy; neither is this island destitute of trees, but such as are not fit for timber, but only for fuel. It abounds likewise in beasts; wild goats are here in vast numbers, but very difficult to be taken, by reason of the many rocks. Tame hogs were brought hither by the *Portuguese*, which have multiply'd to admiration, but are degenerated into wild ones, and are not easy to be kill'd for the aforementioned reason. Thus it is with the partridges, wild pigeons and peacocks, which are here in vast plenty, but are so shy, that so soon as they see any one approach, they fly from one hill to another cross the valleys, so that you must be an hour before you can come at them again, which when you have done, you are in danger of losing your labour, for they return commonly from whence they came. The only way to catch them, is to go abroad with a good company. It produces no ravenous or poisonous creatures, except large spiders and flies. All about the island you see vast multitudes of sea-gulls, which feed on the fishes in which the sea abounds. Here you meet likewise with several colours fit for dyers, especially with a most excellent red colour, and with very fine white salt, made out of the sea-water by the heat of the sun-beams. By reason of its great distance from the continent, the seas hereabouts are covered with fishes, such as mackarel, carps, &c. They are not to be catch'd with nets by reason of the vast depth, but with a hook, or only an iron nail bent, you may catch as many as you please; craw-fish, crabs, oysters and mussels are likewise to be found in vast quantities near the sea-shore. After we had sufficiently refresh'd our selves here, and provided what necessaries we thought fit, or could get, we left this island the last day of May; We continued our former course, and without any remarkable accident, came in sight of Holland, and the 6<sup>th</sup> of July 1658 arrived happily at Amsterdam. I took up my lodgings at my brother Henry Nieuhoff's, whom as well as most of my other friends, I had the good fortune to find in good health. Many of the most curious persons of that place came daily to see me, to take a view of the *Chinese* characters, and other draughts I had brought along with me.

After I had tarried for three months in Holland, and dispatch'd my business both here and in Zeland, I delivered the journal of

my late voyage into *China* to my brother, in order to have it review'd and printed, at the request of several persons of quality; with an intention to take a second voyage to the *East-Indies*, with the first fair opportunity, which was soon after offered me by the directors of the *East-India* company. 5 ships lay then ready for the *East-Indies* under the command of Mr. *Adrian Aelmonde*, viz. the *Arnhem*, burthen 500 tuns, with 40 guns and 430 men, *John Ymenz* master; the second the *Pearl* and three yachts; I was ordered aboard the first. We set sail all together from the *Ulle* the 22<sup>d</sup> of Dec. 1658. The ship the *Arnhem* at her entrance into the sea, struck upon the sands and was in some danger of being stav'd, and another ship run foul upon her, by which she lost part of her gallery; but by God's singular mercy, we got clear again the next high tide, and continued our voyage with the rest.

The 16<sup>th</sup> of March 1659, we arrived safely at the Cape of Good Hope, where we cast our anchor. The 22<sup>d</sup>, the *Pearl* with the other three yachts came likewise to anchor in the same bay. The first thing we did was to take care of our sick, of which we had not very many, but 12 died in the voyage; we went every day ashore to fetch fresh water, fuel, and what provisions we were able to get; sometimes we catch'd good store of fishes. One day several of us went ashore to shoot some wild fowl; but advancing pretty high up the Table Mountain, we unawares espy'd a sleeping lion, at no great distance from us, which made me soon retreat, telling my companions it was dangerous to awake a sleeping lion, who were glad as well as I, to make the best of their way backwards.

After a stay of 14 days at the cape, we set sail again, and with a much more prosperous gale, than I had in my last voyage, arrived safely on the coast of *St. Java*, where just as we got sight of that island, Mr. *Adrian Aelmonde* died, to our great grief; his corps was carried to *Batavia*, where it was honourably inter'd.

The 18<sup>th</sup> of July 1659, we came to an anchor before the city of *Batavia*, after a voyage of about 7 months; during which, there happen'd scarce any thing worth taking notice of. After I had delivered up the merchandises under my charge, and my accounts: I took a turn to the western coast of *Sumatra*, viz. to *Jambe* and *Padang*, which produce abundance of pepper, some gold and salt-peter, and returned the 10<sup>th</sup> of December to *Batavia*.

Not long after I was ordered on board the ship *Henrietta Lovijia* bound for *Amboyna*, Gerard Gerardson a native of *Flushing* master,

1659. master, laden with rice and provisions. We set sail from *Batavia* the 23<sup>d</sup> of Dec. 1659, and in a month after got among the rocks near the point of *Bimaer*, being forced thither by a whirlpool, which turn'd our ship within the compass of three times the length of the ship, as swift as the nimblest horse could run; we were within a few yards of having been struck against a rock, but had the good fortune to escape without much damage, and after some *Travadoes* at last got into the road of *Amboyne*, not without great difficulty, by reason of the swiftness of the stream there, and cast anchor at 36 fathoms depth. We were very kindly received by Mr. *Jacob Hustard* the governor of *Amboyne*, a man of singular probity and conduct. After the ship was unladen, and I had delivered my cargo, the governor and I resolved to take a tour in the small circumjacent islands. Among the rest we visited the island of *Buero*, where the inhabitants made us heartily welcome after their way, and drank to us merrily in cups made of the leaves of trees.

The isle of *Bouro* or *Buero*, is situate about 24 leagues off *Amboyne*, being near 30 leagues in compass. The sea, especially on the south side, of a vast depth, from

whence the shore rises by degrees, and surrounds the whole island like a steep wall. The south wind produces both high and low water here. In the island of *Buero* are mountains which reach to the very skies: Near the bay of *Tamaboo* are high mountains of the same name, the blue tops of which penetrate thro' the clouds, and may be seen at 28 leagues distance at sea; tho' it be very difficult to distinguish them from the clouds. The bay of *Tamaboo* is surrounded with these mountains. Hereabouts you see neither houses, huts, nor inhabitants, but only woods and wildernesses. A certain river exonerates itself into this bay, the banks of which are on both sides full of green trees. On the north-east side of the isle *Buero*, in another bay, called the bay of *Kayelle*, which in some places is two leagues broad. The sea-shore of this bay is very pleasant, by reason of the many woods and wildernesses. Here you see great store of green ebony wood-trees, but the wood is somewhat knotty. Within the marshy grounds, adjacent to the middle of the bay, is a whole wood of trees as hard as iron, and of a reddish colour; the *Dutch* call them *Lary* trees.

The constitution of this island. The island *Buero* is very fertile and abounding in trees near the sea-shore. It produces *Coco* and *Bananas* trees, *Pynany*,

green ebony wood-trees, potatoes, beans, *Kajang* (a certain kind of pease) millet or indian-wheat, tobacco, lime-trees, and di-

In short, the whole country is full of fertile grounds and pleasant woods, and is watered with many fresh water rivers; the worst of all is, that it is much subject to earthquakes.

In the isle of *Buero* lives, among other beasts, a certain strange creature, which by the *Indians* is counted among the number of monsters. It is of the bigness of a large dog, or of a roe-buck, of a dark brown and gray colour, the hair like our gray-hounds; the head and mouth like a hog, with small eyes and ears, the tail curls twice or thrice, and the legs and claws like those of a roe-buck. The flesh is both by the inhabitants and strangers look'd upon as a dainty, and as good as venison. The circumference of its mouth and jaws is as big as a large calf's head, with very strong jaw-bones; on both sides backwards to the throat, are about 12 teeth, but in the fore-part of the undermost jaw-bone, 6 teeth and 2 large ones in the upper part, which are covered by the mouth. From the middle part of the undermost jaw-bone issue forth two large teeth which pierce the mouth. They are a foot long each, about an inch thick, and somewhat crooked like those of the wild boar. Out of the upper jaw-bones spring forth two horns, on each side one, of an inch thick, a quarter of a yard long, smooth like teeth, and turn'd like a hook at the end, which makes it appear at first sight as if it were armed with 4 horns.

On the north-east of the isle of *Buero* are the following villages, *Waiselonga*, *Fogi*, *Wainite*, *Tamabou*, *Palmatte*, *Hokonima*, *Bara*, *Liciela*, *Waisamma*, *Ilai*, and *Romaitte*. The eight first of these villages were in 1653, burn'd to the ground by the *Dutch*, with all their boats, the inhabitants having revolted against them. This island is under the jurisdiction of the king of *Tarnate*. In the year 1660, the *Dutch* built a fort with four small bastions, provided with convenient habitations for the use of the garrison in this island, to keep out those of *Makassar*. It was nam'd *Mandarbaa*, after the then king of *Tarnate*. The natives of *Buero* are pursuant to their capitulation made with the *Dutch*, obliged to inhabit round about the bay of *Kayelle*, where they are possess'd of about 14 villages under the *Dutch* protection: Their houses are neatly built of cane, and some have convenient apartments; and for the improvement of the adjacent grounds, are obliged to cut down and burn the trees and woods, and to turn them into fields, gardens and orchards. Before that time, they lived only in wretched huts built

VOL. II.

along the sea-shore among the woods. They are very black, and like most of the inhabitants of the other neighbouring islands, almost naked both men and women, having only a piece of stuff to cover their nakedness from the waste down to the knees; but girls and boys till they are twelve years old, go quite naked. A young fellow that has a mind to marry a certain maid, may soon obtain her, by making a small present of eatables, or any other thing of no value to her parents. As soon as a woman is brought to bed, she goes straight to the next river, where she washes both her self and the child, and so returns to her usual employments, in the mean while the husband is attended and made much of in the wife's stead. They bemoan their dead neighbours and friends with lamentable out-crys, but after the corps is buried, they dance, sing, feast and make merry. Their graves are made of brick-work, with stones and clay, to preserve them against the wild-beasts. The common food of the natives is *Zagow*, millet, rice and dry'd fish. They are for the most part mahometans, tho' some retain much of paganism, and adore the crocodiles. In the year 1650, one *Madira* governor for the king of *Ternate* in the isle of *Amboyna*, having taken up arms against the *Dutch* in *Amboyna*, the inhabitants of *Buero*, as well those under the king's as *Dutch* subjection, join'd with *Madira* with so much obstinacy, that they chose rather to die than to leave *Madira*; and in 1652 kill'd four sea men belonging to a vessel call'd the *Goose*, who ventured too far into the woods. Mr. *Arnold Flaming van Outshorn* being, 1652, sent with a strong squadron of ships to *Batavia*, and from thence to *Amboyna* and *Buero*, to bring the inhabitants to reason; having understood their barbarous proceedings, burn'd all their boats, and the before-mention'd villages. The king *Mandarbaa* came along with him in person, having before concluded a peace with the *East-India* company at *Batavia*.

After we had taken a full view of this island, we returned to *Amboyna*, where the governor gave a splendid entertainment to the chiefest officers of the company, and some of the courtiers belonging to the kings of *Amboyna*. After dinner we play'd together, and they seem'd so well satisfied, that it might easily be seen there was a good correspondence betwixt them and the company at that time. In the mean while my ship having been loaden with 160 tons of cloves and some other commodities, I took my leave from Mr. *Hustard* the governor, and the 3<sup>d</sup> of May directed my course back towards *Batavia*. Under the government of this Mr. *Hustard* were at that time all the

1659. *Molucco* islands, whose business it is to keep a strict eye over them, for fear they should export cloves. But before I quite leave the isle of *Amboyna*, I will give you a description of its situation, and what else is worth our observation there.

The isle of *Amboyna*. The isle of *Amboyna* or *Amboyne* is by some numbered among the *Molucco* islands, because it produces great store of cloves like the *Molucco* islands. It is situate under 3 deg. southern latitude, about 24 leagues from the isle of *Banda*, and consequently nearer the coast of *Malacca*, than any of the *Molucco* islands. It is 24 leagues in circumference, being divided almost in two parts, by a vast bay or rather gulph. It has a very fine bay where ships may ride safely at anchor near the shore; about two leagues within this bay, is the *Dutch* fort called *Victoria*. It appears like two islands joined together by a neck of land. About 60 or 70 years ago, there were 57 goodly villages or great plantations, inhabited by *Indians* and christians, (some of which were of good strength,) but many of them have been laid desolate, or at least are much decay'd by the intestine wars.

The village *Way*. Among the rest *Way* was a very fine plantation on the north-side of the island, half a league from the sea-shore, built upon a rock, and defended by a good breast-work; notwithstanding which, it was 1630 surpris'd by one *Kimelaba*, the inhabitants were christians. Near this village are abundance of clove and *Zagoe* trees, and all along the sea-shore are several other plantations of less note, all well provided with clove and *Zagoe* trees. The village of *Way* has this convenience, that it is well provided with fresh springs, a thing of the utmost consequence in those hot countries.

The village *Noussanive* was situate upon a river on the west-side under the cannon of the fort *Victoria*, being divided into three plantations. The country thereabouts abounds in clove-trees; the plantations of which extend as far as to the utmost point of the western cape, and on the other side, as far as *Ayer Kabouba*: The king or captain of this district used to be formerly president of the council of *Amboyna*.

The village of *Hutoe* is very ancient, and built near the sea-side, under the redoubt belonging to the *Dutch* company, being the capital of the whole district of *Hutoe*.

*Wawami*. *Wawami*, the head village of all, lies above a league from the sea-shore, upon a hill near an *English* mile high, unto which leads but one passage, which in the midst is defended by strong pallisadoes, and the top of the hill (which is of an oval figure) by a stone wall. Betwixt the hill and the fort

slides along a pretty river. Formerly this was a noted place of retreat for the inhabitants, who used to shelter themselves here.

The village *Moufala* is built upon a mountain about a league and a half high, being so strong by nature, as to be counted impregnable; notwithstanding which, it has been reduced by the victorious arms of the *Dutch East-India* company, under whose jurisdiction they now live.

The following plantations or villages were in 1630, under the jurisdiction of the *Dutch East-India* company.

The district of *Rosfenive* which comprehends *Rosfenive*, *Amaboefoe* and *Hattoe*. *Rosfenive* had in 1630, one *Andrew Rosfenive* for their king or captain; *Amaboefoe* one *Dominges Costa Makkake*, *Poeta* and *Hattoe*, one *Lessemesse*. These villages were better inhabited than most of the rest, the inhabitants making profession of the christian religion, yet not without some mixture of *Mabometanism*, except those of *Amaboefoe*, whose captain was a good christian, and lived much better than the rest; which shews that the chief defect lay in their kings; for *Andrew Rosfenive* was none of the best livers, tho' he could very artificially play the hypocrite; he had no wife but many concubines; and tho' he was often admonish'd to marry, he continued obstinate in the same course, which gave great scandal as well to the inhabitants as to the other kings and captains. The common people of this town were always more ready for the service of the company than those of the other villages. For the villages *Rosfenive*, *Amaboefoe* and *Hattoe* are obliged to supply and manage one half of the governours *Korrakoren*, (or small vessels of war) as the villages of *Kielang*, *Nakko* and *Hattela* are bound to supply the other half.

*Kielang* was one of the most considerable villages on the south-side of the mountain of *Layimor*, not far distant from the sea shore, but of no great strength. Near it are very good springs and great store of clove-trees. Under the district of *Kielang* are the villages of *Kielang*, *Nakko* and *Hattela*. In the year 1630, *Manuel de Silva* was king or captain of *Kielang*, but surrendered the government to his eldest son; he was a very good natur'd honest man, and had the second place in the *Dutch* council. *Anthony Pays* was captain of *Nakko*, and *Anthony Lopes* of *Hattela*, they were all three very good christians.

Under the district of *Ema* are the villages *Oekorilla*, *Lewary* and *Routon Lafary*; *Manuel* was captain of *Oekorilla*, *Simau* of *Ema*, and one *Anthony Routon* of *Lafary*. These are obliged to furnish a *Karrakore* of four *Nadjes* for the service of the company.

1659. They are very honest and faithful, and profess themselves of the tribe of *Olitymas*, except *Routon Lafary*, which belongs to the tribe of the *Olifivas*.

*Soya.* To the district of *Soya* belong the villages of *Abosen*, *Oeriettoe* and *Amantelloe*. These are obliged to find a *Korrakore* of 4 *Nadjos*, are pretty ready in the service, and profess all christianity, and so does the king with all his *Orangkys*: They are of the tribe of the *Olifivas*. *Laurenzo de Sylva* is king of *Soya*, *Anthony Abosen* of *Abosen*, and *Jeronymo Tcholopoe* of *Oeriettoe*, and *Amantelloe*.

*Hative.* Under *Hative* belong the villages *Taviery*, *Hokkonaloe* and *Mardykka*; they furnish *Korrakore* with 4 *Nadjos*. They are good soldiers and christians, and their heads come frequently to the communion. Their chief heads are *Laurenzo Marcus* captain of *Hative*, *Pedro Antonio* of *Taviery*, *Laurence Mendos*, chieftain of *Hokkonaloe* and *Mardykka*. The inhabitants of *Mardykka* are the remnants of the *Portuguese*, and some other slaves set at liberty: 1630 they consisted of 100, or 120 men fit to bear arms, who did considerable service to the state of *Amboyna*; they were very good christians and faithful, and furnish'd an extraordinary *Korrakore* of 4 *Nadjos*; they accounted themselves to be of the tribe of the *Olifivas*, their chieftain was then *Anthony de Costo*.

*Halou.* To *Halou* belongs the village *Hative-Kichileet*, they are pretty well peopled, and christians, and furnish a *Korrakore* of 4 *Nadjos*; *Diego Paty* was captain of *Halou*, and *Adam Marano* of *Hative-Kichileet*.

*Pouta.* *Pouta* has only two small villages belonging to it, viz. *Kapa* and *Cbery*; their captains were *Stephen Terjera* of *Pouta*; *Manuel Lopes* of *Kapa*, and *Andrew Pardis* of *Cbery*.

*Oettomary.* The inhabitants of *Oettomary* did revolt three times, but were in 1626 reduced to obedience by the then governor Mr. *Gorkum*, they were then under the tuition of *Don Pedro de Oettomary* their captain, who was a very honest person, and ever since that time they have adhered faithfully to the company. They are generally stout soldiers and good christians, for they frequent the christian congregations, and add more children to our schools than the other villages do. They furnish a *Korrakore* with 4 *Nadjos*, and are of the *Olifivas*. The four villages of *Ouriem*, *Larik*, *Wakkasive*, and *Affelon* stand likewise under the jurisdiction of the company; they are all blacks and stout fellows, they belong to the *Olifivas*, and acknowledge *Hitteo* for their captain, yet under the protection of the company. They furnish a *Korrakore* of 4 *Nadjos*. Thus the two villages of *Alang* and *Lillebay* be-

long to the company: The inhabitants are christians, except 3 or 4 families at *Alang*. Of the last, one *Salvador* was captain, and of *Lillebay*, *Bastiaen Kasbango*. The inhabitants are likewise of the tribe of the *Olifivas*.

These six villages are obliged to furnish the *Dutch East-India* company with a great quantity of cloves; to wit 300 *Babar per annum*; vast numbers of clove trees having been planted hereabouts, about 1630, which are come to full perfection since, and produce vast store of fruit. Thus 1636, the planting of clove trees was so far encouraged on the south-side of this island, that each family was obliged to plant, at least, ten trees every year, the ground being very fit hereabouts for this purpose; they were also not negligent in planting coco and other fruit trees. *Kamariay*, *Seriwawan* and *Kayrato*, are three villages near the sea-shore; the inhabitants are absolutely devoted to the service of the company, and appear sometimes with an *Orangay* at the head of them at the fort. They adhere to those of *Mardykka*, and belong to the *Olifivas*.

Near the point of the bay are four villages, *Quelipapoety*, *Amassee*, *Marykque*, and *Savoukque*. The first furnishes a *Korrakore* with 3 *Nadjos*, the three last a *Korrakore* of 4 *Nadjos*. In the village of *Amassee* lived at that time two young lads, sons of the *Orangkay*, who formerly had been hostages with the *Dutch* governors for seven years, but now were got into the government of these villages, and seem'd well inclin'd to the company's interest.

The ile of *Amboyna* has many high and steep mountains, call'd *Gounen* by the natives, which have several fair villages built on the top, and are irrigated with very clear and fresh-water springs. The vallies serve for walking-places, by reason of the many fine trees that are planted there, as the mountains serve the inhabitants for a shelter against their enemies in time of war, being for the most part inaccessible. There is a certain rock here, call'd the *Elephants Rock*, from its shape and bigness, from whence issues forth a rivulet as clear as crystal, which slides gently thro' the adjacent verdant plain, whence is a very pleasant walk up to the rock.

However the air of *Amboyna* is none of the wholesomest. There rages in this and the rest of the *Molucco* islands, a certain distemper, both among the natives and strangers, which by its symptoms resembles altogether the *French* pox (for which reason the *Dutch* call it the *Pox of Amboyna*) except that this is communicated without any carnal conjunction. In the face, arms and legs, nay all over the body, appear certain crusty boils, which

1659. which either turn scirrhous, or if they come to a suppuration, a slimy, tough but sharp matter issues from thence, resembling in all its circumstance the *French pox*, except that they are not so painful, neither corrode the bones. This disease is attributed to a peculiar constitution of the climate and the air, and the excessive use of sea-fishes, and coco nuts called *Zago*, and of the liquor called *Saguaveer*. At first this distemper is easy enough to be cured, but if it takes root, not without great difficulty. They commonly apply the same remedies as we do in the *French pox*, in the spleen and dropsy: to wit, the decoctions of chicca, farsiparilla, and guajacum, and purge them soundly betwixt whites.

Its constitution.

The isle of *Amboyna* is pretty fertile; it produces millet, tobacco, coco-nuts, potatoes, pinang, oranges, lemons, citrons, sugar, bamboo canes, and several other fruits. Some places here afford likewise nutmegs, but in no great quantity, neither have they so good as those in the isle of *Banda*, neither do they grow wild here, but the trees are planted in orchards. Neither are they destitute of divers sorts of beasts, especially roe-bucks and hogs, and have great store of fishes, but the chief products of *Amboyna* are cloves, which grow wild here; they are called *Nagalen* (nails) by the *Dutch*, from their shape, being flat on the top and sharp at the end: They call them also *Geroffel nagelen*, perhaps from the *Greek Karyophyllon*. In the *Molucco* islands they call the cloves *Caampe* or *Chanpe*, in the isle of *Java* *Sianke*, and in *Malacca*, *Synken* or *Thinka*; the *Arabians*, *Persians*, *Turks*, and most of the *Indians*, call them *Kalafur*.

The clove-tree.

The clove-tree grows up in form of a pyramid, its branches sprouting forth close together. This tree is of the bigness of our cherry-trees, but in the whole resembling most to a large laurel-tree, the leaves being very near of the same shape; the bark on the stem is of a greyish colour like that of the olive-tree. In the midst of each leaf is a large vein which sends forth many lesser branches; these leaves grow on long stalks, sometimes single, but for the most part in clusters; those that grow near the extremities of the branches are of a purple colour, but the rest dark green, if they are rubbed betwixt your hands they scent as strong as the cloves themselves, and so do the branches. On the extremities of these branches grow certain sprouts which produce certain buds, and those again flowers, sometimes 10 or 20 in a knor, which at last produce the fruit, which are tough whilst they are growing, but hard when come to maturity. At first they are green, then appear of a pale red colour, as if the trees were covered

with scarlet, affording a very agreeable sight to the beholders, because there is often more fruit than leaves on the trees. The blossom is white at first, not unlike our cherry blossom, each leaf of the flower having three small streaks, then they turn green, afterwards red, and last of all dark yellow inclining to black. They resemble in shape a nail, with a small hollowness in the head, in which remains a thin skin which falls off as soon as it is touched. The cloves are very hard of substance; when they see more blossoms than leaves, they foretel great plenty of fruit; the blossoms smell much finer and stronger in dry than in rainy weather, and the first is looked upon as the most fruitful, it being common in a dry season to see more blossoms than leaves, though even in such a season the clove-trees don't hit always alike, for every third or fourth year it is observed that they don't bear so plentifully as otherwise, just as if the tree at that time did remit its vigour spent the preceding years. The cloves are gathered once a year, viz. from the middle of *September* or beginning of *October* till *February*, this being the best summer season here. Some are gathered, the rest beat down with canes like flails; but this last way is not so safe as the other, for unless they be very careful, they bruise the tender sprigs of the tree, which renders it the less fruitful the next following year, tho' the season be never so good. Before they begin to gather, the ground under the tree is cleared of weeds, that they may not lose part of the fruit. What cloves are left upon the trees grow very large as they ripen, much bigger than the rest, but are not so fit for use. The next following year they drop from the tree, and though they are not so aromack as the others, they are used for seed, and produce new trees, for which reason they are called the mother-cloves; for after they are dropt upon the ground they will take root, and in 8 or 9 years time it will come to the perfection of a good tree, and prove as fruitful as the rest; but if these sprouts be transplanted once in two or three years, they will bear more and better fruit. They say the clove-tree will hold good 100 years; the fruit immediately after gathering is dark yellow inclining to black, but if dry'd turns quite black, and if they dip them first in sea-water it preserves them from being worm eaten. Thus prepared they are laid up in store-houses and are transported to other places, where they are picked and the stalks taken from them, which are sold separately. The *Dutch* call these stalks *Nagelruis* (the rubbish of cloves) and the *Portuguese* *Baston*. Cloves are hot and dry, of a bitterish biting taste, but especially when they

V

1659. are dry'd. They seem to consist of a gummy sulphurous substance, with a strong drying and attractive quality; as for instance, when the *Indians* are to deliver a certain quantity of cloves, they put in the warehouse, where they are, a tub full of water, which is in a short time attracted by the cloves, to the no small benefit of the seller, it being observable that the cloves weigh as much the heavier as the water that was put there weighed before. The *Dutch* put this likewise often in practice. Some are of opinion that the cloves by their extraordinary drying and attractive quality, draw all the moisture of the ground round about the tree to that degree that no weeds or grass can grow there; but this is a vulgar error, the bareness of these spots of ground being not to be attributed to the cloves, but to the owners themselves who weed and keep them clear, thereby to afford the more nourishment to the trees, and not to lose part of the fruit when they are gathering or beating them from the trees.

'Tis true, the clove-trees are planted for the fruit sake, nevertheless the blossoms, leaves, sprigs, nay the gum itself that issues from the tree, are not destitute of an aromatical virtue, and afford very good medicines; the *Indian* and *Portuguese* women distil out of the green cloves and leaves, a water and a spirit which is very odoriferous and cephalick; and an excellent remedy against the palsy, called by the natives *Beribery*. Against the same distemper they preserve also the cloves with sugar, and draw an oil both of cloves and leaves. Cloves boiled in milk are accounted a great provocative, they are very cordial, and if chewed take away a stinking breath. They make a pickle of the green cloves, which are not so hot as the rest, and provoke the appetite. Persons of quality put green cloves in vinegar, which is a great strengthener of the stomach. The *Indians* call the vinegar *Atzjar*.

Royal  
cloves.

There is another kind of cloves but not commonly known, being very scarce and dear. The *Indians* call them *Tvinka Papaba*, or curled cloves, tho' they might rather be called ear-cloves, because they sprout forth like the corn ears. The *Dutch* call them *Royal Cloves*, because they are in such high esteem among the kings of the *Molucco* islands, not so much for their excellent taste and scent (in which they surpass all others) but for their scarcity's sake; for if we may believe them, no more than two such clove-trees are as yet found out, and that in the isle of *Makjan* only: One of these two trees exceeds the other in bigness, but both are like the common clove-trees, except that they are much taller, and

Vol. II.

the cloves bigger and of a different shape from the common clove, as may be seen by the draught.

In the island of *Ceylon* are likewise abundance of wild clove trees, but bear no fruit. It is credibly affirmed that in former times the inhabitants of the *Molucco* islands were ignorant as to the use of the cloves, till some *Chinese* coming that way found out their goodness, and from thence transported them to *China*, and so farther to the *Indies*, *Persia*, *Arabia*, and other parts. The islands *Ternate*, *Makjan*, *Mosier* and *Batsjan*, did likewise in former days abound in clove trees, but pursuant to an agreement made with the kings of the islands some years ago, the same have been rooted out.

In the isle of *Ambony* grows likewise the wild palm, or *Zagou* tree, otherwise called *Papedo*. This tree resembles the other palm or coco trees, the leaves hanging downwards on the branches, the lowermost of which perish commonly: This tree bears but one fruit, which is of no use. The inhabitants make bread of the pith of the young trees; for on the top of the tree grows a certain head like a cabbage, in which is inclosed a certain white flower called *Zagou*, and the bread made of this flower *Zagou manda*. This flower they mix with water, and let it rise a little, then they put it in earthen pots, put burning coals all round about it, and so bake it. This bread, whilst it is new, tastes very sweet, and is of a very agreeable scent, but soon grows dry, and is brittle and shining like glass. They also mix this *Zagou* with water, and boil it like pap, into which they squeeze one or two lemons, and so stir it about with a stick: it is very cooling, and of an agreeable taste. They eat it with a stick, which they put into the pap, and turn it round, till a sufficient quantity of the pap, which is very glutinous, almost like turpentine, adheres to the stick, and so put it into the mouth. Out of these young trees they draw, like out of the coco-trees, a liquor; they cut one of the branches near the top, and in a hole made for that purpose, put a piece of hollow *Bamboo* cane, (which in these parts are used instead of tubs, pails and mugs) thro' which in a short time, issues forth a great quantity of liquor as sweet as honey, call'd by the natives *Zagouweer* or *Zagouwer*, but is somewhat harsher than the liquor drawn from the true coco-tree.

Wild palm  
tree called  
Zagou.

In the isle of *Ambony* they put a certain bitter root, call'd by a general name *Onbat* into this liquor, which preserves it for some time, for else this *Zagouweer* turns quickly as sour as vinegar, and is then used for such. They distil also a certain liquor of it call'd *Arak*. This *Zagouweer* is the

U u common

1659. common drink, and sold in publick houses for a farthing a glass, but used in great quantity, proves very obnoxious to the nerves, especially whilt you are hot, when it must be taken with great precaution, else it will infallibly cause the gripes in the guts and palsies, call'd by the natives *Beribery*, which leaves a paleness in peoples faces for ever after. Sometimes they can draw 30 quarts of this liquor in 24 hours out of one single tree. In the isle of *Java* there are likewise some of these *Zagou* trees, but the liquor is, as far as I know, not valued at *Batavia*. They draw the liquor out of these trees till they die, and I was told that there was some of these trees in the woods of *Amboyna*, which will give as much liquor in 24 hours, as a man is able to carry away upon his shoulders. Some other islands belong to the isle of *Amboyna*, to wit, the adjacent large country of *Ceram*, the isles of *Manipa*, *Quelang*, and *Amblau*.

The isle of *Amboyna* is divided into two parts; one of which is under the jurisdiction of the *Dutch East-India* company; the other under the king of *Ternate*. Unto the company belongs the country of *Laitimor*, where is the fort of *Victoria*, and the wooden fort *Wantrou*, and on the pass of *Bagoale*, the redoubt call'd *Middleburg*. The three islands *Homa*, *Honoma*, and *Nausalant*, which produce great quantities of cloves: The whole coast of *Hittoe* with the redoubts, the *Amsteldam* at *Hila*, the *Rotterdam* at *Larike*, and the *Leoden* at *Hittoe* and *Lama*; and several small wooden forts at *Ouriën*, *Lebebeu*, *Ceil*, and *Way*. Under the king's jurisdiction are the country and coast of *Ceram*, the isles *Amblau*, *Manipa*, *Bonoa*, and some others.

The fort *Victoria*, (the staple of the company here) lies five leagues deep in the country, being defended by four bulwarks, a good ditch, and a considerable garriſon, with suitable provisions and ammunition. During my stay here, there was a large crocodile in the ditch, which did vast mischief to the wild fowl belonging to Mr. *Hustard* the governor, who took great delight in them. Some soldiers and others were ordered to place themselves whereabouts they supposed the crocodile had his lurking place, but could not meet with it; till at last the crocodile on a sudden leaped towards the secretary of the governor, whom he had certainly devoured, had not the rest that were near at hand, with sticks and half pikes kill'd the beast immediately, which was extraordinary large. Round about the castle live several *Dutch*, *Chinese*, and other nations. Within and without the fort is a church, where divine service is held both in the *Dutch* and *Malacca* tongue.

The men wear large whiskers, but little hair upon their chin; they only cover themselves with a flight piece of stuff round the buttocks and belly. The women tie their hair up in many knots: He that intends to marry a young maid, buys her from her father for money; but if she proves barren, the marriage is null and void: In former ages the natives were a most barbarous people, men-eaters and pagans. Now a-days they are for the most part *Mabometans*, the rest are *Christians*, some *Roman Catholics*, such as were converted by the *Portuguese*, others professing the *Protestant* religion, which was first introduced there in 1647. The *Dutch* have erected schools in all the villages to instruct the youth in reading and writing, and in the fundamentals of the christian religion. The natives are generally brave, but very deceitful and treacherous; they are naturally addicted to laziness, and are so obstinate, that they chuse rather to die than to leave their ancient customs. They make use of certain small vessels in time of war. They are very swift in their motion, and managed by *Pagagen* or oars. They call these vessels *Korrakore*, and are shaped like a dragon, the head representing the forecattle, and the tail the stern. They have also some lesser boats call'd *Pavas*. Their houses are built of *Bamboo* canes and *Zagou* trees; they sleep likewise in bedsteads made of *Bamboo* canes, or sometimes upon mats only.

Their weapons are bows and arrows, half pikes, javelins, scimeters, targets and firelocks, all which they manage with great dexterity, as well as the darts. They have also a kind of hollow pipes, out of which they shoot great numbers of small poison'd arrows; the wounds made with them prove commonly mortal, unless the poison be removed immediately by cutting it out.

The women of *Amboyna* are very lascivious, and extremely desirous of the christians; if they find themselves disappointed in their expectation, or that they are left by their gallants, they have a way of infecting them with a certain poison, the operation of which is so slow, that they die a lingering death, neither can they cohabit with any other woman, unless they receive proper antidotes from the same woman that poisoned them. Many *Chinese* live in *Amboyna*, tho' for the most part among the *Mabometans* at *Hittoe*, *Lochoe*, and in *Ceram*. In the year 1636, at the request of king *Hittoe*, three or four *Chinese* were permitted to settle under him, with this limitation however, that they should pay the usual taxes to the *Dutch* receiver-general of *Amboyna*; afterwards one *Chinese* was allow'd to live in each village, to provide them with

About the year 1636, the slaves belonging to the *Dutch* had got a custom to run away from their masters, and to shelter themselves among the *Mabometans*, but several being punished with death, pursuant to a proclamation published for that purpose, the rest were so terrified thereat, that no such thing was heard of for a great while after. Certain negro christians dwelt likewise in *Amboyna*, commonly call'd *Mardikers*.

Courts of justice in *Amboyna*.

There are three courts or councils belonging to the *Dutch* in *Amboyna*; first the court martial, secondly the civil court of justice, and thirdly the great council or council of state.

The court martial used to meet every *Monday* and *Thursday*, composed of the governor, the head factor, and under factor of the company, a captain, a lieutenant, one of the eldest sergeants, and a secretary; these took cognizance of all matters relating to the soldiers and garrisons.

The civil court of judicature was kept in the town, consisting of four officers of the company, of four of the chiefest inhabitants, and of four or five *Orangkays* of the council of state; besides which they had two clerks, one a *Dutchman*, and the other a native of *Amboyna*, and two attendants. The head factor in the castle was president here; they took cognizance of, and gave sentence with the governor's approbation, in all civil and criminal cases, neither had the villages any right of exercising of justice without them.

The council of state, or the *Orangkays* of the chamber, who in conjunction with the governor, and his councillors, were to deliberate concerning all publick affairs, such as the equipping of *Korrakoren*, or the management of a war against an enemy, had their seats appointed thus.

*Andrea*, king of *Rosfenive*.

*Mannel*, the old king of *Kielang*.

*Laurentz de Sylva*, king of *Soya*.

*Simaon Ema*, captain of *Ema*.

*Laurenzo Marcus*, captain of *Hative*.

*Diego Pati Halloe*, captain of *Halloe*.

*Anthony da Costa*, captain of the *Mardikers*.

*Don Pedro*, captain of *Vetomoery*.

*Salvador Paty Alang*, captain of *Alang*.

*Simon Baguala*, captain of *Baguala*.

*John Barkabessier*, captain of *Way*.

*Stephen Tercera*, captain of *Pouta*.

*Pedro Antonio*, captain of *Tacieri*.

*Fernando Lavabalai*, captain of *Rosfenive*.

In former ages the island of *Amboyna* was subject to its own kings, till it was reduced under the obedience of the kings of *Ternate*, which according to the relation of the inhabitants happened thus:

Many years ago reign'd a king in *Ternate* call'd *Babou*, son of *Chieroen Diamelou*, who having been the first that introduced *Mabometism* there, was in great esteem with the *Mabometan* priests, who to this day pay a great veneration to his memory. In the mean while, some differences being arisen betwixt the villages of *Warnalete* and *Makatit*, belonging to the district of *Warnolela*, and the last being unable to cope with those of *Warnalete*, they underhand sought for aid by king *Babou*, who having granted their request, sent a good fleet of *Korrakoren*, under the command of his councillor *Samarou*, to the cape of *Saragi*, betwixt *Erang* and *Lissidy*, where they came to an anchor; the inhabitants of *Cambello*, who as well as those of *Erang* and *Lissidy*, had submitted to king *Babou* against those of *Makatit*, advised the inhabitants of *Warnalete* to go to meet *Samarou*, and to purchase his favour by some presents, which being done accordingly, they all attack'd, in conjunction with *Samarou*, those of *Makatit*, and forced them to submission; but *Samarou*, not thus satisfied, reduced all the circumjacent islands under his king's obedience; so that this island owed the loss of its liberty to the intestine divisions of its inhabitants; *Samarou* returning home victorious, was receiv'd with great demonstrations of affection by king *Babou*, who in reward of his service, honour'd his son *Robobongy* with the title and dignity of *Salabakkum* or Stadtholder of these conquer'd countries, having before been dignified with the title of *Kimelaba*, which his successors in the stadtholdership have retained ever since, tho' it be certain, that not *Kimelaba* but *Salabakkum* signifies a stadtholder in their tongue. After the death of *Robobongy*, his eldest son *Adja* succeeded him in the stadtholdership, who was succeeded by his brother *Bassi Frangi*. After him came *Frangi*, who for his treachery was beheaded by *Sabadiin* of *Loubou* his brother's son. *Leliatte*, son to *Bassi Frangi*, then thrusts himself into the government without consent of the king, and following the footsteps of his predecessor, receiv'd the same reward. He was succeeded in the stadtholdership by *Madira*, son of *Sabadiin*, the seventh in order, our company having made use of all their interest with *Hamfia*, king of *Ternate*, to procure him that dignity, in consideration of the singular kindnesses they had received from his father. But they soon found themselves mistaken in their choice; for this *Madira*, of the antient race of the *Temogolo's*, of which *Samarou* was the first, rebell'd 1650, against the king, and with the assistance of the inhabitants, made himself master of several strong holds; to wit, *Amblau*

*Madira rebels against the king of Ternate.*

How *Amboyna* came under *Ternate*.

1659. *bleu, Manipa, Lifidy, Hatua* the lesser, *Af-  
saboudy, Laala* and *Nouffatelo*, plunder'd all  
that oppos'd him, and kill'd about 80 per-  
sons belonging to the *Dutch* company. One  
*John Pays*, captain of *Haturce, Tawiro* and  
*Houkonalo*, living near the fort of *Amboyna*,  
was shrewdly suspected to have had a hand  
in this conspiracy, which *Simon Kos* (who  
commanded in the absence of *Arnold Out-  
shorn* at *Amboyna*) having got notice of,  
secured him in the fort till the arrival of  
Mr. *Outshorn*, when the war broke out with  
great violence on both sides.

How the  
Portuguese  
became mas-  
ters of  
Amboyna.

The *Portuguese* made themselves masters  
of *Amboyna*, 1546, in the following man-  
ner: At the time when *Anthony Galvan* was  
governor of *Ternate*, a great fleet of small  
vessels belonging to the island of *Java*,  
*Banda, Macassar* and *Amboyna*, was sent to  
the *Molucco* islands to fetch cloves; *Galvan*  
being advertis'd thereof, and fearing lest  
they should by this means spoil the spice  
trade of the *Portuguese*, armed about 25  
*Korrakoren*, with 40 *Portuguese*, and 400  
auxiliaries; these, under the command of  
*Jacob Supi Azevedi*, admiral of the sea *Mo-  
lucse*, steer'd their course towards *Amboyna*,  
where meeting with the *Indian* fleet, they  
attack'd and routed them, taking many of  
their ships, with good store of great can-  
non, and a considerable sum of ready mo-  
ney; *Azevedi*, willing to improve this op-  
portunity, landed in *Amboyna*, the inhabi-  
tants of which being terrified at their last  
defeat, did for the most part submit to the  
*Portuguese*, and receiv'd such laws as they  
thought fit to prescribe to them; which done,  
*Azevedi* loaden with glory and spoils, re-  
turn'd as a conqueror to *Ternate*. After that  
time, the *Portuguese* used always in their  
voyages from *Malacca* to the *Molucco* i-  
slands, and in their return from thence, to  
provide themselves with fresh water at *Am-  
boyna*, till 1603, this island was taken by  
the *Dutch* from the *Portuguese*, who got a  
vast booty there, tho' the *Dutch* are not  
very fond of living in *Amboyna*, being a  
place of no great plenty.

We set sail, as I told you before, the 3<sup>d</sup>  
of May from *Amboyna*, and with a brisk and  
prosperous gale arriv'd the 29<sup>th</sup> before *Ba-  
tavia*.

No sooner was our ship unloaden, but I  
received orders to go aboard the ship *A-  
chilles*, *John Vander Werven* master, to *Ja-  
pan*. Every thing being got in readines for  
our intended voyage, I took my leave  
from the directors of the company, and  
the 28<sup>th</sup> of July set sail with 15 ships  
more, Mr. *John Vander Laen* being comma-  
ndore, with orders to sail to *Teywan*, to at-  
tack the city *Makao*, (a populous place,  
and defended by a garrison of 600 men) and

to observe *Koxinga*. But scarce were we  
come within sight of the isle of *Anyam*,  
when we were overtaken by so terrible a  
tempest, that I can safely affirm, I never  
saw the like in my life, and that it is past  
my skill to express it; the waves rising  
sometimes to that height, that the very tops  
of our masts could not be seen, the winds  
sometimes falling flat upon our ships, and  
pressing them down flat under the abyss, so  
that we expected every moment to be swal-  
low'd up by this merciless element, espe-  
cially when we saw the yacht *Gorkum* (in which  
was *Francis Langman*, formerly my com-  
panion in our *China* voyage) in a moment  
perish before our eyes, without the least pos-  
sibility of saving one man. At last, how-  
ever thro' God's infinite mercy the fury of  
the winds began to allay, when with much  
ado we got with our ships, which were much  
damag'd by the storm, into the harbour of  
*Teywan* the 20<sup>th</sup> of September. The season for  
our intended voyage to *Japan* being past,  
as forced against my will to unload my ship  
here, and the design against *Makao* being  
laid aside for that time, because *Koxinga* was  
abroad with a powerful force: We set sail  
with the whole fleet for the islands call'd  
*Piskadores*, and came the 3<sup>d</sup> of October to an  
anchor in the *Church-Bay*: Here I received  
orders to prepare myself for a voyage into  
*Persia*, aboard the ship the *Leerdam*, loaden  
with sugar, which I did accordingly.

The islands call'd *Piskadores* or fisher-  
islands, and by the *Chinese* *Pebu*, are situate  
under 23 and 24 deg. northern latitude, a-  
bout 12 and 13 leagues from the isle of  
*Teywan*. They have several good har-  
bours, and two commodious bays, where  
ships may ride safely at anchor at 8 or 9  
fathoms water. At the entrance of this bay  
are the ruins of two ancient stone forts, one  
built by the *Dutch*, the other by the *Chi-  
nese*; and betwixt both is another fort. The  
country thereabouts is not hilly, abounds  
in grafs, yet pretty strong. It contains ma-  
ny populous villages; these islands being all  
well stor'd with inhabitants, with fat cattle,  
especially cows, and birds of all sorts, espe-  
cially with an incredible number of fine large  
cocks. During the rainy season they gather  
fresh water in cisterns or ponds, but in dry  
weather the water is saltish here. The coun-  
try produces likewise potatoes and many  
other fruits in abundance, and here are al-  
ways to be seen great numbers of *Chinese*  
vessels, which come some for fishing, some  
for traffick. At the entrance of the *Church-  
Bay*, stands to the north-side a *Chinese* Pa-  
gode, where is very good anchorage, and a  
convenient place for shelter to those that  
are bound to *Teywan*, there being no other  
safe harbour for great ships hereabouts. The  
islands

1659. islands *Piskadores* are many in number; two are the most famous; one call'd the *Piskadore* or *Fisher Island*, the second *Pebou* or *Pebu*.

The fourth-east side of the *Fisher Island* is so bare, that it produces not a tree; to the west of it is another small island, and the passage betwixt both so shallow, that a yacht is not able to pass that way. To the south of this lies another island, call'd by the Dutch the *Troublesome Island*, because there is no anchorage for ships here. About a league from thence to the west is a rocky island, or rather two small rocky islands, divided by so many rocks, that there is no passage or anchorage near them.

Return to  
Teywan.

After we had dispatch'd our business here, we set sail again for the island of *Teywan*, Mr. *Conjet* was at that time governor of this isle, who having not without reason conceiv'd a jealousy at the vast number of ships and men, the *Chinese* had brought together in the river of *Quincen*, or in the isle of *Ey* and *Queymuy*, on the coast of *China*, I was dispatch'd thither the 31<sup>st</sup> of October with the two yachts the *Graveland* and *Mary*, with express orders, to demand from *Koxinga* whether he was for peace or war, and not to tarry longer than ten days for a categorical answer. I carried aboard the vessels to take care of them, whilst my colleague went to speak with *Koxinga*: Our limited time being near expired, I went ashore in a boat, ordering our vessels to be upon their guard. The banks of the river were so crowded with people, that I had much ado to pass thro' them; by good chance I met with a *Chinese* who understood *Portuguese*, who was so complaisant as to go along with me to the place, where my colleague and his attendants lodg'd; but they being gone abroad to see *Koxinga* muster his forces, I was oblig'd to take the same way; we address'd ourselves to him, desiring a speedy and positive answer, the time of our stay being expired. He gave us for answer, that being at present busy in mustering his forces, he would give us his resolution to-morrow, in a letter directed to the governor of *Teywan*, which he did accordingly: In this letter he told him, that he had not the least thoughts of any war against the company, but that he would cultivate a good correspondence with them. To remove all occasion of jealousy, he sent several merchant ships to *Teywan*, which however did not remove the suspicion they had conceiv'd of him there, especially after we on the 22<sup>d</sup> of December gave a verbal account of his vast preparations in the fort of *Teywan*. His letter was as follows.

Vol. II.

KOXINGA's letter.

1659.

BEING at a great distance from you, I could not but receive your letter with a more than ordinary satisfaction, which I perus'd more than once, to inform myself the better of your intentions. You mention some false rumours, but at the same time seem to give credit to them. In my father *Yquam's* time, the Dutch possess'd themselves of a certain place in the isle of *Teywan*, with his consent for the convenience of trade, which I have not in the least interrupted, and therefore judge you to be oblig'd to me upon that score. I have of late years been so deeply involved in a war with the *Tartars*, that I have had no leisure to trouble my head with an inconsiderable island that produces nothing but grass: It being not my custom to disclose my designs, but rather if I aim at the east to point to the west; how can you suppose to be inform'd of them by rumours? The reason why so few of our ships come to that island, is, because they cannot trade thither with any profit, the customs being so heavy. It was but this year the *Tartars* made a strong invasion into the low lands of *China*, in hopes to put an end to the war with one blow, but they were so bravely received, that they were forced to retreat with the loss of 100 of their commanders, and a great number of their men; we then retired into the islands of *Ey* and *Queymuy*, in hopes to draw them thither, and so to catch them in the trap. Concerning your complaints of having been treated in a hostile manner in the island of *Piskadores*, if it be really so, it has been done without our knowledge. I sent back an immediate answer, together with your presents, to the letter sent to me from *Batavia* four years ago; by which I understand, that you intended us but a very slender satisfaction, for the *Jonckeh* or ships, and the loading and money aboard them detained by you, notwithstanding which, I did not think fit to urge this business any further, for fear of occasioning a rupture betwixt us; it shall be my endeavour, as soon as the *Tartarian* war is brought to a conclusion, to encourage trade as much as possible may be, and don't question but you will on the other hand contribute to it, as far as lies in your power.

Given in the 14<sup>th</sup> year, the 19<sup>th</sup> day of the 10<sup>th</sup> month of the reign of king *Indick*.

After the reading of *Koxinga's* letter, it was resolved by the majority of voices not to engage in a war against *Koxinga*; most being of opinion, that at this juncture he would not undertake any thing against the company, tho' the governor Mr. *Conjet* was of a contrary sentiment, which proved too true afterwards. Thus all the thoughts of

X x

war

1659. war being laid aside, the continuation of commerce with him being judged, as indeed it was, to be of more present advantage to the company, all the ships there were ordered to their respective places, and I among the rest, set sail aboard the ship the *Leerdam*, loaden with sugar for *Gamroa* in *Perfia*.

The before-mentioned islands, *Ey* and *Queymuy*, are high rocky islands; the city of *Eymny* is situate upon a high hill, pretty deep in the country, being surrounded with a stone wall, without which you see the ruins of an ancient tower, and a *Chinese* Pagode or temple.

The city of *Queymuy* lies upon a river at a pretty distance from the sea, being the capital of the isle from whence it has borrowed its name. It has very large suburbs, which begin on the river side. Not far from thence, deeper into the country, is a strong castle, defended by a very high wall, formerly the residence of *Koxinga*. The country round about is rocky, and not very fertile, except that the valleys afford a little grafs for cows; for the rest, the inhabitants feed most upon fish, and some live by traffick.

It was not long before the *Chinese*, being forced by the *Tartars* to quit the continent of *China*, and *Koxinga*, strengthened with near 25000 fugitives, and about 500 vessels, they resolved to shelter themselves in the two before-mentioned islands of *Ey* and *Queymuy*, and finding himself in a condition to undertake something against us; he embark'd 20000 of his best men aboard a great number of *Chinese* *Joncken* or vessels, and the 30<sup>th</sup> of May 1661, appeared within a league of the fort *Zelandia* in the isle of *Teywan*, steering his course directly to the shore, where his countrymen, living in that island, were ready to receive him, with their carts and other necessities; and soon after, posted a considerable number of his vessels betwixt the fort and the redoubt call'd the *Province*. This put our people under no small consternation, they being not provided either with vessels or forces, to encounter so formidable a power. However captain *Pedel* and *Aldorp*, the first with 240, and the second with 200 men, were sent out to endeavour to prevent the enemies landing, and 4 ships, viz. the *Heitor*, the *Graveland*, the *Finch*, and the yacht *Mary*, were ordered to fall upon their fleet, which was put in execution immediately. About 60 of the *Chinese* *Joncken*, each with 2 great guns in the fore-castle, came up with our vessels, but were so warmly received, that two of them were sunk. and the rest so much disabled, that they were all glad to retire, except six only, which kept close to-

gether, and shot so furiously upon us, that they seem'd all to be on fire; the *Heitor* took fire by an accident, and so together with the *Joncken* that lay aboard her, blew up into the air. The other three ships, notwithstanding this fought it out bravely, and killed above a 1000 *Chinese* besides those wounded in the engagement. The yacht *Mary* was also set on fire, but was saved by the indefatigable care and labour of the seamen. On the land-side captain *Pedel*, having divided his forces into two bodies, and exhorted them to stand it out bravely, gave the enemy a very warm salute with his firelocks, which kill'd many of them as they were landing; notwithstanding which, they were so far from giving ground, as we flattered ourselves they would have done, that they sent whole showers of arrows among our people, and at the same time sent a strong detachment to the right, which taking compass round a hill, attack'd us in the flanks, which so terrified our soldiers, that they threw down their arms, and wading thro' the water got into a pilot's boat, and so ashore, leaving the captain with 19 men only, to the mercy of the enemies; upon which, immediate orders were sent to captain *Aldorp* to retire with his forces to the fort; the enemy landed without any farther opposition, and in 4 hours time cut off all communication betwixt the redoubt, the province, and the fort, and betwixt this and the open country; most of the inhabitants afterwards joining with them against us. *Koxinga* being soon informed of our present condition, in very ignominious terms summon'd the fort, threatening to put all to fire and sword if we did not surrender immediately. It was then taken into consideration, whether, considering the enemy had cut off all communication with the redoubt the *Province*, and his great strength, it were not advisable to treat with *Koxinga*, and to offer the surrender of one of the forts, provided we might preserve a free trade, rather than to lose all; which being agreed upon, and at our request a passport granted for that purpose by *Koxinga*, we sent *Thomas Yperan*, head factor of the fort, and Mr. *Leonardus* the fiscal, as our deputies to him, to salute him in the name of the governor and the council, and to wish him success in all his undertakings, provided they were not intended against the interest of the company. In their letter they told him, that they could have wish'd to have seen him in another posture here, and that they were surprized to find him in arms, without the least declaration of war, that if he had any real cause of being offended, they were ready to give him satisfaction, and to cultivate a good understanding with him. The deputies

Deputies sent to *Koxinga*.

The bad with er di their as the contr or de was again ibis Chin Hood it fr by pe engag

1659. ries had exprefs orders, that in case Koxinga would not hearken to any accommodation, without the furrender of both the forts, they fhould treat no farther, and tell him that the company was in a condition to revenge this injury. With thefe instructions they went the 3<sup>d</sup> of May to Koxinga's camp, which was then about 12000 ftrong, and bufy in the fiege of the redoubt Province. They were armed with three different forts of weapons; the firft with bows and arrows, which they manage with great dexterity; the fecond with fcimeters and targets only, wherewith they cover themfelves, and fo break in upon an enemy, when they are feconded by their pikemen, whofe arms are backwords and pikes of three or four foot long, with broad and fharp irons at the end.

The deputies received into the camp.

The deputies were at their firft entrance into the camp, received by one of their chief commanders, and conducted into a fpacious tent, where they ftay'd till Koxinga was at leisure to admit them to audience. Whilst they ftay'd there, feveral of the enemies troops march'd by their tent, and as far as they could perceive, the fame at feveral times, to make the greater oftentation of their ftrength. Koxinga was in the mean while employed in combing his black fhining hair, a great ornament among the Chinefe, which done, the deputies were introduced into his tent, which was all hung with blue, he himfelf feated in an elbow chair, behind a four fquare table; round about him attended all the chief commanders clad in long robes without arms, and in great filence, with a moft awful countenance. On both fides towards the door, his life-guards were placed in very good order. The deputies addrefs'd themfelves to him in low Dutch, and delivered their letter, which being tranflated into the Chinefe, Koxinga answered.

#### KOXINGA'S ANSWER.

THAT he was fenfible that the good correfpondence the Dutch Eaft-India company had hitherto cultivated with him, as well as with all the other Indians princes, was no longer durable than they found it confiftent with their own intereft; which always ceafed as foon as they found their account in it; that it was contrary to his cuftom to divulge his thoughts or defigns, yet he could not diflemble that it was by reafon of the war he was engaged in againft the Tartars, he had not taken poffeffion of this ifland, which as it always belonged to the Chinefe, fo it was not injuftice that now they flood in need of it themfelves, they might relake it from foreigners, who were only fettled there by permiffion. That he was not come there to engage in a war with the Dutch, but only to

take poffeffion of his own. That he was willing they might take away all that belonged to them, that they might demolifh the forts and carry away their cannon; for which purpofe he was ready to lend them as many of his fhips and men as they wanted, notwithstanding they had fo lately attacked him both by fea and land, when he had given them fufficient proofs of his ftrength. He told them further, that they were very proud and haughty in pretending to defend fo inconfiderable a fort (meaning the redoubt the province) with fo fmall a force againft his numerous army, which he threatned to deftroy, fo as not to leave one ftone upon another: He boasted that if his forces were united he was able to conquer heaven and earth; concluding, that they muft take a very fhort refolution.

Our deputies gave for answer, That fince the Dutch had left the Pifkadore iflands; this ifland was furrendred into their hands by contract; but that if he (Koxinga) had any pretensions upon the company, they were ready to treat about it, and give him fatisfaction. But after feveral contefts, finding him quite averfe to hearken to any accommodation, unlefs they could furrender all, they departed, protefting that the company would fhew their refentments in due time, and fo fet up the red flag.

Before their departure from the camp they had obtained leave of Koxinga to go through the fort the Province in their return home; here they found things in a very indifferent pofture, and the fort not in a condition to hold out above a week longer, all their powder and ball being fpent, there being not enough left to withftand an affault: This, with the weaknefs of the place, induced the deputies to confent that they might capitulate with the enemy, provided they could get liberty to transfer the garrifon into the fort.

The deputies arrived the fame day in the great fort, where having given an account of their tranfactions, the governour Conjel and the reft of the commanders feeing all the communication betwixt them and the redoubt the Province, nay with the whole ifland entirely cut off by the enemy, were at a great lofs what to refolve upon at fuch a juncture as this: After mature deliberation, the only hopes they had left was, to defend the fort Zelandia till fuch time they could be relieved from Batavia, which confidering the northern Monzon, might perhaps take up a whole twelve months time. However it was refolved to defend this fort to the laft extremity, notwithstanding the redoubt the Province had been forced to furrender, the garrifon with all the cannon being fallen into the enemies hands, who had made them prifoners of war.

To prepare themselves for a more vigorous defence, all that were able to bear arms were taken into the fort, and the city set on fire, which however could not be executed so speedily, but that the enemy preserved some ware and other houses, by timely quenching the flame, which served them for places of shelter. Soon after they began to batter the fort with 28 pieces of cannon, but their cannon as well as their men being exposed to our shot, we plied them so warmly with cartridges, and other such like materials, that the streets thereabouts were all covered with the dead carcases of the *Chinese*, and the rest were forced to shelter themselves in the by-lanes, leaving their cannon to our mercy, some of which were rendered unserviceable. On the other side of the fort 6000 *Chinese* advanced boldly under our cannon, and attacked our works hand to hand, but were beaten back with great loss to an adjacent hill; upon which the besieged made avigorous rally, and nailed up all their cannon. It was then propoed to make a general sally, but considering the disproportion betwixt us and the enemy, who were advanced under our cannon, it was judged too dangerous, for fear, if we should miscarry, the enemy might force their way at the same time into the fort. The next day the besieged made another sally, and carried off a six pounder into the fort. The enemy finding all his attacks unsuccessful, kept the fort close blockt up, and in the mean while made the open country feel the effects of his rage; they made all the *Dutch* inhabitants, especially the ministers and schoolmasters, prisoners, because as they pretended, two certain ministers had under hand encouraged their parishioners to kill all the *Chinese* living among them, not questioning but the rest would follow their example; but as it commonly happens in things of this nature where many are privy to a design, this had been discovered by some out of fear, or hopes of reward, for which the ringleaders suffered a most miserable death, being crucified by the *Chinese*, and their crosses erected in their respective villages.

A Dutch  
ship taken  
by the Chi-  
nese.The Dutch  
design to  
carry off a  
Chinese  
ship.

Some *Dutch* sea-men had no better success, for 13 of them being taken in a *Dutch* ship by a *Chinese* vessel near the *Piskadore* islands, these were put on board a *Chinese* vessel mann'd with 30 men, who were to carry them to *Koxinga's* camp. So soon as the *Dutch* sea-men came within sight of the *Dutch* fort, they resolved to fall upon the *Chinese* (not above one half of them being above deck at a time) and so to carry off the ship the next following night; but a *Frenchman* belonging to our ships crew, whether out of fear, or hopes to recover his liberty, did betray their design to the *Chi-*

*nese*, who immediately gave the signal to some other ships near them to come aboard, which being done accordingly, they made them all prisoners, and forthwith sent them to *Koxinga's* camp, where they had their noses, ears, and hands cut off, and in this miserable condition were sent into the fort for a terror to the rest; they were committed to the surgeon's care, who performed his part so well, that not one of them died.

1659.

Miscary.

Among the rest of the *Dutch* prisoners taken by the *Chinese* in the open country, was one Mr. *Hambrocock* a minister; this man was sent by *Koxinga* to the governor of the fort, to persuade him to a surrender, upon condition, viz. that they should depart safely with all that belonged to them and the company; but if he refused, he might have a sufficient occasion to repent it at leisure; and that *Koxinga* would revenge himself upon the *Dutch* prisoners: With these instructions Mr. *Hambrocock* came into the castle, being forced to leave his wife and children behind him as hostages; which being a sufficient argument to him that in case he did not succeed in his negotiation, they must expect nothing but death at *Koxinga's* hands, yet was he so far from persuading the garrison to a surrender, that he encouraged them to a brave defence in hopes of relief; and as a farther encouragement, assured them that *Koxinga* had lost many of his best ships and soldiers, and began to be weary of the siege, fearing lest we should hold it out till we received succours from *Batavia*.

A message  
sent from  
Koxinga  
to the be-  
sieged.

Mr. *Hambrocock* having made an end of what he had to propose, the council of war left it to his choice, whether he would rather stay with them or return to the camp, where he could expect nothing else but present death, every one entreated him to stay; he had two daughters within the castle, who hung about his neck overwhelmed in grief and tears, to see their father ready to go where they were sensible he must be sacrificed to the rage of a merciless enemy; he represented to them, that having left his wife and two other children as hostages in the camp, nothing but present death could attend them if he returned not; and so untwisting himself from his daughters arms, and exhorting every body to a resolute defence, he returned to the camp, telling them at parting, that he hoped he might prove serviceable to his poor fellow prisoners.

Koxinga's  
messengers  
return.

He gave an account to *Koxinga* of his negotiation, and that the besieged were resolved not to treat, unless they were to remain in possession of the castle, which was not at all relishing to *Koxinga*, who now began to be afraid of an uproar; the inhabitants having slain several of the *Chinese*, which

The Dutch  
presence  
excited by  
Koxinga.

which exasperated him to that degree, that having caused indolently a rumour to be spread abroad that the prisoners did under hand encourage the inhabitants of *Formosa* to rebel, he ordered all the *Dutch* male prisoners to be slain, which was done accordingly; some being beheaded, others killed in a more barbarous manner. The dead carcasses after they were stripped quite naked, were to the number of 500, thus buried 50 and 60 in a hole; of all the rest, only the supervisor of the country with 25 others, were saved and carried to *China*, tho' they even did not spare the women and children, many of whom were likewise slain, tho' some of the best were preserved for the use of the commanders, and the rest sold to the common soldiers: Happy was she that happened to fall to the lot of an unmarried man, being thereby freed from the importunities of the *Chinese* women, who are very jealous of their husbands. They were however afterwards, pursuant to the capitulation, sent back to *Batavia*. Among the slain were Mr. *Hambrocock*, Mr. *Mus*, and Mr. *Arnold Winshaim*, three ministers, and many schoolmasters, who were all beheaded.

Whilst these things were transacting here, the *Dutch* in *Batavia* had got notice of this invasion by the *Mary* yacht, which in spite of the contrary season had found means to get thither, and to give them an account how matters stood with us. Ten ships were immediately got ready with 700 soldiers aboard them, which set sail in June 1661 under the command of *Jacob Kou*, and not long after arrived at the isle of *Formosa*. This unexpected relief as it put the enemy into no small consternation, so it encouraged our men to make a more vigorous defence than ever; and tho' the wind blew very hard, these ships found means to land some men and ammunition; but the winds increasing more and more, were forced to choose the main, to the no small grief of the besieged, and did not return till about a month after; when the ship called the *Urk* being forced upon a rock on the coast of *Formosa*, was split, and her men saved, from whom the enemy having understood our strength, and some other circumstances, they began to be better satisfied, because they had imagined this succour much more formidable than really it was.

However the besieged took a resolution by making a vigorous sally to dislodge the enemy from the city of *Zelandia*, and to destroy their ships. The 16<sup>th</sup> of September was appointed for this enterprise, but whilst some ships were engaged, the wind beginning to slacken, the rest could not come up; our men endeavoured to attack the *Chinese* in their boats, but being exposed to their

shot, without being able to do them much harm, ours had the worst on't, some of the boats being overset, others sunk, the rest saving themselves by flight. Two of our ships got upon the sands and were both set on fire. In this sea engagement the *Dutch* lost about 130 men, but the enemy a great many more; however this unfortunate action put a stop to the intended sally, and orders were sent to the garrisons of the two northern forts, to withdraw into the castle, the garrison of which was considerably diminished by the many skirmishes, in which the enemy got but little advantage, and lost many of their best men; which put a check for some time to their design, especially when they understood that we had sent all women, children, and other useless persons to *Batavia*, the better to enable us to make a vigorous defence.

Much about the same time the governor received letters from the *Tartarian* stadtholder of *Hocksieu*, who requested some ships and forces, to drive the remaining forces of *Koxinga* out of the country, promising to come afterwards with his whole power to the relief of *Formosa*. Hereupon *Jacob Kou* was sent thither with five ships well provided with men and ammunition; but being overtaken by a storm, lost all his anchors near the *Piskadores*, which obliged him to send back three of his ships to the island of *Teywan*: With the other two he returned to *Batavia*, where he met with but an indifferent reception.

The besieged finding themselves by this disaster bereaved of a considerable number of men and ammunition, began to despair of holding it out much longer; so that many deserted, and among the rest a certain serjeant, who gave *Koxinga* not only an account of our weakness, but also encouraged him not to let slip this opportunity to force us to a surrender. *Koxinga* having well weighed the matter, attacked us with his whole force more vigorously than ever, and in January 1662 raised three batteries, mounted with 28 great cannon, upon the sandy grounds near the fort; the *Dutch* foresaw the danger that must needs ensue from this near approach of the enemy's batteries, and did all that they could, either with cannon or firelocks, to disturb them in their works, but these not hindring, their men continued to batter the walls till they had made a breach; then they made two several attacks, but were as often repulsed with great loss, the ground being all over covered with dead carcasses. This disaster taught them to be more cautious, and so instead of storming, they continued to fire incessantly their guns with such a fury that they laid a whole redoubt level with the ground,

1662. so that our men finding it no longer tenible, nailed up the guns, and laid some barrels with gunpowder under it, which blew up a considerable number of *Chinese* into the air. *Koxinga* himself was in danger of having been among them, had he not been forewarned by the before mentioned serjeant, who told him that it was too dangerous to venture himself in a place so lately left by the enemy. Here *Koxinga* raised a large battery upon a rising ground, from whence he hoped to lay the body of the castle level with the ground. The *Dutch* on their side were not idle to do what possibly could be expected for their defence, with cannon shot, granados and otherwise; they raised their breast-works, and put great packs of linnen and stuffs into the breach, notwithstanding which the enemy played incessantly upon them, and against night had made so large a breach as was judged sufficient to make a general assault. Then it was the besieged began to deliberate what was best to be done in this exigency, whether, since there was no longer abiding in the castle, they should make a sally and force their way to the enemy, or whether they should abide the assault: The most were for a capitulation, there being not the least hopes left of making a sally with any success, and to resist the whole force of the *Chinese* in a place without defence, exposed to the enemies shot, was looked upon no less than to sacrifice themselves to their enemies; these considerations were so prevailing at last, that it was unanimously agreed to capitulate, and to surrender the castle upon articles; this was put in execution immediately, a truce of five days being agreed on for that purpose, at the expiration of which, after great contests it was agreed, *That every thing belonging to the company should be delivered up to Koxinga. That all the inhabitants, soldiers and prisoners, should have free liberty to retire to Batavia with all their moveables, for which purpose they should be provided with suitable conveniences.* Thus the besieged after having endured a siege of nine months, with the loss of 1600 men, returned to *Batavia*, where the governour and members of the council of *Formosa*, after all the hazards and incredible fatigues they had been forced to undergo, were put in prison, and their goods confiscated; the governour himself being not long after condemned to a perpetual imprisonment in the isle of *Ey*; but was at the intercession of his highness the prince of *Orange*, and by orders from the directors of the *East-India* company in *Holland* discharged, and returned to his native country 1676. Since we have had frequent occasion to speak of the island of *Formosa*, I will give you a short account of it.

The Dutch defend themselves to the utmost.

The fort of Zelandia surrendered.

The isle of *Formosa* is situated under the 23 deg. 30 min. northern latitude. It is of an oblong figure, being not very broad in proportion to its length, which is 125 leagues. It is full of hills, but intermixed with many fertile vallies, producing great store of grafs, and watered by many fine rivers. The country produces abundance of rice, but especially sugar, vast quantities of which are exported from thence. Most of the *Indian* fruits are to be seen here, of which more hereafter, as also several sorts of *Dutch* fruits, herbs, and roots, transplanted thither from *Holland*, as peaches, apricots, and such like; cows, oxen, hogs, wild goats, hares, and rabbits, but especially stags are here in great plenty, but the last are somewhat of a lesser size than those of *Europe*, and without horns; the inhabitants catch vast numbers of them merely for their skins sake, the flesh being not esteem'd here, except their tongues. They have also great store of elks here, which being very strong they use in their carts instead of horses or oxen. One time the master of our ship and I being invited to dinner at his sister's that was married to a native of *Formosa*, they sent us a carr drawn by bufflers; the master of the ship who understood better how to govern the ship than those beasts, would needs supply the carr-mans place, but prickt the bufflers so unmercifully (according to the custom of the country) that they run away with us: for some time we kept steadfast in the carr, which overturning at last, threw us at a great distance, but to our great good fortune, without any considerable harm; we walkt the rest of the way on foot, leaving the ordinary carr-man, a native of *Formosa*, to recover the bufflers, which he did at last, and brought them home. Neither do they want partridges, wild pigeons, and other wild fowl; there are also tygers and bears to be met with, but I never heard of any other ravenous wild beasts here. The mountains are full of brimstone, which questionless occasions so many earthquakes, unto which this isle is much subject. Some are of opinion that these mountains contain likewise gold and silver, some essays of this nature having been made with good success, but it was never attempted to dig for it. This island is destitute of good harbours for great ships, which are forced to ride at anchor in the road of some isles about twelve leagues, from thence. The country is very populous, for besides the natives of *Formosa*, above 25000 *Chinese* forced out of *China* by the *Tartars*, have at several times settled themselves here.

The natives of *Formosa*, especially the men, are of an olive colour, fat, strong, well-limbed and nimble, some being able

Native of Formosa

Their clothing.

Their food.

The women manage the ground.

1662. to out-run a wild boar or stag; they leap upon the back of them and so cut their throats. The mountainers are of a lesser size. The women are not altogether so large as the men, but very strong bodied, and are clothed after the same fashion; they have black shining hair, which they tye together in a knot on the top of the head.

*Their climbing.*

The men throughout the summer appear for the most part quite naked, but those who do not, especially in the winter, wear a kind of silk or callico cloth, which they wrap about their bodies, and button it under the arms; the womens hags somewhat lower down below the knees. Stuffs made of dogs hair are in great esteem with them. They cut off the dogs hair, like as we do our sheeps wool spin and weave it afterwards. They are generally very friendly and faithful to the *Europeans*, and don't easily break a contract; they are very apprehensive, and will give a good judgment of matters; many of them were already converted to the christian religion by the industry of the ministers and schoolmasters, which were planted almost in every village, there being no small hopes that the whole island would in a little time have embraced christianity, had not the conquest of *Koxinga* overturned this good design.

*Their food.*

Their bread is made of several roots, but rice is in the greatest esteem; tho' they sow no more than for their own use, and that scarce sufficient. Their drink is here, like all over the *Indies*, water, though they prepare likewise a strong liquor of rice in the following manner: They just parboil the rice and then beat it to a pap, then several old women chew a certain quantity of rice, which they spit out into a vessel, and mix it with the rest, to make it ferment. After they have put it into earthen pots, they pour water upon it, and after they have covered it very well, set it to ferment for two months, till it is well settled and clear, this produces a very strong liquor, which will keep good 20 years, and grow stronger every year. When they go abroad into the fields, they take of this liquor along with them to drink, and the settlement for their food; most of the rice here being consumed in these liquors.

*The women manage the ground.*

Contrary to the custom of most other nations, the women cultivate the grounds here, and manage the rice, sugar, ginger, and other fruits of the earth; the men being employed in nothing but hunting and warlike exploits, unless they be very old, when sometimes they will give a helping hand to the women in the field. At leisure time the women catch crabs, oysters, and shrimps, which they much admire.

The men are mighty eager in hunting.

Whole villages join together, and surround a great tract of ground, where they kill all they meet with, and divide it, few of the wild beasts escaping their hands at that time. They also catch wild boars and stags with snares fastned to canes; which the wild beast no sooner touches but one or other of the legs is entangled in the snare, where they kill it immediately. They have also certain cane darts of six foot long, with several bent hooks at the one, and a bell at the other end, this they throw at the stags or other wild creatures, which being fixed in the body they trace it by the found of the bell till it begins to lose its strength by the loss of blood, and so kill it.

Their houses are but one story high, but very large, built of cane, with many doors looking to all four corners of the winds, and sometimes more; they always raise their houses three or four foot high from the ground, looking upon it otherwise as unwholesome.

*Their houses.*

Their houses are adorn'd with painted callico hangings, with wild boars and stags heads; with bows, arrows, clubs, pickaxes, and other warlike instruments, but especially with the skulls and bones of their enemies, which they look upon as the chiefest ornament of their houses: They eat and drink for the most part out of wooden vessels, or such as are made of bamboo-canes, but have some earthen pots to dress their victuals in, and for some other particular uses.

*Their tents.*

This isle has no king or general governor, each village being a kind of a petty common-wealth; their government consists of twelve persons, which must be at least 40 years of age, and are chosen out of the chiefest among them; they continue for life; all their power consists only in consulting what is most expedient for the common good, the result of which is proposed to the assembly of the whole village, who receive it with a great deal of sedateness, and after the breaking up of the assembly they debate among themselves what is best to be done; if they approve of the proposition made to them, it has the force of a law, if not, it is of no consequence. They are also much addicted to follow the directions of their prophetesses or the priests; at a certain season of the year, they are obliged to go quite naked for three months, otherwise (say they) we shall want rain. At another certain time they are debar'd from wearing silk or other fine cloths, or if they do, their council has power to strip them of them, and to tear them to pieces before their faces, unless they redeem them by a certain number of stags-skins, rice or strong liquor. Corporal punishments are unknown

*Nat. Form.*

1662. unknown to them; besides this prerogative of consulting and punishing, they are upon the same level with the rest.

*Age in high esteem among them.* Age is the only thing in extraordinary respect among them; this they shew in giving way, either in the streets or at table, to their elders, who are also first served, and speak before the rest.

*Their marriages.* The men never marry before 50 years of age, but the women as they are marriageable. The natives of *Formosa* don't suffer their hair to grow below their ears, before they come to the state of manhood, when they let it grow as long as it can. If a young man has a mind to marry a certain maid, he sends one of his friends with the ordinary marriage presents, which are commonly a *Chinese* suit of cloths, bracelets of twisted reeds, some broad rings of iron or brass, and such like baubles of an inconsiderable value; if the maid accepts of the presents, the match is made. Whilst they are young they don't dwell together in the same house, which is not allow'd of 'till the husband be 50 years of age. But as soon as the young married man has an inclination to meet with his wife, he comes privately into her hut, which is commonly in the field, and lays himself down in the place where she commonly sleeps, where she comes to him, but is sure to fend him away again early in the morning. All the children begot betwixt them, before both the husband and wife be arrived to the age of 37 years, are kill'd; for after the woman is sure she is with child, one of their she priests lays the big bellied woman upon her back, and squeezes her so long with her hands and feet till she miscarries, not without great hazard and pains, which they willingly undergo, because they reckon it a great sin to keep any children, begot before that time, alive, but preserve them carefully afterwards. The mother keeps the infant close by her till it be two years old, when it is sometimes permitted to see the father. Their marriages are as soon dissolv'd as they are contracted, and that upon very slight occasions; but if the husband parts from his wife without any reason, he loses his marriage presents, but in case of adultery, or that the woman is out-rageous, his marriage presents must be restored unto him; the women enjoy the same prerogative, both parties being afterwards at liberty to marry where they please, which sometimes happens twice or thrice a year. They make no great account of fornication, provided it may be done in private, but are very cautious of committing incest.

*Justice.* Here are no courts of justice, every one being at liberty to take satisfaction against

him. If a man be robb'd, and knows who the thief is, he goes straight to his house and fetches either by fair or foul means as much from thence as he thinks will sufficiently repay his loss, which however occasions great disputes, nay murder. He that has kill'd another lies for it till he has given satisfaction to the deceased's kindred, which consists commonly in some hogs and stagskins, then he may return unmolested. Adultery, when discovered, is commonly made up with two or three hogs, according to the ability of the cuckold-maker, which done the cuckold lives both with him and his wife in good correspondence. Sometimes one or more villages engage in war against one another, and surprise those that work in the field, whom they kill, and carry their heads and what booty they can get, to their houses; this they often do in the night time; if they have had good success, they rejoice after their return home, with eating and drinking to great excess. Those who have behaved themselves well in such an expedition, are esteemed before the rest.

Their weapons are long and broad shields, instead of targets, wherewith they cover their bodies, short and broad scymeters which do great execution, darts pointed with iron; they have also bows and arrows, but use no firelocks. As far as ever I could learn, they have no writings or books; their pagan idolatry is transmitted from the parents to their children by word of mouth; they believe the world to have neither beginning nor end, and that the souls of such as have done well, shall be rewarded hereafter. As soon as they are dead, the friends erect a kind of scaffold before the door of the house, where they place the dead carcass surrounded with small standards; near by they set a vessel with water for the soul to bath it self in, and to wash away all its sins; as for instance, to have brought children into the world before 37 years of age; to have worn rich cloaths in the forbidden season; to have catch'd oysters, crabs and such like insignificant things; but murder, man-slaughter, adultery, fornication, theft, and such like horrid crimes, they look upon as small trespasses only, which may be expiated by a certain quantity of rice, stagskins and strong liquors.

They have several Gods, but adore two in particular; when it thunders they say the great man is angry with his spouse, and for that reason refuses to send them rain, for which reason they adore his spouse; the other they say, is of a malicious nature, and therefore adore him, for fear he should hurt them. They have no other but female priests, they sacrifice pigs, stags and fruits; during which the she priests cry out, and fall

1662. fall into extasies afterwards, with tremblings all over their bodies, as if they were possessed by an evil spirit, and then they pretend the idol discovers his secrets to them: The standers by, which are for the most part women, in the mean while get drunk with strong liquors. These female priests ascend to the top of their temples, where they expose themselves quite naked, and wash their bodies in the sight of the people. They pretend to foretel good or ill fortune, to banish the devil, and to purge unhallowed places. It was formerly a custom in some certain villages, that if any of the natives lay sick, past all hopes of recovery, they used to tie a rope about his neck, and so pull him up and let him down again, till they had cured his distemper by a certain death. They dry their dead carcasses over a fire, which occasions a nauseous scent, whilst the kindred, relations and friends pass away the time with eating, drinking and dancing for several days together. The dry'd corps is kept two years after, and then buried in the house. This was the ancient government of the isle of *Formosa*, but since the *Dutch East-India* company has got footing there, they have introduced other laws among them, and instead of their councils, constituted one of their chief men as supervisor in every village, who administered justice, and was accountable to the governor of the island. Thus much of *Formosa*, 'tis time to return to our voyage.

After we had left *Teywan*, the 11<sup>th</sup> of December, we arrived the 30<sup>th</sup> of the same month without any remarkable accident, before the city of *Malacca*, where we dropt anchor, and found Mr. *John Wits* to be chief director there for our *East-India* company.

The kingdom of *Malacca*, otherwise *Maleja* or *Maleca*, thus called after its capital city, is situate upon the same tract of ground or demi-island, which comprehends the kingdoms of *Martevan*, *Quedam*, *Pera* and some other countries extending it self as far as *Sumatra*, the streights of which border upon it to the west and south, as the kingdoms of *Pan* and *Jobor* do to the east. The kingdom of *Malacca* is by some historians taken for the *Golden Chersonese* of *Ptolemy*, tho' at present it is no demi-island. There are some who affirm, that in former ages *Malacca* was join'd by a streight neck of land to the isle of *Sumatra*, instead of which you see now a branch of the ocean, which divides it self into two navigable channels; the first of which is call'd the streights of *Sinkapura*, because it borders on the east side of the cape of that name; the other is call'd the channel of *Saban*,

VOL. II.

from an island that lies to the west of it. This country extends for about 64 leagues in length, all along the sea-coast, beginning at the island of *Cambilan* or *Zabilan* as far as the isle of *Beitan*, its utmost boundary on that side, or rather it ends in the cape of *Sinkapura*, 20 leagues from *Malacca*.

Its capital city is likewise call'd *Malacca*, its capital being the same, in former time call'd *Ta-kela*; it lies under 2 deg. 30 min. of northern latitude, opposite to *Sumatra*, in a bay at the ascent of a hill, on the west-side of the river *Muar* (otherwise call'd *Gaze* and *Tyga* and *Krosant*, or as the *Dutch* express it *Krisjorant*) which having its rise deep in the countrey, divides the castle from the city, and washing its walls, falls with a rapid current into the sea. Cross this river is a strong bridge built of stone, with several arches: This city is very large in compass, being not many years before surrounded with a wall of square stones and bastions, by the *Dutch*. It is very populous, the houses being built very close, tho' it has some very broad and handsome streets, which are planted on both sides with trees. In the midst of the city is a hill with a very fair church dedicated to *St. Paul*, on the top of it, where divine service is perform'd in *Dutch*: The steeple, church and monasteries founded here by the *Portuguese*, are much decay'd. Most of the houses here are built of strong bamboo canes, which are very durable in dry weather, tho' there are also some stone houses here; they are generally not very large, and low, provided with small apartments and slenderly furnish'd.

The city of *Malacca* was in 1610 taken by *Albuquerque* the *Portuguese* general, in the following manner: One *Manuel*, an *Arabian*, or rather *Mabometian*, by birth, being at that time king of *Malacca*, entred into a league with *Albuquerque*, which he soon broke after, putting all the *Portuguese* to the sword. *Albuquerque* soon after appeared before the city, and attack'd it unexpectedly, whilst the king and his courtiers were feasting at the wedding of his daughter; the *Portuguese* set fire to one end of the city, notwithstanding which, the inhabitants defended themselves like desperate men, even the women untilling the houses, and giving what assistance they could for the defence of the place; but at last the *Portuguese* having fought their way thro' the arm'd elephants, they entred the city, forcing the king to fly into the wilderness, where he died. They got a vast booty and above 200000 crowns in money. The *Portuguese* were very careful to fortify the town by a strong castle, and built several fine churches and monasteries; they

Z z

had

1662. had five parochial churches, and monasteries in great numbers. Among the rest, the jesuits had erected a noble college here, with magnificent apartments; they were very liberal, and received all strangers travelling to those parts. There was a church here dedicated to our lady, where they say *Xaverius* preached often, and performed great miracles. Upon a high hill, within the city, the capuchins had a monastery; whilst the *Roman* catholics were in possession of it, it was erected into a bishoprick, under the archbishop of *Goa*. Not many years before the *Portuguese* made themselves masters of it, it was no more than a village, but by the *Javanese* made a city.

Malacca  
attack'd by  
the Dutch.

The *Dutch* admiral *Corelius Matchief* 1605, appeared with 11 ships and 1300 soldiers before the city of *Malacca*, where at the time *Don Furiado de Mendoza*, a brave soldier, was commander in chief: The first thing he did was to sieze upon 4 ships that lay in the road; afterwards he set fire to the suburbs, and batter'd the place for two or three months, which occasioned great famine and mortality within the city. But the *Portuguese*, who were sensible of the importance of this place, sent a considerable fleet from *Goa* to their relief, which engaging with ours, a small fight ensued, in which the *Portuguese* and *Dutch* lost two ships each; at last the *Portuguese* finding the *Dutch* resolv'd to board them, retired under the castle, but were so closely pursued by *Matchief*, that he ruin'd their whole fleet, consisting of 16 galleots, 14 galleasses, and 14 smaller vessels, with 3000 men on board them.

The Dutch  
take Ma-  
lacca.

The king of *Jobor* besieged the city of *Malacca* in 1606, with 60000 men, the *Portuguese* having maintained themselves there till 1640, when the *Dutch* after a siege of six months made themselves masters of it; after the *Portuguese* had been in possession of it 130 years. The *Dutch* found here besides a vast booty, a great cannon which carried a shot of 64 pounds weight, since which time the *Dutch* have left no stone unturn'd to stock this city with all sorts of necessaries as well as with inhabitants, both *Dutch* and *Indians*. The origin and progress of *Malacca* is this, described by *Barros* and some other historians.

The origin  
of Malacca.

The foundation of *Malacca* was laid about 250 years before the arrival of the *Portuguese* in the *Indies*. About that time *Sangsefinga* reign'd in *Sinkapura*, situate under 30 min. of northern latitude, and in the neighbouring country of *Java*, one *Paravisa*, who at his death left two sons under the guardianship of his own brother, their uncle; but he having found means to murder the eldest, usurp'd the throne; at which

some of the noble *Javanese* being highly disgusted, did with *Paramisora*, their late king's youngest son, fly to *Sinkapura*, where they met with a kind reception from *Sangsefinga*, but it was not long before *Paramisora*, in combination with his *Javanese*, murder'd *Sangsefinga*, and put himself in possession of his kingdom. The king of *Siam* being highly exasperated at the treachery committed against *Sangsefinga*, his vassal and son-in-law, forced the *Javanese* to quit the country, who being now obliged to seek for a new habitation, settled themselves near the river *Muar*, where they built a strong hold, call'd *Pagopago*; besides the *Javanese*, *Paramisora* was follow'd by 2000 others, such as they call *Cellati*, who live upon fishing and robbing; but tho' they had been very instrumental in resettling him in *Sinkapura*, he did not think fit to receive them within the body of his new built city; which made them settle their colony about three or four leagues from the river *Muar*, not far from whence *Malacca* now lies; where they join'd with the inhabitants, who were half savages; since which time their language is call'd the *Malaga* language. But when they began to be streighten'd for room, some of them settled themselves about a quarter of a league from thence, on a hill call'd *Bitan*, surrounded with a large plain: *Paramisora* being taken with the conveniency and pleasant situation of this place, abandon'd *Pagopago*, and transplant'd his colony near this place, which afterwards was call'd *Malacca*, i. e. a banish'd person, in memory of the exiled *Javanese*; and in process of time, all the traffick of *Sinkapura* was transfer'd to *Malacca*. *Saquan Dorja*, son of *Paramisora*, succeeded him in the kingdom, and having submitted himself as a vassal to the king of *Siam*, reduced the whole country of *Sinkapura* to the east, as far as *Puto* on the isle of *Zambilan*, which lies west of *Malacca*, a tract of land of forty leagues in length. The successors of *Saquan Dorja* found means to shake off by degrees the yoke of the king of *Siam*, and to make themselves sovereign kings, especially after they were by the *Perjians*, and those of *Surat*, brought over to the mahometan religion. The king of *Siam* 1502, about 9 years before the *Portuguese* became masters of *Siam*, did attack the king of *Malacca* with a fleet of 200 sail, aboard of which were 6000 soldiers, under the conduct of *Laofanava Privan*, his admiral and governor of *Ligoor*, but his fleet was miserably scatter'd by a tempest, and many of his ships fell into the hands of the mahometans by treachery.

The harbour of *Malacca* is one of the finest in all the *Indies*, being navigable at low water all the seasons of the year, a conveniency belong-

It is most conveniently situated for traffick, for there you may to this day see vast numbers of merchants ships coming from *Bengal*, *Coromandel*, *Banda*, *Java*, *Sumatra*, *Siam*, and in short from all parts of the *Indies*. Whilst the *Portuguese* were in possession of it, this city was very famous for its traffick and riches in gold, precious stones, and all other rarities of the *Indies*; *Malacca* being the key of the *China* and *Japan* trade, and of the *Malacca* islands and *Sunda*. In short *Malacca* was the richest city in the *Indies*, next to *Goa* and *Ormus*. Before the *Dutch* had made themselves masters of *Malacca*, a ship was sent every year thither from *Portugal*, which setting out a month before their *East-India* fleet, and taking its direct course thither, without staying in any place, except in case of necessity, used to freight there, and return with a richer cargo than any other ship ever did.

Great passage thro' the Straights of Malacca.

All the ships that came from the north, viz. of *China*, *Japan*, *Siam*, *Cambodia*, *Tonking* and *Manilla*, and are bound for the west, to wit to the coast of *Coromandel*, *Bengale*, and other places thereabouts, as likewise those coming from the west to the north, must pass thro' the Straights of *Malacca* or *Sinkapura*, and consequently by *Malacca*, as I told you before. The *Portuguese* used to take 10 per cent. custom of all ships passing that way, whereby they got vast riches, but the *Dutch East-India* company has abolished this, looking upon it as an unreasonable imposition, and are contented to traffick there. *Malacca* is a countrey producing but very little it self, but must be look'd upon as the staple of the *Indies*, whither all precious commodities are brought from *China*, the *Molucca* and other neighbouring islands, from *Bengal*, *Coromandel*, *Banda*, *Java*, *Sumatra*, *Siam*, *Pegu* and other places. The island of *Sumatra* furnishes them with gold, pepper and other merchandises; from *Ligoor*, *Pera*, *Queda*, *Outjang* and *Salang* they have vast quantities of tin, which is brought up those places by the factors of the company, and sent to *Malacca*, from whence it is transported to the coast of *Coromandel*, to *Bengal*, *Persia* and *Surat*, and sold for ready money. The *Chinese* bring hither vast stores of silk and porcelain, damasks, brocados, sattins, musk, rhubarb, iron, saltpeter, fine silver, pearls great and small, ivory and *China* fans, which they exchange for pepper, frankincense, stuffs of *Cambaya*, coral wrought and unwrought, painted callicoos of *Palakatte*, and white callicoos of *Bengal*, cinnabar, quick-silver, and such other drugs as come from *Cambaya*. The island of *Java* sup-

plies them with rice, oxen, sheep, flocks, flesh and pork; in short, there is such a vast traffick and concourse of merchants here, that from thence probably it got the name of the *Golden Obergonefus* among the ancients; *Malacca* being certainly the richest harbour that can be seen; for formerly, and even to this day, the merchants were so rich here, that they used to compute by no less than by bars of gold, of which a vast quantity is found near the rivers and in the mountains to the west, to wit, on the famous rivers *Kelan*, and *Peren* or *Peragab*. The mahometans living along the coast, used formerly to trade hither with linen and some other commodities, but not so much of late years, neither is the pepper trade so considerable here now, as in former days, since the *Dutch East-India* company have settled their factories on the eastern coast of *Sumatra*, which produces great quantities of pepper. However, ships are sometimes detained here for a considerable time, by reason of the contrary *Monzon* or season winds.

Formerly they had no other coin but what was made of tin at *Malacca*, being of great weight, but little value; or rather they exchanged their commodities for gold and silver by weight; but now they coin both gold and silver, a piece of eight being worth commonly two gilders 11 stivers. They have two sorts of weights, viz. the great and small bar: The great bar consists of 200 *Kattys*, each *Katty* containing 26 *Tayls*, or 384 ounces *Portuguese* weight, a *Tayl* being a ounce and a half: The small bar comprehends likewise 200 *Kattys*, each *Katty* comprehending 22 *Tayls*. According to the computation of others, a bar of *Malacca* contains 200 *Kattys Aelshyns*, or three *Chinese Pikol* each *Pikol* computed at 122 pound weight, making altogether 366 pound weight. The great bar or weight is made use of when they weigh pepper, cloves, nutmegs, mace, white and red sandals, indigo, allum, eagles-wood and civet; with the lesser weight, quick-silver, copper, leaf-gold, oil of nutmegs, benzoin, camphire and such like commodities. The city of *Malacca* is inhabited by many *Dutch*, but for the most part by *Mestices* and *Kastices*, some *Chinese*, *Pagans* and *Jews*, for the conveniency of traffick.

The *Malayars* or natives of *Malacca* are tawny, with long black hair, great eyes and flat noses; they deduce their origin from the *Javaneze*, but their eyes are quite different, they are for the most part naked, wearing only a piece of stuff wrapt about the middle, with their arms and legs naked. Their only ornament being gold bracelets and earrings set with precious stones. The women

1662.

1662. women wear silk cloaths and short skirts, embroidered with gold and precious stones, some of which are twited in their locks, which are very long. The women are extravagantly proud here, expecting more reverence than any other Indian women. There is also another peculiar sort of men in Malacca, called by the Dutch *Kakerlakken* (from a certain monstrous creature in the Indies of the same name) who are blind by day, and can only see by night. They can tell money, work, and do any other thing in the dark, which they cannot do by daylight, which they pass away for the most part in sleeping, and seldom rise 'till sunset. In shape and proportion of their limbs, as well as by their complexion, they resemble the Europeans, having commonly grey eyes; whereas all the eastern nations have black and dark brown eyes. Their hair is inclining to yellow, and of such a length among the women, that it reaches down to their hips; their feet are bent inward. The same kind is likewise found in some other places of the Indies, and in Africa.

The language used at Malacca is called the *Malaya* tongue, from the natives of the country, being very famous throughout the East-Indies. For the general concurrence of so many nations, different in their languages, has put them upon a necessity of compiling a certain language, composed of the best and choicest words of all the rest, which therefore is accounted the neatest and most agreeable of the East-Indies, which is the reason that not only the neighbouring, but also far distant nations that trade with Malacca, are desirous to learn it, and look upon it as a great accomplishment. For the better encouragement of this language, and the benefit of their officers and factors, the Dutch East-India company has caused a dictionary both in the *Malaya* and Dutch tongues to be publish'd. Most of the *Malayers* are either christians or mahometans, tho' there are likewise some pagans and Jews settled at Malacca, for the convenience of commerce. The coast of Malacca is a flat or marshy country, and consequently not extraordinary wholesome; but deeper in the country are many hills and wilderesses, which are plainly discovered at sea. It produces but little for the sustenance of life, except what is brought forth in gardens, and what grows among the mountains, where you meet with some rice and pease; the defect of which is supply'd by vast numbers of small vessels, which come every day from *Bengal* and *Sumatra*, and bring thither rice, and other eatables. However, they are pretty well stored with such fruits as commonly grow

in the Indies. The fruit *Durions* grow here much better and larger than in any other part of the Indies: They have likewise *Ananas*, *Jambos*, *Mangoes*, *Karambolas* and *Papajas*; they have whole woods of coco-trees. Here grows a certain tree call'd the mourning-tree by the Portuguese, because its flowers close up in the night-time. Here you may meet also with cinamon trees, but not very many, neither do they approach in goodness to those of Ceylon. But of *Kalamback* or *Aloe* wood and *Benzoin* they have great plenty. Here are to be found some Indian fruits, peculiar only to this place, but no pears, apples, plums, cherries, or any such like European-fruits. Oxen, cows, sheep and horses are likewise very scarce here, which are brought thither a great way out of the country, and are seldom very fat. Formerly the country hereabouts did abound in wild beasts of all sorts, such as tygers, elephants, &c. which were so ravenous, that they used to break in the night-time into the houses of the inhabitants, who for their better security, used to sleep upon trees; but since it has been so well peopled by the Dutch, this sort of wild beasts are but seldom heard of.

Just by Malacca is the cape or point of land call'd *Rabado*, and the cape of *Barcelai*, being a very high mountain near a point of land. Not far from Malacca is a very large mountain call'd *Madian*, which by reason of the vast quantities of salt-petre it contains within its bowels, 1646, did break out with such a terrible noise and earthquakes, as if the day of judgment was at hand.

*Sinkapura* lies on the most southern point of all Asia, about half a degree to the north of the line, and 20 leagues from Malacca. This cape has imparted its name to the streights of *Sinkapura*. The country of *Sinkapura* had before Malacca was built its own kings, and was the chiefest place of trade on this coast, being much frequented by the Chinese merchants, and those of *Cambaya*. The mountains near the streights of *Sinkapura* bearing the same name, produce most excellent diamonds. About *Sinkapura* is a certain nation, which with their whole families live always at sea in their small vessels; they are called *Saletes*, live upon fishing, and are subject to the king of *Jor*. About two leagues beyond the streights of *Sinkapura* is the river *Jabor*, at the entrance of which you see two mountains, or rather high islands shaped like sugar loaves; one is four times bigger than the other, lying N. N. E. as you enter the river, and the other N. E. On the other side of the river you discover a high hill, tho' the south-side of the river is a champaign country.

1662. There is 10 fathom water at the mouth of this river.

*The isle of Rocks.* To the south of Malacca is a small isle, of about half a league in compass, by the Portuguese call'd *Ilha das Pedras*, or the *Isle of Rocks*, and has very good fresh water.

About half a cannon shot from the city, another small island call'd *Malacca*, and by the Portuguese *Ilha das Naos*, or the *Ship Island*. Two leagues from Malacca is a pretty large isle call'd *Septa*. That vast point or tract of land on which the country of Malacca or Malaya lies, being the most southern of all the *East-Indies*, comprehends likewise several other kingdoms and cities, to wit, *Patany*, *Paban*, *Pera*, *Queda*, *Jobor* or *Jor*, *Ligoor*, and farther to the north the kingdom and city of *Tanassery*. We will give you a short account of the kingdom of *Jobor*, *Putany*, *Ligoor* and *Paban*.

*The kingdom of Jor or Jobor.*

The kingdom of *Jor* or *Jobor* stands indebted for its name to its capital city, call'd by some *Goer* or *Goera*, and *Joor* or *Gabor*. It is situate at the very streights of Malacca, bordering in part upon the kingdom of Malacca, and on the other side upon *Pan* or *Paban*. The antient city of *Jobor* or *Jor* (call'd in some maps *Guar*) was very large and magnificently built, but was in 1603 destroyed by the Portuguese, who left only a few houses standing, which were immediately inhabited again. The king of *Jobor* caus'd in 1609 another city to be built, somewhat higher up the river above *Jobor*; this he call'd *Batusabar*, towards the building of which, the Dutch under their admiral *Peter Verkoeven* contributed 3000 pieces of eight, out of the booty they had taken from the Portuguese ships coming from *Makao*, near the cape *Rachado*. Most of the chief inhabitants of the old city of *Jor* retired from thence to *Batusabar*; a half day's journey from whence is *Sedalli*, near the sea-side. It is a very fertile country, abounding in lemons, and citrons as big as a man's head, *Bananaes*, *Batataes*, *Ananaes*, and other Indian fruits. They have also great store of pepper, cinnamon, bufflers, cows, stags, wild boars, and divers sorts of monkeys and birds, besides some sea-monsters.

*The disposition of the inhabitants.*

The inhabitants are naturally brave, but very lascivious, liars, great dissemblers, and proud beyond measure. Their complexion is inclining to a light blue, with broad faces, crooked noses, and very black teeth, which they acquire by chewing the weed *Belet*, black teeth being accounted a great ornament among them.

*Their clothing.*

The common people go quite naked, having only a piece of stuff to cover their members, which hangs down to their toes. The rich and better sort wear a kind of

Vol. II.

jackets made of blue, green or red callicoe, or what colour they please; they are shaped like our shirts, with wide sleeves, are open before, and reach only to their knees. They have also two silken strings of the same colour with the jacket, one serves for a girdle, the other for a head-string. They paint their nails yellow, and the greater quality they pretend to the longer they wear their nails. The richer sort commonly wear a poniard on their side, enriched with precious stones. Their king has many other petty kings, his vassals, under his jurisdiction. The king of *Jor* or *Jobor* in 1606 attack'd the city of Malacca with 60000 men, which shews him to be a potent prince, and in the taking of the city of *Jor*, the Portuguese got 1500 brass pieces of cannon; in 1608, *Ratipont* the then king of *Jor*, being about 30 years of age, came aboard Dutch fleet with 30 of his wives, he had three gold chains set with precious stones about his neck, and his poniard was likewise enriched with sapphires and diamonds, valued at 50000 gilders. The inhabitants are one half Mahometans, the other Pagans: 1609, one *John de Paratuan* was king of *Jor*, he was styled the *Great King*, being likewise king of Malacca, and *Raya Sybrang*, i. e. prince of the other side of the river. In 1611, the king of *Azem* sent back the brother of the king of *Jor*, with a fleet of 36 ships, and a convoy of 2000 men, with abundance of cannon and ammunition, in order to assist in the rebuilding of the city of *Jor*. It was generally reported, that the king of *Azem* having given his sister in marriage to him, did intend to set him upon the throne, instead of his brother, who then reigned.

*Linga* is an island under the jurisdiction of the king of *Jobor*, who has a governor there; it produces abundance of *Zagu*, but no rice; in 1606 it had about 3000 inhabitants.

The kingdom of *Pan* or *Paban*, is by the Portuguese call'd *Paon*, and by others after the *Arabians* *Phaan*; it being a custom among the mahometan *Arabians* to pronounce *pbe* instead of *p*. To the north it borders upon the kingdom of *Patany*, and adjoins to that of *Jobor*, as well as to the streights of Malacca. The city of *Paban* is situate about a league from the sea-shore, being inhabited only by the nobility, the common people dwelling in the suburbs. It is not very large, but surrounded with a wall made of the trunks of trees joined close together, of about four fathoms high, strengthened on each corner with a bastion, but not fill'd with earth. The streets are enclosed on both sides with hedges of reeds, and planted with coco and other trees, resembling rather some gardens adjoining to one another in the suburbs, than

A a a

a well

1662. a well regulated city, the houses being generally of reed and straw, only the king's palace is of wood. The river of *Paban* is very broad, but not navigable by galleys except at high water: The country round about is very low, and produces about 300 bahars of pepper; as likewise *Palo de Aquila* or eagle wood, *Kalamback* wood and camphire, but not so good as that of *Bornee*, gold (but very coarse) nutmegs, mace, *Sapan* wood, diamonds, *Pedro de Porco*, or hogs stones, which are accounted a greater antidote than the bezoar stone. Deeper into the country are abundance of elephants. The inhabitants are the greatest impostors in the world. The king is tributary to the king of *Siam*, but after *Albuquerque* had conquered *Malacca*, he sent his deputies to *Paban*, to oblige that king to promise fealty to him. At *Paban* great quantities of baskets are made and sold, they are better than those made in *Java*, but not so good as the *Portuguese*. They also cast great guns here of 3000 pounds weight. The inhabitants are partly mahometans, partly pagans. Their king who reigned in 1612, had married the youngest sister of the queen of *Patane*. The two sisters having not seen one another in 28 years, the queen of *Patane* sent to the king of *Paban*, to desire leave for her sister, his spouse, to come to see her, which the king refusing, she laid an embargo upon all the ships laden with rice, and bound from *Siam*, *Campaja*, *Lugor*, and other places to *Paban*; and immediately sent a fleet of 70 ships, on board of which were 4000 men, with strict orders to bring along with them the queen of *Paban*, whether the king were willing or not; but it was not long before the king of *Paban*, with the queen his spouse, and two young children, being forced by famine and a revolt among his subjects to leave the country, came to visit the queen of *Patane*, where they met at first but with a cold reception, not one of all the queen's court giving the king of *Paban* as much as one visit, but caused all his dogs to be kill'd, he being not able to keep them any longer. Some days after matters began however to look with a better face; for the 1<sup>st</sup> of *August* the queen of *Patane* invited the king of *Paban* to a most sumptuous feast, where she diverted him with several *Indian* women dancers. The king of *Paban* returned not long after with his queen, the sister of the queen of *Patane*, into his country, but carried away with him no presents to make him amends for the charge he had been at, having spent almost all he had. The king of *Paban* who reigned in 1607, was then about 40 years of age, and his son had married the daughter of the king of *Queda*.

The kingdom of *Patane* or *Patany*, having derived its name from its capital city, borders to the south upon *Paban*, being situate upon the same eastern coast, to the north upon *Siam* and the kingdom of *Lugor* or *Ligor*; these two kingdoms being incorporated into one. The city of *Patane* is situate under 7 deg. 56 min. of northern latitude, not far from the sea, and surrounded to the land-side by bogs. The harbour is about half a league from the city, which is about half a league in length, and very narrow, fortified with high wooden pallisado's put close together, according to the custom of these countries. The houses are artificially built of wood and canes, and very lightsome. The suburbs are likewise much longer than broad, and are encompass'd on the backside by a pleasant rivulet. The royal palace and court where most persons of quality live, are environ'd with pallisado-work, in the nature of a *Palanck*; the mahometan church is a stately edifice of brick-work, gilt very richly within, and adorned with pillars, curiously wrought with figures. In the midst close to the wall is the pulpit, carved and gilt all over, unto which the priests are only permitted to ascend by four large steps. They have also several temples dedicated to their *Pagan* idols, among which three excel the rest. When the *Dutch* in 1602 settled first here, they saw in one of those temples belonging to the subjects of the king of *Siam*, a gilt statue resembling a man, but of the bigness of a horse, with one hand down and the other upwards. On each side stood a very large dragon gilt, with two stone statues, to wit, a man on the one, and a woman on the other side, with their hands lift up to heaven. The same they saw in the second, with this difference only, that one half of it was only gilt, the other painted red. In the third was one in the same posture, with a gilt streak cross the breast; and behind the altar of the great idol, was another lesser statue resembling a man, with a large horn in the forehead; this idol their priests say, represents the great God.

The climate is very temperate and wholesome here, notwithstanding it lies near the line. Their summer begins in *February*, and continues nine months, viz. till the end of *October*, during which season they have two different winds, to wit, by day from the sea, and by night from the land-side. In *November*, *December* and *January* is their winter, when it blows and rains so violently from the north-east, that there is no stirring for ships out of the harbour till *February*, when the wind turning to the east the rains cease, and the fair season returns. country of *Patane* is very fruitful, abounding in rice and many other fruits, the chiefest of which are the *Durians*, *Mangestans*, *Ananas*, *Lancrats*, *Ramboutans*, *Pisangs*, pomegranates, oranges, lemons, and a peculiar kind of lemons, call'd *Gibol Lemons*, being transplanted hither from *China*. Each month here produces its peculiar fruits, tho' those of certain months are preferable before the rest. The grounds are plowed with bufflers or oxen, which they sow with rice: They also plant good store of pepper, but cannot sell it so cheap here as in some other parts of the *East-Indies*. The woods and wildernesses are stock'd with wild creatures, such as hares, rabbits, (but not so big as ours) stags, wild boars, tigers, bufflers, elephants, apes, monkeys, geese and ducks, (which lay eggs twice every day) and turtle-doves as finely coloured as the best parrots. The wild hogs do incredible mischief among the rice, which obliges the countrymen to watch in the field in the night-time; when they shoot or otherwise kill them, they bury their carcasses under ground; the mahometans (for such those of *Patan* and *Malaya* are) being forbid the use of hogs flesh, neither will they permit any body else to eat it.

How they catch the elephants.

The elephants, as I am credibly inform'd, are catch'd in the following manner: They ride on the back of a tame large elephant into the woods, whom they let loose there; as soon as he meets with a wild elephant he engages him, and whilst their snouts are entangled, some come from behind the wild elephant and twist a rope round his hind legs, and so keep him either to render him useful for the wars, or else kill him for his teeth sake, which are in great esteem in *China*.

The sea hereabouts produces great store of craw fish, oysters and tortoises; and the same drugs, metals, and precious stones, that are found in the kingdom of *Paban*, are likewise to be met with here.

The constitution of the inhabitants.

The natives of *Patane* are of an ash-coloured complexion and well shaped, but very proud and conceited; the richer sort never appearing abroad without a great train of servants. They are however very affable and civil in conversation, as well among themselves as to strangers; but they are no soldiers, nor inclined to warlike exercises, courage being none of their talent, but more taken with pleasures than the use of arms. Their clothing is none of the best. The men are extremely addicted to venery, which renders them jealous above measure, their wives and daughters being not permitted to see their nearest and best friends. They have an antient custom since enacted

into a law, that to check that enormous vice of sodomy, the men are obliged to wear constantly two or three small bells made of gold, silver or lead, betwixt the prepuce and the glans, or head of the yard. Adultery is a capital crime with them, especially among the great officers and nobles of the kingdom; the father of the person that has committed the crime, or if he be not living, the next of kin is obliged to supply the place of executioner, but the miscreant has the liberty to chuse what kind of death he pleases. Notwithstanding this severe punishment, adultery is very frequent among them, by reason of the extraordinary lasciviousness of the women, who are very desirous, and love to wallow in pleasures. Fornication betwixt two unmarried persons is not look'd upon so much as a trespass. Nothing is more common than if any foreign merchants come to *Patane*, to ask them whether they don't want some women for their conveniency, and there is no want of young handsome women who offer their service, out of whom each may take his choice, and agree with her as he best can, as to what he is to allow her per month; which done, she immediately repairs to his lodgings, where in the day time she serves for a chamber-maid, and in the night for a bedfellow; and during this agreement, the man must be as careful to avoid the commerce of other women, as she is on her side, unless he will expose himself to manifest danger. At parting the man pays her her wages, and so they are both free; and if he has a mind to change, he need not look far for one, it being a custom among the nobles here to entertain many female slaves, whom they let out for such a use, and gain great profit by them. For the rest the natives are naturally lazy and idle, living for the most part upon fishing, and some handicraft trades; the best is, that they can be contented with a little, drink scarce any thing but water, and have a natural aversion to strong liquors. Almost all the traffick and other business is in the hands of the *Chinese*, who either themselves or their factors, continually trade betwixt this and the circumjacent countries, such as *Siam*, *Ligor*, *Kamboja*, *Kouchinchina*, *Makassar*, *Paban*, *Jambi*, *Jabor*, *Baniam* and other both inland and maritime places, whither they transport all sorts of *Chinese* commodities from *Patane*, as porcelain pots, pans, kettles, and iron work of all sorts. The chief riches of the natives consist in their lands and slaves, who live upon a small allowance of rice and fish; but the foreign merchants transport thither abundance of rich merchandizes.

From

1662. From *Bengale* and *Malacca* they send clothes to *Patane*; from *Java* sandel wood; from *Borneo* camphire, slaves, wax and bezoar-stones; from *Siam* the inhabitants of *Patane* are furnished with gold, rice, salt and lead; from *Siampa* and *Camboja* with slaves, cotton, *Kalamback*, and the finest aloes-wood; from *Cbina* with white and yellow silk,

1662. gauzes, damasks, sattins, porcelain, iron and copper; from *Japan* with scimeters, copper, and such like commodities. Many things are also transported hither that are bought up in other places by foreigners; as from *Amboyna* and *Banda*, nutmegs, rice and cloves; from *Timor* sandel-wood; from *Jamby* and *Andragny* pepper, which they

Their traf-  
fick.

fetch likewise from *Champor*, *Libor*, *Paban*, *Mordyllion* and *Ligor*: *Pegu* supplies *Patane* with abundance of precious stones; there are also many things exported from thence by the foreign merchants; those of *Labor* and *Paban* provide themselves here with rice, salt, oxen, fowls and other eatables; those of *Malacca* transport the bezoar stones; those of *Borneo* iron, steel and copper; the *Siamese* all sorts of clothings and pepper; the *Chinefe* pepper, camphire, white and yellow sandel-wood, skins, ivory, bufflers horns, and such like; the *Japanese* stags skins, tin, lead and silk.

The country of *Patane* is much more powerful in shipping than *Jabor*, *Paban*, or any of the circumjacent kingdoms: They are governed by a king, who as well as the king of *Malaya* is tributary to the king of *Siam*; their usual yearly tribute consisting of a flower wrought with gold, some fine cloths, velvets and scarlets; the king's chief counsellors are called *Meniary*.

This kingdom was in 1602 under the government of a queen, after the decease of her husband, she being then but 15 years of age. Her name was *Pratie*, she used to keep constantly within the court among her ladies of honour, of whom she had a great number; she did not allow them to marry, but connived at their amorous intrigues. Wherever she went abroad to take the air, (which indeed happened but very seldom) she was mounted on a very fine elephant, and attended by 2000 nobles and great officers, all clad in her deceased royal spouse's liveries, with his coat of arms upon them. Before they returned, she gave them always a splendid entertainment, and so came with the same cavalcade back to her court. The country of *Patane* is so populous, as to be able to bring 180000 armed men into the field; the city and suburbs of *Patane* alone being able to furnish 10000 men.

Divers languages are in vogue, viz. the *Malayan*, *Siamese*, *Patane* and the *Chinefe*; but

1662.

but the first is most used here, as well as in most other parts of the *Indies*. The king of *Palane* married his daughter to the eldest son of the king of *Jabor*, (he having six in all) who with his youngest brother lived at the court of *Palane*; but the youngest being engaged in an illegal commerce with his brother's spouse, he kill'd them both, according to the custom of the country, which punishes adultery with death; notwithstanding which, the king of *Palane*, to revenge his daughter's death, caused his son-in-law, the eldest son of the king of *Jabor* to be slain; *John de Paratuani*, and *Regia Sabrang*, two brothers, and both kings of *Jabor*, being not without reason, highly exasperated at this proceeding, sent one *Magat Mangsor Hoch* their ambassador, along with admiral *Jacob Heemskerck*, to solicit a powerful aid from the states-general against the king of *Palane*, but the ambassador dying at sea put a stop to that design.

The Isle of  
Ding Ding.

Having dispatch'd my business here, we set sail the next day to a certain island call'd *Ding Ding*, abounding in fuel and most excellent fresh water. It lies about 30 leagues to the north of *Malacca*, being covered all over with very tall trees, which grow on the hills. We arrived here the 10<sup>th</sup> of *January* 1661, and immediately after our landing, fell to the cutting down of trees; among the rest we endeavoured to pick out a certain kind of trees, the wood of which is a pale red, but to our great amazement could meet with none, till at last we discovered our error, to wit, that the pith only was red, but all the other wood round about it of a different colour. This wood is much valued by the *Indians* for its beauty, of which they make many curious pieces. The fresh water which runs down from the rocks, claims the preference before any in the *Indies*; and this isle has likewise the convenience of a good bay, where ships may ride safely at anchor. On the east-side it has another bay call'd *Cox Bay*, where we used sometimes to catch as much fish at a draught, as our chaloop was able to carry.

Is destitute  
of inhabitants.

It is destitute of inhabitants and all sorts of wild creatures, except wild boars, which swim over thither from the continent to feed upon a certain root that grows there, nevertheless it abounds in water-fowls more than any other place of the *Indies*: Here is a certain kind of birds call'd by the *Dutch* *Schuis Birds*, being of the bigness of a *Storrex*, the head being without feathers. Here are also great quantities of tortoises and oysters, the last of which are often seen fastened to the branches of trees, which hang sometimes above, sometimes under water.

The clearness of the water having invited us to take a turn at swimming, I found

Vol. II.

something sticking to one of my legs, which when I look'd upon, I found to be a sea-apple, and struck it off; but the sting remaining in the flesh occasioned a great inflammation and pain, which was not appeased till a considerable time after the sting was taken out.

1662.

After we had provided ourselves with what this place could afford us, we set sail again the 14<sup>th</sup> of *January*; as we were failing the same day along the coast of *Sumatra*, our trumpeter catch'd a stone-bream of about three feet long, which appearing very fine to the eye, we ordered the cook to dress it for the table of the cabin. We were all so greedy, that when it was brought in, we ask'd the cook whether he was sure he had kept none behind, which he took so ill, that he answered us, whether we look'd upon him as a thief? But it was not long after dinner, before all those that had dined in the cabin, were seized with such a giddiness in their heads, that they were not able to sit upright; I was the first who cry'd out, *We have certainly eat a poisonous fish*; but our surgeon having no proper remedies aboard, we sent our chaloop to the ship the *Leerdam*, from whence being furnished with vomits, we were by the frequent use of them, after a sickness of 14 days restored to our former health. During our sickness our best diversion was, that being inform'd how the cook was as sick as any of us, we were convinced, that notwithstanding his great pretence of honesty, our suspicion was not ill grounded, which verified our old proverb, *That the cook is commonly the last who dies for want of victuals*. Two cats that had eaten the bones of this fish died soon after, tho' some tobacco-water had been given them to occasion a vomiting, but none of us died, some few however were troubled with a lingering distemper afterwards.

They leave  
it.

Apollonius  
sea-bream.

It is not easy to imagine what could be the reason of this disaster, the sea-bream being otherwise a fish both toothsome and wholesome, unless we supposed this bream to have fed upon some poisonous fish, such as those call'd by the *Dutch* *Seaquallan*, which are very poisonous in those hot countries; for if they touch but your flesh, they cause an immediate inflammation; their flesh is as soft as gelly; they are of the bigness of a trencher, or somewhat lesser, have red and purple spots on their backs, and eight teats below on their bellies: At certain seasons of the year, the seas about *Toutekorin*, and near other places on the coast of *Malabar*, are so full of them, that they are obliged to desist from fishing. But before we proceed farther in our voyage, it will be requisite to give you a short account of the isle of *Sumatra*.

Reason of  
the poison  
of this fish.

B b b

The

1662. The large and most potent island of *Sumatra* is by some authors call'd *Somatra*, *The isle of Samatra and Zamatra*. Its situation is to the south-west just opposite to *Malacca*, about eight leagues from the continent, the great isle of *Java*, lying to the south of it. Its extent is from the 5<sup>th</sup> degrees of northern latitude, near the gulph of *Bengala*, to the south south-east, to the 7<sup>th</sup> degree of southern latitude, as far as the streights of *Sunda*, beyond the coast of *Malacca*, comprehending a vast tract of ground of 12 degrees from the south to the north, amounting to 130 leagues. Its whole length is 195 leagues, its breadth 50, and the whole circumference 360.

It is divided  
in many  
kingdoms.

This isle was formerly divided by some into four, by others into 10 kingdoms, among which *Pedir*, *Pazem*, *Acem*, *Kampar*, *Menangkabo*, *Zunda*, *Andragide* and *Auru* were the chiefest. Some there are who mention no less than 30 petty kingdoms, viz. *Daya*, *Lambry*, *Acem* or *Acen* or *Acin*, *Biar*, *Pedir*, *Lide*, *Pirada*, *Pacem*, *Bara*, *Daru*, *Arkat*, *Irkan*, *Rupat*, *Pury*, *Gaka*, *Kamper*, *Kapokan*, *Andragery* or *Andragide*, *Jamby*, *Palimbang*, *Tana*, *Malayo*, *Sakampan*, *Tulumbavan*, *Andaloz*, *Piraman* or *Pryaman*, *Tiko*, or *Tikoww*, *Barros*, *Quincel*, and *Manakapa*, all which borrowed their names from their respective capital cities; and in ancient times were govern'd by their own kings. But in process of time, many of these were swallowed up in the kingdom of *Acin*, the most potent in this island, having under its jurisdiction the kingdoms and cities of *Pedir*, *Pazem*, *Daya*, *Barros*, *Pasman*, *Pryaman* and *Padang*, and consequently the greatest part of the isle of *Sumatra*, besides the kingdoms of *Queto* and *Pera* on the continent. All the other kingdoms and cities of *Sumatra* were conquered by foreign princes. This the southern parts of *Sumatra*, viz. *Sillabar*, *Dampin*, *Liampon*, *Palimbang*, *Jamby* and some others, acknowledge the king of *Bantam* their sovereign, or else the *Mataram* of *Java* for their protector. Some will have the isle of *Sumatra* to be the same the ancients called *Taprobang*, tho' in my opinion that name belongs more properly to the isle of *Ceylon*.

Not many years ago one of the chiefest cities of *Sumatra* was *Palimbang* or *Palem-bang*, situated near the western coast of *Sumatra*, which on 24 November 1659, was laid in ashes by the Dutch admiral and general *John van der Laen*, because the inhabitants had about two years before surprised by treachery two of their yachts call'd the *Jakkatra* and the *Watchman*, and miserably murdered the whole ships crew; and in the next following year had cut to pieces two other Dutchmen that were sent ashore,

from aboard the vessels the *Nicoport* and the *Leerdam* (lately come from the *Texel*) to serve as interpreters, their heads being by special order from the *Orangkay's* put upon lances, and exposed to the view of their comrades that were in the boats.

To revenge so barbarous a murder, a fleet of eleven ships set sail from *Batavia* the 19<sup>th</sup> of October 1659, under command of *John Vander Laen* admiral, and *John Truyfman* vice-admiral, viz. the *Orange*, admiral, the *Postilion*, the *Molucco*, the *Arms of Batavia*, and the *Charles*; three galleots, to wit, the *Apple-tree*, the *Hour-glass*, and *Hammehiel*; and the chaloops, the *Crab*, the *Tronk*, and the *Flying Dear*, mann'd with 600 seamen and 700 land soldiers. The 30<sup>th</sup> they arrived without any remarkable accident in their passage before the river of *Palimbang*, where they met with the yachts the *Bloemendabl*, the *Koukerk*, and the *Cat*, and with the chaloops the *Cony*, and the *Koe-long*, that were cruising thereabouts. The same day they got sight of a Chinese vessel taking its course towards *Jamby*, which they detained till they had entered the river, and on the 3<sup>d</sup> of November sent her in company of the chaloop the *Tronk* to *Jamby*. They entered the river in the following order. First the *Arms of Batavia*, next the *Postilion*, then the yacht the *Bloemendabl*, aboard of which was the admiral, having left the *Orange* at the entrance of the river; the yacht the *Koukerk* vice-admiral, the yacht the *Cat*, the large chaloop the *Crab*; after these came the three galleots, the *Hour-glass*, the *Apple-tree*, the *Hammehiel*; the ships the *Charles* and the *Molucco*, brought up the rear; the other chaloops were ordered to attack the admiral ship. The 3<sup>d</sup> and 4<sup>th</sup> of November was spent by the Dutch to enter the river, the 9<sup>th</sup> in the night time they were unexpectedly attacked by some of the inhabitants of *Palimbang*, in which engagement we had four or five wounded, the commanders not being time enough upon their guard. The 10<sup>th</sup> they were advanced betwixt the isle of *Cambira* and the opposite shore, within sight of the city of *Palimbang*, where they discovered three of the enemies forts; the first called *Bamagangan*, situate on the western point of the river of the isle of *Cambara*, the other two upon its east point, opposite to the other, they were called *Matapoura* and *Menapoura*. At our first appearance the enemy kept close within their works, which gave us the more encouragement to penetrate higher up the river with our ships. But several large floats, upon which houses filled with combustible matter were built, being laid in the stream, captain *Jurian Paulson* was ordered with some boats and the yacht the *Hour-glass*,

taken.

*Hour-glass*, to take a view of them, to cut their cables, and set them on fire, which being put in execution accordingly, the whole fleet advanced forward in order to attack the fort of *Bamagan*. But as soon as we came within cannon shot of the fort, the enemy gave us a very warm salute out of his great cannon, from the forts both on the east and western points, tho' without any considerable loss on our side, which gave us sufficient encouragement to fire most furiously upon the first fort, with such success, that we set their magazine of powder on fire, which blew up with it the greatest part of the fort, and all the circumjacent houses; hereupon the yachts the *Bloemendabl*, the *Koukerk*, and the *Cat*, were ordered to anchor within pistol shot from the shore, from whence we so grievously gall'd the enemy, both with our great and small shot, that at last we landed, and made ourselves masters of the fort, where we found 22 iron and brass cannon, which we immediately turned against the enemy to the land side, and continued in arms all the night long, which proved no unnecessary precaution, for the enemy attacked us most furiously not long after, in hopes of regaining the place, but were repulsed most courageously, with the loss of only one man on our side.

Then the enemy sent four or five very large fire engines, being floats of timber with wood on houses filled with combustible matter on the top of them, which took up almost the whole breadth of the river, the yachts the *Bloemendabl*, the *Koukerk*, and the *Cat*, had much ado to escape their fury, being forced to cut their cables; but the *Molucca* yacht had her fore-castle set on fire, and was with much ado saved by the help of many boats that were sent to her assistance, without receiving any considerable damage; so that these fire engines were forced down the river by the current, and soon after vanished into smoke. At the taking of the fort 30 *Javane* were killed, and among them the old *Quevy*, *Tommagen*, *Nadapen Radia*, with his two sons, who were buried the next day.

The 11<sup>th</sup> early in the morning we likewise attacked and took the fort *Matapoura*, where we found only four pieces of cannon, the enemy having thrown four more into the river, which we brought out from thence afterwards; the remaining part of the day was spent in shipping in what artillery and ammunition we had got; eight companies of soldiers were likewise landed the same afternoon in the isle of *Cambara*, to attack the fort there, but to their great amazement found this strong hold left by these cowardly wretches; we found here 12

pieces of cannon, some of which they had likewise thrown into the mud, but were recovered by our people, and carried aboard our vessels, with a small quantity of ammunition. Whilst these things were transacting in sight of the garrison of *Palimbang*, they had found means to set fire to the yacht the *Watchman*, which they burned; and in the evening those that had deserted the fort under favour of a violent rain, did three several times attempt the recovery of it, in which engagement we had two killed and six wounded, and were forced to stand to our arms all the rest of the night. The 12<sup>th</sup> and 13<sup>th</sup> were spent in embarking all the cannon and ammunition we had got in the 3 beforementioned forts, which done, it was resolved in a council of war, forthwith to attack the *Chinese* quarter, and so to make ourselves masters of the city before the enemies could recover themselves from the fright they were put in by the loss of their forts: As we were passing by the city we received the same salute we had before from the forts, but without any remarkable harm, or the loss of one of our vessels.

The city of *Palimbang* was fortified with vast trunks of trees put close together, upon which were planted a vast number of great cannon, so that it seemed impossible to be taken by so small a number, being besides this invironed with a deep and miry ditch. We were hard put to it how to find a safe landing place, till at last our admiral having espied at the uttermost point of the fortification a small rivulet, which led up to a place where we perceived very little or none of the enemy's fire, we landed thereabouts with all our forces, and advancing boldly to the very gun-holes of the enemy, they threw their granados through them into the city, which setting the adjacent houses on fire, the enemy were so terrified thereat, that they quitted their post, and thereby gave opportunity to the admiral *Vander Laen*, to Mr. *Truyisman*, and captain *Harman* to break thro' the fortifications into the city by three several ways. Here they met with a brave opposition from the inhabitants, who, according to the custom of these nations, under the found of their *Amock*, fell courageously upon these three bodies, of whom they killed 18, among which were a lieutenant, an ensign, and a sergeant, but not without a much greater loss on their side; the violent rains obliged the Dutch admiral to reconduct his men on board the vessels that night, but the next morning they landed again, and entered the city in the same place, where a doubtful engagement ensued, till the inhabitants being at last forced to give way, were beat out of the place, and retired into the open country.

1662. country. The first thing that was sacrificed to the fury of the flames, was the royal palace, after it had been despoiled of all its riches, and a vast train of artillery, which the king and his cowardly subjects left a prey to the Dutch, after they had for some time defended themselves, and fought hand to hand against them; but the admiral Vander Laen having laid two of their chief or *Quey Nabey*, dead at his feet, the rest were so terrified thereat, that they fought for their safety in their heels. It is worth taking notice of that these *Indians* seemed to have paid a peculiar reverence to their great cannon, which we found covered with scarlet cloth lined with ram-boutins, and so perfumed with incense that the smell thereof stuck a great while after to our fingers. All the artillery and cannon being taken out of the city and from the ramparts, the admiral ordered likewise the fortifications and adjacent houses to be laid in ashes; we found 15 of 21 of our people that were prisoners among them, in the prison on both sides of the royal palace, miserably murdered and mangled by these barbarous wretches, among which was *Jacob de Groot*; one Dutch boy only who was not put in irons, had the good fortune to escape their hands by a timely flight, the remaining six they had carried along with them: To revenge as much as possible this barbarity, all that remained of the city, was after the cannon and all the other booty we got were carried aboard our vessels, set on fire and destroyed, the 16<sup>th</sup> of the same month.

About the same time the enemy sent one of his before-mentioned fire engines, of a vast bigness, down the river; it consisted of 20 wooden houses erected upon floats of timber, which almost extended from one side to the other. But no sooner had the Dutch got sight of this engine, they sent out their long boats well mann'd, who took care to protect our ships against it, and after it was passed by them, set it on fire in sight of the enemy, which consumed both the engines and a good number of houses standing on the banks of the river. The 17<sup>th</sup> and 18<sup>th</sup> our people were still busy in embarking the booty, artillery and cannon, and a day of thanksgiving was appointed to be kept throughout the whole fleet for this victory against the 23<sup>d</sup>. In the mean while we advanced higher up the river, to try whether we could meet with some vessels or plantations that way, but saw nothing of any moment. Mr. John Vander Laen and John Truysman also writ a letter to the Pangerang or governor of Palimbang, which was dispatched thither the 23<sup>d</sup> by a Chinese prisoner and an old woman.

John Vander Laen general, and captain

John Truysman, commanders in chief of the Dutch forces now in the river and the country of Palimbang, sent this letter to the Pangerang and all the chief counsellours of the country of Palimbang.

#### A letter sent to the PANGERANG.

Notwithstanding our last success, we could not but put your bigness in mind of the most abominable murder committed by your subjects upon so many innocent persons in the service of the Dutch East-India company: which barbarous act, tho' it was highly resented by the governor, general, and council of the Indies residing at Batavia, yet to shew their inclinations to continue in peace with your bigness, did at that time for the preventing the effusion of human blood, require and actually demand a reasonable satisfaction for these unheard of barbarities: To accomplish which, they caused certain propositions to be made by John Truysman to your bigness, with strict orders to insinuate to your bigness all such reasons as might conduce towards the accomplishment of that end, which we don't question would have been sufficiently convincing to your bigness, had not your evil counsellours misguided you, and thwarted your good intentions. But seeing you slighted these conditions, and were very backward in giving due satisfaction, the great God of heaven and earth being highly displeased at your conduct, did so direct the heart of the before-mentioned lord governor and his council, as to have recourse to arms, being the only remedy left them, ordained by God almighty to protect the just cause of their subjects. The great God of heaven having been pleased to bless their undertaking, for the due punishment of your malicious subjects, they are however willing to let your bigness know, that the hostilities committed against you and your subjects, were undertaken with no other intention, than to revenge the innocent blood of their subjects, and to procure an honourable and reasonable peace; the said governor and his council being always more inclined to peace than war, if your bigness is of the same sentiment we expect to hear from you either by your letter in answer to this, or by your deputies, it being our resolution to tarry for that purpose in your bigness's territories, and these presents shall be a sufficient passport to those whom your bigness shall be pleased to send to treat with us. Given aboard the *Bloemendaal* the 20<sup>th</sup> of November 1659.

1662. and some few houses built upon floats of timber; the lighters could not be taken, because they came not within reach of our shot, and afterwards sheltered themselves in the small rivulets among the weeds: The houses were set on fire, and some returned the 20<sup>th</sup> before the fort where we lay at anchor till next day. In the mean time Peter de Goyer director of the Dutch factory of Jamby, sent the 11<sup>th</sup> of November from thence by the chaloop the *Trank*, 75 capons, 100 pullets, and five goats, for the use of Mr. John Vander Laen, and the other commanders; this being all he was able to get, all eatables being extremely scarce thereabouts at that time, because the *Pangerang* of *Adrogory* and the young king of *Jobor*, had lately tarried three months, with an attendance of 2000 persons in these parts; and not long ago abundance of cattle and fowls had been killed for the wedding feast of his highness's daughter, who was married to the young *Patiuan*. The admiral and captain *Truytman* received not long after an answer from the *Pangerang* of *Jamby* to their letter dated the 20<sup>th</sup> of November, which being enclosed in another from Mr. Peter Goyer dated the 26<sup>th</sup>, was translated out of the *Malayan*, and runs thus.

This letter is sent from a sincere heart, by the *Pangerang* of *Jamby* to the commanders in chief *John Vander Laen* and *Daman Sittia Bauwa* (meaning captain *Truytman*) men famous for their prudence and courage.

The *Pangerang* having understood that Mr. John Maetzuicker governor general of the Dutch East-Indies, has sent 18 ships against those of *Palimbang*, has thought fit to declare, that his sentiments agree with the governor's, and that he is ready to approve all without the least contradiction, what shall be undertaken by the said Mr. John Maetzuicker, assuring Mr. John Vander Laen and *Daman Sittia Bauwa*, that he will stand firm to this as well as to the other promises made by him the *Pangerang* before. Pursuant to this resolution the *Pangerang* did upon the receipt of the letter, send *Zitta Antacca* with some troops to make war upon those of *Palimbang*. The *Pangerang* also forewarns and commands *John Vander Laen* and *Daman Sittia Bauwa* to be upon their guard, because those of *Palimbang* are near at hand; this being all the *Pangerang* commands at this time to *John Vander Laen* and *Daman Sittia Bauwa*.

The 27<sup>th</sup> all the houses that were yet standing near the fort of *Manjapoura* were together with the fort itself, set on fire by special order from the admiral, and the same day we lifted a great piece of ordnance out of the marshes in the isle of *Cambara*. And being sensible that either out of an obstinate temper or out of despair the *Pangerang* of

*Palimbang* would scarce send any deputies or answers to ours of the 20<sup>th</sup>, we resolved to leave that river; and accordingly with the next tide set sail and returned thro' the branch of the river call'd *Banjarmassum* in order to burn all the houses and plantations we should meet with; but having spent 5 days, viz. to the 3<sup>d</sup> of December in coming down the said river; we met at its entrance with the ship the *Orange*, which joining with the rest, we continued our voyage the 4<sup>th</sup>, and arrived with the whole fleet and our forces the 9<sup>th</sup> in the afternoon, in the road of *Batavia*. Our booty consisted chiefly in 75 pieces of great, and 142 lesser cannon, some of which were of iron. We found no pepper here, but great store of rice and *Padie*, all which was consumed by the fury of the flames, as likewise a vast number of small vessels, among which were the king's pleasure boats, of which there was a vast number; some few were carried away by our people, to be kept in remembrance of this action.

The kingdom of *Acbin* is situate in the most northern part of the isle of *Sumatra*. Its capital city bears the same name, being situate in a plain upon a pleasant rivulet, about half a league distant from the seashore. The royal place, which lies in the very center of the city, is very large, of an oval figure, surrounded with a ditch, and in some places defended by very large pieces of ordnance; the ditch is guarded by palisadoes, in which are seven gates. On the left side of the river is a fort to defend its entrance, and several other redoubts are erected in the marshes, round about the city of *Acbin*, for its defence. The air seems to be much more wholesome here than in the southern parts of the isle. The houses which are covered with reeds are built upon posts, so that you must enter them by several steps, the reason of which is, that at certain seasons the waters rise to such a height, that the whole city is overflown by it. The chiefest riches of the king of *Acbin* consist in gold, jewels and elephants; he entertains a great number of concubines which serve both for his bed and his guards in the antichambers; besides which, he maintains a good number of eunuchs, who attend his person. Four *Sabandars* or nobles have the chief management of the government under the king. This kingdom was in 1663 governed by a queen, who, as it was reported, had an inclination to be married to a *Hollander*; but the council of *Batavia*, for weighty reasons would not consent to the match. The inhabitants of *Acbin* were always renowned for their courage and conduct beyond all other neighbouring nations, and have not only extended their conquests

1662.  
The Dutch have the river

Arrived at Batavia.

The kingdom of Acbin.

1662. quests over the circumjacent countries of *Sumatra*, but also made themselves masters of the kingdoms of *Queda* and *Pera* on the continent of *Malacca*; nay, they frequently have besieged the *Portuguese* in the city of *Malacca*, they having always been declared enemies of that nation.

*Sillebar*. On the western coast, not above 4 leagues to the south of the line, is within a bay, upon a very large river, a certain place call'd *Sillebar*, being furrounded with craggy mountains and vast woods; tho' the country thereabouts is very fertile in pepper; it belongs to the king of *Bantam*. On the same western coast is a very large Bay, the shore of which is all over woody, as the bay of *Sillebar*, is furrounded with mountains; tho' the shore its self is very green and pleasant. Immediately after you come to the bay, you discover a small point of land, behind which lies the town of *Sillebar*.

*Tikouw*. A few leagues to the south of the line, is likewise the city of *Tikouw*, a place very slightly built, and some leagues from thence to the north, is the town of *Passaman*, at the foot of a high mountain.

*Barros*. *Barros* is also situate on the western coast of *Sumatra*, about a league from the seashore, upon a considerable river, betwixt *Passaman* and *Acbin*. The country hereabouts produces pepper, camphire and benzoin. Hereabouts are likewise *Sinkel*, *Labo*, and *Daya*.

*Pedir*. *Pedir* lies ten leagues to the east of *Acbin*, with a high mountain betwixt both; the country, which was formerly a kingdom, is indifferently fruitful of rice and other fruits. Further to the east, on the inward coast of *Sumatra*, are *Pacem*, *Dely*, *Aru*, *Kampar*, *Andripouro*, *Jamby* and *Palimbang*. *Andripouro* is situate under 3 deg. 30 min.

*Padang*. *Padang* lies on a very pleasant river, whither a considerable number of *Indian* vessels resort. The *Dutch* divide the coast of *Sumatra* into the outward and inward coast. The inward coast is by the *Javaneze* call'd the western coast, as the outward coast is the northern coast, where is the kingdom of *Acbin*.

*Unwholesomeness of the climate of Sumatra*. The climate of *Sumatra*, is, by reason of its situation under the line, extremely unwholesome, especially for strangers, and in the rainy season, when scarce a day passes but they are afflicted with sudden showers, storms, thunder and lightnings, which soon after end in a calm. Besides, that the heat of the sun-beams draws up the nauseous vapours of the standing waters, which infect the air, and produce malignant fevers, and other lingring distempers. This is most visible on the western coast of *Sumatra*, and especially in *Tikouw* and *Prya-*

man, where the air is equally obnoxious to the inhabitants and foreigners, which makes the *Dutch* inhabiting there, look bloated and very pale. In the *Devil's-Isle*, and near the river *Indapura* the air is so poisonous, that it kills men and beasts as soon as they set foot on shore; and if they happen to escape by returning immediately, they certainly die soon after.

The isle of *Sumatra* is full of pleasant woods, craggy high mountains, agreeable valleys, fruitful plains, very fine rivers and large bays affording great store of fish; besides that, the marshes and pools are stock'd with young oak-trees, the bark whereof gives the waters a red tincture. The chief rivers here are, the *Acbin*, *Andrigiri*, *Jamby*, *Palimbang*, *Manancabé*, *Banjarmassum*, *Sillebar*, *Indapura*, and *Pryaman*, all which have derived their names from their respective adjacent cities, or these from them. The waters of the river *Indapura* are red for two leagues at sea, which proceeds from the great quantity of young oak trees growing in the marshes, the bark of which imparts a red dye to the river; for which reason also the water is very unwholesome to drink.

The soil produces rice in abundance, and all other sorts of *Indian* fruits, such as *Bananas*, potatoes, coco-nuts, oranges, limons, tamarinds, sugar, honey, ginger, but especially pepper, of which a great quantity is transported from thence into foreign countries. Some years ago many plantations of pepper were destroy'd by the soldiers upon the outward coast of *Sumatra*, which were since replanted, yet in many places cotton-trees have been planted in their stead. The same coast also produces camphire, the most durable of all others, which differs from the *Japoneze* camphire in this particular quality, that whereas in this, the scent is in the wood; the camphire of *Sumatra* contains it in its own substance, without imparting the least share thereof to the wood. This island affords likewise white benzoin, *Kalamback* or aloes-wood, eagles-wood, and fandelwood. The forests here feed divers kinds of wild beasts, viz. elephants, bufflers, tygers, stags, rhinoceroses, wild boars, apes, monkeys and serpents; the rivers, lakes, and ports abundance of fishes; in some you meet with crocodiles. The woods are full of wild fowl of all sorts, and the country abounds in tame fowl. They have bats here of an exceeding bigness. It is very remarkable, that the island of *Sumatra* is the only one throughout the *East-Indies*, that has bears. The mountains here afford gold, silver, copper, tin, iron and brimstone. The outward coast of *Sumatra* especially, has very rich

Earth-ol.

The language of the inhabitants and their manner.

their diet.

1662. rich gold mines, but they are neglected for the most part. However the queen of *Acbin* drew 1000 pounds weight out of one mine, and the *Dutch East-India* company 300 in the year 1665: They also produce smaragds, hyacinths and other precious stones. On the top of the fiery mountain *Balubam*, is a certain spring of sulphurous liquor like oil; and the like is seen in several other parts of this island, to sweat out of the earth or rocks, not unlike a *Petroleum*: The *Indians* call this liquor *Minjab Tunnab*, *e. i.* earth-oil. This is in such esteem among the inhabitants, that the king of *Acbin* has prohibited the exportation thereof under pain of death; so that what is carried away by the *English* or *Dutch*, is brought on board by stealth. It has a very strong scent, but not nauseous; its virtue is extraordinary in curing lameness, call'd by the *Indians* *Beribery*, if the affected parts be only bathed or anointed with it. This island has a certain kind of reed, which grows near 300 fathom high, and twists its self round the trees. They make hops of it.

The most general language here is the *Malayan*, tho' they use likewise several others. They maintain certain schools for the young people to be instructed in reading and writing. The inhabitants of *Sumatra* are large of stature, black and brown of complexion like the *Javanese*. The women are well shaped, and of a fairish complexion, with very white teeth; they make no account of chastity, nor look upon it as a disgrace to expose themselves for money. For the rest, this nation is extravagantly proud and ill-natured, which sets so high a value upon itself, as to despise all foreigners; they are very treacherous, and make very little account of their faith, if they find it consistent with their interest. Every body here is like all the mahometans, does marry as many wives as he is able to keep, one however has the precedence before all the rest: Women of any quality are seldom seen to walk along the streets. In the inland country lives still the remainder of the ancient men-eaters, call'd *Bataches* or *Batatas*, who not only devour strangers, but likewise kill their own fathers and brothers, if grown very decrepid, and eat them.

Both rich and poor are continually chewing the leaves of *Beibol*, mixt with thyme and *Areka* or *Fausel*. Their bread is made of rice, of which they make also a dainty pap, and cakes, and eat them with oil. They feed likewise upon fish, flesh and herbs. Their ordinary drink is water; besides which, they use *Arack* distill'd of rice and coco-nuts, and palm wine. The inha-

bitants of *Sumatra* are very moderate in their diet, like all the rest of the *Indians*.

Most of the inhabitants, especially the poorer sort, go naked to the middle, where they have only a piece of stuff wrapt about them to cover their privities; both sexes go without shoes or stockings. The richer sort wear a kind of coat of silk or callico, after the mahometan fashion; a linnen cloth wrap'd about their heads two or three times, serves them for a cap.

They pay a more than slavish submission and obedience to their kings, not so much out of inclination as fear; their princes or governors are stiled *Pangerang*.

They punish the least trespass with great severity, by cutting off their hands and feet. Capital crimes are punish'd after the most dreadful manner that can be invented. In former ages the kings used to surrender the miscreant to the men-eaters, who after they chop'd of their hands, arms and legs, threw pepper upon the trunk of the body and devoured it.

Most of the inhabitants living near the sea-coast are mahometans now, whereas formerly, both those inhabiting the sea-shore and the inland country were pagans, of which there are still a great number in the countries remote from the sea.

The isle of *Sumatra*, but especially the kingdom of *Acbin*, are places of great traffick, whither resort merchants from all parts of the *Indies*, as the *Chinese*, *Malayans*, *Javanese*, christians and mahometans. There are certain places on the western coast of the isle, which are in confederacy, and under the protection of the *Dutch East-India* company, unto whom they are obliged to sell all their pepper and gold at a certain rate. These are *Pryaman*, *Indapoura*, *Padang*, *Tike* and *Barros*. They had also settled a factory in 1665 at *Andragiry*, but the quantity of pepper and gold to be transported from thence was so inconsiderable, that it did not turn to account. The chief commodities of *Sumatra* are, pepper, gold, tin and camphire. The western coast affords *Pedro Porcos*, which are sold at 200 crowns per piece. *Jamby* and *Palimbang* are the chiefest places for pepper, where the *English* have likewise their factories, and are much esteemed by that king. The foreigners import commonly pieces of eight, callico, *Chinese* gold, iron wire, steel, woollen-cloth, quilts of *Suratte*, silks, salt and such like commodities, which they exchange for those before-mention'd. Thus much of *Sumatra*.

We continu'd our voyage without any remarkable accident, 'till the 3<sup>d</sup> of February, when we pass'd by *Punte Gala*, and arriv'd the next day at *Colomba*, both cities belong.

belonging to the island of *Ceylon*. Having soon dispatch'd our business here, we set sail again the 9<sup>th</sup>, and the 12<sup>th</sup> came within sight of cape *Comarin* and the city of *Korlang*, steering our course along the coast of *Malabar*, where we met with the ship the *Phoenix*, in the road of that city, to load pepper, which done, it join'd with us, to continue its voyage to *Persia*.

Over against the isle of *Baypin* we met with 15 or 16 sail under the command of Mr. *Adrian van der Meyden*, who was sent thither to attack the fortrefs of *Palipatnam*; we went immediately aboard the *Ulieland*, where we paid our respects to the admiral, who enjoyn'd us, to send all our land and sea men ashore, to assist at the taking of this fortrefs; which being done accordingly, and the *Dutch* forces marching in good order to the attack, they found, to their great astonishment, that the enemy had deserted the place, and left only one old woman and a boy behind them; thus we became masters of this strong hold, without striking a blow. However our design upon the city of *Cranganor* was laid aside for that time, after we were thoroughly informed concerning its condition, and that we were not sufficiently provided for such an attempt. So we proceeded on our voyage again the next day, and the 5<sup>th</sup> of *March* pass'd by the bar of *Goa*, where we found several *Dutch* ships under commodore *Roothbaes* a cruising, which kept the harbour of *Goa* block'd up. The 6<sup>th</sup> we came to an anchor in the road of *Wingurla*, where we met several of our men of war, which had been a cruising before *Goa*, and were come hither to refresh themselves: We saw likewise here the *Bantam* yacht, which was sent on purpose hither to carry the queen of *Golconda* to *Mocha*, (a city of *Arabia*, situate on the *Red-Sea*) she being to go from thence to *Medina*, to visit *Mahomet's* tomb, and to make a present of great value there. Her guards, which had conducted her 80 leagues as far as *Wingurla* consisted of 4000 men, all mounted on fine bright *Persian* horses, well accoutred. They had long coats of mail, on the shoulders of which were imbroider'd serpents-heads in imitation of the ancient *Romans*; they had fine polish'd helmets on their heads, being for the rest arm'd with bows and arrows, and some of them with very long beards. At the head of them rid two trumpeters, who sounded the trumpet by turns. All the persons of quality that attended her, were likewise mounted on very fine horses, with a footman on each side of the horse's head, who held the bridle. The Queen herself and all her ladies, were carried in *Palakins* covered on the

top, to keep themselves from being seen by any body; and before them were led several camels cover'd with rich furnitures. On one of these was mounted a kettle-drummer, who with a hammer beat cross-ways, as we do in *Europe*; the drums, of which one hung on each side of the camel, being somewhat sharp at one end like our bee-hives. The commodore *Roothbaes* and M. *Santoliet* (director for the *Dutch East-India* company at *Gamron*) were gone to meet and compliment the queen about two leagues from the town; who, whilst she tarried here, dictated several letters in divers languages to her secretaries; she sent soon after to know whether the ships were ready to sail, and being answered they were, she came immediately aboard the yacht, but finding her much less in bulk than the other ships she lay lying at anchor in the road, she was not very well satisfied, till being told by Mr. *Roothbaes* and *Santoliet*, that the yacht was most proper for her purpose, by reason of the shallowness of the shore of the red sea, she seem'd to acquiesce in their judgment. Near the sea-side a tent was set up, and from thence a passage covered all over with callico to the chaloop, in which was likewise a tent, as also in the yacht, to prevent her being seen by the ship's crew. She gave a very fine present of gold and diamonds to the commodore Mr. *Roothbaes* and Mr. *Santoliet*. The captain of the yacht who carried her to *Mocha*, did not return from thence, but went along with her, being, as we suppose, turn'd mahometan; because the yacht was reconducted by the boatwain.

*Wingurla* is no more than a large village, situate on the sea-shore of the kingdom of *Golconda*, under the 15 deg. of northern latitude. The *Dutch East-India* company have built a very fine house here of stone and plaister work, because all ships bound for *Persia*, are obliged to come to an anchor here, to provide themselves with fresh water and fuel, which they buy here at a very low rate, the place scarce affording any thing else.

After we had left *Wingurla*, we came the 6<sup>th</sup> of *April* before that famous city of *Persia* call'd *Gamron*, and anchored at six fathoms water. I went ashore the same day to give notice of our arrival, and to make the necessary preparations for unlading our ship, which being done, I apply'd myself to have it laden again with all possible expedition; and our cargo being for the most part gold and silver coin, we might soon have been ready to sail again, had we not been oblig'd to stay for some other commodities till the 2<sup>d</sup> of *June*, when we set sail again from thence, and Mr. *James Williamson*, director for the company in *Persia*, took

Scarcity of ter,  
earth  
fresh wa-  
ter.

1662. took this opportunity to go along with us to *Batavia*, the time of his stay in *Persia* being expired.

A description of that city.

The famous city of *Gamron*, the only sea-haven of *Persia*, is situate on a flat sea-shore, just at the entrance of the *Persian Gulph*, at the foot of a barren sandy mountain, producing neither grass nor trees; it lies betwixt two castles, under the 27 deg. of northern latitude: This city was built out of the ruins of the castle and city of *Ormuz*, the destruction of which proved the rise of *Gamron*. It is to the sea-side defended by three stone bastions, on which are mounted good store of iron cannon. But on the land-side it is only surrounded with a stone wall, which is much decay'd, because they fear as it seems nothing from thence. The houses here which are built after a very antique manner, like most of the *Persian* houses, stand very close together, having each a square turret, which mounts to a considerable height above the whole structure, having on each side several holes for the free passage of the wind and air; in these turrets they sleep every night during the summer season. The best of their houses are built only of loom, which being form'd in four square pieces, and dry'd with the sun, become as hard as stone, and keep out the rains and winds. They whiten them on the outside with lime made of burnt mussel-shells, but their back and our-houses are covered only with the leaves of palm-trees, and are miserable huts, scarce fit to defend the inhabitants from the injuries of the season.

Streets.

The streets here are both narrow and short, with many turnings, and are covered by the houses on both sides, which are almost join'd together on the top; notwithstanding which the heat is so excessive here, that they are scarce passable. They are not paved with stones, but only with earth beaten close together, which being continually watered to allay the heat and dust, becomes by degrees as hard as a stone. Both the *English* and *Dutch* have their factories here near one another, each being distinguish'd by their respective flags; the *Dutch* is built close to the water-side, being a goodly structure, and very convenient for the unloading of vessels.

Scarcity of fresh water.

The city of *Gamron* affords no fresh water, which must be fetch'd by the slaves in earthen vessels or sheep skins early in the morning (to keep it the cooler) from the mountains, which are near three leagues distant from thence, which makes the fresh water so scarce here, that most people of fashion will rather present you with a cup of wine than water, there being no pools or basins here where any fresh water is to be met with, but during the rainy season. Nei-

Vol. II.

ther does the country produce any thing but palm-trees; notwithstanding which there is great plenty here of every thing, where-with they are supplied from *Persia* and other places. The common drink of the inhabitants is water, tho' they also are provided with good *Persian* wines; they are very strong, and of a high red colour, but as sweet as canary wine: It grows about *Schiras* and *Yezd*, and is transported from thence in large flasks and casks. They have also *Arack* distill'd of coco-nuts and rice. They make likewise a mixture of water, lemons and sugar, but if drunk in too great a quantity occasions the bloody flux.

The air of *Gamron* is from the beginning of *May* till *September* more unwholesome than in any place of the *East* or *West-Indies* that ever I saw, so that there is no abiding here for foreigners, except in *December*, *January*, *February* and *March*. The natives of any quality being more used to the air, will continue something longer, viz. till *May*, when they retire to their country houses, which are for the most part built among the mountains, near some river or other, at 10 or 12 leagues from the city: Here they spend merrily what they have got by traffick in the winter, leaving the management of their city houses to their slaves till *October*, the usual time for ships and foreign merchants to come to *Gamron*. The heat which is most excessive here obliges them to sleep upon leather, or with the lower parts of their bodies in water; or in the turrets, which are on the top of their houses; some cool themselves with pouring rose-water down the neck; such ships as are obliged to stay in the port during the summer season, must be covered all over with sails, otherwise the planks would split asunder, the pitch and tar rising up in bubbles as it were a boiling; so that no body dare walk bare-footed upon the deck. Those who venture to continue during the hot season at *Gamron*, commonly get for their pains an ague of a very malicious nature, which if it does not kill, at least seldom quits them, but leaves such relicks behind, as at last brings them to their graves. The cause of this excessive heat seems to me to be the situation of the place, at the foot of a barren mountain facing the south, so that the sun-beams by their refractions against the mountains are redoubled in their strength, especially if it be considered that the wind here during the summer season blows for the most part from the south, and consequently from the same corner, from whence the sun-beams exert their utmost strength. For immediately after *March* is past, the winds turn commonly to the west and south-west, which are sometimes so stifling that they

D d d

1662. they kill men and beasts. The *Arabians* call this wind *Elbamudi*, i. e. fish-winds, and the *Persians* *Badesambour*, because it chokes on a sudden such as it touches. It is very observable, that the dead carcasses of such as are kill'd by it, if touch'd with the hands, are as unctuous as grease or oil, and appear as if they had been dead a month ago. This wind continues here in *May*, *June*, *July* and *August*, as likewise all about *Musfil* over against the old *Nineve*, and near *Bagdat*, but those who are upon the water, even in boats in the river, never feel the effects of this wind, tho' they are quite naked.

Traffick of  
the inhabi-  
tants of  
Gamron.

Most of the inhabitants of *Gamron* are merchants, who trade to several cities situate upon the branch of the *Euphrates*, such as *Bassora*, *Sciras*, *Isfaban*, *Tauris* and *Smyrna*. Once every year, to wit, in *October*, the caravans, consisting of several thousands of men and beasts, arrive here from the east, viz. from *Babylon*, *Turky* and *Persia*, with all sorts of merchandizes laden upon camels, dromedaries and asses, which they exchange for *East-India* wares. The staple commodities of *Gamron* are cloth of gold, tapestry and pearls, which they take near the island of *Babrain*, as likewise fruits of all sorts, plumbs, raisins, currans, nuts, dates, oranges, citrons, pomegranates, peaches, &c. They abound likewise in herbs, which are brought thither from other places, especially from the isle of *Kikmis*, not above three leagues from thence. They have also good store of most excellent *Persian* wine, which is brought thither from *Sciras* and *Yezd* in large fasks, pack'd up in casks. They sell also abundance of the best rose-water, which is here in greater plenty than in any other place that ever I saw. There is at certain times such a vast confluence of merchants and ships at *Gamron*, that they want money to buy their commodities; in such cases they write to their correspondents at *Lar*, *Sciras*, *Isfaban* and other *Persian* cities, who if they have ready cash, are sure to buy good bargains at such a juncture. Most of the merchants that resort to *Gamron* are *Persians*, *Armenians* and *Indians*, living in *Persia*. And were it not for the unwholsomeness of the air, abundance more would come from other places, who now stay at home, and rather chuse to buy from the merchants that bring their commodities from *Gamron*.

Disposition  
of the in-  
habitants.

The women here, like as in most other eastern countries, are seldom seen abroad, but dwell in separate apartments, where the men live with them for some time, and in the mean while lay aside all other business. The women who expose themselves for money, sit in the evening upon benches at the doors, with lanterns in their hands, where

every man is free to chuse such a one as he likes best. The inhabitants here are generally very brown. The poorer sort go for the most part naked, only with a piece of stuff wrap'd round the middle; in the summer season some appear quite naked, others only in their shirts. The rich clothe themselves very magnificently after the *Persian* fashion, tho' there are yet some few who retain their antient dress with gold, silver, and iron rings on their hands, ears and noses. The common people make use of dates instead of bread or rice; for it is observable, that the ordinary food of the *Indians* all along that coast, from *Bassora* to *Sindi* is dates and fish, dry'd in the air. The heads and guts of the fishes they mix with date stones, and boil it altogether with a little salt-water, which they give at night to the cows, after they come out of the field, where they meet with very little herbage. They abound also in hares, sheep, pigeons and partridges; but as for tame fowl, tho' they have great store of them, they are not much esteem'd, because they have a brackish taste. The sea, especially that of *Solda* and *Sardin*, furnishes them with vast plenty of excellent fishes, and among the rest with very fine oysters, but they are so little regarded by the inhabitants, that if you have a mind to some of them, you must bespeak them of the fishermen on purpose. Preserv'd fruits of all sorts are here in great abundance; the rich merchants, but especially the *Persian* governor, living in great luxury and pomp.

About a league to the east of the city is a famous sepulchre of a *Banyan* saint, buried there some hundred years ago, under a tree call'd *Arvor das Rais*, i. e. root-tree by the *Portuguese*, or *Lul* by the *Persians*, which he planted here sometime before his death. The inhabitants call this tree the *Tree of the Banyans*, either from its first planter, or because the *Banyans* have founded a *Pagod* or *Pagan* temple under it, and a *Caravansera* or inn for the conveniency of passengers. This tree has spread its branches at a considerable distance round about, and encreases every year to that degree, that its branches, which indeed all descend from one trunk, but by degrees take root again, encompass a space of 550 feet. Under this tree both inhabitants and foreigners shelter themselves against the heat of the sun when they are walking abroad, and entertain one another. Over the sepulchre itself is built a small *Pagode*, in which you see burning lamps hanging day and night under a canopy of silk. The ground all round about is paved with bricks, and adorned with convenient benches and seats neatly kept, where every body is at liberty to take his repose

Here the *Indians* come in great numbers to offer their sacrifices, especially the *Siogs*, call'd by others *Goegys*, *Giogbi*, and *Joegbi*, and *Fakirs* by the *Arabians* and the *moors*. There are a certain sort of *Banyan* fairs (or at least pretend to be such) belonging to one of the four sects of the *Bramins*, viz. the sect of *Cenrawagbi*, of *Samarath*, of *Bijnou*, and the fourth the sect of *Siogs* or *Goegys*. You see them sitting on the highways with their legs across, as the *Mahometans* do; they never pare their nails; some have locks of hair hanging down their backs of four or five feet long, others never shave their heads or beards, which makes them appear more like devils than men. They have no dwelling places of their own, but in the night-time they sleep in the porches of their temples, on dunghills and

corners of the streets, or perhaps in some cave or other hole. They always appear naked, having only a piece of cloth wrapt about the middle. The *Indian* women resort to them in great numbers out of devotion, to touch the extremities of their fingers, or to kiss their privy members in a most humble posture, which they admit of, without shewing the least sign of sensibility thereat, for if they should do otherwise, they would be look'd upon as unfit for that holy feat. They never cast their eyes upon any body, but draw them in a most frightful manner upwards, as if they were afflicted with convulsions. They lead a most severe and miserable life, constantly mortifying their bodies by some strange and unnatural penances they lay upon themselves. Some retire into caves and cellars, where they continue in their devotions sometimes

1662.

The Persian Shepherds about Camron

9 or 10 days, without eating or drinking. Some walk both day and night for several years together without sitting; and when they intend to sleep, hang themselves with a rope about their middle to the branch of a tree. Others carry both their arms all their life-time strait upright above their heads, so that in process of time they are not able to bend themselves downwards again. In this posture they continue day

and night throughout the year quite naked, without the least fear of being scorched by the sun, or stung by the gnats, which they won't as much as remove with their hands. Nay they sleep with their arms in the same posture, a thing which needs must be very painful at first, and at last makes their arms thus distorted and bereaved of their usual nourishment to hang down behind their backs. There are innumerable sorts of other pen-  
tents;

1662. tents, some always lifting up their eyes against the sun, others fixing them constantly upon the ground, without ever looking upon or speaking a word to any body living. They besmear their nauseous bodies with ashes, and their greasy hair and faces with fandel-wood and saffron, but especially with cowdung mix'd with ashes; during our stay at *Gamron* we went several times to refresh ourselves under the tree; the common custom is to carry some wine and sweet-meats along with one, and as for dates, almonds, nuts, and other fruits, they are to be sold there.

The governor of Gamron.

The *Persian* governor residing at *Gamron* lives in great splendor; the king sends every year certain commissioners thither to take an account of the governor's conduct; he commonly meets them at some distance off the city unarm'd, and if they find him to have transgress'd his commission, they cut off his head, otherwise he is regal'd with a present of clothes, and so they enter the city, where they pass their time together in feasting for some days. The governor of the city did in our time meet the commissioners with some armed bands, and thus conducted them into the city.

Persian posts.

The posts which go from *Gamron* to *Isfahan* are wonderful expeditious in their journeys; they are appointed by the governor of *Gamron*, after he has made sufficient trial of their nimbleness, which is done by running with the rising of the sun, to an appointed place till sun-set; a certain horseman being appointed to ride along with them, and to take care they don't rest by the way: After they have perform'd this trial, the governor presents them with a suit of clothes and with the title of runners. So soon as any stranger of fashion arrives at *Gamron*, some or other of the inhabitants is ready to offer him his service, to attend him in the quality of a porter, or as a servant to show him the way; they are sure to wait at your lodgings every morning, and follow you all day long wherever you go, for a very slender allowance.

Shepherds near Gamron.

I had the curiosity to take a view of the shepherds and their huts, with their flocks of sheep and goats; for which purpose, by the help of my guide, I went some leagues deep into the country, where I found them feeding their sheep in a very barren ground; these shepherds, who have no other household goods but a slight coat, commonly manage a flock of 500 sheep and goats. Their huts they set up at pleasure in the open fields, they having no certain grounds appointed them, but like the *Arabians* change their places according to the best convenience of pastorage; and tho' the grounds betwixt the city and the moun-

tains are very barren, yet are the sheep and goats here very good, an evident sign that a small matter is sufficient to feed them. These fields extend from the city to the mountains, which surround them at some distance from thence. They have some sheep of an extraordinary bigness, with two horns on east side of the head. Their he-goats have long curl'd hair, of which they make camlets. Some have such long ears that you may tie them together. *Persia* affords great quantities of tann'd goat and sheep skins. Thus much of *Gamron*.

A little to the right of the harbour of *Gamron*, you may see the isle of *Ormuz*, at the very entrance into the *Persian* gulph, as likewise the islands of *Queixome*, *Kejem* and *Lareck*, of which we will give you a short description.

Some put the island of *Ormuz* under 25 deg. 30 min. of latitude, and 22 deg. 45 min. of longitude; others under 26 deg. 4 min. and some others under 27 deg. and 30 min. northern latitude. The isle of *Ormuz* is by some taken for the same, which by the ancient authors, as *Pliny*, *Pomponius* and *Dionysius*, is call'd *Ogyris*, and by *Ptolemy* *Vorccbia*; it is situate in the *Persian* gulph, about two leagues distant from the continent of *Persia*, having the province of *Caramania* to the east, *Arabia felix* to the south and west, being divided from them only by the streights of *Babarem*, and the continent of *Persia* to the north; it is very near triangular; its largest side which faces the N. N. E. extending from S. E. to the N. W. from the chapel of *St. Lucie* to the point of land where the castle of *Ormuz* is, being the nearest to the continent, where formerly the *Portuguese* had a fort call'd *Comoran*, built just opposite to the castle of *Ormuz*, which therabouts is not above a league distant. The second side extends from the same chapel, viz. from the S. E. to the S. S. W. as far as the cape *Karu*, and so further to the W. S. W. and the W. and makes the basis of the triangle. The third and smallest side begins at *Karu*, and ends at the before-mentioned castle; it faces the country of *Mogofiban*, a name commonly given to the *Persian* coast on that side, which is about two leagues from the isle. Its whole circuit is about three leagues.

The western part of the island extending along the sea-shore, where the mountains end, is call'd *Karu*, where you see a few houses scattered up and down belonging to the moors: At *Turumbake* are a greater number of these houses, but as wretchedly built as the former, except some few formerly belonging to the *Austin* friars, where they used to divert themselves some times. Near to them is a fine fish-pond surrounded

*Mountains.* The whole island is divided by a ridge  
 of mountains, extending from the east to  
 the west, behind which there is nothing to  
 be seen but white and barren hills, produc-  
 ing nothing except very good white salt.  
 Among the rest there is a mountain here  
 called *Kuykastaron*, or the *Mountain of the*  
*Dead*; on the top of which the *Portuguese*  
 had built a chapel call'd our *Lady of the*  
*Rock*; which chapel is observed to rise  
 higher and higher, because the salt, salt-  
 petre, and brimstone, which are contained  
 in the bowels of this mountain, encrease  
 daily in quantity. The inhabitants visit  
 this chapel with a great deal of devotion,  
 unto which they have made a pretty easy  
 ascent by cutting steps out of the rock,  
 which otherwise is very steep. Near the  
 mountain, where the chapel stands, is ano-  
 ther, which runs upwards in form of a py-  
 ramid. It is composed of one entire mass  
 of the best and whitest salt that can be seen,  
 and appears at a distance like a mountain  
 covered with snow. Not far from hence is  
 a chapel called *St. Lucy*, built behind the  
 ruins of some old towers, where former-  
 ly the kings of *Ormuz* used to keep their  
 brothers prisoners, after they had bereaved  
 them of their eyes. About half ways be-  
 twixt this and the city, was another chap-  
 el dedicated to *St. Lucy*, with some hon-  
 oures about it, whither the inhabitants of *Or-*  
*mus* used to retire during the summer sea-  
 son, as likewise to some others built near  
 the sea-shore of reed only, and covered with  
 palm-tree leaves.

From this chapel to the city is a large  
 plain, where the inhabitants used to have  
 their cisterns to gather and keep rain-water  
 in, which were always locked up; for not  
 only hereabouts, but also all over the island  
 the ground is brackish, which makes the  
 rain-water which is kept in these cisterns  
 much better than what is gathered from the  
 pools or ponds; yet does it not come near  
 in goodness to the fresh water that is brought  
 from the continent or the ile of *Queixome*.  
 The remaining part of this plain is taken up  
 with the graves of the mahometans, pa-  
 gans, and jews, which are buried here pro-  
 miscuously without any difference; some  
 of these tombs are covered with a kind of a  
 chapel, but open on all sides. Hither you  
 see great numbers of mahometan, pagan,  
 and jewish women, of all ages and degrees,  
 which come to bring their offerings of eat-  
 ables in flat small dishes, to the souls of  
 the deceased. And some of these are so  
 zealous as to pay their constant visits and  
 devotions to the tombs of some of their pi-  
 ous men or saints, that are in great reve-

VOL. II.

rence among them, and their tombs sumptu-  
 ously adorned.

Not far from this plain is another extend-  
 ing from the mountains to the city, called  
 by the moors by a peculiar name, *Ardemira*,  
 i. e. *The prospect over the plain* (in the same  
 sense as the *French* say *Belvidere*) where the  
 mahometan courtiers, and other officers of  
 the king used to keep their tournaments and  
 running at the ring on horseback. This  
 plain extends to the west as far as the sea  
 shore, the way that leads to *Karu*, from  
 whence the city has the fairest prospect.

Behind the mountains, being the S. S. W.  
 and the W. S. W. part of the island, called  
*Turumbake*, is the fairest of all, tho' its com-  
 pafs is less betwixt the mountains and the  
 sea than that part beyond the mountains.  
 Here you see a country seat of the old  
 queen of *Ormuz*, adorned with walks of  
 palm-trees, and two large cisterns or ba-  
 sons, called from the place the *Ponds of*  
*Turumbake*, besides several lesser ones.

Their water is the wholesomest and fresh-  
 est of the whole island. There is another  
 great basin belonging to this seat, which is  
 continually supplied with water out of three  
 adjacent ponds and a small brook; this wa-  
 ter is not near so salt as that which is kept  
 in the ponds more to the E. and N. N. E.  
 where the sun turns the water into solid salt.  
 This country seat was already in a decay-  
 ing condition 50 or 60 years before my  
 coming here, having only a few apartments  
 left, wherein the king of *Ormuz* used to  
 lodge during the summer season; *Turum-*  
*bake* had at that time not above 15 or 20  
 huts built of reed close together, like a  
 small village, and covered with palm-tree  
 leaves, after a wretched manner. Most of  
 the houses of this island are built after the  
 same manner, notwithstanding which, the  
 inhabitants of *Ormuz* retire thither with their  
 families in the summer, being taught both  
 by tradition and experience, that the open  
 country air is much more wholesome dur-  
 ing the hot season, than the city air.

On the north side of this ile lies the city  
 of *Ormuz*, which before it was subdued by  
 the *Portuguese* was very populous; foreign-  
 ers flock'd thither daily from *Perfia*, the  
*East-Indies* and *Europe* itself, for the conveni-  
 ency of traffick. To be short, the city of  
*Ormuz* was the most famous and richest tra-  
 ding city of the world, before the *Portuguese*  
 had found out the passage by sea to the  
*East-Indies*, being inhabited and frequented  
 by the *Persians*, *Arabians*, *Abyssines*, *Arme-*  
*nians*, *Tartars*, *Turks*, and other mahome-  
 tans; besides the *Italians*, *French*, *Dutch*,  
*English*, *Poles*, and other *European* nations.  
 It was much inhabited by the *Portuguese*,  
 but very few *Spaniards*, because the first

1662. would not permit them to go thither by sea, and the *Turks* stop their passage by land, betwixt the *Mediterranean* and the *Persian* gulph; some few dwelt there under the name and protection of some other nations. The natives of *Ormuz* are all mahometans, but of different sects, some being called *Kiays*, belonging to the sect of *Hali* son-in-law to *Mabomet*, whose doctrine is followed by the *Persians*; others are called *Sunni's*, following the doctrine of *Mabomet*, *Ojmar*, and *Ojman*, as the *Turks* do; the king himself is of this sect; besides which, divers sorts of pagans, as *Banjans*, *Cambojans*, &c. inhabit here.

The city of  
Ormuz in  
the Portu-  
guese  
times.

The city of *Ormuz* whilst under the jurisdiction of the *Portuguese*, and before the *Persians* made themselves masters of it 1619, was a very stately, rich, and magnificent place, of which the inhabitants used to boast, *That if the world were a ring, Ormuz must be considered as the diamond*. For after the *Portuguese* had conquered this city, they were very careful in adorning it from time to time with most magnificent structures, to such a degree, that all the iron belonging to their windows and doors were gilt; and it was the common opinion in those days, that if they had remained masters of it till now, they would have turned them into massy gold. They had built a stately church upon an eminency, dedicated to the virgin *Mary*, with an adjacent hospital called the *Misericordia*. Next to this was the exchange or custom-house, called by the *Persians* *Bencksal*, this was a fine edifice, surrounded with galleries on the out side. They had likewise several monasteries, amongst which those of the *Austin* fryars and *Carmelites* were the chiefest. There is yet to be seen a very high steeple, a most noble piece of architecture, exceeding in magnificence all others of this city; the mahometans call it in the *Arabian* tongue *Alkoran*; on one side of the castle stood formerly a famous *Mosque*, which the *Portuguese* caused to be demolished, as being too near the castle, which proved the occasion of the most inveterate hatred against the *Portuguese*, not only among the moors inhabiting there, but likewise among the *Persians*, their king *Tabamaj* or *Tabamas*, grandfather to *Schabab Awas*, having been the founder of it. No sooner was this city fallen into the hands of the *Persians*, but she was by them deploiled of her ancient glory, and most of her inhabitants, many of whom were killed in the siege, the rest fled for shelter to some other place. All the churches, houses, and other publick edifices, were laid level with the ground, except some few shops in the *Bazar* or shopkeepers street. The *Dutch* ships which un-

Under the  
Persians.

loaded there, and returned commonly empty from thence, used to make it their practice at that time to ballast their vessels with the finest marble stones, the remnants of the stately structures of this city, and would questionless by degrees have taken all that was left, had not the *Persian* governor there prohibited the exportation of them under a severe penalty. For the *Persians* whose intention was to lay the foundation of the greatness of *Gamron* upon the ruins of *Ormuz*, did remove all the best stones from thence, which they made use of in their best buildings at *Gamron*. The fortifications of the city of *Ormuz* in the *Portuguese* times, in 1619, were but in a slender posture, the ditch about the castle being filled up with dirt, having scarce 6 foot of water; besides that, it was not spacious enough for the garrison. Their commanders in chief, who were removed from thence every year, had according to the custom of the *Portuguese*, but a slender share of knowledge in martial affairs, the governor at that time being an ancient man, not trained up in the wars, and not provided with experienced engineers and gunners.

The old four-square castle was built on the utmost northern or north-west point of the land of the isle, where it approaches nearest to the *Persian* shore, two sides of it being washed by the sea, the other two facing the city; betwixt which and the castle is a very fair square of about 300 feet long, from whence you have a fine prospect into the sea. This castle, whilst in the possession of the *Portuguese*, was not very large, being defended only by four bastions, which as well as the cortines, were built with a kind of small flint-stones mixt with mortar and sea-water; so that they were not proof against the thunder of the great cannon. The ditch was likewise very shallow, though it might have been made deeper without any great cost, by reason of the nearness of the sea, which waters it on two sides. In this condition was the castle of *Ormuz* under the *Portuguese*, of which the *Portuguese* boasted that it was impregnable. After the *Persians* had made themselves masters of it, they were very careful to repair the old fortifications, and to add some new ones, especially on the point of the ditch, they made a half-moon, the cannon of which commanded the plain and a gallery; since which time they keep it always in a good posture of defence, and maintain a considerable garrison there, under the command of the governor of *Ormuz*, who residing for the most part at *Gamron*, appoints a deputy for this place, who has his residence in the palace formerly belonging to the kings of *Ormuz*.

1661.

1662.  
The bar-  
bour.

Scarcity of  
water.

The

1662. The harbour of this island is a certain bay, made by two points of land that jett out on both sides; upon one of these capes stands the castle, on the other the *Portuguese* had built a church, dedicated to our *Lady of Good-Hope*; but this point turns somewhat nearer towards the city, so that the harbour where the largest vessels, galleys, and smaller vessels used to cast anchor, lies opposite to the north-east part of the city, betwixt the two monasteries built by the *Portuguese*, one of which belonged to the *Carmelites*, the other to the *Austrian* friars. The tide where this bay is deepest rises at high water, near four foot high above the foundations of the houses; notwithstanding which, at low water the shore is dry for above 200 paces; and 150 paces farther the water is not 3 feet high where it is deepest, so that the largest vessels are obliged to cast anchor at 600 paces from the city, and the galleys at 500, which renders this harbour very unsafe, especially if a storm arises from the east, which often forces the ships ashore; nay, this harbour would be much more dangerous, were it not for the nearness of the continent, which covers it on the N. and N. E. side, and the isle of *Queixome*, which lies to the N. N. W. of it, and breaks the violence of the raging waves. Some tell us of two different bays belonging to the isle of *Ormus*, which afford a safe harbour to ships, the one to the east, the other to the west, being divided by a neck of land which jetteth out betwixt them a considerable way into the sea.

Scarcity of water. The whole island is destitute of water, except what some standing pools or ponds afford, which is always brackish, tho' some more than others; some, especially such as are near the sea-side, being tolerably fit for use; for the farther they are from the mountains, the less they participate of the salt. It does sometimes not rain in *Ormus* for three years together; the only springs of fresh water they have being in the royal gardens. *Ferra Gutka* who reigned in 1596 in *Ormus*, found out a spring with fresh water in *Turumbake*. Not far from thence near the sea-side, arises a salt water spring from among the rocks, called by the *Persian* inhabitants *Abdarmon*, i. e. medicinal water, which has a purging quality, and cleanses the bowels from all impurities. Here you see abundance of people drink the waters at a certain season of the year, when they have a mind to be satisfied whether their bowels are thoroughly cleansed, they cut a piece of an orange or citron, and if immediately after they go to stool, they reckon themselves sufficiently purged. 'Tis true, there are three springs here, which all

1662. having their rise among the mountains, afford water sufficient for three rivulets, but it is as brackish as the sea water itself. Thus several brooks are to be seen to the S. E. among the mountains which carry a very clear water, but so stocked with salt, that in the summer, when these rivulets are dry'd up, you see vast lumps of salt, which cover the banks on both sides. The vast quantity of salt which is to be met with all over this island, being in some places burnt up and blackned by the violence of the sunbeams, affords a dreadful sight at a distance. They have also a kind of salt clay, out of which they make earthen vessels.

The whole isle is nothing else but a barren vast lump of salt, which scarce affords either grass or trees, except what is brought forth by force in the royal gardens in the plains, neither does it afford any thing for the sustenance of human life. It has however some few trees in certain places, but bear no fruit except dates, and another small fruit growing on thorn bushes with green leaves; another kind of these thorn bushes they have with a pretty large stem, and small red leaves. In the opening of the rocks you see now and then a large green and well spread tree, notwithstanding several have positively asserted that this isle did produce neither tree, herbs, nor grass. The mountains are full of rock salt, which is very transparent, and contain likewise a considerable quantity of brimstone. In some winters the salt is washed by the rains down from the mountains, which afterwards is again coagulated by the sun, which is the only made use of here, for the rock salt being of too corrosive a nature, does consume the meat instead of preserving it. The *Dutch* transport abundance of salt from hence to the *East-Indies*. The isle also affords a certain kind of white plastering called by the inhabitants *Guecke*, and another that is red of the same kind, but not so good as the white. They have also a certain way of preparing dung for plaster-work, which they perform in the following manner: They take the uppermost part of an old dunghill away, the rest they make up in balls, and let them dry in the sun. This done, they burn them to ashes with fire; the ashes they beat for a considerable time upon an even piece of ground, and immediately after mix it for use, for, if they let the ashes be cold, or keep them only two or three days, they are not fit for their purpose; but this prepared and used keeps the water out of any place for many years. There are scarce any other stones to be met with here but flint-stones, of which the greatest part of the fortifications of the castle are composed. There is also a kind of black

1662. black glittering sand to be found here, which the *Portuguese* used to transport from thence to their factories in the *East-Indies*. No barley or oats is to be seen here. Their cattle they feed with a peculiar sort of pease or beans, which they grind, and afterwards steep in water, being otherwise too hard to digest. Of these they give a certain quantity every night to their horses. But in the morning they give to each horse 2 pounds of black sugar, mixt with a pound of butter and some flour, which they make up into balls; then they wash the horses mouth and teeth, because this mixture sticks very close to their teeth and gums; in the day time they feed them with some herbs which they draw out of the ground with roots and all, and cleanse them very well from all impurities.

Sinking  
wood.

In the bay and all along the coast of the isle of *Ormuz*, they fish for wood, of which they find great store in the bottom of the sea, but not very large. This wood is by the violence of the currents of the rivers arising from among the mountains of the continent of *Persia* (which is not above two leagues distant from hence) torn off and carried to the shore of *Ormuz*; a thing most surprising, and contrary to what is observed of this kind in other islands lying near the continent, or some other great islands, whether the adjacent rivers force abundance of wood, which however always swims on the surface of the water, and commonly is found rotten, whereas the wood upon the coast links to the bottom, and is not quite rotten, but affords the inhabitants great store of fuel, which has induced some to believe that this wood did grow under water.

On the *Persian* coast you meet also with certain kind of light porous stone under water, not unlike our pumice stones; especially near those places where subterraneous fires are; which makes these stones to be always white, in which they differ from the common pumice, which are either blackish or grey; they are found here in such prodigious quantities, that they build their houses of them, because they mix very well with the mortar, by reason of their spongy substance, and very light; and when well cemented with the mortar, resist the violence of the winds, which blow here exceedingly about the change of the seasons, better than any other stones. Some are of opinion that these stones were cast out by a burning mountain, which seems not improbable, there being on the back side of a neighbouring mountain found vast quantities of these stones, as black as coals. The reason why those on the sea shore are white, seems to be because they have for many years, nay, for many ages past, been scou-

red by the water of their impurities; the inhabitants call them *Sancbmay*, i. e. *Rock-Fish*, because as many as are taken away grow again in a little time, and furnish them with materials for building. They report that in former ages this island did burn for seven years together, of which they shew the marks to this day; the earth upon the mountains being red, and in the vallies spongy like ashes or quick lime; besides that the whole island is subject to frequent earthquakes. The mountains are all over covered with salt, and the grounds are full of salt-petre. As often as the wind blows from the south-west, there arises so violent a stink of brimstone from the mountains, as infects the whole air. The heat is more intense at *Ormuz* than at *Gamron*, for it continues at least five months, viz. from *May* till *September*, and sometimes till the beginning of *December*; in the winter season the heat is somewhat allayed by the dew which falls all the night long, but in the summer the nights are so excessive hot, that it would be impossible for the inhabitants to abide here, if by several ways they did not assuage in some measure its violence. For on the tops of the houses they set certain wooden vessels like bathing tubs, big enough to contain two persons at a time, in these they sit and sleep all night in the open air with the water up to their necks. The cause of this intolerable heat is attributed chiefly to the nature of the soil, which is not only sandy, but full of salt-petre, which occasioning a continual loss of spirits, the inhabitants are forced to repair in some measure this defect, by continually keeping themselves in cold water, notwithstanding it be none of the best here; all the water that is brought hither from *Bandel Kongo*, or the isle of *Queixome*, being taken out of ponds, and consequently not purified from its dregs for want of motion; which is sufficiently demonstrable by its colour which is like milk, and its sediment which is sometimes two or three inches thick at the bottom of the vessel it is kept in. During the violence of the hot season you may see people of both sexes and all ages, flock to the city walls; but the *Europeans* seldom venture at swimming in the sea, the water being so excessive salt that it excoriates their bodies; but they allay the excessive heat of the nights by wetting their quilts and pillows with cold water. It is farther observable, that the winds are so changeable here, that you may in a quarter of an hours time remarkably feel their different effects; some by opening, others by obstructing the pores of your bodies. During the summer season the winds blow for the most part E. and S. E. or W. S. W. but seldom from the

Their Drink.

The drink of the common people is water, those of the better sort drink Spanish wine, or Persian wines of *Sbiras*, but these are very scarce and dear. They distil also a spirit of rice and fugar here, as well as in all other parts of the *Indies*. They have also a certain kind of drink call'd *Tari*, which is drawn from a tree, and as sweet as musk; this is the ordinary liquor sold in public-houses, who pay a considerable tax for their licenses to the king. This liquor is brought every day to town in casks on horse-back, each horse carrying one on each side.

Origin of the Isle of Ormus.

The isle of *Ormuz* was in ancient times govern'd by its own kings or princes, descended from the race of these great kings that ruled all over *Arabia*, *Persia* and the adjacent countries. The first famous in their histories, was a certain *Arabian* Emir or prince, call'd *Mabamed Dramku*, of the race of the ancient kings that ruled in *Saba*, or *Arabia Felix*. This prince being extremely desirous to conquer new dominions, extended his conquests to the *Persian Gulph*, where he landed with a great fleet from *Kalayate*, a city of *Arabia Felix*, and laid the foundation of a city call'd *Ormuz* or *Harmus* on the coast of *Persia*. He left for his successor *Solyman* his son, who was succeeded by the following kings. *Isa* the third in rank, son of *Solyman*; the fourth *Lax Kari* son of *Isa*, who left the court and embraced a private life. The fifth was *Katobad* his son; the sixth *Isa II.* son to *Katobad*, the 7<sup>th</sup> *Mamud* son of *Isa II.* who suspecting *Mir Xabadin Molong* his nephew, made him a prisoner in the castle of *Guti*; from whence he escaped to *Seugon*, and married the daughter of the governor of that castle. The 8<sup>th</sup> *Xaranta* son of *Mamud*, he engaged in a war against *Molong*, but was slain in an engagement with his enemy.

9<sup>th</sup>, *Mir Xabadin Molong* was declared king in his stead; his daughter *Sed Alkatum* was married to *Emir*, or prince *Seyfadin Aben Azar*, his brother *Aly's* son, king of the isle of *Keys*, who dying soon after, his son *Seyfadin* obtained the kingdom of *Keys*. *Mir Xabadin* dying likewise not long after, his Vizier *Xarcar* made himself master of the kingdom of *Ormuz*; and those of *Keys* having at the same time deposed *Seyfadin*, he fled to *Ormuz*, where being well received by the inhabitants, he besieged the usurper *Xarcar* in the castle of *Karcan*, whom he kill'd, and thereby became ma-

Vol. II.

ster of the whole kingdom. After *Seyfadin* had well settled his affairs here, he undertook an expedition against those of *Keys*, of whom he kill'd many, and made some of their chief men prisoners. From thence he went to the isle of *Gerun*, (since call'd *Ormuz*) where he caused all his prisoners to be slain upon a certain mountain, which from thence was call'd *Kay Kajaron*, i. e. The mountain of the dead. He returned at last victorious to *Ormuz*, where he spent the rest of his days in Peace. The 11<sup>th</sup> was *Xabadin Mamud*, son of *Isa II.* who succeeded his uncle in the kingdom. The 12<sup>th</sup> *Emir Rohnadin Mamud*, *Xabadin's* nephew, son of *Hamud*, who was very victorious, and extended his conquests as far as *Saba*, a province of *Arabia Felix*. He reign'd 35 years, and died 1278.

He was succeeded by his son *Emir Sayfadin Nocerat*, but was soon after forced by *Emir Kodbadin Tbabantam* and *Emir Moezbadin Fulad*, or *Pulad*, to fly the kingdom, and to seek for shelter, together with his mother, by sultan *Gebaladin Suraget Mex*, governor of *Kernon*, by whose assistance he was restored to his kingdom: But being a second time vanquish'd, by his brother *Emir Kodbadin* was forced to save himself by flight in a small bark, in the isle of *Queixome*. In the mean while, king *Seyfadin*, who had assisted *Kodbadin*, having caused him to be murdered, the soldiers conceived such a hatred, against this *Seyfadin*, that they instantly recall'd *Emir Sayfadin Nocerat*, chased away *Seyfadin*, and restored him to the throne. Notwithstanding which he was not long after murdered, by his two brothers, *Emir Majaud*, and *Emir Turkonxa*, together with his two sisters, *Bibi Banek*, and *Bibi Neyty*, after he had reign'd 12 years, viz. 1290.

*Majaud* the murderer of his Brother, succeeded him in his throne, being a very courageous but cruel man, which brought upon him the hatred both of the nobility and common people, of whom he caused many to be killed. This made them implore the assistance of *Emir Babadin Ayas Seyfin*, formerly a slave only of king *Nocerat*, but now governor of *Kalayate*, a sea-port of *Arabia-Felix*; who forced *Majaud* to fly to *Kernon*, and from thence into *Syria*, where he died, after a reign of three years. He was succeeded by *Babadin Ayas Seyfin*, who caused two brothers of *Majaud* to be beheaded, for endeavouring to restore him to the kingdom.

About that time a great swarm of *Turkes*, came out of *Turkestan*, conquered a considerable part of *Persia*, and by their frequent inroads, into the kingdom of *Ormuz*, forced the inhabitants to seek for shelter.

F f f

at

1662.

at the command of their king *Azaez*, in the isle of *Queixome*. Whilst they were roving about in the neighbouring seas, to find out a place where to fix their habitations, they happened to light upon a certain island, 2 leagues from *Queixome*, where meeting with a very ancient man, living just on the point of the isle, a fisherman by trade, he advised their king, to settle there. The king approving of his counsel, sent to the king of *Keys*, the proprietor of this, and all the other islands in the *Persian Gulph*, to desire him to sell him the said isle, for a certain sum of money, which being granted, he settled there a colony of his subjects, 1300, and gave it the name of *Ormus*, after his native country. His successors afterwards extended their conquests over a great part of *Arabia* and *Persia*, and over the *Persian* sea, as far as *Bajora*; and maintain'd themselves in the possession of it, till this island was conquered by the *Portuguese*. This king died 1312, in the 22 year of his reign.

Some historians give us the following account of this and the succeeding kings of the isle of *Ormus*.

After this king had settled his new colony, he surrendered the government, to *Emir Ayzadin Gordonxa*, son of *Salbor*, and *Bibi Zeineb*, a nephew of the ancient king of *Ormus*, and retiring to *Kalayatte* in *Arabia*, there finish'd his days in peace. *Gordonxa* was engaged in war with the king of *Keys*, because he had intercepted some ships coming from the *East-Indies*, his dominions; *Ormus* he vanquish'd, and forced him to fly his dominions; but the king of *Keys* returning soon after, found means to make *Gordonxa* his prisoner, under pretence of an interview concerning a peace betwixt them; and *Bibi Sultan*, *Gordonxa's* spouse, committed the administration of the government to *Malek Guaya Hadin Dinar*, son of her husband's brother *Xamxa*; scarce five months were expired, before the king of *Keys* came to *Ormus*, with *Gordonxa* his prisoner, where he was joyrully received by his subjects, except *Dinar*, who being used to rule, would not submit to *Gordonxa*, but forced him to retire to the castle of *Minab*, on the continent of *Persia*. Notwithstanding which, *Dinar* being sensible what affection the people bore to *Gordonxa*, and fearing his return, he thought it his safest way to retreat in time to the kingdom of *Makron*, betwixt *Persia* and the country of *Send* or *Ind*. After which *Gordonxa*, once more return'd to his kingdom, where he died 1318.

He was succeeded by his son *Emir Mobarjadin Bararon Xa*, who together with his brother, was by *Emir Xabadin Issuf* his general put in prison; *Issuf* afterwards

mounted the throne, but was engaged in a war immediately after, with *Emir Xa Kodbadin*, brother to the imprison'd king: *Dinar* came likewise with a strong flying army, to his assistance, from *Makron*; but finding *Issuf* too strong for them both, he entred into a confederacy with him; and *Issuf* after having caused the imprison'd king, his mother, and one of his brothers to be slain, forced *Kodbadin* to retire to *Kalayatte*, with *Bibi Mariam*, the spouse of *Ayas Ceyfin*. But *Kodbadin* afterwards returned unexpectedly to *Ormus*, with a considerable force, and having made *Issuf* his prisoner, he put the crown upon his head, and caused him, his wife and his two sons, to be killed; after which he likewise made himself master of *Keys*. It happen'd that *Kodbadin* being abroad a hunting on the continent, 1345, *Rud Xur Nofomadin*, in the mean while got himself proclaim'd king of *Gerun* or *Ormus*; but finding most of the inhabitants averse to him, he quitted the country. However it was not long before he return'd with a great power, and having gain'd *Homer Sojadin*, *Kodbadin's* general, to join with him, he forced *Kodbadin* to fly to *Kalayatte*. He had scarce stay'd here a year, when word was brought him, that *Nofomadin* was dead, and that by his last will, he had enjoined his sons, *Xembe* and *Xady*, to throw themselves at the feet of *Kodbadin*, and to surrender the crown to him; but finding that the two young men, instead of performing their father's will, had seized upon the kingdom; he attack'd them and regained the crown of *Ormus*. He died 1347, in *Nakelstan*, a province of *Mogestan*.

He was succeeded by *Turonxa* his son, (who writ the lives of the kings his predecessors, both in verse and prose.) He vanquished *Xembe* and *Xady*, and died 1378, after he had reigned 30 years. After him his eldest son *Mazud* obtained the crown of *Ormus*, who was succeeded by *Xabadin*, the second son of *Turonxa*; after whom reign'd *Salgar*, *Turonxa's* third son. Under his reign, *Sofi Hbalila* conquered all *Persia*, even to the continent, directly opposite to the island of *Gerun*, or *Ormus*, which escaped his hands for want of shipping; but *Salgar* lost all that he was possessed of on the continent. For the rest he reigned in peace, as did his successor *Xauwes*. Him succeeded *Seyfadin*, who reigned 1507, when the *Portuguese*, after they had discovered the passage by sea to the *Indies*, first set footing in the isle of *Ormus*, under the command of *Alfonfus Albuquerque*, the king being then yet in his minority, was under the protection of one *Aiar* or *Kogear*, his father's slave, a brave but cunning man,

1662.

1662.

The Portuguese came first into the Persian gulph.

1662. whose chief aim was to let the young king bear the title of king, but to keep the administration of affairs in his own hands. *Albuquerque* being not ignorant of it, look'd upon this as a favourable opportunity to bring the city of *Ormuz*, under the power of *Emanuel*, the then king of *Portugal*, or at least to make it tributary to him, by erecting a fortress near it, by which means he might clear the *Persian* gulph of all the *Turkish* and other Mahometan vessels trading to the *Indies*, and consequently entail that whole trade upon *Portugal*. He was about that time, with six stout men of war well mann'd, cruising in those seas; but thinking it below himself at such a juncture as this to lie privateering at sea, he steer'd his course the 20<sup>th</sup> of *August* 1507 towards the *Persian* gulph, and passing by the cape *Rosalgat*, came to an anchor before *Kalayatte*, (a noble city, and the first on that coast under the jurisdiction of the kings of *Ormuz*) to provide himself with fresh provisions. The inhabitants dreading the name of the *Portuguese*, which was then already become famous throughout the *Indies*, entered into a confederacy with him, upon such conditions as *Albuquerque* was pleas'd to prescribe them. From thence he set sail for *Kuratie*, another city belonging to the kings of *Ormuz*, on the *Arabian* coast. Here the inhabitants being of a different opinion with those of *Kalayatte* chose rather to defend themselves by force, than to submit to *Albuquerque*, tho' with very ill success. For *Albuquerque* having landing his men, so vigorously attack'd the city, that the garrison after some resistance were forced to leave it to his mercy, which he burnt to the ground, with all their ships he found in the harbour. In the same manner he made himself master of the *Makate* and *Orfasan*, two strong and well fortified places belonging to the king of *Ormuz*; and from thence directly taking his course to *Ormuz* it self, the chief aim of this expedition, he sent word to king *Seyfadin* and *Atar* the protector, that *Emanuel* king of *Portugal* having taken a resolution, out of an hereditary hatred to the mahometans, the declared enemies of *Christianity*, to make war against them, which should not end but with the total conquest of either side, he was come to tell them, that if they were ready, according to the example of several other *Asiatick* and *African* kings, to pay his master a certain yearly tribute, he would leave them in the quiet possession of the island, but if they refus'd to acknowledge the king of *Portugal* for their lord, he was come to denounce them war, which was not to end but with their total total destruction.

The Portuguese came first into the Persian gulph.

The king being forely frightned at the last success of the *Portuguese*, and dreading the same fate, thought it his best way to cajole *Albuquerque* with fair words into a belief of his sincere intentions of peace; but at the same time, by the advice of *Atar*, fought to gain time, and to delay his positive answer, till the expected auxiliaries from the continent of *Persia* were arrived. No sooner had he received these supplies but he altered his note, and in plain terms sent word to *Albuquerque*, that the kings of *Ormuz* were not us'd to pay, but to receive tribute from foreigners; that in case the *Portuguese* would be contented with the same privileges of trading other nations enjoy'd there, they should be welcome; but that if they once came to hostilities, they should be convinced to their cost, what difference there was to fight with well appointed *Persians* and *Arabians*, and with an undisciplin'd rabble of *Moors*. By this time *Atar* the protector had got above 20000 men together, part of which he embark'd aboard the merchant vessels then in harbour there, which he posted in a line along the shore, to prevent the enemies landing, whilst he with the men of war put to sea with an intention to attack *Albuquerque* in the rear, so soon as he should be engaged with the merchant men: But *Albuquerque*, instead of attacking the merchant ships, came up with *Atar's* fleet, and engaged them so furiously, that that in a short time he sunk many of them, and burnt the rest, with a great slaughter of men on the enemies side, whereas the *Portuguese* lost not above ten men during the whole engagement. King *Seyfadin* being sensible that the loss of his fleet must of necessity draw that of the whole island after it, sent immediately his deputies to *Albuquerque* to treat of peace; they were kindly received by the *Portuguese* general, who gave immediate orders, that the fire which had seized by this time upon the merchant ships, should be extinguish'd immediately, and the next day a peace was concluded betwixt them upon these following conditions.

That *Seyfadin* king of *Ormuz*, and all his successors, submit themselves to, and shall acknowledge the king of *Portugal* their protector, and pay him an annual tribute of 15000 *Serafs*.

That *Albuquerque* shall have liberty to pitch upon a place, such as he judges most convenient for the erecting of a fortress, for which purpose he shall be supply'd with ready money, and other necessities by the said king.

Accordingly *Albuquerque* apply'd himself with all imaginable speed to the building of the fortress, but many of the gentlemen volunteers,

1662.

1662. volunteers and other *Portuguese*, looking upon it as a great hardship to spend their time here in slavish drudgery, whilst they miss'd their opportunity of getting a rich booty at sea from the *Moorish* ships, (the main intent of their voyage) began to murmur, and at last, with the consent of their captains, embark'd themselves aboard their men of war, and in spite of *Albuquerque* return'd to the *Indies*. He was vex'd to to the soul to see himself thus disappointed in this great design, but being forced to comply with necessity he follow'd the rest. But some years after he being sent from the king of *Portugal* in the quality of viceroy of the *Indies*, he did, after the conquest of *Goa* and *Malacca*, bring it to perfection in the following manner.

He caus'd 1577, 22 men of war, and a good number of merchant ships to be equip'd at *Goa*, and to have it rumour'd abroad, that he intended to go with this fleet to *Aden* (a city at the entrance of the *Redsea*) to prevent those of *Ormus* to conceive any jealousy of this equipment. But no sooner was he come to *Makate* but he changed his course, and steer'd directly for *Ormus*, where his arrival caus'd an incredible fear both in the king and people. For *Azar* being dead since, and king *Seyfadin* poison'd by *Noradin*, governor of the city, his brother *Toro* or *Torunxa* had usurp'd the kingdom from his children. *Noradin*, who had both by this act, and before heap'd so many obligations upon this new king, got thereby the sole administration of the government into his own hands, and daily appear'd in publick with a strong guard, consisting most of his own kinsfolks. Those that bore the chiefest rank among these were three brothers, among whom was one *Hamades*, *Noradin*'s chief favourite, a man of about 35 years of age, bold, prudent and very ambitious, and resembling in every respect the late decess'd protector *Azar*. He took effectual care by placing his creatures in all places of trust, whereby he establish'd himself in the management of the government, so that not only *Noradin* but also *Toro* himself durst not attempt to act contrary to his sentiments. From hence it was, that tho' the league with *Portugal* had been kept inviolably hitherto, the *Portuguese* had been civilly receiv'd there, and the yearly tribute punctually paid, yet was the power of *Hamades* so prevailing, as to have constrained *Toro* to accept of the *Persian* tributant sent him by *Ismael Sopbi*, an evident sign that *Hamades* his inclinations were rather for the *Persians* than *Portuguese*. *Albuquerque* being not ignorant of what pass'd at *Ormus*, resolv'd, by delivering king *Toro* from the slavish submission impos'd up-

on him by his subjects, to confirm him absolutely in his fidelity and interest to the king of *Portugal*; for which purpose he surrounded the whole island with his fleet, to take away from them all hopes of relief, and immediately sent word to the king, that he was come thither with no other intent than to enter upon a new league betwixt the kings of *Portugal* and *Ormus*.

King *Toro* being not a little surpriz'd at the unexpected appearance of so great a fleet, dispatch'd immediately his deputies to *Albuquerque*, to treat with him concerning the conditions of it; *Albuquerque* demanded, that besides the annual tribute to be paid to the king of *Portugal*, liberty should be given him to build a fortress, and a factory house to secure the trade of the *Portuguese*; and king *Toro* being willing enough to grant what he desired, the league was confirmed by a solemn oath on both sides. But *Hamades*, who soon foresaw that the building of this fortress would tend to the no small detriment of his authority, left no stone unturn'd to prevent its accomplishment, which *Albuquerque* being soon aware of, he caus'd this ambitious favourite to be kill'd. After his death, the *Portuguese* meeting with no other obstacle, the fortress was soon after brought to perfection; king *Toro* readily furnishing them with materials and other necessities. The next care of *Albuquerque* was, how to remove all the opportunities of a future revolt among the inhabitants of *Ormus*; for which purpose, after having taken the oath of fidelity from king *Toro*, he removed all the great cannon out of the city, and sent about 30 persons of the royal family, who had their eyes taken away before, and were maintain'd at the king's charge from thence to *Goa*, where they were to be provided for by certain persons appointed for that purpose by *Emanuel* king of *Portugal*. *Albuquerque* having thus settled the affairs of *Ormus* return'd to *Goa*, where he was no sooner arriv'd but dy'd. The *Mahometans* call this *Albuquerque* *Maland*, because he was born at *Melinde* in *Africa*, call'd by them *Maland*.

It was not long before king *Toro* refus'd to pay the usual tribute to the *Portuguese*, alledging that they did not defend him against the violences committed by *Mekrin* his vassal prince, of the island of *Babaren*, who hinder'd the ships from coming to *Ormus*. *Sequeira*, then governor of the *Indies* for the king of *Portugal*, sent here 17 seven men of war (aboard of which were 400 *Portuguese* soldiers) to the assistance of king *Toro*, under the command of *Anthony Correa*, which were join'd by 200 barks of the king's, mann'd with 3000 *Persians*, under the

1662. the conduct of *Xaraf* his admiral. *Mokrin* brought together an army of 12000 men, consisting of three thousand *Arabian* horse, 4000 *Persian* archers, and the rest of *Turkish* firelocks, and some of his own subjects, arm'd only with scimeters and javelins; but being overthrown and slain in battle, the isle of *Babaren* fell into the hands of the king of *Ormuz*, who gave it to one *Bardadi*, under condition that he should pay him an annual tribute of 40000 *Serafs*.

By this time *Sequeira* being sufficiently convinced, that the king his master was circumvented in his share of the customs and other taxes, appointed certain *Portuguese* commissioners to have a watchful eye over them, which so exasperated the inhabitants, that king *Toro* in 1521 revolted, and caused all the *Portuguese* at *Ormuz*, except such as fled into the fortrefs, to be kill'd; the same treatment received the *Portuguese* at *Kurialte*, *Soar*, and in the island of *Babaren*, who were either all slain or imprison'd. Then he attempted the taking of the fortrefs, but meeting with a brave resistance from the *Portuguese*, and dreading their return with a good fleet, he retired with all his subjects and their effects to the isle of *Queixome*, and set fire to the city of *Ormuz*, which burnt four days successively. But not long after *Xaraf*, the chief adviser and promoter of this revolt, having received intelligence of the coming of the *Portuguese* fleet, and fearing to be call'd to a severe account kill'd king *Toro*; and in his stead put *Mamud Seba*, one of the sons of *Seyfadin*, upon the throne. This king being but 13 years of age, made a new league with the *Portuguese*, by virtue of which he was oblig'd to pay an annual tribute of 20000 *Serafs* to the king of *Portugal*: The inhabitants of *Ormuz* were to restore to the *Portuguese* all that they had taken from them; in consideration of which, the *Portuguese* were not to intermeddle with their custom-house, or other courts of judicature. In the year 1550, the *Turks* made an inroad into the isle of *Ormuz*, and laid it almost desolate. The king who in 1566 reign'd in *Ormuz* was call'd *Siafrusia* of *Kahruxa Gialadin*; and in 1580 reign'd one *Ferraguixa*, who tho' very antient, had a great inclination to marry *Bisatme*, the widow of *Rex Bradadin*, his late governor of *Mogostan*, thereby to be master of her treasure, which was very great; she gave him for answer, *That she would comply with his desires as soon as he had perfected his new gardens at Tarumbake, and found out a new spring of fresh water*; both which the king having found means to effect in a short time, he was nevertheless disappointed in his expectation by the crafty widow. He that

Vol. II.

reign'd in *Ormuz* in 1606 was *Xaque*, i. e. 1662. prince *Ajo*, or as some call him *Ajofia*, i. e. king *Ajo*.

For tho' the *Portuguese* by the conduct of *Albuquerque*, had got into the possession of the island of *Ormuz*, ever since 1507, nevertheless the succession of their kings from father to son, was kept inviolable under the protection of the crown of *Portugal*; for no sooner did the king of *Ormuz* die, but the inhabitants set another of the royal family, tho' not without the consent of the *Portuguese* governor upon the throne, who was oblig'd to take the oath of fidelity to the king of *Portugal*, after which he was invested with the crown and scepter by the said governor, who conducted him in great pomp to the royal palace, and afterwards gave him all the demonstrations of respect and honour, tho' at the same time he durst not stir from the island without his approbation.

The antient kings of *Ormuz* were masters of vast territories on the continent of *Persia* and *Arabia*; and among the rest of the countries of *Lar* and *Mogostan* in *Persia*, the last of which is commonly call'd the *Persian* coast, and the country of *Lar* being a mountainous country of very difficult access, serv'd them as a bulwark against the *Persians*. For after these had once taken from the king of *Ormuz* the country of *Lar*, and what else they were possess'd of on the continent of *Persia*, (whose example was followed by the *Arabians*) the isle of *Ormuz* was bereaved of its chief defence, and exposed to the insults of the *Persians*.

It was the custom of the antient kings of *Ormuz*, in order to secure to themselves the quiet possession of the throne, to confine their next kinsfolks, or such as had any pretensions to the crown, with their wives and children, where they were well entertain'd, and kept till the king thought fit to dispose of them otherwise. They also used to blind their brothers, and others descended of the royal line, because it was a fundamental law amongst them, that no blind man could sway the scepter. It was performed thus; they made a copper basin red hot, which they, immediately after it was taken out of the fire, held frequently close before the eyes of him that was to be bereaved of his eyesight; which without any farther application, had the desired effect, without giving the least blemish to the eyes in outward appearance, which look'd as clear as before. Some will have it to have been done with a red hot iron.

The kings of *Ormuz* possessed vast treasures in former ages; the customs they received from all goods exported and imported

G g

ed

1662. ed there, amounting to an immense sum yearly, which empower'd them to extend their conquests on the continent of *Persia* and *Arabia*, which they afterwards lost again by their own neglect. For whilst they themselves were drowned in voluptuousness, they left the sole management of affairs to their favourites, who encreasing in pride as they did in riches, at last left them nothing but the bare royal name, whilst they acted in the government at their own pleasure, disposing of the treasury and all other matters of moment, as it suited best with their own interest, whereby both the power of the kings and the strength of the kingdom being weakened, they were no longer able to cope as before with their enemies, and at last were forced to yield themselves tributaries to the *Portuguese*, who were afterwards, viz. in 1622, chased from thence by the *Persians*, with the assistance of the *English*, under the reign of their king *Schach Abbas*, which happened in the following manner.

The *Portuguese* at *Ormuz* had no sooner been advertised of the taking of the fort of *Queixome* (situate upon the point of the island of the same name;) but they sent deputies in the name of the king of *Ormuz* and of *Goazi* to the *Persian* Chan of *Sciras*, to come with them to an amicable composition, but with such evident marks of fear, that the *Persians*, who had lately received advice of a powerful incursion made by the *Usbeck* and *Nogayan Tartars*, and consequently would have rested satisfied with the conquest of the isle of *Queixome*, being sensible thereof, resolved not to let slip this opportunity of plundering as it were en passant the city of *Ormuz*. Accordingly the Chan of *Sciras*, without tarrying any longer in the island of *Queixome*, embark'd about 40000 *Persians* and *Arabians*, under the conduct of *Emanculibey* his lieutenant, in some barks, who coming before the city of *Ormuz*, found it deserted by the *Portuguese* and most of its other inhabitants, but met with a prodigious quantity of merchandise, which they either could or would not bring into the castle. The *Persians* seeing themselves thus masters of the city without striking a blow, and finding that under the protection of the houses they might open their trenches, without any considerable danger from the cannon of the castle, fell to work without delay, and soon carried them on to the foot of the ditch, which being dry on that side, they pass'd without much opposition. Then they attack'd the bastions of *St. James*, which they undermin'd and made themselves masters of it in a few days; the garrison all this while not making one salley, but were forced to surrender the place the 3<sup>d</sup> of May, after a siege

of ten weeks. They consisted of 400 men, regular troops, besides women and children, which were some days before sent to *Mafkate*. The *English* had the chief hand in making the conditions for this surrender, which were,

*That all the soldiers should have their lives granted them;*

*And that all such as were willing should be transported to Mafkate in two English ships appointed for that purpose*, which was strictly observed by the *Persians*; they made the king of *Ormuz* and *Goazil*, with their families, prisoners, and seized upon their whole treasure, which in pearls and gold amounted to above two millions, besides a vast booty of precious stones, and other riches belonging to the inhabitants, and 300 pieces of cannon, all which fell to the *Persians* share, who lost a great number of men in the siege of this fortress. The *Portuguese*, before they surrendered the fort, took care to make all the cannon useless by nailing of it up. The king of *Ormuz*, with some other *Arabians* of note were carried prisoners into *Persia*, together with the beforementioned *Goazil Raia Noradina*. This last was a young lord, a subject of the king of *Spain*, a very handsome person, and well versed in the *Persian* and *Arabian* histories. He had at the beginning of the siege offered 100000 crowns in ducats and *Xeraphins*, to the *Persians*, to be transported to *Mafkate* or *Goa*; and the unfortunate king of *Ormuz*, had likewise made an offer of his whole treasure to the *Portuguese*, to obtain the same favour, which was refused by the *Portuguese*, notwithstanding they were both vassals of the king of *Portugal*, which has given no slender cause of suspicion to some, as if the *Portuguese* had invited the *Persians* thither, when they sued for peace to them in the isle of *Queixome*. The *English*, in consideration of this service, had the moiety of all the customs and other revenues granted them by the *Persians*. The chief reason of the loss of the fortress of *Ormuz*, is attributed to the revolt of the garrison in the *Portuguese* fort of *Queixome*, who in spite of *Ruy Freira* their governor, surrendered it to the *Persians*. It was also alledged, that if the governor of the *Portuguese* fortresses of *Ormuz*, had, according to the advice of the other commanders, filled the ditch betwixt the city and the fortress with water, by opening the sluices, the *Persians* would have found it a much harder task to have approached so near to the bastion of *St. James*.

Before the *Portuguese* had discovered the passage by sea to the *Indies*, all the *Indian* commodities were brought into *Europe* by the way of *Ormuz*, whither they were first transported

Conquest of  
Ormuz by  
the Persians.

The isle of  
Baharen.

1662. transported out of all parts of the *Indies*, and from thence thro' the *Persian* gulph, and along the river *Euphrates* to *Bassora*, which city lies upon the confluence of the two great rivers the *Euphrates* and *Tigris*. From *Bassora* they were by land carried by camels to *Bagdad*, a city upon the *Tigris*. From hence they travelled with their merchandizes in caravans thro' the deserts of *Syria* to *Aleppo*, being a journey of forty days; and from *Aleppo* to *Tripolis* in *Syria*, bordering upon the mediterranean (only three days journey) from whence they were transported by the mediterranean into all parts of *Europe*. From hence it is evident, that *Ormus* in former ages was the staple of all the *Indian* commodities. But since the discovery of the sea passage to the *East-Indies* by the *Portuguese* by the cape of *Good Hope*, this way of transporting the *Indian* commodities by land is laid aside, tho' even to this day, certain *Indian* merchandizes, but especially *Persian* silks, are brought from *Ormus* by land by the caravans, this island by reason of its situation, at the entrance of the *Persian* gulph, and its two harbours, lying very commodious for traffick and shipping from the eastern parts of the world. After the city of *Ormus* was fallen into the hands of the *Persians*, most of its traffick and the staple of the *Indian* commodities was from thence transferred to *Gamron*, a city upon the *Persian* coast, built upon the ruins of *Ormus*. We will now proceed to a short description of the islands of *Babaren*, *Queixome* and *Kesem*.

The isle of Babaren.

Among a great number of other islands in the *Persian* gulph, and under the jurisdiction of *Persia*, one of the chief is the isle of *Babaren*, or *Babrem*, called by *Strabo* and *Pliny* *Tilos*, and is by some taken to be the same island, called *Ichbar* by *Ptolemy*. It is situate in the streights of *Bassora* or the *Persian* gulph, betwixt *Bassora* and the isle *Gerun*, or *Ormus*, about 60 leagues distant from each, near the *Arabian* coasts, over against the harbour of *Katifa*. This island abounds in water, but is brackish, the best of all being found in certain ponds or pools in *Nanyab*, in the midst of the island; next to which that which is taken out of the sea is in most esteem, which is performed in the following manner.

There are certain springs of fresh water arising in the bottom of the sea, at three fathoms and a half deep. Near the city of *Manama*, certain divers go early in the morning in boats, about three musket shot deep in the sea from the shore, and dive to the bottom of the sea, fill their earthen or leathern vessels with the water that issues from the springs, and so come up again and return to the shore; this they do with

a great deal of dexterity and nimbleness. 1662. These springs are supposed to have been formerly on the shore, not far from the sea-side, which since that time have been swallowed up by the inundations of the sea, occasioned by earthquakes. This isle is very fertile, abounding in fruits of all sorts, but especially dates. But all the rice (which together with the dates, is the general food of the inhabitants;) is from the *Indies* transported to *Ormus*, and from thence into this island, which is famous throughout the *Indies*, by reason of the pearl fishery here, Pearl fish. 173. from whence the king of *Persia* draws a vast revenue yearly, as may be gathered from thence, that after this island was fallen into the hands of one *Bardadin*, (who succeeded *Anthony Korrea Mokrin*, a vassal of the king of *Ormus*) he promised to pay a yearly tribute of 40000 *Serafs*. Besides this, the pearl trade here produces yearly at least 500000 ducats in ready money, not to reckon 100000 ducats more, which are shared betwixt the *Persian* governor and the other officers: For there is a great resort of merchants to this place, which come hither from all parts of the world to buy up pearls, and to transport them to the *Indies* and other places, the best and most precious pearls in the world being found near this island of *Babaren*, and the isle of *Ginjar* or *Gisfar*, which both in bigness and roundness, far exceed those found near the other islands of *Latif*, *Lafen*, *Barebator*, *Zezirafibar*, *Alul*, *Seran*, *Djud*, *Daas*, *Emergoenon*, *Ancovi*, *Serecho*, *Delmesialmas*, *Sirbeniaft*, *Aldane*, *Festebuatich*, *Cherizorn*, *Dibi*, *Sarba*, *Agiman*, *Ras*, *Emelgovien*, *Rafagiar*, *Davin*, *Rafaelchimes*, *Sirkorkor*, *Kafab*, *Konzar*, *Melenderadi*, *Lima*, *Debe*, *Cborf*, *Cbelb*, *Sarar*, *Suet*, *Meftar*, *Garajat*, *Teuji*, *Golaf*, *Furgatile*, *Sam*, *Gameda*, *Bacha* and *Jadi*. All which afford pearls, but they are not exactly round. Near *Mafkate*, about 33 or 34 leagues from *Ormus*, are likewise very good pearls to be found.

The pearl fishery near *Babaren* begins sometimes in *June*, but generally in *July*, and continues till the end of *August*. About 200 barks go abroad together, viz. 100 belonging to the isle of *Babaren*, 50 to *Pilfar* and 50 to *Nibely*; their rendezvous being commonly near *Katar*, a sea port of *Arabia*, six leagues south of *Babaren*. The pearls taken here exceed all the rest in goodness, beauty, and weight, tho' not in bigness. They catch them by means of a stone, which by its weight is let down 12 or 18 fathom under water. They sell the pearls by *Karats* and *Abas*, three of which make one *Karat*; and by *Matikals*, or *Mitgals*, each of which contains 42 *Karats*; the small pearls are sold by *Mitgals*. Besides this general fishery

1662. fishery near Katar, which continues for two months, there are several other particular fisheries, near Nibely, Babaren, Julfar, Makate, Teude, and Rozalgate, in the Persian gulph, which though not of so great consequence as the first, yet are commonly greatly beneficial to the owners. As they take up the oysters they open them, when the pearls drop out. It is generally believed that these pearls are progenerated by the May dews, during which month the oysters rise up to the surface of the waters, and opening themselves, receive a small quantity of dew, which being coagulated, afterwards produces these pearls. Certain it is, that if these oysters are opened before June, the pearls are soft and pliable like pitch. Most of the inhabitants of the isle of Babaren are Arabians, but the garrison consists of Persians, under the command of a vizier sent thither by the king of Persia. Formerly this isle was under the jurisdiction of the kings of Ormus, and in 1602 taken from them by the Portuguese. But when the Persian sultan of Xiras had laid siege to the Portuguese fortrefs of Comoran, he made himself master of Babaren. The king of Persia alledging that he had not taken it from the Portuguese, but from a vassal of the king of Ormus, who was his vassal; so that ever since 1602 the Persians have been in possession of it.

The isle of  
Queixome  
Kechmiche.

The isle of Queixome, or Queixume, or Queixome, otherwise called Kechmiche, and by the inhabitants Brokt, lies close to the continent of Persia, being separated from it only by a small branch of the sea: It has about two leagues in circuit, and is three leagues distant from Ormus. Its two chief places are Arbez and Homcal, where the king of Ormus at the time when Albuquerque first appeared hereabouts, had strong garrisons. The other places of note are Lapbt, the best harbours of this island, Darbaga not far from the Lapbt, Chau, and Sirmion, or Sermion. It bears plenty of corn, but especially barley, without which the inhabitants of Ormus, who are supplied from hence with it for their horses, could scarce subsist there. Here is also a most excellent spring of fresh water; to secure which the Persians had erected a fort hard by for fear of the Portuguese, who were then as yet masters of Ormus. If we may believe some historians, this island was not inhabited in ancient times; partly by reason of the frequent earthquakes that happened there, partly by reason of the vast numbers of serpents and other venomous creatures, which infected both air and some trees, so as to render the island uninhabitable. Among these trees is one called Baxama or Baxana, the fruit of which is so poisonous, that the

least taste of it kills in an instant, and its shadow is so pestiferous, that it kills those who abide there in less than a quarter of an hour. The root of this tree is in several other parts esteemed as the greatest antidote that can be, but here it is mortal, as are its leaves, and fruit called Rabuzit.

The Portuguese in 1622 conquered this island from the Persians, and on the point opposite to Ormus erected a fort, fortified with a wall, and surrounded with a broad and deep ditch, but the wall was very slight, being sustained from behind only by some loose earth. In short it was a place of no defence, without any great cannon, neither in a condition to bear the weight of them. It had three ponds within its precinct, being chiefly built by the Portuguese, for that purpose, because the inhabitants of Ormus, were from thence supplied with water. Scarce had the Portuguese finished this fort, but the Persians out of the country of Lara in 1622, besieged it by land, as the English did at sea; the Portuguese commander Ruy Freira de Andreada defended himself bravely for some time, and killed many of the Persians, who would have bought it perhaps at a dear rate, had not the English threatened to bring their great cannon against it, which obliged the garrison who were not provided with them, to capitulate, and to surrender the fort upon honourable conditions, which were not performed on the enemies side. There are some others who have given the following account of the occasion of this siege.

The king of Persia had 1612 taken the isles of Queixome and Babaren, and the fortresses of Bandel and Moxtan on the continent, from the king of Ormus, which he refusing to restore, the king of Portugal sent his express orders to Ruy Freira, that in case the king of Persia would not restore the isle of Queixome and the fortresses of Bandel, he should declare war against him, and erect a fort on the point of the isle of Queixome. Accordingly Ruy Freira de Andreada, who in the beginning of June 1620, came to Ormus, caused a fort to be built on the point of the said island, surrounded only with a slender wall made of stone and clay, or loam, being scarce to be compared in strength to some private buildings: The Persians with the assistance of the English having erected a small battery against it, did play upon the fort with their cannon, which did strike such a terror into the garrison that they refused to stand the brunt any longer, but forced Ruy Freira to capitulate. For Emanbulican governor of Schiras being just then come with 5000 men to Bandel or Gamron, he sent part of his forces under the command of Emanbuli-

1662. *key to the siege of the fort of Synxome, Ruy Freira, as I told you, being forced to surrender, had obtained certain conditions from the English for himself and the garrison, among which the chiefest was, that the whole garrison as well Portuguese as Arabians (the last of which were come thither from Zulfia upon the coast of Arabia, under the command of Emir Alikamai Zemur Mabomet, and had done signal services by sallies and otherwise) should be safely conducted to Maskate, a city on the coast of Arabia belonging to the Portuguese; but this was but ill performed by the Persian general, who before the Portuguese were embarked, caused all the Arabians to be beheaded, in spite of the protestations of Ruy Freira, who accused the English with breach of faith, but these excused themselves, alledging that these Arabians having formerly been subjects of the king of Persia, it was not in their power to prevent it: No more than 20 out of 250 Arabians escaped with life, who were hid by the English seamen. The commander in chief of these Arabians Emer Genedin being brought before the Persian general, was by his orders stabbed in his presence by Xarial his son-in-law, and then governor of Mogostan; but the Portuguese garrison consisting of 200 men, were by the English instead of conveying them to Maskate, set on shore in the isle of Ormus, from whence they got safe into the Portuguese castle.*

*The isle of Jarek is situate three leagues from the coasts of Arabia, to the south of the isle of Ormus, and to the east of the isle of Kechmeche. It is destitute of inhabitants, and very small in compass, the Dutch who reside on the behalf of the East-India company at Gamron, have planted there only a garden near a certain pond, whither the wild boars and stags which are here in great numbers, come to drink; they also keep here some tame fowl for their recreation. It is now time we should leave Gamron and Ormus, and proceed on our voyage.*

*After we had taken in our lading at Gamron, we set sail from thence the 2<sup>d</sup> of June, and with a favourable gale passed along the coast of Malabar, towards the isle of Ceylon; for before you come to the coast of Coromandel, you are obliged to sail round all that vast tract of land. I had letters by me for the governor of Punto Gale, a city of Ceylon, which I delivered to a certain master of a small vessel, without going ashore myself. After we had provided ourselves with fresh water here, that the rendezvous of the Dutch ship was appointed to be at Punto Pedro, where Mr. Rijklof van Goens commanded a body of troops in order to besiege the city of St. Thomas, whither we*

*They come to Punto Gale in Ceylon.*

also directed our course. But whilst the great train of artillery was embarking, and the troops ready to go on board for this expedition, we received intelligence that the Portuguese had sold the city of St. Thomas to the Jentyves or Pagans, which made us also alter our measures; and I went to Jafeneapatnam to dispatch my business.

*The city of St. Thomas is situate under 12 or 13 deg. 30 min. of northern latitude, 26 German miles from Nagapatnam, one and a half off the river Ganges near cape Komorijn, and a days journey or five German miles to the south of Paliakatte, on the coast of Coromandel, close to the sea-shore. The city of St. Thomas was otherwise called Kalamina, and by the natives Meliapor, which name the Portuguese changed into that of St. Thomas, in honour of that apostle, which name it retains to this day, not only among the christians, but also the Turks and Indians. Meliapor signifies in their language as much as a peacock, intimating that as this bird is the most beautiful of all others, so this city did in beauty excel all the rest of the east. Some will have the city of St. Thomas or Meliapor, to be the same called Mapura by Ptolemy. This city was quite desolate when the Portuguese first came there, who rebuilt it in 1545, since which time it has encreased to that degree, that not many years after she was accounted one of the finest cities in all the Indies, both in respect of the magnificence of its building, and the number of rich inhabitants. It is fortified with stone wall, strengthened by several bastions; and had under its jurisdiction above 300 villages and towns. It is one of the richest sea ports of all the East-Indies, its situation being in the midst of all the best harbours of those parts, which renders it the more convenient for the East-India trade. Whilst this place was in the hands of the Portuguese, it was at first incorporated with the diocese of the bishop of Cochín, but afterwards erected into a bishopdom, under the jurisdiction of the archbishop of Goa. They had a church here dedicated to St. Francis, belonging to the Capuchins, and two others, one dedicated to St. John, the other to the virgin Mary, where the Mabometans and Pagans were instructed and baptized. In the suburbs was the church of St. Lucy, and in the city the monastery of Charity and Lazarus, besides three others. The jesuits, of whom there was a considerable number here, had a goodly college within the city, wherein the children of the Portuguese and of the chief Malabars, were instructed in the fundamentals of the christian religion. Next to this college was a very large parish inhabited by christians, such as were by the jesuits converted*

1662.

*The city of St. Thomas.*

H h

verted

1662. verted from paganism and mahometanism, of which 120 were baptized in 1604. Here you see also the famous church of *St. Thomas*, this apostle, as the *Portuguese* pretend, being buried here; his sepulchre is shewn to this day on the top of a mountain near a city, over which they have built a small chappel, which may be discovered at some distance at sea. Close to this college upon a pretty high hill is a chappel, which as they say, was *St. Thomas's* usual sleeping place. The jesuits to shew their reverence to this place, have adorned that part of the chappel where *St. Thomas* used to say his prayers, with gilt iron steps.

St. Thomas's chapel.

Here you see also a stone cross, which they say is the same that in the apostles time did fall from heaven; for which reason they have covered it with an arch, as they have done with the adjacent springs, which arising from a rock is covered by another arch resting upon four columns. The whole chappel is likewise adorned with many ornaments, and the wood of the chappel being looked upon as a precious relic, is frequently set in gold and carried away by the devout pilgrims.

We continued our course along the coast till we came to *Negapatnam*, where we were to unload part of our cargo.

Negapatnam.

*Negapatan* or *Nenapatnar* is composed of *Naga*, which in the *Malabar* tongue signifies a serpent, and *Patnam* or *Patan* a city, because round about this place used to be seen a certain kind of very venomous serpents called *Cobros Capellos*, i. e. *Head-serpents*. It is situate under the 9 deg. 45 min. and the adjacent cape under 11 deg. of northern latitude; beyond the rocks of *Romanankir*, over against the isle of *Manar*, just opposite to *Tripalikorin*, three leagues from the city of *Tranguabar*, and about 39 leagues from the cape *Comorin*, at the beginning of the coast of *Bijnagar* and *Coromandel*. This city as well as its castle call'd *Ragu*, acknowledge the *Portuguese* for its founders, the castle being built for their better security against the attempts of the *Naik* or *Neyk*, lord of the circumjacent country. They had several goodly churches here, and a very fine monastery belonging to the *Franciscans*, which was maintained at the charge of the chiefest of the inhabitants. There are to this day remaining divers fine churches and other large structures, with spacious apartments and galleries according to the *Portuguese* fashion. Next to the jesuits college stood the church of *Tranguabar*. The city is pretty well fortified with defensible towers, surrounded with a good mote: It is very populous in proportion to its bigness, but most of the inhabitants are of a tawny complexion, be-

ing generally either *Mestices*, i. e. such as are born of a *Portuguese* father, and a the blackamoor; or *Kajlices*, i. e. such as their fathers were blackamoors and their mothers *Portuguese* women. It is also inhabited by *Banyans* and *Mahometans*, who are the chiefest traders here.

This city was the 23<sup>d</sup> of July 1658, surrendered to the *Dutch* by composition. For Mr. *John Vander Laen* then commander in chief of the *Dutch* forces in those parts, did pursuant to his orders from Mr. *Rijklof van Goens* admiral general of the *Dutch* fleet, set sail from *Jajenepatan* in the isle of *Ceylon*, on friday the 19<sup>th</sup> of June, to *Punto Pedro*, where he cast anchor in the evening, and found the yachts *Workum*, the *Morning-star*, *Manar*, *Waterpafs*, *Narjapour*, the galliot the *Amsterdam*, and the challoop *Japara*, ready to join him; but the *Pidgeon* yacht was run aground, and the *Workum* was fain to stay behind, having lost 3 of her anchors. He took care to provide the fleet immediately with as much meat and other refreshments as the place would afford; and on the 20<sup>th</sup> was likewise join'd by the yachts the *Goes*, the *Pidgeon*, and the *Workum*; next day Mr. *Lucas Vander Dussen* took a review of the land forces, which consisted of 500 men, divided into 11 companies, besides the sea-men. Mr. *Vander Laen* having summoned all the captains aboard the admiral's ship, where he gave them the necessary directions how every one should behave himself in his post at their arrival before *Negapatan*.

Surrendered to the Dutch.

The 21<sup>st</sup> of July the fleet set sail from *Punto Pedro*, and arrived the 22<sup>d</sup> early in the morning in the road before the city of *Negapatan*, where he met with the yachts the *Pipelen*, the *Nassipour*, and a *Danish* challoop. Mr. *Vander Laen* ordered to be set up the white flag in the yacht *Vander Goes*, and sent Mr. *Lucas Vander Dussen*, with 3 captains and an interpreter in a challoop, and credential letters to *Cajpar Alphonso de Karvalbo*, the *Portuguese* governour of *Negapatan*, and his council, to summon the said city to a surrender upon honourable conditions. About noon Mr. *Vander Dussen* returned; and gave an account to the admiral, that the *Portuguese* governour and his council, refused to admit any of the company, except himself and the interpreter; that he was very civilly received, and admitted to appear before the council, where he had made use of all the arguments he thought might induce them to surrender, desiring that they would send aboard the admiral their plenipotentiaries to treat about the conditions. They desired time till the next morning to consider of the matter, and that the admiral would be pleased to send another

1662. another chaloop to morrow, because the *Jenivres* or natives did stop the passage of their boats at the mouth of the river. Accordingly the 23<sup>d</sup> Mr. *Vander Dussen*, with two ensigns return'd to *Negapatan* in the same chaloop, with a white flag, and brought back from thence *Manuel Karvalbo* a jesuit, *Lewis de Quintal* Parfire and *Diego Berijero* two captains, and *Antonio d'Almeida* a lieutenant, instructed with credentials and full power from the *Portuguese* governor, to treat about the surrender of the city to the *Dutch East-India* company upon reasonable terms. The conditions proposed by them were these; that a church should be allow'd to such *Portuguese* as were willing to remain there, with as many priests as were requisite.

The Portuguese send deputies to treat.

That the inhabitants should have liberty to retire to *Bengal*, and that they might carry along with them all what belong'd to the poor.

Their demands.

After some contests on both sides, it was agreed to surrender the place upon these following conditions.

Conditions agreed upon between them and the Dutch.

That the city of *Negapatan* belonging to his *Portuguese* majesty, should be surrendered on Wednesday the 24<sup>th</sup> of July, to the *Dutch East-India* company, with all its territories, cannon, ammunition or arms, as likewise the keys of the magazines and other store-houses thereunto belonging.

That immediately as many soldiers of the *East-India* company shall be admitted into the city, as shall be thought requisite by them and the *Portuguese* governor, for their mutual security; and all merchandizes or what else may belong to the crown of *Portugal*, shall at the same time be delivered without the least fraud.

The *Portuguese* garrison now in the city shall march out with beat of drum, matches lighted and bullets in their mouths, to a certain place to be appointed by the *Dutch* admiral Mr. *Vander Laen*, where they shall be disarm'd, except that the officers even to the ensigns shall have liberty to retain their swords.

All the inhabitants, whether clergy or laymen, married or unmarried, shall be left in the free possession of all their goods, except their arms, as well moveable as unmoveable, houses, gold, silver, merchandizes, slaves of both sexes, till the last day of *October*, of the same year; against which time they shall be provided with convenient shipping, at the charge of the *Dutch East-India* company, in order to carry them to *Goa*, or further to the north, if they please.

The clergymen shall then be at liberty to carry along with them all the church ornaments, or what else belong'd to the exercise of the divine worship, except the

bells, as likewise all the moveable goods belonging to them.

1662.

The laymen, soldiers and merchants, may, without the least exception, transport all their moveables, money, gold, silver, jewels, slaves of both sexes, and all their merchandizes, provided the same don't belong to the king of *Portugal*.

The day of their departure being come, the *Portuguese* shall have their swords restored to them.

*Gaspar Alfonso de Karvalbo* the *Portuguese* governor, shall be transported to what place he shall think fit.

Accordingly the 24<sup>th</sup> about noon, seven companies of *Dutch* soldiers, one of *Bandaesers*, and one of *Lasfaryns*, under the *Modier* of *Negombo*, took possession of the gates of the city, at which time the *Portuguese* drew off from the bastions, and proclamation was made immediately, not to molest, much less rob the inhabitants, under pain of death.

Mr. *Vander Laen* himself was received by the *Portuguese* governor, who was not very well at that time, at the entrance of one of the gates, where he had the keys of all the city gates deliver'd to him. From thence he went to take a view of the bastions, and after having given the necessary orders, he commanded the inhabitants to appear the same afternoon in the court of the *Stadthoufe*, in order to be disarm'd, pursuant to the last agreement. They were no more than 670 strong, divided into 17 companies, consisting of *Portuguese*, *Mestices* and *Topasses*, being all inhabitants, not in the king of *Portugal's* pay. Their artillery consisted in 28 brass, and 53 iron pieces of cannon small and great, their ammunition in 8000 pounds of gunpowder, lead, and other things of this nature in proportion; besides which, there were ten large and eight small bells in the town.

The Dutch take possession of the City.

Much about the same time the *Dutch* appeared before the city, the *Kapado Negape*, or general of the *Neyk*, or lord of the country came to lay siege to it; but understanding that the *Dutch* were got into possession of it, he desired to be admitted into the city to confer with them, concerning the sudden surrender of it. His request being granted, he took a great deal of pains to persuade the *Dutch* that both the city, and all the *Portuguese* ought immediately to be deliver'd to the *Neyk* his master, to make satisfaction for what they stood indebted to him; but this request was civilly refused by Mr. *Vander Laen*, who told him that he was very ready to cultivate a good understanding with the *Neyk* and his subjects, but that both in point of conscience, as he was a christian, and in honour he could not re-

cede

1662. cede from the articles of the surrender. By this time the hour approaching when the inhabitants were to be disarm'd at the stadthoufe, he invited the Kapado to go along with him, which he courteously accepted of: The inhabitants earnestly intreated Mr. Vander Laen to permit them to be transported to Bengal instead of Goa, unto whom he gave for answer, that he would intercede for them in writing with the Dutch admiral general Vander Goens. The 25<sup>th</sup> publication was made by beat of drum, that every one, without any exception of persons or quality, should deliver forthwith all his arms at the stadthoufe, unless they would be excluded from the benefit of the capitulation; which was punctually perform'd the next day, which was spent altogether in receiving their arms.

In the mean while the Neyk's army had so inclosed the city, that we began to have some scarcity of provisions; and the Dutch living at Tranquabar, a Danish colony, began to be sorely afraid of being attack'd by Wardaraje Purnal, who, as it was given out, was sent for from the countrey of Tanjaor, by the Neyk, to chastise those of Tranquabar; the governor of which, Esbeck Anderson, had promised to cruise before the bar of Negapatan, with three stout yachts well mann'd, instead of which he had sent only one small chaloop; so that the inhabitants fearing the worst, fled daily with their best moveables into the fort of Danesburgh. The 17<sup>th</sup> the Kapado Negapa, sent by the Neyk with an *Ola* or letter from Maniegul, appeared in the city of Negapatan, where he delivered the following letter to Mr. John Vander Laen.

*A letter from the Neyk to Mr. Vander Laen.*

THE 16<sup>th</sup> day of the year Welenby. I Asfy Para Neyk send to the Dutch commander Moor this letter; by which I would have them to understand, that the Portuguese inhabitants of Negapatan have for these 12 years last past not pay'd their usual taxes, but are run much behind. It is for this reason I sent my army to attack them in the city of Negapatan, to demolish its fortifications, and after the inhabitants were reduced under my obedience, to grant them liberty to live as before, under my jurisdiction; having always lived in a good correspondence with the Dutch East-India company, I desired their assistance by sea; but now I am credibly informed, that you have made an agreement with the Portuguese of Negapatan, who have deliver'd the city into your hands, which is very displeasing to us; if you had a mind to maintain a good understanding with us, you ought first to have given us

notice of it, and obtained our consent; but now you must surrender the city to us, therefore send one of your deputies to treat with me, and he shall be honourably received, and receive all the satisfaction that may tend to the maintaining a farther good correspondence betwixt us. If you do otherwise, you will have occasion to repent it; but as I know you to be persons of wisdom, I don't question but you will surrender the city to our people; in witness of which I have sent our Kapado Negapa with this letter.

Unto which Mr. Vander Laen sent this answer.

*Mr. Vander Laen's Answer.*

THE *Ola* or letter deliver'd to us by your bigbness's envoy Negapa, I received with all imaginable respect, under the discharge of three pieces of ordnance; out of which having fully understood your bigbness's intentions, I am obliged to tell your bigbness, that the Portuguese having surrendered to us the strong city of Negapatan, without making the least opposition, and under certain conditions, agreed on betwixt both parties; we are bound by our duty, as christians, to observe punctually in all respects the said articles, it being unquestionable that without any injustice to your bigbness, we have power to annoy the Portuguese, our enemies, wherever we can meet with them, which makes us live in hopes that the friendship establish'd betwixt your bigbness and the East-India company will not suffer the least detriment upon this account. What has the undertakings of the said company not long ago against the Portuguese in the countrey of the Neyk of Madura and in other neighbouring countries and kingdoms, which were never interpreted to their prejudice, makes us believe that your bigbness will not be displeased with the advantages obtained by us against the Portuguese, which as they tend to no other end than to increase our trade in your bigbness's dominions, so they must in time turn to your own advantage. In the mean while we have communicated your bigbness's sentiments, by two several yachts sent for that purpose, to the directors of Jafenepatan, from whence we hourly expect an answer, which we don't question will be to your bigbness's satisfaction.

In the mean while the Kamerapanijk the adviser of this siege was fallen in disgrace with the Neyk.

The 30<sup>th</sup> Mr. Vander Laen received letters from Rijklof Goens, dated the 29<sup>th</sup>, with the ratification of the capitulation, with orders to send the Portuguese, to the number of 150, according to their request, to Bengal, where they were likely to do them

1662. the least mischief, and they might soonest rid their hands of them. As to what concerned the difference with the *Neyk*, he advised to endeavour to compose the matter by the means of some presents; but if that would not succeed, to make his forces to retire deeper into the country; in the mean time to give all the courteous entertainment to his deputies, and to assure them, that he intended in a few days to be with them in person, to adjust all matters in question betwixt them and his highness; but if he committed any hostilities against the city, to stand upon the defensive, and to protest in writing against his proceedings. In the mean while the *Neyk's* forces continued in their camp, which extended to the very ditch of the city; and as it increased daily in number, so it occasion'd great scarcity within. The 1<sup>st</sup> of August, Mr. *Vander Laen* was inform'd that the commander in chief of the *Neyk's* forces before *Negapatan* had received a letter from the *Neyk*, directed to Mr. *Van Goens*; and in the afternoon three persons were sent into the city, to give notice of the said letter and some presents, which they desired might be received with all imaginable demonstrations of respect. In compliance with which Mr. *Vander Laen* commanded immediately captain *Wajb* with his company, and the *Modlier* of *Negombo* with his *Laskarins*, to post themselves in good order without the gates of the city, in order to receive the presents with all imaginable respect, under the discharge of three pieces of cannon. They kept their post till evening, without seeing any body, when a certain person belonging to the *Neyk's* camp came privately to the *Modlier*, and told him in the *Singalese* language (for fear of being understood by others) that there was no *Ola* or letter, nor any presents sent from the *Neyk*, the whole being only a stratagem contriv'd on purpose to draw some of our forces without the gates into an ambush, which they had been disappointed in, by our forces not stirring from the gates, upon which the *Modlier* and captain *Wajb* return'd with their troops into the city, and the *Neyk's* forces retired back into the country. This *Neyk* besieged *Negapatan* a second time, 1660, in September, but the *Dutch* garrison making a vigorous sally, in which they kill'd 400 of his men, they came to a composition for that time; notwithstanding which, he appeared before it again in the next following year.

The country hereabouts bears such great plenty of rice, that abundance of it is transported from hence to other places. But they have great numbers of lewd women and idle fellows here.

Vol. II.

Not far from the city is a *Pagode*, with a stone steeple, call'd *Tzina*, the pinnacle of which reaches to the very clouds; the inhabitants believe that it was built by the devil, and that in one night. In the suburbs to the north, which are of magnificent houses, there are likewise many *Pagodes* or pagan temples, wherein you see many idols of a terrible aspect, made only of clay. Thus far concerning *Negapatan*.

From hence we pursued our voyage towards *Paliakatte*, and saw the lofty and most ancient *Pagode*, call'd *Tyripapeliri*, which stands within the precinct of a fort at a little distance from the sea-shore, and of which I had the curiosity to take a full view. It is an ancient structure, the front of which is adorned with many statues artificially cut in stone. It is surrounded by a wall with a gallery on the top of it, over which are placed a great number of large coffins, which rest upon statues of divers figures, some representing a horse, others somewhat else. The walls are made of large blue stones, which are brought thither a vast way out of the country, and most artfully joined together. The *Indian Pagodes* or temples seldom have any light but what comes through a hole in the frontispice; notwithstanding which I ventur'd in, and found several lamps burning there; by the light of which I ascended by a pair of stairs of wood, to the top of the temple, from thence to take a view of the circumjacent country. But scarce was I come to the stairs-head, when I saw myself in an instant surrounded by thousands of bats that were striving to get out thro' the hole in the frontispice, so that I was glad to get away from this unwelcome company, which, to avoid the brightness of the sun-beams, shelter themselves by day in these dark lurking holes.

We soon set sail again, and coasted it along the shore, which is flat and sandy here, till the 15<sup>th</sup> of June, when we arrived at *Paliakatte*, where I delivered our whole cargo of gold and silver we had taken in *Perisa*, to the director *Lawrence Pit*.

The *Dutch East-India* company has a strong fort here, with four bastions of stone work, call'd *Geldria*, of which they have been possess'd ever since the year 1619. Without the castle is a plantation or town, which to the land-side is defended by an earthen wall, which is but indifferently kept, but the houses within are very close and well built. It is inhabited partly by *Hollanders*, partly by *Jenivoes* or pagan natives, the last of which live for the most part upon trade with painted and white calicoes and linen. The rice which grows in this country in great plenty, is as well as all

1662.

They come to Paliakatte.

The fort of Geldria.

1662. other sorts of grains brought weekly to market here. The fort is on one side wash'd by a river, which swells very high in the rainy season, when the merchandizes may be unloaden here by the help of lighters. But in the summer season the river being quite dry'd up, the goods are forc'd to be carried ashore on their backs. This river abounds in fish in the winter-time, most of which die in the summer, which makes the inhabitants catch them before that time, and dry them in the sun, and so transport them to other places. The north Monzon begins here in October, and holds all the November and December, with such violence, that the ships can scarce ride in the road. January the Monzon changes, and the winter season returns.

As to the city of Paliakatte, its inhabitants are for the most part *Mestices* and *Kastices*; *Mestices* are such whose parents were married such foreigners; as for instance, when an *Hollander* marries an *Indian* woman, or an *Indian* man a *Dutch* woman; but the children of the *Mestices* are call'd *Kastices*. Thus many of the natives, especially of the *Tbioles* have married *Dutch* women, as on the other hand, several *Hollanders* are married to women of the *Tbioles*, from whence is come a numerous off-spring of *Mestices* and *Kastices*. Many *Bramans*, *Banyans* and *Panekayers*, or *Tbomists* and *Jews* live here, of great traffick; for every month comes hither the *Kasila* or caravan of *Agra*. The *Banians* and *Jews* are the chiefest of all the traders here, this city being a place *Golconda*, *Suratte* and *Cambaia* by land; both *Christians* and *Mahometans* bring to this place their merchandizes from the *Red-Sea*, the *Persian Gulph*, from *Suratte*, *Goa*, *Malabar*, *Sumatra* and *Malacca*. There is great plenty of fish at *Paliakatte*, and a neighbouring country furnishes them with all other sorts of provisions.

They leave Paliakatte. After we had dispatch'd our business here, we pursued our voyage towards the great city of *Masulipatnam*, where we were to load wood and other materials for the building of our fort at *Paliakatte*. We set sail the 20<sup>th</sup> of July, and came to an anchor before *Masulipatnam* the 22<sup>d</sup>, I went ashore the same evening to take care of our loading, which consisted for the most part in timber and other materials for building, besides some callicoes, which took us up till the 14<sup>th</sup> of August, when we were ready to set sail again. In the mean while I had sufficient leisure to take a full view of the city of *Masulipatnam*. It lies near the sea-shore, upon a branch of the great river *Kisna*, a few leagues from *Negenapatnam*, being surrounded on all sides with water. It is closely built and well peopled, it being

A description of this city.

the only place of traffick in callicoes, indigo, diamonds, and other precious stones, in the kingdom of *Golconda*. To the land-side, north-west of the city, is a standing pool, over which is built a bridge of 2000 paces long, in the midst of which stands a house for the conveniency of the passengers to repose themselves there. This bridge rests upon very thick posts, which are covered with shells of 12 or 14 feet long, without any leanings on either side. Most of the inhabitants are *Pagans* and merchants. The *Persian Mahometans* have here likewise a mosque built of white stone, after a very antique fashion, in the very center of the city. The houses are all of wood cover'd with pantiles, the king having expressly forbid the building of stone houses, for fear of encouraging his subjects to revolt; who, tho' *Pagans*, wear white callicoe vests and turbants like the *Moors*. They use rice instead of bread, and drink commonly water; they have also great plenty of all sorts of fishes, ducks, geese, and tame and wild fowl. Both the *Dutch* and *English East-India* companies have each a house here, with their respective flags on the top of them. The *Franciscans*, who are all *Portuguese*, have here a Monastery over against the city; on the continent is a village, where the governor has a country-seat, where he diverts himself sometimes.

The river of *Kisna* arises very deep in the country, and exonerates itself with one branch about five leagues below the city of *Masulipatnam* into the sea, where it is but shallow, but the other turns to *Masulipatnam*, which is much deeper. This river is not join'd to the city by a bridge, but they pass it in boats; it has plenty of fishes, as likewise crocodiles; it swells sometimes to such a height during the rainy season, that you may pass in boats thro' the streets of the city, but in the summer season it is so shallow, that near the city it is scarce four foot deep. About half a league to the west is a champaign country, and on the east-side the country is planted with palm and syry trees, behind which you may discern the tops of the mountains. We left *Masulipatnam*, and the 29<sup>th</sup> return'd to *Paliakatte*, where meeting with several sorts of commodities that were wanting at *Batavia*, I made all the haste I could to have the ship loaded; but when we were almost ready to depart, the yacht call'd the *Parroket* arrived in the road, with advice, that the ships the *House of Zwieteren*, the *Sea Horse*, the *Exchange*, the *Stadthouse of Amsterdam*, the *Rising Sun*, and the *Encresing Moon* were at sea, being sent from *Holland* with men and all sorts of ammunition, to assist in the expedition against the coast of *Malabar*.

1662. *labar.* This soon made us alter our measures, every one having received orders to join the said fleet, so that after we had unladen our ships, we set sail the 10<sup>th</sup> of September for Colombo, the general rendezvous of our fleet. We stop'd at *Pedro Ponto*, where having provided ourselves with fresh water and fuel, we came to an anchor the 7<sup>th</sup> of October before *Colombo*, where we were employed among the rest to take the great train of artillery aboard of us. The commodore *Roodbaes* in the mean while went out before the rest with seven ships only, ordering the rest to follow him to *Manepara*, one of the seven seaport villages on the coast of *Madure*, where all our ships were to meet, which we did accordingly on the 15<sup>th</sup> of November. Mr. *John vander Werf*, Mr. *Symonson*, and myself, were made not only supervisors, but also treasurers of the whole train of artillery: Being provided with every thing requisite for such an expedition, we set sail from thence, and came with the whole fleet the 7<sup>th</sup> of December to an anchor, about two leagues to the south of the city of *Kolang* or *Koulang*. The remaining part of the day was spent in landing our soldiers and other necessaries, and bringing the ships as close as possible could be to the shore. The 8<sup>th</sup> we march'd in battle array into the country, and the *Negroes* had thrown up a small redoubt within half a league from the city, from whence they fir'd thick upon our yachts, but without any great loss, yet they ply'd us so warmly near the shore, that we were forced to cut our way thro' the woods to attack them from behind. Immediately all our carpenters were set to work to cut down the bushes and trees, whilst the seamen were employed in levelling the grounds to make way for our artillery. After we were advanced a little way into the wood, we came into a small plain, to the left of which, leading to the sea-side, we saw a stone-house, where we halted a little to take breath, because the seamen had been hard put to it, in drawing the cannon thro' the deep sand along the sea-side. The enemy at the same time kept within his strong hold, but as we advanced farther they charged our vanguard, who were order'd to break in upon them; they bravely stood the first brunt, but afterwards retreated again to their fort. In the mean time our cannon having join'd us, we prepar'd for a general attack, which was carried on so vigorously, that the *Negroes* deserted the fort, in hopes of saving themselves by flight, but were most of them either kill'd upon the spot or in the flight. A strong party of them happen'd accidentally to fall in with captain *Polmans* company of firelocks, who were sent thro'

the woods to attack the fort from behind; 1662.  
here you might have seen them fight like desperate men, the engagement was very terrible considering the number of men on both sides; at last they were overcome with above 100 kill'd and as many wounded on their side; we had no more than three kill'd, but a great many wounded, who were sent aboard the ships to be taken care of. We found two iron pieces of cannon in this fort, which we nail'd up, and beat the carriages in pieces: After we had placed guards in all convenient posts thereabouts, the soldiers repos'd themselves under the shadow of trees; but within two hours after we continued our march to the city of *Kolang*, passing all the way by a great many fine plantations, surrounded on all sides with walls, the road betwixt them being very narrow. As we advanc'd to the city, the enemy fir'd briskly upon us from a small fort near the water-side, where they had set up the *Portuguese* standard, but perceiving us notwithstanding this to march undaunted towards the walls, their hearts began to fail, and betaking themselves to flight, left the city to our mercy, which we took without the least resistance. All the officers and soldiers, each according to their respective qualities, had their quarters and posts assign'd them; we rested the next day, but every one being animated by the last success in taking so considerable a city without opposition, long'd for action, so that before the morning the whole body being put in battle array without the water-gate, the chief minister of the camp, Mr. *Baldens*, made a short but very fervent speech, and the commanders exhorted them to fight courageously for the honour of their country and religion; which being joyfully accepted by the soldiers, who promised to hazard all for the service of the company, the drums and trumpets began to sound the march. Mr. *Nbrand Goffeled* commanded the van, and commodore *Roodbaes* the rear, being both persons of known bravery; Mr. *Rücklof van Goens* commanded the main battle; we carried some field pieces along with us to serve us upon occasion. We were forced to march thro' narrow ways, where scarce four could march a-breast, and finding that the enemy gall'd us from an adjacent small fort, some companies wheel'd to the right, and the rest to the left, whilst the seamen undauntedly approach'd with their scaling ladders, and mounting the walls, took the fort with little resistance. We found here no more than two iron pieces of cannon ready charged; notwithstanding all this they skirmish'd briskly with our foremost troops as they were advancing beyond the fort, but gave way by degrees and retreat-

Kolang  
taken.

1662. ed to the royal palace, where they made another halt, and engaged our troops a second time, but with no better success; for being once seiz'd with a panick fear, they soon gave ground, and left the place to our mercy, which we plunder'd and destroy'd. They had however in the mean while attack'd our rear several times, because our heavy cannon could not come up soon enough with us, by reason of the narrowness of the way; the enemy making use of this advantage, attack'd us very furiously, but were bravely repuls'd by the help of our field pieces, which being charged with small shot, were discharged among them with such success, that many of them remained dead upon the spot: and by this means we kept them so long in play, till we received a seasonable reinforcement, when they betook themselves to their heels, and left us absolute masters of the field. In the mean while our troops were advanced to the river, where they made themselves masters of another fort, in which they found 2 brass and 10 iron pieces of cannon. In a certain *Pagode* next to the royal palace, call'd *Matta del Reyne*, we found a great chest with gunpowder, which being set on fire, in an instant blew up and destroy'd this ancient structure, covered on the top with brass. Then our troops beat the country both to the right and left, burning and destroying all they met with. In an instant we saw whole woods in a flame, the *Bambo* canes making a most terrible noise, and burning like brimstone, a miserable spectacle to the enemy, who from the other side of the river, saw the flame consume in an instant, what had cost them many years labour. *John Piccard* my nephew, a captain lieutenant, and *William van Teylingen* were sent with some chaloups up the river *Arwick*, to pursue the flying enemy on that side, but these took another way; most of them wading thro' the river, where they could not come near them with their chaloups. Mr. *Piccard* then landed his company on the other side, where he set 40 houses on fire, which occasion'd a fresh consternation among the flying enemy. After we had thus ravaged the country, we return'd to the before-mention'd *Pagode*, where our troops repos'd themselves for a while, and the same evening return'd conquerors to the city of *Koulang*. The 12<sup>th</sup>, all the ships carpenters were sent for ashore to cut down the trees that stood upon the city walls, and orders were given for breaking down part of it, and to bring it into a narrower compass, which was put in execution immediately. About the same time the natives sent some deputies to sue for peace; by what we were inform'd, that at the time

of our arrival there were not above 30 true born *Portuguese* in the city, who fled immediately, and that the *Negroes*, who were near 800 strong, having had some notice of our design near 15 days before, had resolv'd to kill all the *Hollanders* they met with except a few, whom they intended to preserve to send them aboard their galleys, but the scene was altered; in the mean while we continued with breaking down and removing, which had almost proved fatal to the ship the *Sea-Horse*, which happened to take fire, and was in great danger of being burnt by the violence of the flame, had not the seamen quenched the fire.

By this time it being resolv'd to prosecute the career of our victories, the commodore *Roodbaes* with eight ships sail'd towards the city of *Cranganor*, to block up the entrance of that river, the rest being to follow with all convenient speed. The 19<sup>th</sup> I went on board the commissary *James Borchorst*, with whom I had some earnest business, but scarce was I come thither, but on a sudden there arose such a tempest, that with much ado I could get ashore again, for the wind arose first from the land-side with most violent rains, but soon after chop'd about with such violence, that it tore roots of trees out of the ground, and untied abundance of houses. By this sudden change of the wind, our whole fleet consisting of thirty ships great and small, were in no small danger of being shipwreck'd. The ship the *Stadtboufe* was driven among the rocks, where having lost her rudder, she gave the signal of being in utmost distress, but no body durst venture to bring her off. The ship the *Achilles* was likewise forced from her anchors among the rocks, but by good fortune happened to cast anchor again, not far from the *Stadtboufe*. The ship the *Erafmus* was also got adrift, and was in great danger of running upon the shelves; several of our small craft were beaten to pieces by the sea, and many others much endamaged. The ship the *Stadtboufe* continued in great distress all that day and night, striking several times against the rocks, but next morning the fury of the tempest being somewhat appeas'd, we sent out some boats to her assistance, which brought both her and the *Achilles* safe from among the rocks into the open sea. So that at last, thro' God's mercy, all our great ships escap'd the danger of this storm without any considerable damage, except what was in their rigging, which however fell most upon the smaller vessels.

The 24<sup>th</sup> the garrison of the conquered city of *Koulang*, consisting of 663 men, both soldiers and mariners, under the command of captain *Cox*, and *Henry Walling*, being provided

*The Dutch  
lost near  
Cranganor.*

1662. provided with all necessaries, during our intended stay before *Cranganor*, Mr. *Van Goens* set sail the same day with the ships the *Walnut-tree* and the *Ulieland* towards *Cranganor*, commodore *Goske* being to follow with the rest; we were in the mean while busy with refitting the ship the *Stadtboese*, and I stay'd ashore with Mr. *Goske* till such time that the gunpowder of the *Stadtboese* and several other ships, which had got wet in the last storm could be dried again; about the same time we were inform'd, that the negroes had receiv'd a good sum of money to fight against us, but when they perceived we were in earnest, they left the *Portuguese* in the lurch, who as we told you before, left the city of *Koulang* the same afternoon, when we landed. The 29<sup>th</sup> we set sail in the ship the *Exchange* to follow the fleet; by an express sent us from some of the *Malabars*, we were desired to stay till the next day, which we refus'd, it being not our business to tarry here for matters which might well be deserv'd till another time. The next following day we pass'd by *Kalkoulang*, the governor of which came aboard of us, with a present of fresh provisions, which we accepted. The 31<sup>st</sup> we coasted it along the shore, where we cast our anchor, because one of our yachts approach'd so near to the shore, that we feared she would run herself into danger, which made us detach 20 soldiers in a boat to their relief, if occasion should require. The 1<sup>st</sup> of January 1662, by break of day we found ourselves within a league of the city of *Cochin*, and soon after sail'd so near the shore, that we could hear the centinels speak. We saw five ships lying in the road, the foremost of which carried *English* colours. The same day about noon we came into the road, at the entrance of the river *Pallipport*, and the next day having embark'd our men in boats, and our ammunition with two field pieces in another, we landed them without any opposition, except that the enemy discharg'd some of his great cannon against us from *Cranganor*, but without any loss on our side.

The Dutch  
land near  
*Cranganor*.

We had posted our forces in three several places, the better to cut off all correspondence betwixt the enemy and the country. The next following day we brought two tons of rice, and two brass guns ashore, and soon after our whole train of artillery, with all other necessaries requisite for such an undertaking. For some time we had kept the place block'd up both on the land and river side, but now we began to open our trenches with such success, that in a short time we carried them on under the cannon of the city, the garrison being all this while not idle on their side, but endeavoring

VOL. II.

vouring to hinder our approaching by their continual fire out of their cannon and firearms, which they did with such dexterity, that they kill'd many of our men in the trenches; among the rest, a certain soldier had his arm and shoulder shot off at once, notwithstanding which, Mr. *Van Goens* order'd him to be dress'd, which the surgeon did accordingly, who told me at the same time, that since he must infallibly die, he would give him something that might ease his pain; I ask'd the poor wretch how he did, he answered me without any alteration in his countenance, *Pretty well, I don't find it very ill, tho' he died in a few hours* &c. Fourteen days after we had carried our trenches to the body of the place, during which we had several smart skirmishes with the enemy, it was resolv'd to venture a general assault; pursuant to this resolution, I was sent with two servants to confer with commodore *Goske* and Mr. *Roodbaets*, concerning the most convenient place the assault was to be made in. I was sometimes to wade up to the middle in water, and met with captain lieutenant *Piccard*, who had the advanced guards. He forewarn'd me not to approach too near the city, from whence they fir'd without intermission, but I was forc'd to venture at all, being oblig'd to be with the admiral general again the next morning. I went close under the walls of the place, the centinels ask'd me in *Portuguese*, *who was there?* I answered in the same language, *a friend*, and so escap'd the danger. Mr. *Goske* and *Roodbaets* had been before inform'd concerning the condition of the place by a certain *Negro*, and where it might be most conveniently assaulted, of which they having given me a circumstantial account, I return'd forthwith, and was with the admiral by next morning, who thereupon resolv'd to assault the city, and as he left me said, *To-morrow the city shall be ours*. So soon as every thing was prepar'd for the intended assault, I went on board the fleet to keep a watchful eye over the ships, which were of the utmost consequence to us all.

In the mean time our forces mounted the breach, and assaulted the town with great fury under the favour of the smoak of their cannon and fire arms, which by the wind was forced toward the city; I saw from on board the ships the smoak approach nearer and nearer to the place, which I looked upon as a good omen on our side; the enemies defended themselves with a great deal of bravery for a considerable time, but our men pushing on the assault with the utmost vigour, they were at last forced to give way, and to leave us masters of the city. Mr. *Polman* and *Schuilenburg*, two of our

the as-  
saults.

1662. captains, were dangerously wounded, 80 common soldiers were killed in the assault, and a great many more wounded. The loss of the enemies side was much greater, 200 Portuguese being slain during the action, besides a great number of negroes, who were all thrown into the river, and carried back and forwards several times by the tides, a most terrible spectacle to behold. For we found the taking of this place to be another piece of work than that of Koulang, and we were upon the point of founding the retreat, had not the commanders by their own example animated the soldiers to do their utmost; it being almost surprising how with so small a force we were able to attack and conquer so strong a place as this. After the city was plundered it was laid level with the ground, except one stone tower, which standing upon the river, was preserved entire, and a garrison put into it for the security of the river.

*To laid desolate.*

*A description of this city.*

This city of Cranganor (for there is another on the coast of Malabar, nearer to the sea shore) lies about four or five leagues to the north of the city of Cocbin; being the capital city of a kingdom of the same name, bordering to the north upon Cocbin and to the south upon Koulang. It was very famous among the Indians, by reason of its antiquity; being situate upon the banks of a river, about a league from the sea shore, defended by a wall of earth, and a stone breast work; which had seven bastions and the wall of earth three more. At the point near the river is remaining to this day a strong stone tower for the defence of the river, which served instead of a bulwark on that side; on the other point was a small fort which commanded the river, and all ships going out or in. Several goodly stone houses were in this city, and among the rest a church, excelling all the rest; on the opposite side of the river, towards the side of Cocbin, is the redoubt called Pallipport, built for the better defence of the river; upon a long island called Baypin extending to the river of Cocbin. The royal palace is not far from hence, in a very pleasant country; the king then reigning being a prince of great bravery, and well versed in military affairs, in the flower of his age.

*The redoubt Pallipport.*

*Cocbin taken by the Dutch.*

After the taking of Cranganor, it was concluded by the majority of voices to attack likewise the famous city of Cocbin, not questioning but that the fame of our late victories would open us likewise a way to the conquest of this place, before the enemies of this could recollect themselves from the fear they were in at that juncture. Accordingly we decamped from thence, and set down before Cocbin, our forces as in the last siege were again posted in three several

places, from whence the attacks were to be carried on against the city; Mr. Isbrand Goltz had his post assigned him near the sea shore; Mr. Koonin upon the bank of the river; and the admiral general's quarter was betwixt both. But the garrison of Cocbin was not so much frightened as we had flattered ourselves, but made a brave resistance. We did all we could to persuade the negroes that we were not come hither with an intention to hurt them, but the Portuguese, our enemies; but in vain, for they all appeared in arms against us, and several times attacked us like madmen, throwing themselves in among our ranks, tho' they were sure to die in the attempt, and thrusting themselves upon our swords and pikes, not like men, but rather like wild boars or enraged bears. Not far from the royal palace was a very large Pagode, where the negroes had fortified themselves: Our men, notwithstanding their fury, attacked them in this advantageous post with so undaunted a courage, that they chased them from thence with the loss of 400 negroes, and many more wounded. The old queen would fain have hid herself in a corner on the top of the Pagode, but was found out, and brought a prisoner by captain Henry Rede into our camp. But after we had spent near two months in the siege, the waters beginning to rise more and more every day, which filled up our trenches to the middle, and our forces by the several losses we had sustained in divers engagements and attacks, and thro' the garrisons we had been obliged to put in the conquered places, being considerably diminished in number, it was thought most expedient to raise the siege for this time, and to return with a greater force against next spring. Accordingly we decamped without any noise, and in one night got all our men, artillery, and ammunition aboard, without being perceived by the enemy, who were not sensible of our departure till next day about noon, as looking upon our motion only as a feint to draw them out of the town into an ambush. But when they found how matters stood, they discharged all their cannon round the walls, unto which we gave no answer for that time, but delayed it till a more convenient opportunity. The next thing the enemy had to do was to slight our works and trenches, which they did immediately, and to cut down all trees and edifices which they had found to be an obstacle to them during the siege, they also took effectual care to have their fortifications repaired and strengthened, as not questioning but that we should give them another visit with the next fair opportunity, in which they found themselves not deceived.

It is or 20 foot urbs which by the Portuguese Koulang is of which is Koulang, the first the ordinary residence the possession nearer to St. Paul and nastery, and steeples. Either Portuguese as many R than seven was the sum

1662.

After the raising of the siege of *Cochin*, our land forces and ships were ordered to such places where their presence was judged to be most necessary at the present juncture, Mr. *Nybrand Gotske* sailed with a squadron of ships to *Batavia*, and the rest steered their course to other places thereabouts; I went aboard the ship the *Exchange*, and passed by the city of *Kalkoulang*, in my way to *Koulang*, where I was appointed chief director of the company: At the same time it was thought convenient to strengthen the fortifications of *Kalkoulang*, and to put a good garrison into it under captain *Polman* and several other commanders, till we could dispose our forces in more convenient quarters.

The author comes to Koulang.

I arrived at *Koulang* the 7<sup>th</sup> of *January*, where I gave immediate orders for the repairing the castle, and such houses as belonged to those that were in the company's service; and settling every thing that might tend to the re-establishment of traffick with the queen of *Koulang*, and other neighbouring princes, unto whom I was sent as a deputy, to treat with them concerning the most convenient methods, and to enter into a confederacy with them for that purpose.

Treaty sent to the queen of Koulang.

The first treaty that was set on foot after the taking of the city *Kalkoulang*, was with the queen of *Koulang*, which was soon concluded upon these conditions; that her palace and great guns should be restored to her, for the rebuilding of which, and other damages sustained, she was to have a certain sum of money to be paid her by the company, whose interest it was, rather to purchase a peace upon reasonable terms, than be at the charge of a war.

A description of Koulang.

The city of *Kolang*, or *Koulang*, or *Koulon* and *Koylang*, the capital of a kingdom bearing the same name, is situate upon the sea shore of the coast of *Malabar*, under 9 deg. of northern latitude, about 13 *French* leagues (*Lincol* says 24) to the south of *Cochin*. It is fortified with a stone wall of 18 or 20 foot high, and 8 bastions; its suburbs which are very large and stately, are by the *Portuguese* called *Colang China*. For *Koulang* is separated into two bodies, one of which is called the *Upper* or *Malabar Koulang*, the other the *Lower Koulang*; in the first the king and queen kept their ordinary residences; the last was formerly in the possession of the *Portuguese*, as lying nearer to the sea side; here the friars of *St. Paul* and the *Franciscans* had each a monastery, adorned with stately chapels and steeples. Besides which there were four other *Portuguese* churches here, dedicated to as many *Romish* saints; they had no less than seven goodly churches, among which was the famous church built many ages ago

1662

by the Christians of *St. Thomas*, which was left standing, after we reduc'd the place into a narrower compass; in this church is the tomb of a certain great *Portuguese* captain, who was governor of *Koulang* 60 years. The houses of the inhabitants were very stately and lofty built of freestone; among which the stadhous surpass'd all the rest; it was two stories high, and had very curious stone steps on each side. But the castle, the residence of the *Portuguese* governor, surmounted all the rest in magnificence; this I took up for our own lodgings, it lies very near the sea-side, at one end of the city, being cover'd on the top with cocon-leaves, as likewise two of its turrets, the third being tiled with pan-tiles. Just upon the sea-shore is another four-square tower, where I set up the company's flag on the top of a mast. In the midst of it is a very lofty edifice, which the *Portuguese* used for a chapel, which I order'd to be made up into divers convenient chambers, and to be fitted for the use of the company's officers. This castle is the strongest the *Portuguese* ever were masters of on the coast of *Malabar*, being built some hundred years ago, by the famous engineer *Heitor de la Casa*.

This city, as I told you before, was drawn into a less compass by the *Dutch*, which they fortified on the land-side with two half and one whole bastion. Most of the churches and other publick edifices were pull'd down, except the castle, *St. Thomas's* church, and some monasteries, which remain'd standing within the said precinct. Behind most of the houses here are very pleasant gardens, planted with *Cocoas*, *Mangoes* and other *Indian* fruit trees; and about the city you see very fine basins cut out of the rocks, unto which you ascend by steps. They have also some ponds with fresh water, their water being else for the most part brackish and full of salt-peter. The air is very wholesome in this country, which is low and full of rivers, which afford a convenient passage from hence to *Kalkoulang*, *Cochin* and *Cranganor*; and is accounted the best both for fruitfulness and its pleasant situation in all the *Indies*. This part of the country affords abundance of pepper, which twists itself round the trees; the fruit is gather'd in *January* and *February*. The harbour is very convenient for small vessels, but not for great ones, because the south wind blows directly upon the shore, and forces the waves with great violence thither; they call it *Coydanel*. Near the sea-side you see great store of stone-like rocks, but they lie loose upon the sand, and are frequently wash'd away by the sea. About a league to the west of *Koulang*, the great river *Eguick* disembogues into the sea.

The

After

1662. The Dutch were once before masters of the city of *Koulang*, till the Negroes took the opportunity of murdering captain *Henry Glunning* their governor there, as he was taking a walk without the gates, and afterwards massacred all the Dutch; since which time the Portuguese got into possession of it. On the side of *Koulang China*, along the sea-shore, the jesuits had built a great village for the *Parvoes*, a poor sort of *Malabars* living upon fishing, where the governor of the king of *Travankor* and Prince *Baryette Poole* kept their residence, which are about a mile in circuit, and surrounded with an earth wall, with some points like bastions, on which are mounted good store of great cannon, which command the roads, without which there is scarce any access to them. If we may believe the *Malabars*, the *Maldivoe* islands, which lie about 60 leagues deep in the sea, just over-against the palace, were formerly part of the continent and torn from thence by the sea; and as a confirmation of their opinion, shew certain rocks betwixt the shore and these islands, upon which they assure us stood at that time a goodly church. The best houses are built along the river-side, with very good gardens, stock'd with all sorts of trees, fruits, flowers and herbs, but especially with citrons, which grow here not on trees, but shrubs; their houses are seldom above two stories high, their stairs within of stone, their rooms above stairs are pav'd with green and yellow four square stones, the ceiling of which is commonly of *Indian oak*, some being finely carved, others painted. They commonly have an arbour or summer-house belonging to each garden, which is commonly near the river-side, where they spend generally their evenings, and divert themselves with angling.

The river  
*Kalchan*.

The mouth of the river *Kalchan* or *Mangar*, upon which this place is built, is a very large bay, where yachts of 300 tons may come close to the shore and unload, being 28 feet deep at high water; but of very difficult entrance, if the winds be not favourable, because they blow the waves directly upon the shore. In the midst of this bay you see three vast rocks laying all together in a ridge. During the rainy season this river frequently overflows the neighbouring country, and carries away a great deal of the adjacent grounds; these violent rains are occasion'd by the clouds, which gathering among the tops of the mountains, break out into sudden storms and tempests. The country is flat and marshy hereabouts, and the air not altogether so wholesome as at *Koulang*.

By this time the season for action draw-

ing near, and every thing being prepar'd for a vigorous expedition, the siege of *Cochin* was resolv'd upon the second time; for which purpose Mr. *Jacob Hufart*, one of the member's of the great council of *India*, with captain *Peter de Pon* and *Henry Van Rade* set sail the 25<sup>th</sup> of October 1662, with 11 ships from *Batavia*, Mr. *Van Goens* being ordered to follow with three more, with all imaginable speed. No sooner had they landed their men, but they began to form their attacks, notwithstanding they found the place much strengthen'd by some additional fortifications, since the last siege, and put them so to it, that the besieged being enclosed on all sides, and beyond all hopes of relief, were forced to capitulate, and to surrender the city, after a siege of three months; after the Portuguese had (with the consent of the king of *Cochin*) been in possession of it above 150 years. The Portuguese had not long before forc'd *Momadavil*, the lawful king of *Cochin* to leave the city, in whose stead they had set up an aunt of his of the house of *Godarne*; but whilst our forces lay before *Cochin* the dethron'd king stay'd with me at *Koulang*, in order to his solemn coronation after the taking of the place. I had taken all imaginable care to have his room hung with tapestry, and furnish'd with other moveables, the best the place afford; he came often to visit us, being commonly clad in white callicoe, with his hair tied in a knot on the top of his head, rings on his fingers, and a gold chain hanging down before him. He spoke the Portuguese and *Malabar* tongues, and was of a pleasant conversation. But scarce a few days were pass'd, when finding himself not very well, he desired to go to the Queen of *Koulang* for his diversion; which I was very unwilling to grant, being sensible that his person being committed to my care, I might be call'd to an account by his subjects, who much esteem'd him, if any sinister accident should befall him; but at his reiterated instances, and the earnest request of the queen of *Koulang*, who was an excellent good natur'd person, and engag'd her word to bear me harmless, I conducted him thither, but he found no considerable alteration in his health, for when not long after a yacht was sent to *Koulang* on purpose to fetch this prince to the camp before *Cochin*; he was so very weak that he would fain have avoided going thither, but there being positive orders given for his coming, I sent him my *Palakin* or letter, and conducted him with some of our officers aboard, but before he could reach *Cochin*, his sickness encreas'd to that degree, as to put an end to his life. 1662. ther, who was aboard the same yacht, being the next heir to the crown, was, after the taking of the city, crowned king of *Cochin*, by the *Dutch*, his crown, which was of gold, having the cypher of the *East-India* company, engraven on one side. He kept his residence not far from *Cochin*, in a place situate in a very pleasant country, call'd by the *Dutch* *Malabar Cochin*, had his guards, musician, and all other things belonging to a royal court, according to the custom of that country.

The city of *Cochin*, by the *Portuguese* call'd *Cochin*, and generally *Kakochin*, is the capital of a kingdom of the same name, and indeed of the whole coast of *Malabar*. It is situate under 10 deg. of northern latitude, 4 or 5 leagues to the south of *Koulang*, extending along the bank of the great river *Koulang* or *Koleban*, or *Mangat* or *Mangar*. Some authors make mention of two different *Cochins*, viz. the *Old Cochin*, lying about a league and a half from the sea-shore; the *Portuguese* call it *Cochin Dacima*, or *Arabia*, i. e. the *Higher Cochin*, because it lies higher up the river; by the *Dutch* it is call'd the *Malabar Cochin*, where the king keeps his residence; being situate upon the banks of a river, and pretty well peopled, and adorn'd with several goodly structures and *Pagodes*, according to the custom of the *Malabars*. The other *Cochin*, call'd commonly the *New Cochin*, is scarce a league distant from the sea, just at the entrance of the same river; it was for many years together in the possession of the *Portuguese*, who had fortified it with a stone wall, and several bulwarks, and beautified it with several fine edifices, churches and monasteries. In the suburbs towards the land-side were several goodly churches, and a little nearer to the sea-shore the monastery of *St. John*. Here the *Austin Fryers*, *Franciscans* and *Jesuits* had likewise their several convents, all magnificently built, with very pleasant gardens and walks, the place being inhabited only by *Portuguese*. But since this city was conquer'd by the *Dutch*, the greatest part of it was laid desolate, and the rest fortified with regular stone, bastions, curtains and a very broad ditch, so that it is now look'd upon as impregnable. Among other steeples, that of *St. Paul* being magnificently built of square stones, exceeded all the rest as well in height as beauty, which is since demolish'd with all the other churches, except one, where divine service is exercised according to the tenets of the reform'd religion. The houses here are cover'd with tiles of about the breadth of a hand, and are fastned to the laths by small hooks. Some make their windows only of a kind of lattice-work, others of canes very artificially twisted to-

gether; others make use of large shells in which the pearls grow, these they flave and flatten, and make windows of them, as we do of glass.

After we thus had made our selves masters of the greatest part of the *Malabar* coast, and had taken all imaginable care, to re-establish the commerce in those parts, it was judg'd necessary for the better obtaining of this end, to enter into strict alliances with the kings and princes of the adjacent countries; for which purpose Mr. *James Hughtart*, chief councillor of the *Indies*, of *Ceylon* and the *Malabar* coast, having sent me the necessary instructions and credentials, I provided my self with all things requisite for such a journey, and the 21<sup>st</sup> of January 1664, embark'd aboard a small vessel, with one serjeant, several soldiers, an interpreter, and divers mariners, which carried us up the river, as far as to the city of *Kalkilang*, where we arriv'd safely the next day. So soon as I had provided my self with a convenient lodging, I gave notice of my arrival, by our interpreter to the king, who soon after returned in company of a *Residoor* from the king, to fetch me to court. Accordingly I and Mr. *Willing*, who resided there in the quality of under factor of the *East-India* company, were introduced by the said *Residoor* into the kings presence, whom we found surrounded with a good number of courtiers, that constantly attend his person. After the first ceremonies and compliments, such as are usual in this place, were passed, I surrender'd my credentials to the king, who received them with a great deal of respect and seeming satisfaction. After he had perused them, he gave orders to one of his *Residoors*, one of his chief favourites to treat with me concerning such points as I should propose to him, tending to the maintaining of a good correspondence betwixt us and them, and to make his report to him. This prince had the character of a very sincere person, which appeared both in his countenance and actions; but leaves the chief management of all affairs of moment, to the beforemention'd *Residoor*, who knows how to make his advantage of it. After I had treated with the *Residoor*, as far as my commission would give me leave, I desired to be dismiss'd, under pretence of fetching new instructions, which being granted, I took leave of the king, and with Mr. *Willing* pursu'd my journey to *Porka*, whither I had sent a serjeant with six soldiers before. But at our arrival there, being inform'd that the king of *Porka* was ten days before gone to his palace call'd *Kudda Malair* or *Koramallur*, or *Koramallo*, about ten leagues distance from hence, I

1662. resolv'd to go thither. We were forced to go by water through several channels and rivers, the country thereabouts being full of both, like the province of *Holland*, which affords scarce any passage by land, but by the dikes, all the rest being rice fields, cuttously planted with trees on all sides.

We were forc'd to have our *Manfool* (vessel) drawn through a narrow sluice, which open'd us the passage into a large lake, which to the north is about two leagues broad; from thence we enter'd into a channel of about a league in length, its entrance is somewhat narrow and so full of flags, that there was scarce room enough to manage our oars. At the end of this channel you see very pleasant rice-fields, which extend to the foot of the mountain, and are flock'd with prodigious quantities of wild and water fowls. The inhabitants hereabouts have a certain way to drain their fields, which makes them bear rice all the year round; so that whilst they are sowing and planting in one field, in another the rice is half ripe, and in another its come to its full maturity, which renders this country both very fruitful and populous. The mountains produce some pepper, but in no great quantity. This part betwixt the channel and the mountains is water'd by a very fair and large river, beautified on both sides with many fair houses, gardens and trees, which afford a very agreeable spectacle to those that pass by that way, the houses being all built among small groves. After we had spent several hours in coming up the river, we in the afternoon cast anchor before the court of the king of *Porka*, situate upon the right side of the said river, near a village inhabited by christians of *St. Thomas*, who enjoy great privileges here. As we were passing up the river, not far from the court, we saw a large crocodile sunning himself upon the sandy bank; I order'd our soldiers to fire at him, which they did, but he escap'd under water. This creature was used to fet upon the people as they pass'd by that way, and consequently much dreaded by them. The king of *Porka* was at this time rebuilding his palace, in which they say he had already bestow'd 20 years; it was but an odd old fashion'd piece of structure, surrounded with walls of earth and a dry ditch; I sent our interpreter to notify our arrival, and to provide us a lodging, who being return'd, we scarce had set a foot ashore, but the chief *Refidoor* of the king came to conduct us to court, where he introduced us into his presence. After the usual compliments I deliver'd him my credentials, which he receiv'd with extraordinary marks of respect, ordering the *Refidoor* to entertain me till he had read and

Has audience of the king of *Porka*.

consider'd of them. In a little while after he return'd with some of his attendants into the same apartment, where he ask'd me whether I had any other commission to treat with him, and I answering that I had, he declared to me, that his indications had been always for us, even whilst we appear'd in arms on that coast, though at the same time he was not insensible, that some had endeavour'd to persuade us to the contrary, but that time and opportunity should discover the good sentiments he had for us. He told us farther, that he had caused the flags of the *English* and some other nations to be taken down, and the *Dutch* flag to be set up, for which they threaten'd him with an open war, in his own territories, and refused to quit the country, which made them to be look'd upon but with a very indifferent eye by all the neighbouring princes. Having afterwards given him a farther account of the occasion of my coming, he told me that he should be very glad now he was convinc'd of the intentions of the company, which were agreeable to his, to speak with Mr. *Huffart* himself: I return'd for answer, that the company was sensible of his favourable sentiments to them, and had always put a great value upon his person, inviting him at the same time to *Cochin*, to visit Mr. *Huffart*, the last of which he modestly declined, alledging that for several reasons he could not come to *Cochin*, but that if Mr. *Huffart* would come either to *Porka*, or any other place under his jurisdiction, he should be very ready to treat with him concerning such matters as tended to their mutual advantage. The king farther ask'd me, whether I desir'd an account of my negotiation in writing, which I having accepted of, he said it should be sent to my lodgings, and at my departure conducted me in person to the door of his apartment, from whence the *Refidoor* carried me to his lodgings, and treated us with all sorts of refreshments, a very welcome entertainment to some of my attendants, who had not met with the like since the beginning of our journey. Towards the evening the *Refidoor* brought me the writings, with whom whilst we were taking a view of the court, I had abundance of discourse concerning the intended treaty.

This palace of the king is a four square structure of about 40 paces in the square, in the midst of which is a court, about which the apartments (of which there is a great number) are built; they are all four square, their chief ornaments within being the carving of leaves and other work in all sorts of fine wood; in some of these lodgings you see fine cisterns for the convenience of bathing; you ascend to them by

The author gave a full and true account of *Porka*.

Has audience.

Palace of the king of *Porka*.

1662. by certain broad stone steps, like our grave-stones. In one of these lodgings is a very large basin, surrounded with such stones, which are about 20 feet broad, and a foot and a half thick, which have been brought thither with incredible pains and charges, a great way out of the country. The palace it self is cover'd with small tiles of a hand broad, the windows being made either of twisted canes or shells, which transmits the light.

After my return from thence to Koulang, I went farther to Cocbin, to give a verbal account of my transactions to Mr. Hufart, who thereupon order'd me to go once more to the court of the king of *Porka*, in order to set matters there upon a sure foundation; accordingly I set out the 3<sup>d</sup> of February, with some of my former attendants from Cocbin to the king of *Porka*'s court, where within an hour after giving notice of my arrival, one of the king's *Refidoors* came to introduce me to the king, whom that time I found in a most magnificent array, (after the *Malabar* fashion) in the midst of his courtiers. After the usual respect paid, I deliver'd to him my credentials, which he having received, he order'd all his attendants and my interpreter among the rest to withdraw, because he had a mind to discourse with me alone in *Portuguese*, which he understood very well. I told him that I was sent on purpose by my masters to his majesty, to assure him of their friendship, and to pay the money stipulated by the last treaty, which sum, though it much exceeded the value of the thing receiv'd, yet notwithstanding all this my masters had thought fit not to recede from what had been promised in their name. The king gave for answer, that it never had been a custom to weigh the pepper at Cocbin, (which I had desired should be done) and that therefore he hop'd the company would not introduce any novelties in his territories; assuring us withal, that he would be ready to assist the company and their officers upon all occasions, besides several other assurances too tedious to be inserted here. I soon understood his meaning, to wit, that he would not have the pepper trade transferr'd to Cocbin, which was a matter of no great consequence, so I did not insist any longer upon it, but agreed, that the pepper should be receiv'd and weigh'd at *Porka*; assuring him, that the company had never had the least intention to impair any body's right, as his majesty might easily be convinc'd as well by this as several other transactions and treaties made lately with other kings and princes. The king appeared to be highly satisfied thereat, desiring that a factor might be sent

thither forthwith, to buy and receive the pepper; which I having promised to the king, he order'd the *Refidoor* to receive the money, and granted me leave to depart.

The next following day, just as I was ready to depart, a *Refidoor* come to my lodgings, which was an old chapel, and presented me, from the king, with several refreshments, according to the custom of the country, and knowing this *Refidoor* to be a person in great esteem with the king, I requested his favour in behalf of the company, which he promised to do.

The king then reigning at *Porka* was a person of 30 years of age, very stoutly and well made. He was adorn'd with many jewels of diamonds and rubies, which he wore on his hands, arms and ears, according to the *Malabar* fashion. He is a most absolute prince, acknowledging no superior, every foot of the country being his own, and at his disposal. Justice is administered here with extraordinary severity, especially on the account of theft, which makes this crime scarce ever to be heard of here, of which I saw the following instance myself; whilst I was paying the money to the before-mention'd *Refidoor*, I was call'd away to the king, and seeing above 50 persons in the same room, I charg'd one of my attendants to take care of the money; the *Refidoor* having taken notice of it, laugh'd heartily, and told me, *You need not give yourself that trouble, no body will dare to touch the money, tho' it was untold and unguarded, for we know scarce what thieves are*, which surpris'd me not a little, knowing that the *Malabars* in general are the errantest thieves in nature.

The kingdom of *Porka* or *Porkab*, otherwise *Perkatti*, has borrow'd its name from its capital city; it borders to the north upon the kingdom of Cocbin, to the south upon that of *Kalkoulang*, it has *Takken Berkenker* to the north-east, and the sea to the west, being about 12 leagues in length; its capital city is *Porka* or *Porkab*. Another of the chief cities is *Koramallur* or *Koramallo*, situate upon the same river with the cities of Cocbin and Koulang. The kings of *Porka* were in ancient times great idolaters, who worship'd at least 900 idols, unto each of which daily sacrifices were offer'd, and visits made them about six or seven a clock in the morning till twelve at noon. It was not till the year 1590, that the *Romish* religion was openly profess'd here with consent of the king. Tho' many years before, the Christians call'd of *St. Thomas* liv'd in these parts. This king granted considerable privileges to the jesuites; such as the building of churches with crosses on the top of them, and the necessary bells, near unto which no

1662. Pagodes, Jewish synagogues, or Mahometan mosques were to be erected; they had also liberty to baptize as many as were willing to embrace the christian religion, all which was punctually observ'd. The king of *Porka* who reign'd 1599, was call'd *Nambrale* or *Nambrane*, which implies as much as the high priest in the *Malabar* tongue. In the year 1640, one *Siam Baalsbery Vaubaar* reigned over *Porka*. They claim a superiority over the king of *Cochin*, against whom they waged heavy wars in former ages; but nowadays the kings of *Porka* are under the jurisdiction of the *Dutch East-India* company, being forc'd thereunto by their victorious arms; the chief strength of the king of *Porka* consists in his small frigates, of which he has 500, and are made use of, when the fields are overflown with water; formerly the *Portuguese* were masters of the pepper trade here, with the king's consent; but finding that they intended to fortify themselves in several places, he engaged in a war against them, which lasted three whole years. The *Dutch* never came to *Porka* till 1642, under the reign of *Siam Baalsbery Vaubaar*, being then not above 24 years old; they were very kindly receiv'd by him, a treaty being concluded betwixt them at that time, by which the *Dutch* had the pepper trade granted to them. This part of the country is very fruitful, but unwholesome, most of the inhabitants being afflicted with thick swell'd legs, occasioned by the drinking of brackish water; blindness is also a common distemper here, which by some is ascrib'd to their feeding so much upon hot rice. Most of the inhabitants live by husbandry, tho' during the rainy season, most of the rice fields hereabouts, as well as all along from the cape *Comarin*, as far as *Pokare Biarbar*, lay under water. This country produces also a considerable quantity of pepper yearly, which is for the most part bought up by the *English*, who have had a factory here many years ago. Deeper into the country live abundance of christians, who were formerly converted by the *Portuguese*, these buy up the pepper in the country, which they are oblig'd to deliver to a certain merchant, appointed for that purpose by the king.

The author goes to Marten.

From hence we went to the king of *Marta* or *Marten*, the capital city of the same name, three leagues to the south of *Cochin* upon the same river. I and Mr. *George Henry Willeng*, under factor of *Koulang*, got on horseback early in the morning, and arriv'd at 10 a clock before noon at *Carnopely*, where we took up our lodgings in a house near the river side, which the *Dutch East-India* company some years before had

purchased from the king. It is pretty large, but not very convenient, being built according to the *Malabar* fashion, with abundance of corners and inlets oddly contriv'd: The gardens are well planted with palm-trees, for the use of the house. I had no sooner given notice of my arrival, but I was sent for to the king. After the usual compliments to be paid to the *Malabar* kings, I deliver'd the following *Ola* (letter) from Mr. *Huflart* to the king.

James Huflart councillor of the Indies, governor and director of the isle of Ceylon, and the *Malabar* coasts, sends his *Ola* to the king of Marten.

Illustrious prince,

Nothing could be more welcome to me, than *Admiral* to understand at my first arrival in *Huflart's* these parts, that your majesty had always liv'd in a good correspondence with our company. To shew your majesty what an extraordinary value we set upon your friendship, we have sent Mr. John Nieuhoff captain of *Koulang*, in order to enter with you into a more strict league and friendship. We hope your majesty will give him entire credit, in what he shall propose to you, which I shall be ready to acknowledge upon the like occasions.

God preserve and give your majesty a long and a happy life.

Cochin  
2 Feb. 1664.

James Huflart.

After which I gave the king a more particular account of my commission, unto which he answer'd, that he would consider of it till the next day; accordingly I was sent for at the appointed time, when I found the king surrounded with a great number of his courtiers, and among the rest some mahometan merchants; he order'd immediately two of them, and one of his captains, who was in great esteem with him, to treat with me concerning the propositions made on behalf of the company; but as I was sufficiently inform'd that most of the mahometan merchants here drove considerable traffick to *Cananor*, to the no small prejudice of our company, I did not think fit to treat with them, if possible I could avoid it, which made me to tell the king, that I had no commission to treat with the mahometan merchants, but with his majesty; that the company at present offer'd peace to the whole coast of *Malabar*, in which, if his majesty was desirous to be included, and to enjoy the benefit of a flourishing trade, he might himself treat with me, but if not, grant me leave to depart. The king after a little pausing, desired that my propositions might be drawn up in writing, which I did accordingly: Our demands were,

1662. To forbid the importation of amfon, the peeling of the wild cinamome, and the exportation of pepper.

These propositions the king order'd to be read aloud in our presence, which the mahometan merchants endeavour'd to oppose with all their might; and the greatest part of the day being spent in messages betwixt the king and us, by the *Residoors*, who gave an exact account of all what pass'd to the king, he gave leave for us to return to our lodgings, and order'd us to attend him again the next day. But early in the morning a certain person of quality, who bears the second rank in that kingdom, came along with the before-mention'd captain, to tell us, that what we desired, was absolutely to the prejudice of the king and kingdom, which I endeavour'd to put out of their heads, by telling them, that we were come with no other intention, than to establish a free commerce with them, as we had done with most of the other *Malabar* kings and princes before, and which would turn to their great advantage; notwithstanding this they were for making several alterations in each point, and five or six messages pass'd betwixt the court and us; at last they ask'd what quantity of pepper we desired yearly? We answer'd them, that it was no matter about the quantity, since we were for buying all. This point was vigorously oppos'd by the mahometan merchants, who said would have persuaded the king to reserve part of it for them; but by degrees we overcame all these difficulties, the king having granted us all we demand'd, except the peeling of the wild cinamome, which we did not so much insist upon, being a thing uncertain whether it would quit the cost to the undertakers or not, because it was in the kings power to set what price he pleas'd upon it.

The kingdom of Marten.

The kingdom of *Marta* or *Marten* is very near as big as that of *Kalkolang*, extending to the north as far as *Porka*; to the south it borders upon the *Indian* sea, and to the east it is surrounded by high mountains, and wash'd by the same river, upon which *Cochin* and *Koulang* lie: The capital city is likewise call'd *Marta* or *Marten*. But to the south near the sea-shore is another city call'd by the inhabitants *Panderatoutte*, and *Pesse* by the *Portuguese*; here we built a House by the king's consent, for the convenience of the pepper trade, which is always weigh'd here. There is another city belonging to this kingdom call'd *Podigabo* or *Maulikara*. This king possesses some parts of the countrey in common with the king of *Kalkolang*, a thing not usual on this coast, where are so many petty kingdoms, that it requires no small

Vol. II.

time, to distinguish and know them from one another. The country is well peopled here, abounding in pepper, pease and beans, and the fields near the river-side in rice and salt-pits. The king is a sovereign prince; he that then reign'd being of about 60 years of age, very large of body and a stern countenance; upon his head he wears a bonnet of scarlet cloth lined with callicoe; he keeps constantly 1200 negroes in pay; his residence is at *Carnapoly*, a place surrounded with an earthen wall of 20 foot high, but appeared much decay'd at that time. This kingdom has long ago been inhabited by christians, which however were forced to live there 12 whole years without a church, viz. till the year 1581, when the king then reigning, not only gave them liberty to build a church, but also to cut wood in the adjacent forests dedicated to the pagan idols. He also gave permission to his subjects to turn christians, and the jesuits had full power granted them to exercise the church censure, and to inflict it upon those that were baptiz'd by them. The said church was dedicated to *St. Andrew*, because it was finish'd upon that saints day.

Upon the banks of the same river, where the kingdom of *Marten* lies, is also the kingdom of *Batyma*, with its city call'd *Katyapery*. It is commonly reported in these parts, that the kings of *Batyma* made a law, by which a man was empower'd to kill any woman that should refuse him a kindness.

By this time our negotiation being brought to an entire conclusion, I offer'd the usual presents to the king, which he order'd to be taken by him who bears the second rank in the kingdom, who as well as several others of his courtiers having been very instrumental in promoting the treaty, we thought fit to engage to our party by some small presents. At last we were appointed to attend before the court in the open air, where the king first, and I afterwards sign'd the treaty with our own hands, in the presence of a great multitude of people, that were flock'd thither on purpose to be spectators of this ceremony. This done I took my leave of the king and his chief courtiers, and the same evening went aboard our vessel, which about a league from thence did ride at anchor in the river. A certain lord commanding over the countrey here, a vassal of the king of *Marten*, came on purpose to meet and compliment us and presented us with some fowls, *Py-sang* and other refreshments, of whom I likewise took my leave and return'd to *Koulang*, where I arriv'd the 9<sup>th</sup> of February,

Whilst I was negotiating with the king  
M m m of

1662.

The author leaves Marten.

Returns to Koulang.

1662. of *Porka*, the king of *Kalkalang* sent for me to his court, where he presented me with a very fine *Brocade* silk gown, made according to the *Indian* fashion, testifying his joy for the good success we had had in our negotiation with his neighbour; I return'd my hearty thanks to the king for this and other favours I had receiv'd at his hands, and went back again to the king of *Porka*.

*Is presented by the king of Kalko-  
lang.*

But to return to *Koulang*; no sooner was I arrived the 9<sup>th</sup> of Feb. at *Koulang* but the queen of the same name, sent the next day her chief captain to receive the customs and cannon she pretended to be due to her by virtue of the late treaty; I was willing to surrender the cannon, according to our agreement, but could not consent to the other; and in the mean while we were preparing our *Manfo* (vessel) for a voyage to the king of *Travankoor*'s court, the *Residoors* of the king of *Goenre* and *Barriette* *Pule* desir'd an interview with me, whom I gave a meeting accordingly in company of Mr. *Cber de Venne*, book-keeper of the *Dutch East-India* company. We saw above 300 negroes all in a body, who with one voice cry'd out for the customs, which made me, after many debates and disputes, tell them, that I would go home, with an intimation to return the next day to them, provided they would desist from these things, that were not granted them by the treaty, nor were ever likely to be granted, and so return'd to *Koulang*.

The 12<sup>th</sup> of February, I embark'd at nine a clock in the evening for *Atingen*, where the king of *Travankoor* kept his residence then, being come thither some days before. With break of day we found our selves near the village of *Mappul*, about five leagues to the east of *Koulang*, but not daring to approach the shore with our vessel, we were forced to hire an *Indian* boat, which carried us safely ashore, notwithstanding the violence of the waves that rowed against the shore. We travell'd for about a league along the sea-side, till we came to a large river, which carried us in three hours rowing to the court; here we understood that the king was just then ready to go to *Kalkalang*, I gave immediate notice of my arrival to his majesty, who sent for me by one of his *Residoors*; he met us on the stairs-head, with many of his courtiers; where I presented him with the usual respect, the letter, with some presents, which he receiv'd and caused the letter to be read aloud before all there present, telling me, that he would forthwith let me know his intention, and that in the mean while I might take a walk into the garden of the castle, with some of his *Residoors*; and discourse with them farther in

*Goet to  
Atingen.*

a certain grove, which he pointed at with his fingers. Accordingly I begun to talk more at large, concerning my propositions, with the four *Residoors*, who were for treating with me immediately upon the subject in hand, which I told them I had no orders to do, my business being to treat with the king in person. They having given the king an account of what I said, brought me word, that his majesty, in a matter of such consequence could not take a resolution till next day, desiring me to have patience till then, and presented us with *Pyjant* and some other refreshments. On the western-side of the palace is a pleasant house at the foot of a hill, in the midst of a very pleasant grove, from whence there is a prospect into a very fruitful valley full of rice-fields, hedg'd in with palm-trees; this place was assign'd us for our lodgings, our host appearing to be a very honest man, but so mistrustful withal, that when we were going to supper, he refused to let us have dishes or any other utensils; their soldiers being exasperated at this usage, the whole house began to be in an alarm, and I enquiring the reason, could get no other answer from him, than *That the devil and his ill fortune wou'd him a shame, when they brought such lodgers into his house*, desiring us at the same time to look out for another lodging. With much ado I persuaded him, that we were no such fellows as he imagin'd us to be, and so at last with the help of a little money, he let us have what we had occasion for.

The next day, being the 14<sup>th</sup> of Feb. about eight a clock in the morning the king sent for me to court again by a negro, where we met the before-mention'd four *Residoors* at the gate, ready to receive us, we went together into the garden, where I caused a carpet to be spread under the shadow of some trees, as they did their *Indian* mats; and being seated, the chiefest of the *Residoors* told me, *That his majesty was not a little dissatisfied at our burning the royal palace of Koulang, and that he had given him orders to treat of that as well as the other subject with me. That the letter sent to admiral Hufart had been written with no other intention, than to treat concerning the pretensions of prince Gondormo, and that therefore they would be glad to hear what instructions I had about that matter.* As I thought it not for our purpose to tergiversate in the matter, I told them bluntly, that *Gondormo* might thank himself for his misfortunes; for that when our fleet and forces, about two years ago appear'd near *Cochin*, to attack the *Portuguese* our enemies, the *Dutch* admiral had set up a white flag, to shew his willingness to treat with the

1662. queen of *Cochin*, which *Gondormo* had not only prevented, but also attack'd our forces, and oppos'd and still did oppose all our designs tending to the re-establishment of the government of *Cochin* upon its true foundation. I further told them, that, when about two years ago, I had the honour to see his majesty at *Kalikali*, I assured his majesty that we had conquer'd *Cochin*, and were engaged in an everlasting alliance with *Monta Davila*, their legal sovereign; and that therefore *Gondormo* need not flatter himself with the least hopes of his re-establishment. Of this they gave an account to the king, who soon sent them back with another proposition, to wit, whether he might not be admitted as a second or third person in the kingdom? To make an end at once of this dispute, I ask'd them whether they did acknowledge *Monta Davila* lawful king? They answer'd they did? I demonstrated to them, how unreasonable it was, to demand that one who had set up against his legal sovereign, should be receiv'd in such a station in the same kingdom, and considering the ill consequences which must needs ensue from thence, I told them it was in vain to say a word more of it. This made them insist no more upon the business of *Gondormo*, they only told us, *That we had best be upon our guard*, *Gondormo and his three brothers being resolv'd to live, and to be buried in the kingdom of Cochin*. I answer'd him carefully, that I had travel'd thro the greatest part of that kingdom; and that I was sure there was room enough for 100000 of them. I assured them farther, that his majesty of *Travankoor*, had been always in great esteem with our company, that they never doubted of his friendship, notwithstanding he seem'd to bear so great a share in *Gondormo's* business; that I was sent thither on purpose to enter into a more strict league with him, in the same manner as had been done with several other kings his neighbours. Whilst they were debating this matter, an envoy arriv'd from the queen of *Koulang*, with a letter, in which she complain'd, that she had not receiv'd any share of the customs, nor were the cannon restor'd to her; the *Residoor* ask'd me what the meaning of it was, and whether we would do less than the *Portuguese* had done? I answer'd him, if we should follow the footsteps of the *Portuguese*, we must be guilty likewise of the same enormities, in murdering, plundering, &c. things not customary among us, the intention of our company being to maintain every one in his right, and to establish a free commerce without interruption; and these, said I, are the main contents of my commission, according to which I am to

treat with all the kings and princes of the coast of *Malabar*. After several other debates, finding them full of tergiversations, I roundly told them, that I found them very backward in what had been propos'd; that for my part, I had done all what I could to procure a peace, but that they seem'd to be rather inclinable to war; and finding them somewhat puzzl'd by their silence, said, that if as yet they could find out any expedient, to compose matters upon reasonable terms, I should be willing to hearken to them, and that, if it was for a yearly present, or a sum of money, once for all, they should have it. The king being inform'd of this resolution, sent me word back, that in a thing of this nature, in which several others besides himself were concerned, he must take some leisure to advise, which done, he would send one of his *Residoors* to *Koulang*, to treat further of the matter. I insist'd upon having all things dispatch'd here, but the *Residoors* telling me, that they durst not urge it any more to the king, for that time, I was fain to acquiesce, and to defer it till our next meeting at *Koulang*, tho' I very well foresaw that this negotiation would meet with no small difficulties, unless something more were granted than had been offer'd hitherto. About the same time the before-mention'd queen, sent me underhand word, that she was very inclinable to a farther treaty, but that it could not be done till the king of *Travankoor* was gone, which as it was no unwelcome news to me, so I desired the *Residoor* whom she sent to me, to use his utmost interest with her majesty to bring it to pass, being sensible that it was the intention of my Masters to live with her in a good correspondence.

The country about *Attingen* has hitherto not been describ'd by any that I know; it abounds in pepper, of which a great quantity is brought thither out of the circumjacent parts. The ancient race of the kings of *Travankoor* owed its origine to *Attingen*, but for want of male heirs, one of the princes of *Cochin* was placed in that throne; the king who then reign'd, being descended from the *Cochin* race of *Ram-merankail*, and elected king of *Travankoor*. The ground where the pepper grows, is hereabouts strong and red, which makes the pepper not full so large here, as in the valleys about *Koulang* and *Cochin*. On the descents of the hills you see very pleasant rice-fields, cut out like steps, and water'd from the top by small rivulets. The king and queen's palace are directly opposite to one another, with some rice-fields betwixt them.

The next following day about 10 a clock

1662.

1662. clock in the morning, I was call'd to court again, where the king told me in person, that it would be better to reassume the treaty at *Koulang*, which I being fain to be satisfy'd with, I took my leave of his majesty and the *Refidoors*, who offer'd me a present from the king, according to the custom of the country, which I accepted off, and went directly to the river-side, where we found our boat, and sailing down the river, came just before sun-set to *May-pule*, where I was met by the resident of *Tengepatnam*, whom I had given notice of my coming that way. The next following day, viz. the 16<sup>th</sup> of February we reim-bark'd our vessels, and steer'd our course by sea to *Koulang*, from whence I immediately dispatch'd our interpreter to *Pule de Margaty*, to inform himself where the queen of *Goenree* at that time kept her court; he return'd the next day with advice, that a month before she was gone deeper into the country, to a place call'd *Peretaly*, about four days journey from thence.

The king-  
dom of  
Travan-  
koor

The kingdom of *Travankoor* (thus call'd from its capital city) begins at the cape of *Comory* or *Comorin*, and extends all along the sea-coast as far as *Koulang*, comprehending a tract of ground of 20 or 24 leagues in length; the famous village of *Paru*, belonging to the queen of *Sing-naty*, being only in the middle of the coast it borders upon the kingdom of *Madure*, and to the west upon the countries of *Peretaly* and *Kotarkery*. It has several considerable villages which are inhabited by the moors, such as *Tengepatnam*, *Kuletture*, *Koritypatnam* and *Allage*. About the year 1544, above 30 villages, inhabited by the *Makao*s, who live for the most part upon fishing, and by the mahometans, were upon this coast. But the chief cities lie deeper in the country, which is of a great extent all along the mountains to *Naynar*, near the cape of *Comorin* and toward *Travankoor*, in all 29 great cities and villages. About a league and a half to the north of the cape *Comorin* is the city of *Kotale* or *Kokatti*, a place of great traffick; the populous city of *Siminitira* and *Matadavalur*, famous for its bigness, being surrounded by six or seven other towns; *Verrage* is not above a quarter of a league distance from *Kotale* and *Tatikury*, the two most considerable places of the whole country. *Kal-kolang* is a very large city, being a league and a half long, upon the confines of the *Neyk* of *Madure*. It is situate upon a high hill, 3 leagues from *Tengepatnam*, and 12 from *Koulang*; being on one side strengthen'd by inaccessible mountains, on the other by a wall, the undermost part of which is of stone, the uppermost of brick-work, in all

24 foot high; the royal palace stands at the west end, being surrounded by a stone-wall. On the east-side you see the ruins of an old castle, built on the top of a hill, fortified with a triple wall. The city of *Kal-kolang* is the chief residence of the king, who constantly keeps a garrison of 10000 negroes here, to secure it against the *Neyk* of *Madure*, whose power is much dreaded here. It is a very fertile country, abounding in pepper, rice and other grains. It also produces wild cinnamon, the best, the whole coast of *Malabar* affords, but it wants several things requisite for the convenience of life. One of the chiefest rivers which water this country, is the river *Mannikorin*, it exonerates itself into the sea, near cape *Comorin*. The king of this country is by some stiled the *great king*, because he possesses larger territories than any other of the *Malabar* kings. He is served in great state, and maintains abundance of commanders, whom they call *Mandigals*, and many counsellors, call'd *Pullas*. Some ascribe to him a superiority over neighbouring princes, but of this I am convinced to the contrary by my own experience; it is true they reverence him, as a potent king, but pay him no obedience. Others will have him to be a vassal of the king of *Nar-singa*. The whole country is well stock'd with people, who appear very well cloth'd according to the *Malabar* fashion.

The 18<sup>th</sup> of February, I set out from *Koulang* in company of Mr. *Siewert Baker*, for the kingdom of *Goenree*. But scarce were we come to *Kaligoli*, but one of the *Refidoors* told us, that the queen of *Goenree* was a month ago gone into the country, and would not return very quickly, by reason of a certain religious ceremony, she was obliged to perform there, before her return; I desired a guide, because I had something of moment to communicate to the queen, but they excused it, telling me that the ways were so rocky and impassable, that it would be impossible for me to get thither, it being five tedious days journey to the country of *Peretaly*, bordering upon the territories of the *Neyk* of *Madure*. Being made sensible that this journey could not be undertaken without great difficulty and charge, I thought it most expedient to leave a letter with the *Refidoor*, to be deliver'd to the queen, the contents of which were as follows.

His letter to the queen.

THAT I was come hither to offer a small present to her majesty, and to enter into a strict and everlasting alliance with her; but I was so unfortunate, as not to meet with her

1662. *her majesty, I liv'd however in hopes, that she would not be backward in entering into a general league, which the company had lately concluded with all the Malabar princes; to accomplish which as we should be ready to contribute every thing on our side, so we did not question, but that her majesty would be pleas'd to let us know her sentiments by the bearer of this letter.*

Whilst I tarried here, I understood that the *Residoor* of the king of *Travankoor* was arriv'd the 20<sup>th</sup> at *Koulang China*, and had notified his arrival by our *Petangatin Thome Bottoncho*, desiring to confer with me, concerning certain matters commanded him by the king his master, since my departure from thence. The place appointed for our interview, was the church of the christians of *St. Thomas* in *Koulang China*, where I was present at the appointed hour, but finding them to trifle away the time in altercations and tergiversations; I was ready to mount on horse-back again, in order to return to *Koulang*, which when they perceiv'd, they desired me to stay and give them another meeting, which I agreed to do. At last, after abundance of contests, the following agreement concerning the shares of the customs, the importation of amson and the exportation of pepper, was made betwixt the *Dutch East-India* company, by their deputy *Mr. John Nieuhoff* on one, and the kings of *Marten*, *Singnaty*, *Goenree*, *Travankoor* and *Barrigetta Pule* on the other side.

#### Articles of agreement.

I. **N**O body shall import, sell or exchange any amson into these countries, except the *Dutch East-India* company.

II. No body, without any exception, shall be permitted to export any pepper or cinamome out of this country, or to sell them to any body, except to the said company.

III. A certain price was settled, betwixt both parties, and what share each should have in the customs, whereby all former pretensions and exceptions should be annulled.

February  
21, 1664.

Sig'n'd in the court  
Matta del Reyne.

In my return from *Koulang*, in the road leading to *Matta del Reyne*, I found guards posted upon all the cross roads, which made me enquire of *Matta del Pule* chief commander of the negroes, what the meaning or it was, who told me with a sorrowful countenance, that the prince *Barrigetta Pule*, had caused one of the queen's *Residoors* to be slain by his soldiers, who had

also laid about 80 houses in ashes, and cut down many palm-trees. That they had been sent to besiege him in his castle, but that at the intercession of the king of *Travankoor's Residoor*, who had promised that the said prince should be call'd to an account by the king his master, they had delay'd the execution of it for three days; but he much fear'd he should scarce withhold them much longer, from taking a direful revenge of him. He was very inquisitive concerning our late transactions with the king of *Marten*, but I excus'd the matter, telling him only, that I hoped it would be brought to a conclusion, to both sides satisfaction.

The 22<sup>d</sup> I sent a letter by *Mr. Sebastian Ferdinandi*, our interpreter, to the queen of *Singnaty*, in which I gave her an account of what had been transacted betwixt the *Residoor* of the king of *Travankoor* and myself. In the mean while the king's and prince's soldiers were come to blows, several being kill'd and wounded on both sides. Whereupon the prince finding himself besieged in his castle, sent one of his most trusty servants to desire assistance, and some powder and ball for his master, which I thought fit to refuse, for weighty reasons; for whatever may be the opinion of those who think it a maxim of state to fish in troubled waters, I was too well acquainted with the perfidiousness of the *Malabars*, who make not the least account of faith or leagues, unless they are forced to it, than to put the least confidence in them.

In the mean time the beforementioned *Residoor* of the king of *Travankoor* not appearing at the time and place appointed for the removing of some remaining differences, I sent him the following letter, by *Topaes Nicolaes da Costa*.

The captain of *Koulang* sends this letter with his service, to *Narrano Poly*, *Residoor* of *Travankoor*.

The author's letter to the *Residoor* of *Travankoor*.

**P**Ursuant to our mutual agreement, I came to *Koulang China*, in order to bring the treaty begun before to a happy conclusion. But your bigbness did not perform your promise, neither had I the least account since, how the queen of *Singnaty* was likely to relish our transactions. And as the nature of the thing would admit of no delay, I saw myself obliged to send my interpreter to the queen of *Singnaty*, and *Topaes Nicolaes da Costa*, to the *Goenree* and *Barrigetta*, to be inform'd concerning that point. They bring me for answer, that the said queen pretends to the customs

N n n

without

Trouble  
raised by  
Barrigetta  
Pule.

1662. without the least diminution, which is not in my power to agree to. As I am sensible, that I have left nothing unattempted, which might reasonably and honestly be expected from me, for the terminating of these differences, but all in vain, I have nothing left to do, but to protest once for all, according to the strictest rules of justice, in the name of the whole company, against your Narrano Poly, and your transactions, and all others who take part with you, that we will, and hereby declare our selves innocent, and guiltless of all the troubles and miseries of a future war.

Koulang Feb.  
26, 1664.

John Nieuhoff.

In the mean while I had given an account of the whole matter to Mr. *Hustart*, desiring him to come in person, and to endeavour by his presence to put a happy conclusion to the negotiations. He sent me an answer dated *Cochin* the 24<sup>th</sup> of February, intimating that he had intended to set out from thence within two days after, of which he order'd me to give notice to the king of *Travankoor*, and queen of *Singnaty*, which I did accordingly by an express sent with letters to both their majesty's. The 27<sup>th</sup> the *Residoor* of *Travankoor* sent me word by *Topaes Nicolaes de Costa*, that he was willing to treat with me once more about the customs, but that no body except the queen must be privy to the matter; for which reason he could cause a quite different rumour to be raised among the people; but considering with my self that the negroes, who are in great esteem here, might get scent of the matter, and that (as the king had told me himself before) several persons in the first rank were concern'd in the customs, I did not look upon this underhand treaty as advantageous for the company; which made me write to the *Residoor*, that I was willing to contribute all what in me lay, towards the composing of the differences betwixt us, provided it could be done in the same nature as with the other *Malabar* princes, who had not refus'd to read the treaties in the presence of their subjects, to shew that their words were altogether consonant to their deeds. I receiv'd an answer the same evening, in which the *Residoor* desired an interview with me in *St. Thomas's* church the next day. Accordingly I went thither on horse-back with Mr. *James Cher de Venne*. After many contests on both sides, we agreed at last, and the *Residoor* promised to return to morrow to finish the treaty. About this time I receiv'd a letter from the queen of *Singnaty*, in answer to that I had sent her before; as follows.

Another  
interview  
with the  
*Residoor*  
of *Travankoor*.

The queen of *Singnaty's* letter to the author.

I Receiv'd and saw the contents of the letter sent to me from Mr. John Nieuhoff, captain of *Koulang*, concerning the proposed treaty; I will find word in the Month of March to *Kottekkery*, where we will meet together, and I shall be ready to rectify what my plenipotentiaries shall agree to. For which reason I order'd this letter to be written to captain John Nieuhoff.

The next day the *Residoor* of the king of *Travankoor* came to *Koulang*, who was receiv'd by us with all imaginable respect; he began among other things to renew his former discourse about the prince *Gondorma*, upon which it was agreed to delay the last conclusion of the treaty till the coming of Mr. *Hustart*, who was expected every day at *Koulang*.

The 2<sup>d</sup> of March with break of day, the vice-roy of the king of *Travankoor*, call'd by them *Gorsepe*, the chief commander of the negroes, call'd *Matta de Pulo*, and my self, set out for the court of the queen of *Koulang*, which was then kept at *Calliciere*. We arriv'd there about two a clock in the afternoon, and as soon as notice was given of our arrival, we were sent for to court, where, after I had deliver'd the presents, and laid the money down for pepper, I was introduced into her majesty's presence. She had a guard of above 700 soldiers about her, all clad after the *Malabar* fashion; the Queen's attirement being no more than a piece of callicoe wrapt round her middle, the upper part of her body appearing for the most part naked, with a piece of callicoe hanging carelessly round her shoulders. Her ears, which were very long, her neck and arms were adorn'd with precious stones, gold rings and bracelets, and her head cover'd with a piece of white callicoe. She was past her middle age, of a brown complexion, with black hair tied in a knot behind, but of a majestick mein, she being a princess who shew'd a great deal of good conduct in the management of her affairs. After I had paid the usual compliments, I shew'd her the proposition, I was to make to her in writing; which she order'd to be read twice, the better to understand the meaning of it, which being done, she ask'd me, whether this treaty comprehended all the rest, and whether they were annull'd by it; unto which I having given her a sufficient answer, she agreed to all our propositions, which were accordingly sign'd immediately. This done, I recommended Mr. *James Cher de Venne*, who was to succeed me at *Koulang*, to her majesty, desiring her to acknowledge

1662. *Her Majesty's Audience with the Queen of Koulang*

1662. knowledge him as such, and to continue in a good correspondency with our company, by whom I was order'd to go to *Toutekorin*, which she promised to do. I then desired leave to depart, because I expected Mr. *Huflart* every hour at *Koulang*, which she readily granted, and at the same time took a golden bracelet from her arms, which she presented me as a token of her good inclinations to the company. She order'd one of the *Residoors* to fasten it to my arm, but it being too streight, she caused it to be fitted for me, she having once before, viz. when I first gave her notice of Mr. *Huflart's* coming, presented me with another golden bracelet, for which and all other honours, I had received from her majesty, since my residence at *Koulang*, I returned my hearty thanks, desiring her once more not to withdraw her favour from the company. Thus I return'd to *Koulang*, about two a clock in the night, where I was let in through one of the gates, the admiral *Huflart* being the day before arriv'd there with two ships, the *Erasmus* and the *Nieuwenboven* from *Batavia*. The next morning I paid a visit to the admiral at his lodgings, where I gave him an ample account of my negotiations, and other matters relating to our factory here, wherewith he was highly satisfied, and gave me some farther orders

about certain matters to be transacted before my departure.

About the same time the viceroy of the king of *Travankoor* came back to the city of *Koulang*, to compliment the admiral, and to consummate the treaty. The admiral sent him afterwards several presents, and let him know, that if the king his master did give any assistance of men or arms to prince *Gondormo* against *Cochin* and the company, he must expect to be treated as an enemy; he return'd for answer, that he was sure his master would not do it, but always maintain a good correspondency with the company, upon which he was dismiss'd, and left *Koulang* the same night, as did the admiral soon after, who set sail for *Cranganor*, leaving the commodore *Bitter* behind him, who with his wife and family was come aboard the ship the *Nieuwenboven* to load pepper here. His wife being very desirous to see the queen of *Koulang*, I caus'd her to be carried thither in my *Palankin*; the queen receiv'd her very courteously, being extremely well pleas'd with the sight of a *Dutch* woman; and many of the *Malabars* were so curious as to peep into the *Palankin* to see her; they being no less surpriz'd at the sight of the *Europeans* than we were at them. Commodore *Bitter* having by this time got his full cargo, set sail again for *Batavia*.

1662.

The viceroy of Travankoor comes to Koulang.

1662. *Batavia*, as I did the 11<sup>th</sup> to the court of *Gonree*, and so to the prince *Baryette Pule*, where I introduced Mr. *Cherde Venne*, who, as I told you before, was to manage the affairs of the company after my departure; they receiv'd him very civilly, and promis'd to maintain an everlasting correspondence with our company. At parting, prince *Baryette Pule* presented me with a golden bracelet curiously wrought, and the viceroy with a silken suit of cloaths, and so I return'd very well satisfied to *Koulang*, where I prepar'd for *Toutekorin*, for within four days after, viz. the 12<sup>th</sup> of *March*, having first surrendred all my accounts, and what also belong'd to the company, and given the best instructions I could to Mr. *James Cherde Venne*, taken my leave of the chiefest officers belonging to the company, I set out for *Toutekorin*, after a stay of two years at *Koulang*, considering that my appointed time was near expiring, and I had settled our traffick at *Koulang* upon a good foot. I could have been very glad to have stay'd the remainder of my time here, for which purpose I sent a letter to *Colomba*, but the chief director of *Toutekorin* being order'd to *Persia* upon some urgent business, I was forc'd to supply his place. And upon this occasion I think it not amiss to give the reader an account of what I have observ'd most remarkable during my stay on the coast of *Malabar*, together with the products, beasts and inhabitants of this country.

Limits of  
the coast of  
*Malabar*.

Its direct-  
ion.

The coast of *Malabar* is properly called that tract of ground where the *Malabar* tongue is us'd, beginning 50 leagues to the south below *Goa*, and extending to the south to the cape *Comorin*, under 7 $\frac{1}{2}$  degree of northern latitude, about 80 leagues along that coast. On the west-side it borders upon the *Indian* sea, and to the east it is surrounded by a ridge of high mountains, which divide it from the coast of *Coromandel*. It is commonly divided into five kingdoms, viz. *Cananor*, *Calicut*, *Cranganor*, *Cocbin* and *Koulang*, unto which some add the kingdom of *Porka*, *Tanakor* or *Tanor*, *Koulang* and *Travankoor*; not to mention here the petty kingdoms of *Kota*, *Mountingua*, *Badara*, *Chambaya*, *Marta*, *Materie*, and several others among the mountains. It is situate almost in the midst betwixt the line and the tropick of *Cancer*; which makes the days here excessive hot, notwithstanding which, it is a pleasant, extraordinary fertile and healthful country. It is full of very fine springs, pools, rivers and channels, even as far as the mountains, but most towards the sea-side; in which it resembles the province of *Holland*, being scarce passable without boats; tho' most of

their rivers are shallow, and consequently unfit for ships of burden. Here grows a great store of the best pepper, exceeding all the rest in goodness; formerly the inhabitants us'd to exchange the pepper with the foreign merchants for silver, gold, amition and other commodities; but since the *Dutch East-India* company have made themselves masters of the kingdoms of *Cranganor*, *Cocbin* and *Koulang*, and forc'd the *Portuguese* from thence, they have by entering into several leagues with the neighbouring princes, got the monopoly of pepper on that coast into their hands, and have so well provided the three before mention'd places with strong fortifications and garrisons, that they are look'd upon as impregnable. Besides this, the country of *Malabar* is full of cocotrees, especially in the marshes, where these trees thrive better than in any other place in the *Indies*, there being some trees here of 95 and more foot high. They drive a considerable trade with the oil and bark of this fruit, neither do they want wood fit for the building of houses and ships. The air is very pure here, and very cold in the night time, during the three months of *January*, *February* and *March*; and when the nights are very foggy, which questionless occasions the cold, the days being excessive hot. The winter begins here in *April*, or at the most in *May*, and ends in *September* or *October*, with thunder, lightnings and storms: This season produces the most fruits, by reason of the warm rains. Then begins the summer season, which continues till *April* or *May* with intolerable heat, and commonly without any rains, which renders the sandy grounds so hot, that they cannot pass over them with their bare feet, but are forced to make use of a certain sort of shoes, call'd by them *Siripous*. Every morning about nine or ten a clock, the land wind blows from the *East*, and immediately after sunset the west wind from the sea, both which contribute much towards the cooling of the air, as well here, as in all other adjacent islands. What is most observable is, that the land wind never reaches above ten leagues in the sea; an observation which has never been known to mis. The seasons here are quite of a different nature from ours, for whilst during the summer months every thing is dried up in the hot climates of *Europe*, here the fruits appear most florid and green, because this is the winter season in *Malabar*, where it rains continually for six months, during which time you not as much as see the least glimpse of the sun, but in the other six months it never rains. During the months of *October*, *November* and *December*, they are much afflicted with dreadful storms. There is another thing which

Vol. II

1662. is most surprizing here, that when it is summer on the coast of *Malabar*, it is winter on the coast of *Coromandel*. This is occasioned by the mountains call'd *Gate*, which stop the passage of the winds; for whilst on the east-side of these mountains, which extend all along the coast of *Malabar*, they have great heats and droughts during their summer season, those on the west-side have their winter with violent rains. Thus on the south-side of the cape *Comorin*, they have their summer during *April, May, June, July, August and September*, whilst at the same time, those on the north-side have their winter, it being very stormy and rainy on one, and fair and calm on the other side at the same time.

1662. Their ordinary houses are of bamboo canes, cover'd with leaves of coco-trees; some are plastered with carving, without any cellars, garrets or windows. They never lock up their houses, because their household-stuff is not worth stealing, unless they be persons of an eminent rank; their doors are so low, that you cannot enter without stooping, tho' they have also some houses cover'd with lead, copper and tiles, and built otherwise and well fitted up, according to their fashion; their private buildings don't approach in height to ours, they commonly have two or three apartments within one another; within the compass of the middlemost of these apartments is a small square, with some small galleries round about it, which receive the water from the tops of the houses. At the entrance of all their houses, whether rich or poor, are court-yards surrounded with high walls and ditches, and one of strong pallisadoes. These court-yards are for the reception of travellers, who eat, drink and sleep here, with more conveniency than if they were lodged within, being ready at all times to proceed on their journey when the rest of the company goes. Their royal palaces and pagods are commonly built of stone, surrounded with a mud wall, on which are mounted some great cannon. Most of their princely palaces are erected in large ponds or lakes, some having a league and a half in circumference. They have most excellent carvings in wood, with all sorts of images in their houses; their ceiling is of a plain polish'd wood; among the marshes are to be seen many ruins of old houses, which appear to have been built many ages ago. Some tell us, that *Alexander* the great coming into those parts, after he had order'd his admiral to enter by the way of the river *Ganges* the sea, and from thence by the *Euphrates* to *Babylon*, had laid these countries desolate; others ascribe this devastation to *Tamerlane*.

VOL. II.

1662. The *Malabars* eat and drink sitting upon the ground, after the *Mabometan* fashion, almost like our taylors. Their cups, dishes and spoons are made of coco-nuts; people of quality have them made of metal. Instead of bread they use nothing but rice; besides which, they feed upon flesh, fish, spices, fruits, milk and eggs. They drink abundance of water, as likewise the juice of the coco-trees; some of which give 30 quarts of this liquor in 24 hours, but if they are drain'd too much, the trees perish. They also distil a spirit call'd *Arack* out of this liquor, but it is not near so good nor wholesome as our brandy. When they drink they don't touch their lips with the cup, but pour the liquor from above into the mouth; some eat neither flesh nor fish, but live purely upon the products of the ground.

They use amfion very greedily. They take the quantity or the bigness of a pea, this they either mix with *Arack*, or chew it alone, sometimes till they fall asleep; they pretend that this makes them have very pleasant dreams of the *Elysian* fields and such like. When they are to attack an enemy, they take a good quantity of it, which makes them fall on like enraged wild beasts, and the virtue of the amfion being gone, they don't remember what has past, which shews that it is very obnoxious to the memory. Some have accustomed themselves to use amfion every day, some every two or three days; and before I knew the effects of it, I have been often surpriz'd, that they should be so forgetful in such matters as I had treated with them of before. The queen of *Koulang* asking me once among other things, what was the reason the *Dutch* were more active and perseverant than the *Malabars*, who were generally fickle and unsettled, I laid the fault upon the use of the amfion, telling her withal, that the *Malabars* should imitate the *Dutch*, and drink wines, which used with moderation, did acuate the understanding, made the spirits active, and often discovered the truth.

Among these several sects of the *Malabars*, that of the *Brahmans* is most revered, and maintains a peculiar manner of living. They are generally very wise, ready, active, modest and charitable, and strict observers of their promises. They betake themselves to divers employments at pleasure; some are soldiers like the natives, and wear the same clothes, except that they are distinguish'd from them by the cord they wear round their middle, and abstain from flesh. Others are priests, whose business it is to offer sacrifices to their idols, no other sect being admitted to that service.

O o o

Some

1662. Some also encrease traffick, and tho' they grow very rich, yet observe the same rules of living. Some there are among them who addict themselves to natural philosophy and other sciences, but especially to astronomy, others to physick and pharmacy. They eat neither flesh nor fish, nor any other living creature, and drink nothing but water; nor do they ever eat before they have washed and bathed themselves; which done, they only cover their privy parts, and for the rest eat naked. They are forbidden to eat any thing but what is prepared by one of their own sect; which makes them commonly be their own cooks; for they rather chuse to die than eat any thing touch'd by one of another sect; whereas all the others are at liberty to eat what is dress'd by a *Brabman*. They never (no more than all the other *Malabars*) touch the brim of the cup when they drink, but pour it from above into the mouth. They wear a white turbant upon their heads, red shoes, and a callicoe coat, which reaches down to their ankles. Over this they have another large white piece of stuff, which they wrap three times round their bodies, which they draw thro' betwixt their thighs, and tie it together behind upon their buttocks in a knot. They wear about the middle a girdle or scarf of fine white callicoe, as their turbants are, and over the shoulders a piece of colour'd callicoe or silk, as the *Europeans* do their cloaks. They also have long hair, with pendants in their ears. But that which distinguishes them from all the other *Malabars*, is a cord of fine cotton thread, which they wear next to their skin, and is put about them first of all in their temples with a great deal of ceremony, and not without a considerable charge, which is the reason you cannot do a greater injury to a *Brabman* than to tear this cord, which he is obliged to purchase again, if he will pass for a true *Brabman*; and if any of them is to undergo any corporeal punishment, his cord must first be taken from him, which is likewise done if any of them happen to transgress the rules prescribed to their sect. As they pass along the streets in their white callicoe clothes, they tell such as they meet that they are *Brabmans*, because the cord by which they are chiefly distinguish'd is worn next to their skin, and consequently not to be seen; when they are to take an oath, they lay the hand upon it. The *Brabman* women have holes in their noses, in which they hang gold and silver rings, pearls and precious stones, as well as about their legs and in their ears, where they have silver and gold plates set round with precious stones. The wives of the *Negroes*, of the *Moncoris*, and the other *Malabars*,

are not permitted to use these ornaments. They also wear bracelets from their wrists up to their elbows, some of gold and silver, others of glass and tortoise-shell curiously engraven and enamell'd. These women are generally handsome and well-featured, some of them being not inferior in complexion to the *Portuguese* or the brown *Dutch* women. They marry very early, sometimes before they are quite 7 or 8 years old; for the boys and girls are permitted to sport together till they come to be in good earnest; but they take great care not to mix themselves with another sect. The men are allow'd to marry twice, tho' no more than one woman at a time. Be they never so poor, they will be sure to keep their rank, and to oblige such as meet them to pass by with making a bow, in token of their reverence. Those among the *Brabmans* who have lifted themselves among the *Negroes*, are in the same degree with them, except that they observe more austerity. The *Brabmans* are in great esteem with their kings, who keep some of the chiefest always near their person, to advise with them in all matters of moment. Those of the first rank among the *Brabmans*, as well as other *Indian* persons of quality, have commonly a numerous attendance; some of whom carry their umbrellas, others a silver basin full of *Betel*; others one full of water; some are carried in palankins or chairs.

The *Brabmans* have, under pretence of *Feast of the Brabmans*, introduced a feast, which furnishes them with a certain opportunity of being revenged of their enemies. It is a custom among the *Malabar* kings once every year, viz. at the time of the new-moon in *October*, to remember the blessings they suppose they have received from their Idols, by a solemn sacrifice, which is perform'd by setting certain houses on fire, such as are appointed by the *Brabmans*: This is commonly perform'd in the night time, without the least fore-warning given, so that sometimes not only the house, but also the inhabitants, with all their goods are burnt, no body daring to quench the flame. This they call *The sacrifice of fire and blood*.

There live many of the *Banjans* of *Cam- Several baya* in *Malabar*; these have also *Brabmans*, sorts of *Brabmans*, who are in great esteem among them; the *Brabmans* of *Malabar* are allow'd to frequent their temples. The *Banjans* themselves lead as austere a life as their *Brabmans*, but they are of an inferior degree, nor can they intermarry with them. In the kingdom of *Calicut* is a certain sort of *Brabmans*, who despise all images, and live in chastity after the 20 or 25<sup>th</sup> year of age. They

Divers sorts of inhabitants.

The Nayar.

1662. They are so averse to the female sex, that as often as they stir abroad, some body cries out aloud before them *Poo, Poo, i. e.* keep back, keep back, to let the women know they must keep out of sight. These don't wear the cord twisted of cotton thread, neither do they abstain (like the other *Brabmans*) from flesh, fish or wine; but to preserve their chastity eat daily a certain quantity of the pulp of the fruit *Karusa*, being taught by experience, that the same has a quality of checking the venereal appetite. Neither do they bury their dead bodies like the other *Brabmans*; some strew themselves all over with ashes, and are enclosed day and night in iron cages, which are so small, that they can scarce sit upright in them. Others burn or scald certain parts of their bodies, whereby they suppose to gain the Affections of the common people. Thus far of the *Brabmans*.

Several sorts of inhabitants.

For the rest it is to be observed, that the inhabitants of the coast of *Malabar* may be divided into foreigners and natives; the foreigners are properly those call'd commonly *Malabars*, being a colony of *Arabians*, who have fix'd their habitations there many ages ago, near the sea-side chiefly. The natives are pagans, divided into *Brabmans* or *Braments*, *Bramos* or *Bramen*; into the *Nairas* or *Nayros*, and into the common people call'd *Moncoris* or *Pouleas*, and otherwise *Parvas*. They are also divided into five several degrees; the first are the royal families, among which the house of *Gondormo* is one of the most illustrious; the second is the sect of the *Brabmans*, or of the priests. The third is the military order or nobles, call'd the *Nayros*; the fourth comprehends the merchants, and the fifth the *Parvas* or fishermen.

The Nayros.

The *Nayros*, as I told you, are descended of noble families, and brought up to the war. They appear with a shield on their left-arm, which they carry aloft, and with a naked sword in the right-hand. They are very haughty, and at first pretended to dispute the rank with the *Portuguese*, which occasion'd no small disturbance, 'till the difference was agreed to be decided by a single combat betwixt a *Portuguese* and a *Nayros*, in which the last being worsted, the *Nayros* ever since were forced to give way to the *Portuguese*; but all the other *Malabars* must give place to the *Nayros*. They are generally well proportion'd, tho' of a brown or olive colour; they take a singular pride in having long ears, which they perform by art; they bore holes thro' the ears of both boys and girls, which they fill up with palm-tree leaves roll'd together; these rolls they make bigger and bigger by degrees, 'till the holes are

1626. extended to the utmost reach the holes can bear, and hang down to their very breasts: This is accounted one of their chiefest pieces of gallantry, and they adorn them with gold, silver and jewels. Tho' the *Nayros* are from their infancy train'd up in arms, and are very bold and brave, they are nevertheless very civil and meek in their conversation, according to the custom of that country; notwithstanding which they are mightily addicted to robbing upon the high-way, and will kill the travellers unawares, unless they be well upon their guard. This is the reason why the mahometan *Malabars* dwelling in this country, whenever they are travelling from one place to another, take one of these *Nayros* along with them, who is their conductor for a certain piece of money, to the next place where they take another, and by this means may pass without any danger thro' a thousand of *Nayros*, tho' their conductor should be an old decrepit person, or only a boy. These *Nayros* are strict observers of the times, which are neglected by the common people, for they will not converse with any of the inferior orders, except the *Brabmans*; nay, if any of the vulgar fort happen only to touch a *Nayros*, as he passes by, he will make his servant that carries his meat after him, to throw it down upon the ground; nay, if they do enter their houses, or only touch the doors and walls, they will not eat there for fear of being defiled. However the *Nayros* are not altogether so nice in these points, as the *Brabmans*. For the rest, they are not much inclined to vice, sodomy and incest; nay, the boys and girls, tho' they converse together daily, and that without cloths, you shall seldom observe in them either in word or action, any thing that savours of uncleanness. The *Nayros* scarce ever laugh, and that not but upon extraordinary occasions; and if they see others laugh they will look downward. Those *Nayros* who are watching at the town gates, and serve for conductors to travellers, are the poorest of all, yet will they rather follow this employment than a trade, which they look upon below their quality. They apply themselves from their infancy to the use of arms, and frequently fight together with swords and targets, which renders them infinitely active at that sport. They are the best wrestlers in the world, and are very nimble on foot. They attack their enemies quite naked, their privities being only covered. Their arms are bows, arrows, javelins, swords and shields; these are very large, which they use with the utmost dexterity to cover their bodies. On the hilt of their swords they have small plates of metal, which

1662. which makes a noise when they are fighting, and serves to animate them. Since the Portuguese and Dutch have got footing there, they have also learn'd the use of fire-arms to that degree, that they will turn right and left, and give a volley of shot with the same order as the Europeans do.

Their marriage.

One *Nayros* is not allow'd more than one Wife at a time, but the women in this point have got the start of the men, they being permitted to have three husbands at once; except that a woman of the sect of the *Brabmans* that is married to a *Nyros* is not allow'd more than one. Each of these three husbands contribute their share towards the maintenance of this woman and her children, without the least contest or jealousy. As often as any of them comes to visit her, he leaves his arms at the door, a sign that neither of the other two must come in, for fear of disturbing the first. From hence the poorer sort reap this benefit, that they have the use of a wife, yet contribute only the third part towards the maintaining of the family; tho' on the other hand this carries along with it a great inconveniency concerning the inheritance of their children, which they recompense in some measure, by making the sister's children the heirs of their uncles. The *Nayros* employ the common people in the country and other drudgeries, but in their houses they make use of none but *Nayros* (or gentlemen) tho' very poor, who are willing to serve them for their bread. The vulgar sort are all clad after the same manner, being quite naked except that they have a small girdle round their waste, on which they hang a piece of callicoe, or perhaps of the bark of a tree, or a few leaves to cover their privities. The women wear a kind of vestment of callicoe, which reaches down to their knees, and have very long hair; whereas the men are obliged to cut their hair close, except one tuft which they keep on the crown of their head. All the *Malabars* have black teeth, occasion'd by the continual chewing of the leaves of *Betbel*: Black teeth are in great esteem among them, because those that don't chew *Betbel*, are considered here as of a mean extraction. The *Malabars* are said to be much addicted to sorcery, who are able to kill people as they pass by or at least throw them into a lingering distemper. They are extremely covetous, and will venture at any thing for a small gain. The women are generally unchaste, the young women about 17 or 18, being obliged by custom to dispose of their maidenheads, for no body cares to marry a maiden here, but such as have been best beloved, soonest meet with a husband. The *Malabars* have great store

1662. of great artillery, muskets and pikes; nay, their arms were in more esteem than those of the Portuguese, only they did not know the art of hardning their armour: They now make very good and strong gun-barrels and gun-powder. The children of the *Nayros* are from the seventh year of their age exercised in arms, and train'd up to the wars; but every one betakes himself to one peculiar kind of arms, it being their opinion, that they cannot excel in the use of all. They anoint the limbs of their young children every day with a certain oil, to make their joints pliable; for when they forced to fly, they put their greatest confidence in the agility of their bodies, and will in an instant turn back upon their enemies, and attack them in the rear; besides, that in their flight they throw their javelins backward with great dexterity, and as soon as they have thrown their darts, they know how to shelter themselves behind their shields.

Tho' the *Nayros* in general are very good soldiers, yet there is a certain kind among them call'd *Amokos*, who are esteemed above all the rest, being a company of stout, bold and desperate bravadoes. They oblige themselves by most direful imprecations against themselves and their families, calling heaven to witness, that they will revenge certain injuries done to their friends or patrons, which they certainly pursue with so much intrepidity, that they stop neither at fire nor sword, to take vengeance of the death of their master, but like mad men run upon the point of their enemies swords, which makes them be generally dreaded by all, and makes them to be in great esteem with their kings, who are accounted the more potent, the greater number they entertain of those *Amokos*; tho' this their fool-hardiness is chiefly attributed to the excessive use of the amfion. You see the streets of all the towns on the *Malabar* coast full of *Nayros*, with their arms always about them, tho' many of them dwell in the country, and a good number are kept near the king's person. Most persons of quality here maintain some of those they call *Janguys*. If a quarrel happens to arise betwixt a *Nayros* and another *Malabar*, the king allows the latter a guard of another *Nayros*, and as long as he stays with him, they dare not fight, the first aggressor being guilty of high-treason; for persons of the chiefest rank, if they will be admitted in the number of the *Nayros*, must have the king's peculiar leave for it, and are afterwards distinguish'd by a gold ring they wear on the right arm, or by a buffler's horn. The *Nayros* frequently hunt the tigers, some apply themselves to philosophy, but especially

1662. pecially astronomy, but never to traffick or any handicraft trade. They eat all sorts of meat, except cows flesh, and are very fond of pork. They go above half naked, with bare heads and feet, having only a large piece of white callicoe wrapt round their middle, which reaches down to their knees, and is drawn thro' betwixt their thighs, and tied together behind above their buttocks. They wear also a red silken scarf, with a fringe of about half a foot long, being half gold and half silk. They let their hair grow very long, without ever cutting it, by which they are distinguish'd from the common people; they have a way of tying it very neatly together in a puff on the crown of their heads. Their shield they carry on the left arm, and their sword in the right hand; some have also a javelin, musket or pike. The *Nayros* women are clothed after the same manner as the men, so that there is not the least distinction to be seen betwixt boys and the girls, till the breasts begin to appear in the last. They are forbid to marry any other person but of the same rank, and but one at a time; and in case a *Nayros* woman should marry another, except a *Nayros*, she instantly forfeits her head; in the same manner, if a *Nayros* should marry a woman of another tribe but a *Nayros*, he is punished with death. This they have provided against, because they would not have their blood mixt with strangers or those of an inferior rank, of which they are so cautious, that they will not as much as suffer any to approach them; for which reason, when they walk abroad, they cry out aloud to the common people, *Popoite*, keep back; for if any of these should touch a *Nayros*, he would certainly ruin him.

The common people of Malabar.

The common people of *Malabar* call'd *Moncois* or *Poulias*, or otherwise *Parvas* or *Parivas*, are a wretched sort of slaves; they are blacker and much uglier than the *Nayros*, neither must their ears hang down above three inches at most. They are again of different kinds, for those inhabiting near the sea-shore, are properly call'd *Moncois*; these are all fishermen, and all along the coast of *Malabar* are employed at sea in rowing and otherwise for certain wages. Their wives and daughters perform all manner of drudgery by land, and expose themselves for money to the first man, without the least distinction of quality or religion, without the least fear from their husbands, who are well enough pleas'd at it. For it is to be known, that there are no common strumpets here, but the wives and daughters of these *Moncois*, and of the *Tivas*, who are handicrafts men; for the rest are obliged to contain themselves within

Vol. II.

their own tribes. The common people are often put to a great nonplus when they happen to meet a *Nayros* at the corner of a street, when they are fain to stand aside till they are pass'd by. There is another kind among the vulgar sort, call'd by some *Tivas*, whose employment is to draw the liquor from the coco-trees: The rest are handicraft and husbandmen. But these intermarry with one another, notwithstanding there is some difference in their rank, for the husbandmen claim the first, and the *Tivas* or handicrafts men the second degree, the *Moncois* or fishermen are the last.

Those call'd *Parivas* or *Parvas* live in the villages near the sea side; some of these live near the coast, and in the isle of *Markar*, where, as well as near *Touletorin*, betwixt the cape *Comorin* and the isle of *Ceylon*, they live upon pearl fishing; they are a stubborn generation, more addicted to laziness than labour; they live chiefly upon pearl and oyster fishing, being the best divers in the world, unto which they are accustomed from their first infancy. Whilst the men are abroad at sea, the women and children are employ'd in gathering of pearl dust near the shore. They are a cowardly and deceitful sort of people, lying and deceit being so customary among them, as not to be look'd upon as a sin. They are great admirers of the ecclesiastical laws, it being a strict custom among them, not to punish a crime, if the transgressor confesses it and promises amendment. The *Parvas* were formerly all *Pagans*, but being sorely oppress'd by the *Mahometans*, they rebell'd against them, and with the assistance of the *Portuguese*, shook off the yoke, which proved the opportunity of their conversion to the *Romish* religion.

For finding themselves daily more and more oppress'd, by the advice of one *John de Cruis* (a native of *Malabar*) they sent their deputies to *Cochin*, to crave assistance against the mahometans, offering at the same time to be baptized. The *Portuguese* receiv'd these *Pantagitini* (being then their magistrates) very courteously promising them immediate succours against their enemies, which had so powerful an influence upon these deputies, that to shew their gratitude, they receiv'd baptism immediately, and took upon them the surname of *De Cruis*, which name is retain'd by many of the *Parvas* to this day. After the *Parvas* had rid their hands of the *Moors*, with the assistance of the *Portuguese*, and got the pearl fishery again into their hands, many thousands of them, at divers times and places, embraced the christian faith; and under the viceroyship of *Stephen Gamma* the *Portuguese*, viz. about 1500, above

The Parvas.

How they were converted to the Roman faith.

1662. 20000 *Parvas* received baptism; but for want of good ministers, who understood the *Malabar* tongue (few of the *Portuguese* clergy being willing to settle here) they soon return'd to their pagan superstitions, having scarce any thing left among them but the name of christians, till *Francis Xavierius* (who arrived in the *Indies* 1540, and went by the name of the great and holy father) being inform'd by *Michael Vas* of the miserable condition of the *Parvas*, resolv'd to go thither from *Goa*, to re-establish the decay'd state of christianity among the *Parvas*. Accordingly he set out from *Goa* (after a stay of five months there) in the beginning of *October* 1543, in company of *Francis Manfilla*, who was come along with him out of *Portugal*, and two novices of the college of *Goa*, who understood the *Malabar* tongue. After his arrival at the east end of that coast, near the cape *Comorin*, finding that his young interpreters stood him but in little stead, he found out this expedient; he call'd together such of the natives, as he knew to be well versed in the *Portuguese* tongue; among those he chose certain persons, who join'd with those two he had brought along with him from *Goa*, translated the chief articles of the christian faith, the ten commandments, with a short explication, a general confession of faith, and some other such like necessary matters into the *Malabar* tongue. Then he began to preach to them according to the capacity of his auditors, explaining to them the chief duties of a christian, the glory of heaven, and the punishment of hell, with the reason, why some deserve heaven, and the other hell. He explain'd afterwards to them the sign of the cross, and began to unfold to them the mystery of the holy trinity, of which they had been quite ignorant before, and made such a progress among them, that whereas at his coming thither he found not above 2500 demichristians, at his going away he left near 40000 good christians behind him. *Xaverius* himself in his letter dated the 12<sup>th</sup> of *Jan.* 1554, speaks of the vast increase of the christians in those parts, saying thus:

King, you may guess what a great number of these poor people were reduced back to the flock of Christ from thence, that my arms and hands used to be tired with baptizing, sometimes whole villages at a time. My strength and voice have often failed me, by reason of the frequent repetitions of the articles of faith.

The *Romanists* tell us, that besides these, *Xaverius* converted ten towns betwixt *Bringen* and *Permanel* (and six or seven more near *Bengala* and *Ramanankoris*.) This they say he performed by his miracles, by healing the sick, casting out demons, and rais-

ing the dead from their graves. He raised 1662. a certain young man, the son of a poor widow, who was choak'd in the mud, from the dead. The same he did to another young man, the son of a person of quality in the city of *Puvicale*, and to a young maid. Another woman in labour, being reduced to the last gasp, he deliver'd without the least pain, as soon as she had received baptism. By his miracles he converted a whole village at once, near *Toutekorin*; so that both christians and pagans used to have their last recourse to him in their sicknesses, many of which he restored by reading the gospel over them; as may be seen more at large in the life of *Xaverius*, of *John de Lucenas*, and other *Roman* authors.

But whatever success *Xaverius* had in converting the *Parvas* and others to the christian religion, certain it is, that he brought no more than one *Brahman* over to the *Romish* faith, tho' he bestow'd much time and pains in speaking to them. And among the *Parvas* themselves are many to this day, who adhere so deeply to their pagan superstitions, that they make but little account of christianity. However, those that have ever since persevered in the *Romish* faith, are from time to time furnish'd with and instructed by the *Portuguese* priests; who ever since 1685, when we made ourselves masters of *Toutekorin*, lived about a league or two from the town in the country, whither they carry their children to be baptized. They are very obstinate in their religion, which extends no farther than the knowledge of the christian faith, our father, the ten commandments and an *Ave Mary*, but they follow blind-fold the directions of the *Portuguese* priests, carry *Pater Nosters* and a rosary constantly about them, and use the sign of the cross on their foreheads and breasts, like as the *Roman* catholics do. The *Dutch* ministers of the protestant religion, have several times attempted to introduce the reformation into the churches of the *Parvas*, both before and since we were masters of *Toutekorin*, but all in vain; for tho' we caused the word of God to be preached in the *Portuguese* tongue, the *Parvas* durst not venture to come to church for fear of the *Roman* priests living among them. These *Parvas* declared to *Xaverius* and *Michael Jassus*, in those days, that whilst they were yet involv'd in darkness of paganism, the devil used to appear to them in most frightful shapes, so that they durst not stir abroad at night, or go a fishing, unless in great companies. He us'd to enter into the bodies of the living, and declared he would not leave them, till they had erected

temples

temples for him. But since they had embraced the christian religion, the devil never had appear'd either in their houses or vessels, tho' they freely went abroad a fishing without any company. *Xaverius* having exhorted them to persevere in their religion, set out from thence to *Makarara* and the adjacent places, and so further to the isle of *Ceylon*.

The Mahometan Malabars.

All the *Mahometan Malabars* are either merchants or pirates; if any foreigners come into the harbours where these pirates lie, they endeavour to engage them into their service; which if they accept of, they maintain them and their families throughout the whole winter; when they are just a going to engage an enemy, they take some *Betel*, by which they swear to stand by one another; if they take a prize, they ranfack the ship, and all the mariners and passengers before they come ashore; the captain and other officers take the best part for themselves, the rest is divided among the crew. These poor wretches endure incredible fatigues and miseries at sea, and tho' they have no head that has any legal authority over them, they seldom fall out or quarrel, a thing scarce to be believ'd among us. Several of the richer sort of the *Malabars* equip certain vessels, with a good number of soldiers and galley slaves, which always keep at sea, except that now and then the captain comes ashore to dispose of the booty, which the merchants buy without any regard, whether they belong to friends or foes, provided they can have a good bargain; the *Mahometan Malabars* knowing no other preference but riches: the merchants are distinguish'd only by their habits; both these and the corsairs being never to be seen without arms; but the merchants wear their hair short, and have a bonnet of red scarlet cloth upon their heads, sometimes with a handkerchief rowl'd about it like a turbant, which they call *Mundu*, and are commonly embroider'd with gold and colour'd silk. They half shave their beard, but without whiskers, wear a silk or callicoe vest, reaching three inches below the middle, and under that a kind of drawers hanging down to the knees. They commonly carry a silk or callicoe handkerchief flourish'd, in which they tie and hide their purses. The corsairs never shave their heads, but wear their hair very long, like the women, which they like the rest of the *Indians*, tie together in a knot, and wear one of these flourish'd and embroider'd handkerchiefs over it; for the rest they go quite naked, except that they wear a silk vestment down to their knees; both the merchants and corsairs have knives with silver hasts, on which hang all sorts of toys,

such as tooth-picks and the like, all curiously wrought.

The corsairs shave their beards, but leave whiskers, which in time grow excessively, that so one may tie them together behind. These, as well as all the *Malabars* use no shoes. Their women are clad like the men, neither do they wear any other ornament upon their heads but their hair, but have pendants in their ears, and rings on their fingers and toes. They wear a slight callicoe coat, reaching only to the middle, and under it a silk or callicoe vestment, from the middle down to their knees; they walk bare-footed like the men. All the *Malabars* are of a middle size, and very hairy upon the breast and other parts of their bodies. The women are very well featured, but small of stature. Their men undergo incredible fatigues at sea, and tho' they are *Mahometans* they use the *Malabar* tongue, and pay allegiance and taxes to the several kings of the *Nayras*, under whom they live, which is commonly near the sea shore. Their priests never meddle with any thing except marriages, and what relates to their temples. They are clad in white, after the *Arabian* manner; besides which, they have a certain kind of religious men, call'd *Abedallen*, or ministers of God, who vow poverty, and beg in the country: You may see sometimes 30 or 40 of them together, tho' they travel not above two or three at a time, and sometimes one alone.

The country of *Malabar* was formerly under the subjection of one potent prince, *Sarama Perimal*, who at the persuasion of some *Arabian* merchants that traded thither, having embraced mahometism, became so great a zealot of that religion, that he resolv'd to leave his kingdom, and to undertake a pilgrimage to *Meccha* and *Medina*, to visit *Mahomet's* tomb: And having no children, divided before his departure the whole country, betwixt his chief favourites and courtiers, to wit, the country of *Cananor* to his Esquire; to his sword-bearer, who was his darling favourite, *Calicut*; to his scepter-bearer *Cochin*; and to another *Koulang*, unto which he annexed the title of kingdoms, and gave several other countries to others of his friends. Upon his sword-bearer, who had *Calicut* for his share, he bestowed the title of *Zamory* or *Zamorin*, or emperor, and to have a preeminency above the rest: For *Zamorin* signifies in the *Indian* tongue as much as an emperor, being otherwise express'd by the word *Tambarana*, i. e. God, which is the reason that all the other *Malabar* countries follow the religious ceremonies of those of *Calicut*, as being the chiefest kingdom of *Malabar*.

1662.

1652. *Malabar*. From hence it is, that the *Zamorin* claims the preheminance before all the other *Malabar* kings, he having alone the prerogative of coining. The two next in rank were the kings of *Koulang* and *Cannor*; besides which, many other petty princes on the coast of *Malabar* claim the title of kings, tho' they are not really so, nor enjoy the prerogative of coining. The *Zamorin*, or king of *Calicut* lost a considerable share of his lustre, after the coming of the *Portuguese* into those parts, with whose assistance the king of *Cochin* freed himself from all subjection formerly due to the kings of *Calicut*, and soon after arrived to that pitch of greatness, that they thought themselves not in any wise inferior to the *Zamorins*, and waged continual war against them. Nevertheless most of the petty *Malabar* kings, and the *Nayros* are vassals of the *Zamorin*, and never speak of him but with a great deal of reverence, except the king of *Cochin*; and the king of *Koulang* being the most remote of all, pays the *Zamorin* less respect than any of the rest: However, all the kings of *Malabar* are sovereigns in their own dominions. The *Malabar* kings never marry, but maintain a concubine of a noble family, who lives commonly in the same palace; if they happen to disagree, another is taken in her place, tho' they are so modest as seldom to change their bedfellows.

The sons born from these concubines are not regarded as king's children, neither do they succeed in their territories or estates, but are heirs only to their mothers, except what money the kings are pleased to bestow freely upon them, to make them live with the more lustre among other gentlemen: But the king's sisters sons inherit their dominions. These sisters don't marry no more than the kings, but are at liberty to chuse a gallant, such a one as they like best. If they have three or four sons, and two or three daughters, the eldest son succeeds the king his uncle, and the other brother after him. After their decease, the succession goes to the eldest son of the king's second sister, and to his brothers afterwards. After their decease, the sons of the other sisters are the next heirs to the crown, so that the succession descends from the brothers to their sisters sons. If it happens that the king's sisters bear no sons, the chief man of the kingdom elect a king who is next of kin, but for want of such a one, chuse whom they please. When the king's sisters are arrived to age of maturity, viz. to their 13 or 14 years, they pitch upon one of the nobility whom they like best; unto whom, after they have made him considerable presents, they send word

that he is chosen to get her maiden-head, and to get her with child. The young noble man accosts her the first time with a great deal of respect and ceremony, and after having tied a very fine jewel about her neck, he diverts himself in private for some days with her, and so returns home: If she proves with child, it is well, if not, she commonly chuses some *Brabman* or other to try his strength whether he can get her with child. When a *Malabar* king dies, the corps is burnt three days after. All his subjects, from the next successor to the meanest child, have themselves from head to foot, leaving no hair, except what is on the eye-brows and eye-lids. They are also obliged to abstain from the use of *Betel* for the space of 13 days, and if any one should be found to chew *Betel* during that time, they cut off his lips. During these 13 days they dare eat neither fish nor flesh, and the fishermen are forbidden to fish upon pain of death. Considerable alms are given to the poor out of the king's coffers, and the *Brabmans* are provided with victuals at the publick charge. After the expiration of these 13 days, every one is at liberty to eat what he pleases, except the new king, who is tied to the same rules for a whole year after; during which time, he must neither have the hair of his head or of his body cut, nor pare his nails: He is obliged to say certain prayers every morning, and must eat but once a day. Some time before dinner he bathes himself, which done, he must forbear to cast his eyes upon any body till after he has taken food. Towards the latter end of this mourning year, his next successor in the kingdom, the other princes of the royal blood, and other persons of the chiefest quality attend the new king, and pay their homage to him, in the presence of many thousands; at which time the new king declares his next successor, and the others each in his degree; which done, he confirms the lords there present in their respective places and offices. He that is declared the next successor to any new king, is oblig'd from that time not to appear at court as long as the king lives; but those princes who are to succeed him may continue there. Before the above-mentioned 13 days are expired, the new king has not the least authority in the kingdom, which they take for a general maxim here, to see whether any body else will lay claim to the succession: But, after the expiration of this time, the great men of the kingdom, and chief officers of state, engage the new king by a solemn oath, to maintain the laws made by his predecessor, to pay his debts, and to endeavour the recovery of the territories lost under

under the reigns of his predecessors. Whilst he takes the oath he lays his right hand upon an oil cask, in which are set up many lighted wicks, and with a drawn sword, which he holds in his left, touches a jewel set in gold within the cask. This done, they strew rice upon his head with a great deal of ceremony, and certain forms of prayers, turning their faces to the sun. In the same manner, all the princes of the blood, and other great men swear fealty to the new king. During the first 13 days after the king's decease, the sole administration of the government is lodged in the lord chancellor, who has also the management of the treasury, without whom the king cannot take or dispose of the publick money, unless it be in case of the greatest necessity. It is also the chancellor who puts the king's mandates in execution. The first in rank next to the king are those call'd by them *Kaimales*, then the *Brabmans*, who are in great esteem in those courts, the king of *Calicut* himself being of that sect, and wearing the twisted cord. After the *Brabmans* come the *Nayros*, or military order, the true off-spring of their ancient nobility; then come the vulgar or common people, call'd *Moukois*, or *Pontias*, or *Parvas*: The king is the only judge here, before whom are brought all such as have committed any crime, or refuse to pay their debts: In his absence certain great men of the court determine all affairs of any moment; but if a difference arises betwixt two or more *Moukois* or any strangers, he that thinks himself aggrieved, makes his complaint to the next *Nayros* he meets, who is obliged to do him justice immediately, without receiving any reward, unless the plaintiff will voluntarily give him a present: This holds in matters of small consequence, for all matters of moment are decided before the king in person. Their ordinary punishments are imprisonments, or the loss of a joint of a limb; if the crime be capital the malefactor is thrown to the elephants. They have no other prisons but what are in the royal palaces. In case of any difference betwixt two *Pagans*, when the truth is to be verified by a solemn oath, they put one hand into boiling oil, or else lay hold of a piece of red hot iron; sometimes they swim cross a river swarming with venomous creatures; it being their opinion, that if they have spoke the whole truth, they shall not receive any hurt; but the trial with the hot iron is most generally received. When the *Malabar* kings or their governors intend to inflict a punishment upon the inhabitants of a certain place, they surround it with wooden stakes like an enclosure, out of which they must not stir, neither may they buy or

A peculiar way of taking an oath.

sell, or have the least communication with others, till the same be removed again under pain of death. This is sometimes done also before the doors of private persons.

All the *Pagans* here, as well *Brabmans* as the *Nayros* and *Moukois*, burn the carcasses of their deceased friends; tho' this was more universally practis'd before the *Portuguese* and *Dutch* introduced and settled the christian religion here. They take peculiar care to provide in their life-time as much fine scented wood and other precious drugs as they think requisite for the burning of their bodies to ashes, which is afterwards divided among their relations and friends, who preserve them, and at their festivals mix them with water, and paint their faces with them. When a *Brabman* happens to die, his widow is obliged, as a demonstration of her affection towards her deceased husband, to burn herself; this is commonly done under the noise of several musical instruments, to suppress the doleful outcries of the dying person, and in the presence of their next kindred. However they may excuse themselves as to this point if they please, but then they are branded with infamy, their hair is cut off close, which they must not let grow to any length again; they are excluded from the society of other women, nor are allow'd to marry again. Notwithstanding which, many chuse rather to dispense with these disadvantages than to burn themselves. The wives of the *Nayros* are not obliged to this custom, tho' there are not wanting instances, that they have thrown themselves into the flames which consum'd their husband's carcass; the men are not engaged to mourn for their wives, except that they are forbidden to marry again.

The marriages of the richer and better sort are celebrated here with a great deal of solemnity. The first thing they do after matters are agreed betwixt them, is to repair to the *Pagode* or temple, where the priests perform certain ceremonies; after this, the friends and relations of the new married couple, both men and women, lead the bride for 15 days consecutively to the bridegroom's house, where they are entertain'd at his charge; most of the women singing and playing upon flutes, small drums, and other musical instruments; the bride and bridegroom are placed together very richly attir'd, especially with jewels, to such an excess, that they have been computed to amount sometimes to 200000 crowns. The room is hung with fine silk hangings interwoven with gold; and among other things, a plate with *Bebel* offer'd to every one there present; nay, even to those that are strangers; towards

1662.

Their funeral.

Their marriages.

1662. the evening the women reconduct the bride to her house. At the expiration of the 15 days, the bride and bridegroom are mounted on an elephant richly accoutred, so as to face one another; the elephant is led by a *Nayros*, and surrounded by the friends and relations on foot; thus they are conducted thro' the whole city, and are sure always to stop at the doors of any of their nearest kinfolks, relations or particular friends, who present them with *Betel*, fruits and sweet meats, and anoint the head of the elephant with sweet scented waters; they are very careful not to miss any of their friends houses, for if any such thing should happen, they would look upon it as a signal affront. When they come to the *Pagode* they dismount, and after they have tarried there for some time, return to the bride's house, where the marriage is consummated, each of the guests being obliged to present the *Nayros* that led the elephant with a coco nut.

They begin their new year in *September*, but have no fix'd day, which they regulate according to the decision of the astrologers and conjurers, who pretend to find out by their art the very hour which is likely to be the most fortunate for the beginning of the year. All those that are above 15 years of age cover their faces that day, for fear of casting their eyes upon any thing; thus they are led by children to the temple, where uncovering themselves, they fix their eyes upon what object they find directly before them; if this happen to be an idol (which their temples are full of) they have a peculiar veneration for it, they look upon it as a good omen that the next year will prove prosperous to them.

*Their custom.* All over *Malabar* they use a peculiar language call'd by them *Malkama*. Paper they have none, but instead of it write upon the leaves of the wild coco-trees, with an iron pencil or pen; which contain not only their religious ceremonies, but likewise the whole series of their most ancient histories. These leaves they cut all in the same shape of the breadth of two inches, and two hands length; of these they lay together as many as they think fit, and put a small stick thro' them on the top; which done, they fasten the stick on both ends to the leaves with a pack-thread, which they loosen as often as they have occasion to peruse them. Each of these leaves is call'd *Ola* by the *Malabars*. They exceed all the *European* writers in swiftness, which they perform with that dexterity, as to turn their faces frequently from the leaves, and to entertain others with talking whilst they are writing. The *Malabar* tongue is very

1662. difficult to be learn'd, by reason of its multitude of words, one and the same thing being express'd by different terms; nay, each day throughout the year is distinguish'd by a peculiar name. Several *Portuguese* Jesuits have attempted to give us an insight into the *Malabar* tongue, and among the rest father *Gaspar Aquilar*. They have their peculiar letters, which are very ancient, and resembling the *Syriack* characters.

The inhabitants of *Malabar*, as we told you before, are either natives, or descended from foreigners; the last of which being first come thither out of *Arabia*, are *Mahometans*, as the natives are *Pagans*. Some are of opinion, that all the kings of *Malabar* follow one and the same religion, but that their subjects are divided into 18 several sects; but, as far as ever I could learn by the most exact enquiry I was able to make, all the natives of *Malabar*, as well *Brabmans* as *Nayros* and *Moukois*, perform their religious worship in the same manner; for they adore their idols, and the sun, as they rise in the morning. In their temples you see a golden cow, or some other image, unto which they pay their devotions; which is the reason that neither the *Brabmans*, *Nayros* nor *Moukois* will kill this beast, but pay such reverence to it, that they paint the walls of their houses with its dung mix'd with water; thus, when the king of *Calicut* is to bathe himself, fifteen marks with cow-dung in their silver basons, plaister the rooms with it thro' which he is to pass twice aday. Their chief God they call *Parabramma*, with three sons near him, in remembrance of which the *Brabmans* wear a cord twisted of three threads on their bare skin. They not only worship man, but, as I told you, the beasts also, and erected temples for them, exceeding in magnificence those of the ancient *Romans*. There is one temple dedicated to the ape, the gallery of which is supported by 700 marble columns. Besides the cow they pay likewise a godly veneration to the elephant, it being their opinion, that the souls of men transmigrate into those beasts. They have many books, which contain an account of their religious ceremonies, much resembling the ancient *Greek* and *Roman* fables. The priests and *Brabmans* keep these books from the sight of the vulgar, these being their oracles, unto which they have recourse for their prophecies, to blind these poor wretches, as has been confess'd by some converted *Brabmans*. They make however much more account of religion than the *Nayros*; for they daily provide (at the king's charge) a considerable quantity of boil'd rice in their temples.

They keep continually burning lamps in their temples, and their prophets are almost cover'd with bells, which when they dance and make other awkward postures make a great noise; the *Monkoi* have their own temples, which are natively kept; they don't frequent them above once a month, viz. at the new moon, because they can spare no more time from their daily labour: At the entrance, each of them is presented with some ashes mix'd with water. The *Nayros* go commonly once a day to their temples, where each mutters out a short prayer; these temples are disposed throughout the whole country, and are most frequented at certain days, when they repair thither with a great deal of devotion; some for 20 or 30 leagues, for they have their appointed feasts, but two or three before all the rest. The chiefest is that of the new-years day, when the *Nayros* come to pay their reverence to the king, who receives them standing at a window, and throws a certain quantity of *Betel* to each, and some gold and silver among them, as well as the rest of his subjects that appear there.

The *Malabar* kings, *Brabmans* and *Nayros*, pay likewise their devotions to serpents, which they consider as evil spirits made by God to torment mankind for their sins. You meet here with certain vagabonds who carry serpents in a basket, with some bran for their food, hanging on a stick, carried on the shoulders of two fellows; some of these serpents are six, seven or nine foot long, of a grass green colour, and not above an inch thick; some are very large and bulky, with grey spots; so soon as these *Malabar* vagabonds begin to play upon a certain instrument like a bagpipe, the serpents set themselves upright upon their tails, twist themselves in a most surprizing manner, and soon after raise their fins or bristles, which are near the head, and fall on with such fury, as if they would tear one another to pieces, to the no small terror of the spectators.

The Mal-  
leens.

On the tops of the high rocky mountains of *Malabar* (on the foot of which live the christians of *St. Thomas*) dwells a certain nation call'd the *Malleens*, they have a pretty good tillage about 13 or 14 leagues from *Madura* call'd *Priata*. According to the description given us by *Plutarch* and *Curtius*, and the resemblance of their names, these may not unlikely be the same mention'd by them as the most warlike nation of all the *Indians*, *Alexander* the great having receiv'd a mortal wound as he was

1662. attacking one of their cities. Now adays they don't inhabit any cities, towns or villages, but only certain enclosures in the valleys betwixt the rocks; their houses are built of canes very low, and plaister'd up with loom or clay. Some of them live in the woods, these make their houses of wood, which they remove from tree to tree, to secure themselves against the elephants and tygers. The first they catch in holes cover'd with the branches of trees, with some earth on the top; they also cultivate the ground, but in a very slender manner, tho' their valleys would be very fruitful if they were duly manag'd. They have but one wife at a time, who goes abroad a hunting with them, or wherever they go, whereas the *Pagan Malabars* marry generally several women. They chiefly differ from the other *Malabars* in their complexion, are just and honest, good natur'd, charitable, without deceit; for the rest, courageous, ingenious and cunning; they pretend to converse with the devils, only out of curiosity to know the event of things; the custom of the other *Malabars* and *Indians*, who hurt others by their forceries, being unknown to them. They pay a great deal of deference to the sepulchres of their ancestors, and if they happen to be defiled, they look upon it to be an ill omen. Upon their festivals they wear a long gown, with a turbant, as the *Malometans* do; but at other times they go half naked, like as the other *Malabars* do. They have holes in their ears and noses, in which they hang gold rings and jewels; a custom common also to the *Pagan Malabar* women, who look upon this as their chief ornament, especially to wear such things in one of their nostrils. At their feasts and festivals, the maidens play upon rush-pipes and small flutes and drums; theft is a thing unknown among the *Malabars*, every one living in his house in a profound security, with open doors; sometimes the inhabitants of a whole enclosure transfer their habitations to another. Part of the *Malabars* acknowledge the king of *Turbula*, part the king of *Pugnati Perimal* for their superiors, unto whom they pay some yearly tribute, yet with the entire preservation of their liberty, they being govern'd by their own laws, under captains or judges of their nation, call'd by them *Arley*, each of them has commonly 5000 or 6000 under his district; besides which, each enclosure is govern'd by its own judge, call'd *Pandera*, unto whom they pay strict obedience.

Before 1599, when they began first to be instructed in the *Romish* religion, by the assiduity of the then archbishop of *Goa*, they were all pagans, but since that time, a good

1662. a good number of them have embraced christianity; eight of their best men, among whom were three *Pandaras*, with their whole families, first received baptism, who being follow'd by many others, a church dedicated to St. Michael was built in the village of *Priata*. Before their conversion they had no temples erected in honour of their idols, neither did they sacrifice with feasting, dancing and such like ceremonies, but each family had its domestick god, unto whom they paid their devotions. They are much more esteem'd among the *Malabars*, than their common people, neither are they look'd upon as unclean by them, no more than the christians of *St. Thomas*, if they happen to touch a *Nayros*; they keep scarce any commerce with the neighbouring nations, even not with the *Thomists* themselves, who live at the foot of the same mountains. Their weapons are the same as the rest of the *Malabars* use, viz. a bow and arrows pointed with a broad iron. They use also scimeters or hangers, and a peculiar sort of fire arms, such as are no where else to be seen among the *Malabars*. On the foot of the mountain inhabited by the *Malabars* call'd *Karakara*, bordering upon the kingdom of *Karanarata*, stands a church belonging to these *Thomists* or christians of *St. Thomas*, dedicated to *St. Austin*, because the inhabitants owe their conversion to certain fryers of that order.

bar.

Coco-tree.

*Malabar*, as I told you before, is a country abounding in divers sorts of fruits, such as the *Indies* commonly afford, of the choicest of which we will give you a short description here.

All along the sea-shore of *Malabar*, and the rivers near the sea-side, the *Indian* palm or coco-tree, grows in sandy and brackish grounds; the *Malabars* call it *Tenga*, the *Brabmans* *Mado*, and in the *Malabar* tongue it is call'd *Kalappa*. Its trunk, which is of an ash colour, rises sometimes to the height of 95 feet; such I have several times measured my self near the city of *Koulang*; it has commonly 16 inches diameter, tho' sometimes it is so thick, as scarce to be grasped by a man; and is of the same thickness from the bottom to the top; the wood is spongy, and the pith as white as paper. However the trunk does not grow up strait, but is jointed, without any branches, but only on the top, where commonly sprout forth 16 or 18, and in a very large tree sometimes 28, which bear green large leaves like reeds, being about a finger's length broad, and about two foot long. The root of this tree is very small in proportion of its bigness, and does not reach deep under ground, but creeps just under its surface, so that it seems next to a mira-

cle, how these high trees are able to withstand the fury of the wind. The fruit, call'd commonly coco-nuts, after the *Portuguese*, who call them *Cogno* and *Cocoe*, grow at the ends of the branches, about 6, 8, or 10 in a bunch; a bunch weighing some times from 60 to 100 pounds weight; each ripe nut exceeds the bigness of a lusty man's head, being of a triangular figure, and cover'd with a double peel; the first is an inch thick, consisting of many threads, extending length-wise round the fruit; the outside is of an ash colour, but inwardly inclining to red; the next peel is hard and brown, which contains the peel. Before they are ripe, they are of a pale yellow colour, and afterwards turn dark green, having at one end a bush of small leaves, resembling our turnep leaves. The pith is white, inclining to yellow, about an inch thick, and to the second peel, the remaining hollowness being fill'd with liquor, and containing according to the bigness of the unripe nut, a pint of liquor, which in the ripe one diminishes by degrees, and encreases the bulk of the peel. This liquor is good to drink, the pith is sweet, and of no ungrateful taste, only a little flat. The blossom, which is not unlike that of the chestnuts, appears at the ends of the branches which produce the fruit, which ripens in three months time. The pith dried, may be kept and transported like chestnuts; if it be powder'd and mixt with sugar and cinnamon, it tastes very well, augments the seed, and is a strong provocative. When the *Nayros* are to gather the nuts, they climb with most wonderful nimbleness to the tops of these high trees, where they cut off as many branches as are ripe, and let them fall down upon the ground. Besides the fruit, this tree affords also a certain liquor, call'd by them *Sury*, and by the *Europeans* palm-wine: When they are to gather this liquor, they only cut off one of its branches, from whence issues the liquor, which falls into a vessel of bamboe, hung under it for that purpose; if they draw too much liquor at a time, the branches turn brown, and the tree produces no more nuts. These trees being planted in a streight line, the *Nayros* lay sticks reaching from one to other, by which means they get to the branches, where they have fasten'd the vessel that receives the liquor. This liquor, whilst fresh is very good to drink, and will inebriate like wine; but if kept in the sun, turns to vinegar in an hours time. But tho' they take never so much care of it, what is gather'd about noon, will turn by night, taste sourish the next day, and turn quite to vinegar the day after that. The liquor

1662. which distils from the young trees, is not so strong and spirituous as that gather'd from the old ones, but the first affords a greater quantity. After this liquor has been kept 24 hours, they distil a spirit of it, with the addition of a small quantity of the oil of clove; this is by the *Indians* call'd *Arack*, and by some *Tula* or *Mype*. Out of this liquor they prepare vinegar, thus: They put the vessels in which the liquor has been gather'd, in lime 15 days, during which time it ferments, casting gross sediments to the bottom; the clear is very good vinegar. Out of the same sugar they make a kind of liquor call'd *Jagra*. They put a small quantity of lime in the vessel which contains the liquor, as much as is sufficient to make it turn red; for if you put in too much lime, the liquor turns whiter and whiter, but if you put too little, it does not change its colour. The liquor thus mix'd with a sufficient quantity of lime, must be boil'd and stirr'd continually with a spoon, till it comes to the consistency of red sugar; where it is to be observed, that if there be not lime enough added, it will produce no sugar, but if too much, part of it will settle to the bottom, which must be taken out before you can boil it into a sugar. If you intend to make white sugar or *Jagra*, you must take care to pour the liquor mix'd with the lime out of one pot into another (to separate the superfluous lime) which you must repeat three times; as for instance, if your liquor be gather'd in the morning, you must pour it into another vessel by noon, and repeat the same a second time about two a clock, and a third time before night, and then boil it. What liquor is gather'd in the night-time keeps longer than that gather'd in the day-time. Whilst it is fresh, its taste is not much unlike our whey, unto which the inhabitants add some raisins, and make it taste like *Spanish* wine. The trunk of the coco-tree is used for timber in the building of houses and ships, the branches and leaves to write upon and to cover houses with, as also by the basket-makers. Out of the hard shell of the nuts (some of which are of a pale, others of a dark brown colour) they make drinking cups and other vessels, which they polish, and sometimes are edg'd with silver. The hairy substance, call'd *Kayer*, is used by the rope-makers; these ropes don't rot easily: They also make matches of them, which burn very fiercely. In the *Maldiv* islands (where these trees are found in vast quantities) they sometimes equip whole vessels out of the coco-trees; the body of the vessels being made of the trunk of a tree, without any nails or other iron-work; the sail and ropes of the hairy substance, the

VOL. II.

provisions consisting of the liquor and kernels of the coco-nuts, their drinking and other vessels being made of the shell, and their hammocks, quilts and other implements of the leaves. In short, this tree furnishes the *Indians* upon occasion, with all that is necessary for their subsistence, being very fruitful in marshy and low grounds, but bears not so great a quantity of fruit, neither so big in the mountainous countries. The coco-tree is in its prime from the 25<sup>th</sup> to the 30<sup>th</sup> year, and affords the most fruit and liquor; from the time it begins to bear, the ripe fruits fall off, and others grow continually in their stead, but when it begins to grow old, the fruit grows lesser and lesser. This tree will continue till it is 100 years old; when the small branches and leaves begin to turn yellow, it is an infallible sign of its decay. It is produced out of the kernel of the coco-nut; these the *Indians* put into the ground till they begin to sprout, then they make as many holes as they intend to plant trees, and of such a depth, that the tops of the leaves don't reach beyond the surface of the ground; then they throw a handful or two of sand (unless it be in sandy ground) and half a handful of salt in each hole, upon which they put the kernel, which they cover with the same ground they had taken out of the hole before, and every other day water them, till they are sure the nuts have taken root. They plant them with the point downwards, out of the opposite part of which at first shoot forth two or three broad leaves, after which comes the right leaves, and soon after the small sprouts, which fall off as new ones succeed, till the tree comes to its full growth. The young tree commonly begins to bear in the fifth year after its planting; great care is taken that the horse-flies don't spoil the young trees. This is a kind of worm not unlike our hornets, with two sharp horns, but not so big; this worm gets to the pith of the tree, which he consumes till the tree dies, unless he be taken out in time, at which the *Malabars* are very dextrous, and then the tree will recover. It has been observed that this tree in the third year after its planting, has its branches in their perfection, and from that time the branches begin to fall off. Those branches are at that time about five or six yards long, tho' the stem on which they grow is not above two foot high, and about a foot in circumference. Every month you see commonly a new branch come forth, and then the old ones fall off, but in the summer and dry seasons they fall off more frequently than in rainy weather; these branches come to their full growth in

R r r

three

1662. three months. I caused above 4000 coco-trees to be planted near *Koiland*, but most of them came to nothing, being not carefully look'd after by my successors. There are divers kinds of this tree, which are distinguish'd by the fruit, but especially by the watery substance found within the shells of the nuts.

*Malabar* produces prodigious quantities of wild cinnamon trees, but the cinnamon is neither in smell nor in goodness comparable to that which grows in the isle of *Ceylon*; this island, and that of *Floris* being the only ones where the true cinnamon grows. The *Portuguese* call this wild cinnamon *Canella de Mato*, i. e. *Wood-Cinamon*, the *Malabars* *Larva* or *Babona*, as also *Kaunema*, i. e. *Sweet-Wood*, from the word *Kau*, which in their language signifies wood, and *Nema* i. e. sweet, the *Malayans* *Kais Manis*, the *Zingalese* or inhabitants of *Ceylon* *Kurudo* or *Kurundo*, and the *Arabians* *Querfaa* and *Qyerfe*, as also *Kerfak*. Before the *Dutch* got into possession of *Ceylon*, they used to transport this cinnamon, but since that time they make no account of it. The tree is of the bigness of our orange tree, less or more, but not large as the cinnamon trees in *Ceylon*. It has abundance of branches, leaves not unlike the laurel leaves, but broader, of a paler colour, with three distinct veins. The blossom is white, almost without any scent; the fruit not unlike the wild olives, first green, afterwards inclining to red, and when ripe, black shining. It has also a kernel not unlike the wild olive, which is covered with a pulp like the same, out of which issues a kind of green oily liquor, of the same scent as the laurels, biting and bitterish upon the tongue. The rind of this tree (or the cinnamon it self) is thick, without any remarkable taste, tho' the small sprouts or tacks are somewhat bitter, yet don't come near to the cinnamon of the isle of *Ceylon*.

Oil of cinnamon and volatile salt.  
Out of the rind of the root they prepare a kind of volatile salt, which they call camphire, swimming upon the surface of the water of a yellow colour, clear, strong and well scented, sharp upon the tongue, and very penetrating, being so volatile, that if exposed to the air, it evacuates immediately. This camphire is exceeding white, excelling the common camphire in its scent; the particles of this camphire are insensibly mix'd with the oil, whilst yet warm, immediately after its distillation; but as soon as the oil begins to cool, they adhere to one another in divers shapes, and settle to the bottom. This camphire is very volatile, and so fiery that it takes fire in an instant, and leaves not the least impurity behind, after it is consumed. The oil ap-

proaches very near both in smell and taste 1662. to the camphire, and is so volatile, that if some of it be dropped upon woollen stuffs, even of the nicest colours, it evaporates immediately, without leaving the least spot behind. It is also very combustible, burning with a white and blue flame; if put upon the fire, it evacuates in a instant, and turns into a white smoak, which is very apt to take fire. This oil mixt with gunpowder, will set it on fire by degrees, yet not till a great part of the oily substance be evacuated. If mix'd with sulphur or salt-peter, or with both, it will take fire immediately and consume the sulphur and salt-peter, remaining without the least alteration. If you put the oil upon the fire, and receive the flame which evaporates from thence, in a thick cloth, a white kind of salt will settle in it, which is the camphire itself. This oil will also in time separate some of those camphirous particles, which falling to the bottom, render the oil more clear and pure. The oil drawn out of the *Malabar* cinnamon, is clear, transparent, yellowish and well scented, swimming upon the water; whereas out of the common cinnamon of *Ceylon*, besides that oil which rises on the top of the water, another is also drawn, which sinks to the bottom. The oil distill'd from the leaves is thin at first, turns yellowish by degrees, and transparent, and of a greenish colour at last, being very sweet, but sharp at last, having something of cinnamon; it sinks to the bottom of the water.

The oil made out of the rind of the root, with its volatile salt (the camphire) is endow'd with greater virtues. It is a sovereign remedy against all lameness, if applied outwardly, and gives immediate ease in the gout; it may also be taken inwardly with very good success, being a great remedy against malignant fevers, a great sudorifick, expelling the wind, procuring an appetite in the stomach, and consuming the stone both in the kidneys and bladder, and is good in the cough, and many other chronick distempers; to be short, it is the most universal remedy made use of there by the *Dutch* in their hospitals. The camphire is very proficuous in all distempers in the womb, promotes the monthly terms, and is a great sudorifick, being used in all respects like the common camphire. The oil distill'd out of the bark of the tree, is an excellent remedy in all distempers of the stomach, and in the cholick, proceeding from a cold cause; the water of cinnamon is cordial; the oil of the leaves is good against the cholick, if applied outwardly to the belly, and helps lameness.

The In

1662. In the woods of Malabar about Kananor, grows a certain shrub in great plenty, call'd *Zua* by the Malabars, at *Surate Dekan*, and *Cachora* by the Canarins; by the Arabians and Persians *Zerumbet*, and *Zeruba* by the Turks. If planted or sow'd, it will grow also in many other places. By some it is reckoned a kind of ginger, and not without reason, its leaves resembling those of the ginger, only that they are somewhat larger, as is also the root, which being cut in pieces and dried, is thus transported into foreign parts.

The tree call'd Macre or Macre of Malabar. On the coast of Malabar, in the isle of *St. Cruce*, belonging to the kingdom of *Cochin*, near the river *Manatle*, grows a certain tree call'd *Macre* by the *Brabman* physicians, by the christians there *Makuyre*, and by the Portuguese *Arbore de las Canaras* and *Arbore Sancto*, i. e. the *Tree of the Bloody Flux* and the *holy Tree*. The saints of this country have this saying of it; *Kura Sancta Macre Nistusa garul*: i. e. *Macre was discover'd to mankind for their benefit by the Angels*. *Galen*, *Dioscorides* and *Pliny* call it *Macer*, and *Avicenna Talisjar*; this tree spreads its branches in a large compass, being bigger than our elm-tree. Its leaves are seven foot long, and two broad, the uppermost side of a pale, and the undermost of a dark green colour. It is generally believ'd, that this tree produces no fruit, but only a kind of seed, of the bigness of a farthing, thin, yellowish, resembling in taste the kernel of an almond or peach-stone, cover'd with a white skin. It is enclosed in a kind of a bladder compos'd of two different peels. This bladder comes forth in the middle of the leaf, resembling that which in *May* sprouts forth on the elm-trees, except that it is somewhat broader and flatter. The leaf of this bladder is of the bigness of other leaves, but not so much pointed at the end, and narrow towards the stalk, of a deep yellow colour, cover'd with a kind of curl'd down from the stalk to the end. The root of this tree is not unlike that of the *Siene* palm-tree, with large and thick roots spread at a great distance; the rind of those roots is thick, rough, of an ash-colour without, but white within; containing a juice like milk whilst fresh, but turns yellow; when dry it is very astringent. This tree delights in few but sandy grounds, and kills all other trees or shrubs near it. The rind of the root of this tree is in vast esteem among the *Malabars*, as well as among the *Chinese*, *Javanese*, *Malabars* and all *Bengale*; being look'd upon and made use of in their hospitals, as the most sovereign remedy in the world, against looseness and all manner of bloody fluxes. The *Indian* physicians, as well *Brabmans*,

1662. *Canarins*, as *Malabars*, cure with this rind whilst fresh, powder'd and mix'd with butter-milk, the bloody flux; some infuse half an ounce of the rind, dried and powder'd in a quartern of whey for 12 hours, which they give the patient twice a day, viz. in the morning and evening, immediately after they give the patient rice to eat, boil'd without salt or butter, and after that a chicken boil'd in the decoction of rice flour. If the distemper be very urgent, they add some *Opium* for the strengthening of the stomach; and to stop vomiting, they mix a little maltich with this rind, and give it in mint water. They tell you that a small quantity of this rind, excels much in virtue a considerable number of the *Myrobolan* rinds, or of *Areka*; nay, they prefer it before the *Koru* of *Malabar* itself. The fruit, or rather seed, expels all sorts of worms, and dissolves the stone in the kidneys, being look'd upon likewise as a great preservative both against the stone and cholick. Besides the tree *Macer*, other trees grow here very different in kind, but agree in virtue with the *Macer* tree.

The first of these two is by the *Malabars* The tree call'd *Kuradipala*, or *Kuro*, and *Koru* by the *Canarins*, by the *Brabmans* *Kura*, and by the Portuguese the *Malabar* shrub, its use having been first shewn them by the *Malabars*. This tree or shrub is not unlike a small orange tree, especially as to its leaves, except that the vein in the middle of the leaf, out of which come 8 or 9 on both sides, is somewhat thicker. The blossom is yellow, and without the least scent. *Garcias* says this tree is somewhat less than a common crab-tree, its leaves like a peach-tree, with a white blossom. It has a pale green and smooth bark, out of which, if cut with a knife, issues a milk-like juice, more viscous than that which comes forth out of the *Macer* tree, bitterish of taste; the *Malabar* physicians assign it a cooling quality. This tree affords an infallible remedy against all kinds of bloody fluxes, provided the gross ill humours have been purged away before, without which the patient will soon have a relapse. The *Malabars* (according to *Garcias*) prepare a compounded water out of the root, unto which they attribute great virtues against the bloody flux; they take 8 ounces of this root well beaten to powder, and infused in whey, and the liquor of boil'd rice, unto this they add the seeds of purfley, black cummin and coriander, each an ounce and a half; of the *Myrobolan* rind 7 drachms, and fresh butter 2 ounces; this they distil, and mix a quartern of this distill'd water with half a quartern of *Arack*, and give it the patient. They apply this water also in form

1662. form of a clyster in the night time, by reason of the excessive heat of the days in those parts. Inwardly they commonly give it twice a day, viz. in the morning about six a clock, and in the afternoon about two. Their diet is rice mix'd with fat, and chickens boil'd in the decoction of rice, which they call *Kaeje* in their language, but the use of wine is absolutely forbidden, unless it be in an inveterate bloody flux, to keep up the spirits. Some give only the juice of the shrub whilst green, of which they give a quarter and a half in the morning, and as much in the evening; and to take away the bitterish taste, allow the patient to drink a little whey after it. In case of necessity they mix some *Opium* with it. It is also a good remedy to strengthen the stomach, and to stop vomiting, if taken in mint water, or mix'd with some mastich powder'd. The root taken inwardly with the decoction of rice, or applied outwardly is very good against the piles. The decoction of the leaves, and those of tamarinds, make an excellent fomentation for swell'd legs, held over the hot iteam, and a cloth dip'd in the same decoction is with good success applied in the looseness and dropsy.

The third sort of those vegetables which are us'd here against the bloody flux, is call'd by the *Malabars Pavate*, and *Vasa Veli* by the *Brabmans*, and *Canarins*, and *Arbor contra las erysijelas*, i. e. the Tree against the *St. Anthony's Fire*. It is a shrub not above 8 or 9 foot high, with a few branches and leaves, resembling the small leaves of orange-trees before they come to their full growth, green on both sides; the blossom is white and small, the seed round, in bigness like to that of the mastich-tree; dark green at first, which turns black as it ripens. The stem and tacks are of an ash-colour, the root either without scent or taste, except that it is somewhat bitterish.

Among the fruit trees of *Malabar*, that which the inhabitants call *Jambos*, and the *Portuguese Jambeiro*, must not be pass'd by in silence. The *Malabars* and *Canarins* call the fruit *Jambali*, the *Arabians Tusa Indi*, the *Turks Alma*, and the *Persians Tufat*. It is the common opinion, that this was first of all for the pleasantness of its blossom, and excellency of its fruit, transplanted from *Malacca* (where it is found in great plenty) into all the other parts of the *Indies*. There are two kinds, resembling one another in most respects, except in their fruit, which is somewhat different. Both are not unlike, as well in shape as bigness to our *European* apple-trees, and will grow without much cultivating in any ground, and bear fruit within 5 years; they take root very deep, a thing seldom observ'd among

the *Indian* trees. These trees are of a pleasant aspect, spreading their branches to the height of a good plumb-tree. The bark, as well of the tree as of the branches, is of an ash-colour and smooth; the wood brittle; the leaves also resemble those of the plumb-tree, but are somewhat more pointed at the end, being a palm in length, and not unlike the iron point of a long pike or lance. The upper side is dark, and the undermost pale green, with a strait vein in the middle, which sends out divers others on both sides. The blossoms are both for scent and colour like our roses, but inclining more to a purple colour; the first is of the bigness of a large pear, or of a goose egg, or rather bigger. They are of two sorts; one of which is a dark red, inclining to black, generally without stones, excelling the other in taste; the other is pale red, has a longish white stone of the bigness of a peach-stone, cover'd with a white rough skin; this, tho' inferior to the former, yet is of a most pleasing taste. Sometimes the first is absolutely red, and these are of a purple colour, and smell like a rose; the fruit is cover'd with so thin a peel, that no knife can separate it from the pulp, which is accounted cold and moist; and so are the blossoms, notwithstanding which they are very well scented, and for that reason in high esteem among the inhabitants. The fruit is commonly eaten before dinner, or at the beginning of a meal; neither are they useless in physick, both the fruit and flowers preserved, being preferred in violent burning fevers; having besides their cooling quality, a certain virtue of comforting the spirits. This tree may well be accounted among the number of those, which by the excellency of their fruit, and the agreeableness of their flowers, surprizes the beholders; for, whilst you see one side of the tree bare of leaves and blossoms, the other is stor'd with fruit, which last, till the other side begins to renew its leaves; so that in one and the same tree you see a continual spring and autumn at once. Thus you never can cast your eye upon this tree but you meet there either with blossom or fruit; and as the blossom drops underneath on the ground (which is frequently cover'd with those purple colour'd flowers) others come forth in their stead; and whilst some of the fruit are ripening, others are to be gathered. The best way to gather their fruit is to shake the tree, then they fall with ease; but if you endeavour to pull them off, the tacks are apt to break.

The fruit *Karkapuli*, call'd *Kerkapoli* by the *Canarins*, is in shape and bigness like an orange; they are green at first, afterwards

1662. terwards turn yellow, and when ripe, white, of sweet taste, but a little tartish. In the centre of the pulp lies the seeds, flat and long, of the bigness of a joint of a finger, and are of a dark brown colour.

The tree which bears this fruit is very tall, call'd *Kodlam Pulli* by the *Malabars*, sometimes *Otta Pulli*, and by the *Brabmans Danabos*, by the inhabitants of the isle of *Ceylon Chorakas*; the fruit is eaten, and used in physick among the *Indians*, being accounted an excellent remedy against looseness, especially if occasioned by too much venery. Besides which, the fruit before it is quite ripe, or the juice of it mix'd with butter-milk, or the fruit dried and powder'd mix'd with butter-milk and boil'd rice, is excellent good to acute the appetite of the stomach. This juice also, as well as the dry fruit powder'd, is accounted a good remedy against the dimness, cataracts, and other infirmities of the eyes; they apply the juice, mix'd with some other herbs, to the nail of the great toe, on that side where the defect of the eye is. The midwives give it to women lately brought to bed, to expel the after-birth, and produce plenty of milk for suck. This fruit, when dried, is transported to foreign countries. There is another kind of this tree, bearing a round fruit and sweet, of the bigness of a cherry, call'd *Karkapuli* by Mr. *Dinshoben*; this tree is call'd *Karue Choraka* by those of *Ceylon*, i. e. *sweet Choraka*; out of the bark of both of these trees, if slit with a knife, issues a gum call'd *Gutta*, but that which comes from the *Kanka Choraka* is the best.

The use of aloe leaves is very frequent among the *Malabars*, a purge they boldly give not only to children, but also to women with child. They take of the aloe leaves 3 ounces cut very small, these they boil with two drachms of black salt over an easy fire, and after they have strain'd it, add to it an ounce of sugar, and so let it stand the whole night in the air. The next morning about six a clock they give the patient this decoction cold, ordering him to abstain from sleep, and to walk about to promote its operation; three hours after he hath taken it, they give him a little chicken broth, with a few grains of mastic in it, and an hour after that allow him to eat, and to take a little wine of the smallest sort. They either increase or diminish the dose of the decoction, according to the constitution of the patient.

There grows in *Malabar* a certain fruit of the bigness of a hazle nut, but is not quite so round and white; it grows on the stalks of a certain shrub which they sow; it has no peculiar use in physick, tho' *Serapio* ascribes to it a virtue of augmenting

Vol. II.

the seed, and promoting the birth in women; the same the *Malabars* do to this day, who call the fruit *Chevique lenga*, and in some places *Kurkas*, and those of *Cambaiak Karpata*. If *Garcias* may be credited, this is the same fruit described by *Serapio* by the broken name of *Habel-culcul*, whereas it should have been *Hab-alcul*, which signifies as much as the seed of *Culcul*.

The tree call'd *Kumbulu* by the *Malabars*, and *Bon-Varo* by the *Brabmans*, grows very tall, with a trunk of that thickness, that a man can scarce grasp it. The leaves are a span, and two or three inches long, and two palms broad, woolly at the end of the stalks, which are round, long and thick; at the extremities of the stalks, which sprout forth out of the branches, grow certain yellow flowers in clusters on short stalks, consisting of five round and thick leaves. After these comes a fruit that's like a pear, full of juice, the pulp being of a yellowish colour, and a sweetish taste, but the juice when press'd out is deep yellow. They are green at first, next of a pale yellow, and turn reddish at last; in the centre of the fruit is a white smooth stone, shap'd like a pear, with a small kernel in it. The decoction of the root, mix'd with a little rice, is a good remedy against the ague, which often follows the gout or rheumatism. Taken in butter-milk, or mix'd with the oil of *Sirchalem*, it expels the wind, and eases the pain; and the juice of the leaves taken with butter-milk, is good against the cholick.

The tree call'd *Ganjibi* by the *Malabars*, and *Schivanni* by the *Brabmans*, grows in sandy grounds a great height and thickness, so that a man can scarce grasp the trunk, which as well as the branches has a bark of an ash-colour without, but green within. The leaves hang on long, round and green stalks, being above a span in length, and two palms broad, of an oblong figure. The blossoms fastened to stalks which are pale green, sweet, round and thin, each flower consisting of no more than three, and seldom of four leaves. After these comes the fruit, which is of a triangular figure, flattish, and of a green colour, hanging on long and green stalks, the seed being triangular, and the pulp very substantial; the decoction of the root is used against the gout, and apply'd to the affected part.

Of the tree *Palega* there are two kinds; one is call'd *Palega-Pajaneli* by the *Malabars*, and the other barely *Pajanel*. The *Palega-Pajaneli*, called *Davandiku* by the *Brabmans*, is very tall, with a trunk enough for a man to grasp, having an ash-coloured bark, as well as the branches, which grow straight upright, of a considerable thickness.

S 11

1662.

Chevique  
Lenga.

The tree  
Ganjibi.

The tree  
Palega-  
Pajaneli.

1662. The leaves hang on stalks, which shoot forth both out of the stem and branches of the tree. On the extremities of the branches grow certain clusters of flowers shap'd like bells, consisting of six thick leaves; whitish or pale yellow within, and streak'd with red on the out-side, the scent of which is offensive to the nostrils. The fruit which follows the flowers is about three spans long, of the breadth of a hand, and an inch thick, with a dark green peel. The pulp juicy and tender at first, but grows hard at last; the seed is very flat. The bark of the tree powder'd and mix'd with wine, applied to a wound, or broken bones, heals them. The decoction of the root is good against the dropsy; and the leaves, whilst yet very young, mix'd with *Malabar* saffron, cures all sorts of ulcers, if apply'd to them outwardly.

The second  
kind of  
*Pajaneli*.

The second kind of the *Pajaneli*, called *Davandiku* by the *Brabmans*, is likewise a very tall tree, whose branches shoot forth upright to a great height; it delights in sandy grounds: The root spreads at a great distance, having a thick ash-coloured rind. The trunk is of that thickness, that a man can scarce grasp it, of a brittle wood, with a dark ash-coloured bark: The flowers are like the former, shap'd like bells, but have no more than five leaves. The fruit is the same: Of the juice of the leaves, and that of the fruit *Kareka*, or *Mirobolans* mix'd together, the *Malabars* make a black dye to dye their mourning cloaths with. The decoction of the rind of the root dispels hard tumours if they be fomented with it.

Of the tree *Pala*, called *Santeru* by the *Brabmans*, there are four kinds; 1. *Pala*; 2. *Kuruta Pala*; 3. *Kadaga Pala*; 4. *Kaikotten Pala*: The first kind, called only *Pala*, is a high tree growing in sandy places, and spreading its branches into a great circumference: The root, which has a dark yellow rind, reaches very deep into the ground, and contains a milky juice: The trunk is two or three fathoms thick, the bark of an ash-colour, as is likewise the bark of the branches. The leaves grow four or five together, on stalks of an oblong figure, and towards the stalks full of a milky substance; the flowers grow in clusters, having five whitish leaves of a strong scent, but offensive to the brains. The fruit which comes immediately after the blossom, do likewise hang in clusters on small stalks, being green husks of about two spans length, but small and flat, full of a milky juice or substance, as is the tree itself, which produces fruit but once a year, viz. in *January*.

The second kind of *Pala* is by the *Malabars* called *Kuruta Pala*, by the *Brabmans* *Kudo*, being a tree from six to twelve foot

high, the trunk about the thickness of a foot, with an ash-coloured bark, as well as the branches. The leaves come forth out of the branches with their stalks, being of an oblong figure, and pointed at the end. The flowers grow on the extremities of the small stalks, are white, and bigger than those of the first kind, and have five long leaves. The fruit grows likewise in clusters, being of an oblong figure, dark green at first, and as they ripen turn yellow. The husk contains five, six or seven seeds. The tree bears fruit all the year round, but most in the rainy season. The bark of the tree beaten to powder, and taken in warm water, is good against the loose piles, but if taken in milk stops the bloody flux.

The third kind of *Pala*, called *Kadaga Pala* by the *Malabars*, and *Alego-Kugo* by the *Brabmans*, is no higher than the *Kuruta Pala*, and delights in sandy grounds. The root does not go so deep underground as that of the *Pala*, the bark is of a dark brown colour; the trunk is of a foot circumference like the second kind, but the leaves and blossom being also like the same. It bears long husks like the *Pala*, but are somewhat thicker, of a green colour, a span long, and full of a milky liquor. The bark of the trunk beaten to powder, and taken in butter-milk, stops the looseness; and the rind of the root, taken in the same manner, cures the bloody flux. The decoction of the seeds is given in burning fevers, and kills the worms. The fourth kind, called *Kaikotten-Kala*, is very near the same with the third.

There are two kinds of the tree called *Parva* by the *Malabars*; the first they call *Tindaparva*, and the second *Anaparva*, and the *Brabmans* *Bendarli*. The *Tindaparva* grows to a great height in sandy grounds, having a thick whitish root with a soft rind: The trunk is so thick that a man can scarce grasp it with his arms, having an ash-coloured bark as well as the branches, which underneath the bark are of a dark brown colour. The leaves which are long, and pointed at the end, hang on short stalks, as do likewise the flowers, consisting of four pale green and pointed leaves. The fruits are a kind of round berries, with a very thin peel, green at first, afterwards inclining to white, and turn red as they ripen. In the peel is enclosed a round kernel. The root beaten to powder and taken inwardly, is a sovereign remedy against epileptic fits; and the decoction of the leaves dispels all pain, if the affected parts be well fomented with it.

The tree *Kavalkan*, as the *Malabars* call it, and *Bankar* by the *Brabmans*, grows in

stone

1662. Stone is very deep that his ath- The into figure ed at green small green forth ther, thick beans round These This viz. in mong Of

1662. stony and sandy grounds; its root, which is very thick, and covered with an ash-coloured but softish rind, stretching very deep underground. The trunk is so thick that a man can scarce grasp it with both his arms, covered with a thick bark, of an ash-colour without, and pale green within. The wood is also white, and may be drawn into thread. The leaves are of an oblong figure, a span and 2 or 3 inches long, pointed at the ends, hanging on long round and green stalks: The flowers consisting of five small leaves sprout out in clusters, with green and hairy stalks. The fruit comes forth in bunches, three, four, or five together, being of the shape of an egg, with a thick and hard rind, containing nine or ten beans of the length of a finger each, but round and smooth, with a double peel: These beans, when roasted are good food. This tree bears blossom but once a year, viz. in May, and is not used in physick among the Malabars.

The tree  
Ambalam.

Of the tree *Ambalam* there are two kinds in Malabar; one is simply called *Ambalam*, or *Koduko Ambado*, (i. e. *Sweet Ambado*) by the *Brabmans*; the other, *Kai Ambalam*, or *Pee Ambalam*. The tree *Ambalam* grows to a great height in sandy grounds, with its branches not spreading, but upright. The root which is very large, stretching with many twigs under ground. The trunk is of a great circumference, covered with a very thick bark; the wood being very soft: The leaves hang on small green stalks or sprouts, in bunches of five together; they are generally as long again as they are broad, smooth and soft, and of a light green on both sides. Those leaves which are nearest to the small twigs, are not so large as the rest, of an agreeable scent, and tartish, not unlike the rind of the *Indian Mangoes*. The blossom or flower do likewise come forth out of small and green sprouts, are of a whitish colour, shaped like stars, having five or six leaves. The buds of these flowers are round, and green at first, but turn white before they open; which when it happens, the leaves fall from the tree, which continues bare as long as it stands in blossom, but as the fruit grows, new leaves come forth by degrees. The fruit grows in clusters, being of an oval figure, and pretty hard, not unlike to the *Indian Mangoes*: Before they come to maturity their rind is dark brown, and full of sour juice, but when they begin to ripen turn light green, and at last yellow, of an agreeable tartish taste, and are eaten by the inhabitants. In the midst of the fruit is a very large stone. This tree bears twice every year, viz. in January and May. The root of it thrust into the matrix stops the super-

fluous monthly times. The bark powder'd and taken in butter-milk is good against the looseness, and so is the juice mix'd with rice. The decoction of the wood is a good remedy against the involuntary emission of the seed, and the juice of the leaves mix'd with that of the fruit infill'd into the ears, eases the pain in those parts.

The second kind of the *Ambalam*, *Kai Ambalam*, or *Pee Ambalam*, as the *Malabars* call it, and *Kaduko Ambado* by the *Brabmans*, resembles the first in a great many respects, except that its leaves are less, and so are the fruit, being somewhat rounder, and the taste a mixture of sour and bitter, which is the reason they are never eaten. *Kai Ambalam*, or *Pee Ambalam*, signifies in the *Malabar* tongue as much as *Wild Ambalam*, and *Kaduko Ambado* among the *Brabmans*, as much as the *Bitter Ambado* from its taste.

The tree called *Agaty* by the *Malabars*, and *Agasto* by the *Brabmans*, runs up to the height of ten or twelve yards, the branches growing strait upright: The trunk is so big in circumference that a man can scarce grasp it, having a very soft wood, and the pith much tender. If an incision be made into the bark, a certain watery substance distils thence, which turns to gum afterward. The leaves come forth out of small and green sprouts or buds, being near a span and a half long, and growing two and two on long green stalks. The flowers consist of five small leaves, and grow in clusters on stalks of a pale green colour. After the blossom come thin, strait and green husks, of about a span in length, and an inch in breadth, having a thick peel, in which are enclosed certain beans, not unlike in taste to, but somewhat smaller than, our *French* beans, being white at first, but turn pale green by degrees, and are very good food. This tree bears fruit twice or thrice in the rainy season, and indeed the whole year round, but not so frequently in the summer. The juice of the bark of this tree, either by itself, or mix'd with honey, is an excellent remedy against all the inflammations of the throat and mouth. The juice of the leaves taken into the nostrils like a liquid snuff, cures the quartan ague.

The tree call'd *Appel* or *Nalla-Appella*, by the *Malabars*, and *Karo-Nervoloe* by the *Brabmans*, has a very thick and hairy root, the rind of which is of a satiron colour. The circumference of the stem is of five or six palms; the branches growing directly upright: Its wood is white, but the peel dark red. The leaves sprout forth out of the branches in small green and square buds, the stalks being round, very short, and of a pale green colour, commonly two and two together. The

1662.

Katambalam.

The tree  
Agaty.

The tree  
Appel.

1662. leaves are of an oval figure, round near the stalk, and pointed toward the end. The flowers grow in clusters, consisting of four round white and small leaves each. The fruit are round berries, having a round stone in the middle; are pale green at first, but when ripe turn black. The tree bears but once a year. The root of this tree powdered and taken in water, stops the looseness, and boiled in sea-water and applied outwardly, appeases the pain of the gout. The decoction of the leaves is a good remedy against the pain of the belly and stomach, occasioned by wind; the same effect has the oil drawn out of the root, if anointed on the painful part; this oil is yellow and transparent, of an agreeable scent, and a piquant bitterish taste.

S. hageri.  
Kottam.

The tree call'd *Schageri Kottam* by the *Malabars*, and *Sabali* by the *Brabmans*, seldom exceeds the height of six foot, and delights in sandy grounds: Its stem is of the thickness of a man's arm, the root red within, and black on the out-side. The leaves sprout forth out of the twigs and hang on round, and green stalks; they are very large, and pretty long, broad towards the stalk, and pointed at the ends; the upper-side dark green, and the undermost side of a pale green colour. At the very extremities of the small twigs grow the flowers in clusters on small stalks, consisting of four or five great leaves, of a white and pale yellow colour. The fruit is in shape like an *European* pear, dark green at first, and when ripe, turns black; it is of a sweetish taste, and eaten by the *Malabars*. The juice of the leaves boil'd with sugar, and taken inwardly, strengthens the liver, and stops the looseness.

Kolinit.

The tree call'd *Kolinit* by the *Malabars*, and *Schebara Punka* by the *Brabmans*, does not grow above two or three foot high, its stem being not above three or four inches thick, the branches spreading round about it. The wood of the stem is very hard, and the green bark which covers it of a piquant bitterish taste. The leaves come forth out of small and green sprouts, hanging on very small stalks; they are of an oval figure, round at the ends, and somewhat pointed towards the stalks, of a sharp and bitter taste: The blossom is like our bean blossom, having each four leaves: The fruit is a kind of a small, smooth, and long husk, yet not above two or three inches in length, are green in the beginning, and dark red at last, having within them certain beans, which are green at first, and black at last. This tree produces fruit twice a year, once in the winter, and once in the summer. The root powdered and boiled in milk, or the juice of the coco-

tree, is a good remedy against the falling-sickness.

There are four kinds of fig-trees in *Malabar*, call'd by one general name *Alu*; the first they call *Atty-Alu*, the second *Itty-Alu*, the third *Arealu*, and the fourth *Peralu*. The fig-tree *Atty-Alu*, call'd *Roombadoe* by the *Brabmans*, grows to a great height, spreading its branches at a good distance. The trunk is of that thickness, that a man cannot well grasp it; the fruit is round, but flat, and lesser towards the stalk, and somewhat hairy and rough, not unlike our figs. Before they are ripe, they are green and full of a milky juice, but turn red when ripe, and are not so juicy. Within the pulp, you see small kernels like those in our figs, and as soon as they are ripe, the pismires get into them. These figs are the only ones that are eaten by the *Malabars*, and eaten raw when ripe are accounted good against the looseness. If the inhabitants may be believed, these trees are produced out of the feed of the fruit, after it is eaten by the ravens, and discharged again with their dung.

The second sort call'd *Itty-Alu*, and *Areka* *Itty-Alu* *Goli* by the *Brabmans*, is the smallest of all the four kinds, its trunk being to be graft by any ordinary man. It bears a small and round fruit, which is green, whilst not come to maturity, and full of a milky juice, but when ripe turns yellow. It has also abundance of kernels, like the first kind.

The tree of the third kind, call'd *Arealu*, *Arealu* and *Bipaloe* by the *Brabmans*, is as tall as the former, spreading its branches very loftily, at a good distance: The trunk is of such a thickness, that two men can scarce grasp it: The fruit is like that of the *Itty-Alu*, small and round, and not forced, as that of the *Atty-Alu*. These *Pagans* have dedicated this tree to their idol *Vijnu*, who they say was born under this tree, and took of its blossoms: For this reason it is, that they surround it with a stone wall, and worship it. The christians call it the *Devil's-tree*.

The fourth sort call'd *Peralu*, and *Vadboe* by the *Brabmans*, exceeds all the others in height; for which reason the *Brabmans* have given it the name of *Vadboe*, i. e. large. The fruit is much the same with that of the *Atty-Alu*, but very round, and of a very high red colour, being covered with a kind of a *Lanugo* or woolly substance when they are ripe.

Of the tree call'd *Paniti* by the *Malabars*, are likewise four different kinds, viz. *Pariti*, *Bupariti*, *Kadupariti* and *Schem-Pariti*. The tree *Bupariti*, call'd *Valli-Kari-Kajoesi* by the *Brabmans*, is a very high tree, with very lofty branches, growing in

1662.

The tree  
Bupariiti.

the shape of a crown round the tree, which is never infested with any insects. The leaves resemble in shape a man's heart, of the bigness of the palm of a man's hand, somewhat pointed at the end, of a lovely green on the upper-side, and a pale green on the other. The flowers are of the shape of bells consisting of several white leaves; after these comes a certain round spongy fruit, which emits a gummy liquor, if an incision be made with a knife. For the rest, the tree produces flowers all the year round.

Pariti.

*Pariti*, or the tree of the second kind, call *Karikaprefi* by the *Brabmans*, grows to the height of 18 foot, the trunk being however within the compass of a man's grasping. The flowers are like those of the *Bupariiti*, only somewhat lesser; and after these come certain round sponges, covered with a *Lanugo* or hairy substance. The blossom bruised and mix'd with women's milk, and infused into the ears, cures the head-ach.

Kudapariiti.

The tree *Kudapariiti* of the third sort, called *Kapussi* by the *Brabmans*, runs to the height of 12 foot, tho' its stem is not above two palms thick. The flowers are likewise like bells, of the same shape and colour as the precedent, only that they are a little lesser, and inclining to green. The spongy fruit are three corner'd, pointed at the top, and within distinguish'd by three skins in as many different concavities, each of which contains three or four seeds enclosed in a thick white *Lanugo* or woolly substance: This tree is never without blossom throughout the whole year. The leaves bruised and mixed with cow's milk, and apply'd outwardly to the head, procures sleep, and consequently cures the head-ach. The fruit bruised and taken inwardly in water stops the bloody flux. The fourth sort is very near the same with the third.

Chavanna Mandaru.

Of the tree *Mandaru* are likewise four different sorts, viz. *Chavanna Mandaru*, of which two bear the same name; *Velutta Mandaru*, and *Kanfchenapou*. The first call'd *Chavanna Mandaru* by the *Malabars*, and *Tambido Mandaru* by the *Brabmans*, grows up to the height of 24 foot, spreading its branches far round about. The trunk is not above a foot thick. The leaves hang on very short stalks, being even in two at the upper-end, like goats feet, whence the *Portuguese* have given them the name of *Pee de Capra*. The flowers have five leaves of an oval figure, among which the largest and broadest is rounder than the rest, white on the outside, and of a purple colour within; the other four are more oval, of a pale red colour without, but high red within; two of those four, viz. those next to the

Vol. II.

biggest leaf are on the inside whitish towards the bottom, but the other two all over of a rose-colour within; from which rose-colour the *Malabars* have given the name of *Chavanna Mandaru* to this tree. In some of those leaves you see streaks as red as blood, which they say are the remnants of the blood of St. Thomas, who preach'd the gospel on the coast of *Malabar*, and in the isle of *Ceylon*. After these come certain flat, long and smooth husks, of the length of seven or eight inches, in which are enclosed flat and long beans, which at first are ripe, but afterwards turn dark red. This tree produces flowers all the year round, but in the rainy season in greater plenty. The flowers preserved with sugar, are used with good success for a laxative, as we do with our rose-sugar. The second sort of the *Chavanna Mandaru* is a very tall tree like the first, with such like branches, a trunk of the same thickness, and the same leaves, only somewhat larger. The flowers have five oval leaves of a purple colour, both in and outside with white streaks. The husks of this tree are the largest of all the four kinds, being two spans long, an inch thick, flat and smooth; the beans are the same both in shape and colour as the first; and this tree blossoms at the same time, and in the same manner. The flowers of this tree eaten raw are laxative; the bark, flowers and fruit bruised together and mix'd with the liquor of the decoction of rice, is a sovereign remedy to bring to maturity, and to open all sorts of tumors. The bark chew'd cures the tooth and head-ach.

The third sort, call'd *Velutta Mandaru* by the *Malabars* and *Dove Mandaru* by the *Brabmans*, is not above six foot high, and an arm thick; the leaves are cloven like those of the first, but the flowers white without the least scent, having five round leaves. The husks are not so big as those of the others, viz. not above four or five inches long, and an inch thick, for the rest flattish and smooth. The beans are long and round, of a yellowish colour, neither so big nor so red as those of the *Chavanna Mandaru*. This tree blossoms two or three times every year, but chiefly in the rainy season. The flowers bruised and mix'd with some pepper, and applied outwardly to the head cures the head-ach; and if you wash yourself with the decoction of the root, it lays all sorts of itching of the skin.

The fourth sort called *Kanfchenapou* by the *Malabars*, and *Kanfjanu* by the *Brabmans*, is a tree which runs up to the height of 12 foot or more, with lofty branches, but the stem is not above half a foot thick.

T t t

1662.

The tree  
Mandaru.Velutta  
Mandaru.Kanfche-  
napou.

1662. The leaves are cloven like the rest, but not so big, very strong scented if rubb'd betwixt your fingers, especially in the night-time: The flowers consist also of five leaves, of a pale yellow colour, without the least scent. The husks are the same with those of the *Chavanna Mandaru*, very smooth on the outside, but somewhat hairy whilst very young. The beans are small, in shape and colour resembling those of the *Velutta Mandaru*. The tree bears flowers twice or thrice a year, but most plentifully in the rainy season. The decoction of the root taken inwardly, is a good remedy against the worms and inflammations of the liver, and the piles. The bark powder'd disperses tumors, cleanses the wounds, and is an excellent narcotick.

The tree  
Nilikamaram.

The tree call'd *Nilikamaram* by the *Malabars*, and *Arwali* by the *Brabmans*, grows up to the height of 24 foot, tho' its trunk be no bigger than a man's arm, which as well as the branches, are covered with a black bark. The leaves sprout forth out of thin and round twigs, with very short stalks; they grow two and two together, of an oval figure, and very small, being dark green on the upper side, and light green on the other side. Every night the leaves close up like tulips; the flowers grow on small twigs in clusters, consisting of six very small leaves. It bears a round, but flattish fruit, of a pale green colour when ripe, and somewhat transparent; the pulp being likewise green and very juicy, of an agreeable astrigent taste: In the midst is a stone, distinguish'd into six different concavities, each of which contains a small triangular seed or small kernel. The fruit is much used by the *Malabars*: The water distill'd from this fruit cools the liver, and dry'd and power'd, and mix'd with four coagulated milk, stops the bloody-flux.

Odollam.

The tree call'd *Odollam* by the *Malabars*, and *Uro* by the *Brabmans*, grows to the height of 18 foot, its trunk being so thick as scarce to be encompass'd by a man with both his arms, with crooked branches. The wood of the stem is very soft, and the pith red, the bark of an ash colour, bitter and very hot upon the tongue. The leaves grow scattering upon the twigs and long stalks, are of the shape of a tongue, thick, smooth, dark brown on the upper-side, bitter and biting upon the tongue. The flowers grow in clusters like cornets, on long, thick, and green stalks, having five very white and pointed leaves. It bears a kind of ground-apple, with a green and smooth rind, under which is a white pulp of a waterish taste. The stone which is in the midst, is shap'd like the heart of a man, of a pretty large size, with two ker-

nels within it. Some will have this tree to be the same which the *Indians* call *Mongas*.

1662.

Nuroti.

The tree call'd *Nuroti* by the *Malabars*, and *Kaitu* by the *Brabmans*, rises up to a great height, its branches spreading very lofty round about it: The trunk is so big as scarce to be grasped by a man; the wood white, with a thick bark, which is green without and red within. The leaves are scattered here and there on the twigs with short, round and green stalks, of the length of a span, and the breadth of four or five inches, of an oval figure, pointed at the ends, not unlike the laurel leaves. The flowers sprout forth six or seven together out of the extremities of the small twigs, consisting of three rows of small leaves. The first row makes up a star of five small pointed and dark brown hairy leaves. The second row contains five round and small leaves of a rose-colour, and the third or outermost row, five pointed green leaves. The fruit grows on short and thick stalks, being of an oval figure, having a rose colour'd rough peel, and within a large yellowish stone, containing 10 or 12 kernels of an oleaginous substance. This tree produces both flowers and fruit in great plenty all the year round: From the kernels or seeds an oil is drawn, which has an anodyne quality, and applied outwardly, cures all sorts of scurfs and itchings: The same oil, mixed with a certain fruit, the *Malabars* call *Paleo*, kills the corns in the feet, if applied to the affected part.

Of the tree call'd *Kaniram* there are four several kinds: One is call'd *Kaniram* only; the second *Karakanimam*, and the third and fourth *Vallikaniram*. The tree call'd *Kaniram*, and by the *Brabmans*, *Karo*, grows up to a great height, with lofty and far spreading branches. The root is very thick, exceeding bitter, and covered with a yellow rind. The trunk is of that thickness as scarce to be grasped by two men, having a dark ash colour'd bark. The leaves, which are of an oval figure, are very broad in the middle, and pointed towards the ends, of a bitterish taste and an odd scent, growing two and two over against the other: The flowers sprout forth in clusters, having each five or six pale green and pointed leaves. No sooner begins the blossom to bud, but the tree loses all its leaves, instead of which new ones come soon after. It bears a kind of round and smooth apple, which is green at first and turns yellow afterwards, two, three, four or more hanging together on short stalks. The pulp, before they are ripe, is white and insipid, but when ripe, bitter with a thick rough peel. It blossoms in the

summer.

1662. summer, and brings forth fruit in the winter. In the pulp are round but flattish seeds, which are also very bitter. The juice of the leaves taken in the decoction of the same leaves cures the head-ach, but if used in too great a quantity is mortal, the only antidote against which is man's dung taken inwardly. Two or three of those seeds taken every day for two years successively, is a preservative against the biting of the serpent, called *Cobra de Capelo* by the Portuguese.

The tree called *Manjapumeram* by the Malabars, and *Pariataku* by the Brabmans, rises up to the height of 18 or 24 foot, with very thick and lofty branches spreading round about it, but the stem is not above the thickness of an arm, having an ash-coloured bark: The leaves hang crosswise over one another, being pointed at the ends, the uppermost side of a dark green, and the other of a light green colour, of an astringent and bitterish taste; the flowers grow on stalks which stand upright five in a cluster, are very agreeable and sweet scented, having six, seven, and sometimes eight leaves each, of a whitish colour both in and outside. The fruit is of an oval figure, but flat, of a green colour, containing two round and flattish seeds. This tree is of no use among the Malabar physicians.

This tree *Champakam*, as the Malabars call it, and the Brabmans *Champo*, is a very tall tree, with many lofty branches spreading at a good distance: The trunk is of that thickness as scarce to be grasp'd by a man, with a thick bark of an ash-colour without, and soft within, of a bitter astringent taste. The wood is white: The leaves are of an oval figure pointed a good way towards the ends, of the length of a span, and the breadth of four or five inches; the uppermost side dark green and shining, the other side light green, bitter and biting upon the tongue. At the extremities of the small twigs sprout forth pale green flowers, of a quick odoriferous scent, having oval leaves placed in three rows within one another. In the first row are about eight leaves, being as broad again as those of the second row, round but pointed at the ends; but those in the second row are more pointed still, and those in the third more than the second, and pale yellow. The fruit grows in bunches of an oval figure, with a thick rind. Whilst not come to maturity it is green, but turns pale yellow when ripe, being sharp of taste, and of no agreeable scent: Within are three or four seeds, round on one, and flat on the other side; within those seeds, when they are come to their full perfection, is a thin milky substance enclosed in a skin of a pur-

ple colour, and within it a black stone. 1662. The tree, if not too old, blossoms twice a year; out of these flowers they distil a good cordial water.

The tree call'd *Elengi* by the Malabars, and *Vavalli* by the Brabmans, grows up very high, with many far-spreading branches: The trunk is of that thickness, that two men can scarce well grasp it, with a dark brown and rough bark, containing a milky liquor within. The wood is full of the same juice, and will keep a great while under water, but not very long in the air. The leaves grow on small round and green stalks, being of an oval figure, but pointed at the ends. The flowers have pale green stalks, growing five or six in a cluster, of a white colour, consisting of 16 leaves of an odoriferous scent. The Malabars make nosegays of them. The fruit is shap'd like an olive, green at first, but turns yellow and red by degrees: The pulp is yellow and mealy. The Malabars eat this fruit, which has two oval but flat and dark brown stones within. This tree bears flowers twice a year, out of which the Malabars distil a well-scented water, which is look'd upon as a great cordial, and revives the spirits. The fruit bruised and taken inwardly in warm water, promotes the birth.

Besides these there also grows here *Cassia Fistula*, called *Konna* by the Malabars, and *Bajo* by the Brabmans; and *Tamarinds* call'd *Balam-Pulli*, or *Maderam-Pulli* by the Malabars, and *Sinza* by the Brabmans. The coast of Malabar produces likewise *Cardamom*, *Berbergy* ginger, and some aloes; as also bezoar-stones, salt-petre, honey, lacca, and cotton; to be short, this country abounds in all sorts of Indian trees and fruits.

The woods afford vast plenty of birds of all kinds, and among the rest most excellent peacocks, the flesh of which is very white and well tasted. No place in the world abounds more in all sorts of water-fowl, and there are a great many birds here so tame, and so plentiful, that you may kill them with a stick, the reason of which is, that as the Pagans adhere to the opinion of *Pythagoras*, concerning the transmigration of the soul; so they won't kill any living creature, which makes all sorts of wild creatures multiply here, almost in infinitum. The flesh of their hogs (of which they likewise have great plenty) is also excellent good; but above all, tame fowl is so prodigious cheap here, that you may buy a very good pullet for two-pence, and thirty eggs for the same price. I remember I had once bought up 300 pullets against the arrival of our ships, which being put in the old church of *St. Thomas*,

Plenty of  
fowl.

W.C.

1662. we found all dead one morning; we could not guess at the cause of this disaster, till a certain *Malabar* told us, that it could not be otherwise, but that a *Cobre Kapel* (a very venomous serpent) must be hidden in the place; whereupon strict search being made we found the serpent under a heap of old wood, which was no sooner removed,

but the serpent set herself upright upon the tail, spitting fire and flame, so that no body durst approach her, till one of our soldiers kill'd her with his sword. Of venom there is also great plenty.

They have likewise bats of divers kinds; *Bats*, and among the rest a certain sort of that bigness, that their wings when extended are

as long as man can stretch with both his arms together. They have red heads and necks, black bodies, and are shaped like a fox. They are extremely nimble, and having very sharp teeth do a great deal of damage to the fruit. Their wings are bare, like those of our bats, unto which are fastened their legs and tails, so that they can neither walk nor stand; to recompence which defect they have a kind of a hook, of the thickness of a finger on each wing, wherewith they fasten to the branches of the trees: You see here vast multitudes of them in the woods, so that it is no difficult thing to kill them; but whatever you kill, remains hanging among the trees: They are naturally so fierce that they are not to tamed; for if taken alive, they will bite their own wings and flesh as far as they can reach; I once had the curiosity to set two of these creatures a fighting, which they did with such fierceness, that they both remained dead upon the spot. They will

drink of the liquor of the coco-tree till they are drunk; they commonly bring forth two young ones at a time, and that generally in the hollow of trees; the *Malabars* eat the flesh, which has no agreeable taste.

Here you meet also with *Jackalls*, as our *Jackall* people call them, being not unlike a large fox, of the bigness of an ordinary peasant's dog, of a red grey colour, but thinly covered with hair. They assemble in the night in whole troops, and approaching (especially about the new-moons) to the villages or plantations, make a hideous noise, like the outcries of women or men; they are very greedy after mens flesh, and will scratch the dead carcases out of the graves, unless they be well covered with stones: They are scarce ever to be tamed. The *Malabars* eat the flesh of these *Jackalls*. And thus much of the co st of *Malabar*.

After, as I told you, we had set sail the 12<sup>th</sup> of March from *Koulang*, the wind turn'd against us the same evening, but about eleven

Vol. I

1662. ven a clock at night we set sail again with the land wind. The 13<sup>th</sup> we kept along the shore with a gentle breeze and very fair weather; but the wind turning soon after to the E. S. E. we were forced to chuse the main sea, but made to the shore again towards evening, and took the benefit of the land-wind. The 14<sup>th</sup> there being but little wind we advanced no farther than 12 leagues from *Koulang*; and the 15<sup>th</sup> finding ourselves off of the city of *Tengepatnam*, we gave the signal by a cannon shot for the resident Mr. *Kock* to come aboard us, which he did accordingly; and after I had discoursed with him of what I had in commission to tell him, we continued our voyage, but being towards evening overtaken by a tempest, were forced to come to an anchor. The 16<sup>th</sup> early in the morning the winds being somewhat laid we set sail again, but by reason of the contrary winds were forced to return towards *Pulon*, near the cape of *Comorin*, where the Portuguese have a small church dedicated to St. *Martin*. The 17<sup>th</sup> we made this cape, but the winds continuing still against us, it was not till the 18<sup>th</sup> that we could reach *Toutekoriin*, the chief among the seaports of the coast of *Madure*. Here I tarried for some time to observe the interest of the company, both in respect of their traffick hither, and in the government of the inhabitants, who live under their jurisdiction along the sea-coast, in seven large villages, the chief of which is *Toutekoriin*, the other six are *Manapara*, *Alendale*, *Wiranypatnam*, *Pommekiel*, *Baypaer* or *Vaypaer*, and *Bempaer*. After a stay of six months here, I received orders from Mr. *Van Goens* to return to *Koulang*, and to take once more upon me the government of this city, being very well known to the queen there; accordingly having surrendered my accounts to Mr. *Lawrentz Pii*, in the presence of captain *Van Reede*, I left this place the 19<sup>th</sup> of May 1665, and went by land to *Koulang*. The number of the inhabitants of the before-mentioned seven villages amounted in 1664 to above 20000 souls, viz. in *Toutekoriin* about 3000, in *Manapara* 4000, in *Alendale* 800, in *Wiranypatnam* 900, in *Pommekiel* or *Punikael* 2800, in *Baypaer* 700, and in *Bempaer* 800; besides those inhabiting on the coast of *Comorin*, which amounted to a considerable number: All these villages are adorn'd with stately churches, built by the Portuguese, especially those of *Manapara* and *Bempaer*, but are now in a decaying condition, since the Portuguese have been chased thence. Some of the *Romy*s priests now and then come to say mass in the neighbouring villages, whither the people flock in great numbers; tho' to speak truth, they are

Vol. II.

more heathens than christians. *Toutekoriin* 1662. consumes yearly abundance of foreign commodities, by reason of the great numbers of inhabitants living along this coast, who must be provided from abroad with most things they stand in need of; *Toutekoriin*, otherwise *Tutukuriin*, or rather *Tutukury*, *The village of Toutekoriin*, or *Totokury*, is now, as we told you, the chief of all those seaports, being an open place, but beautified with stately stone buildings. It has three large churches built by the Portuguese, which are to be seen at a great distance at sea, the countrey round about being flat and low. In one of these the reformed exercise their religious worship: Besides which the convent of the *Franciscans* is lately fitted up for the same use.

The Dutch East-India company have a factory here, managed by a merchant as chief governor; by a factor as his deputy; two or three assistants, and a military officer, under whose command are some soldiers, but the *Nayk* of *Madure* will not allow them to erect any fortifications: During my stay here, I begun to erect a brick-wall round the garden, but finding the *Jenives* to look with a jealous eye upon it, I desisted; yet I took care to repair the house of the company, and set their flag on the top of it, which might be seen a good way at sea.

This place was taken by the Dutch from the Portuguese 1658; without much resistance. In the road of *Toutekoriin*, is good anchorage at five fathom water in a sandy bottom.

Three small leagues from *Toutekoriin* near the rocks of *Remanekor*, not far from the kingdom of *Narsinga* lies the village of *Punikael*, where the Portuguese formerly had a fort, and a garrison of 40 men. Two leagues from thence there was a Pagan temple of the *Brabmans* call'd *Trichanduri*, against which and the priests thereof the Portuguese would frequently utter very injurious words, which so exasperated the inhabitants, that they entered into a league with their neighbours, viz. the *Badagas* of *Narsinga*, in order to drive the christians thence: Accordingly, having with a great deal of secrecy got together a body of 6000 men, and received certain intelligence that the Portuguese in the fort were but ill provided with gunpowder (the chief terror of these *Barbarians*) they march'd directly to *Punikael*, the Portuguese being not a little surprized at so unexpected a sight, were put to the greatest nonplus that could be, being in want of ammunition, and no great account being to be made upon the *Parvas* (the christian inhabitants) as being not trained up to military affairs, but living upon

About that time a certain priest, named *Anthony Kriminalis*, who was come some days before thither to take care of the christians there, seeing this miserable spectacle, applied himself to *John Ferdinando Korrea*, governor of the fort, remonstrating to him, that since they were not in a condition to oppose the enemy, to endeavour to bring things to an accommodation; but the governor answer'd, that it was against the glory of his king to submit in the least respect to those *Barbarians*; *Kriminalis* made what haste he could to return to his flock, which he met in the church where he had preached the same morning, and led them to the sea-shore, endeavouring as much as he could to see them embark in their boats, whilst he refused to enter himself, being resolved to stay ashore, and to expect the utmost fury of the *Barbarians*, who were advancing apace, and with their arrows had already kill'd several of the *Portuguese* and others, among whom was the interpreter of *Kriminalis*, who was shot by his side, notwithstanding which he remained immovable in his resolution, and wringing his hands up to heaven, fell upon his knees; the first troop of the *Badagas* pass'd by without doing him the least harm, except that they took his hat, and so did the second, but one of the third troops (consisting of *Mahometans*) run a lance into his left side, whilst others let fly their arrows at him, and thinking he had been kill'd came to take his cloaths, which he, being yet alive, gave to them, and so retreated into the church, with an intention to spend the small remainder of his life at the foot of the altar; and being follow'd by the *Badagas*, he there received a second thrust, and soon after a third, which put a period to his life: They afterwards cut off his head, which together with his bloody cloaths they carried in triumph to their temple of *Trichbanduri*; the trunk of the body was afterwards buried by the christians.

Not far from *Punikaal* or *Pommekiel*, lieth a great village call'd *Putanam*, and so further up the coast *Bembar* or *Bempaer*, *Kalekure*, *Beadal*, *Nianankor*, or rather *Romanankoris* and *Kanbameira*; next you see *Negapatnam*, the first frontier of the coast of

*Coromandel*, but one of the chiefest towns of this coast is *Periapatan*, situate near the rocks of *Romanankoris* being the capital city of the *Maravas*, who inhabit the mountains, a barbarous generation, living only upon robbing; the jesuites that formerly belonged to the church of *Periapatan*, did endeavour to reclaim them in some measure from their barbarity, but most of them soon return'd to their old way of living. There is another village seated on the other side of the rocks of *Romanankoris*, directly opposite to *Negapatnam*, the inhabitants of which are all christians. All along the sea-coast are about 30 villages, among which, besides the before-mention'd, are the chiefest, *Trichbandar* or *Trekandar*, *Kallegrande* and *Cberakalle*.

The inhabitants of those places are very black and strong; they are deceitful and cunning, make but little account of their wives, but generally keep two or three harlots, by whom they have sometimes 16 or 18 children. The men wear nothing but a single piece of callicoe wrap'd about their middle, and another piece about their head, which they call *Romare*. The ordinary women commonly wear painted callicoe, those of fashion are adorn'd with gold rings and bracelets when they are abroad, but are very nasty at home. They tie their hair up in a truss behind, like those of *Malabar*, for the rest they have very good features. They live upon meat and rice, but drink nothing but water, from the sea-shore; they live by pearl fishing and catching of fish, by weaving and shipping, there being some who drive a considerable trade with the painted callicoes to *Kalpentien*, *Kolomba* and the *Malabar* coast. They have abundance of callicoe and linnen weavers here, and great numbers of people are employed in painting of callicoes, which they do very artificially. This trade was in great request whilst I was here, because I used to give all imaginable encouragement to them; the inhabitants are govern'd by judges of their own, who are chosen every year by the chief director of the *Dutch* company there, whom they stile the *Captain of the Seven Sea-ports*. Each village has the privilege to propose four, out of which the *Captain* chuses two, who swear fealty to the company; all civil causes are transacted in their respective villages, but criminal matters are decided at *Toutekorin* in the council of nine, whereof the *Captain* is president. The remaining *Portuguese* pay no taxes to the *Dutch* company, but to the *Nayk* of *Madure*; however, this tax is paid with the approbation of the chief director, who al-

1662. lots every one his share according to his substance; those who are backward in their payment, must expect speedy execution, which is done by the soldiers of the *Nayk*, and causes frequent quarrels betwixt the inhabitants and the soldiers, as it happened in my time; when the *Nayk* peremptorily demanded the tax from the *Parvas*, which they were not able to pay, I sent to him a serjeant with some soldiers, to desire that he would send a commissioner with whom they might treat, and obtain some time for the payment thereof; upon which the *Nayk* having sent one of his great officers with a body of horse, I remonstrated to him the impossibility of the matter, telling him that the seven seaports were willing to make a present of two silver dishes fill'd with ducats to his master, which was well accounted of, and the *Nayk*, as a token of his satisfaction, sent me a scarf richly embroidered with gold. These seven seaports were formerly (before the *Portuguese* fleets appear'd in these parts) under the government of the king of *Martien*, a vassal of the queen of *Tengauzy*, unto whom they were forc'd to pay many taxes; at which time the *Parvas* lived deeper in the country, and us'd to serve in the wars to such princes as would pay them best.

Wart be-  
twixt the  
*Parvas* and  
*Moors*.

One time a certain *Parvas* happening to fall out with some *Moors*, these cut off his nose and ears, which so exasperated the *Parvas*, that they resolv'd to take up arms, and to revenge the quarrel of their countryman. To begin the fray, they took one of the *Moors*'s merchants prisoners, whose nose and ears they likewise cut off, and so sent him home. Hereupon the *Moors* having assembled a body of 30000 men, they march'd to, and pitch'd their tents near *Toutekoriin*; on the other hand, the *Parvas* were not above 5000 men, and well arm'd, and trusting more to their bravery than number, fell upon the *Moors* so courageously, that they made them quit the field, with the slaughter of 7000 of their men; a great number of them being forc'd to the sea-shore, saved themselves in boats, but were scarce got to sea, when by a strong tempest from the S. W. they were dispersed, that no news was ever heard of them since. After this victory the *Parvas* having made themselves masters of these seaports, came to a composition with the queen, promising to pay her the same taxes as the *Moors* had done, which being impossible for them to perform, this proved the occasion of unspeakable miseries; some of them being imprisoned for want of payment, others sold for slaves to that degree, that at last they resolv'd to shake off the

yoke, cost it what it would: The *Portuguese* who 1490 appear'd first thereabouts with their ships from *Cochin*, having at that time traded there for 40 years before, and consequently their strength at sea, being not unknown to the *Parvas*, they sent their deputies to *Cochin* to implore their protection, and to promise their obedience, and that they were ready to embrace the christian faith. The *Portuguese*, willing to improve this opportunity, came with their fleet 1533 on that coast, and having made themselves masters of the seaport towns, the *Parvas* received baptism all on one day. However they met with great opposition afterwards from those on the coasts of *Coromandel* and *Malabar*, encouraged underhand by the *Parvas*, till at last matters were adjust'd thus, that the *Portuguese* should remain masters of the coast, that the *Parvas* should pay them a certain annual tribute, according to their ability, and that all the chief men on that coast should have their share in the pearl fishing, which was to be perform'd on a certain day. After all, the *Nayk* of *Madure* having found means to get into the possession of this country, left the *Portuguese* in the full possession of their jurisdiction over the *Parvas*, and of the free exercise of their religion, in which state it continued till the year 1630, when the king of *Portugal* having sent thither a governor, to clip the wings of the *Romish* clergy, who were grown too powerful there, this occasion'd new troubles; for the *Parvas* being a zealous kind of people, and for the most part at the devotion of the priests, they were divided into two factions, during which intestine commotions the clergy did not forget to improve their authority, and to enrich themselves at the expence of their flock, but the *Jentyves* or *Pagans* also began to encrease to such a degree, that being become formidable to the *Parvas*, they often forc'd them to shelter themselves against their forces in the neighbouring islands. Since that time the *Parvas* acknowledged the jurisdiction of the *Portuguese* governor; each village has two judges, who are changed every year, they keep courts twice a week, and in conjunction with the *Petangiins* (who are hereditary officers) decide all controversies of less moment; they raise the taxes, and are accountable once a year to the people for all their transactions; whilst the *Portuguese* were masters here, the *Jentyves* or *Pagans* durst not exact more taxes from the *Parvas* than was agreed for, unless they would see them go with wife and children to the neighbouring islands, from whence they did not return till they had obtain'd some considerable

1662.

1662. *Parvas* having left off that custom, the *Jentyves* improve it to their advantage, and force them to pay three times as much as they used to do formerly.

The kingdom of the *Nayk* of *Madure*, under whose jurisdiction the seven before-mentioned sea-ports are, borders to the west upon the kingdom of *Travankor* to the east upon the sea, and to the north-west upon the country of the *Nayk* of *Tanjaor* or *Tanjawer*, betwixt the coast of *Malabar* near the cape *Comorin* and *Coromandel*; its whole extent being along the whole eastern gulph or coast opposite to *Ceylon* from the cape *Comorin* (where the coast of *Malabar* ends) to the town of *Bemper* or the river *Ullon*, a tract of 75 leagues in length, and 30 in breadth. The sea-shore, commonly call'd the *Pearl-Coast*, from the many pearl-banks that are hereabouts, extends from south to north in length, and in some places about half a league deep into the country. The capital city and ordinary residence of the *Nayk* is *Madure*, five days journey to the north of *Koulang*; being adorn'd with many most magnificent *Pagodes*, or pagan temples, which have very high turrets gilt on the top. Along the coast of *Madure* neither grass or herb, or plant is to be seen, except thistles and house-leek; it having been found by experience, that the coco-trees would not thrive here no more than several other *Indian* trees; notwithstanding which they are sufficiently provided with all manner of necessaries from the circumjacent country, as well as from abroad, by the way of *Toutekorin*; besides that, the sea-shore abounds in hares and partridges, the first of which resemble our rabbits, their flesh being tough, yet in taste like our hares. The flesh of the partridges, which have red legs and round bills here, is of an agreeable taste.

They have here mice as big as cats, which dare not approach them, for if they be pursued, they will settle upon a chair or chest, and sitting upright, fight and bite like dogs: They are in colour and shape like the *European* mice, except that they are without hair, and have a rough skin like an elephant. They will dig underneath the doors, and do considerable mischief to the merchandizes in the warehouses.

There is also here another sort of mice, red and much lesser than the first, but so fierce, that they will make the cats run before them.

This country also produces serpents, and divers other sorts of venomous creatures. One morning, as I was rising, I found the skin of a serpent sticking to one of the posts of my bedstead, which she had

cast there the night before, without being perceived by me or any body else. In 1662, *October*, *November* and *December*, the western winds blow with such violence, the sand from the adjacent mountains to the shore, that you are not able to open your eyes. Much rain falls deeper in the country, and near the cape *Comorin*, but never at *Toutekorin*, instead of which a thaw falls every night, which is very cold, and consequently, by the sudden alteration of the weather, very unwholesome; the winds being sometimes so excessive hot here, as if they did blow out of a fiery furnace; as long as these winds last, the inhabitants dare not go abroad into the fields for fear of being overwhelm'd by the sand.

The *Nayk* of the kingdom of *Madure* is master of several considerable counties, each of which are govern'd by a peculiar governor; besides which, there is one governor-general, who has the chief management of the whole kingdom, who ruled all our time the country, which was called *Boomalapelles*; besides the governors, each village has two judges, who are much respected by the inhabitants. The *Nayk* to secure himself of the fidelity of his governors, detains always their wives and children in a certain castle call'd *Zwela Baddy*, about seven leagues from *Madure*, under the guard of 300 eunuchs; neither are the husbands permitted to see them without peculiar licence from the *Nayk*, and are obliged to depart again in two or three days; some to avoid this inconveniency, content themselves with harlots. Most of the inhabitants of the country of *Madure* are *Jentyves* or pagans, (by some they are call'd *Badagas*) tho' some of them have been converted to the *Romish* faith by the *Portuguese*. The *Jentyves* are accounted good soldiers, yet much inferior to the *Malabars*, witness the wars the *Nayk* of *Tanigot*, tho' much inferior in power, wages against them.

There are three *Nayks* in this part of the *Indies*, viz. the *Nayk* of *Madure*, the *Nayk* of *Tanjaor*, by the *Dutch* call'd the *Tanjower* and *Tanjawer*, and sometimes *Taaver*, and the *Nayk* of *Gingi*, otherwise call'd *Cingie*, or *Cbengier*. The word *Nayk*, *Neyk*, or *Najeka*, signifies as much as a governor, vassal or viceroi, their predecessors having in ancient times been only governors of those countries they are now possessed of under the jurisdiction of the kings of *Vidia Najar* or *Bijnagar*, or *Narsinga*; but having revolted against their liege lord, each of them assumed the royal power and title. The *Nayk* of *Madure* had been for a considerable time in war with the *Nayk* of *Tanjaor*, and taken many places

1662. places from him: At my time the war was renewed with more vigour than ever; and the *Nayk* of *Tanjaor* having gathered a great army, attack'd the *Nayk* of *Madure* so briskly, that he took from him in a few days all the places he had conquered from him before. The army of the *Nayk* of *Madure* being much disheartened by the victories of their enemies, the *Madure* sent to me, to *Koulang*, his chief governor, desiring assistance from the company; but as it was not our interest to engage on any side, I excused it as handsomely as I could.

The Pearl-Banks.

Between the coast of *Madure*, where the seven villages are, and the isle of *Ceylon*, are divers famous pearl banks by the sea, for which reason this tract is called the *Pearl-Fishery*. These pearl-banks are properly rocks of white coral stone, which sometimes are covered with sand; on these rocks, the oyster-shells, containing the pearls, are fastened, but in what manner no body knows. Some of those banks are about 12 or 13 fathoms, and others at 15 fathoms distance from the shore, so that they can scarce be seen from thence: Some of those banks are five, six or seven fathom under water. The oysters live six years, after which time the shells open and the pearls are lost; of which I have seen several that were shown me by the divers. These pearl-banks are search'd every year to see whether the shells are come to their full maturity: This is commonly done in *October*, when the weather is calm, and the sea clear hereabouts. After they are convinced that the said oysters are come to their full perfection, the time of pearl-fishing is appointed and proclaimed throughout the country, so that the merchants resort thither from the other part of the *Indies*, nay, from *Arabia* and *Turkey* it self, who let up their tents near the sea-side, to buy the pearls.

Pearl-fishing boats perform'd.

They fish for pearls, or rather the oyster-shells containing the pearls, in certain boats called *Tonnis*, being about 28 foot long, (of these you shall see 3 or 400 at time,) each of which has 7 or 8 stones, which serve instead of anchors, and 5, 6 or 7, nay sometimes 8 divers, who are to dive one after another. These divers are quite naked, being covered only with a kind of thin wastecloth; they have each a net hanging down from the neck, and gloves on their hands, wherewith they are to pick the oysters from the rocks; each of them has also a stone of about a foot in length, and 50 pound weight, to make him dive the swifter: This stone has a hole on the top, wherewith it is fasten'd to a rope; when they are going to dive, they set their foot into a kind of a stirrup, laying hold

VOL. II.

with their left-hand of the rope, the other end of which is held by one in the boat, stopping their nose with the right-hand to hold in their breath, and so go to the bottom; where they are no sooner come, but they give a signal, by pulling the rope, for those in the boat to pull up the stone.

This done, to work they go, and scraping the shells from the rocks, fill their nets, and then pull again the rope, when those in the boat draw up the nets first, and soon after the divers, who are succeeded continually by fresh ones. These divers can hold their breath four times as long as other people; they are obliged to dive from 3 fathoms to 15, being not able to hold their breath any longer. These boats commonly go to sea every morning by break of day, with the land-winds, and return in the afternoon with the sea-winds. Those who equip those boats, hire both the divers and the rest of the boat's crew at a certain price *per diem*, like as we do our day-labourers. All the oyster-shells are brought ashore, and there laid up in a great heap, till the pearl fishery is over, which begins immediately after *October*, and continues all the *November* and *December*, which makes the oysters smell very strong, and sometimes occasions distempers. The pearl-fishing being over, a wooden house is erected for the company and the *Nayk*, where each receives his share, the boats being obliged to fish one day for the *Nayk*, and another for the company; and these take care that they be not disturbed in their fishing, the governor and two judges being every day near the sea-shore, to decide such differences as arise betwixt them. At last the oyster-shells are opened in the before-mention'd house, in the presence of certain commissioners; every oyster-shell does not contain pearls, nay, the most are either without any, or have at least very small ones: On the other hand, some shells contain five, six, seven, nay eight pearls apiece. Some of these pearls are found in the liquor, some in the flesh of the oysters, others, but few, are fasten'd to the shells, of which last I keep several by me. The pearls being all taken out of the shells, are put into sifts of different holes, and according to their different sizes are sold to the surest bidder: The pearl-dust is bought and sold by the *Dutch*. They stew and eat the flesh of these oysters, but it is somewhat rank and hardy, not comparable in taste to our *English* oysters. They give the pearls a glance by rubbing them with salt and powder'd rice. Out of the shells *dust* they make a very fine mortar.

They have two sorts of pearl-dust, the old and the new: The new pearl dust is

X x x

search'd

1662.

1662. search'd after daily by the women among the dirt and rubbish of the oysters: The old pearl-dust is dug out upon the very brink of the sea-shore, dirt, sand and all, sometimes six, seven or eight foot deep; this they let dry altogether in the sun, and by degrees the dust being blown away by the wind, the black pearl-dust remains behind, which they bring to those in small parcels, who have given them some money beforehand. This pearl-dust being the worst of the two, and of no great value, these poor wretches can scarce get a half-penny a day for their labour, a wretched gain indeed, but sufficient to keep them from starving in this country.

The horns  
of Siankos

Besides the pearl-oyster, they also catch on this coast certain horns call'd *Siankos* by the inhabitants, being in shape long; round and thick, and very white; out of these they make bracelets and thumb-rings, which they make use of in drawing their bows, being valued much beyond Ivory. This product of the sea is found at 8 or 12 fathom depth, in a tract of the sea of about 10 leagues in length, from the coast of *Vyraamdes Laam* to *Ilba Dooe*. They begin to fish for it in the middle of *December* till the middle of *May*, when the sea hereabouts beginning to be unclear, the divers cannot without great danger go to the bottom. Among these sea-horns they now and then, (tho' scarce once in 100 years) meet with one they call the *King's-Horn*, being not to be distinguish'd from the rest, except by the opening, which is on the contrary side, being red within and green without; they are said to swim before the rest, which follow them like their king; for which reason it is, that the kings of *Golconda*, and several other *Indian* kings are accounted out of one of these horns, which makes them to be in great esteem here, especially among the *Jentyves*, who will sometimes give 800 reals for such a horn. Whilst I was hereabouts, a certain fisherman dream'd that he had taken a king's-horn, which he telling to one of his comrades, they agreed, that they would go immediately to try, and divide the booty; accordingly they did, and he who had dream'd the night before, catch'd a king's-horn, but refusing to give to his comrade his share, they went before the judges, who were obliged to decide in favour of the dreamer, the other having no witnesses to prove his bargain. I bought the same horn afterwards for 170 reals, and was offered 20 reals gain immediately after, by one of the judges. These *Siankos* are sold at a dear rate at *Bengal*, where they have a way of polishing them, that they shine with a most lovely white,

much beyond any ivory: They make bracelets and other ornaments of them.

As the fishing of these horns is one of the main subsistence of the inhabitants on this coast, so they must be carefully look'd after, that under pretence of fishing for them, they don't dive for oysters, for which reason certain people are maintained to watch them. I remember they once brought up a moorish boat belonging to *Kalitpatnam*, which under pretence of fishing for *Siankos*, had been found among the pearl-banks; when they came before me, I found upon a strict examination, that extreme poverty had enforced them thereunto, and so dismissed them for that time. Some are of opinion, that the pearl-dust dug on the sea-shore, has lain there ever since the isle of *Ceylon* and the *Maldivo* islands, were torn from the continent, when the pearl-shells were cast up by the floods here, and opening themselves, were confum'd by degrees, leaving the pearls under ground. The pearl-dust is gather'd by the men during those intervals, when they can't go a fishing, but when they are abroad at sea their wives and children do it in their stead. Abundance of divers are devour'd by the sharks, against which they pretend to defend themselves by certain incantations, notwithstanding they are christians.

After I had settled my accounts at *Toulé-koriin*, I prepared for my journey to *Koulang*, I prepared for my journey to *Koulang*, and accordingly as I told you, set out the 19<sup>th</sup> of *May* 1665, under a guard of some soldiers, and with an attendance of some porters to carry my baggage and provisions, there being no inns by the way, and in many places not the least thing to be got for money. We had scarce travell'd a day but were met by a troop of *Malabar* robbers, arm'd with bows and arrows ready to let fly at us: They had already laid hold of two slaves, who were carrying some *Persian* wine, but seeing the soldiers ready to discharge their firelocks among them, they thought it their best way to retire, and finding us continually upon our guard, quite to leave us at last. We pass'd that dreadful ridge of mountains call'd *Balligate*, extending 120 leagues in length, and is cover'd with a very fine red land, which being as light as dust, is in *October*, *November* and *December* blown by the continual strong west winds as far as the isle of *Ceylon*, a tract of at least 50 leagues; whence it is probable, that these mountains are not so high now as they were in former ages. When the sun casts its rays upon this red land, the reflection thereof appears most dreadful to the eyes in the sky, which seems to be all on fire. This high ridge of mountains

The moun-  
tains of  
Balligate

1662. mountains does likewise occasion most surprising alterations in the season; so that whilst on the north-side of the cape *Comorin*, it is winter during the months of *May, June, July, August, and September*; it is summer at the same time on the south-side of that cape; on one side you meet with continual tempests, thunder and lightning, whilst the other enjoys an agreeable and lovely season. About that time black clouds are gathering upon these mountains by the winds, which break out into very hard and sudden rains, occasioning great water floods, by the overflowing of the rivers, which are oftentimes thereby choak'd up with sand to that degree, that they are rendered unnavigable for a considerable time after.

Comes to  
Koulang.

Having at last passed the mountains I arrived the 25<sup>th</sup> of *May* at *Koulang*, whereabouts I found all the fields under water. Pursuant to the orders I had received, to draw the city of *Koulang* into a narrower compass, and to fortify it on the land-side with one wall and two demibastions, I ordered all the houses, churches, trees, and what else stood in our way to be cut or pull'd down; and 30000 stones, each of two foot long and one broad, to be cut out of the quarries; so that the first foundation of these fortifications being laid the 1<sup>st</sup> of *July*, the same was continued with all imaginable diligence. In the mean while I went in an inland bark to *Cochin*, by the way of *Kalkalang*, to confer with the governor *Kolfer* how to regulate the factories of *Koulang, Kalkalang* and *Karnopoly*, to the best advantage of the company.

Goes to  
Cochin.

After a stay of three days at *Cochin*, in my return to *Koulang*, we were surprized by so violent a tempest, that we were forced to leave the bark and to get ashore, but the next day the violence of the wind being much abated, we prosecuted our journey to *Koulang*, where I arrived the 4<sup>th</sup> day after I left *Cochin*.

The war among some of the *Indian* kings continuing as yet, it was generally reported, that the king of *Travankoor* (who was then at *Manjassi*, tho' the queen resided at the same time at *Koulang*) was marching with a considerable force to attack the fort of *Kalkalang*, whereupon I sent our factor with letters from our chief director *Mr. Kolfer* to the king, to know the reason of this enterprize: But he was forced to return without any other answer from his courtiers, than that the king being employed in his devotions, no body could be admitted into his presence till that time was expired, which was likely to hold for some time; however the army did remain all the time in its former camp, without commit-

ting any hostilities: In the mean while I had taken effectual care to provide for the security of *Koulang*, the walls advancing apace, and being in such forwardness, that we hoped in a little time to bring them to perfection; this being the only thing that stay'd me at *Koulang*; for as the time of my contract with the company began to come near a period, I began to make preparations for my return into *Holland*. But *Mr. Jacob Hufart* being gone to *Batavia*, and *Mr. Goens* put in his place, I happened to have some difference with him concerning the government of *Toutekoriin*, which rose to that height, that he ordered me immediately from *Koulang* to the city of *Kolombo* in the isle of *Ceylon*, leaving captain *Van Reele* governor of *Koulang*.

The season for sea-voyages (which must be exactly observed in these parts) being then expired, I was forced to travel for above 60 leagues along the sea-shore, with no small difficulty, there being no such thing as an inn to be met with hereabouts, or any other convenient lodgings, unless you meet with some charitable popish priest or other, who will receive you into his house, most of the inhabitants along this shore being *Roman Catholics*, who have here and there a small church. However, after some troublesome days journey I came safely to *Toutekoriin*, where I found the *Mary* yacht ready to transport me to *Kolombo*, where I arrived the next day, viz. the 18<sup>th</sup> of *Sept.* 1666, I stay'd here above a whole year; when I resolv'd to go aboard the *Brederoo* yacht bound for *Batavia*, where I landed the 20<sup>th</sup> of *August* 1667, without meeting with any thing remarkable at sea. I continued for three whole years at *Batavia*, without being engaged in the companies service, and in 1670 return'd thence into *Holland*. During those three years, I had sufficient opportunity to take a full view of the city, both within and without, in which I was so curious, as not only to make draughts of all its publick structures, but also of such plants and trees as grow in and about that city; tho' to confess the truth, the same could oftentimes not be undertaken without great hazard, as well from the wild beasts, as from the barbarous *Javanese*, so that I durst not venture far out of the town without a good guard; but before I proceed to give you a description of the living creatures, trees, fruits and plants, and of the city of *Batavia* itself, in the isle of *Java*, it will be requisite I should give you an account before-hand of the situation of this great island.

The isle known generally by the name of *Great Java*, to distinguish it from the *Lesser Java*, otherwise call'd *Bati*, lies six degrees

Great Java.

1662. degrees to the south of the line, directly opposite to the south-point of the isle of *Sumatra*, from which it is separated only from the straits of *Sunda*, where the same is not above four or five leagues over. To the north lies the isle of *Borneo*, betwixt which and this isle there is a convenient passage for small vessels; to the east it has the isle of *Bati*, or the *Lesser Java*, from which it is divided by the channel of *Balambuan*, and to the south by the main ocean. Its length from the straits of *Sunda* to the channel of *Balambuan*, viz. from E. to W. inclining however a little to the S. and N. is about 130 or 140 leagues; its breadth is very different, but the whole circumference is computed at 300 leagues: The north coast of *Java* has abundance of very commodious creeks, bays, harbours, and goodly towns, with many little islands near the shore. In former times the isle of *Java* had as many petty kings as there were cities, but now adays it is divided into two kingdoms only, the one of which is under the jurisdiction of the emperor of *Mataram*, the other under the king of *Bantam*. The first is in the possession of the eastern and greatest part of the isle, the other of the western and lesser part; for since the emperor of *Mataram* (call'd also the emperor of *Great Java* by the *Dutch*) had once found means to subdue his petty neighbours, he soon extended his conquests all over the eastern parts of this isle: The emperor who reign'd all the time of my being there, was a young prince named *Soujoubonnan Ingelaga*, the son of *Sulthan Mabomet*.

Unto one or other of these two potent princes all the rest are obliged to pay homage, tho' there be also as yet remaining some petty sovereignties along the sea-coasts, besides what belongs to the city of *Batavia*.

In the eastern parts of *Batavia* are the cities *Balambuan*, *Panarukan*, *Passarvan*, *Jcartan*, *Surabaya*, *Brandaon*, *Sydayo*, *Tubaon*, *Kajaon*, *Japare*, *Pati*, *Dauma*, *Samarang* and *Mataram*, the residence of the emperor of *Java*. To the west, near the sea are *Taggel*, *Charabaon*, *Dermayaon*, *Maukaon*, *Karavaon* and *Batavia*, of the coast of which we intend to give you a short but exact account. About 10 or 12 leagues from *Batavia* is the famous city of *Bantam*, where the *English* have a factory, and a considerable traffick.

The *Javanese* are a barbarous, proud, and fierce nation, of a brown colour, with flat faces, and thin, short, coal black hair, large eye-brows, and large cheeks. They boast themselves to be descended from the ancient *Chinese*, unto whom they resemble

in some respects, having very small eyes with large eye-lids. The men are very robust and strong limb'd, and well fitted for the war; the women are but small. The men wear a piece of callicoe wrap'd two or three times round their bodies; people of fashion have them with gold flowers or streaks. The women wear it from under their arm-pits down to their knees, all the rest bare. They marry sometimes two or three wives, and perhaps keep divers concubines besides, according to their ability. Lying and cheating is a daily practice with them. Those living near the sea-side are for the most part *Mabometans*, which was introduced there about 150 years ago. In the inland countries they are generally *Pagans*, abstaining from feeding upon any living creatures. When they are to consult about matters of moment it is done in the night time.

The isle of *Java* is very fertile, tho' a great part thereof be not known hitherto; it has very high mountains, reaching to the very clouds, witness the pepper mountain on the south-side of the land; it has likewise impassable forests and wildernesses; but to the north, betwixt *Batavia* and *Bantam*, is a very populous country, full of rice fields, and all sorts of tame and wild creatures; hereabouts also is salt and pepper to be found, but not so good as that at *Malabar*, besides most other sorts of *Indian* fruits, which are sold in great plenty at *Batavia*. They abound also in fish, are well stor'd with hogs, oxen, sheep and other tame beasts, the flesh whereof is of a very good taste; fowl both wild and tame they have in great plenty; but the woods have also large tigers, rhinoceros's and divers other wild beasts; in the rivers you see also often *Crocodiles*, call'd *Kaymans* by the *Indians*.

The air or climate of *Batavia* is in my opinion as temperate and healthy as any place whatever in the *Indies*; the east and west winds blowing all the year long along the shore, besides the ordinary land and sea winds. The seasons of the year run here in the same manner as in *Europe*, except that the sun passes twice a year directly over their heads; the most agreeable season begins in *May*, which continues with continual breezes from the east, and a very serene sky till *November*; when the winter season approaching it rains sometimes continually for three or four days without intermission, which fets all the low grounds under water, which however has this convenience, that it kills and washes away all insects, which else would prove very noxious to the fruits. This season ends about *May*, when the dark clouds beginning

1662. to dispe. the sky assumes its former serenity; in *December* the west winds blow so violently, that there is no going by sea here; in *February* it is changeable weather, intermix'd with sudden storms of thunder and lightning; in *March* they begin to sow, and this month produces some fruit; in *June* is the most agreeable time of the year. In *July* the sugar and rice begins to ripen; in *September* it is the best time, and the *October* affords them plenty of all sorts of fruits.

The happy temperature of the climate produces such plenty of all sorts of necessaries, that there are very few countries that can compare with this island; the pleasant river rising in the mountains divides itself into many branches, and waters the circumjacent country, and afterwards recollecting its channels, passes thro' the midst of *Batavia*, (which it divides in two parts) and there exonerates into the sea.

Batavia.

The city of *Batavia*, which got its name many years ago from the *Dutch* after their first establishment in those parts, was first, and is now by the *Javanese* and *Chinese* call'd *Kalakka*; from the fruit of a palm or cocotree, which grows very plentiful hereabouts; the fruit of which the *Javanese* call *Kalakka*. The *Indians* call it *Jacata*, derived likewise from a certain fruit call'd *Jaccas* by the *Indians*, and *Sebrookzak* by the *Dutch*. Not long before the *Mahometans* settled in the *Indies*, *Batavia* was no more than an open village, inhabited by *Pagans*; at first it was surrounded only with a row of palades of bamboo canes, but as it became more populous, the inhabitants began to wage war against the king of *Bantam*, and some other neighbouring princes, and that with very good success. The city of *Batavia* lies at 5 deg. 50 min. off southern latitude.

Vol. II.

at the north-side of the isle of *Java*, in a large but fenny plain before it to the south; it is surrounded with abundance of small islands, and to the north or land-side with woods and high mountains. It is divided into two parts by a river, is of a quadrangular figure, fortified with a wall of stone, and 22 bastions; the names whereof are *Amsteldam*, *Middelburg*, *Delft*, *Rotterdam*, *Hoorn*, *Enkhuysen*, *Vienna*, *Gelderland*, *Katzenelbogen*, *Orange*, the *New-gate*, *Hollandia*, *Dieft*, *Nassau*, *Zeeland*, *Utrecht*, *Friesland*, *Overysel*, *Groningen*, *Zewburg*, *Kuilenburg*, and the *Middlepoint*. The ditch underneath the wall was in the year 1670, surrounded with a quick-set hedge of thorns; it has four great gates, two whereof are very stately and artificially built by the famous *John Listing*, on the south-side; the first 1630, and the other 1657. The third gate

Y y

1662. gate is on the east-side call'd *Rotterdam*, and the fourth call'd *Utrecht* on the west-side. The city of *Batavia* is situate in a bay, extending to the east as far as the cape

of *Karvunt*, and to the west as far as the cape call'd the *Rough Point*, towards *Bantam*, which lies on the same shore, about twelve leagues from *Batavia*.

1662.

The harbour.

Both within and without this bay lie about 17 or 18 islands, upon which the violence of the winds and waves being broken and check'd, this renders the road of *Batavia* one of the safest harbours of the whole world, being able to contain above 1000 vessels at once; small vessels and barks lie commonly close under the banks of the river, where they may lie without anchors in a muddy bottom; the river is lined with stones on both sides as far as the boom, which is shut up every night at nine a clock, and guarded by a good number of soldiers, besides which, there is cut a channel out of the main river, for the reception of smaller vessels; no vessel passes the boom without paying a certain custom, every vessel that fetches salt pays a real, and those that carry stones two reals. The ditch without the wall is very broad and deep, and sometimes rises so high, that some of the lowermost streets without the city are laid under water; all the buildings of this city are well contriv'd, most even of the private houses having handsome gardens, well planted with fruit trees and plants and flowers, adorn'd with pearls, springs, pumps, &c.

All the streets of this city run in a straight line, most of them being 30 foot broad; and on both sides near the houses paved with bricks; there are eight streets, which are all well built and inhabited, among which the *Princes-Street* is the chiefest, beginning at the middle point of the castle, and running in a strait line to the town-house, having on each side a cross street. Next to this is the *Lords-Street*, beginning on the north-side over-against the castle, reaching in a direct line to the new gate. The first cross street on the east-side has got the name of *John Tirment*, who built abundance of houses in this street. The second is call'd the *Market-Street*, opposite to which lies the third call'd the *Petawins-Street*: The fourth is call'd the *Street of the Hospital*. As you come out of the castle at the first entrance into the *Princes-Street* is the *Princes-Lane* on the left-hand. These are on the east-side of the river; we will now pass over to the western side; the bank of which is planted with pleasant trees, and adorn'd with houses all in a straight line as far as the *Dist-Gate*. The first street on this side is call'd

as the 1662.

The  
 hick  
 ings of the  
 city

1662. call'd the *Gentlemans-Street*, being divided into two streets by a gracht that comes cross it. The second street comes crosswise thro' this part of the city, beginning at the *Utrecht Bastion*, from whence it has got the name of the *Utrecht-Street*. But now we must look back and take a view of the *Burghwalls* or *Grachts* (being streets with water channels in them) of these there are no less than 15 among which the *Tygers Gracht* is the most stately and most pleasant, both for the goodliness of its buildings, and the ornament of its streets, which afford a very agreeable shadow to those that pass along the street; the channel is edged and lined with stones from the bottom, over which are four stone bridges, sustain'd by as many high stone arches, twelve foot broad each; beside which, there is a wooden bridge at one end. The inward *Gracht* behind the *Carpenters-wharf* (where is also the founding-house) has three bridges; next to this is the *Kaymans Gracht* with four bridges. The first *Gracht* which runs crosswise, is the city's *Inward Burghwall*, having only one bridge: Next to this the *Herb Gracht*, without any bridge at all. The *Sekons Gracht* extending from the *Middle Point* directly to the *Rotterdam-Gate*, with six bridges, and the *Inward Gracht* with one bridge only. These are all the *Burghwalls* and *Grachts* on the east-side; now we must come to those on the west-side. The first is the *Gentlemans Gracht*, with three bridges; the second is call'd the *Rhinoceroses Gracht*, having likewise three bridges; the third is the *City's Inward Gracht*, with three bridges. The first *Gracht* running crosswise to the north, is the *City's Inward Gracht*; the second faces the *Carpenters Wharf*, and is called the *Javaneze Gracht*; and the third is call'd the *Chinese Gracht*, having only one bridge. The fourth *Gracht* which runs crosswise, begins at the bastion call'd *Friesland*, and ends at the new bridge near the *Fish-Market*, having three bridges; last of all, the *City's Inward Gracht* with one bridge. These are all the *Grachts* and *Burghwalls* within the city, over which are laid 56 bridges, most of which are sustain'd by large stone arches, not to mention here the wooden draw-bridges which are over the *Gracht* without the walls. At my first coming to *Batavia* I lodg'd upon the *Tygers Gracht*, so that having sufficient opportunity to take a draught of it, I thought fit to insert it here.

The public buildings of the city

Among the public buildings of this city, the church call'd the *Cross-Church* claims the precedence, being built in 1640, of solid stone: In the midst of the church stands the steeple, being exceedingly beautify'd with iron-work. It has but one bell, which

is only rung before church-time; the stone edgings in the front of the church are artificially carved, and adorned on the top with *Cerberims*. But time which defaces all things, and the air, which is much sharper here than in *Europe*, has in a few years wrought a considerable change in this magnificent structure. The pulpit and seats of the chief men here are very finely wrought and adorned with iron-work and ebony-wood. The vestry is of the same workmanship. This structure is very light-some and lofty, within being adorned with five clear branches of brass brought thither from *Holland*. In the other part of the city, the foundation of the new church was laid during my stay there, and before my departure the brick-work was almost finish'd. In the year 1644, there was also a church built in the castle, of an octagonal figure, being very light within, and flat on the top; the floor covered with well polish'd white and blue stone neatly done: The glass of the *lathorn* on the top was of the best kind, and the pews of the church carv'd very artfully, and made of the best kind of wood the *Indies* afford.

The *Town-House* stands very near in the centre of the city in a spacious place, being built of brick in 1652. It is two stories high, and you ascend into the second by a pair of winding stairs. The great gate is exactly in the middle of the structure, artificially wrought, of the *Corinthian* order, over which is a balcony or gallery of stone, unto which you enter out of the upper-hall. When criminals are to be try'd, a scaffold is erected before the *Town-House*. The windows of this building are in proportion very high and lofty, finely glazed, and on the out-side guarded with iron-work. In this house the courts of justice are kept; here is the meeting of the *Schepers* or senators, as also of the masters of the hospitals, and of the overseers of other places; as also of the court for the direction of military affairs within the city. The inward court is enclosed with a high wall, and a double row of stone-pillars; here the officers of justice have their habitations, and the prison-keeper with his attendants on the west-end of it. It extends from the *Tygers Gracht* to the *Lords-Street*.

The hospital for the sick stands upon the bank of the great river, which runs through the city, betwixt the *New-Gate* and the *Dielt-Gate*. Here such as are sick, and have not wherewithal to provide for themselves, are entertained and cured, there being sometimes 200 or 300 to be seen here at a time, who are all provided with neat lodgings, beddings and other conveniences. In

The hospital for the sick

the

1662. The cross church

The Town House

1662. the out-houses are the apartments for the overseers and their servants, for the doctor, apothecary, surgeon, minister, cash-keeper, treasurer and others, who are to keep the house clean and look after the sick; all these are plentifully maintain'd by the company. Besides those before-mention'd, three persons of note belonging to the company are constituted overseers, who take their turns every week, and see that every thing be done as it ought to be, and especially whether any of them are recovered so far as to be fit for service. Behind it is a square enclosed with a high wall, and planted with trees, which serves for a walking place for those who are upon their recovery; and a door with a wooden bridge reaching a good way into the river, is also made for the taking of the fresh air of the river. The minister, who is appointed to visit the sick, says prayers every morning and evening, when a bell is rung; every Sunday there is a sermon, where all those that are able are obliged to be present.

Spin-  
House.

For the encouraging of virtue, and suppressing of debauchery in lewd women, a spin-house has been erected here, having no windows or prospect but only on the east-side towards the *Burgwall*, where certain iron-rails are made in the gate, with wooded shutters within, which are shut and

bolted as often as the overseer pleases. 1662. Here the women are reclaim'd from their lewdness by keeping them continually at work, under the tuition of a governess, whose business is to look after the House, and to set them their task, which if they miss to perform, they are sure to be scourged. For the rest, there two members of the senate constituted on purpose for the government of this house, whose business is to be present there every Sunday at the sermon that is held there, for the reclaiming those lewd creatures from their ill course of life. If they commit any misdemeanor which cannot be corrected by scourge, they are punish'd by the ordinary court of justice.

Upon the very brink of the river are built two slaughter-houses or flesh-halls, sustain'd by wooden piles, by which means they may with conveniency throw the excrements of the kill'd beasts into the river. They kill twice a week, each butcher having his peculiar stall, where he sells his meat at such a price as the magistrates shall think fit to set, tho' most of them find means to sell it as dear as they can. Whilst I was there beef was sold at the rate of four pence *per* pound, and pork at the same rate; but mutton being most esteem'd was sold dearer. All the beasts that are to be kill'd must

The hall  
for the  
sale of  
stuff.

On the west-side of that spacious place which faces the *Town-House*, is a certain structure, in which are sold all sorts of cloaths ready made, as also stuffs and calicoes, white and painted, besides divers other commodities exposed to sale there, by the *Chinese*. These have here their peculiar shops, for each of which they pay 3 crowns per month. The whole building is of

wood, being divided into 5 walks or galleries, having shops on each side; and as many doors from without, which are kept open day and night, because the shopkeepers don't put up their commodities till very late at night, and lay them out again early in the morning, with a great deal of curiosity, to invite the buyers to give them a good price, at which the *Chinese* are very dextrous and quick, so that unless you be upon guard, you are over-reach'd before you are aware of it; however, these little shops have this convenience, that you may furnish your self here at an easier rate, and that all at once, with abundance of small things, which you can't buy so conveniently at the great shops where they will not be satisfied with a small gain.

1662.

The city  
stables.

On the east-side of the *Town-House* is a goodly structure, fitted up for stables for horses, being all of brick-work without, and provided with racks, mangers, and partitions, and paved with stones, so that the horse-dung may be removed and walk'd away with all imaginable convenience. The place where they manage their horses is very airy and well situated, having two doors, one whereof leads to the city's *Binne Gracht*, for the convenience of watering and washing the horses. In this stable are kept, besides the coach and cart-horses, above

Vol. II.

100 saddle-horses, that are managed daily by certain persons kept for that purpose. Their best horses are the *Arabian* and *Persian* horses, which they buy here at a high rate, 200 crowns being a common price for an indifferent *Persian* horse, the best being not to be got for money. It is worth observation, that the *Persians* train up and manage their horses without blows, whereas our managers are used to make use of whips and spurs, which makes them unfit for the due management of those horses. Abundance of horses are also brought to *Batavia*

Z z z

via

1662. *via* from *Japara* in the isle of *Java*; but these are not comparable to the *Perjian* horses: Some of these however are very tractable, if well handled from the beginning, but many of them are broken mouthed before they come to *Batavia*: The natives being used to ride their horses with a

light hunting-bridle, they are apt to toss up their heads, when they are rid afterwards with a curb-bridle, to prevent which, our managers fasten a leather string to the girth under their belly, the other end of which being buckled to the bridle, makes them keep their heads steady.

1662.

The Chinese hospital for sick and aged persons.

On the *Rhinoceroses Gracht*, near the spin-house, is the *Chinese* hospital for sick and aged persons, built of brick, and divided into convenient apartments, and a pleasant court to walk in: It was built in the year 1640. In this house such as are sick and superannuated, and have not wherewithal to subsist, are received and maintain'd. For the maintenance of which a certain duty is laid upon marriages and burials; as also upon actors of plays, farces, and such like shews. And as, besides this, many of the rich *Chinese*, either by voluntary contributions or legacies, give great encouragement to this house; it is provided with a considerable revenue. The whole management of this house is committed to two *Hollanders*, and as many *Chinese*, who have a secretary to keep their accounts.

The hospital for children.

At the extremity of the west-end of the *Rhinoceroses Gracht*, you see the hospital wherein poor orphans are maintain'd and educated, being of brick, with convenient

lodgings for the servants of the house: It has hitherto no settled revenue, being maintain'd by the voluntary contributions of well-disposed people.

In the east-corner is the house wherein are lodged all the artificers belonging to the company, as carpenters, bricklayers, gun-founders, stone-cutters, glass-makers, turners, engineers, seal-cutters, pewterers, painters, &c. all which are disposed into their proper quarters, under the direction of three *Hollanders* appointed by the company. Besides the slaves belonging to the house, there is also a surgeon and a schoolmaster; the last of which is obliged to say prayers every night; at which all are obliged to be present under a certain forfeiture. In this house the surveyor-general has his lodgings, which are very handsome, and keeps two clerks under him. He oversees the workmen. In this house also are maintained such criminals as have been condemned to the chains, who are kept

Every night at nine a clock, the doors of the house are shut up, and a guard of slaves is placed to prevent any disorders which might happen among so great a number of people of different callings. I had for some time my lodgings in this house; and here it was that I first made the draught, and afterwards made the description of *Batavia*. The wharf belonging to this house is only fitted for the building of small yachts and boats, such as are used only in the road for the loading or unloading of ships: But ships of bulk are built at the isle of *Ormuz*, about a league

to the west of *Batavia*, where are considerable magazines for ropes, and other implements belonging to ships, which are defended by certain fortifications.

The *Rope-Alley*, where they are employed in twisting ropes, is likewise in one corner of the city, opposite to the carpenter's wharf, being planted with large nut-trees, which afford an agreeable shade to the rope-makers. A little beyond it to the west you see the pack-houses of the company, wherein are laid up pepper, cinnamon, nutmegs, cloves, mace, &c. The overseer has a goodly habitation for his own use.

The magazine of rice.

Not far from thence, viz. near the bastion call'd *Amsterdam*, stands the company's magazine of rice, a large structure, having a door looking to the water-side, where ships may be laden and unladen. It was built in my time 1670, of brick-work. There is a square enclosed with a wall at the inward wharf, where the receivers and other servants of the company have their habitations.

The *Pravwenbouse*, so call'd from the word *Praw*, which in the *Malayan* tongue signifies a boat or small vessel, stands upon the brink of the river, for convenience of such small boats as are built or refitted

there; here several shipwrights, and a good number of seamen have their quarters, the last being obliged to be ready upon call, wherever they are ordered to row by the deputy governor, under whose tuition they are. On the east-side of the little wharf, the overseer has a small house. Having thus given you an account of the publick structures of this city, with such draughts thereof as time and opportunity would permit us to take, we will now proceed to the four great markets of *Batavia*, and begin with the fish-market.

The fish-market is on the western-side of the great river, being sustained by strong wooden

1662. wooden piles, and covered on top with pan-tiles. Opposite to it is the dwelling place of the *Alager* (or *Outroper*) where the fisher boats are oblig'd to stop, and their cargo is sold immediately by publick sale, to the fairest bidder; the fishmongers are generally *Chinefe*, each of which has his own stall, for which he pays two reals per month. The *Outroper* pays ready money to the fishermen for what they sell to these *Chinefe*, who allow him twopence in the crown, and are obliged to repay it at a set time. Here you may furnish yourself with sea, river, or shell-fish, according to your own pleasure, from 10 a clock in the morning till four in the afternoon; when the fishmongers leave their stalls here, and sell the remnants near the river-side behind the flesh-hall.

The rice or  
corn mar-  
ket.

The rice or corn market is adjoining to the former, or rather opposite to it at the

1662. north-end; being built after the same manner, except that it has no stalls or banks; here you meet with grains of all sorts which are sold here, according to the market price, by a certain small measure called *Ganting*, containing about 13 or 14 pounds of rice, which is commonly sold for sixpence. He that has the oversight of the market and measures, has a house at one end; his business among other things is to set the mark upon the measures and weights, which is done twice a year; viz. in *January* and *July*, at the town-house, in the presence of two *shepmen* or *aldermen*. They pay two-pence for each mark.

Near the new bridge, as you pass along the river-side to the *Crofs-Church*, is the fowl-market, where the *Mardikers* and *Toppassen* (a kind of negroes) sell all sorts of fowl in great plenty, so that you may buy an ordinary pullet for three-pence, but the

best sort are dearer. In this market you see many huts, in which they sell dried fish, eggs and coarse earthen ware.

The fruit  
market.

The fruit-market begins at the new-bridge, extending by the river-side to the *Middlepoint*. Here you meet with all sorts of fruits and herbs, sold by the *Chinefe* and *Negroes*, who pay the 10<sup>th</sup> penny excise.

From four a clock in the afternoon till night, this market is so crowded with people, that there is scarce any passing in it.

On the *Tyger's-Gracht* is the *Latin* and *Greek* school, the back-side of it reaching to the *Kaymans-Gracht*, with a lofty stone-gate. It has a very pleasant court, where the schoolboys may divert themselves at certain

1662. certain times. The rector or head school-matter has a w<sup>h</sup> handsome house. Besides this school, there are divers other schools at *Batavia* for the instruction of young people in reading and writing; in which some of the natives, and especially the *Toppasses* are so ingenious, that they don't give way in that point to any other nation. What books are used here are brought out of *Holland*; but in the year 1667, a printing house was erected, and several books have been printed here with good success.

The castle.

The castle is a quadrangle, situate in a level ground, two bastions of which, viz. the *Diamond* and the *Rabbes* front the city, one facing the *Tyger's-Gracht*, and the other in a straight line thro' the *Lord-street* to the *Middlepoint* of the new-gate.

On the west-side the river washes the very walls, being enclosed by part of the city, which lies open on that side; the two other bastions call'd the *Pearl* and the *Sapphire* face the sea; the low grounds toward the west are well planted with gardens and or-

chards; the bastions, as well as the *Cour-tins* of the castle, are faced with white stone from the bottom to the top, and provided with watch-houses at convenient distances; the ditch is very broad and deep, being inclosed 1669, within a quick-set hedge, serving not only for an ornament, but also as an additional strength to the place, from whence they fire with advantage upon an approaching enemy.

In this castle the *Dutch* governor general of the *Indies*, and all the members of the council of the *Indies*, residing at *Batavia*, have their places of residence; as likewise the head factors who keep the accounts, and of what is paid to the servants of the company; and the general book-keeper, the secretary of the great council, the captain of the armory, the physician, chirurgion, and commander of the soldiery; all these I say, besides several others, have their fix'd habitations here. But the house or rather palace of the governor-general surpasses all the rest in magnificence.

1662.

It is built of brick, two stories high, yet so lofty, that the top of the roof surpasses in height all the other buildings, and may be seen a great way at sea; especially the lantern or turret, which stands in the midst of it, having instead of a weather-cock a ship of iron, very artificially wrought.

Vol. II.

The door is just in the middle, unto which you ascend several broad stone steps; in this palace is the council-chamber for the great council to meet in, and near it the secretaries office and chamber of accounts. The great hall is hung about with bright and well polish'd armour, ensigns, standards

A a a and

1662. and flags, which have been taken by the *Dutch* in several sea and land engagements; in this hall prayers are said every night, and here it is that the governor at certain times gives audience to all such as have occasion to represent their grievances to him. Behind it are pleasant walks planted with trees, among which a *Tamarind* tree of an excessive height, and standing in the center of the garden, affords a most agreeable sight. Out of this garden you pass thro' a little gate of the *Courtain*, by a small bridge to a summer-house, built upon piles in the midst of the water, from whence you have a very pleasing prospect, not only of the fortifications of the castle, but also of the rivers mouth, and the road where the great ships ride at anchor. At the eastern corner of this summer-house is a door leading thro' a gallery, to the before-mentioned chamber of accounts, which has a flat roof, convenient offices, and pleasant walks belonging to it; the floor is covered with a kind of grey-stone neatly done. In this apartment most of the book-keepers and clerks are boarded at a certain rate by the treasurer.

The houses of the members of the great council are on the south-side of the castle, the land-gate being in the midst of them.

The armoury is built much after the same manner as the chamber of accounts; it extends along the east-side of the *Courtain*, having separate apartments for sword cutlers, gunsmiths, and other artificers of that kind.

The governor of the sea affairs has his house on the north-side just opposite to it, and on the same side dwell the factors, physician, chirurgion and apothecary. Hereabouts stand also the magazines of flesh, bacon, wine, *Brunswick* mum, *Holland* butter, oil, vinegar, and divers other provisions; and under ground are made certain vaults for gunpowder and artificial fire-works. The castle has four avenues, and as many gates. The first and largest is call'd the *Landgate*, built 1636, where you see a stone-bridge, supported by 14 arches over the ditch, being 26 rods long, and 10 foot broad, paved with *Dutch* bricks set on edge. The *Watergate* faces the north, where is a large watch-house for the garrison, and some apartments on both sides for the overseers of the magazines and store-houses.

This was built 1630, according to the inscription. Besides these, two lesser gates are in the *Courtains* to the E. and W. which are scarce ever made use of, unless that some vessels laden with ammunition, and such like things, are generally unladen here. There is a small plain before the

*Rabbit* bastion, where the new lifted soldiers are exercised and taught the use of arms, by an officer appointed for that purpose. Not many years ago a wooden draw-bridge was built near the bastion call'd the *Sapphire*, by which means you may walk all round the city to the boom, where you must be ferried over.

Before my departure, a project was on foot of building a tower and steeple upon the *Rabbit* bastion, making some additions to the *Rotterdam* and *Utrecht* gates, and to enlarge the city to the E. and N. as far as to the turning of the great river, so that the north-side of the castle should front the bastion call'd the *Middlepoint*. Thus far of the city of *Batavia* itself, we will now take a view of its outside.

It is easy to be guess'd at, what moved the regents of this city to surround it with forts at such a distance, viz. to the E. as far as the river *Anjol*, and to the W. as far as the river *Dike*, along the bay of *Batavia*, and on the land-side to the S. by the forts *Northwijk*, *Riswick* and *Jacatra*; these serving the inhabitants of the flat country, as a defence against the incursions of the neighbouring barbarians, so that they may quietly enjoy the fruits of their labour; the country all about this city being well cultivated and stored with rice and sugar-reed fields, gardens and orchards, country-houses, brick and tile wharfs and sugar-mills, which are of great consequence to the city. To give all possible encouragement for the maruring of the ground, the main channel of the great river was ordered to be stop'd up 1659, instead of which two branches being made, one leading to *Riswick*, the other to *Jacatra*, these serve to lay the ground thereabouts under water upon occasion. One of these branches is to the W. brought into another channel, leading directly to the middle of the city, and being stop'd near the second bridge of the new gate by a dike and sluice. Here you see seven mills, one whereof is a corn-mill, four gunpowder-mills, one saw-mill for wood, and one paper-mill, which are driven by the force of the water; near it the millers have their habitations.

Before the dike, just at the entrance of the city is the place where they refine the brimstone; near this place 1658, a very strong sluice was built for the conveniency of bringing country commodities into the cities with less charge, but the same was ruin'd in a little time after by the force of the water.

Not many years ago, a certain contagious distemper began to rage at *Batavia*, which proving mortal to many, it was resolved, (to stop the infection) to build a

kind of hospital or pest-house, where such as were seiz'd with this evil, might be provided with lodgings, diet, and suitable remedies. This house, which has with it the *Deijl-Gate* near the road to *Arke*, is under the government of several of the richest citizens of *Batavia*.

By the east-side of the dike where the mills are, a house was built in 1609, for the washing and whitening of linen apparel, the latter being carried thither by bamboo canes fastened together. Without the city are besides these many other houses erected partly by the company, and partly by the liberality of some of the inhabitants, which I will pass by in silence here, and say a word or two more of their out-works or forts: All these lie in a flat even country, made of earth, surrounded with ditches and quickset-hedges, except the quinquangular fort call'd the *Riswick*, and the fort *Ansoel*, both which are faced with brick-work. They are all well provided with great artillery, and provisions for nine months, or perhaps for a whole year, as well as the garrison of the city of *Batavia* it self. There is a certain officer appointed to keep the cannon and other arms neat and clean, the which being under the over-sight of a captain of the artillery, who commands also the fire-workers, and has his habitation

upon the bastion call'd the *Diamond*. The garrison consists chiefly in foot, there being only a troop of horse, which serves as a guard to the governor-general, who are obliged to be upon the guard in their turns. These enjoy great privileges, are commanded by one of the best officers, and are obliged to appear every *Sunday* in their armour well polish'd, and with their pistols, carabines, and broad swords.

The inhabitants of *Batavia* consist either of the citizens, or such as are servants to the company, being of divers nations; among whom the *Dutch* exceed the rest both in riches and dignity, most places of honour and profit being in their hands.

The *Chinese* drive here a considerable traffick, being more industrious than any of the other *Indians*; they deal much in fish, and cultivate most of the rice, reed and corn-fields; some also maintain themselves by fishing, but the chiefest upon merchandizing; they farm the excises and customs; but of late years some of the other nations have found ways to imitate them in their thriftiness and cozenings, at which they are great artists, which I know by my own experience. They live here according to the laws and customs of their own country, under the tuition of a *Chinese* governor, who manages all their affairs

1662.

The inhabitants.

Chinese.

Their out-works.

1662. *faïrs with the company. They are dress'd after their own fashion, in a coat with wide sleeves, either callicoe or silk, according to their abilities. They don't shave their heads here according to the Tartarian fashion, as they do now in China, but wear their hair long and neatly twisted. Their habitations are settled thro' the whole city, but live for the most part on the west-side, near the great river, and many of them on the east-side; their houses are low, with the roof cover'd over the first floor.*

*The Malaysians.*

*The Malaysians as they are not so much addicted to trading as the Chinese, live for the most part upon fishing; their boats are made after the Indian fashion, with large sails. They have also a governor of their own, who lives in the Rhinoceroses Gracht, whereabouts most of them have their dwelling-places. They wear light callicoes or silks, tho' some of their women of fashion use flower'd and strip'd silk; their hair, which is very black, they tie behind in a knot, but the men wear a piece of cloath about their heads. Those few merchants that are among them, are next to the Chinese, accounted the cunningest traders; the houses of the Malaysians are but very indifferently built there, being covered with leaves, and planted round with coco-trees. They have a custom of chew-*

*ing the Betel leaves continually, and take tobacco through sugar-canes lackered over with stone ball.*

*The Moors or Mabometans here maintain themselves almost in the same manner, and live near the Malaysians; some however drive a kind of pedling-trade, and sell coral and glass beads in the streets, some have small stalls in market-towns. A few of them merchandise, especially in free-stone, which they fetch in their vessels from the adjacent islands. They are clad after the Mabometan fashion.*

*The Amboyne inhabit a particular part of the suburbs, on the left-hand, as you come from Jacatra to the city, near the burying place of the Chinese; near it their governor (who has done great service to the company) has built himself a stately house, after the manner of the Amboyne. They live for the most part upon carpenters work, being extremely dextrous in building of houses of bamboo-canes, and have a peculiar way of splitting and twisting of canes in divers figures for windows, which afford a free passage to the air. The Amboyne are a courageous nation, of a dreadful aspect, with long black hair, and much inclined to munity; their chief weapons are cymeters, and shields of an oval figure, where with they know how to ward a blow*

Javanese.

1662. a blow, and to intercept their enemies arrows: The men wear a piece of callicoe wrapt several times about their heads, both ends hanging down, and adorned with flowers and some other ornaments. The women have only a piece of callicoe wrapt about them, and another piece round their shoulders, their arms being left bare; their houses are made of wooden planks, carved with leaves, indifferently high built: Their drefs is like that of the *Moors*.

*Javaneſe*. The *Javaneſe* inhabit in houſes of bamboo-canes, on the other ſide of the burying-place of the *Chineſe*, ſome of which are neatly built and cover'd with the twigs of coco-trees. Some maintain themſelves with huſbandry, and eſpecially with planting of rice, others with building of boats, uſed by the inhabitants for the carrying of their commodities to the city; they alſo go abroad a fiſhing, their boats which are turn'd like horns in the figure of a half-moon, being ſo nimble, that they call them the *Flying-Boats*. The *Javaneſe* men go for the moſt part naked, being only covered from the middle to the knees; ſome wear a kind of a ſcarf, whereon they faſten their ſwords; on the head they wear a cap, but go bare-footed. Their houſes excel in neatneſs thoſe of the reſt of the *Indians*.

Vol. II.

The *Mardijkers* or *Topaſſers* are a mixture of divers *Indian* nations, call'd *Topaſſers*, i. e. *Accommodators*, becauſe they will accommodate themſelves eaſily to the manners, cuſtoms and religion of ſuch as they live among; tho' ſome will have them derive their name from a precious ſtone call'd a *Topaz*. They live both within and without the city, the chiefteſt of which being merchants, who traffick in their own veſſels with the adjacent iſles, live in very ſtately houſes. The reſt live upon huſbandry, graſing and gardening, and have ſome artiſans among them; they have their own captains, who ſit in the council of war, and ſchool-maſters who teach their children to read and to write. Their drefs approaches near to the *Dutch* faſhion, but their breeches reach down to their ankles, and wear a kind of caps on their heads. Their women are clad like other *Indian* women. Their houſes are better built than thoſe of the other *Indians*, generally of ſtone, and cover'd with tiles, ſtately built and arch'd. Before their houſes they plant coco-trees, and all ſorts of *Indian* fruits and flowers, but the backſide they reſerve for the keeping of pigs, pigeons, fowl and other ſorts of poultry, which they bring to ſale in the market.

The

1662. *Mardijkers or Topaſſers.*

1662.  
The fold-  
ers of Ma-  
kassar.

The chief arms of the soldiers of *Makassar* are certain poison'd arrows of a foot long, pointed at one end with fish teeth, and on the other with a kind of hard wood; when they are to go into the wars, they provide a good number of these arrows dipt a good while before in a poisonous liquor which they let dry upon them. This poison is the juice issuing out of the bark of a certain tree growing in the isle of *Makassar*, and two or three adjacent isles of the *Bougiffes*; it is of the height of a clove tree; its leaves resembling also those of that tree; the juice of which, while yet fresh, is mortal, and not to be cured by antidotes. These poison'd arrows the soldiers of *Makassar* don't shoot out of their bows, but thro' trunks, as we let fly at the birds in *Europe* with small earthen balls; with these they will hit any mark within four rods distance. This poison is so pernicious, and penetrates with that swiftness thro' the whole mass of the blood, and seizes upon the spirits, that the *Makassars* themselves know no remedy against it. The most approved remedy against it is man's dung, which taken immediately after the wound is given, causes a vomiting, and hinders the operation of the poison: I have known several of our soldiers cured by this remedy, tho' some others I have seen die not long after they had been wounded, notwithstanding the use of it, and others after two or three days. In the isle of *Makassar* grows a certain root, of a bitterish taste, which is look'd upon as a great antidote against this poison, and is often used as such by the *Dutch*; they chew the root, and lay it about the orifice of the wound.

Timorese  
soldiers.

The *Timorese* soldiers or inhabitants of the isle of *Timoor*, use swords of sandal wood, wherewith they can cut a man through the middle at one stroke: For in this isle, and the *Molucca-Islands*, and all along to the S. S. E. beyond the *Lesser-Java*, to the 10<sup>th</sup> deg. of southern latitude, grow whole woods of white and yellow sandal wood, call'd *Cbandava* by the inhabitants. The *Timorese* are very barbarous, but warlike; formerly they were all pagans, but of late years most are turn'd mahometans, and some *Roman* catholics.

Bougiffes.

The *Bokjes* or *Bougiffes*, who formerly inhabited divers isles near that of *Makassar*, are a warlike people, arm'd with cymeters, arrows, and shields, which they handle with great dexterity. They go for the greatest part naked, having only a piece of stuff about the middle down to the knees. The women are clad like the other *Indians*. After the *Dutch* became engaged in a war with the king of *Makassar*, these *Bougiffes*

fixt their habitations in and about *Batavia*, till the event of the war; their king having his residence near the out-guard, betwixt the forts of *Riswick* and *Northwick*, the queen being permitted to reside within the city; but after the *Makassars* were conquered by the *Dutch*, under the conduct of *Cornelius Spellman*, and a firm peace was settled with the neighbouring nations, both the king and queen had a house assign'd them in the *Lords-Street*. This house or palace extends to the brink of the river, with very pleasant walks, flower-gardens, and a most delightful vineyard, which in my time, 1676, bore vast branches of grapes. The gate facing the street is very neatly built, of the *Ionick* order, with a gallery on the top of it, and the apartments so spacious and well-contrived, that most of the *Indian* kings and their retinue might live here.

Among the foreign nations residing here, there may, according to computation, be raised 6720 fighting men, viz. 400 *Topassars* or *Mardiken* under two captains, within the city, besides 710 without the city, under three captains, making in all 1110; of *Regantiins* 70; *Ambonyse* 600; *Malayans* 201; *Chinefe* 1200; *Moors* 200; of the *Javanefe* in their quarter within the *New-Gate* 750; near the burying-place of the *Chinefe* 1500; in their quarter beyond the *New-Fort* 800; and of *Brasilians* beyond the fort 300. That this island is sufficiently fruitful, and able to maintain its inhabitants, is evident from the exportations that are made yearly thence to *Ambony* and other places: It is true no wheat grows here, but supposing the supplies that are brought of that grain from *Suratte* and *Japan* should be stopt, the defect thereof may very well be supplied with rice. The chief artificers here are *Dutch*, most of which live very well, and the *Chinefe* have many carpenters and bricklayers among themselves, who will work as journeymen. Their cabinet-makers have a way of joining the wood of their cabinets, so that the injuries are not to be seen. Others get a livelihood by selling of sugar-beer, cookery, and the sale of *Sury* or coco-liquor, and *Arack* or *Indian* strong-waters, of which they make punch, (as the *English* call it) a liquor that opens both the hearts and purges of the inhabitants. But the chief inns and taverns are kept by the *Dutch*, who pay, as well as all the other nations, two reals per month for their license, besides 70 reals excise of every pipe of *Spanish* wine they sell. The distillers of *Arack* are most *Chinefe*, who pay 50 reals excise for every chauldron or gosper per month.

1662. The government of the city of *Batavia* is settled upon the same basis as in the *United Provinces*, being administer'd by six peculiar colleges or councils.

The first and chief is compos'd of the members of the council of the *Indies*, in which the governor-general of the *Indies* presides, whose name was Mr. *Maetsuiper* at that time. In this council all affairs of state are transacted: Their chamber is in the palace of the governor, where audience is given every day to redress the grievances of the people.

The second college or council consists of nine persons, besides the president, who commonly is one of the members of the great council, and is the keeper of the great seal, representing a woman placed in a tower, with a balance in one, and a sword in the other hand, with this inscription; *The seal of the council of justice of the castle of Batavia*; this college being generally called the *Council of Justice*. Here are debated and decided all matters relating to the publick revenue and treasury. They also take cognizance of differences arising about customs. The president in conjunction with the council has a voice in the determination of civil causes, and has a third part of all the fines; but if they exceed 100 reals, he has only a sixth part. His chief business is to take care that no encroachments be made upon the prerogatives of the sovereignty of the *United Provinces*. The secretary is to keep an exact register of all things transacted in this assembly, without any other reward but his salary: He also has in his custody the money which comes from the fines, of which he must give an account. The door-keeper is to attend whilst they are sitting, and to summon such persons as are to appear before them: He wears a stick and a silver-shield on the left-side, with the seal of the council. The goal-keeper keeps three tables for the prisoners; who are to pay half a real for turning the key. This council assembles in the council-chamber of the town-house, twice, and sometimes thrice a week.

The third college or council consists of the aldermen or senators, chosen out of the best citizens. They assemble three times a week, viz. *Mondays, Wednesdays and Thursdays*, from 7 till 11 in the forenoon. At their election they are presented with 50 rixdollars, and with 100 more every 6 months. In this council are determin'd all the causes betwixt the citizens, (from whom however lies an appeal to the council of justice;) if any difference arises betwixt a servant of the company and a citizen, the last must be summoned before

this court; and no citizen is obliged to appear before the council of justice, but must be summon'd before this assembly first, and there answer for himself. This council issue their orders in relation to the publick structures, bridges and streets, yet not without the approbation of the great council. The president has the custody of the seal, and calls the assembly together when he thinks fit: He may peruse the register, and propose all matters to the council: He has a double voice, and is commonly one of the members of the great council. The *Landroft* or chief judge, has in this assembly a decisive sentence in criminal causes, and is allowed a third part of all the fines. This council consists of nine persons, among whom are two *Clunese*. They have also a door-keeper, who is called the city messenger, having a shield with the city's arms in it.

The fourth council consists of the overseers of the hospital of the orphans, being chosen out of the best citizens, except the president, who is generally a member of the great council. It consists of five members only, three whereof are citizens, the other two servants of the company: Their business is to provide for the poor-orphans, and to enquire into their condition, and what is left by their parents.

The fifth is the council appointed for the determination of matters of less moment; the president whereof is a member of the council of justice. They are to give licences for marriages, and not to permit men before they are twenty one, and maids before eighteen years of age, to marry; nor mahometans or pagans to marry with christians, nor any *Hollanders* with the natives that don't understand *Dutch*. They sit twice a week in the town-house, where causes of little moment are pleaded and soon decided.

The sixth council of *Batavia* is the council of war, in which the chief officer of the militia of the city is president. Here are determined all matters relating to the militia of less moment, which are brought before them by the city major; but matters of consequence are refer'd to the determination of the judge and court of the senators. They also meet in the town-house once a week.

All these courts have each their own secretary, clerks and waiters.

The ecclesiastical government of *Batavia* is administer'd by the ministers, church-wardens and overseers of the poor, who assemble in the vestry of the church upon the summons of their president, who is chosen every month. The ministers being chosen in, and sent hither out of *Holland*,

1662.

The government of Batavia.

The ecclesiastical government.

1662. are confirm'd here, and live in great esteem among the citizens.

The original and rise of Batavia.

Batavia, the capital city of all the Indies under the Dutch jurisdiction, has been frequently attempted by the natives or *Javanese*; for no sooner had the *Hollanders* in 1618. (after the taking of *Jacatra*, unto which they gave the name of *Batavia*) erected a fortress here, but the natives being encouraged by the *English* of *Bantam*, endeavour'd to drive them from thence. To effect which, the *English* persuaded them to erect a redoubt or great battery, upon which they planted their great guns, from whence they play'd so furiously upon the new bastion of the *Dutch* fort, that they were not able to bring it to perfection. *John Peterfon Koen*, the *Dutch* governor, having thereupon call'd together a council of war, it was resolv'd, that to hinder the further progress of the enemy, they should make a falley the next morning by break of day, in order to attack the redoubt, and the quarters of the *Chinese* and *English* at the same time. Accordingly our men were divided into three troops, commanded by *Peter Van Broek*, (afterwards governor-general of the *Dutch-Indies*) *Peter Van Dirks*, and *Peter Van Rey*, with these they attack'd the before-mentioned posts at once. The *Javanese* fought bravely at first; but seeing the *Hollanders* persisted in the attack, resolv'd either to flee or overcome, they retreated, leaving their strong hold to the enemy, who destroy'd all their work in a few hours. But being sorely gall'd by the fire of the city, they had not the same success at the new redoubt erected by the enemy near the river-side; so, that having endeavour'd, but in vain, to make a breach there, they were forced to retire with the loss of 15 men killed and 10 wounded. Besides this redoubt, the *Javanese* had another battery raised in the midst of the city, which being mounted with heavy cannon taken out of the *English* ships, did also considerable mischief to the besieged, who were day and night at work in raising batteries, and putting their fortifications in a state of defence; whereas the enemy being much superior in number, had had time enough to provide themselves with all things for this enterprise. In the mean while the *Hollanders* made a second attempt upon the redoubt near the river-side, but were repulsed with the loss of 7 or 8 of their men, and a lieutenant, whose head the *Javanese* carried in triumph on the top of a lance. The *English* then living at *Bantam*, would fain have revenged themselves upon the *Dutch* inhabitants there, for the damages their countrymen had received at *Batavia*, had they not been pre-

vented therein by the *Pangerang*. Whilst the *Dutch*, who were not above 240 fighting men strong in the fortress, were thus defending themselves against some thousands of the *Javanese*, (besides the *English*) an *English* squadron of 11 ships appeared in the road of *Batavia*, coming from *Bantam*; whereupon the governor of the fort, having recommended the defence thereof to *Peter Van Broek* the deputy governor, he went on board a man of war, with an intention to engage the *English*, but finding himself too weak, left what ammunition he could spare, in the castle, and so set sail for the *Molucca* islands, being pursued for some days by the *English*, but to no purpose; who after their return, came again to an anchor in the road of *Batavia*. Thus the *Dutch* were attack'd both by sea and land, yet did not lose their courage, but defended themselves with so much bravery, that the enemy thought fit to offer a truce, to settle, as they pretend, the preliminaries of a peace.

Hostages being exchange'd on both sides, the *Domnagon* or prime minister, the king of *Jacatra*'s brother demanded the sum of 4000 crowns from the *Hollanders*, which he said they had forfeited according to agreement, for having attack'd the *English* without the king's leave, and 4000 more for the letting them finish the new bastion, which he said was not comprehended in the said contract; after many debates and contests, certain articles were at last agreed on, which the *Dutch* (who wanted ammunition) were willing to sign; but the *English* finding those conditions against their interest (the *Dutch* being thereby permitted to remain in the possession of their fortress and habitations at *Bantam*) found out the following trick to break off the treaty; they so far prevail'd, first with *Peter van der Broek* the deputy-governor of the fortress, that he came out to meet the king of *Jacatra* at an appointed place, but no sooner appear'd there but he was taken prisoner, with those few that attended him, and laid in irons; being threaten'd with present death, unless he would prevail with those in the fortress to surrender it immediately; but finding the garrison resolv'd to defend the place, the *English* brought more of their heavy cannon ashore, in order to batter it with the utmost fury; at the same time they drag'd the deputy-governor, laden with irons and a rope about his neck, to the walls of the castle, threatening him once more with immediate death upon the spot, unless the garrison would prevent it by an immediate surrender; the deputy-governor was so far from being overcome by the fear of present death,

1662.

that faithful defence which and threw drag he to a cou ashan wards Dutch and relief, ble no condit all the English jewels first of king o mande trels o

1662. that on the contrary, like a brave and faithful commander, he exhorted them to defend the place to the last drop of blood, which so exasperated some of the *Javaneſe* and *English* that stood near him, that they threw him backwards by the rope, and so drag'd him back to the council, all which he took patiently, and with so undaunted a courage, that some of the *English* being aſham'd of so barbarous an action, afterwards beg'd his pardon. By this time the *Dutch* having spent all their ammunition, and quite tir'd out with continual labour and watching, without any hopes of present relief, saw themselves under an indispensable necessity to surrender the place under condition, that the garrison and castle with all the artillery should be deliver'd to the *English*, and the merchandizes, money and jewels to the *Javaneſe*; it was sign'd the first of February 1619, by *Wyndurk Bama*, king of *Jacatra*, and the *English* chief commander on one side, and by those in the fortresses on the other side.

The *Hollanders* being now upon the point of delivering themselves and the fortresses up to their enemies, a sudden accident robb'd the *Javaneſe* and the *English* of all their hopes; for the *Pangerang* of *Bantam* had no sooner notice of this capitulation, in which he had no share, but he order'd his *Dommagon* or chief minister to march with a body of 4000 men to secure the *Dutch* deputy-governor, and the castle with all that was found in it for his use. Accordingly he march'd with all secrecy to *Jacatra*, and meeting with the king in his apartment, put his dagger to his breast with these words: *King, surrender yourself prisoner, or expect no quarter*, which so terrify'd the king, that he comply'd not only with his demands, but soon after retir'd with the queen into the mountains, without ever being heard of since. The *Dommagon* of *Bantam* having taken the deputy-governor into his custody, summon'd the fortresses to surrender, which those refus'd to do, except upon the before-mention'd conditions, which the *Bantameſe* refusing to agree to, and the *English* in the mean while (seeing they were like to be disappointed in aim) beginning to reimbarck their cannon, thro' contrivance of the besieged, these finding their enemies at variance about the booty, began to take fresh courage, and having in several attacks bravely repulsed the *Javaneſe*, were now so confident of maintaining the fort, that they gave it the name of *Batavia*; thus matters stood, when on the 25<sup>th</sup> of March 1619, their so long look'd for relief, consisting of 17 men of war, under the command of *John Peterſon Koen*, came from the *Molouque* islands in

VOL. II.

the road of *Batavia*: Within a few days after they landed 1100 men, divided into 12 several bodies, and edged on with revenge, attack'd the city of *Jacatra* with incredible fury, the *Javaneſe* defended themselves with great obstinacy for some time, but no longer able to endure our fire, they left their entrenchments, and look'd for their safety in an open flight, being closely pursued by the *Dutch*, who gave no quarter; this happened the 30<sup>th</sup> of March 1619, which day is yearly celebrated here in memory of this great action. This done, *Mr. Koen* sail'd with the fleet to *Bantam*, demanding the immediate restitution of all the prisoners; the *Pangerang* being at first unwilling to grant his demand, he began to thunder with his cannon into the city, which soon terrify'd him into a compliance. The *English* seeing themselves now quite out of all hopes of accomplishing their design, by the coming of the *Dutch* fleet, made the best of their way thro' the freight of *Sunda*, and those of *Bantam*, finding themselves forsaken by their confederates, thought it most convenient to give over their project.

The *Hollanders* having now their hands free, and seeing the situation of their new fortresses in so fertile a country, near a very advantageous bay, capable of containing 1000 ships with safety, resolv'd and gave immediate orders for the building of the city, under the cannon of the fortresses, the adjacent islands furnishing them with sufficient stone and mortar, and what else was requisite for this undertaking, being purchased from the neighbouring confederates. But the *Javaneſe* not being able to brook this rise and encrease of this new city, the *Mataram* (or *Javaneſe* emperor) 1629, laid close siege to it with 12000 men, under the conduct of the prince of *Madure*; and being advanc'd with their works within musket shot of the walls, they made several furious attacks in the night-time, but were as often repulsed by the fire of the besieged, who besides this made frequent sallies, and ruin'd their works, without giving them leisure to repair them. The *Javaneſe* being resolv'd to try all means to reduce the place, stop'd the current of the great river with piles run'd into the bottom, behind which they threw all the dead carcasses of men and beasts, which not only infected the water, but also the air, which occasion'd distempers among the besieged, who were forced to drink salt water for a considerable time, till at last by continual digging having found some springs of tolerable good water, they began to refresh themselves with less danger and more ease. The *Javaneſe* finding also this dis-

Cccc

figa

1662. sign to prove unsuccessful, had recourse again to force, and the 2<sup>d</sup> of October 1629, made a general assault on the south-side of the city, relieving their troops continually with fresh men, but were repulsed bravely without any considerable loss of the Dutch. At the same time they assaulted a small outwork or tower call'd *Maastrand-Waerberg*, defended only by 15 men, who defended themselves courageously, as that they were attack'd. At last, having spent all their powder and ball, they went to work with the tiles and bricks of the castle within; the *Javanese* being sensible of their want, advanced to the very foot of the walls, and having found means to bring a great rope round the building, were endeavouring to pull down the tower; but the besieged seeing themselves in extremity, made a furious sally upon the *Javanese*, who thought not fit to stand the shock, but soon retreated to their entrenchments, except a few that were slain upon the spot. The first of November 1629, about six hours after sunset, the *Javanese* set fire to their camp in three several places, and march'd off with all imaginable secrecy, after a siege of three months and three days. No booty worth mentioning was found there, but 800 men miserably murdered all on a spot; a miserable spectacle! occasion'd as we learn'd afterwards by the haughty courage of the prince of *Madure*, which happened thus: During the first siege of the castle of *Batavia*, the emperor of *Mataran* having sent a body of troops under the command of one of his best officers to the king of *Jacatra*, and the same returning unsuccessful, the prince of *Madure* spoke slightly of the matter, telling openly at court, *That if he had been sent with such troops, he would have carried the castle or died in the attempt.* The *Materan* being inform'd thereof, and resolv'd to try his fortune against *Batavia*, gave the supreme command of his army to the said prince, who proving unsuccessful, just as he was ready to march off with his troops, was order'd to be slain with all his followers, to verify his own words (as he said) that he would either carry the castle or perish in the attempt.

The *Javanese* lost above 30000 men in this unfortunate siege, notwithstanding which, those of *Bantam* in the year 1655, had a mind to try their fortune against the Dutch; who meeting them in the open field, this occasioned many skirmishes, in which the *Javanese* commonly had the worst, so that being pretty well tired with the war, and hearing of the approaching succours from the *Molucca* islands, under the command of *Arnold Ulaming*, they thought it

their best way to come to a composition with them, since which time they have not thought fit to come to any rupture, but maintain a good correspondence with those they know are able to cope with them; especially since they have strengthened their city with divers considerable outworks and forts.

The fort *Ansjol* on the sea-side, the fort *Aake* to the west-side, and on the *Quinquangular* fort, the *Riswick*, *Nootbwick* and *Jacatra* on the land-side. The fort *Aake* is built 1200 rods from *Batavia* to the east, near the sea-side just by the lime-kills, and faced with stone. The fort *Aake* lies about 500 rods from the city, more towards the land-side, being also a free quadrangular figure; hereabouts live abundance of farmers along the river, the grounds being very fertile here. Near it is the *Pest-house*. The fort *Jacatra* stands upon the bank of the river, not above 500 paces to the north-east of the city; from whence there is a strait and pleasant walk thither, planted on both sides with gardens and orchards. The *Chinese*, *Amboyne*, and some other foreigners have their habitations hereabouts. The fort of *Nootbwick* lies to the north of the city near the river, betwixt that of *Jacatra* and *Riswick*.

Without the city many of the citizens have very pleasant gardens and houses. Upon the great river without *Batavia* you see a house belonging to captain *Burghs*, built flat on the top after the *Indian* fashion, being surrounded with all forts of *Indian* trees. Upon the brink of the river is a pleasant summer-house. Without the city, near the great river, stands another house belonging to a rich citizen call'd *Strantwick*, belonging formerly to Mr. *John Maetzucker*, governor-general of the *Dutch Indies*: It is very airy and pleasantly built, with a very fine front, the gardens being well stored with trees and flowers of most forts.

Without the new gate, in a grove of *Chinese* pleasant trees, you see the tomb of a *Chinese* governor, named *Sequa*; being no more than a heap of earth raised above the surface of the ground, and enclosed with brick-work, plaistered white all over: In the midst you see a table, and upon it a cup, into which the *Chinese* put sometimes money, sometimes victuals, to appease the manes of the deceased.

The grounds about *Batavia*, and indeed of the whole isle of *Java*, are extremely fertile in all sorts of fruits the *Indies* afford; but what is most surprizing is, that divers plants, which in *Europe* grow on small and tender stalks, rise up here very thick, and with hard stalks; whereas

1662. on the other hand, divers sorts of beans and flowers grow in *Java* upon trees. The soil about *Batavia* is so rich, that the seeds brought hither out of *Holland*, *Persia*, and from *Suratte*, thrive extremely, and yield plentiful fruits.

*Holland* cabbages, if sown in due time, and well look'd after, come here to a good perfection, but if neglected they will not cabbage. Provident nature seems to have been careful in abundance of astringent plants for this climate, where the bloody flux and other distempers occasioned by the gall, are so frequent. Of trefoil or clover they have great store here; and in their gardens purslain, asparagus, endive, lettuce, bekabung, water-cresses, parsley, radishes, red and white beets, and such like: The radishes grow longer and better tasted here than in *Europe*, and there is a certain kind of them shorter but thicker than the rest, which are boil'd like our turnips. The *Chinese* pickle radishes, and use them to create an appetite to their victuals. Here also is found a certain kind of *Mandragora*, called *Bella Donna* by the *Italians*, in great request among the *Indians* in burning fevers; they pickle it in vinegar, and eat the fruit roasted in the ashes as a diet.

Vines are very plenty and good here if well cultivated; whether or by whom the vines have been translated hither is uncertain, there being no mention made of it in the journals of the voyages made into those parts since the year 1595. They grow very luxuriously upon the walls of the houses of *Batavia*, which bear fruit in a manner all the year round, provided they be pruned in due time; for 14 days after they are pruned the buds come out, which in 14 days more stand in full blossom, and in two months longer produce ripe grapes; so that every vine brings forth ripe grapes every three months, and consequently four times in the year. But they don't thrive so well without the city; whether the lands be too low, or not sufficiently purged from the salt-petre, I will leave to the enquiry of others; since it is certain, that vineyards would be of prodigious consequence to the inhabitants, there being vines here which bear grapes, each bunch weighing 16 or more ounces; and there are some grapes as big as the *Spanish Muscadine* grape.

All along the roads about *Batavia* grow a certain plant among the woods, with small branches not unlike the hops, which spread very plentifully upon the ground, or will rise up to a good height on stalks like our *French* beans, having leaves like our rose-trees. The flower comes forth out of a bud as large as our ordinary roses, pointed at the end; they are of a lovely sky blue

colour, and yellow in the middle, but the fruit being rank is not regarded.

The *Indian* beets grow in the gardens of *Batavia*, their leaves being not unlike our sorrel leaves, with a pale vein thro' the middle: They bring forth pursley flowers on green stalks; some are white, others a mixture of purple and green. The leaves and stalks when boil'd, are in taste like the *Indian Bajon*: All sorts of garden-herbs are in great request among the *Indians* here, because most of the *Indian* foreigners that come from *Suratte*, and the coast of *Coromandel*, feed for the most part upon fruits of the earth; for believing the transmigration of the soul, they will not eat the flesh of any living creature; for which reason also they abstain from red beans, or herbs of a red colour, as having a resemblance to blood; and for the same reason it is, that the *Indians*, tho' otherwise very ignorant, yet are very well versed in the knowledge of plants and trees. The *Malayans* call all pot-herbs or other eatable herbs *Seir*, but medicinal and poisonous herbs *Oubat*. About *Batavia* are to be found divers sorts of pot and other garden herbs; as red and white beets, parsley, divers sorts of lettuces, dill, fennel, asparagus, &c. And of fruits of the earth water-melons, pumpions, cucumbers, citruls, &c. And of pulse, all sorts of beans and peas, which grow up to a great height on stalks or trees.

The fruit call'd *Fokky-Fokky* by the *Indians* is shaped like a pear, sometimes near a yard long, and of the thinness of a man's arm: It contains abundance of small seeds, the rind being thin, but so smooth and bright, that you may see your face in them like as in a looking-glass: The leaves are green but rough, and as it were covered with a hairy substance: They grow up to a good height. This fruit is one of the best and most esteem'd of all the *Indies*, being of a delicious taste, and when boil'd with wine and pepper, not unlike our artichoke bottoms. They are frequently eaten both by the *Dutch* and *Indians*, instead of the *European* turnips, being look'd upon as very nourishing and easy to be digested; besides, that by their diuretick quality they are good against the gravel and stone. There is another wild kind of *Fokky-Fokky*, the fruits whereof are round, and when ripe turn yellow, but these are only food for the hogs.

In the plains of *Java* grows a tree, the fruit whereof the *Malayans* call *Jamboes*, and the *Dutch* sloes or small plumbs: This tree resembling in all respects our sloe or wild plumb-tree, the fruits being also of an astringent but not disagreeable taste: The fruit when ripe is yellow, and the juice

1662. juice thereof mix'd with *Champana* and rose water, is used against the inflammation of the throat. The juice taken inwardly is good against the bloody flux, and other bileous distempers. Thus this juice of the *Indian* fruit *Jangomas* is equivalent in its virtue to the *Acacia* of the antients, or to our *European* sloes.

Cubebes or Kumuk.

In the isle of *Java* only, viz. in the woods near the shore of the streight of *Sunda*, grows wild a certain fruit called *Cubebes* and *Qyabeb* by the *Arabians*, *Kumuk* by the *Javaneſe*, and by the rest of the *Indians*, except the *Malayans*, *Kubab Sini*, i. e. *Chinese Cubebe*, not because it grows in *China*, but because it is transported thither in great quantities. The tree which bears this fruit is both in leaves and branches not unlike to our apple-tree, but somewhat lesser. The fruit is round, smaller than pepper, of a dark brown colour, and if pinch'd with the nails, will emit a certain liquor like unto the cloves. This fruit is in so high an esteem among the *Javaneſe*, that they will not permit them to be transported, unless they are boil'd before-hand, to prevent their being transplanted into another place. They gather some of them before they are ripe; these are light, with a rough rind, within which is a small soft and whitish kernel. When they are ripe the rind is smooth, have a bigger kernel, and are much heavier than the others. Before they are quite ripe, they have an aromattick, biting, and bitterish taste, and when chew'd offend the brain: But the ripe ones are neither so sharp nor so bitter, and don't send so much of their offensive vapours up to the head; they are reckoned hot and dry in the third degree; are good to attenuate slime in the stomach and breast, expel wind, and correct the cold symptoms of the womb. Chew'd with mastick, they draw the phlegmatick humours from the head, and strengthen the brains. They are in great request among the *Javaneſe* and other *Indians*, who steep them in wine, and take them to raise their appetite to venery, and to warm the stomach. Three or four chew'd, disperse the vapours which occasion giddiness in the head, but care must be taken to spit out both the phlegm and *Cubebes*, and to keep the nostrils close while you are a chewing, that so the smell and scent of them may penetrate with the more efficacy, and affect more immediately the head.

Assafetida.

The *Javaneſe*, *Malayans*, and other *Indians*, use very frequently for the relishing of their saucers, a certain drug called *Hin*, by the *Arabians* *Altil*, and by the *Europeans* *Assafetida*, by reason of its ill scent. This shrub, out of the root of which

this juice is express'd, grows in *Persia*, betwixt *Gamren* and *Lara*. It is of two sorts; the first is not unlike our *Oſier*, out of the leaves and sprigs of which is squeezed the *Hin* by a press, and the juice afterward coagulated in the sun: The second sort is much stronger and worse scented, being the juice express'd out of the root of this shrub. This juice, and that of *Amſon* or *Opium*, are two of the chiefest commodities of the *Dutch* trade in the *Indies*. Our *East-India* ships bound to *Java* and other *Indian* ports, do always carry a considerable quantity of this juice from *Persia*, which they exchange with the *Javaneſe* for such of their country commodities as they have occasion for.

Both great and small *Cardamome*, (as the *Carthians* call it) called *Malignetus* by the *Indians*, grows likewise in the isle of *Java*. The small *Cardamome* grows on a stalk with small joints like reeds, (the leaves being also like theirs, and grow in clusters like them;) but the *Cardamome* seldom grows above two or three foot high, and the leaves rub'd betwixt your fingers, emit a very odoriferous scent. From the root first sprout forth in ears like the *Spicknard*, the flowers being of a pale colour, not unlike the orange-flowers. After these come certain husks, which contains these well-scented seeds, which are green, but in time turn of a dark vermillion colour. The *Cardamome* is a most excellent spice of extraordinary virtues, having an agreeable heat consonant to our nature, without leaving any heat behind it, which is the reason that it is chew'd without any addition. It promotes urine, and the monthly terms of the women; opens the obstructions of the spleen and liver, and procures a sweet breath. The great *Cardamome* grows plentifully in the woods of *Java*; the flowers grow on the stalk like the hyacinth; it differs from the small *Cardamome* in divers respects: It grows to the height of six foot, the leaves are larger, and the stalks not knotty like the reeds. The small *Cardamome* sends forth an ear from the root, and the husks are sometimes a finger long. However, the leaves and flowers are of the same scent in both, but the leaves of the great *Cardamome* are not only much larger, but also covered with a *Lanugo* on the under side. This shrub is very pleasant to behold, of a light green colour, with white flowers tip'd with purple red at the extremities.

The plant called by the *Malayans* *Moulit Bebek*, i. e. the *Ducks-Beak*, from its shape, grows in the gardens of *Batavia* on a somewhat longer stalk than the *Cardamome*, being a sempervivent herb; the leaves also differ from those of the *Cardamome*, being carved or edged in the circumference.

1662. The inhabitants use the juice of this herb against pustules and other exulcerations of a bileous nature; and steep'd in vinegar, it is a good remedy against the *St. Anthony's Fire*; the *Malayan* women lay it upon the heads of their children to corroborate the brains.

Indian  
Sarsel.

In the isle of *Java*, and adjacent islands, grows an odd kind of sorrel, having no resemblance to the *European* sorrel, growing up to the height of six foot, with a strong, hard, and three corner'd stalk not unlike the hemp; the leaves being also not unlike those of the hemp, beset with sharp small prickles. The flower has but one single leaf of a pale yellow colour, but of a purple colour below. The leaves chew'd have the same taste as our sorrel, but are more oily: The seed is thorny like that of *Carduus*, and of a cooling and drying quality. The *Malayans* eat this herb among their sallads; they also take the leaves, and after they have mix'd them well with the sawdust of sandel-wood upon a marble-stone, and a little coco oil and vinegar, make a cataplasm of it, which they apply to the head to cure the tooth-ach, proceeding from a hot cause.

Benjoin  
tree.

In the isle of *Java* grows likewise the tree, out of the bark of which, after an incision made, flows that well scented gum called *Benjoin* or *Benjuin*, being a shrub or tree spread into many branches, of the thickness of a man's arm.

Nardus.

About *Batavia* grows a plant in great plenty call'd *Nardus*, most in request among the *Javanese*, who used it in their fish and boil'd meat sauces, to give them a relish. They steep the *Nardus* in vinegar, and make a syrup of it with sugar, which is esteem'd a good remedy against the coldness of the bowels, and opens the obstructions of the spleen and liver. This vinegar and syrup cures also the stings of the serpents and scorpions, if applied outwardly and taken inwardly at the same time.

Amfioen, or  
Opium.

*Amfioen* or *Amfion*, as it is called by the *Indians*, and *Opium* by the *Europeans*, is nothing else but the juice of poppies, much used by the *Javanese* and other *Indians*, especially when they are upon the point of engaging their enemies. The *Amfion* is a very useful drug to the *Indians*, without which they would be at a stand how to cure many distempers in this hot climate, as the bloody flux, burning fevers, and such like distempers proceeding from the gall. The poorer sort of the *Indians* boil the leaves and sprouts of the *Amfion*, out of which they make a slighter sort of *Opium*, by coagulating the decoction called *Pouss*.

Pyzang.

The fruit called *Pyzang* or *Indian figs*, as also *Bachorvees* from the *Portuguese* word  
V o l. II.

*Bakovia*, are called *Pyzang* or *Banana's* by the *Malayans*, *Gedars* by the *Javanese*, *Thio* by the *Chinese*, by the rest of the *Indians* *Oucelli*, by the inhabitants of the isle of *St. Thomas* *Oucella*, and by the *Arabian* *Maus* and *Muza*. The stem or trunk of this tree grows up in long oval scollops to the height of 20 or 30 foot in six months time; its circumference being of four foot, but so soft, that you may cut it with a knife like a cabbage stalk. It spreads its branches very loosely, and bears leaves, some of which are a foot and a half broad, and five, six, or seven foot long; green on the uppermost side, but dark on the other side, with a thick vein through the middle. The fruit has an ear, the stalk a yellowish brown, is very pleasing to the sight, and shap'd like a cucumber, turning at the extremities towards one another as they hang on the tree: Before they are ripe they are of a parrot green colour, but when come to full perfection, yellow both in and outside. When the fruit is fit to be gathered the stem is cut down to the ground, and the fruit, which is green as yet, taken and hung up in the house, where it ripens and turns pale yellow in a few days. The rind is so thin, that it may be taken off without a knife. Neither the tree nor fruit produces any seed, but a very handsome flower of the bigness of an ostriches egg, which sprouts forth on the top out of large buds, and opens its leaves by degrees. Whilst the stem has fruit enough to nourish, the leaves fall off one after another: Out of the before-mentioned knot or flower comes forth a branch, on which grows the fruit in a cluster, sometimes 1 or 200 together, so that sometimes one branch is as much as a man can carry, and each stem or trunk brings forth no more than one cluster. There are divers sorts of these figs, distinguish'd by the inhabitants by different names, shapes and tastes; and they put them to various uses; some have a way of drying them in the sun, when they taste as pleasantly as the *Portuguese* figs: Of this kind I tasted at *St. Anthony*, one of the salt islands.

The *Dutch* fry them with butter and eggs, or with butter alone, and eat it for a dainty; thus dress'd they are accounted cooling, nourishing and opening. The fruit raw is very astringent, and consequently not to be eaten thus, because they are windy, and will create a nauseousness in the stomach; and sometimes will produce the bloody flux. However, they being of so agreeable a scent and taste, they are sometimes eaten raw, provided they are cut off the trees a good while before they come to full maturity; when the rind will remain  
D d d d green

1662.

1662. green, and the pulp by degrees acquires a very agreeable taste, not unlike our sugar pears: If you cut the fruit thro' the middle, you will see the figure of a cross within: The leaves of this tree are used like as we do our mats, to pack up goods with: And I remember, that in 1660, when I travell'd with Mr. James Hufart to the isle of Buro, the inhabitants served up their victuals in those leaves instead of dishes, and covered their meats with the same: They also used them instead of napkins to wipe their hands on: When one of our servants offered them a glass with liquor, they refused to take it; but instead thereof brought forth a leaf of a certain tree, which being accommodated for that purpose, they drunk out of it, telling us, that their cup needed no washing: The *Javaneſe* being of opinion, that the leaves of these fig-trees have a great virtue to extinguish the fire, they plant them near their houses, to make use of them in case of necessity. So soon as the stem or trunk is cut to the root, after the fruit is come to maturity, the root sends forth new ones, round about the old one, which coming to their full growth in a little time, and producing new fruits, the same may be had fresh all the year long. This tree grows without much trouble, and in such plenty, that for a penny you may buy a whole bunch; they grow best in a fat and mellow soil. Some will have this fruit the same, which by the spies of *Israel* were brought out of the *Land of Promise* into the camp of the *Israelites*: Others are of opinion, that these were the leaves where with *Adam* and *Eve* covered their nakedness: Others again maintain, that *Adam* eat of this fruit, which occasioned his fall, whence they call them *Paradise Apples*.

The Bam-  
boe.

The *Bamboe* grows all over *Batavia*, being strait reeds clove in two at the upper end, having no root fastened in the ground, but grows without the least portion of earth from the surface of the water, having on the bottom a thick knob, from whence sprout forth small twigs like threads, which being nourished by the air and thaw, bring forth leaves and flowers. Its flowers are very white, having five long leaves somewhat crumpled, not unlike the white lilies; they have also a very odoriferous scent, and a yellow seed within. The leaves sprout forth at the extremity of the twigs bending downwards, which bear long and narrow leaves. It is very surprizing both for its natural growth, and its most agreeable scent.

Button  
flower.

The flower called by the *Malayans*, *Bo-rago Soesan*, by the *Javaneſe*, *Bunbang Ungo*, and *Licubna* by the *Chineſe*, the *Portuguese* call *Fula de Batano*, i. e. the *Button*

flower, from its resemblance to a button. It grows in great plenty in the gardens, by reason of its pleasing purple colour, (which remains even after it is dried) but has no scent. It grows like our clover, except that the leaves grow cloſer to one another on thin brown stalks; The flower comes forth with green buds betwixt two leaves.

1662.

The white sweet briar, called *Boenga Da-du* by the *Javaneſe* and *Malayans*, and *Tyn-fou* by the *Chineſe*, bears leaves and flowers like our rose-tree, except that the flowers, which are very white, are not altogether so large, and have pointed leaves; they scent like our roses, but not altogether so strong. They say, that this tree was first transplanted from *Persia* near *Batavia* by the *Dutch*, when they first settled here: Out of the leaves of the flowers they distil rose-water, used in the same manner as our rose-water, for which reason they are very industrious to propagate this tree.

The white  
sweet-  
briar.

The tree which bears the fruit called *Jakka*, or *Jakkas* by the *Portuguese*, and *Nanka* by the *Javaneſe*, is one of the largest fruit-trees of the *Indies*, which delights in high and dry grounds, where it will grow up to the height of an oak-tree. The leaves are blue on the underside, but green on the other side, round and less than the leaves of our cherry-trees. It bears no flowers, the fruit growing out of stem and branches, of such a bigness, that one of them weighs sometimes nine or ten pounds, being commonly eight inches thick, and a foot and a half long: They are very pleasing to look upon, not unlike the pompions or large melons, but on the outside like the *Ananas* or pine-apples. The fruit is green at first, but after it is gathered and ripened, yellow: It has a thick rind, covered with a kind of three cornered thorny *Lanugo*, but don't prick. Within this rind you have certain divisions like as in a honey comb, which contain certain kernels or chefnuts larger than dates, enclosed in a yellow pulp, which is eaten. The kernel is generally of the bigness of a joint of a man's thumb, and two of them be sometimes found in one of these fruits if it be of the largest size; some are yellow, others white within; the harder the sweeter they are. The fruit is of an agreeable scent, yet of a rough taste, and if eaten raw create winds, but if roasted like chefnuts are well tasted, and a provocative to venery, for which reason they are frequently eaten by the common people. If you eat too much of this fruit it increases the blood, produces loosenesses, exulcerations in the bowels and bloody fluxes. In short, this fruit is very unwholesome by reason of its lusciousness, and

1662. and is commonly evacuated by stool just as it is eaten; the pulp about the kernels being so tough, that it is scarce to be managed with the teeth; the kernels are eaten boiled by the inhabitants with a little salt instead of rice. Of this fruit there are two sorts; one is call'd *Barka*, and is the best, the other *Papa* or *Girafol*, which is softer than the other; as you may perceive by pressing it with your fingers. They grow all over the *Indies*, but those of the isle of *Ceylon*, and the coast of *Malabar* are the best; I remember that the queen of *Signati* presented me with one, which was of so delicious a taste, that I could meet with none afterwards like it.

This flower is called by some the flower of *Camboja*, because it was transplanted from thence to *Batavia*, tho' others look for its original as far as *China*, whence it is call'd *Pakjaboa*. It grows all about *Batavia* in the gardens, on knotty trees, which grow sometimes twelve foot high. It bears no seed, but thick oily leaves, white on the extremities, but a pale yellow towards the stalk; some have red spots on the upper side. The flower sprouts far at the ends of the twigs in a broad knot, which produces several flowers, the scent whereof is like our *May* flowers, but stronger and not so agreeable. The leaves of the stem are long, pointed at the end, green and full of veins; the wood is grey, and near the top where the flower buds out, surrounded with many young sprigs.

The flower call'd *Katsjepiri* by the *Malayans*, *Korban* by the *Javanese*, and *Ambon* by the *Chinese*, grows in the gardens of *Batavia*, the tree being not unlike a palm-tree, but somewhat higher, and with larger leaves. The flowers sprout out of pale green buds, are well scented with thick, oily and snow white leaves, with yellow seeds in the middle. This flower is in great request for its pleasing scent, being sold sometimes for two-pence a piece.

The rice-flower is called by the *Portuguese* *Fulo di Arroz*, by the *Malayans* *Boingo Pissa Pria*, and by the *Javanese* *Pella Sindanga*, all in the same sense from its scent, which is like rice when it comes boiling hot out of the pot. It grows on a kind of vine which spreads its branches like our vines, with very fair broad leaves, like those of the quince pear-tree, and are as green as a leek. The branches grow so thick that the sun cannot penetrate them, being supported by bamboo sticks. The flower has single white leaves, streaked with white within, and in the middle a pointed sprout surrounded with small buds.

The apples called *Pompions* by the *Dutch*, *Jamboa* by the *Portuguese*, and *Tboe* by the

*Chinese*, grow scarce any where else in the *Indies* but in the isle of *Great-Java*, especially in the gardens of *Batavia*. This tree is produced by no other ways than either by laying off of the branches, like as we do our vines, or from the seed of the fruit; the first bears fruit the second year, but the tree which comes from the kernel or seed does not bear till the third or fourth year. The apples are of a gold colour without, and some of them red within; their taste being not unlike our cherries. Some are white and somewhat sweeter; they are very like oranges, both in and out side, except that they are five times as big, some weighing 10 or 12 pounds, and being 10 or 12 inches in circumference, so that one apple is sufficient for two or three at a time. They grow in clusters four or five together, on thin twigs supported by bamboo-canes, without which they would either break or hang down to the ground. The tree also grows like the orange-tree, except that the branches are somewhat thicker and closer, and the leaves broader. The blossoms have white leaves, with a yellow seed within, being of the bigness of our apple blossoms: The fruit continues almost all the year round, and after it is gathered will keep four or five months. It delights in a fat soil, and the ground must be kept clear of weeds near the stem.

Most and the best of the *Indian* fruits continue throughout the whole year, except few, among which that call'd *Man-gas* by the *Javanese*, and *Pas Ampelan* by the *Malayans* is one; the trees which bear this fruit are sometimes as tall, thick and well spread as the largest oak trees in *Europe*. The flowers which are white, sprout forth of certain small twigs growing on the branches, which produce such vast plenty of fruit, that when they begin to ripen, they are forced to support them with sticks. Their time of gathering is chiefly in *September* and *October*; tho' less or more they continue throughout the year. And most of the trees bear fruit but every other year. The fruit is something larger than a plumb; green at first, but when ripe of an orange colour; some are spotted, and being of the same colour on the inside are very pleasing to the eye, but somewhat crabby in taste. The inhabitants make divers relishing pickles of them; they boil them in a certain pickle, and make them as good in taste as the best *Portuguese* olives; others are pickled with vinegar and green pepper, and are used with roasted meats like our pickled cucumbers. They are also preserved with sugar for the use of the women; they have another way of taking off the rind and the kernel, the space of which they

or Man-  
gas.

1662.

they fill up with sugar, butter and eggs, and so make a delicious dish of them, very pleasing both to the palate and stomach. The fruit, if eaten in any great quantity after it is ripe, is very unwholesome, but moderately used, is good against the bloody-flux. The tree is produced out of the kernel, and does not bear till some years after, neither does it bear fruits for several years before it dies.

Mango-  
flan.

The fruit call'd *Mangostan* by the *Malayans* and *Manges Tanges* by the *Javaneze*, carries the bell before all the other *Indian* fruits, for its agreeable taste. It grows chiefly about *Bantam*, and in some places of *Malacca*. The tree which bears this apple, grows no higher than a plumb or mulberry-tree, having a straight stem of the bigness of a man's calf of his leg; with a rough bark, its branches growing up like those of the clove tree; both the leaves and branches affording a very agreeable sight. The apples hang at the extremities of the small twigs, each being cover'd with two leaves, of two palms in length, having abundance of veins; they are somewhat of a pale green on the outside, but light green on the inside. This agreeable fruit comes forth from a pale green bud, which opening produces the blossom, and these the fruit. On the top of the apple is a kind of a coronet, which opens as soon as it begins to ripen. The several points of this coronet has so many marks to direct you how many kernels are contained in the apple; which are sometimes six, sometimes eight; but those which have the most kernels, are generally the best. The fruit has a very thick rind, not unlike our granate apples, of a purple colour without and whitish on the inside; Its taste is somewhat crab-like, not unlike the rind of the granate apple, and somewhat inclining to bitter; the pulp which is round the inward kernels, is sometimes white, sometimes inclining to red, being exceeding pleasing to the palate, and not unwholesome for the stomach, notwithstanding its cooling quality, it being scarce ever known, that any body surfeited himself by the eating of this fruit, a thing otherwise very common to the cooling fruits of the *Indies*. These are accounted very proper even in agues, and have towards the bottom, about the stalks, three or four different rinds or shells. These are brought in such vast quantities from *Bantam* to *Batavia*, that you may buy many of them for six-pence, and I have seen several of them in the gardens about *Batavia*, one whereof bore fruit very plentifully, which makes me believe they would thrive very well hereabouts.

mond tree.

As far as I remember, there is scarce

1663.

any kind of fruit tree in the *Indies* which casts its leaves so as to remain bare except this tree, which as well as the fruit is call'd *Katopper*. The tree grows up very tall, with thick branches and leaves, which afford a very plentiful shade; it is in all respects like an elm-tree, except that its leaves are above a palm in length and very narrow, with yellow veins. The stem of this tree is very strait, out of which come forth the branches one above the other in due order. The fruit grows in clusters on the extremities of the twigs with the blossoms, which are small white flowers with a yellow seed, and many green buds not open'd yet near them: The fruit is enclosed in a hairy substance, which turns yellow, and shrinks as it ripens; within which is a hard shell, which contains commonly one, and sometimes two kernels. These are as sweet as almonds, being not unlike them in shape, and are eaten and used otherwise like almonds; the shell is so hard that you can scarce crack them with your teeth. There are divers sorts of them; some having a pale red shell, which are bigger, others a yellow one.

The *Javaneze Rottangs* grow in those countries wild, and are different in their kind; some would have them to be a kind of reed, because they grow sometimes with knots or joints; whereas otherwise they have no resemblance either in the stem or leaves to the cane or reed kind. This grows so fast, and twists its self sometimes so closely up to the very tops of the highest trees, that they die for want of air. They are much used in the *Indies*; however the best walking canes are brought from *Japan* and *Siam*. They bear also a kind of fruit of a brown colour like our earth-nuts, with a very thin rind, containing two kernels, which are white, but of an unpleasant taste, and therefore scarce ever eaten, except a small portion thereof next to the rinds which is well tasted. The *Chinese* make divers sorts of pickles of this fruit, in the nature of the pickled olives, and draw an oil from them, which is very good to heal wounds.

The tree and fruit call'd by the *Portuguese* and *Dutch Anrae*, is call'd *Sarborosia* by the *Malayans*. It grows in divers places of the *Indies*, to the height of an ordinary apple-tree, with rough leaves, which are green at first, but turn brown as the fruit begins to ripen, and grow directly opposite to one another, like those of the tree *Gojavas*, but are not so broad. It bears no blossom, the fruit coming forth of buds like the *Portuguese* figs, which has a rough rind, with pale green knots, not unlike the pine-apple; it comes to full maturity in three months time, when it is gathered, and kept

1662. kept till it grows soft, that it may be broken with ones hands; within it resembles a rotten medlar, being full of seeds, and the pulp of so agreeable a taste, that one can scarce be satisfied with it. The inhabitants make many incisions in the bark, to make the tree bear the better, as we say of our walnut-trees, when the twigs are well beaten whilst they are gathering the fruit. There is another sort of these figs called *Aianone* by the inhabitants, which are lesser, as is likewise the tree, which resembles a shrub, with narrow leaves, but above a palm in length. The fruit is of the bigness of a *China* apple, yellow and shadowed with an orange colour, but white within, with brown seeds; they are much more luscious, and when cut open emit a scent like rose-water, being accounted very comfortable to the brains, and therefore held in great esteem. This fruit likewise sprouts forth out of long green buds, which opening, contain another round nut or bud, which produces the fruit.

Date-tree.

The date trees grow in great plenty in *Persia* near *Gamron*, and delight much in sandy grounds. Some of these trees have of late years been transplanted to *Batavia*, of which I saw a young one in Mr. *Peter Moleb's* garden, the draught of which I have inserted, but whether it will bear fruit time will shew. The date trees continue in their full vigour for many years; they have, like the coco-trees, very small roots, and the trunk is thicker near the top, than towards the root. The pith of the three is accounted excellent good to encrease sperm and an appetite to venery, and the *Persians* about *Gamron* are so fond of this fruit, that they eat it at their meals as we do bread, or the *Indian* rice. The dates hang in yellow shells on the trees, being of a delicious taste, especially if eaten green. There is a male and female date-tree, the last of which bears fruit only; they differ also in this, that the female has a thicker and longer stem, but the blossom is the same in both, and shoots forth in a great bunch or cluster on the top of the tree, of the thickness of an arm, which opening after some time produces the flowers, and those the fruit. The *Persians* cut off this knot from the male tree before it opens, which they cut into divers pieces, one of which they put into the knot or cluster of the female tree, (which they have a way to open) pretending thereby to make the tree bear greater plenty of fruit.

They have many stories of the male and female trees, tho' not worth the inserting here.

Water-melons or Patekas.

The water-melons, call'd *Batiek* by the *Indians*, as also *Patekas* or *Pateks*, grow almost in all the countries betwixt the two

Vol. II.

tropicks of *Cancer* and *Capricorn*, yet the nearer to the *Equinoctial* line, the better they are, and continue in vigour all the year round, except in the height of the rainy season. Some are white without, as at *Batavia*, but the red ones are the best; they have a thin green rind, which is soft and tender within. The pulp is bright, and so tender as to melt in ones mouth like sugar. The seeds are black, not unlike our pompanion seeds: The plant creeps with its stalks and leaves along the ground like the pompanions, and at their opening resemble our cucumbers. The fruit is sufficient for four persons to feed upon, and is, among all other fruits that are eaten raw, the most pleasant and harmless, tho' you eat ever so much of it. However, moderately eaten they are best, when they are very refreshing and acuate the stomach; whereas in too great a quantity they are obnoxious, and may occasion the bloody flux: They grow best in sandy grounds. I have seen some of them in the gardens of *Holland*, but the fruit has a watery taste.

Ananas.

The fruit called *Ananas*, by the *Portuguese* and *Dutch*, is called *Nuna* by the *Malayans* and *Javanese*, and *Unglay* by the *Chinese*. The plant which produces this fruit delights to grow in shady places and a fat soil: First shoots forth a stalk of an inch thick and a foot long, on which near to the ground grows the fruit, not unlike a melon, with a well colour'd rind, being of a pale red colour mixed with orange colour'd streaks, which towards the extremities are green. The fruit looks yellow within. They are sometimes five inches in circumference, and nine long, weighing perhaps five or six pounds. Below and round about the stalk come forth certain sprouts like house-leek or alocs, with 15 or 16 carved leaves of the same colour as the fruit, green in the middle, and of an orange colour about the edges. The *Ananas*, after it is come to its full perfection, is one of the most delicious fruits of all the *Indies*; but before they are well ripe, they contain a corroding poisonous quality, of which the ripe ones even have some remnants, and therefore ought not to be eaten in too great a quantity, unless you cut them into small slices, and by pouring some *Spanish* wine upon them draw out the sharp humour. Some use water instead of wine, notwithstanding which they often create a heat in the throat; but as they are diuretick, so they are accounted good against the gravel: But without being steep'd in wine or water, they would exacerate the palate of the mouth and the tongue, and cause a mortal bloody-flux. They have a way of preserving them with

E e e e

sugar,

1662. sugar, and are thus transported frequently from the *West-Indies* into *Europe*. This fruit has so fragrant a smell, that when it is cut it fills the room with a smell like rose-water: In taste they approach next to our large strawberries, which being very inviting to the palate, makes one eat too much, and inflames the bowels, or occasions burning fevers, for which reason they ought to be eaten with caution. Those of the isle of *Ceylon* exceed the rest in taste; those growing near *Batavia*, and in other parts of *Java*, are not so fine. The fruits ripen in six months; when they are cut

from the stalks, which remain thus; or else they take the sprouts, and having cut them from the main stalk, put them thus without any root in the ground, which afterwards produce new plants. The fruit *Ananas* grows in most parts of both the *Indies*, and some are of opinion, that the first plants thereof have been transplanted many years ago from *Brasil* unto the *East-Indies*.

Among other *Indian* plants, which are beneficial to human kind, is that called *Betel* or *Betele* by the *Indians*, and *Siry* by the *Malayans*, *Sury* by the *Javaneze*, and *Lauben* by the *Chinese*, which is one of the

most inconsiderable ones. It resembles at a distance the black pepper, and runs up with its branches round trees, stalks, posts, or any other thing it meets with, like our hops, to a good height, delighting especially in a well dung'd soil, and shady places, and growing but slowly in the open air: It requires also a considerable heat, which is the reason that it is planted near the sea-side, and after all must be defended and covered against the cold night blasts, being so tender, that it can't bear the least cold. Both the branches and leaves are in all respects like those of the pepper; the leaves being sometimes six inches broad, and as many long, of a dark green colour, having

several veins thro' the length, and 5 or 6 crosswise; the stalks are an inch broad. The leaves have a spicy taste, very penetrant and somewhat astringent. They are so generally used in the *Indies*, as if the inhabitants could not live without them. They take a single leaf, and a small quantity of lime made of burnt oyster shells, then folding the leaf together, they put into it the lime, and a fourth part of the nut *Areka*, (or *Pinang*) which augments the astringent quality of the *Betel*, and draws the spittle: After they have chew'd it thus a while, the first spittle is red, like stagnated blood, which being pass'd, they swallow the rest. The first spittle taints the

The juice thereof, which is swallowed down, has an astringent and corroborating quality of the stomach, after the first spittle which contains the lime, is spitted out: It closes the upper orifice of the stomach, disperses the vapours arising from drunkenness, and revives the spirits. It corrects a stinking breath, cures the tooth-ach and scurvy, fastens the teeth and strengthens the gums, but makes the teeth as black as jet, an ornament much affected by the *Indians*; and if you chew too much of this mixture, it will loosen and corrode the teeth. *Betel* chew'd without lime, produces a green spittle, but with lime, makes it red; persons of quality mix some musk, amber-greece or camphire with it: The use of it is so frequent here, that no body pays a visit to another, but a small dish of *Betel* is brought immediately. Nice people spit in pots.

The ancient herbalists have placed the *Pynang* tree among the palm-trees, perhaps because its stem, leaves and branches, are not unlike the coco-tree. It owes its original to the kernel of the nut like the coco-tree, and grows all over the *Indies*, especially in the isle of *Ceylon*, where they drive a great traffick with these nuts, and transport them in prodigious quantities to the coast of *Madura* and other places. In a few years after it is planted it bears nuts. From underneath the leaves sprout forth certain twigs, which grow close together, and are full of small of small white leaves, emitting a most fragrant scent at a considerable distance, especially mornings and evenings. After these flowers come the nuts, called *Fausel* by the *Arabians*, *Areka* by the *Indians*, and *Pynang* by the *Malayans*: They grow very thick together on both sides of very strong stalks, being green at first, but turning yellow by degrees; some are of an orange colour. Some of these nuts grow not so close on tender twigs; others, which are of an orange colour, grow out of certain green hulks, in bunches like grapes; they are covered on the out-side with a hairy substance. This tree equals in height the coco-tree, but the stem seldom exceeds six or seven inches in thickness, neither has it so long and many branches as the coco-tree, and the leaves are shorter and broader. These trees look very oddly at a distance, being fo

thin of stem and almost without branches, so that they are beat by the wind on all sides, yet never break. The stem is spongy within, but the bark very hard, of which they make laths for the coverings of their houses, for which they are very useful by reason of their straightness. The fruit resembles an acorn, but is four bigger; however, when cleansed from the hairy threads, the nut scarce exceeds the bigness of a nutmeg, and looks like it within. The kernels are astringent, and good for the stomach. They make no other use of them but for chewing with the *Betel* leaves and lime, as we told you before. They cleanse the nuts from the hairy strings with a pair of scissors, and cut the nut if large in four, or else in two pieces; and this put into a leaf of *Betel*, and mix'd with a little lime, they chew so long as it will draw the spittle, and spit out what remains; but the old *Pynang* nuts with the *Betel* leaf will dissolve insensibly in the mouth. Such as are not used to the chewing of *Pynang*, especially if used before it is come to its full maturity, will certainly be seiz'd with giddiness in the head, and will fall down without sense or motion.

*Suryboa* is a certain plant which runs up close round the *Pynang* tree to a great height, and being planted in rows, afford shady and agreeable walks. The leaves and branches are like those of the *Betel* or of pepper: The fruit is not unlike in shape to the *Bengal* pepper, growing on small and green stalks of two fingers length: It is green and chequer'd, of the length of a palm, but scarce an inch thick, containing a white kernel with small seeds. These kernels are used with the *Areka* instead of *Betel*, being a pleasant chew. They cut them through the middle, and taking one half of the *Pinang* kernel likewise cut in the middle, they tie both together with a cotton thread, and with the addition of a small quantity of lime made of oyster-shells, use it like as they do the *Betel*; it has the same effects, and being not so common as the *Betel*, is more esteem'd among persons of quality.

*Dap-Daf* or *Dap-Dap*, is a very agreeable fruit both raw and dress'd, having a very pleasant taste, of a mixture of sweet and sour, and of a cooling quality. It grows out of the bottom of a stem of a tree, having very fine leaves, the flowers or blossom consisting of small red leaves. The fruit is inclining to red, mix'd with black spots of an oval figure, and ragged, bent a little at the end like a cucumber. It contains a white kernel of a delicious taste, being enclosed in a whitish rind. These trees bear fruit all the year long.

1662.

1662. long, and grow properly in the *Molucca* islands, from whence they have been transplanted into the gardens of *Batavia*, but do not thrive so well there as in their native soil, being much pester'd with aunts or pismires, which do incredible mischiefs to the fruits there. The tree whereof I took the draught at *Batavia*, was furrounded with rails, within which the ground was paved with stone, and a small cistern in it with water, notwithstanding which the fruit was so covered with pismires as scarce to be discerned.

Takkatak. The fruit call'd *Takkatak*, or *Boa Burun* by the *Malayans*, and *Kannekoni* by the *Javanese*, are by the *Dutch* called *Red-Currants*, from their resemblance to our currants, tho' in their qualifications they are very different. These berries grow on high trees with large leaves, not unlike the chefnut trees, and sprout forth in large buds in clusters, on the twigs of the trees, being of the same bigness as ours, but are of a four taste; notwithstanding which they are much coveted, and sold and used in great quantities at *Batavia*, in the same manner as we do our red-currants. They grow in the gardens about *Batavia*, and bear fruit every three months, but most in September.

Moringo. The tree call'd *Moringo* by the *Portuguese* and *Dutch*, *Ramony* by the *Malayans*, and *Kelor* by the *Chinese*, is found not only in all the gardens, but also before the houses: It has a white blossom, which sprouts forth from white buds, having a yellow seed within. The fruits grow several together, being enclosed in hard husks, not unlike our *French* beans, except that the husks are round and longer. So soon as they are ripe, they are gathered, and the twigs on the top being cut off, others sprout forth in their stead, which bear new fruit. The leaves are very smooth and thick, in taste not unlike the coco leaves in *Holland*, but not so biting and penetrant. They stew these leaves with meat, or eat them alone, as we do our spinage, being well tasted and cooling; the same they do with the husks, whilst they are young, but when old are tough; so that both the usefulness and pleasantness of this tree is a sufficient encouragement to the people to afford it a place in their gardens, especially since it wants no great industry to plant it, as growing out of a sprig of the tree planted only in the ground without any root, which in a few months begins to blossom and to bear fruit.

Torre. The tree called *Torre* by the *Malabars*, *Tary* by the *Portuguese*, *Rombang Juri* by the *Javanese*, and *Husk-Tree* by the *Dutch*, does not rise above the height of an or-

dinary apple-tree: It brings forth certain husks hanging strait down on thin stalks of about a quarter of a yard in length, and the thicknes of a little finger. The husks contain 8 or 10 small pease, which are eaten as well as the leaves, which are round and small, growing on small twigs, and the flowers, which are surprizing at first sight. They sprout forth out of green buds in the shape of a half-moon, with purple-coloured points, and streaks of the same colour within: From the innermost leaf come forth certain long and thin sprouts like fillets, with yellow hairy points; the stalk is green, but the beginning of the leaves of the flower are white, interspers'd with veins to the extremities, with a parrot-green colour intermix'd with some red, which affords a most agreeable spectacle to the eye: The inhabitants also make use of the leaves as a sovereign remedy against the stings of the serpents, in which case they squeeze them betwixt two stones, and mixing a little salt with them, apply them to the tumor, which give immediate relief.

The *Portuguese* have given it the name *Devil's-Folio di Inverno*, or *Devil's-Leaf*, or *Hellish-Leaf*, because it will over-run all places wherever it lights; the *Malayans* call it *Garrak*, and the *Javanese* *Klatte*; It has several physick virtues against divers distempers. There are two sorts, distinguish'd by their different colours, one having green leaves, and growing very fast, the other being brown and red, like the leaves of our red cabbages, and growing up to the height of 12 or 14 foot, with carved leaves hanging on very long stalks. On the top sprouts out a bunch of green buds, which opening by degrees, produce yellowish flowers; after which comes the fruit, not unlike a chefnut, containing a bean or kernel, which is very good food.

The plant or herb called the *Broad-Numerado* by the *Portuguese*, and *Bajan Dierdia* by the *Malayans*. The shape of the leaf which grows on the stalk of this plant chequered with various colours like a tulip, is altogether like our beetes, and used in the same manner, but is preferred for the beauty of its leaves, which are on the top, as an ornament of the gardens. There is another sort resembling in colour our red cabbages, and is frequently planted by the *Chinese*, who sell it in great quantities in the market of *Batavia*; it is of an agreeable taste, either boil'd with meat or stew'd by it self.

The tree which produces the *Javanese* cotton, is call'd *Kappok* by the *Malayans*, *Jerondo* by the *Javanese*, and *My* by the *Chinese*, grows up to the height of a great mat, spreading its branches directly

1662. *strawways* on all sides. The bark of this tree is white, as far as the lowermost branches, but from thence to the top green; the flowers which are white come forth out of certain buds growing out of the branches; then come the fruits of the bigness of a hen's egg, pointed at the end, being green at first, but turn brown like a dried oak-leaf. These fruits hang on the middle and end of the branches, two and two together, seldom one alone. They open at last near the stalks, and produce the cotton-wool, which covers the seed, and extends its self when exposed to the air. The seeds are black, not unlike the brown pepper, but somewhat smoother. The cotton-wool is gathered in the *Indies* in *October* and *November*, wherewith they drive a considerable traffick all over the *Indies*, where they are used instead of feathers, to stuff their cushions, bolsters and quilts withal, feather-beds being unknown here, but is not long enough for combing, or for weaving: Great care is to be taken that no fire come near it, for if it takes fire it burns with such violence, that scarce any water can quench it. This tree grows wherever it is planted.

*Jambos.* The tree *Jambos*, as the *Indians* and *Javanese* call it, the *Portuguese* *Rojado*, the *Malayans* *Jambos Ramus*, and the *Chinese* *Sheapont*, affords a very agreeable entertainment to the eye, while it stands in full blossom. It grows up very regularly, in the shape of a pyramid, the branches growing in good order, neither entangled within one another, neither above one another. It rises to the height of a large pear-tree in *Europe*, and takes deep root. The leaves are long and green, at the extremities of the small twigs sprout out green buds, which produce flowers with leaves as red as blood, containing certain red fillets within: The fruits are of an oval figure, resembling in bigness and shape our sugar-pears, which grow in clusters 23, 24 or 25 together: Some are red, others white, but both of the same taste, tho' the white ones are reckoned the best. They smell very sweet, but are somewhat mellow: The stone which lies in the middle has a large but bitter kernel, which is never eaten. Abundance of these flowers which produce no fruit, fall from the tree upon the ground, which cover the ground underneath, and afford a pleasant sight. The stalks of the flowers are red, not unlike the sea-lion's, but not so long. These flowers have so pleasing and savory a taste, that they are used and eaten as a delicious salad. The fruit has a sweet, yet relishing rest, and allays the excessive heat of the stomach; if stew'd with sugar, and a little wine, they eat like

stew'd pears. The best I ever met with were in the isle of *Ceylon*, where they grow in great plenty. These trees are produced from the seed, and bear fruit in the 4<sup>th</sup> year, and three times in a year, so that they never are in want of this fruit throughout all the seasons: 'Tis generally believed that this tree, for his sweet scented flowers and well tasted fruit's sake, was transplanted from *Malacca* into other distant countries. There is yet another sort of *Jambes*, which grow in the isle of *Amboyna*, on trees no bigger than our cherry-trees, but they are not so well tasted; so that this tree is cultivated there rather for its blossom, which is red also, than the goodness of the fruit.

Among many other fruits, which if eaten raw, are crabbed and sour upon the tongue, we must not pass by in silence what the *Portuguese* call *Nelyka*, the *Malayans* and *Javanese* *Boa Malakka*, the *Chinese* *Sealy*, and the *Dutch* *Wild-Plum*: They grow in vast numbers on thin twigs, and are greenish of colour; the twigs have small green leaves growing close together. The fruit has a fourth taste, and is very cooling, for which reason it is in request by some, tho' generally no great account is made of it. They are in their prime in *August*, and are then to be sold in the market in *Batavia*.

The tree called *Canary* by the Malays, *Javanese* and *Chinese*, is an Indian oak-tree. Canary tree. It grows very high with lofty branches and very smooth leaves, interwoven with divers veins. The stem grows thick, and extends it self into several protuberances near the root. The rangers of the forests keep a watchful eye over these trees at convenient distances, when the acorns begin to fall, because the wild-boars appearing in great numbers, they shoot them ; so that during that season, the wild-boars flesh is sold at a cheap rate in the market of *Batavia*. The fruit is nothing else but an acorn or nut, produced out of a yellow blossom growing on small twigs. The nut or acorn is enclosed in a green shell, and next to that another, which is so hard, that you must break it with a hammer, if you will come at the kernel, which is as white as an almond, and of as good a taste, being covered by a thin skin.

In and near the city of *Batavia*, grows in the gardens a certain flower, both in scent and figure not unlike our camomile-flower, but whether it obtains the same virtue, is unknown hitherto. The *Topafes* call it after the *Portuguese*, *Fulo di Madra* i. e. *Mother-Flower*, because its leaves and the flower are somewhat like the *Matricaria*, and perhaps of the same kind. It

F f f f

grows

1662. grows about a foot high, with large carved leaves: The flower which is white, sprouts forth out of green buds, with double leaves carved at the ends.

The flower call'd *Four-Lights* comes forth out of small buds, being not unlike a single gilliflower, but of a bright red colour. It consists of four carved leaves, which have certain pleasant curls at the ends. The leaves are dark green on the inside, and pale green without, chequered with streaks which run all along to the point of the leaf, which has the shape of an heart. This flower is kept only for ornaments sake, but is soon faded.

Alli or water-flower.

There is scarce a lake or pool in this country, but what produces some flower or other; but the flower called *Alli* is found in great plenty all along the ditch or *Gracht* betwixt *Ansoj* and *Jacatra*. It is a pretty sort of a flower, which may be kept a pretty while in water: It comes forth out of long and large buds, is pale green without, and white within with yellow seeds. After it is opened, it is not unlike a tulip or lilly, except that the leaves are green on the out-side. Its virtues are unknown as yet, but is kept for ornament's sake.

White violet or Jar-ron.

The leaves of this flower growing close within one another like our violets, it has got the name of a white violet, scarce differing from it in any thing but the scent. It grows wild on certain shrubs without *Batavia*; when they are planted in the gardens, the stalks thereof are cut down close to the ground, when new stalks sprout forth, which bring flowers in great plenty. The inhabitants who call this flower *Jar-ron*, say it was brought hither from the isle of *Baly*. The *Malayans* call it *Benja Sufun*, the *Javanese* *Malati Rompah*, and the *Chinese* *Beleboa*. It much resembles the *Katsipiri*, but is not so strong of scent, tho' it has no scent at all, except in the morning, before the sun-beams have dry'd up the dew from its leaves. The leaves are pale green, in shape not unlike peach leaves, but something broader: The flower issues out of a pale green turned bud, of the bigness of a double daffadil, and is snow white.

Cotton of Bengale.

There is a certain sort of cotton which is transplanted from *Bengal* to *Batavia*, called by the *Chinese* *Algodan*, but by the *Malayans* and *Javanese* *Kapas* or *Kappas*; the tree bears flowers and fruit throughout the whole year. So soon as the flowers are gone, there buds out a knot, containing the cotton or wool: The leaves are carved in three places, being not unlike a certain herb the *Dutch* call *Duck-foot*. The flower is brown red, having within certain

pointed fillets. This cotton is fit for weaving.

The fruit called *Batsjan* by the *Javanese* *Malayans* and *Chinese*, is a kind of wild *Mangas* of so strong a scent, that you may smell it before all other herbs in the market. The tree which bears this fruit, is very delightful to the eye, and not unlike the *Mangas* tree, but the leaves are somewhat bigger than those of the almond-tree, of a dark green colour. The blossom is also like that of the *Mangas* tree, and yellow. The fruit is green, of the bigness and shape of a limon, within which grow certain almonds, which are much more taking to the eye than toothsom, tho' the smell is much more disagreeable than the taste, which is bitterish, and somewhat nauseous, and not comparable to the true *Mangas*, which is the reason they are not much planted near *Batavia*, but abundance of them are brought to market there from *Bantam*, in *October* and *November*.

About *Batavia* and all over the isle of *Marokko* grows a certain tree called *Marokko* or *Morukko* by the *Portuguese*, *Dap-Dap* or *Dadap* by the *Javanese*, *Darradap* by the *Malayans*, and *Ossensio* by the *Chinese*. Its leaves are like those of the poplar-tree, but as big again, smell very well, and grow on yellow stalks. These leaves being interspersed with many yellow veins, appear at a distance as if the tree were cover'd with flowers. The inhabitants lay these leaves over their pots, in which they have their boiled rice, the steam of which draws out from thence a very agreeable scent; but have no other use that I know of.

The plant call'd *Ratjiobank* by the *Malayans* and *Javanese*, *Bantoboa* by the *Chinese*, *Datura* by the *Turks* and *Persians*, *Duroa* by the *Indians*, and in a broken dialect *Dutter* by the *Dutch*, grows wild in the woods, almost all over the *Indies*; it seldom rises above the height or thickness of our red cabbages, the stalk being very like the same, but the leaves brown, pale, green and carved. It bears divers flowers, which open every morning, and close up again about noon; they are white within, and pale yellow without, some being near a palm in length, and of the figure of a bell, others carved at the extremities; after these comes the fruit, which has a pale green rind, cover'd with thorny prickles; they seldom exceed the bigness of our yellow palms, and contain yellowish seeds. Whether this plant has the virtue of intoxicating to a degree of madness for a certain time, as some would have it, I am not able to determine; but this I am certain of, that the *Topasses* and other negroes, who keep it in their gardens near

Water-pumpions

The *Dutch* by the

1662. *Batavia*, look upon it as a fable. It is properly a kind of nightshade or henbane.

The trees call'd *Kananga* by the *Malayans*, *Javanese* and *Chinese*, bear leaves of a parrot green colour, above which comes forth the blossom; they are planted near the *Betel*, which winds about them; and growing to a great height, their lofty tops are conspicuous above most of the other fruitful trees in the gardens; as far as I know, they have no other use. Besides that, these trees are easily to be discerned from the rest by their crooked hanging boughs, they commonly set a little wind-mill in the tops to frighten the birds out of the garden, especially the great bats here, which keep their rendezvous in these trees, and are seen hanging with their claws to the branches thereof with their heads downwards, and that in such numbers, that you see sometimes more bats than leaves on a tree.

Indian ash.

The *Indian* oak-tree produces no eatable fruit, yet does its wood make a sufficient amend for this defect, being the most lasting of all, and as good as our *European* oak. This tree grows up to a great height, as may be seen by the long pieces of timber in many of the churches, and other lofty buildings of *Batavia*. This tree is sufficiently known by its large branches and broad leaves, which sprout forth out of the boughs and branches, being intermix'd with green veins of a pale brown colour, and somewhat rough, something resembling the fig-leaves, but are not carv'd; at the extremities of the boughs sprout forth certain flowers not unlike the hops, which produce acorns, the seeds from whence this large tree takes its root; the inhabitants use the leaves in the pleurisy: They take a certain quantity of the liquor contain'd in the coco-nuts, in which they boil some of these leaves, to the consumption of half the liquor, and this decoction they give the patient to take inwardly, which appeases the pain. I have seen pieces of this oak-timber as straight as an arrow, no less than forty foot long, and of 2½ foot diameter to the very top in thickness; and nothing more common than to meet with boards of this wood of three and more foot broad. The *Malayans* call this tree *Kyati*, from whence they call this oak-wood, *Kiaten-wood*; which is exceeding hard, and has the same veins as our oak, being very lasting, and not subject to be worm-eaten, being proof, especially against the mice, which sometimes will eat whole pieces of the timber within, tho' the out side appear very sound.

Water-pumpkins.

The fruit call'd water-pumpkins by the *Dutch* from their shape, are call'd *Katolas* by the *Malayans* and *Javanese*, and with a

broken name *Katilai* by the *Portuguese*. It is neither a tree, shrub, herb nor plant, but sprouts forth in the nature of small branches, from a small seed, and spreads to that degree, that it runs over the tops of the houses with its leaves and flowers. The *Indians* frequently lead them over their cisterns in which they bathe, being sustain'd by bamboo-canes to keep off the heat of the sun-beams. They bring fruits the whole years round, but especially in *April* and *August*. The flowers are like those of our pumpkins, and fade without producing any fruit. The fruit is of two sorts, one grows to the bigness of our ordinary pumpkins, but the other which is the best, scarce exceeds in bulk our cucumbers or melons. They are used in the same manner for salad. There is another sort of the length of a man's arm, but no thicker than a good walking-cane, the rind being full of spots; that of which I took the draught was 13 inches long and 3½ diameter, weighing 3½ pounds. When the gardeners have a mind to make this grow longer than their ordinary size, they fasten a weight with wire-thread to the extremities of it, which stretches it downwards to a prodigious length. The leaves and branches are like those of the pumpkins; the fruit green inclining to yellow on the rind without, but white within; as are also the seed.

If we should enter upon giving you an account of all the flowers that grow in the isle of *Java*, it would require an entire volume; among the chiefest and best is that flower call'd *Champakka* of *Siampakka* by the *Malayans* and *Indians*, and *Vinboa* by the *Chinese*. The tree which produces these flowers, grows up to the height of our moderate pear-trees or peach-trees, with large wrinkled leaves, intermix'd with many veins. The branches or boughs grow all in a strait line from the tree, and afterward turn upwards; they are generally so weak that no body can climb up to the tree, so that the flowers which grow on the top, must be taken down with bamboo-canes or reeds. These flowers are in great request among the *Indians*, for their odoriferous scent, and used in garlands: The scent is betwixt a rose and a violet, and so strong, that it may be smell'd in the houses, as the flowers are carried by in the streets; they are of two colours, viz. of an orange colour and green, not unlike the blossom of a *Spanish* orange-tree, but resemble in figure the *English* saffron. This flower is one ingredient of that famous ointment made by the *Indian* women call'd *Borbory*; they also adorn their hair among the rest with this flower. This tree also bears fruit, which grows out of the sprigs like bunches of grapes,

Champakka.

1662. grapes, and are of the same colour and bigness, but fit for nothing.

The great  
creeping-  
beans.

The branches which produce the beans, call'd by the Dutch the *Large Creeping-Beans*, are call'd *Katsjang Parang* by the *Malayans* and *Javanese*, and run up in many small branches to such a height, that their curl'd sprigs on the top grow beyond the pinnacles of the highest buildings. At the bottom they are of the thickness of a man's arm, and change their leaves and fruits, without any alteration to themselves; they bear fine green and thick leaves, intermix'd with small veins; the blossoms are of a purple colour, and before they open pointed at the end: The husks which contain the beans, are green like ours, having a purple colour'd string all round the husk. They are of divers sorts, among which these following are most in request.

Fabas de  
Moro.

The *Moors-Bean* call'd *Fabas de Moro* by the inhabitants, are very large, and run up to a great height; they commonly plant them near the *Pynang* trees, which serve them for supporters. The husks are about a foot in length, and an inch in breadth; they are chiefly used by the *Chinese* and *Javanese*, but neglected by the *Dutch*, by reason of their unfavourable taste.

Gondola.

The bean call'd *Gondola* runs up likewise to good height, affording a very agreeable shade; the leaves boil'd or stew'd are very cooling; the ranks don't hold above one year, tho' the beans will keep green three or four years; I did plant some of the large creeping-beans at *Koulang* about a summer-house, four or five of which yielded me near six bushels of beans.

Kadjang.

*Kadjang* as the *Javanese* and *Malayans* call it, and the *Chinese* *Petan*, is a kind of pease known by all the inhabitants of *Batavia*, which grow in vast plenty in the fields about *Batavia*. When they are ripe, they are gather'd and dry'd in the air. These pease are of the bigness of our vetches, which grow among the winter-corn, and grow with green shells at first, but turn black afterwards. Betwixt each two leaves sprouts forth a bud, which produces a flower, and this the pea. These peas are of great advantage to the ships in their return home, and when boil'd with bacon and well butter'd, are very good for the stomach. If you plant them in a pot, with earth and keep them well water'd, they will come in twice 24 hours, and make a good salad aboard a ship.

Makandou.

The tree, the fruit whereof the *Javanese* call *Makandou*, has very broad, thick and fine leaves, the blossom is long and white, after which comes the fruit *Makandou*, in all respects like a pine-apple,

except that it is not pointed at the end, neither so hard, but soft. Before it is ripe, it is green, but afterwards yellow, and almost insipid. The *Malayans* roast it in the ashes, and take it inwardly against the bloody-flux, asthma and pleurisy. In the isle of *Java* grows a certain tree with leaves like those of the ash-tree, and a knotty stem or trunk. It bears a fruit like unto our hazle-nuts, the kernels whereof, after they are taken out of the shells, are of no ill taste, yet a little astringent. The leaves apply'd to wounds and ulcers, cleanse them and render them fit for healing; a spoonful of the juice of the leaves is avowed remedy against the worms. Out of the stem grows a twig, but to no great height, which brings forth yellow flowers, like those of the nightshade; after these come the fruits, which before they are ripe are green, but afterwards red, and of a circular figure; if you squeeze them betwixt your hands, they send forth such an ill scent, that no *Asa Fetida* or *Segapenum* is comparable to it; for which reason the *Indian* women apply to the nostrils of such persons as are afflicted with fits of the mother: The *Indians* look upon them as not fit to be eaten.

In the woods of *Java* grows a certain shrub, call'd *Daulonta*, to the height of six foot, spreading its branches at a good distance, like our water-willow in *Holland*; and that in such vast quantities, that the *Chinese* are forced to root them out with fire and steel: The leaves are not unlike those of the *Balsamina*, and cover'd likewise at the ends. It bears clusters of flowers like coronets, not unlike those of the elder-tree; after which come certain berries that are very better, both the leaves and flowers smell like the camomile-flowers, and contain the same virtues: its decoction is excellent good against the cough, and nothing provokes the monthly terms of the women beyond this remedy.

The fruit *Mangam* is look'd upon by the *Javanese* as the greatest antidote in the world, even beyond *Bezoar*, *Malaise* nuts, &c. The tree which bears this fruit grows upon the graves of their kings, and the fruit is of the bigness of a coco-nut. Whenever the king of *Bantam* intends to give a mark of his particular favour to any of his particular favour to any of his great men, or some foreign minister, he first puts his drinking-cup upon this fruit, and then drinks to the person he intends to honour.

In the isle of *Java*, on the banks of rivers, but especially about *Bantam* grows a certain plant, the leave, whereof resemble altogether the horn of *Alce*, from whence

1662.

1662. the *Javanese* bar *Mangam* Tanda ro thereof a not under or in hollow on all sides and full of happen to shine prod *Javanese* roots and make pou they are n fire, which hot, which seems alth purges by kills the v The flou Tratty by boe by the e. The *Fla guese*, is ve commonly The stalk thom above the flower that it has as big again near the p grees turns the stalk. the same fl opening of most fragr their beaut fant colour by. They which bur flowers: S like the fl brim of a flat and cle being roun comes forth the leaves a husks or b hand, of a yellow feed beans, whic the *Faba* *Æ* husk being cut asunder discovers ab As these be they are en when ripe, hazel-nut wi like it in tast what phlegm the market c be a kind of

1662. the *Javanese* have given it the name of *Simbar Mangiram*, and the *Malayans* that of *Tanda rouja*; it has no root, but instead thereof a veiny knot or lump, which lies not under ground, but either upon stones, or in hollow trees, sending forth its leaves on all sides. This plant is sempervirent and full of juice, and if some of the leaves happen to rot by the rains, the next sunshine produces others in their stead. The *Javanese* use these leaves like as we do the roots and leaves of the white-lillies, viz. to make poultices of to apply to tumors; but they are not proficuous in the *St. Anthony's* fire, which shews that this plant is very hot, which its bitterish and biting taste seems also intimate. Taken inwardly it purges by stool, and applied to the navel kills the worms.

The flower called *Tratty*, or *Tongjong Tratty* by the *Malayans* and *Javanese*, *Tienboa* by the *Chinese*, and *Fulo de Franke*, i. e. *The Flower of the Lake*, by the *Portuguese*, is very large and fair, and grows most commonly in pools and standing waters. The stalk grows to the height of a fathom above the surface of the water, and the flower resembling our tulips, except that it has broader leaves, and is at least as big again. Some are of a purple colour near the points of the leaves, which by degrees turns pale yellow or white towards the stalk. Some are quite white, but of the same shape as the former. At the first opening of the buds, these flowers emit a most fragrant scent, and discover to us their beauty, which by reason of its pleasant colour attracts the sight of all that pass by. They sprout forth out of a green bud, which bursts open like those of the peony-flowers: Some of the leaves grow upwards like the flowers, being of the breadth of a brim of a hat, and bright green; some lie flat and close to the surface of the water, being round, out of the midst of which comes forth a stalk with the flower. After the leaves are fallen off come forth round husks or buds of the bigness of a man's hand, of a green colour, containing a pale yellow seed, and many small and yellowish beans, which lying bare in part, resemble the *Faba Egyptiaca* of *Dioscorides*, viz. this husk being flat on one side, is as if it were cut asunder in the middle with a knife, and discovers about 30 beans placed in a circle. As these beans grow to their full bigness, they are enclosed in a peculiar husk, and when ripe, resemble the green husk of a hazel-nut without the shell, and are not unlike it in taste, being very sweet, but somewhat phlegmatick; they are sold daily in the market of *Batavia*: It seems to me to be a kind of water-lilly, having broad and

VOL. II.

red leaves, and being the same both in the stalk and root, tho' it differs from our *Dutch* water-lillies, which are white or yellow, but are of a purple colour in the *Indies*: It also differs from ours in the fruit and husk. The leaves of this plant are steemed cold in the third degree, like our *European* water-lillies, wherefore also the *Dutch* here, after the example of the *Malayans*, give the decoction thereof in burning fevers, frenzies, bloody-fluxes and other hot distempers. There is also another sort, with pale purpled flowers; and a third also worth seeing. There grows also in the rivers and pools abundance of what is commonly called ducks-meat, being a food the ducks are mighty fond of, whereof the *Chinese* keep here great numbers. In the standing pools and rivers grows also the *Polamo Geylon*, or fountain-herb, and water-plantine, which if chew'd causes great burning in the throat and upon the tongue.

Nothing is more frequent in the *Indies* than to see the trees bear fruit all the year round; but the fruit called *Langzap* by the *Malayans*, *Kakasan* by the *Javanese*, and in a broken dialect *Lanfen* by the *Portuguese* and *Dutch*, is gathered but once a year, viz. in *February*. The trees which bear these fruits, hanging in bunches like grapes, in vast quantities, spread in a large circumference, with lofty branches, and pale green leaves like the lawrel leave, or those of the chestnut-tree, but are not carved. The fruits have a soft and yellow rind like our peaches, containing a white and sharppish liquor. They resemble most our yellow plumbs, but are inclining to red and white within, the pulp being divided by certain partitions, is of a somewhat astringent taste like our red currants, and so luscious, that one can scarce be satisfied with them; they are in great request here, being accounted very good to allay the heat of burning fevers: Each has commonly two or three kernels, from which you must suck the pulp, the kernels and skin being both bitter. The fruit sprouts out of small yellowish buds or knots, after the blossom. They grow in vast plenty in the isle of *Ambony*, and especially at *Gilelo*, where I have seen prodigious quantities of them brought to market. The isle of *Java* produces another sort of this fruit, called *Boa Rampi* by the *Malayans*, and *Kapandung* by the *Javanese*, differing from the former only in the outside, being for the rest the same in taste and virtue; for which reason they might well be call'd the *Javanese* *Lanfen*: These are ripe in *October*, and are brought out of the country to *Batavia*.

These purple plumbs are so called by *Purple* the *Dutch* from their colour, but by the *plumbs*.  
Gggg *Javanese*

1662. *Javanese Gapak*, and by the *Malayans* *Boka Gobok*: They grow in great plenty on trees of a moderate size; they are of a purple colour without, but white within, with red stones. They have a sourish taste.

Jambul  
lang

The fruit *Jambulang* is the same with our black-cherries, which is the reason the *Dutch* call it by that name here, but the *Javanese* *Duat*, and the *Malayans* *Kiungo*; tho' they are of an oval figure, and not of so agreeable taste, approaching to our great sloe; they ripen in *Autumn*. The tree which bears these fruits is also much taller than the black-cherry trees, and spread their branches at a great distance. The leaves are dark green, taper towards the stalk, and broader at the ends, being intermix'd with many strings or veins. The flowers have red leaves with small filets within: The fruit is brought to market at *Batavia* by whole large baskets full in the months of *September* and *October*. It is look'd upon among the inhabitants as a very good remedy against the bloody-flux.

Fulo de  
Sapato, a  
single and  
double shoe-  
flower.

The single shoe-flower is call'd by the *Portuguese* *Fulo de Sapato*, i. e. *Shoe-flower*, because the flower chew'd affords a juice, which is excellently good for blacking and beautifying of shoes. There are two sorts of it, which may be distinguish'd as male and female, like our peony-flowers. Out of the flower, which is darken'd, and not unlike our common roses, sprouts forth on the top a yellow stalk, at the end of which bud out leaves like a coronet, covered with a yellow wool: The leaves are green, and carved at the extremities like our nettles. These produce large buds containing the flower. They are astringent of taste, and consequently cooling: The water distill'd thereof is good in burning-fevers, and applied outwardly to the forehead procures sleep. There is also another kind of these flowers, with single leaves, of an isabella colour, which grow upon small trees like our sweet-briars: They spread their branches at such a distance, that they are frequently used for arbours; they also make baskets of the twigs. The inhabitants wash their heads with the decoction of these leaves, and when steeped in vinegar, use it against the looseness; they also apply it to bruises. These bushes or small trees require an excessive heat for their growth, which is the reason they commonly plant them against the east-walls here, as we do in *Europe* against the south-walls, for the exercise of heat. There is likewise a shoe-flower with double leaves not differing from the former, except in its leaves, and the coronet in the middle, which are both of a bright red colour like a ruby.

The flower  
Dukol.

The flower called *Dukol* by the *Javanese*,

*Bale Adap* by the *Malayans*, and *Fulo di Poca*, i. e. *Flower of the Bush*, by the *Portuguese*, grows every where in the hedges, to the height of 12 or 13 foot; it produces at the top a white leaf growing straight upwards, near unto which the flowers, which are of an orange colour, grow in clusters. The other leaves are dark green, with white veins running through the middle.

The fruit called *Boenga Tanjong* by the *Crab Malayans*, *Kombang* by the *Javanese*, *Kan-will-plumb* by the *Chinese*, and *Crab-Plumb* by the *Dutch*, grows on very high trees with wrinkled leaves. The flowers, which are very small and of an isabella colour, open every morning, and send forth a most fragrant scent, but close up again against sun-set. The fruit is of the bigness and shape of a hazel-nut, green at first, but turns yellow afterwards, and of an orange colour at last: The pulp which is of the same colour, grows about a brown stone, but being of a four taste, this tree is admired and planted chiefly for its flowers sake.

The fruit called *Karembolas*, and likewise *Kamozia*, *Karabelli*, *Chamarab* and *Bulanbach* by the *Indians*, grows in many places of the *Indies* on a tree, with a slender stem, twig and leaves, which is produced from the seed, and growing to the height of an ordinary cherry-tree, bears a flower of a pale blue colour, after which comes the fruit, which is green at first, but turns yellow, resembling in shape our pom-pions. Some of these trees (which is very strange) produce a fruit of so delicious a taste, that nothing can be beyond it; whilst others of the same kind bear a fruit so astringent and sour as can scarce be imagined; when they are cut in the middle, they represent in the inside a star. The leaves of the tree are green, not unlike the rose-tree leaves, but not carved and full of small veins.

The tree which produces the fruit called *Boca Bidara* by the *Malayans* and *Javanese*, and *Massam* by the *Chinese* and *Portuguese*, and by the *Dutch* *Prick-Plumb* from their thorny prickles, grows up to the height of our cherry-trees, with ash coloured leaves, with a triple vein. Its twigs are covered all over with almost invisible thorns or prickles: It produces fruit all the year round, in such plenty, that the twigs bend to the very ground. The fruit is of the bigness of a hazel-nut, of a dark green colour without, but white within, containing a stone of an isabella colour: The flowers are yellow, having no more than five leaves, with as many small stalks betwixt them. This fruit being of an agreeable taste, tho' somewhat astringent, is eaten raw, and very cooling. The tree grows

1662. grows with but has their garden. The root and *Malayans* *vanese* turn grows like of the big fers much and taste with white sprouts for ple colour nourishing too great.

for which

1662. grows wild at some distance from *Batavia*, but has been of late years cultivated in their gardens.

The root called *Gadang* by the *Javanese* and *Malayans*, has got the name of a *Javanese* turnip among the *Dutch*, because it grows like our potatoes in the earth, and is of the bigness of our turnips, tho' it differs much from them both in its substance and taste. It bears dark green leaves, with white streaks or veins, betwixt which sprouts forth a twig with flowers of a purple colour. They are accounted very nourishing and wholesome, if not used in too great a quantity.

Here grow divers sorts of mushrooms or toadstools, called *Kulet* by the *Malayans*, and *Jawor* by the *Javanese*. Some are of a red, others of a pale green colour; they grow without any need out of the moisture of the earth. Some of them are used here like as in *Europe*, and are eaten with wine and sugar.

The plant, the root whereof is called *Borbori* by the *Javanese*, *Saffran di Terra*, i. e. *Saffron under Ground* by the *Portuguese*, *Kurkum* by the *Arabians*, and by the *Latins* *Radin Curcume* or *Curcume-root*, has its leaves not unlike those of the white-hellebore, viz. thick, long, and broad, smooth and interspersed with many veins. The stalk is thick, and grows up to a considerable height: The flower is of a purple colour, and the root resembles the gentian-root. After the flower comes the fruit, like a chestnut, containing a round seed not unlike our peas. The root contains a saffron yellow tincture, whence it has got the name of *Indian saffron*. The *Malayans* boil and eat them both with fish and flesh, and look upon them as the most sovereign remedy in the world, against all the obstructions of the liver, lungs and spleen; again the gravel and stone, the stoppage of the monthly flowers, and other diseases of the womb, but most especially against the yellow jaundice: This root is one of the main ingredients in that ointment, called *Borbori* by the *Javanese*, wherewith they anoint the whole body.

The *Indian* tree houseleek, grows in the isle of *Java*, on the *Mango* trees, and a certain *Indian* oak called *Kyati* by the *Malayans*. The shrub has long leaves, in taste not unlike our sorrel, but are more juicy, and much thicker, like our common houseleek. It has long round roots, out of which sprout forth certain threads, which fasten to the trees and stones, and grow thus till they come to their full perfection. It has a small white flower of an aromattick, smell approaching to the smell of citrons, for which reason the *Malayans* look upon

it as a great strengthener of the sinews and brains. The leaves and flowers made up into a conserve, are good against the cramp, and very cordial, like our borage-flowers. After the flower comes the fruit, of the length of a finger, and an insipid taste, containing seeds as big as our barley. This plant has a certain quality of resisting all putrefactions and poisons; for which reason the *Malayan* physicians prescribe it as an infallible remedy against poison'd wounds occasion'd by the poison'd darts and other weapons of the *Javanese*, which they poison with the blood of a certain serpent called *Gekko* by the *Dutch*.

The fields and woods of *Java* produce *Indian* a certain herb called *Veronica* by the *Europeans*, with a white flower; the *Malayans* and *Javanese* call it *Oribat Maita*, i. e. a Remedy for the eyes, because its juice allays the inflammations and defluxions in the eye. The same juice or the decoction of the herb, they also use against old coughs and consumptions: By reason of its diuretick quality, they also prescribe it for the gravel and stone, and the *Gonorvirentia*. The leaves bruised are also apply'd outwardly to ulcers, as having a singular drying quality.

The plant call'd *Kolkas* by the *Arabians* and *Moors*, has a very thick root, large broad leaves, and bears a red fruit growing in clusters, not unlike the *Arum*. It contains a slimy poisonous substance, for which reason the *Javanese* cut them in slices, and steep them three or four days in river water; after which they squeeze the remaining juice out by a press, and having laid the roots to dry, make a kind of meal or flour of it, of which they make cakes instead of rice. The *Malayans* and *Chinese* prepare them in the same manner. The bread made of these roots, which the *Javanese* of *Materan* were forced to eat 1629, at the siege of *Batavia*, for want of rice (their magazine of *Tengel* being destroy'd by the *Dutch*) occasioned a pestiferous bloody-flux in their camp; the *Chinese* and *Malayans* also boil these roots, but throw away the first decoction, and putting on fresh water, boil them again, and afterwards eat them with vinegar, oil of coco and pepper, as we do the red beat-root.

The *Indian* *Betony* tree has speckled leaves like our *Pulmonaria*. The flowers sprout forth like ears, sometimes a thousand in one ear, of a pale blue colour, like our rosemary-flowers. The decoction of this plant they account a good remedy against spitting of blood, the consumption and coughs, call'd *Sai-i-Haty*, i. e. the disease of the heart, by the *Malayans*, who comprehend the liver, lungs, and even the spleen, under,

1662. der the general name of the heart. The Indian women use the juice thereof as an antidote against the sting of serpents, scorpions, and such like venomous creatures.

Indian  
grass.

Java produces all sorts of grass, and among the rest, a peculiar kind, which has four ears crosswise on the top of the stalk, the leaves being for the rest like those of common grass. There also grows here another sort of grass, of the same kind with six or eight ears, which contain small seeds. The Malayan physicians prescribe the root and the grass itself for the bloody-flux, stoppage of urine, exulcerations and pains of the kidneys, and to promote the monthly times in women. Java produces likewise another kind of grass differing from the rest in the roots, which are three or four small knots, which when chew'd have a flavour like cloves, but are not so hot in the mouth.

The Indian  
primeprint.

The Indian primeprint has got its name from its resemblance to ours, in its leaves as well as flowers; tho' the leaves thereof have a more odoriferous scent than our primeprint, and the flowers, tho' the same in shape, yet differ in their colour from ours, those of the Indian primeprint being inclinable to a blue, whereas ours are as white as snow, but the berries of both are black. Like unto this is a certain shrub called *Alkanna* and *Henne* by the *Arabians*, and *Cibnnet* by the *Persians*, except that its leaves are somewhat less. The leaves of *Alkanna* are in great request throughout the *Indies*, to give their teeth, lips, but especially their nails, a red tincture, a thing much esteemed among the *Moors*. They prepare the tincture, by steeping the leaves after they have been rubb'd small upon a marble stone, in fair water mixt with a small quantity of lime; with this the *Turks* and *Persians* also die their horses tails. The leaves chew'd leave a piquant taste upon the tongue, yet without any sharpness. Both these shrubs are in high esteem among the Indian women, who use the decoction of the leaves in all diseases of the womb, and have an opinion that it keeps them young; and to confess the truth, they have a peculiar virtue (if boil'd in water) to cure the Indian gout or barrenness, called *Beribery*; it grows all over the *Indies*, and the *Malayans* call it *Sagandi*.

The Indian  
sage-tree.

The Indian sage-tree grows twelve foot high, whole woods of them being to be seen about *Batavia*; and if planted in the gardens, spreads its roots to that degree, as not to be easily rooted out again. The flowers are white, the leaves very long and of an agreeable scent. They cultivate the

trees in the gardens by pruning and cutting the roots and shoots at certain times, and by this means make it as good and as wholesome as our garden sage. The *Malayan* women use it against the distempers of the womb, mixt with the *Sagandi* and the *Daulontas*, wherewith they bathe themselves. The flowers are prescribed by the physicians to correct the cold humours of the brain and sinews, and by reason of their diuretick quality are very proper in the dropsy. Our garden sage as well as rosemary, are a kind of rarity here, the excessive heat of this climate being as unnatural to them, as the cold is with us in winter.

The Indian *Verbena* grows also in Java, being altogether like ours, except that the ears are somewhat longer and harder. They apply the flowers bruised to exulcerated legs, by reason of their drying quality, requisite in the healing of wounds especially at *Batavia*, where the moist and hot climate renders the cure thereof very difficult. A spoonful of the juice of the leaves taken inwardly, cures the cholick and bloody-flux; and the Indian women attribute to this plant a secret virtue against witchcraft.

In the woods of Java grows a certain kind of *Esula*, which shoots up to a great height, with a three corner'd stalk, sometimes of the thickness of a man's leg; it has abundance of thorny knobs, which being however not very hard, don't prick: The leaves grow at some distance from one another, being not unlike those of our houlseek; out of the stalk, (after an incision made) issues a milky yellow juice, of a sharp taste. This juice reduced to the consistency of an extract is administred in the dropsy, lameness and other distempers proceeding from cold; it purges both by stool and urine. This plant differs not either in shape or the manner of growing from that, which affords that yellow juice, call'd corruptly by the apothecaries *Gutta Genou*, and by the *Indians* *Lonan Cambodia*, because it is of the product of the kingdom of *Kambodia*.

In Java also grows a certain kind of *Mittum Solis*, resembling ours in its flowers, leaves and the stalk; but the fruit is much larger, and as hard as a stone, containing a mealy pulp. The *Portuguese* have given it the name of *Yerva da Rojarios*, the rosary herb, because the *Malayan* women use to make their rosaries of the fruit, and wear it about their neck instead of necklaces. Both the herb and fruit is proficuous in the distempers of the kidneys and bladder.

Batavia,  
by reason  
VOL. I

1662. *ani*, and *Lafise* by the *Chinese*, is by the *Dutch* called the *Indian pear*, by reason of its bigness and resemblance to our pears. When ripe they are of a pale yellow with black spots, hollow within, with blue seeds, the pulp adhering close to the peel. They are scarce ever cultivated in the gardens of *Batavia*, by reason of their crabbed taste, tho' very agreeable to the eye; they are brought in great quantities into the market there, especially in *February*. The tree grows up to a great height, having a brittle and coarse wood and leaves.

*Rambutan* or *Rampellan* as the *Malayans* call it, is one of those fruits, which are produced without flowers, for this comes forth only out of a green bud. They grow in clusters on very small twigs of a tree, of the height of our cherry-trees, are of a purple colour, and resemble at a distance our chestnuts, whilst they are hanging on the trees. Within is a slender quantity of a pulp, of an acid agreeable taste, and in this a stone. They come to maturity in *February*. There is another kind of *Rambutan* growing on shorter twigs than the former, and being covered with a hairy substance; but tho' these two fruits are very different in outward appearance, their taste is much the same.

The fruit called *Sattara* by the *Malayans*, *Gandaria* by the *Javanese*, and *Romani* by the *Portuguese*, resemble our yellow plumbs, but are somewhat bigger. The inside is not unlike the *Mangas*, and in taste like the *Batfian*, yet not altogether so sour. They are green at first, but turn yellow mixt with an orange colour; the pulp is likewise yellow. The inhabitants pickle and use them like as we do olives; they are of no disagreeable taste, but something more hairy than the *Mangas*.

The *Javanese* flower called *Fiele de Japan* (in the same sense) by the *Portuguese*, *Benga Japan* by the *Malayans*, and *Quiboa* by the *Chinese*, delights in shady places; the stalk is not above a foot high, some of which produce white flowers, others of an isabella and purple colour, sprouting forth with small knobs between the leaves; and no sooner do the leaves of the lowermost flowers fall off, but others come forth on the top in their stead. The stalk, after the leaves have been cast, produces a bud, containing a black seed, as small as tobacco seed, tho' this plant will grow without it, if you put only a twig of it in the ground. These flowers have no other use but to divert the eye.

The tree called *Patty* by the *Malayans* and *Javanese*, grows in many gardens about *Batavia*, being cherish'd by the inhabitants, by reason of its spacious branches and fine

leaves, which afford an agreeable shade; it rises up to the height of an apple-tree, with thin branches, on which you see the fruit hanging on the stalks, three and three together, of a crabbed taste, and therefore not regarded; they resemble the pine-apple on the one side, and have a seed within. The leaves are of a lively green colour, and grow very close together.

The flowers called *marygolds* by our people, have got their name rather from their colour, than any other resemblance to ours. The leaves are dark green, like those of the apple-tree, but somewhat less: On the tops of the twigs sprout forth certain orange colour'd buds, which opening produce the orange colour'd flowers with four leaves, they have no other use than to please the eye-sight.

The huntman's tree is a kind of wild palm-tree, the stem whereof is covered with a grey rind or bark, twisted about as it were with circles. The leaves which are bright green, grow on long yellowish stalks, the lowermost of which turn yellow by degrees, and hang downwards; being for the rest very agreeable to the eye. The fruit is not near so big as the least coco-nuts, and has no other use, except that the inhabitants draw from it a certain syrup and sugar, which they sell to the neighbouring countries. The wood of the stem is very durable, provided it be kept from the air, and so hard, that they can neither saw nor cut it, but are forced to split it by pieces of wood in it; some of the *Indians* make their bows of the twigs of this tree; and the *Chinese* at *Batavia* make of the leaves and tender sprouts, fans to cool themselves with. The *Malabars* make use of the leaves instead of paper, which they know how to order with a great deal of dexterity; for the leaves being about three inches broad, and above a yard long, they make holes at one end of them, and so tie as many of them together with a string, as they have occasion for at a time. They write with an iron pencil, wherewith they know how to imprint and cut their characters on the uppermost surface of these leaves, as that they remain indelible. This they perform for the most part without keeping their eyes so close and earnestly upon them, as we do. These leaves are also very durable and will not easily putrefy, even in water; I have several letters writ to me upon these *Olen* or leaves by persons of great quality among the *Malabars*. This tree also yields a juice like the coco-tree, which if boil'd, tastes very sweet, and is apt to inebriate, but if not boil'd, turns sour immediately. But the chief use they make

1662. of it is, to boil it into sugar. This hunt-  
man's tree is none of the lowest rank a-  
mong the many kinds of palm-trees of the  
*Indies*, being much esteem'd and cultivated  
for its usefulness, especially in the isle of  
*Ceylon* and in *Javapatnam*, where you see  
whole woods of this tree.

The tree  
and fruit  
Biling-  
bing, or  
Blingbing.

About *Batavia* grows a tree of a most  
delightful aspect, with most pleasant leaves  
hanging downwards. The stem, which is  
very thick, and branches send forth small  
sprouts full of green buds or knobs, which  
produce red flowers, not unlike a small  
lilly; after which comes the fruit, grow-  
ing in clusters, resembling both in bigness  
and shape our small cucumbers, about the  
thickness of an inch, and a fingers length.  
They have a green rind, and within it a  
seed, not unlike that of the cucumbers,  
but somewhat more round. The *Malay-  
ans* and *Javanese* call this fruit *Bilingbing*  
and *Blingbing*. This tree is among the trees  
what the sheep are among the beasts, for  
they not only rob it of its flowers and fruit,  
but also of its leaves and rind, sometimes  
to the very root, as having their peculiar  
use in physick; so that this tree would  
make but a very slender appearance for the  
most part, were it not that provident na-  
ture did almost cover its stem and bran-  
ches with odoriferous flowers and well-  
tasted fruits. The fruit is very juicy and  
cooling, but somewhat astringent, for which  
reason it is seldom used alone, but in sauces,  
to give a good relish: The fruit is also  
preserved with sugar. Our physicians there  
prepare a syrup out of the juice, and prescribe  
it in the excessive heat of the liver and  
blood; and this syrup is also mixed with  
the decoction of the rice, before it is peel'd,  
called *Pady*, and given in fevers. This  
juice also quenches the thirst, and has one  
peculiar quality, that notwithstanding its  
astringency, it takes away that sour taste  
of divers other fruits which sets the teeth  
on edge.

The Indian  
dog's-  
tongue.

The herb call'd hound's or dog's-tongue,  
from its resemblance to ours, which bears  
the same name, is by the *Javanese* called  
*Suroe*, by the *Malayans* *Sudu-Sudu*, and by  
the *Chinese* *Kautsu*. The stalk is thick be-  
low, but grows thin towards the top. As  
you pull off the leaves, you see a milky  
juice drop out of it; of which two or three  
drops dropt into the ear, cures the ear-  
ach; as its use is only in physick, it ge-  
nerally grows wild.

Bitter-  
green.

The plant called bitter-green by our  
people, has got its name from its bitter  
taste: It grows in the gardens of *Batavia*,  
and creeps up to the next tree or stalk,  
almost like the branches of the cucumbers,  
but that it leaves are deeper carved, and

more pointed. The fruit is also not un-  
like a cucumber, yellow with green streaks  
and a thick rind, yellow within, with a  
red kernel. When it comes to its full  
perfection, it is marbled with an orange  
colour. The *Dutch* make no account of  
this fruit, by reason of its bitter taste; but  
the inhabitants use it in their sawce call'd  
*Karry*, and put the root and leaves in their  
ordinary drink, which preserves it for two  
or three days, whereas otherwise it would  
turn immediately. They cure the bitter-  
ness with sugar.

Among all the garden fruits, there is  
scarce any that exceed the *Durions*; 'tis  
true the scent of it is not unlike that of  
rotten figs, and consequently not very in-  
viting to search after the kernel, which  
makes amends for the smell, being of a  
luscious taste. The tree which produces  
this fruit, grows crooked, with abundance  
of branches, and very harsh leaves pointed  
at the ends, of a palms length, sometimes  
grey on the outside, but bright green on  
the other side. They are not inferior in  
height to the tallest trees of *Europe*. The  
fruit *Durions* grows in clusters on the  
thickest stends of the twigs, and sprouts forth  
out of a green bud, which growing big-  
ger and bigger by degrees, opens at last  
into an isabella colour'd flower, surround-  
ed on the out-side with hard leaves, like a  
rind: This flower produces a thorny fruit  
of the bigness of a melon, covered with a  
thorny rind, not unlike the fruit *Jaka*; it  
is green at first, but turns yellow. It has  
four partitions within, in each of which  
you see a stone like a peach-stone, of the  
bigness of a chestnut, containing a delicious  
sweet and white kernel. Before they take  
out the kernels they stamp the fruit un-  
der foot, to avoid being wounded by the  
thorny prickles. The *Durions* are always  
eaten raw, being reckon'd one of the  
wholesomest fruits in the *Indies*, if used  
moderately, but if in excess, inflame the  
blood, and raise pimples in the face. They  
seem to have an antipathy against the *Beibel*,  
because they will not grow near it, but die.  
They come to maturity in three months  
time, and chiefly in *October* and *November*,  
tho' I have seen them also in the market  
of *Batavia* in *August*, for they are to be  
had all the year round, but not in such  
plenty. They grow much about *Bantam*,  
whence they are brought to *Batavia*. The  
first that I saw was in the grounds of *Christi-  
an Chandelour*, near the great river of *Ba-  
tavia*; and since that I have met with them  
in divers other places thereabouts; so that  
this fruit thrives as well here as at *Bantam*,  
but no where better than near *Malacca*, where  
the *Durions* are of an excessive bigness.

 called

1662.

the pepper, called *Lada* or *Laden* by the *Javans*, and *Morifia* by the *Javanese*, grows on tender branches, with abundance of knots, and creeps up along stalks or trees like our hops. Sometimes they will climb to, and the pinnacle of the highest trees, and afterwards hang downwards. On the stalks or twigs of these branches the pepper grows in such thick clusters, that they are scarce to be discern'd from the leaves. These sprout forth out of the buds of the branches, being green and interperfed with veins, not unlike those of the cinnamon-tree, pecked at the extremity, sometimes of the breath of a hand, and long in proportion, of a bitterish taste, and hot upon the tongue: After the leaves come forth certain twigs or stalks not unlike those of the hazel-nut trees, on which hang the berries, like our red-currants, but in larger clusters; these berries turn black as they ripen. The pepper is one of the chiefest commodities in the spice-trade; the best grows along the coast of *Malabar*, near *Kaulang*, where I used to buy great quantities for the company's use. The pepper must be planted in a rich soil, and bears fruit within the year. In *Malabar* it ripens chiefly in *January*, but in other places sooner or later, according to the difference of the climate. In the isle of *Java* it ripens in *October*, and is gathered in *November* and *December*, and is then green, but turns black as it is a drying in the sun; after which it is made up into balls of 80 or 90 pounds. The best pepper is white, close and biting within: There is also a sort of long pepper. The *Indians* also make a pickle of green pepper. Of the *Sagon* tree, represented in the next print, we have treated before.

Will  
not.

The *Portuguese* have given the name of a wild onion, or *Sabollos de Matte*, to a certain flower, because its root resembles that of an onion, tho' for the rest it has not least congruity with it. The *Javanese* and *Malayans* call it *Hakung*, and the *Chinese* *Taukio*. This flower grows in a bunch on the top of a thin stalk, but near three foot high. They come forth out of red buds, are of a high red colour, with purple colour'd streaks of a palm in length; are very delightful to the eye, and of no disagreeable smell, especially in the morning before the dew is dry'd up by the sun-beams, for which reason they are much cherish'd in the gardens of *Batavia*. The leaves of this plant are above three foot long, and spread all round about, being pointed towards the extremities.

Potatoes.

The Roots of potatoes, called *Patattes* by the *Portuguese*, after the *Brazilians*, are called *Ubi Tora* by the *Malayans*, *Ubi* by the

*Javanese*, and *Hantsoa* by the *Chinese*. These roots grow in the ground on branches, with leaves not unlike the cucumber leaf; some of these branches bearing white, others blue flowers, shaped like bells. The *Chinese* cultivate these roots in the fields near *Batavia*, which must be well dung'd beforehand: They cut the ranks near the extremity, which they put into the ground, and let them grow for some time. Then they cover these ranks with rich earth, at a foot distance perhaps, into which the ranks send forth their roots, which come to maturity in a short time, and sometimes grow to the thickness of a man's arm, and a foot long. Some are red on the outside, and these are in greatest esteem at *Batavia*, but don't approach in goodness to those of *Brazil*, especially near *Rio St. Francisco*, where these roots are red both within and without. This root is frequently boil'd by the *Dutch* both with fish and flesh, excelling in taste and sweetness much our parsnip-roots or artichokes; they are also eaten raw with salt, oil and vinegar, like a salad, but are not so easy a digestion then: The best way is to roast them in the ashes, which makes them taste like chestnuts, and are good to stop the looseness, a symptom very frequent to those that inhabit near the line; for which reason this root is in great request here, and cultivated with a great deal of care, which makes them very cheap here; for you may buy as much for a half-penny as will suffice for a whole meal. In the isle of *St. Thomas* they use them instead of bread. They also make a kind of drink of them. They boil a considerable quantity of these roots in a kettle well cover'd, till they are soft or tender; then they stamp them well, and put them in a vessel with water, where they begin to ferment in twice 24 hours, when the vessel must be stopp'd up; which done, it turns clear, and as strong as good beer.

Besides the potatoes, there grows another root about *Batavia* called *Injames* by the *Portuguese*, after the *Brazilians*, by the *Javanese* and *Malayans* *Byra*, and *Siatfani* by the *Chinese*. It has a very fine green leaf, and interperfed with veins: The root has commonly five or six inches diameter, and is one foot and a half long, having a brown rind, but is white within. The flower is of a greenish colour. These roots are sold in the market of *Batavia* by the piece, weighing each 15 *Katty*, or thereabouts, a *Katty* being a pound and a quarter, according to our weight, so that 30 persons may dine upon one root. Its taste is however not near so good as the potatoes, and being of a hard digestion and very dry, they are not much look'd after by the

1662.

1662. the *Dutch*, but the natives are very fond of them.

Blue  
plumbs.

The tree which bears a kind of blue plumbs, spreads its branches very loftily, not unlike the mulberry-tree, except that its leaves are of a different shape. You see this tree frequently at one and the same time laden with flowers and fruit, both ripe and unripe: The wood is very tough, so that you may venture to climb up by the smallest branches. The flowers are of an agreeable scent, especially in the morning before the dew is gone. This fruit is not regarded at *Batavia*, because the markets are over-stock'd with them by the country people, who bring them in vast quantities thither out of the mountains; tho' for the rest it is of an agreeable taste, somewhat like the dates. They are rarely to be met with here in the gardens. This plumb comes forth out of certain buds, consisting of five white leaves each, and grows on the twigs like our oval plumbs. It is green at first, but turns to a dark red, but the pulp is white, within which are three stones. The *Malayans* and *Javaneſe* call these plumbs *Boa Soa*, or *San*, the *Chinese* *Theely*, and the *Portuguese* *Fruite de Manilha*, i. e. *Fruit of Manilha*. At *Batavia* I never saw but one tree, bearing at the same time flowers and ripe plumbs.

Oranges.

*Java* produces divers sorts of oranges, among which three are prefer'd before the rest, viz. the common ones, and those of *Japan* and *China*. The trees are much of the same height, but different in their leaves; those of *Japan* have broader leaves than the ordinary ones, and these again broader than those of *China*. They all are of a different taste, yet very agreeable. The *Javaneſe* oranges are the biggest and most juicy, but somewhat inclining to a sour taste; among the ordinary ones, some are exceeding sweet, others quite crab-like. The *China* oranges have a pleasant taste, betwixt sweet and sour, being prefer'd here before the rest, having a very thin rind: They are preserved with sugar, like the *Portuguese* figs, and thus transported all over the *Indies*.

Wild Jam-  
boes.

Tho' this fruit called the wild *Jamboe* by our people, and *Jamboe* by the *Malayans* and *Javaneſe*, has not the least resemblance to the *Jamboe* we have given a description of before, in outward appearance, because that grows upon high trees, with a most delightful blossom; whereas this grows upon a low tree not unlike our mulberries, without any blossom, but is produced out of certain green buds, not unlike the figs; yet are they the same in taste, and divers other qualities. Some of them are extremely well tasted, and quench the thirst. Some

are dark red, others white, mix'd with red, and that on the same tree, where they grow in clusters in such prodigious quantities, that they cover the very leaves and twigs, as if they had been spread over with a scarlet cloth. They are of the bigness of a sugar-pear. In *Ambeyna* they grow in such plenty, that you may see the ground under the trees covered with them, every one being free to gather them; one reason whereof is, that they being used there as we do our acorns, for the fattening of hogs, which the *Moors* and *Mahometans* abominate, they are not much regarded.

The weed call'd *Tobacco* by the *Malayans* *Tobacco*, and *Javaneſe*, after the *Portuguese*, grows in all parts of the *Indies*; the *Chinese* call it *Hun*. Tobacco being frequently used by the inhabitants, is consequently in great request, and carefully look'd after; that of *Ternate* being esteem'd the best, is most generally made use of at *Batavia*. They have a way of tying several leaves, weighing about two pounds together, with small twisted canes, each parcel of the best being commonly sold for six-pence; but you may buy also very good tobacco at *Batavia*, for two pence. In *Ambeyna* each family commonly plants as much tobacco in their garden as they have occasion for, not troubling themselves with any other plantations. About *Batavia* the plantations of tobacco are chiefly managed by the *Chinese* and *Javaneſe*, and this weed grows here and thrives extremely well, provided it be planted in a rich soil, when it will grow up to the height of eight foot, with leaves of 18 inches long and eight broad. The *Indians* don't take tobacco through pipes, but have a way of rowling one or more leaves (according as they are big) together, and lighting the same at one end, suck in the smoke as we do with our pipes. The women commonly take of the worst sort, and rowl up their leaves in a piece of dry'd *Pyſang*.

Among all the flowers of the *Indies*, that call'd *Fula Mogori* or *Mugri*, i. e. the *Flower Mogori*, by the *Portuguese*, *Kombans Malali* by the *Javaneſe*, and *Badiboa* by the *Chinese*, is more esteem'd by the inhabitants, which they plant with singular care upon long and well dunged beds, with little walks betwixt them: The stalk on which this flower grows, seldom exceeds two foot in height, and grows like briars: The leaves are smooth like the quince-pear tree leaves, the flowers exceeding white, consisting of four leaves, which seldom open, and imitate in their odoriferous scent our white-lillies, but are no bigger than the blossom of an apple-tree. The *Javaneſe* of both sexes wear these flowers upon strings on their

1662. their festival days. I remember that at a certain tournament on horseback at *Japara*, I saw the *Javaneſe* thus adorn'd with theſe flowers, ſome of which had theſe ſtrings tied ſeveral times round above their ears, with the two ends hanging down before upon their breſts. They alſo diſtil a water out of theſe flowers, which they eſteem a great cordial in fainting-fiſts eſpecially, much beyond our roſe-water, it being reckoned equal with orange-flower water. They preſcribe it in burning-fevers, and head-achs, proceeding from a hot cauſe. The *Javaneſe* alſo waſh their faces with this water, to make them ſmooth. The leaves bruifed are a good remedy againſt the rheum or deluxions of the eyes: Theſe flowers grow in vaſt plenty all the year round, and are fold in the ſtreets by the ſlaves.

The tree called the melancholy-tree, has got its denomination from its opening its flowers not till after ſun-ſet, which continues no longer than the night time. Hence the *Portugueſe* have given it the name of *Arvore da Noite*, i. e. the Night-tree; at *Goa* they call it *Paraavaiako*, at *Malacca Singadi*, in the kingdom of *Dekan Pul*, the *Arabians* *Guart*, the *Persians* and *Turks* *Gul*, and the *Malabars* *Mogli*, i. e. trees, for its excellency's ſake; for which reaſon the ſame *Malabars* call the water diſtill'd from the flowers *Mogli-water*: There is another kind of this tree, which begins to bloſſom in the morning, and is bereaved of its leaves by night: Theſe trees grow for the moſt part about *Cochin* and *Malacca*.

The plant called *Boenga Mera* by the *Malayans*, *Kombang Merak* by the *Javaneſe*, and *Konkuſiou* by the *Chinese*, has very fine green leaves, growing on ſmall ſtalks, cloſe together. The flowers, which are not unlike our gilliflowers, are high red, but yellowiſh at the extremities; they no ſooner open, but drop off, leaving ſmall huſks behind them, which contain a kind of peaſe, but are not eatable.

Among ſeveral other ſorts of beans which grow and are eaten at *Batavia*, thoſe called *Katſian Goed* by the *Malayans*, and *Katſian* only by the *Javaneſe*, but by the *Chinese* *Lak Goetuin*, exceed the reſt. They grow in the fields all about *Batavia*, eſpecially in thoſe belonging to the *Chinese*: The ſtalks and huſks of theſe beans are pale green, and ſomewhat woolly, but the leaves are ſmooth, and reſemble thoſe of our *French* beans, being interſperſed with many veins. The bloſſoms are white, and ſprout forth out of green knobs or buds. Theſe beans grow almoſt all the year round, and conſequently are no ſmall advantage

Vol. II.

to the inhabitants of *Batavia*, affording 1662. very good food to the labouring men; as likewiſe for our ſhips, becauſe they will keep a great while at ſea.

The *Turkey* wheat, called *Maiz* by a general name among the *Indians*, and *Jangon* by the *Malayans*, *Javaneſe* and *Chinese*, grows in many places in the *Indies*, and in good plenty about *Batavia*; for they take the corn ſreſh out of the ears, and put it into the ground, which produces freſh corn in three months time. It is boiled and roaſted with the chaff, and look'd upon as a great dainty; ſome of this corn is white, ſome red. The *Indies* produce alſo rice, ginger, cotton, and ſugar in many places, figs, quince-pears, apples, lemons, beſides many other fruits.

Thus much concerning the trees, fruits and plants of the *Indies*, and of *Java* and *Batavia* in particular; we will now proceed to give ſome account of the living creatures of the *Indies*, and begin with the fiſhes.

The ſea-porpoife or hog-fiſh is about 15 or 16 inches long, and about ſeven in breadth. It has a very thick ſkin, and ſuch cloſe and hard ſcales, that ſcarce any inſtrument will pierce them, but when boil'd the ſcales come off with eaſe, and the ſkin is very ſoft. Their fleſh is very white reſembling the breſt of a boiled capon; the mouth is but ſmall in proportion of the reſt of the body, but is armed with two rows of white gliftering teeth, one above, the other below. Upon the back, which is brown, you ſee a ſharp fin of half a finger's length, which the fiſh can erect at pleaſure, and ſuch another is below near the navel; the other fins are not ſo ſtrong, of a pale blue colour. The belly is white, and gliftering like ſilver, but the ſides are mix'd with yellow, which by degrees, towards the back, turns into an aſh colour. It has large brown ſhining eyes, and when boil'd is of a very pleaſant taſte.

The *Amboyneſe* fiſh has got its name becauſe it is found chiefly in the rivers of *Amboyne*, but being very ſcarce, and of a very good taſte, is look'd upon as a dainty here. It is about a ſpan in length, ſomething like our perch both in ſhape and taſte. Its colour is inclining to brown, with blue ſtreaks under the head, the fins below the mouth are likewiſe blue, but thoſe on the ſides are green and ſpeckled. It is both a very wholeſome and toothſome fiſh, eſpecially with good ſauce.

The ſtone-bream is a moſt excellent fiſh, ſome of which are four foot long; they reſemble our breams, (which has begot them their name) but are much bigger.

1662.

The bald-  
pate.

ger. Their eyes are very large, with a large red mouth, as are also the fins and extremity of the tail. They are caught at sea with a hook, being not easily to be taken with the net, and are eaten either broil'd or boil'd. There is another kind, but not so good as the former, the flesh of which shrinks when they are cut, from whence some call them shrinkers.

The bald-  
pate.

The fish called baldpate has got its name from its head and neck, being without scales, whereas the rest of the body is covered with them. It is of a greyish colour, its mouth, which is very wide, being spotted with red. The eyes are large, yellow and starting out of the head: It is one of the best sorts of fish that can be eaten, of a very agreeable taste: It is taken both in the sea and rivers.

The sea-  
bleak.

Among the great variety of fish found in the *Indies*, most of which turn immediately after they are catch'd; there are however a few that will take salt like our herrings; such is the sea-bleak, a fish much of the bigness of a herring, but not so long and something broader: It is green on the back, but white on the belly, with a forked tail: The head is of a very odd shape, with a wide mouth and large eyes. They are catch'd in prodigious quantities, because they swim in vast shoals like the herrings, especially on the coast of *Malabar*, where they dung their rice-fields with them. They are of a tolerable good taste, but not so good as our herrings.

The third  
fish.

This fish is called third fish, because it delights in salty places, tho' otherwise it is of no ill taste, but is not regarded. It is very flat, about a span in length, and near of the same breadth. The belly is blue, and the body is full of brown spots.

The yellow-  
tail.

The fish called yellow-tail is in shape and bigness like a bream, with very sharp prominent teeth in the fore part of the mouth. The back all along to the tail is inclining to a yellow, and the tail very yellow, whence it has got its name. The belly is blue, inclining to a brown towards the forepart. It has red fins, and is catch'd with hooks at sea near the rocks: It is both a wholesome and toothsome fish.

The Kaelt  
fish.

The *Kaelt* fish, as our people call it, is a kind of pike with a large piked mouth full of teeth, and large bright eyes. The belly and tail is of a purple colour, but the back brown: It is very thick and plump, about a foot and a half long, swims very swiftly, and of a good taste, but somewhat hard.

Ravens  
fish.

The raven fish, has got its name from its mouth, like a bill under the head. It is about a span in length, red on the back and tail, but inclining to yellow on the

belly, and has two yellow streaks on each side, which vanish by degrees. It is a very firm fish, and very wholesome to eat, and is taken in salt waters.

1662.

The king's-fish has obtain'd his title from its excellent taste, being one of the best and most wholesome fishes of the *Indies*. Some are five foot long, and have long forked tails. The back and sides are full of brown spots, but the belly is white. They can open their mouths very wide, and are very greedy after carrion.

The rivers and standing pools afford also abundance of eels; they are generally black on the back, which turns pale towards the belly, and are full of blackish spots. It is the general opinion here, that they are a kind of water-serpents. There is another sort of a ruddy colour with yellow streaks, having a sharp head with very small eyes; some of them are a foot and a half long. They are eaten by none but the natives.

There is another kind of sea-eels, or rather water-serpents in the *Indies*, of about three foot long, of a brown colour, chequered with black spots like the skin of a serpent. The forepart of the body is slender, but is as thick again towards the tail. It has a long head and mouth with sharp teeth, but so small as scarce to be discerned. It delights in rocky places, and serves the natives for a dainty. This fish has one peculiar quality, *viz.* That those who kill or exenterate it, are commonly seized with a trembling, and sometimes with fainting, which however continues not long, which seems to intimate that this creature contains something of poison, which exerts its vigour at the time of its expiration.

The sea-cock is a fish of a very odd shape, more like a sea-monster than a fish. Some are about two foot long, very broad and thick; a great part whereof is nothing but head. On the back it has two long fins, but one longer than the other, and below three other very long fins; a forked tail of a brown colour, but is yellow on the belly. The skin is glittering like silver, and the fins on both sides are red: It is catch'd in salt-water.

The white-fish has a thick short head, a brown back, and blue belly inclining to yellow; it is of a tolerable good taste, and catch'd in prodigious quantities in the sea near the shore with nets, but is generally not much regarded.

The grunting fish has got its name from a certain grumbling noise it makes when it is taken; cros the back run along both sides two brown and one yellow streak; it is very plump, with little scales, not above

1662. bove a span in length; the head not unlike a pope. It is of an agreeable taste, and eaten like as we do our popes or small perches.

The sea-hog.

The sea-hog or sea-porpoise called *Pixoporkas*, in the same sense by the *Portuguese*, is of a different kind from the former, this being not above a span in length, inclining to a green with blackish scales, the fins and tail of the same colour, but the eyes are yellow: It is a fresh-water fish, very plump and fat and well tasted.

Another kind of grunting fish.

There is also another kind of grunting-fish, so call'd for the same reason with the former; it is almost round, with a smooth skin, but full of knobs and spots; it is of a brownish colour streaked with black. The head is very thick, short, and full of knobs, with a large mouth and red eyes. The tail is also very round and short; on each side of the body is a red fin, and the fish is of a tolerable good taste.

The sea-louse.

The sea-louse is a strange kind of shell-fish, of above a foot in length. It appears like a round lump, with a large tail, with many legs on both sides. Its colour is gray inclining to green. It is caught near *Batavia*, but is seldom eaten, unless it be by the *Javanese* and *Chinese*.

The lamprey.

The *Lamprey* is a kind of an eelpoute, above a foot long, with a smooth skin, and fat like an eel, but of a different shape. It is brown on the belly, with yellow spots on the back, and has purple coloured fins under the belly. The head is not unlike that of a snail, with horns, and its fins are venomous. It is catch'd in ponds and pools, and eats best stew'd.

Kabos.

*Kabos* is a kind of an eelpoute, but bigger than the last; these being above two foot long and very fat. The skin is likewise smooth, without scales, of a brownish colour, but the belly is somewhat paler, with black spots. The head is thick and short, with the eyes in the forehead; they are well tasted.

The pen fish.

The pen fish is also a kind of eelpoute, with a smooth skin without scales; of the length of a foot, the back brown, and the belly of a pale blue colour. The fins are brown, very sharp and venomous, so that if the least part of it remains in a wound, it will scarce heal; the fish is of a good taste, but unwholesome if eaten in any quantity. It is likewise a fresh-water fish, and taken in pools and ponds.

The elephant-nose.

The fish called the elephant's-nose is of an odd shape, its undermost jaw being as sharp as a pin. The body is prettily spotted, with a broad streak running cross the middle. It is a very thick fish, which is taken in the sea, and in bigness and taste is not unlike our large finelts.

The fish called *Jacob Evertson*, is above ten foot long, weighing sometimes 400 pound. It is blue on the belly, and brown on the body, with many dark red spots near the head and tail. It has a large white mouth, with a short brown tail, and many fins turning up towards the back.

1662.

Jacob Evertson.

The fish crooked-back has got its name from its shape: It has a smooth skin without scales, a white belly, and yellow tail and fins. It is in great request all over the *Indies*, by reason of its agreeable taste; some are four foot long.

The crooked-back.

The horn fish is about a span in length or something more, with a large head, but a little mouth; half of the body being taken up with the head. The skin is very bright, the back bluish, the belly white, but the fins and tail yellow. The body represents it self in various colours, according to its several turnings.

The horn fish.

The fish called *Kneffsen*, is a bastard carp, about a span long, and pretty broad with thick scales. It is a well tasted fresh-water fish.

Kneffsen.

Their flounders are in shape and bigness like ours, except that they have teeth, wherewith they take hold of all they light on; they also are as well tasted as the *Dutch* flounders; they have here also turbut and soals, little different from ours both in shape and taste.

The flounder.

The *Klip* fish is a kind of fish with a smooth skin without scales, flat, broad, and of the bigness of our plaist: It is brown on the back, spotted with white, but very white towards the belly, with many streaks of various colours. The mouth and eyes are like those of the bream, and it is a well tasted fish.

The Klip fish.

The cod fish here is of the same size and colour with ours, except that it has very sharp fins on the back and the under part of the mouth jets out beyond the uppermost.

The cod fish.

The horn fish has got its name from the horn upon his head, and two more underneath, which being very brittle are also very poisonous, and if part thereof remain in a wound, will scarce admit of a cure; and if you happen only to be wounded by it, it will exulcerate immediately.

The horn fish.

The flat fish is about a foot long, with a smooth skin without scales, and a white mouth: It glitters all over like silver; on the back it has a small fin, and one more on each side. Underneath the belly, it has only one fin which is instead of the tail. It is a fresh-water fish, of a very good taste, but full of small bones, and therefore not much regarded.

The flat fish.

1662. The red-fish is a kind of a bream, of a dark red colour, as are likewise the fins; however the belly is blue, and has two yellow fins; it is very thick of body, and the head is sharp at the end, with a large mouth and yellow eyes, some are four foot long.

The bitter fish.

The bitter fish is of the shape and bigness of a carp, with large scales and red fins, and two black streaks round the tail. It is a fine well tasted fish, but being full of small bones, is not much in request.

The parrot fish.

The parrot fish has got its name from its mouth, which turns like the bill of a parrot. It is a foot long, and sometimes bigger. It is of a greenish colour, marbled or chequered towards the head with yellow. Both the fins and eyes are of a blue colour; the last very large and sprightly, and surrounded with a yellow circle. It has very large scales, and two rows of very hard teeth, wherewith they often bite off the hooks. This fish is very greedy after muscles and oysters, which it cracks to pieces to come at the fish. It is a very firm fish, and of a good taste.

Short nose.

The short nose is a fish like our had-dock, having a round body; it is yellow on the belly, and the fins are of the same colour. The mouth is just under the nose, which is very short; it is a well tasted fish.

The bone fish.

The bone fish is of the bigness and shape of our carps, but flatter, and has another head: It has large scales, and a forked tail; its taste is very good, but being full of small bones, is not much regarded.

The sand smelt.

The sand smelt resembles in colour and bigness a small whiting, and is round of body, and inclining to a yellow on the belly: It is a sea fish, and of an excellent taste.

The pock fish.

The pock fish is generally above a foot long, with a smooth skin, without scales; but being very bright, it varies in colour according to the various position of its body, appearing sometimes blue, then green, and soon after of a purple, or some other colour. It is a long fish, but not broad, not unlike a great smelt, with a forked tail, and teeth in its mouth. Tho' it is a well tasted fish, yet being full of small bones, is not eaten, except by the natives.

The Chinese fish.

The Chinese fish is round, and about a span long; the head is like an eel, with small eyes, and a long tail. It is green on the back, but white on the belly. It is a fresh water fish, and well tasted, but those catch'd in ponds are accounted unwholesome.

The pit fish.

The pit fish is no bigger than a large smelt, with a round body, full of green and yellow spots, and without scales. The

eyes, which they can draw in or out, are starting out of the head. On the back they have sharp pointed fins; they delight in muddy places, notwithstanding which they are well tasted; they are very nimble, and will leap a great way.

The mullet is a very fine fish, which being catch'd in particular places only, is dry'd in the sun, and transported all over the Indies. It is white of colour, chequered with blue and purple; it swims with great swiftness, and is so nimble, that it will not only leap over the net, but even over the fisher-boat. These fishes are of a dainty taste whilst in season, but at certain times they are pestered with worms, at which time they are neither toothsome nor wholesome.

Nothing more common than to give names to fishes in foreign countries from what they most resemble; whence it is, that the sea snipe has got its name from its mouth, which is like the bill of a snipe. Some of them are five foot long, with a head like that of a hog, and large bright eyes: On the back are large and sharp fins, reaching from the head to the tail, and full of spots.

Some korets are six or seven foot long, have large yellowish eyes, and a forked yellow and greyish tail, with yellow fins; under the belly, which is blue, inclining to green, and under the tail, are divers fins. They are very bright, and shine like silver, when they are catch'd at sea with hooks: They are very well tasted and not unwholesome, being sometimes a great refreshment to those ships that come to these parts.

This kind of fish has deservedly got the name of sea devil, by reason of its ugly shape; having the eyes on one side, and the mouth in the concavity below the head. Its tail is like that of a roach, with two teats on each side, pointed towards the end. The skin on the head is full of brown spots; some are near seven or eight foot long, but afford very coarse food.

The stip fish has a skin full of spots, is well tasted, and taken generally with hooks near the isle of St. Vincent.

The sea pigeon has got its name from the resemblance of its head to that of a pigeon, and of its breasts protuberating like those creatures. This fish is without scales, but not without divers spots. It is but rarely catch'd, and none of the best tasted.

The sea hedge-hog is justly so called from its sharp fins about the head and mouth, which is round, and has very large eyes. They can't swim very swiftly, and consequently would soon fall a prey to other fish, were it not that nature has arm'd them with these pointed fins against any attempt.

1662.

The jack.  
1662.

The suckers are represented at length in the cut, tho' there are some much bigger. They are blue, with bright yellow eyes, a smooth skin without scales: They have no teeth, but broad lips, wherewith they will suck, and adhere so close to other fish, that they will rather be kill'd than let go their hold. They will stick so close to the shark, that they are often catch'd with them. They are eaten sometimes for want of better food, but are but of an indifferent taste.

The shark.

Some sharks are eight, ten, or fourteen foot long: Their skin is rough and sharp, and they have a double row of teeth, and some three or four rows, which are covered with the gums. Their eyes lie forward near the mouth. It is a very pernicious fish, which oftentimes bites off an arm or a leg of those that divert themselves with swimming. The sharks bring forth their young ones alive, which follow the she-shark wherever she goes, and in bad weather creep into her belly, and come out again after the storm is over. It is observable that certain fishes of a foot long always swim after the shark, which are plainly to be seen in still weather.

The sea cat.

The sea cat, (the draught whereof you see in the cut) is a very odd creature, both for its colour and shape. The eyes are exceeding large in proportion to the body, the back is of a purple colour, and the belly blue, with divers purple spots. The tail is in comparison of the rest of the body, vastly large, and pale red, wherewith it swims, it being destitute of fins. However, just on the front of the head, it has seven fins, which stand out straight forward like those of the shrimps. It affords very good food, especially if dry'd in the sun.

Soldier-fish.

The klip-fish, or soldier-fish, is a kind of bream, but sometimes grows not above to the length of a span: It is flat and of a pale colour: On the back it has sharp fins like a perch; a sharp tail, and yellow eyes. It is one of the best fish in the Indies, of a very delicious taste.

The sea eagle.

The sea eagle is an odd kind of fish: It has a tail like a roach, with large fins like wings, a thick head, and tastes like a roach.

The sea cat.

The sea cat is a round fish of a span in length, of a very odd shape; the hindermost part of the body being an oval lump, on which hangs the head. It has long and large eyes, a smooth skin, inclining to blue, but brown upon the belly. The entrails of this fish contain a certain gum, out of which the Chinese make their ink. They dry this fish in the sun, as the Dutch do the plaice; and they are in great request among the Indians, tho' they are of no easy digestion.

Vol. II.

The leaping fish is so called, because they leap and play continually upon the surface of the water. They are of the bigness of a herring, and are without fins on the back, from the head to the tail. They have a knotty head, and the body of a greyish colour, with black spots; but toward the belly they begin to be white. They look very fiercely before they begin to leap. They are sea fishes, and of a very good taste, especially broiled.

Pampus.

The fish Pampus is above a foot long, and about a span in breadth; for the rest in colour and shape, not unlike our plaice, with a smooth skin: The eyes stand on both sides, and the mouth straight forward. It is a well tasted fish, especially if dry'd and eaten as the Dutch do their plaice.

Peyxe Kok.

Peyxe Kok, i. e. the Fish Kok, so called by the Portuguese, because when taken it makes a noise or sound like Kok. It is taken near the isle of St. Vincent, and is but an indifferent fish.

The blower.

The blowers are huge fishes which appear now and then in the open sea. They have got this name from their drawing in of the water, and spouting it out again with great force into the air.

The white fish.

The white fish is about the bigness of a whiting, with a round hanging belly, a straight back, and turn'd up mouth: Its tail is forked, it has one large fin upon the back, and abundance of small ones betwixt the belly and the tail. It is full of streaks all over the body, and on the mouth it has two long teats: It is of a very good taste.

Five-finger-fish.

The five-finger-fish has got its name from five black spots on each side, resembling the prints of fingers. Its length is about a foot and a half, with a small head, large mouth, and brown pointed fins towards the tail. It is of a shining blue colour mix'd with purple, without scales. It is of a pretty good taste, and taken in the sea all over the Indies.

Karappa, or round fish.

Karappa, or round-fish, is not unlike a whiting, of a very good taste: It has but a small head and tail, but a pretty bulky belly. Below it has some fins not unlike those of an eel.

Flying-fish.

Some of the flying-fish are near as big as corvette, of a blueish colour on the back, but inclining to a brown towards the tail. They have large eyes, and large yellowish fins, and resemble in shape our smelts: They are of an agreeable taste, but not easy to be catch'd, except when they fly against the sails, which they frequently do, and so fall upon the ships deck.

The fork-tail.

The fork-tail is a long and round fish, with a very long forked tail, whence it tail has got its name. Its head is not unlike

K k k k

that

1662. that of a herring, with a long teat on the top of it, and two more below near the mouth, like those of the shrimps, but larger; they keep them close to the body when they are swimming. They are of the bigness of a mackerel, but of no extraordinary good taste.

*Seals.* Some seals here are a foot long, of the same colour as ours, and as well-tasted; but their heads are strangely shaped, the mouth turning quite to one side, as well as their eyes.

*Bonites.* The bonites are not unlike the corettes, but with lesser fins and blue streaks, which vanish by degrees towards the tail. The back is of a dark brown, and the belly white, the eyes blue, surrounded with a yellow circle. Some are a foot and a half long, and very bright when first taken, which is done without much difficulty, because they follow the ships, and are very greedy after a bait. They eat best if they are salted a little before they are broil'd.

*The sword-fish.* The sword-fish has a very odd head, not unlike that of an owl, with a very wide mouth: The skin is hard, the back grey, the belly white without any scales. On each side of the sword, which is above five foot long, are 27 teeth: Their whole length, including the sword, is generally 25 foot long, and so thick, that scarce two men can grasp them. Near the eyes they have two nostrils, through which they draw the water in and out.

*Siap Siap.* The fish called *Siap Siap* by the *Javanese*, is a river fish in great request among the *Javanese*, and is taken in considerable quantity near *Batavia*.

*The pyed-fish.* The pyed-fish has got its name from its colour; its tail and fins being brown, spotted with pale blue spots: It is about a foot long, and pretty thick, without scales. The eyes, which are yellow, are surrounded by a blue circle; underneath the throat hangs a crop extending it self to the tail: It has a little mouth, and on each side a yellow fin. It is in great esteem among the inhabitants, and well tasted, but contains a certain venomous matter, which must be carefully taken out when it is gutted.

*Five-eyes.* The five-eyes have got their name from five black eyes, enclosed in yellow circles, which are in the fins near the tail. They are smooth and yellow without scales, pretty thick with a small head and sharp nose, which turns over the mouth, near which they have two red fins; they are catch'd in the rivers and are well-tasted.

*Sea-bats.* The sea-bat has got its name from its resemblance to a bat: It has two yellowish wings streak'd with three blue streaks; a long tail, thick head and large mouth. By its taste it seems to be a kind of thorn-back.

The gudgeons of *Java* are of the length of a finger, but scarce an inch thick. They are speckled with pale blue, and other colours without scales; they have small forked tails, are catch'd in the rivers and are exceeding well tasted. There is another kind of them taken in the sea, in such prodigious quantities, that they fill a whole canoe full for eight or ten pence, and fatten their ducks and geese with them.

The *Indian* carps are taken in the rivers, being not in the least different from ours either in shape or taste.

The sea-monster is an odd kind of fish, having a knobby star of eight tacks upon the head, and upon that a certain excrescence resembling a bishop's mitre: From the sides of the head issue two fins of the same length with the body of the monster. It has a very dreadful wide mouth, and very broad tail, wherewith it guides it self in swimming.

They have divers sorts of shrimps and creafishes in the *Indies*; and of the latter sort, a certain kind which have teeth like a saw on the back; some of them are of that bigness as to weigh six pounds, of a delicious taste, and very wholesome, being accounted good for such as are troubled with the asthma, or spit-blood. The sea-shrimps are a salt-water fish, the biggest of which are near a span in length, and have shells like ours, of a fallow colour with a red fork'd tail. Out of the head come forth divers fins, on which hang two small thin horns. They are very well tasted, and five or six are sufficient for one man's meal. The river-shrimps are about the bigness of our sea-shrimps, of a blue colour, with a small head and thick body. Out of the head come two long fins, as fine as a thread. Their shell is not so hard as the former, neither are they so well-tasted. The rivers here afford also abundance of creafishes, which are taken in holes among the ysters. They are better tasted than our lobsters.

The sea-star is an odd shaped fish with five branches or tacks like a star: They are of a pale red colour, an inch thick, covered with a knobby skin, underneath which are many small bones: They have a hole in the middle, through which they draw their sustenance: They are never to be seen at sea, except in calm weather, and are taken and kept rather for curiosity's sake than any other use.

The sea-crabs are of about the bigness of a span, of a most curious colour, the shell being speckled with yellow spots; besides which they have three purple spots enclosed within white rings. Their claws are yellowish towards the body, afterwards white.

1662. white, and at the extremities of a high purple colour; their eyes are fixt upon certain small tacks an inch breadth without the head. There is also a kind of blue-crabs, some of which are a foot and a half long: They are of a purple colour spotted with white; the claws are blue, and of a purple colour towards the body; their eyes are fixt upon small tacks like the former, and stand a fingers length without the head. They are a salt-water fish, and very well-tasted.

*Lobsters.* There is another kind of lobsters not quite so big as the former, which run very swiftly: Their eyes stand likewise about two inches breadth without the head, especially whilst they are running, but otherwise can draw them back, and lay them close under two fins. Their bodies are marbled with divers colours, the claws of a purple colour; behind they have two small round and blue shells edged with yellow. Some are of a considerable bigness, and of a very good taste. There is another sort of sea-crabs, of the same bigness as the blue-lobsters, but easily to be distinguished from them by their colour, which is inclining to green, with red claws, and by their taste, which is exceeding delicious, these being the best sort throughout the *Indies*. Their eyes stand likewise an inch's breadth without the head. Some sea-crabs here cast their shells, and during a certain season of the year abide under ground till they grow again. The *Indian* oysters are prefer'd before those of *Europe*.

*Muscles and oysters.* The muscles of the *Indies* are like ours, but somewhat bigger; the shell is brown both in and outside. There is another sort of muscles called tail muscles by our people; these are of a greenish colour; they have on that end where they open, two sharp horns, and on the other end, a pale yellow tail, wherewith they can fasten themselves in the mud. They are of the same taste, and used like ours, as well as those we commonly call *St. James's* muscles. Of oysters they have also several sorts, the biggest adhere to the rocks, some to the roots and tacks of the trees; they are all of a very good taste; and are either stew'd with spices, or eaten raw with lemon-juice and pepper.

*Purple snails.* Abundance of purple-snails are found in the islands overagainst *Batavia*: The scallop or shell is of a yellow colour, of the bigness of a good citron, with curious windings at one end. Within this shell is the snail, which is round, plump and yellow, streak'd with black. They are boil'd

and eaten by the *Chinese*, who have a way 1662. of polishing the shells, and pick out of the middle of the snail a certain purple colour'd substance, which they use in colouring and making of red ink. There is also another kind with green shells, streak'd with black, white within, and of the bigness of a child's head: The snail is of the same colour, and is not ill tasted. Another sort has a shell pale-red, marbled with white, and curiously twisted, of the bigness of an orange: The snail is of the same colour, and is eaten as we do our periwinkles, but is of a hard digestion.

The *Quallen* are a certain product of the sea, of a mucilaginous substance, without head or tail, or entrails; they commonly are of the bigness of a trencher, and sometimes less. They have purple edges all round them, wherewith they swim. In the midst is a certain white spot, (which is sometimes blueish) wherein perhaps their vituals are contained. If they are forced ashore, they are dissolved. The *Chinese* have a way of distilling a certain *Arack* or strong-water out of them, which is excessive hot, sharp and unwholesome, causing exulcerations in the body. For if this substance happen to adhere to the bare skin of a man in swimming or otherwise, it burns with violence, and raises blisters immediately.

The *Dorades*, by some called sea-breems, *The Dolphins.* are a kind of dolphins. They have long and sharp fins on the back, and a very long tail; underneath the belly they have three fins, the last of which extends as far as the tail. Some are 4 or 5 foot long, and rather broad than thick. They eat tolerably well, if salted before they are dress'd, but are of a hard digestion: They are sometimes taken with the hook, being not easily caught with the harpiron, by reason of their nimbleness, which is such, that they will leap sometimes five or six foot high above the water, after the flying-fish.

The *Indies* afford excessive large thorn-backs, some of which are as big in circumference as a moderate table, and will suffice to dine forty people. They have vast long tails, but are of the same colour with ours, and of the same taste, but are hard of digestion, but the young ones are much better. Their fins, which are very large, are of a purple colour. All fish with scales cast their spawn; but those without scales bring forth their young ones alive.

Indian and Javanese birds and four leg'd beasts.

In the isles of *Sumatra*, *Banda*, and the other adjacent *Molucca* islands, is to be found *The Bird Emu.*

1662. found a certain bird, called *Emeu* or *Eme* by the inhabitants, and *Casuaris* by the Dutch. He walks constantly with his head straight upright, when he is above five foot high, and about three in length from the breast to the tail. The head is in proportion of the body, but small, very smooth, and of a dark blue colour. Before, on the neck, hang two red teats or bags. The eyes are large and fierce, behind which are the ear-holes, and almost at the extremities of the bill two nostrils; and from the midst of the bill to the crown of the head, grows a hard yellow substance, like a cockle-shell, especially in the males. They have very long and gross legs, covered

with a yellowish rind, their feet are thick, knobby, and without spurs, instead of which, they have on the forepart three long horny claws, in which they differ from the ostriches, whose feet are cloven both before and behind. They are covered all over with feathers, or rather with plumes of a dark red mix'd with black. Those upon the breast and thighs, grow two and two together, but those on the tail are much longer and stronger. Underneath the feathers, which grow on both sides, are hidden certain pens, which serve them in running, for these birds are scarce able to raise themselves from the ground. They are exceeding greedy, devouring every thing

they meet with, even to iron and burning coals, all which they evacuate backwards without any alteration; nay, they sometimes throw out what they have eat, not till a year after, without the least sign of any digestion: For the rest they live upon herbage. Their strength consists in their legs and feet; and run so fast that no man can overtake them, and when exasperated, kick with their feet backwards and sideways like a horse. They lay greenish eggs upon the ground among the shrubs, scarce so big as our hen-eggs, speckled with dark green spots; the yolks thereof are eaten by the inhabitants. They have neither tongue nor tail.

Among the several sorts of flitter-mice or bats, that which by some is called a flying-cat, may well challenge a place; its head, tail, nay the whole body and bulk resembling to a cat. It differs from the bats in this, that whereas they hang on certain tacks, this hangs on its claws, and hides its self within its wings: The hair brown red, except on the back, where it is black. Betwixt the fore and hindermost legs grows two skins, a little hairy on the outside, which serves them for wings. There is also a sort of flying-apes, these have very sharp teeth and claws, and very lively eyes.

1662.

The hunter's-bird.

In some parts of the *Indies* you meet with a certain bird call'd the hunter's-bird. The breast and whole body is black, but the tail grayish; the head is dark yellow, but without feathers; below the neck hangs a bag, not unlike those of our turkeys: The bill is distinguish'd by certain twisted rings, by which they discern their age, every year producing one like our oxes horns. On the top of the bill grows a horny substance; they are look'd upon as a rarity, and fold at a dear rate.

Dronthe or Dodaers.

In the isle of *Mauritius* you meet with a certain bird call'd *Dronthe* by the inhabitants, and *Dodaers* by the Dutch. In bigness it is betwixt an ostrich and a large turkey, and has also some resemblance to them in his feathers and tail. His head is very large, not unlike that of a cuckow, but covered all over with a skin. The eyes are large and black, the neck crooked

and very thick: The bill is very long, thick and pale blue, except towards the extremities, the uppermost whereof is blackish, and the undermost yellowish, but both sharp and bent. He is very thick and round of body, covered with soft grey feathers, like those of the ostrich; the belly and hindmost part are so thick as to touch almost the ground, which is the reason he is easily catch'd. On both sides he has certain pens instead of wings, of a pale yellow colour, and instead of the tail five curl'd plumes of the same colour: His legs are short and thick, with four large claws. The meat, especially that of the breast, is fat and toothsome enough, and three or four of these creatures afford a meal for 100 persons. In his stomach is sometimes found a certain porous hard stone.

1662.

Parraquets.

The parraquets are of a green colour, of the bigness of a sterling; their bills are yellow, the neck red mix'd with green, and the wings yellow at the extremities: They are found in vast numbers in the woods, and are easily tamed and taught to speak. There are divers sorts of them of different colours.

The martins.

The martins here are as big as our mag-pies.

pies, of a black colour with a yellow bill, and a yellow tuft upon the head. The midst of the wings is white, the feet yellow, with large crooked claws. The *Javaneze* are great admirers of this bird, and teach him to whistle and speak, which he does as distinctly as a man, but with somewhat a rough voice. There is another sort of them not so big as these; they are found all

L 111

1662. all over the *Indies*, and feed upon rice and other fruits of the earth.

Crows.

The *Indian* crows are pale blue, in shape betwixt a heron and stork. The head and neck is somewhat of a darker colour, with a curl'd tail and sharp bill. They live most in wildernesses, and fly (as they say) sometimes as far as *Europe*, under a certain leader, who flies sometimes before and sometimes behind.

The bird  
Rubus.

The bird *Rubus* is of the bigness of a starling, with a blue bill and legs, the back and tail red, and white and black wings. The head is green, and in his tail he has two large feathers, like the *Paradise* bird.

Bats.

In divers parts of the *Indies* are very large bats, exceeding in bigness our cats. In the isle of *Java* are some of the ordinary sort, no bigger than a pidgeon; they live in the woods, and are accounted a dainty by the *Javaneſe*. In the night-time they will get sometimes into the chambers, if the windows be left open, and draw blood from such as are asleep there.

Gwira.

There are two sorts of the bird called *Gwira*, they are both white, mix'd with some brown feathers. One sort has a red belly, and the other a blue tail, with one very long feather in it.

Porro.

The *Porro* is a long, but slender bird, of a span in length, including the bill and tail. The bill is somewhat crooked, and the tail like that of the bird *Gwira*. His feathers are blueish, mixt with yellow, and his feet very small. He feeds upon pismires.

Cormo-  
rants.

In *Java* you meet often with cormorants, not unlike our geese, except that they are much bigger; underneath the bill hangs a large bag, which they can extend and draw together at pleasure, and in it keep such fish as they have swallow'd. Their feet are like those of the swan, and their bills are crooked towards the extremities. They are so greedy after prey, that they rush out from among the flags with such violence, that they are easily taken by that means. They swallow oysters with the shells, and keep them in their bags till they open, when they spew them out again and pick out the oyster. They are frequently found in the isle of *Din Ding*, and soon discovered by their noise.

Ducks.

All over the *Indies* you meet with ducks in great numbers, resembling ours both in bigness and taste. They are generally dark yellow, with a black bill and legs, large bellies, and tufts on their heads. But whereas the *West-India* ducks have hanging bellies, these carry them more upright. By reason of the excessive heat they are not easily brought to sit upon their eggs, which are generally laid under hens, or so-

mented in horfeding or ovens. Their meat is very wholesome, provided they are well fed.

1662.

The wide-bill has got his name from *Wia*. his bill, which reaches up on both sides to the eyes: He is scarce of the bigness of a pidgeon, of a pale black colour, with black wings, and underneath the eyes and bill white. They are brought to market in great quantities at *Batavia*, their meat being well tasted.

The strand bird is a kind of snipe of the bigness of our wood-cocks. Their feathers are green mixed with black, they are fold in great numbers at *Batavia*, and in taste are not unlike our wood-snipes.

The *Indian* turtles are not altogether so big as ours, and of a yellowish colour mix'd with grey: They have a black feather in each wing, and the tail is black and white; under the neck they are somewhat brighter, and the breast almost red. They are taken in great quantities in the rice-fields, and are fat and well-tasted.

The *Indian* geese are much finer and larger than the *European* geese, resembling rather our swans, their necks being excessive long, of a yellowish colour, but their bills black. Along the back, upon the wings and tail they have dark grey feathers mix'd with some light ones, but on the belly they are white. They have not so shrill a voice as our geese, but differ not in the least from them either in shape or taste, their feet being likewise red. They have both wild and tame ones.

In divers places of the *Indies* are great quantities of birds of prey, as eagles, hawks, kites, and such like, which do prodigious mischief both among the wild and tame fowl, and are of such strength, that they carry sometimes a young pig away and devour it in the woods or among the rocks. There is a certain bird of prey here, which you see moving in the air without moving its wings; and another called *Jin* by the *Chinese*, exceeding all the rest in nimbleness: It is greenish on the back, but white on the belly. The eyes are quick and red, and the bill yellow, bent like a hook at the end. Their feet are likewise yellow, arm'd with long and very sharp claws.

The *Koey* is a kind of a heron, but much exceeding ours in beauty, being yellow before and green in the hindmost part. On the head he has a delicious plume, spreading all over the neck. The young ones eat tolerably well, but the old ones are tough and taste much after fish.

*Kolibry* is the least of all the birds, being no bigger than a horse-fly: it has a very sharp bill, wherewith it sucks its sustenance out of the flowers, though some are

birds, be- it has a its suste- form are of

1662. of opinion it feeds upon the dew. It has all the colours of the rain-bow, and its wings are not unlike those of the pigeons or ducks: It builds a nest to the south under the branches of orange, limon, or cotton-trees, to defend itself against the injuries of the north winds: Its eggs are no bigger than peas. There is another which sings exceeding fine, but is not so well colour'd; it weighs not above 24 grains, and is catch'd by throwing hot or any thing else upon it.

In the woods of Java you see vast numbers of birds not unlike our quails or thrushes, but of the bigness of our wild pigeons; their bills are however somewhat longer than those of our quails, and their noise is very different. They are of so cold a constitution, that if expos'd on the cold ground, they are in danger of perishing by cold; for which reason they hide themselves, cover'd with their wings in the hollows of trees, immediately after sunset, and at sun-rising come forth again and begin to chirp with a great deal of cheerfulness.

The Indian quails resemble those of Europe, are brown on the back and blue on the belly: they have a yellow bill and four claws, viz. three before, and one behind; they don't make any noise, but are very good meat.

The rice-bird is of the bigness of one of our pullets, but something longer leg'd, with brown feathers on the body, a red head, and very large claws; they live among the rice, whence they have got their name, and eat very deliciously roasted.

In many parts of the Indies are also pheasants with long and pointed tails; some are white on the breast and about the eyes.

They have prodigious numbers of butterflies of various colours; they have long bills, which they can stretch out when they suck the juice of the flowers, or draw back at pleasure. Some are of a most delicious colour, intermix'd with blue, white and red, beyond what can be express'd. They are generally of the bigness of the palm of the hand, when their wings are spread; some have larger wings than others, and have two small feathers on their heads.

The Indian wood-pigeons are of the bigness of our tame pigeons, with brown spots on their backs; a white belly, purple colour'd breast, and red feet; they resemble entirely our turtle-doves, or common pigeons; live generally in the woods or in the rice-fields, and are a most delicious food; when they are tamed they will breed in our houses.

The Lory bird is a bird as big as a parrot, but of a much finer colour, with a

lofty round breast, cover'd with yellow feathers. The wings are green, the head black and shining, with a yellow bill. The Indians give sometimes 30 crowns for such a bird, because they will learn and speak several languages, and are very tame: There is another with large and long tails, sometimes three quarters of a yard long, these are blue on the back, and yellow under the belly, and commonly call'd Kak-kataws or Indian ravens. Another kind there is, which is white all over, except a yellow tuft on the head, which they set upright, when they are vexed. They have also some resemblance both in shape and bigness to our magpies or blackbirds; these imitate a man's voice much more distinctly than the parrots: They are of a blueish colour, mix'd with dark blue spots and streaks, they have a yellow tuft on the head, which is black, and as smooth as velvet.

The Yelumbers are as big as our larks, with a thick bill and red feet; their feathers are yellow, chequered with grey, they are catch'd in prodigious numbers, and sold in the markets of Batavia, being look'd upon as a dainty.

The rice-sparrows are no bigger than our ordinary sparrows, and of the same colour, except that their bills are somewhat thick, with a few black feathers near the tail, and some white ones underneath on the belly; their feet are blue. They are found in such prodigious quantities, that the inhabitants are scarce able to preserve the rice from being devour'd by them.

These birds properly called parrots, are no bigger than our larks, but have a very fine green head and wings; the back underneath the wings is of a high red colour, the breast light green, and the tail of a most agreeable colour: They are found in the woods in great numbers, feed upon rice and fruits, but will not speak, being kept only for their feather's sake.

The Indian pullets are generally white, with long red tails, and their feet almost cover'd with feathers, and a bright red comb on the head. They are not much bigger than our largest tame pigeons, but very well tasted. They were first transported to Batavia from Siam. They have also a kind of tame fowl with black feathers, legs and flesh, which however is not ill tasted, and accounted very wholesome: Another kind there is that have hair instead of feathers, others have their feathers turn'd towards the head, in lieu of declining backwards.

About Batavia and many other parts of the Indies abundance of herons are to be seen in the low grounds; they are in bigness

1662. nests the same with our herons, with long gray feathers and black wings; they are generally seen near the water-side, where they are looking for their prey, but build their nests in trees; the meat is tough, and tastes much after fish.

The jumpers.

The jumpers have got their name from their continual motion from branch to branch: They are of the same bigness with our blackbirds, and will whistle like them; they have a black head, wings and tail, but are white on the breast and belly; I have seen them kept at *Batavia* with a chain to one leg for diversion sake, and they feed them with boil'd rice. They are easy to be tamed.

Stock doves.

The stock-doves are in shape and bigness like our pigeons, but of a much finer colour; the neck and breast is green, the rest of the body purple colour'd, and the tail and wings blue with a white edge. They are catch'd in great numbers in the woods near *Batavia*, and eat very well roasted.

The goldfinches or linnets.

The goldfinches here are very agreeable for their fine colour'd feathers, being for the rest no longer than our linnets or goldfinches; their bill is pale red, the head white, the back and wings blue, the belly red, and the tail dark blue. They are taken in prodigious quantities near *Batavia*, and sometimes kept in cages: They feed upon rice.

Scorpions.

At *Batavia* you see often large scorpions of a quarter of a yard long; but those of a lesser size are so frequent, that you can scarce move a stool, bench, chest, looking-glass or picture, without being in danger of being stung by them, unless you be very careful to avoid them. The small ones are about a fingers length, composed of many joints, of the thickness of a goose-quill. They are yellow, speckled with brown streaks; before they have two claws, with two sharp pinchers; their tail is long, and lies turn'd upon the back, at the end of which is the sting, where-with they poison such as they touch. They have eight long legs, not unlike those of a creafish. The sting of a scorpion is accounted mortal, unless prevented in a little time; tho' some are of opinion that the scorpions in the *Indies* are not so venomous as those of *Italy* and *Spain*. A scorpion bruised to death, or stifled in oil, and apply'd to the wound, draws out the poison. They say that a radish sliced and laid upon a scorpion, kills him in a minute: They have also another story, viz. that the scorpion is sometimes so pester'd with the pisnires, that he stings himself to death in the head with his tail, and so becomes a prey to the pisnires.

The thousand-legs are about five or six inches long, of the thickness of a man's finger, of a ruddy colour, and composed of many joints and bones. They have two claws or pinchers, wherewith they wound as dangerously as the scorpions; occasioning such violent pain, as is almost unspeakable: The cure is perform'd by lifting them in oils like as with the scorpions, and they are generally found like them, in holes, and behind old chests or benches.

Both the *East* and *West-Indies* produce snakes of divers sizes and colours: Among others they have a certain sort in the isle of *Java*, not exceeding a foot in length, which are frequently met with in the fields among the grafs: They have others with large shining scales on the back, and their eyes so bright, that in a sun-shiny day you see them at a great distance; others are so full of spots, that they are terrible to behold. Besides these, they have another kind of snakes much lesser than the field snakes; these dwell in houses, and feed upon flies, ants and other insects. They will stick so close to a wall or roof, as if they were immovable, but no sooner perceive their prey, but they shoot down all on a sudden to catch it. The tail of a snake separated from the body, will grow to it again. These snakes are not in the least pernicious, and will pass over the bare faces of persons sleeping in their chambers, without doing the least harm.

In the woods of *Java*, as likewise in the fens and pools is found a certain sort of snakes, or rather a kind of crocodile call'd *Lagoen* by the *Indians*; it resembles altogether a crocodile, except that it is less, being not above five or six foot long, whereas the crocodiles are from 15 to 20 foot: The *Javanese* however affirm, that those in the mountains are much larger. They have a knobby green skin, but the meat is white, like that of our rabbits, and very well tasted. They have a long head, wide mouth, and a tail as long as the whole body; each leg has four paws arm'd with sharp and long claws.

In the woods of *Java* are certain flying snakes, or rather drakes, they have four legs, a long tail, and their skin speckled with many spots; their wings are not unlike those of the bat, which they move in flying, but otherwise keep them almost unperceived close to the body. They fly nimbly, but can't hold it long, so that they fly from tree to tree at about 20 or 30 paces distance. On the outside of the throat are two bladders, which being extended when they fly, serve them instead of a sail; they feed upon flies and other insects: The *Javanese* don't in the least ac-

the least ac-  
count

1662. count them poisonous, but handle them  
just like the common snakes, without the  
least danger.

The frogs here are about the same big-  
ness with ours; of a dark yellow colour,  
with brown spots: They are sold daily in  
the markets of *Batavia*, the *Chinese* ac-  
counting them a dainty, but eat only the  
hindermost parts. There is another sort  
of frogs in *Java* near as big as a rabbit,  
but are not eaten. They make a noise  
like the bellowing of an ox.

The fire-flies have got their name, be-  
cause they appear in the dark shining like  
a light, and are catch'd by means of a fire  
or candle, through which they will fly till  
they are taken. They are about an inch  
broad and long, and sometimes bigger:  
The head, which is brown, has two small  
horns; the neck is red, but their hard  
wings brown, underneath which they have  
two softer wings, which they make use of  
in flying, and then it is you discover that  
shining substance, which is contained in a  
black bladder on their backs, which they  
hide with their wings whilst they are not  
a flying. In the rainy season they dwell  
in prodigious numbers among the trees,  
and draw their chief sustenance from the  
blossom. There are divers sorts of them.

The horse-flies here are a most pernicious  
insect, which sting most furiously.  
They are about two inches broad and long,  
of a brown colour, with a yellow streak  
along the body. They build their nests  
very curiously on the roof or rafters, as the  
wasps do on the sprigs of trees: In these  
they lay their eggs and hatch their young  
ones. They feed upon fruits, and emit  
a most nauseous scent after they are kill'd.

The *Kakkeriakken* are so called by a cor-  
rupted name from the *Portuguese* word *Ka-  
kalakkas*, because their eggs are both in  
colour and smoothness like to the *Lacca*.  
They are much of the same bigness with  
the horse-flies, of a brown colour, with  
two long horns on the head. They both  
run and fly very nimbly, and are very per-  
nicious, there being no chest or trunk so  
strong, but they will gnaw through it.  
They are also to be found in ships, tho'  
newly built, in their way from *Europe*, es-  
pecially at the time of their passing under  
the line; when the lice die, these begin to  
appear; and in their return, as soon as  
they are pass'd the line again, and the lice  
appear, these begin to vanish by degrees.  
They are very pernicious to paper, linen,  
and woollen cloaths.

The *Jakalat* is a mischievous insect, but  
only in the lower parts of the houses, its  
delight being in moist grounds.

About *Batavia* you find a kind of lo-  
custs of a finger's length, but no thicker  
than a pen or goose-quill, distinguish'd by  
divers joints. They walk upon six feet,  
and have two small horns. The locusts  
here are however of divers kinds; some  
are yellow on the belly, with brown wings,  
and two horns on the head; they can leap  
a great way, and fly together in great num-  
bers. There is another sort of the same  
shape, but green, and of a finger's length.  
These come sometimes in such prodigious  
swarms, that they darken the sky as they  
pass by, and devour all in those parts  
where they settle, so that the inhabitants are  
often obliged to change their habitations  
for want of subsistence, as it has happened  
frequently in *China* and the isle of *Ta-  
jowak*.

The blister-drawers are so called, be-  
cause when they sting they raise blisters.  
They are of divers sorts, different both in  
colour and bigness, but commonly of the  
length and breadth of a finger. They have  
very large eyes, and delight in marshy  
places. They are most frequent at *Bata-  
via* in *October* and *November*.

There is here a kind of hornets that have  
a certain claw like a pincher on the head,  
wherewith they pinch to that degree, that  
they will not let go their hold unless you  
cut off their heads. They are of divers  
sorts, bigness and shape, some being above  
five inches long, of a dark brown colour;  
they have double wings, the uppermost  
are hard, the undermost soft; the last they  
make use of in flying, the others being on-  
ly for the defence of the undermost ones.  
They feed upon herbs, and the fruits of  
certain trees, which they know how to  
choofe among all the rest.

Of ants or pismires there are in *Java* Ants or  
and throughout all the *Indies* prodigious  
quantities of divers sorts; some of them are  
above a finger in length, of a ruddy colour,  
inclining to black, some with, others with-  
out wings. They are very pernicious to  
the fruits of the earth; and even in the  
houses scarce any thing can be preserved  
against them without a great deal of care.  
It is observable, that an ant meeting another  
with something in her mouth, will give  
way to her, if she be not loaden her self.

The gardens about *Batavia* are extreme-  
ly pestered with caterpillars; they are  
about 5 inches long, with long brown horns  
standing upright on their heads. The  
head and whole body is yellowish, but the  
wings inclining to a green spotted with yellow.  
They feed upon herbs and leaves  
like the locusts.

This insect has got its name from the knot-  
ty composition of its body, which, as well

1662. as the feet is of a pale-green colour. It has two fore legs covered with a hard shell like a crab or crawfish. It seems to be a kind of locust, and feeds upon greens, but can neither fly nor run very fast. There is another kind with a monstrous head and neck, and a thick body, on the hindmost part of which are two small pins like thorns. The two fore-feet are enclosed in a hard shell and of a very odd shape; it has two

wings, but can scarce fly, by reason of the weight of its body.

There are many sorts of spiders in the Indies, and of a very different bigness; some are above four inches long, and have very thick legs; others have eight feet, a thick speckled body, and round head with brown eyes. These have two teeth bent like hooks, wherewith they bite fiercely. I have seen toothpicks made of these teeth.

The lynx.

The lynx is a fierce creature, of the bigness of a large dog, and in shape seems to participate both of that and a cat. He is of a brown colour chequer'd with red, with black streaks; his tail is very short, and the ears very black; he lives upon prey, and is extremely nimble.

Sukotyro  
or Suco-  
tario.

The *Sukotyro*, as the Chinese call it, is a very odd shaped beast; it is of the bigness of a large ox, with a snout like a hog, two long rough ears, and a thick bushy tail. The eyes are placed upright in the head, quite different from other beasts: On the side of the head, next to the eyes stand two long horns, or rather teeth, not quite so thick as those of the elephant: It feeds upon herbage, and is but seldom taken. Of the jackal we have given a description before.

Oxen with  
bunches.

On the Cape of Good-Hope, but especially in the isle of Madagascar, are certain

oxen with bunches upon their necks and shoulders, which being nothing but fat, is melted and used by the inhabitants like butter; but these oxen have not so great a quantity of suet about their kidneys as ours. The cows of this kind frequently bear two or three calves at a time.

The macassar-fox has got his name from the isle of Macassar, where he is most found. He has an excessive long bushy tail, which stands upright, flat feet, long claws, and short ears, just as he is represented in the cut.

There are divers sorts of apes and monkeys distinguished by peculiar names. Some are very small, others middle sized, and others as big as a boy of eight years of age; such a one I saw my self once at Batavia. In many parts of the Indies, where the inhabitants think it a crime to kill any living creature, they multiply to a prodigious degree, and are very tame: They

They

1662. They live for the most part in woods, and feed upon fruits. Some are green with a long beard and large eye-brow, like an ancient man: Some, call'd *Cicatic* by the *Indians*, have long bushy tails, for which reason they are reckon'd by some among the fox kind. There is another sort call'd *Saragofe*, with long tails, which they carry straight upright. Another sort are called death's heads by the *Dutch*, from their pale faces. The *Suri* monkeys are in bigness and shape not unlike a squirrel, but of a yellow colour; they have short and round ears, large eyes, and a large bushy tail, wherewith they can cover the whole body: They can leap at a great distance from tree to tree, and guide themselves with the tail so exactly, that they seem to fly.

1662. There is a certain sort of monkeys or apes that are not in the least mischievous; they are no bigger than a rat, but have a long tail, which they carry upright. They have a green, soft and woolly hair, somewhat inclining to a grey about the eyes, and a little white on the feet. They have short ears, a sharp mouth and brown nose, the feet being like those of an ape; but these are very scarce. Those call'd *Sangwayns* are likewise of the bigness of a rat, and very nimble; their face, hands and ears are black, and the rest of the body of a chestnut colour, except that they have some dark yellow hair along the back; they have very long tails, feed upon fruits, and are very diverting.

The pig-mire-eater or anti-bear.

Stags.

The pig-mire-eater or anti-bear, is so call'd, because he feeds chiefly upon ants: There are three several sorts of them; the first is of the bigness of a young hog, the second somewhat lesser, and the third like a cat, but longer. They are all of a rusty colour like a fox, with a long sharp mouth, small ears, and a head like that of a pig.

Abundance of deer or stags are found in the forests of the *Indies*, they are easily to be tamed here, so that they will feed among the cattle. They are generally

red, speckled with white, and much of the same bigness as ours. They have large ears, long legs, and are white underneath the belly. The horns of the male are wrought towards the head, and brown and very hard towards the extremities. Their flesh is very well tasted. With the deer-skins a great traffick used to be carried on in the isle of *Tayouan*, whilst the *Dutch* were masters of it; for they used to take many thousands of them only for the skin's sake, which were sold to the *Japonefe*; and scarce to preserve any part of their

1662. their flesh, except the tongue, which is accounted a dainty here.

*See iron.  
pig or  
porcupine.*

About *Batavia*, and in the woods of *Java* are abundance of iron-pigs or porcupines. They grunt like hogs, and are covered with certain painted pens or pegs like iron, whence they got their name: They are of different sizes, some of the bigness of a good large dog, but somewhat longer, and more short leg'd. They are generally brown, with a grey tuft on the head, and a mouth like a hare, with two great teeth both below and above, like a horse, the two fore-feet like those of a deer, and the hindmost like a bear. The pens or pegs are very sharp, a foot long, and chequered with black and white. When they are at rest, they lay them close to the body, but if they are vexed, they can, by contracting themselves, cast them forth with such strength, that they kill man or beast: Thus some years ago, a dead lion was found at the *Cape of Good-Hope* with a porcupine's pen sticking in his body, wherewith he had doubtless been killed. In the winter they retire into holes, where they remain without either eating or drinking. They feed upon herbs and roots, and cast their pens as other creatures do their hair. In the stomachs of some of these animals grows a certain stone, which by reason of its sudorifick quality is accounted very good in pestilential fevers; just as the stone found in the *Vesica Bilearis* or gall-bladder of the wild boars, is reputed the most sovereign remedy in that distemper called *Morderi* by the *Javanese*, and as much dreaded among them as the plague in *Europe*, because it commonly kills in a few hours time.

*Tame and  
wild boars.*

There are several sorts of hogs in the *Indies*, some with, but the most without any hair; hogs flesh is accounted wholsomer and better than beef or mutton, and is by the *Chinese* prescribed even for sick persons. The wild boars feed upon what roots or fruits they can meet with; and I remember that I saw a considerable number of them swim cross the water in the isle of *Dingding* near *Malacca*, to look after provisions. In the gall-bladder of the *Indian* wild boars, grows a certain porous stone, called thence *Piedra da Puerco*, i. e. hog's stone by the *Portuguese*; it is sudorifick, and expedient in malignant distempers; they steep it in wine for twelve hours, and give the infusion to the patients; or they give the quantity of 25 grains powdered in wine. Women with child must be cautious of it, because it makes them miscarry, it being a general opinion among the *Malayan* women, that they can

procure their monthly times, with only holding this stone in their hands.

1662.

The *Javanese* sheep are much of the same bigness as ours, some being white, others pyed white and red, with short legs and little or no wool. Their meat is not so good as the *European* mutton, pork being much prefer'd before it here. The sheep have sometimes teats hanging below their throats like some of our hogs, others have such long ears that you may tie them together underneath the throat. Others have tails of 20, 30 or 40 pounds, being one lump of fat, which eats best boil'd. Some have a plain hair like our goats, others a curled wool like our sheep, and are milked like cows.

The goats here are not near so big as the sheep, nor is their flesh so well tasted, tho' the kids in some parts of the *Indies* afford excellent good meat. Some are white, some pyed, and have generally long hair. Others have very long ears, and horns standing upright on the head. In some places they bear three or four young ones at a time: They make cheese of their milk.

The *Bouffles* are bulkier and stronger than an ordinary ox; they have no hair, their flesh is very good, but not so juicy nor so digestible as beef, for which reason it is most used among the slaves, and other labouring people. Their horns lie close to the head; some of them are black, and, when polish'd, are very useful for several things to be made out of them. The tame bouffles are used in the sugar-mills, plough and cart: They guide them by means of a chain drawn through their nostrils: Their milk is accounted very wholesome. The wild bouffles that live in the forests are very fierce, and not easy to be taken.

Many places of the *Indies* afford oxen and cows, the flesh whereof, as well as the milk and butter, are very good; some are red, others white, others pyed, and of several other colours. Some have horns standing upright on the head, others crooked horns like ours; and others long ears hanging downwards: However, the beef is much better in some places than in others. It is generally eaten fresh, because it will scarce take salt well in this hot climate, and is not to be kept above three or four days. They bring a certain kind of oxen from *Suratte* to *Batavia*, not much bigger than a large dog; they look very fierce, notwithstanding which they are used in small carts to draw children, or any other odd thing.

The horses here are of different sorts and colours, some black, others of a che-

1662. nut colour, and others white and grey. The *Javanese* horses are not very tall, but thick and well-set, like the *Norwegian* or *Westphalian* horses, very strong and hardy, but are not near so high-spirited as the *Persian* horses that are transported from *Suratte* to *Batavia*, and excel all the rest in swiftness, courage and beauty. The

Indians carry on their wars for the most part with foot soldiers, and preserve their horses for the draught and travelling.

Thus much of the isle of *Java* and the city of *Batavia*: We will now proceed to give an account of our return into *Holland*.

The author's return into Holland.

Every thing being got ready for our voyage, we weigh'd anchor in the road of *Batavia*, the 17<sup>th</sup> of *December* 1670, and with the land-wind, pass'd betwixt the isles to the south of *Batavia*, situate betwixt the *Ruigenboeck* or *Rough-Point*, and *Karowan*, most of which have borrow'd their names from some places or other in the *United Provinces*; as the *Coopers-Isle*, the *Schiedam*, *Amsterdam*, *Middleburg*, *Purmerent*, *Rotterdam*, the *Pigeon-Island*, the *Harlem*, *Hoorn*, *Enckbuisen*, *Edam*, *Almar*, &c. we came the same evening to an anchor near the isle call'd the *Men-eaters Island*, near which the ship call'd the *South-Pole* struck upon the sands, but got off again. Here a general review being taken of all the persons on board the ships, such as were found to be indebted to the company, were sent back to continue in the

Vol. II.

service 'till they had discharged their debts.

Then we set sail again, and had the 19<sup>th</sup> the point of *Bantam* to the west of us, and *Pulo Paly* to the north; but being becalm'd were forced to come to an anchor at 15 fathom water. The 20<sup>th</sup>, having received some refreshments by the *Golden-Lion* from *Bantam*, we set sail again, but the calm obliged us to come to an anchor again at 15 fathom. The 21<sup>st</sup> we continued our voyage, and had the 23<sup>rd</sup> the point of *Java*, call'd *Krakketou* to the east-south-east, at 23 fathom water. The commodore having, by the usual signal of the white flag, summon'd all the commanders of ships aboard him, to know whether they were provided with what was necessary for so long a voyage; the *Golden-Lion* was sent back, and we had the north point of the *Princes Isle*, west to the north; and the 25<sup>th</sup> the south-point about four leagues from us.

N n n n

About

1662. About noon the commodore went aboard and took a view of all the ships under his command, and in the afternoon set sail again: We met with several fierce but short travadoes or storms, at 7 deg. and 41 min. southern latitude. The 31<sup>st</sup> we had another most violent travado at 9 deg. 54 min. but continued not long.

*Isle of  
Mony.*

The first of January one of our ships crew died, and we got sight of land to the south-east, which we found to be the *isle of Mony*, and that we were 64 leagues to the south-south-west of the *Princes Isle*, being forced thus far to the east by the tide; we were at the latitude of 10 deg. 29 min. The 2<sup>d</sup> we had the said *isle* to the south-east, and found its situation to be 52 min. more to the north than it is placed in the maps. The 3<sup>d</sup>, we were within four leagues of the said island, at 11 deg. 15 min. Hereabouts one of our ships crew was found dead in his cabin. The 6<sup>th</sup> we were at 13 deg. 40 min. and the 9<sup>th</sup> at 14 deg. 17 min. The same day Mr. *Dirk Indiik* died of a long and lingering distemper: As he had been factor and fiscal at *Suratte*, and was accounted very rich, his goods were all sealed up in the presence of the commodore and the other commanders. The next following day we made 32 leagues, and so continued our voyage with a prosperous gale till the 19<sup>th</sup>, when we found our selves at 20 deg. 54 min. of latitude, and at 105 deg. 14 min. longitude. The 26<sup>th</sup> the commodore having by the usual signal summon'd the chief officers aboard him, to adjust the difference in the compasses, and the same being found only 1 degree 33 minutes, no alteration was made therein.

The 2<sup>d</sup> of February we were at the height of 29 deg. overtaken by a most furious tempest, with thunder and lightning from the west, and had frequent travadoes till the 4<sup>th</sup>, and for many days after had very changeable weather, sometimes good, sometimes bad. The 26<sup>th</sup> with break of day we found 112 fathom depth, but saw no land: About noon we found our selves at 35 deg. 17 min. steering our course westward, the weather being very fair, we saw divers whale-fish sporting in the water, and some sea-birds, which together with the colour of the water, was a sufficient sign that we were not very far from land. The next day we found seven fathom water without seeing the land.

*They dis-  
cover land.*

The 28<sup>th</sup> very early in the morning we discovered land to the north-north-west of us, at 45 fathom depth, and the next day after sun-rising at 38, being then within three leagues of the shore, which appeared hilly and white. About noon

we were at 34 deg. 36 min. the weather cold and fair. The first of March we found our selves at 35 deg. and steering our course to the south-east in sight of the land, which was very hilly to the north-east, found 65 fathom depth at night, in sight of a mountainous shore. The 4<sup>th</sup> we still saw land at 48 fathom water, and in the evening at 20.

The 6<sup>th</sup> before sun-set, we saw the famous point of the *Table-Bay* of the *Cape of Good-Hope*, where we cast anchor before the fort, at eight fathom water. Here we met with three ships, viz. the *Crown'd-Peace*, the *Damiata*, and a yacht bound for the *Indies*; and heard the good news that the commodore *Jbrand Gofke* did come to the cape, the last 2<sup>d</sup> of February, and thence continued his voyage with three ships the 24<sup>th</sup> for *Holland*. Our commodore being then sick, he sent one to the commander in chief of the cape, named Mr. *Hakkus*, to notify his arrival, and the next day went ashore himself.

The 8<sup>th</sup> the *Mary Yacht* arrived at the cape from the *isle of Madagascar*, having on board the marquis de *Mondeverguin*, a French governor of *Madagascar*, and the other adjacent places under the French jurisdiction. He was a person of 70 years of age, and of a goodly aspect. He sent word to Mr. *Hakkus*, commander in chief of the cape, that he should be glad to come ashore, provided he might be sure of a reception suitable to his quality: However, he set sail again on a sudden, without coming ashore, perhaps by reason of the rumour that was then already spread abroad of a war betwixt *France* and the *Dutch*.

The same evening the ship called the *Spanbroeck* came into that road from *Ceylon*, with advice, that the *Cingalese* had taken up arms under their king *Radya*, and we were in the mean while not idle to provide our selves with what necessities we could get for the prosecution of our voyage, till the 17<sup>th</sup> of March, when the commodore summoning all the officers aboard him, told them, that he intended to set sail the next Sunday, viz. the 22<sup>d</sup> of March, without staying for the two ships we left behind, and a war betwixt us and the *French* being then much talk'd of, he ordered every body to be upon his guard, and to prepare for a vigorous defence in case of an attack.

The 20<sup>th</sup> was spent in letting the sea-men go ashore in their turn.

The 21<sup>st</sup> the goods of the before-mentioned Mr. *Indyck*, deceased were exposed to publick sale, and 13 diamonds, besides four more of an extraordinary bigness,

1662. with some bezoar-stones, being found concealed in a private pocket in his breeches, the same were sealed up, seized by the commodore as contraband goods, for the use of the company.

The 22<sup>d</sup> after dinner, the commodore having given the signal to sail, to the five ships, the *Peace*, the *Arms of Veer*, the *Count of Breda*, *South-Pole* and *Spanbroeck*, they weighed their anchors, and after sunset were about two leagues and an half from the *Table-Bay*.

The 23<sup>d</sup>, a consultation being held aboard the commodore about regulating the compass, and the same being fix'd to 3 deg. to the west we found our selves that evening at 33 deg. and about 18 leagues to the south-east of the *Table-Mountain*.

From hence we steer'd our course to the isle of *St. Helens*, of which we got sight the 12<sup>th</sup> of April, at 16 deg. 44 min. without any remarkable accident.

The 13<sup>th</sup> with sun-rising we were within five or six leagues of the said isle, when the commodore summoned again all the officers aboard him, in order to consult what course they should take towards the *Ascension* island.

The 24<sup>th</sup> we were at 4 deg. 32 min. and the 27<sup>th</sup> at 16 min. of southern latitude, steering our course north-west to the west with an easterly wind and brisk gale.

The next following day we were at 15 min. of northern latitude; and the 29<sup>th</sup> at 2 deg. 38 min. having been much pestered with sudden storms and travadoes.

The 14<sup>th</sup> of May the 2<sup>nd</sup> gave a signal as if they had seen land, but it proved only a refraction of the sun-beams through the clouds. The sea hereabouts seem'd in the night-time all on fire, a thing usual in hot weather.

The 24<sup>th</sup>, at 25 deg. 29 min. we found our selves in the *Kroos* or *Cross-Sea*, (so called from a kind of water-creffes or ducks-meat that floats in prodigious quantity upon the surface of the water) and the 25<sup>th</sup> finding these sort of herbage encrease, we judg'd our selves to be more eastward than we intended.

The 30<sup>th</sup> at 26 deg. 15 min. our comfortable *Mans Timmer* died, and we were still much pestered with these *Creffes*, which continued the 1<sup>st</sup> and 2<sup>d</sup> of June.

We continued the same course till the 13<sup>th</sup>, when it being agreed to fix the compass 4 deg. more to the west, we took our course north to the east, towards the *Dutch* coast.

The 15<sup>th</sup> being a foggy day, we discharged every hour a mulquet, as a signal to the ships to prevent their being separated from one another.

About midnight the commodore sent for me, and in the presence of the master of the ship, *Henry Span*, the first chirurgion, and the minister, told me, that finding himself very ill, he was resolv'd to make his last will, which he did accordingly, recommending his affairs, and what he had of the companies in his hands, to our care.

About six in the morning he sent for me again, with an intention to make some alterations in his testament, but before the clerk could finish it, he expired, without signing of it. We took care to summon immediately the council of war, where every thing being settled for the prosecution of our voyage, we discovered land the 29<sup>th</sup> to the north-east at 115 fathom water.

The 30<sup>th</sup> we found our selves over against the isle of *Fulo*, and understood by one of their fisher-boats, that the peace continued betwixt *France*, *England* and *Holland*, and that 14 days before, 11 stout ships pass'd that way.

Having provided our selves with some cods, which we bought or exchanged at the rate of two pence a piece, we gave the signal by a cannon shot, to our convoy, which we expected to meet us hereabouts.

The first of July meeting a boat betwixt *Fulo* and *Hiland*, we charged the master thereof with the body of our deceased commodore, in order to his burial in *Hiland*: He had six crowns given him for his pains and charges, with a promise of six more, after we had received certain advice, that he had well discharged his trust. About noon our two convoys, the *Middleburgh* and *Leyden* came up with us, and after the usual salute, brought us fresh orders from the company.

The 2<sup>d</sup> and 3<sup>d</sup> of July, several of our seamen, and among the rest, the quartermaster died of the dropy, an usual distemper to those that return from the *East-Indies*, and many more falling sick daily for want of provisions; the rest were hardly put to it, especially in our ship, which being leaky, four men were continually employed at the pump.

The 5<sup>th</sup> we advanced bravely with a very cold wind and air.

The 6<sup>th</sup> it was fair weather, and we had 18 fathom water.

The 7<sup>th</sup> it proved cold and rainy, at 16 fathom: The same evening the ship called the *Arms Vanter Veer* left us, and soon got out of sight.

The 8<sup>th</sup> of July we got sight of the *Dutch* coast, and the ship *Spanbroeck* having taken its course towards the *Spaniards-Gate*, we were forced to lie by till four in the

1662. the afternoon, when with turning of the tide, we made the *Texel*, where we came to an anchor the same night.

*They arrive in the Texel.*

The 9<sup>th</sup> Mr. *Silvius*, Mr. *Bekker*, and Mr. *Schagen* came aboard us, three directors of the company; who having given the necessary orders for the unloading of our vessels, and taken the diamonds belonging to the company into their custody, discharged the ships crew from their service; and I embark'd in a boat for *Enkhuysen*, and arrived at *Amsterdam* the 11<sup>th</sup>. Count *Maurice of Nassau* happening to pass at the same time through *Amsterdam* in his way over *Zealand* to *Cleves*, he sent for me; and I having shew'd him my ob-

servations and draughts of *Brasil* and the *East-Indies*, he engaged me to meet him the next day again at dinner, at the house of Dr. *William Pijp*, where I took my leave of the said earl, he being just upon his departure.

Some days after I appeared in the assembly of the directors of the company, unto whom having given a satisfactory account of all my transactions, they return'd me thanks; and as a mark of their satisfaction, bestow'd upon me another factor's place; so that accordingly I undertook my third voyage to the *East-Indies*, in the ship called the *Arrow*, before the expiration of the year.

1662.

*Nieuhoff gives an account to the company.*

*The third sea and land voyage of Mr. JOHN NIEUHOFF aboard the Arrow to the isles of Majotte, upon the African coast of Mosambique, extracted from his own journals, and brought over and deliver'd by capt. Reiner Klacson to his brother Henry Nieuhoff.*

MR. John Nieuhoff having embark'd aboard the *Arrow*, they pass'd by the French coast the 18<sup>th</sup> of December, and the 1<sup>st</sup> of Jan. 1672, at 29 deg. by the Canary isles, about three leagues off of *Teneriff*, where they met with the *Lion* bound for the *East-Indies*. They continued their voyage with a prosperous gale, without any remarkable accident; and passing the 4<sup>th</sup> of Feb. the line, and the 16<sup>th</sup> the high islands of John Christian de Akonga at 36 deg. 36 min. southern lat. arriv'd the 8<sup>th</sup> of April within sight of the Cape of Good-Hope, at 33 deg. 30 min. lat. and cast anchor in the Table-Bay the same night. Here they met with seventeen vessels, thirteen of which were bound from the *East-Indies* for Holland, and accordingly set sail the twenty forth. The ship the *Arrow* had aboard her a large chaloop or boat, which being taken to pieces before they left *Amsterdam*, was now set together again, for its more convenient passage along the shore of *Sofala*, *Mosambique* and the island of *Majotte*.

*They come to the Cape of Good-Hope.*

*They leave the Cape of Good-Hope.*

In this chaloop (unto which they gave the name of the *Bow*) they embark'd, and in company of the *Arrow* and another small vessel called the *Goldfinch*, bound for the isle of *St. Maurice*, having aboard Mr. *Huigens*, governor of that isle, set sail

the 30<sup>th</sup> of April. The 6<sup>th</sup> of June being at 36 deg. 3 min. latitude, the *Goldfinch* steer'd her course towards *St. Maurice*, leaving the *Bow* and *Arrow* to prosecute their voyage towards the isle of *Madagascar*, which they got first sight of the 20<sup>th</sup>. They kept along the coast which was high and rocky, and near a large point of land found 20 fathom water at a league distance from the shore, and near it a long sand-bank. They were then at 24 deg. and being, by reason of the land wind, obliged to advance sometimes nearer the shore, sometimes to keep off at sea; they at last cast anchor at 30 fathom, whereas three leagues from the shore, they could find no bottom. The *Bow* afterwards follow'd the *Arrow*, but kept closer to the shore.

The twenty second they discover'd a small isle not above half a league from the shore, where the *Arrow* cast her anchor at 17 fathom; they went a fishing, and brought back along with them two canoes belonging to the inhabitants, loaden with coco-nuts and water-limons. The *Bow* being failed before, and come to an anchor in the bay of *St. Austen* near a small isle, the *Arrow* followed her thither, and found at the mouth of the river two white points of land jetting out into the sea.

1672. The inhabitants brought some fruits aboard us, and Mr. *Hugo* and Mr. *Nieuboff* went ashore the next day, to see whether they could traffick with them, but could only exchange a few slaves with them; however Mr. *Nieuboff* catch'd abundance of fish at the mouth of the river.

The second of *July* the *Bow* sail'd within the mouth of the river to refit, having received some damage; they endeavour'd to catch some *Tortoisés* but could not take any: About noon the captain of the *Madagascariens* came aboard us to exchange some slaves; and the seventh the *Bow* in which was Mr. *Nieuboff*, and the *Arrow* separated, the first some leagues to the north, but were to meet again at the island of *Majotte*.

The 14<sup>th</sup> the *Bow* after 17 leagues sail was at 16 deg. 56 min. latitude within sight of the continent of *Mosambique*, and at 3 leagues distance from the shore, found 100 fathom water near a sand-bank: The next day they came within 1½ league off of the isle of *Paimibris*.

The 18<sup>th</sup> at 16 deg. 15 min. they saw white downs, and in the evening cast anchor near a sand-bank at 18 fathom, whereas at the stern of the ship there were at least 60 fathoms. The 20<sup>th</sup> they pass'd by a large bay, cover'd with a great sand-bank, which at low water has six fathom water. The 22<sup>d</sup> they pass'd betwixt the southern islands of *Mosambique*, named *St. James* and *St. Joris*, where coming to an anchor at nine fathom, they met here with a stout *Portuguese* ship at anchor behind the fort, having aboard the governor of *Goa* lately come from *Portugal* with three lesser vessels. The *Arrow* coming likewise afterwards to an anchor here, divers *Portuguese* officers came aboard us, to buy certain commodities, and about the same time three other *Portuguese* ships, one of which had the governor of *Mosambique* aboard her, arriv'd here from *Sojola*. It prov'd a very tempestuous day.

The first of *August* the *Bow* and *Arrow* set sail again, steering their course eastward to the isles of *Madagascar* and *Majeleyn*. The 10<sup>th</sup> they got sight of the shore of *Madagascar* at 15 deg. 53 min. and about half a league from a round mountain cast anchor at ten fathom water. The *Bow* entred the river, and discovered two boats with masts, and divers canoes, but could not come up with them. As the wind hereabout turns every 24 hours thro' all the points of the compass, so it is easy sailing along this coast. The 12<sup>th</sup> Mr. *Nieuboff* in the *Bow* sail'd towards the isles of *Makandari* and *Magelagie*, taking a *Madagascarian* slave along with him.

The 15<sup>th</sup> the *Bow* and *Arrow* met again,

but had not been able to traffick much: 1672.

They saw nine boats with four square sails pass in sight of them, and in a small river met with another boat, that furnish'd them with eight pullets, and told them, that farther to the north they might meet with fresh provisions enough. So they set sail again, and after five days came to a large bay, where they cast anchor at seven fathom. Here they were told, that it was a plentiful coast, and that *Magelagie* and the islands of *Makandari* were farther to the east. The 22<sup>d</sup> they came within a league of an island, where they cast anchor at 11 fathom. The 24<sup>th</sup> Mr. *Nieuboff* sail'd in the *Bow* up the river *Magelagie* and returning the 26<sup>th</sup> reported, that this was the river upon which *Magelagie* stood, a populous and plentiful place; that he had seen there an *English* ship, that had bought slaves there to be carried to *Barbadoes*, besides several other *Moorish* vessels trading in slaves. Hereupon Mr. *Hugo* and Mr. *Nieuboff* went thither, and return'd the 30<sup>th</sup>.

About two leagues into the country you see a high ridge of land. The 31<sup>st</sup> Mr. *Nieuboff* carried certain commodities ashore, but could not agree about the exchange, the inhabitants offering very little, and holding their slaves at sixteen crowns a piece: however the second of *September* Mr. *Hugo* and Mr. *Nieuboff* went ashore with some cloves, for which the king had offered some money before, but return'd unsuccessful, and the *Madagascariens* (a very malicious generation) having besides this spoil'd the ponds where we used to fetch our fresh water, they set sail again for the river *Marigande*, where they cast anchor the ninth on the east-side of the cape, and met with good fresh water on the west-side of the bay. Mr. *Hugo* and Mr. *Nieuboff* had the good fortune to exchange some of their commodities with the king of the place, and brought back 22 slaves, 13 cows, some sheep and other provisions, of which they stood in great want. The 22<sup>d</sup> it being resolv'd to sail 36 or 40 leagues farther to the North; Mr. *Nieuboff* sail'd before with the *Bow* to discover the lands and rocks, and came into the *Young Man's Bay*, where there is 10, 12 and 15 fathom water. Hence continuing their voyage, they came the 27<sup>th</sup> about noon to the point or cape of *Parmira* near one of the five islands at 13 deg. 13 min. The 29<sup>th</sup> they were near the cape of *Konquijo*, where they saw some fisher boats. The middlemost of these islands is a high, steep and unaccessible rock, which may be discovered a great way at sea. Some of the fishermen having shew'd them where their king kept his court, Mr. *Nieuboff* set sail thither in the *Bow*, leaving the

0000

Arrow

1672. *Arrow* in the bay, and in company with the ships mate, and some few seamen went ashore, in hopes to exchange some of his commodities; but on the 7<sup>th</sup> the *Arrow* was much surprized to see the *Bow* making towards them, and with two cannon shot to give the signal of distress. They sent out their boat to meet them, which returning with the master of the *Bow*, gave an account, that Mr. Nieuhoff being gone ashore with some of the company in the bay of *Antegoa*, or *Ant Ofy Sambo*, by some styled the *Murderers Bay*, to traffick, was not returned, and that therefore the *Bow*, after a stay of three whole days, had weighed her anchors, and set sail again without them. It was concluded on all hands, that the *Bow* ought to return thither, but Mr. Hugo alledged that having at first no more than six months provisions, they would be in great danger of being starved, if they tarried any longer here, he insisted upon returning to the cape first, which they did accordingly, and set sail the same afternoon at 25 and 30, and again at 20 and 25 fathom water. In the evening they pass'd near a great sand-bank south to the west, and north to the east, of the biggest of the three islands near the cape of *Koaquis*, about three leagues from the said isle, and the northern point and the great isle of *Nausby*.

This was the end of Mr. John Nieuhoff, who had spent so many years in viewing the *West* and *East-Indies*, and consequently deserved a better fortune. What Hugo alledged, concerning their scarcity of provisions, was indeed true enough; but on the other hand, it is unquestionable, they needed not to have bestow'd much time in looking after him. The *Bow* and *Arrow* prosecuted their voyage, and on the 8<sup>th</sup> found themselves at 12 deg. 40 min. latitude, having the west cape of *St. Sebastian*

1671. six leagues to the north-east. The next following day they came in sight of a small isle full of trees, about three leagues from the cape of *St. Sebastian*, near which place being toss'd to and fro by tempests and contrary winds, they were reduced to that extremity, that they were forced to live upon a spoonful of rice 24 hours: So that after having suffer'd a great deal of misery, and the loss of many of their men, both the *Bow* and *Arrow* return'd to the Cape of *Good-Hope* the 17<sup>th</sup> of December, where Mr. Hugo met but with an indifferent reception, and the master of the *Bow* was cashier'd for having not tarried longer near the place where Mr. Nieuhoff went ashore. The first of Jan. 1673, the *Bow* and *Arrow* being provided with sufficient provisions, set sail again, the first for the bay where they had left Mr. Nieuhoff, the second for the isle of *St. Maurice*, whither she was to carry Mr. Hugo. After their parting at sea, no news was heard of the *Bow* for a long time after, till at last it was discovered that the ships crew mutinied and sold the vessel to the *French* at *Mosambique*; so that it remains uncertain, whether any of them had any intelligence concerning Mr. Nieuhoff. At the request of his brother, Mr. Henry Nieuhoff, the directors of the chamber of *Amsterdam* dispatch'd, the 2<sup>d</sup> of May 1676, the yacht called the *Voorhout* from the Cape of *Good-Hope* to the place where Mr. Nieuhoff went ashore; which returning to the said cape the 20<sup>th</sup> of September with 250 slaves, brought no farther account than that they had seen the king of the place, and that he had declared to them, that he knew nothing of the matter; so that it is very probable that Mr. Nieuhoff and his company were at their first landing massacred by the barbarous inhabitants.

THE

To the RIGHT HONOURABLE

**WILLIAM** Earl of **PEMBROKE**,

Lord Steward of his Majesty's most Honourable Household;

**ROBERT** Earl of **LINDSEY**,

Great Chamberlain of ENGLAND;

**HENRY** Lord **HUNSDON**,

Viscount **ROCHFORD**, Earl of **DOVER**;

AND

All your HONOURABLE FRIENDS and WELL-WILLERS.

MY LORDS,

**S**IR *Robert Cotton*, that most learned treasurer of antiquity, having by perusal of my general history, and others, found that I had likewise undergone divers other as hard hazards in the other parts of the world, requested me to fix the whole course of my passages in a book by it self; whose noble desire I could not but in part satisfy; the rather, because they have acted my fatal tragedies upon the stage, and rack'd my relations at their pleasure. To prevent therefore all future misprisions, I have compiled this true discourse. Envy hath taxed me to have writ too much, and done too little; but that such should know how little I esteem them, I have writ this, more for the satisfaction of my friends, and all generous and well disposed readers. To speak only of my self were intolerable ingratitude; because, having had so many co-partners with me, I cannot make a monument for my self, and leave them unburied in the fields, whose lives begot me the title of a soldier; for as they were companions with me in my dangers, so shall they be partakers with me in this tomb.

For my *Sea-Grammar* (caused to be printed by my worthy friend Sir *Samuel Saltonstall*) hath found such good entertainment abroad, that I have been importuned by many noble persons, to let this also pass the press. Many of the most eminent warriors, and others, what their swords did, their pens writ: Though I be never so much their inferior, yet I hold it no great error to follow good examples; nor repine at them will do the like.

And now, *My most Honourable good Lords*, I know not to whom I may better present it, than to your lordships, whose friendships, as I conceive, are as much to each others, as my duty is to you all; and because you are acquainted both with my endeavours and writings, I doubt not, but your honours will as well accept of this, as of the rest, and patronize it under the shadow of your most noble virtues, which I am ever bound in all duty to reverence, and under which I hope to have shelter against all storms that dare threaten.

5

Your Honours to be commanded,

JOHN SMITH.

 OF  
 Captain *JOHN SMITH.*

## CHAP. I

*His Birth; Apprenticeship, going into France; his beginning with ten shillings and three pence; his service in the Netherlands; his bad passage into Scotland; his return to Willoughby, and how he lived in the woods.*

**H**E was born in *Willoughby* in *Lincolnshire*, and a scholar in the two free-schools of *Alford* and *Louth*. His father anciently descended from the ancient *Smiths* of *Crudley* in *Lincolnshire*; his mother from the *Rickands* at *Great-Heck* in *Yorkshire*. His parents dying when he was about thirteen years of age, left him a competent means, which he not being capable to manage, little regarded, his mind being even then set upon brave adventures, sold his satchel, books, and all he had, intending secretly to get to sea, but that his father's death stay'd him. But now the guardians of his estate more regarding it than him, he had liberty enough, though no means, to get beyond the sea. About the age of fifteen years, he was bound an apprentice to *Mr. Thomas Sendall* of *Lyn*, the greatest merchant of all those parts; but because he would not presently send him to sea, he never saw his master in eight years after. At last he found means to attend *Mr. Peregrine Bertie* into *France*, second son to the right honourable *Peregrine*, that generous lord *Willoughby*, and famous soldier; where coming to his brother *Robert*, then at *Or-*

VOL. II.

*leans*, now Earl of *Lindsey*, and lord great chamberlain of *England*, being then but little youths under tutorage: His service being needful, within a month or six weeks they sent him back again to his friends, who when he came from *London*, they liberally gave him (but out of his own estate) ten shillings to be rid of him; such oft is the share of fatherless children: But those two honourable brethren gave him sufficient to return for *England*. But it was the least thought of his determination, for now being freely at liberty in *Paris*, growing acquainted with one *Mr. David Hume*, who making some use of his purse, gave him letters to his friends in *Scotland* to prefer him to king *James*. Arriving at *Roan*, he better bethinks himself, seeing his money near spent, down the river he went to *Harver de Grace*, where he first began to learn the life of a soldier. Peace being concluded in *France*, he went with captain *Joseph Duxbury* into the *Low-Countries*, under whose colours having served three or four years, he took his journey for *Scotland*, to deliver his letters. At *Ancusan* he embark'd himself for *Letbe*, but as much danger, as shipwreck and sickness could endure, he

P p p p

had

SMITH.

had at the holy isle in *Northumberland* near *Berwick*. Being recovered, into *Scotland* he went to deliver his letters. After much kind usage among those honest *Scots* at *Ripswich* and *Bromwich*, but neither money nor means to make him a cottier, he returned to *Willoughby* in *Lincolnshire*; where within a short time, being glutted with too much company, wherein he took small delight, he retired himself into a little woody pasture, a good way from any town, invironed with many hundred acres of other woods: Here by a fair brook he built a pavillion of boughs, where only in his clothes he lay. His study was *Machiavil's*

*Art of War*, and *Marcus Aurelius*; his exercise a good horse, with his lance and ring; his food was thought to be more of venison than any thing else; what he wanted his man brought him. The country wondering at such an hermit, his friends persuaded one *Seignior Theodora Polaboga*, rider to *Henry Earl of Lincoln*, an excellent horseman, and a noble *Italian* gentleman, to insinuate into his woodish acquaintance, whose language and good discourse, and exercise of riding drew him to stay with him at *Tatterfall*. Long these pleasures could not content him, but he returned again to the *Low-Countries*.

## CHAP. II.

*The notable villany of four French gallants, and his revenge; Smith thrown overboard; Captain La Roche of St. Malo relieves him.*

*A notable villany of four French gallants*

THUS when *France* and the *Netherlands* had taught him to ride a horse, and use his arms, with such rudiments of war, as his tender years in those martial schools could attain unto; he was desirous to see more of the world, and try his fortune against the *Turks*, both repenting and lamenting to have seen so many christians slaughter one another. Opportunity casting him into the company of four French gallants well attended, fawning to him the one to be a great lord, the rest his gentlemen, and that they were all devoted that way; over-persuaded him to go with them into *France*, to the duchess of *Merceur*, from whom they should not only have means, but also letters of favour to her noble duke, then general for the emperor *Rodulphus* in *Hungary*; which he did, with such ill weather as winter affordeth; in the dark night they arrived in the broad shallow inlet of *St. Valleries sur Soame* in *Picardy*: His French lord knowing he had good apparel, and better furnished with money than themselves, so plotted with the master of the ship, to set his and their own trunks ashore, leaving *Smith* aboard till the boat could return, which was the next day after, towards evening: The reason he alledged was, the sea went so high he could come no sooner, and that his lord was gone to *Amiens*, where they would stay his coming; which treacherous villany, when divers other foldiers and passengers understood, they had like to have slain the master, and had they known how, would have run away with the ship.

*A curialue was forced to sell his cloak to pay for his passage. One of the foldiers, called*

Coming on shore he had but one curialue, was forced to sell his cloak to pay for his passage. One of the foldiers, called

*Curzianvere*, compassionating his injury, assured him that this great lord *Dupreau* was only the son of a lawyer of *Mortagne* in base *Britany*, and his attendants *Curjell*, *La Nelie* and *Monferrai*, three young citizens, as arrant cheats as himself; but if he would accompany him, he would bring him to their friends, but in the interim supplied his wants: Thus travelling by *Diepe*, *Cadebeck*, *Humpbla*, *Pount-demer* in *Normandy*, they came to *Caen* in base *Normandy*; where both this noble *Curzianvere*, and the great prior of the great abbey of *St. Stephen* (where is the ruinous tomb of *William the Conqueror*) and many other of his friends kindly welcomed him, and brought him to *Mortagne*, where he found *Dupreau* and the rest, but to small purpose; for Mr. *Curzianvere* was a banished man, and durst not be seen but to his friends; yet the bruit of their cozenage occasioned the lady *Collumber*, the baron *Larshan*, the lord *Sbalghe*, and divers other honourable persons, to supply his wants, and with them to recreate himself so long as he would: But such pleasant pleasures suited little with his poor estate, and his restless spirit, that could never find content to receive such noble favours, as he could neither deserve nor requite: But wandering from port to port to find some man of war, spent that he had, and in a forest, near dead with grief and cold, a rich farmer found him by a fair fountain under a tree: This kind peasant relieved him again to his content, to follow his intent. Not long after, as he passed thorough a great grove of trees, between *Pountersan* and *Dina* in *Britany*, it was his chance to meet *Curjell*, more miserable than himself: His piercing injuries had so small patience,

*Here he encountered one of the thieves.*

*The nobility of the Earl of Plover.*

*As when man all of the precincts in using him overheard.*

*A ship-rail sea-fight.*

*Here he encountered one of the thieves.*

as without any word they both drew, and in a short time Curjell fell to the ground, where, from an old ruinated tower, the inhabitants seeing them, were satisfied, when they heard Curjell confes what had formerly passed; and that how, in the dividing that they had stolen from him, they fell by the ears amongst themselves, that were actors in it; but for his part, he excused himself to be innocent as well of the one, as of the other. In regard of his hurt, Smith was glad to be so rid of him, directing his course to an honourable lord, the earl of Plover, who during the war in France, with his two brethren, viscount Poomory, and Baron de Mercy, who had been brought up in England; by him he was better refurnished than ever. When they had shewed him St. Malo mount, St. Michael, Lambal, Simbreack, Lanion, and their own fair castle of Tuncadeck, Gingan, and divers other places in Britany (and their British Cornwails) taking his leave, he took his way to Raynes, the Britains chief city, and so to Nants, Poyters, Rochel and Bourdeaux. The rumour of the strength of Bayon in Bisky, caused him to see it; and from thence took his way from Leskar in Bicarne and Paw in the kingdom of Navarre to Tolouza in Gascoigne, Bezors and Carcassone, Narbone, Montpellier, Nimes in Languedock, and thorow the country of Avignon, by Arles to Marfilles in Provence, there imbarcking himself for Italy; the ship was enforced to Tolonne, and putting again to sea, ill weather so grew upon them, that they anchored close about the shore, under the little isle of St. Mary, against Nice in Savoy. Here the inhuman provincials, with a rabble of pilgrims

of divers nations going to Rome, hourly cursed him, not only for a hugonot, but his nation they swore were all pirates, and so vilely railed on his dread sovereign queen Elizabeth, and that they never should have fair weather so long as he was aboard them; their disputations grew to that passion, that they threw him over-board, yet God brought him to that little isle, where was no inhabitants, but a few kine and goats. The next morning he espied two ships more riding by them, put in by the storm, that fetched him aboard, well refreshed him, and so kindly used him, that he was well contented to try the rest of his fortune with them. After he had related unto them his former discourse, what for pity, and the love of the honourable earl of Plover, this noble Britain his neighbour, captain La Roche of St. Malo, regarded and entertained him for his well respected friend. With the next fair wind, there sailed along by the coast of Corsica and Sardinia, and crossing the Gulf of Tunis, passed by cape Bona to the isle of Lampadosa, leaving the coast of Barbary till they came at cape Rosuta, and so along the African shore for Alexandria in Egypt. There delivering their freight, they went to Scandaroone, rather to view what ships were in the road, than any thing else; keeping their course by Cypres and the coast of Asia, sailing by Rhodes, the Archipelagus, Candia and the coast of Græcia, and the isle of Zefolonia. They lay to and again a few days, betwixt the isle of Corfu, and the cape of Otranto, in the kingdom of Naples, in the entrance of the Adriatick sea.

Capt. La  
Roche re-  
lieves him.

### CHAP. III.

*A desperate sea-fight in the Streights; his passage to Rome, Naples, and the view of Italy.*

A despe-  
rate sea-  
fight.

BETWIXT the two capes they met with an *Argosie* of Venice; it seemed the captain desired to speak with them, whose untoward answer was such, as flew them a man; whereupon the *Britaine* presently gave them the broad-side, then his stern, and his other broad-side also, and continued the chase, with his chase-pieces, till he gave them so many broad-sides one after another, that the *Argosie* sails and tackling was so torn, she stood to her defence, and made shot for shot; twice in one hour and a half the *Britaine* boarded her, yet they cleared themselves; but clapping her aboard again, the *Argosie* fired him, which with much danger to them both was presently

quenched. This rather augmented the *Britaine's* rage, than abated his courage; for having reaccommodated himself again, shot her so oft betwixt wind and water, she was ready to sink, then they yielded; the *Britaine* lost fifteen men, the twenty, besides divers were hurt, the rest went to work on all hands; some to stop the leaks, others to guard the prisoner that were chained, the rest to rifle her. The silks, velvets, cloth of gold and tissue, pifters, chicqueens and sultanies, which is gold and silver, they unloaded in four and twenty hours, was wonderful, whereof having sufficient, and tired with toil, they cast her off with her company, with as much

much

much good merchandize as would have freighted such another *Britaine*, that was but two hundred tons, the four or five hundred.

To repair his defects he stood for the coast of *Calabria*; but hearing there was six or seven galleys at *Messina*, he departed thence for *Malta*; but the wind coming fair, he kept his course along the coast of the Kingdom of *Sicilia*, by *Sardinia* and *Corfica*, till he came to the road of *Antibo* in *Peamon*, where the set *Smith* on shore with five hundred chicqueens, and a little box God sent him, worth near as much more. Here he left this noble *Britaine*, and embarked himself for *Legborn*, being glad to have such opportunity and means to better his experience by the view of *Italy*; and having passed *Tuskany* and the country of *Siena*, where he found his dear Friends, the two honourable brethren, the lord *Willoughby* and his brother cruelly wounded in a desperate fray, yet to their exceeding great honour. Then to *Viterbo* and many other cities he came to *Rome*, where it was his chance to see pope *Clement VIII.* with many cardinals, creep up the holy-stairs, which they say, are those our saviour *Christ* went up to *Pontius Pilate*, where blood falling from his head, being prick'd with his crown of Thorns, the drops are marked with nails of steel, upon them none dare go but in that manner, saying so many *Ave-Maries* and *Pater-Nosters*, as is their devotion, and to kiss the nails of steel: But on each side is a pair of such like stairs, upon which you may go, stand, or kneel, but divided from the holy-stairs

The popes

by two walls: Right against them is a chapel, where hangs a great silver lamp, which burneth continually, yet they say the oil neither increaseth nor diminisheth. A little distant is the ancient church of *St. John de Lateran*, where he saw him say mass, which commonly he doth upon some *Friday* once a month. Having saluted father *Parsons*, that famous *English* jesuit, and satisfied himself with the rarities of *Rome*, he went down the river *Tiber* to *Civita Vecchia*, where he embark'd himself, to satisfy his eye with the fair city of *Naples*, and her kingdom's nobility; returning by *Capua*, *Rome*, and *Siena*, he passed by that admired city of *Florence*, the cities and countreys of *Bolonia*, *Ferrara*, *Mantua*, *Padua* and *Venice*, whose gulf he passed from *Malamoco* and the *Adriatick-Sea* for *Ragouza*, spending some time to see that barren, broken coast of *Albania* and *Dalmatia*, to *Capo de Istria*, travelling the main of poor *Slavonia* by *Lubbiano*, till he came to *Grates* in *Styria*, the seat of *Ferdinando*, archduke of *Austria*, now Emperor of *Almania*, where he met an *Englishman* and an *Irisb* jesuit, who acquainted him with many brave gentlemen of good quality, especially with the lord *Eversbaugbt*, with whom, trying such conclusions, as he projected to undertake, preferred him to baron *Kijell*, general of the artillery, and he to a worthy colonel, the earl of *Meldrich*, with whom, going to *Vienna* in *Austria*, under whose regiment, in what service, and how he spent his time, this ensuing discourse will declare.

#### CHAP. IV.

*The siege of Olumpagh; an excellent stratagem by Smith; another not much worse.*

The siege  
of Olum-  
pagh.

AFTER the loss of *Caniza*, the *Turks* with twenty thousand besieged the strong town of *Olumpagh* so straitly, as they were cut off from all intelligence and hope of succour, till *John Smith*, this *English* gentleman, acquainted baron *Kijell*, generall of the archdukes artillery, he had taught the governor, his worthy friend, such a rule, that he would undertake to make him know any thing he intended, and have his answer, would they bring him but to some place where he might make the flame of a torch seen to the town; *Kijell* inflamed with this strange invention, *Smith* made it so plain, that forthwith he gave him guides, who in the dark night brought him to a mountain, where he shewed three torches equidistant

from the other, which plainly appearing to the town, the governor presently apprehended, and answered again with three other fires in like manner; each knowing the others being and intent; *Smith*, though distant seven miles, signified to him these Words: *On Thursday at night I will charge on the east, at the alarm salley you; Eversbaugbt* answered, *he would*, and thus it was done: First he writ his message as brief, you see, as could be, then divided the alphabet into two parts thus,

An excel-  
lent phra-  
feign.

The first part from *a*. to *l* is fignified by fhewing and hiding one link, fo oft as there is letters from *A* to that letter you mean; the other part from *m* to *z*, is mentioned by two lights in like manner. The end of a word is fignified by fhewing of three lights, ever itaying your light at that letter you mean, till the other may write it in a paper, and anfwer by his fignal, which is one light, it is done, beginning to count the letters by the lights, every time from *A* to *m*; by this means alfo the other returned his anfwer, whereby each did underftand other. The guides all this time having well viewed the camp, returned to *Kijell*; who doubting of his power, being but ten thoufand, was animated by the guides, how the *Turks* were fo divided by the river in two parts, they could not eafily fecond each other. To which *Smith* added this conclufion; that two or three thoufand pieces of match faftened to divers fmall lines of an hundred fathom in length, being armed with powder, might all be fired and fretch'd at an inftant before the alarm, upon the plain of *Hjynaburg*, fupported by two ftaves, at

Another  
fratagem.

each lines end, in that manner would feem like fo many mufketeers; which was put in practice, and being difcovered by the *Turks*, they prepared to encounter thefe falfe fires, thinking there had been fome great army; whilst *Kijell* with his ten thoufand being enter'd the *Turks* quarters, who ran up and down as men amazed, it was not long ere *Eberfbaught* was pell-mell with them in their trenches; in which diftracted confufion, a third part of the *Turks* that befieged that fide towards *Knoufbruck*, were flain, many of the reft drowned, but all fled. The other part of the army was fo bufied to refift the falfe fires that *Kijell* before the morning put two thoufand good foldiers in the town, and with fmall lofs was retired; the garrifon was well relieved with what they found in the *Turks* quarters, which caufed the *Turks* to raife their fieve and return to *Canizza*; and *Kijell* with much honour was received at *Kerment*, and occafioned the author a good reward and preferment, to be captain of two hundred and fifty horfemen, under the conduct of colonel *Volto* earl of *Meldritch*.

## CHAP. V.

*The fieve of Stoll-weiffenburg; the effects of Smith's fire-work; a worthy exploit of earl Rofworme; earl Meldritch takes the bafhaw prifoner.*

A General rumour of a general peace, now fpread it felf over all the face of thofe tormented countries; but the *Turk* intended no fuch matter, but levied foldiers from all parts he could. The emperor alfo, by the affiftance of the christian princes, provided three armies, the one led by the archduke *Matthias*, the emperor's brother, and his lieutenant duke *Merceur* to defend *Low-Hungary*; the fecond by *Ferdinando* the archduke of *Styria*, and the duke of *Mantua* his lieutenant to regain *Canizza*; the third by *Gonzago*, governor of *Higb-Hungary*, to join with *Georgio Bufca* to make an abfolute conqueft of *Transilvania*.

Duke *Merceur* with an army of thirty thoufand, whereof near ten thoufand were *French*, befieged *Stoll-weiffenburg*, otherwife called *Alba Regalis*, a place fo ftrong by art and nature, that it was thought impregnable. At his firft coming, the *Turks* filled upon the *German* quarter, flew near five hundred, and returned before they were thought on. The next night in like manner they did near as much to the *Bemers* and *Hungarians*; of which fortune ftill prefuming, thinking to have found the *French*

The Siege

Regalis.

quarter as carelefs, eight or nine hundred of them were cut in pieces and taken prifoners. In this encounter monfieur *Grand-vile*, a brave *French* colonel, received feven or eight cruel wounds, yet followed the enemy to the ports, he came off alive, but within three or four days died.

Earl *Meldritch*, by the information of three or four christians (efcaped out of the town) upon every alarm, where there were greateft afsemblies and throng of people, caufed captain *Smith* to put in practice his fiery dragons he had demonftrated unto him, and the earl *Van Suleb* at *Comora*, which he thus performed: Having prepared forty or fifty round-bellied earthen pots, and filled them with hand gun-powder, then covered them with pitch, mingled with brimftone and turpentine, and quartering as many mufket-bullets, that hung together, but only at the center of the divifion, fluck them round in the mixture about the pots, and covered them again with the fame mixture; over that a ftrong fcarcloth, then over all, a good thicknefs of towze-match, well tempered with oil of linfeed, camphire and powder of brimftone: Thefe he fity placed in flings, graduated fo near as

they could to the places of these assemblies. At mid-night upon the alarm, it was a fearful sight to see the short flaming course of their flight in the air, but presently after their fall, the lamentable noise of the miserable slaughtered *Turks* was most wonderful to hear: Besides, they had fired that suburb at the port of *Buda* in two or three places, which so troubled the *Turks* to quench, that had there been any means to have assaulted them, they could hardly have resisted the fire and their enemies. The earl *Rosworme*, contrary to the opinion of all men, would needs undertake to find means to surprize the segeth and suburb of the city, strongly defended by a muddy lake, which was thought unpassable.

*A worthy exploit of earl Rosworme.*

The duke having planted his ordnance, battered the other side, whilst *Rosworme* in the dark night, with every man a bundle of fedge and bavons still thrown before them, so laded up the lake, as they surprized that unregarded suburb before they were discovered: Upon which unexpected alarm, the *Turks* fled into the city; and the other sub-

urb not knowing the matter, got into the city also, leaving their suburb for the duke, who, with no great resistance took it, with many pieces of ordnance; the city being of no such strength as the suburbs, with their own ordnance was so battered, that it was taken by force, with such a merciless execution, as was most pitiful to behold. The *Bashaw* notwithstanding, drew together a party of five hundred before his own palace, where he intended to die; but seeing most of his men slain before him, by the valiant captain, earl *Meldritch*, who took him prisoner with his own hands; and with the hazard of himself saved him from the fury of other troops, that did pull down his palace, and would have rent him in pieces, had he not been thus preserved. The duke thought his victory much honoured with such a prisoner; took order he should be used like a prince, and with all expedition gave charge presently to repair the breaches, and the ruins of this famous city, that had been in the possession of the *Turks* near threelcore years.

*Earl Meldritch takes the Bashaw prisoner.*

## CHAP. VI.

*A brave encounter of the Turks army with the christians; duke Merceur overthroweth Asian Bashaw; he divides the christian army; his noblenes and death.*

**M**Avomet the great *Turk*, during the siege, had raised an army of sixty thousand men to have relieved it; but hearing it was lost, he sent *Asian* bashaw, general of his army, the bashaw of *Buda*, bashaw *Amaroz*, to see if it were possible to regain it: The duke understanding there could be no great experience in such a new levied army as *Asian* had, having put a strong garrison into it, and with the brave colonel *Rosworme*, *Culnits*, *Meldritch*, the *Rhine-Grave*, *Vaban* and many others, with twenty thousand good soldiers, set forward to meet the *Turk* in the plains of *Girk*. Those two armies encountered as they marched, where began a hot and bloody skirmish betwixt them, regiment against regiment, as they came in order, till the night parted them: Here earl *Meldritch* was so invironed among those half circular regiments of *Turks*, they supposed him their prisoner, and his regiment lost; but his two most courageous friends, *Vaban* and *Culnits*, made such a passage amongst them, that it was a terror to see how horse and man lay sprawling and tumbling, some one way, some another on the ground. The earl there at that time made his valour shine more bright than his armour, which seemed then paint-

*A brave encounter of the Turks army with the christians.*

ed with *Turkish* blood; he slew the brave *Zanzack Bugola*, and made his passage to his friends, but near half his regiment was slain. Captain *Smith* had his horse slain under him, and himself fore wounded; but he was not long unmounted, for there was choice enough of horses that wanted masters. The *Turk* thinking the victory sure against the duke, whose army, by the siege and the garrison he had left behind him, was much weaken'd, would not be content with one, but he would have all; and left the duke should return to *Alba Regalis*, he sent that night twenty thousand to besiege the city, assuring them, he would keep the duke or any other from relieving them. Two or three days they lay each by other, entrenching themselves; the *Turks* during the duke daily to a set battle, who at length drew out his army, led by the *Rhine-Grave*, *Culnits* and *Meldritch*, who upon their first encounter, charged with that resolute and valiant courage, as disordered not only the foremost squadrons of the *Turks*, but enforced all the whole army to retire to the camp, with the loss of five or six thousand, with the bashaw of *Buda*, and four or five zanzacks, with divers other great commanders, two hundred prisoners, and nine pieces

of ordnance. At that instant appeared, as it were another army coming out of a valley over a plain hill, that caufed the duke at that time to be contented, and to retire to his trenches, which gave time to *Affan*, to reorder his difordered fquadrons: Here they lay nine or ten days, and more fupplies repaired to them, expecting to try the event in a fet battle; but the foldiers on both parties, by reafon of their great wants, and approach of winter, grew fo difcontented, that they were ready of themfelves to break up the leager; the bafhaw retiring himfelf to *Buda*, had fome of the rear troops cut off. *Amaroz* bafhaw hearing of this, found fuch bad welcome at *Alba Regalis*, and the town fo ftrongly repaired with fo brave a garrifon, raifed his fiefge, and retired to *Zigetum*.

The duke underftanding that the archduke *Ferdinando* had fo refolutely befieged *Caniza*, as what by the lofs of *Alba Regalis*, and the *Turks* retreat to *Buda*, being void of hope of any relief, doubted not, but it would become again the chriftians. To the

furtherance whereof, the duke divided his army into three parts. The earl of *Rofworme* went with feven thoufand to *Caniza*; the earl of *Meldritch* with fix thoufand he lent to affift *Georgio Bufca* againft the *Transilvanians*, the reft went with himfelf to the garrifons of *Strigonium* and *Komara*; having thus worthily behaved himfelf, he arrived at *Vienna*, where the archdukes and the nobility with as much honour received him, as if he had conquered all *Hungaria*; his very picture they efteemed would make them fortunate, which thoufands kept as curioufly as a precious relique. To requite this honour, preparing himfelf to return into *France*, to raife new forces againft the next year, with the two archdukes, *Matthias* and *Maximilian*, and divers others of the nobility, was with great magnificence conducted to *Nurenburg*, there by them royally feafted, (how it chanced is not known,) but the next morning he was found dead, and his brother-in-law died two days after; whole hearts, after this great triumph, with much sorrow were carried into *France*.

*Duke Merceur divides his army.*

*Duke Merceur and his Brother-in-law die fuddenly.*

Caniza.*

THE worthy lord *Rofworme* had not a worfe journey to the miferable fiefge of *Caniza*, (where by the extremity of an extraordinary continuing tempeft of hail, wind, froft and fnow, the chriftians were forced to leave their tents and artillery, and what they had, it being fo cold, that three or four hundred of them were frozen to death in a night, and two or three thoufand loft in that miferable flight in the fnowy tempeft, though they did know no enemy at all to follow them,) than the noble earl of *Meldritch* had to *Transilvania*, where hearing of the death of *Michael*, and the brave duke *Merceur*, and knowing the policy of *Bufca*, and the prince his royalty, being now beyond all belief of men, in poffeffion of the beft part of *Transilvania*, perfuaded his troops, in fo honeft a caufe, to affift the prince againft the *Turk*, rather than *Bufca* againft the prince.

*Earl Mel-  
drich ferve-  
th the prince  
Sigifmundus.*

The foldiers being worn out with thofe hard pays and travels, upon hope to have free liberty to make booty upon what they could get poffeffion of from the *Turks*, were eafily perfuaded to follow him whitherfoever. Now this noble earl was a *Transil-*

*vanian* born, and his fathers country yet inhabited by the *Turks*; for *Transilvania* was yet in three divifions, though the prince had the hearts both of country and people; yet the frontiers had a garrifon amongft the unpaffable mountains, fome for the emperor, fome for the prince, and fome for the *Turk*: To regain which fmall eftate, he defired leave of the prince to try his fortunes, and to make ufe of that experience, the time of twenty years had taught him in the emperor's fervice, promifing to fpend the reft of his days, for his country's defence in his excellency's fervice. The prince glad of fo brave a commander, and fo many expert and ancient foldiers made him camp-mafter of his army, gave him all neceffary relief for his troops, and what freedom they defired to plunder the *Turks*.

The earl having made many incurfions into the land of *Zarkam*, among thofe rocky mountains, where were fome *Turks*, fome *Tartars*, but moft bandittoes, renegadoes, and fuch like, which fometimes he forced into the plains of *Regall*, where is a city, not only of men and fortifications, ftrong of it felf, but fo environed with mountains, that made the paffages fo diffi-

cult, that in all these wars no attempt had been made upon it to any purpose: Having satisfied himself with the situation, and the most convenient passages to bring his army unto it. The earth no sooner put on her green habit, than the earl overspread her with his armed troops. To possess himself first of the most convenient passage, which was a narrow valley betwixt two high mountains; he sent colonel *Veltus* with his regiment, dispersed in companies to lie in *Ambuscado*, as he had directed them, and in the morning to drive all the cattle they could find before a fort in that passage, whom he supposed would fall, seeing but some small party to recover their prey; which took such good success, that the garrison was cut off by the ambuscado, and *Veltus* seized on the sconces, which were abandoned. *Meldritch* glad of so fortunate a beginning, it was six days ere he could with six thousand pioneers make passage for his ordnance. The *Turks* having such warning, strengthened the town so with men and provision, that they made a scorn of so small a number as *Meldritch* brought with him before the city, which was but eight thousand. Before they had pitched their tents, the *Turks* sallied in such abundance, as for an hour they had rather a bloody battle than a skirmish, but with the loss of near fifteen hundred on both sides. The *Turks* were chafed till the cities ordnance caused the earl to retire. The next day *Zachel Moyses*, general of the army, pitched also his tents with nine thousand foot and horse, and six and twenty pieces of ordnance; but in regard of the situation of this strong fortress, they did neither fear them nor hurt them, being upon the point of a fair promontory, environed on the one side within half a mile with an useless mountain, and on the other side with a fair plain, where the christians encamped, but so commanded by their ordnance, they spent near a month in entrenching themselves, and raising their mounts to plant their batteries; which slow proceedings the *Turks* oft derided, that their ordnance were at pawn, and how they grew fat for want of exercise, and fearing lest they should depart ere they could assault their city, sent this challenge to any captain in the army.

That to delight the ladies, who did long to see some court-like pastime, the lord *Timbashaw* did defy any captain, that had the command of a company, who durst combat with him for his head: The matter being discussed, it was accepted, but so many questions grew for the undertaking, it was decided by lots, which fell upon captain *Smith*, before spoken of.

Truce being made for that time, the rampires all beset with fair dames and men in arms, the christians in batalia; *Timbashaw* with a noise of hautboys entered the field well mounted and armed; on his shoulders were fixed a pair of great wings, compacted of eagle's feathers, within a ridge of silver, richly garnish'd with gold and precious stones, a *Janizary* before him, bearing his lance, on each side another leading his horse; where long he stay'd not, ere *Smith*, with a noise of trumpets, only a page bearing his lance, passing by him with a courteous salute, took his ground with such good success, that at the sound of the charge, he passed the *Turk* throw the fight of his beaver, face, head and all, that he fell dead to the ground, where alighting and unbracing his helmet, cut off his head and the *Turks* took his body; and so returned without any hurt at all. The head he presented to the lord *Moyes*, the general, who kindly accepted it, and with joy to the whole army he was generally welcomed.

The death of this captain so swelled in the heart of one *Gruado*, his vowed friend, as rather enraged with madness than choler, he directed a particular challenge to the conqueror, to regain his friend's head, or lose his own, with his horse and armour for advantage, which according to his desire, was the next day undertaken: As before upon the sound of the trumpets, their lances flew in pieces upon a clear passage, but the *Turk* was near unhorsed. Their pistols was the next, which marked *Smith* upon the placard; but the next shot the *Turk* was so wounded in the left arm, that being not able to rule his horse, and defend himself, he was thrown to the ground, and so bruised with the fall, that he lost his head, as his friend before him, with his horse and armour; but his body and his rich apparel were sent back to the town.

Every day the *Turks* made some sallies, but few skirmishes would they endure to any purpose. Our works and approaches being not yet advanced to that height and effect, which was of necessity to be performed; to delude time, *Smith* with so many contradictory preuading reasons, obtained leave, that the ladies might know he was not so much enamoured of their servants heads, but if any *Turk* of their rank would come to the place of combat to redeem them, should have his also upon the like conditions, if he could win it.

The challenge presently was accepted by *Bonny Mulgro*. The next day both the champions entering the field as before, each discharging their pistol, having no lances, but such martial weapons as the defendant

appointed.

appointed, no hurt was done. their battle-axes were the next, whose piercing bills made sometime the one, sometime the other to have scarce sense to keep their saddles; specially the christian received such a blow, that he lost his battle-axe, and failed not much to have fallen after it, whereat the supposed conquering Turk, had a great shout from the rampires. The Turk prosecuted his advantage to the uttermost of

his power; yet the other, what by the readiness of his horse, and his judgement and dexterity in such a business, beyond all men's expectation, by god's assistance, not only avoided the Turks violence, but having drawn his faulchion, pierced the Turk so under the culets, thorow back and body, that altho' he alighted from his horse, he stood not long ere he lost his head, as the rest had done.

### CHAP. VIII.

*Georgio Busca an Albane, his ingratitude to prince Sigismundus; prince Moyfes his lieutenant, is overthrown by Busca, general for the emperor Rodulphus; Sigismundus yieldeth his country to Rodulphus; Busca assisteth prince Rodol in Wallachia.*

THIS good success gave such great encouragement to the whole army, that with a guard of six thousand, three spare horses, before each a Turk's head upon a lance, he was conducted to the general's pavilion with his presents. *Moyfes* received both him and them with as much respect as the occasion deserved, embracing him in his arms, gave him a fair horse, richly furnished, a schimitar and belt worth three hundred ducats; and *Meldritch* made him fergeant major of his regiment. But now to the siege, having mounted six and twenty pieces of ordnance, fifty or sixty foot above the plain, made them so plainly tell his meaning, that within fifteen days two breaches were made, which the Turks as valiantly defended as men could; that day was made a darksome night, but by the light that proceeded from the murdering muskets, and peace-making cannon, whilst their slothful governor lay in a castle on the top of a high mountain, and like a valiant prince asketh what's the matter, when horror and death stood amazed each at other, to see who should prevail to make him victorious: *Moyfes* commanding a general assault upon the sloping front of the high promontory, where the barons of *Budendorfe* and *Oberwin*, lost near half their regiments by logs, bags of powder, and such like, tumbling down the hill, they were to mount ere they could come to the breach notwithstanding with an incredible courage, they advanced to the push of the pike with the defendants, that with the like courage repulsed, till the earl *Meldritch*,

*Becklesfield* and *Zarvana*, with their fresh regiments seconded them with that fury, that the Turks retired and fled into the castle, from whence by a flag of truce they desired composition. The earl remembering his father's death, battered it with all the ordnance in the town, and the next day took it; all he found could bear arms, he put to the sword, and set their heads upon stakes round about the walls, in the same manner they had used the christians, when they took it. *Moyfes* having repaired the rampires, and thrown down the work in his camp, he put in it a strong garrison, though the pillage he had gotten in the town was much, having been for a long time an impregnable den of thieves; yet the loss of the army so intermingled the fowre with the sweet, as forced *Moyfes* to seek a further revenge, that he sacked *Versatio*, *Salnos* and *Kupronka*, and with two thousand prisoners, most women and children, came to *Eisenberg*, not far from the prince's palace, where he there encamped.

*Sigismundus* coming to view his army, was presented with the prisoners, and six and thirty ensigns; where celebrating thanks to Almighty God in triumph of those victories, he was made acquainted with the service *Smith* had done at *Olumpagh*, *Stoll-Weissenburg* and *Regal*; for which, with great honour, he gave him three Turks heads in a shield for his arms, by patent, under his hand and seal, with an oath ever to wear them in his colours, his picture in gold, and three hundred ducats yearly for a pension.

The first  
English.

SIGISMUNDUS BATHORI, by the grace of God duke of Transilvania, Wallachia and Moldavia, earl of Ancebad, Salford and Growenda; to whom this writing may come or appear. Know that we have given leave and licence to John Smith an English Gentleman, captain of 250 soldiers, under the most generous and honourable Henry Volda, earl of Meldrieub, Salmaria and Peldoia, colonel of a thousand horse, and fifteen hundred foot, in the wars of Hungary, and in the provinces aforesaid under our authority; whose service doth deserve all praise, and perpetual memory towards us, as a man that did for God and his countrey overcome his enemies: Wherefore out of our love and favour, according to the law of arms, we have ordained, and given him in his shield of arms, the figure and description of three Turks heads, which with his sword before the town of Regal, in single combat he did overcome kill, and cut off, in the province of Transilvania. But fortune, as she is very variable, so it chanced and happened to him in the province of Wallachia, in the year of our lord 1602, the 18<sup>th</sup> day of November, with many others, as well noble men as also divers other soldiers, were taken prisoners by the lord bashaw of Cambia, a country of Tartaria, whose cruelty brought him such good fortune, by the help and power of Almighty God, that he delivered himself, and returned again to his company and fellow soldiers, of whom we do discharge him, and this he hath in witness thereof, being much more worthy of a better reward; and now intends to return to his own sweet countrey. We desire therefore all our loving and kind kinsmen, dukes, princes, earls, Barons, governors of towns, cities or ships, in this kingdom, or any other provinces he shall come in, that you freely let pass this the aforesaid captain, without any hindrance or molestation, and this doing, with all kindness, we are always ready to do the like for you. Sealed at Lipswick in Misenland, the ninth of December, in the year of our Lord 1603.

*With the proper privilege  
of his majesty.*

SIGISMUNDUS  
BATHORI.

UNDUS  
HORI.

TO all and singular, in what place, state, degree, order or condition whatsoever, to whom this present writing shall come; I William Segar, Kt. otherwise garter and principal king of arms of England, with health. Know, that I the aforesaid garter, do witness and approve, that this aforesaid patent, I have seen, signed and sealed, under the proper hand and seal manuel of the said duke of Transilvania, and a true copy of the same, as a thing for perpetual memory, I have subscribed and recorded in the register and office of the heralds of arms. Dated at London, the nineteenth day of August, in the year of our Lord 1625, and in the first year of our sovereign lord Charles, by the grace of God, king of Great-Britain, France and Ireland, defender of the faith, &c.

WILLIAM SEGAR.

#### CHAP. IX.

*Sigismundus sends ambassadors unto the emperor; the conditions re-assured; he yieldeth up all to Balsa, and returneth to Prague.*

morum. Da-  
CAROLI  
c. primo.

g, Garterus,

Balsa having all this time been raising new forces, was commanded from the emperor again to invade Transilvania, which being one of the fruitfullest and strongest countries in those parts, was now rather a desert, or the very spectacle of desolation; their fruits and fields overgrown with weeds, their churches and battered palaces, and best buildings, as for fear, hid with moss and ivy; being the very bulwark and rampire of a great part of Europe, most fit by all christians to have been supplied and maintained, was thus brought to ruin by

them it most concerned to support it. But alas, what is it, when the power of majesty pampered in all delights of pleasant vanity, neither knows, nor considers the labour of the ploughman, the hazard of the merchant, the oppression of statesmen, nor feels the piercing torments of broken limbs and inveterate wounds, the tollsome marches, the bad lodging, the hungry diet, and the extreme misery that soldiers endure to secure all those estates; and yet by the spite of malicious detraction, starve for want of their reward and recompences,

compences; whilst the politique courtier, commonly aims more at his own honours and ends, than his countries good, or his prince's glory, honour or security, as this worthy prince too well could testify. But the emperor being certified how weak and desperate his estate was, sent *Busca* again with a great army, to try his fortune once more in *Transilvania*. The prince considering how his country and subjects were consumed, the small means he had any longer to defend his estate, both against the cruelty of the *Turks*, and the power of the emperor, and the small care the *Polanders* had in supplying him, as they had promised, sent to *Busca* to have truce, till messengers might be sent to the emperor for some better agreement, wherewith *Busca* was contented. The ambassadors so prevailed, that the emperor re-assured them the conditions he had promised the prince at their confederacy for the lands in *Silesia*, with 60000 ducats presently in hand, and 50000 ducats yearly as a pension. When this conclusion was known to *Moyes*, his lieutenant, then in the field with the army, that would do any think, rather than come in subjection to the *Germans*, he encouraged his soldiers, and without any more ado, marched to encounter *Busca*, whom he found much better provided than he expected; so that betwixt them, in six or seven hours, more than five or six thousand, on both sides, lay dead in the field. *Moyes* thus overthrown, fled to the *Turks* at *Tamesware*, and his scattered troops, some one way, some another.

*Busca* in  
*Transilva-*  
*nia* over-  
thrown  
*Moyes*.

The prince understanding of this so sudden and unexpected accident, only accompanied with an hundred of his gentry and nobility, went into the camp to *Busca*, to let him know how ignorant he was of his lieutenant's error, that he had done it without his direction or knowledge, freely offering to perform what was concluded by his ambassadors with the emperor; and so causing all his garrisons to come out of their strong holds, he delivered all to *Busca* for the emperor, and so went to *Prague*,

*Sigismundus* yield-  
eth his  
country  
to *Busca*.

where he was honourably received, and established in his possessions, as his imperial majesty had promised. *Busca* assembling all the nobility, took their oaths of allegiance and fidelity, and thus their prince being gone *Transilvania* became again subject to the emperor.

Now after the death of *Michael*, vavoid of *Wallachia*, the *Turk* sent one *Jeremy* to be their vavoid or prince, whose insulting tyranny caused the people to take arms against him, so that he was forced to flee into the confines of *Moldavia*; and *Busca* in the behalf of the emperor, proclaimed the lord *Rodol* in his stead. But *Jeremy* having assembled an army of forty thousand *Turks*, *Tartars*, and *Moldavians*, returned into *Wallachia*. *Rodol* not yet able to raise such a power, fled into *Transilvania* to *Busca*, his ancient friend; who considering well of the matter, and how good it would be for his own security, to have *Wallachia* subject to the emperor, or at least such an employment for the remainders of the old regiments of *Sigismundus*, (of whose greatness and true affection he was very suspicious) sent them with *Rodol* to recover *Wallachia*, conducted by the valiant captains the earl *Meldritch*, earl *Veltus*, earl *Nederpolt*, earl *Zarvana*, the lord *Becklefeld*, the lord *Budendorfe*, with their regiments, and divers others of great rank and quality, the greatest friends and alliances the prince had; who with thirty thousand, marched along by the river *Allus*, to the streights of *Rebrinck*, where they entered *Wallachia*, encamping at *Raza*; *Jeremy* lying at *Argish*, drew his army into his old camp, in the plains of *Peteske*, and with his best diligence fortified it, intending to defend himself, till more power came to him from the *Crim-Tartar*. Many small parties that came to his camp, *Rodol* cut off, and in the nights would cause their heads to be thrown up and down before the trenches. Seven of their porters were taken, whom *Jeremy* commanded to be flayed quick, and after hung their skins upon poles, and their carcases and heads on stakes by them.

*The battle of Rottenton; a pretty stratagem of fire-works by Smith.*

*Rodol* not knowing how to draw the enemy to battle, raised his army, burning and spoiling all where he came, and returned again towards *Rebrinck* in the night, as if he had fled upon the general rumour of the *Crim-Tartars* coming, which so inflamed the *Turks* of a happy victory, they

urged *Jeremy* against his will to follow them. *Rodol* seeing his plot fell out as he desired, so ordered the matter, that having regained the streights, he put his army in order, that had been near two days pursued with continual skirmishes in his rear, which now making head against the enemy,

enemy, that followed with their whole army in the best manner they could, was furiously charged with six thousand *Heydukes*, *Wallachians* and *Moldavians*, led by three colonels, *Overfall*, *Dubras* and *Calab*, to entertain the time till the rest came up; *Veltus* and *Nederjolt* with their regiments, entertained them with the like courage, till the zanzacke *Hamelbeg*, with six thousand more, came with a fresh charge, which *Meldritsch* and *Budendorfe*, rather like enraged lions, than men, so bravely encounter'd, as if in them only had consisted the victory; *Meldritsch's* horse being slain under him, the *Turks* pressed what they could to have taken him prisoner; but being remounted, it was thought with his own hand he slew the valiant zanzacke; whereupon his troops retiring, the two proud bashaws *Aladin* and *Zizimmus*, brought up the front of the body of their battle. *Veltus* and *Nederjolt* having breathed, and joining their troops with *Becksfeld* and *Zarvana*, with such an incredible courage, charged the left flank of *Zizimmus*, as put them all in disorder, where *Zizimmus* the bashaw was taken prisoner, but died presently upon his wounds. *Jeremy* seeing now the main battle of *Rodol* advance, being thus constrained, like a valiant prince in his front of the vanguard, by his example so bravely encouraged his soldiers, that *Rodol* found no great assurance of the victory. Thus being joyned in this bloody massacre, there was scarce ground to stand upon, but upon the dead carcases, which in less than an hour were so mingled, as if each regiment had singled out other. The admired *Aladin* that day did leave behind him a glorious name for his valour, whose death many of his enemies did lament after the victory, which at that instant fell to *Rodol*. It was reported *Jeremy* was also slain; but it was not so, but fled with the remainder of his army to *Moldavia*, leaving five and twenty thousand dead in the field, of both armies. And thus *Rodol* was seated again in his sovereignty, and *Wallachia* became subject to the emperor.

Wallachia  
subject  
to the em-  
per.

But long he rested not to settle his new estate, but there came news, that certain regiments of stragling *Tartars*, were foraging those parts towards *Moldavia*. *Meldritsch* with thirteen thousand men was sent against them, but when they heard it was the *Crim-Tartar*, and his two sons, with an army of thirty thousand; and *Jeremy*,

that had escaped with fourteen or fifteen thousand, lay in ambush for them about *Langanaw*, he retired towards *Rottenton*, a strong garrison for *Rodol*; but they were so invironed with these hellish numbers, they could make no great halt for skirmishing with their scouts, foragers and small parties that still encountered them. But one night amongst the rest, having made a passage through a wood, with an incredible expedition, cutting trees thwart each other to hinder their passage in a thick fog; early in the morning, unexpectedly they met two thousand loaded with pillage, and two or three hundred horse and cattle; the most of them were slain and taken prisoners, who told them where *Jeremy* lay in the passage, expecting the *Crim-Tartar* that was not far from him. *Meldritsch* intending to make his passage by force, was advised of a pretty stratagem by the *English Smith*, which presently he thus accomplished; for having accommodated two or three hundred trunks with wild-fire, upon the heads of lances, and charging the enemy in the night, gave fire to the trunks, which blazed forth such flames and sparkles, that it so amazed, not only their horses, but their foot also; that by the means of this flaming encounter, their own horses turned tails with such fury, as by their violence overthrew *Jeremy* and his army, without any loss at all to speak of to *Meldritsch*. But of this victory long they triumphed not; for being within three leagues of *Rottenton*, the *Tartar*, with near forty thousand to beset them, that they must either fight, or be cut in pieces flying. Here *Bufca* and the emperor had their desire; for the sun no sooner displayed his beams, than the *Tartar* his colours; where at mid-day he stayed a while to see the passage of a tyrannical and treacherous imposture, till the earth did blush with the blood of honesty, that the sun for shame did hide himself from so monstrous sight of a cowardly calamity. It was a most brave sight to see the banners and ensigns streaming in the air, the glittering of armour, the variety of colours, the motion of plumes, the forests of lances, and the thickness of shorter weapons, till the silent expedition of the bloody blait from the murdering ordnance, whose roaring voice is not so soon heard as felt by the aimed at object, made among them a most lamentable slaughter.

## CHAP. XI

*The names of the English that were slain in the battle of Rottenton; and how captain Smith was taken prisoner, and sold for a slave.*

*The battle  
of Rotten-  
ton.*

IN the valley of *Veristborne*, betwixt the river of *Altus* and the mountain of *Rottenton*, was this bloody encounter, where the most of the dearest friends of the noble prince *Sigismundus* perished. *Meldritch* having ordered his eleven thousand in the best manner he could, at the foot of the mountain upon his flanks, and before his front, he had pitched sharp stakes, their heads hardened in the fire, and bent against the enemy, as three battalions of pikes, amongst the which also, there was digged many small holes. Amongst those stakes were ranged his footmen, that upon the charge were to retire, as there was occasion. The *Tartar* having ordered his 40000 for his best advantage, appointed *Mustapha* bashaw to begin the battle, with a general shout, all their ensigns displaying, drums beating, trumpets and hautboys founding. *Neder-spolt* and *Movazo* with their regiments of horse most valiantly encountered, and forced them to retire; the *Tartar Begolgi* with his squadrons, darkening the skies with their flights of numberless arrows, who was as bravely encounter'd by *Veltus* and *Clerwin*, which bloody slaughter continued more than an hour, till the matchless multitude of the *Tartars* so increased, that they retired within their squadrons of stakes, as was directed. The bloody *Tartar*, as scorning he should stay so long for the victory, with his massie troops prosecuted the charge: But it was a wonder to see how horse and man came to the ground among the stakes, whose disordered troops were there so mangled, that the christians with a loud shout cried *Victoria*; and with five or six field pieces, planted upon the rising of the mountain, did much hurt to the enemy that still continued the battle with that fury, that *Meldritch* seeing there was no possibility long to prevail, joined his small troops in one body, resolved directly to make his passage, or die in the conclusion; and thus in gross gave a general charge, and for more than half an hour, made his way plain before him, till the main battle of the *Crim-Tartar*, with two regiments of *Turks* and *Janizaries* so overmatched them, that they were overthrown. The night approaching, the earl with some thirteen or fourteen hundred horse, swam the river, some were drowned, all the rest slain or taken prisoners: And thus in this bloody field, near 30000 lay, some headless, armless and legless, all cut and mangled; where

breathing their last, they gave this knowledge to the world, that for the lives of so few, the *Crim-Tartar* never paid dearer. But now the countries of *Transilvania* and *Wallachia* (subjected to the emperor) and *Sigismundus*, that brave prince, his subject and pensioner, the most of his nobility, brave captains and soldiers, became a prey to the cruel devouring *Turks*; where, had the emperor been as ready to have assisted him, and those three armies led by three such worthy captains, as *Michael*, *Busca* and himself, and had those three armies joined together against the *Turks*, let all men judge, how happy it might have been for all christianity, and have either regained *Bulgaria*, or at least have beat him out of *Hungaria*, where he hath taken much more from the emperor, than hath the emperor from *Transilvania*.

In this dismal battle, where *Neder-spolt*, *Veltus*, *Zarvans*, *Movazo*, *Bavel*, and many other earls, barons, colonels, captains, brave gentlemen, and soldiers were slain, give me leave to remember the names of our own countrey-men, with him in those exploits, that as resolutely as the best in the defence of *Christ* and his gospel, ended their days, as *Bakerfield*, *Hardwick*, *Thomas Milmer*, *Robert Molineux*, *Thomas Bishop*, *Francis Compton*, *George Davison*, *Nicholas Williams*, and one *John a Scot*, did what men could do; and when they could do no more, left there their bodies in testimony of their minds: only ensign *Charlton* and sergeant *Rolinson* escaped: But *Smith* among the slaughtered dead bodies, and many a gaiping soul, with toil and wounds lay groaning among the rest, till being found by the pillagers, he was able to live, and perceiving by his armour and habit, his ransom might be better to them than his death, they led him prisoner with many others; well they used him till his wounds were cured, and at *Axopolis* they were all sold for slaves, like beasts in a market-place, where every merchant, viewing their limbs and wounds, caused other slaves to struggle with them, to try their strength. He fell to the share of bashaw *Bogal*, who sent him forthwith to *Adrianopolis*, so for *Constantinople* to his fair mistress for a slave. By twenty and twenty chained by the necks, they marched in file to this great city where they were delivered to their several Masters, and he to the young *Charatza Tragabigzanda*.

## CHAP. XII.

*How Captain Smith was sent prisoner thorow the Black and Dissabacca-Sea in Tartaria; the description of those seas, and his usage.*

THIS noble gentlewoman took some time occasion to shew him to some friends, or rather to speak with him, because she could speak *Italian*; would feign herself sick when she should go to the *Banians*, or weep over the graves, to know how *Bogal* took him prisoner; and if he were, as the *basshaw* writ to her, a *Bobemian* lord conquered by his hand, as he had many others, which ere long he would present her, whose ransomes should adorn her with the glory of his conquests.

But when she heard him protest he knew no such matter, nor ever saw *Bogal*, till he bought him at *Anapolis*, and that he was an *Englishman*, only by his adventures made a captain in those countries; to try the truth, she found means to find out many who could speak *English*, *French*, *Dutch* and *Italian*, to whom relating most part of these former passages she thought necessary, which they so honestly reported to her, she took (as it seem'd) much compassion on him; but having no use for him, left her mother should sell him, she sent him to her brother the *Tymor* *Basshaw* of *Nalbrits*, in the county of *Cambia*, a province in *Tartaria*.

Here now let us remember his passing in this speculative course from *Constantinople* by *Sander*, *Screw*, *Panassa*, *Musa*, *Lasilla* to *Verna*, an ancient city upon the *Black-Sea*. In all which journey, having little more liberty, than his eyes judgment, since his captivity, he might see the towns with their short towers, and a most plain, fertile and delicate country, especially that most admired place of *Greece*, now called *Romania*, but from *Varna*, nothing but the *Black-Sea* water, till he came to the two capes of *Taur* and *Pergilos*, where he passed the streight of *Niger*, which (as he conjectured) is some ten leagues long, and three broad, betwixt two low lands, the channel is deep, but at the entrance of the sea *Dissabacca*, there are many great ofe shaulds, and many great black rocks, which the *Turks* said were trees, weeds and mud thrown from the in-land countries, by the inundations and violence of the current, and cast there by the eddy. They failed by many low isles, and saw many more of those muddy

rocks, and nothing else but salt-water, till they came betwixt *Sufax* and *Curuske*, only two white towns at the entrance of the river *Bruapo* appeared: In six or seven days sail, he saw four or five seeming strong castles of stone, with flat tops and battlements about them, but arriving at *Cambia*, he was (according to their custom) well used. The river was there more than half a mile broad. The castle was of a large circumference, fourteen or fifteen foot thick, in the foundation some six foot from the wall is a pallisado, and then a ditch of about forty foot broad, full of water. On the west-side of it, is a town all of low flat houses, which as he conceived, could be of no great strength, yet it keeps all them barbarous countreys about it in admiration and subjection. After he had stayed there three days; it was two days more before his guides brought him to *Nalbrits*, where the *Tymor* was then resident, in a great vast stone castle, with many great courts about it, invironed with high stone walls, where were quartered their arms, when they first subjected those countries, which only live to labour for those tyrannical *Turks*.

To her unkind brother, this kind lady writ so much for his good usage, that he half suspected as much as she intended; for she told him, he should there but sojourn to learn the language, and what it was to be a *Turk*, till time made her master of her self. But the *Tymor*, her brother, diverted all this to the worst of cruelty; for within an hour after his arrival, he caused his *Drubman* to strip him naked, and shave his head and beard so bare as his hand, a great ring of iron, with a long stalk bowed like a sickle, riveted about his neck, and a coat made of ulgries hair, guarded about with a piece of an undrest skin. There were many more christian slaves, and near an hundred *Forsados* of *Turks* and *Moors*, and he being the last, was slave of slaves to them all. Among these slavish fortunes there was no great choice, for the best was so bad, a dog could hardly have lived to endure, and yet for all their pains and labours, no more regarded than a beast.

## CHAP. XIII.

*The Turks diet; the slaves diet; the attire of the Tartars; and manner of wars and religion, &c.*

*The Tymo-  
mor's diet  
of Cam-  
bia is at  
the Turks*

THE Tymo and his friends fed upon pillaw, which is boiled rice and gar- nances, with little bits of mutton or buck- ones, which is roasted pieces of horse, bull, ulgie or any beasts. *Samboyfes* and *Mu- jelbit* are great dainties, and yet but round pies, full of all sorts of flesh, they can get chopped with variety of herbs. Their best drink is coffee, of a grain they called *Coava*, boiled with water; and sherbeck, which is only honey and water; mares milk, or the milk of any beast, they hold restora- tive; but all the commonalty drink pure water. Their bread is made of this *Coava*, which is a kind of black wheat, and *Cuf- kus* a small white feed, like *Mullia* in *Biskay*: But our common victuals, the entrails of horse and ulgies; of this cut in small pieces, they will fill a great cauldron, and being boiled with *Cufkus*, and put in great bowls in the form of chaffing-dishes, they sit round about it on the ground; after they have raked it thorow, so oft as they please with their foul fists, the remainder was for the christian slaves. Some of this broth they would temper with *Cufkus* pounded, and putting the fire off from the hearth, pour there a bowl full, then cover it with coals till it be baked, which stewed with the remainder of the broth, and some small pieces of flesh, was an extraordinary dainty.

*The attire  
of those  
Tartars.*

The better sort are attired like *Turks*, but the plain *Tartar* hath a black sheeps-skin over his back, and two of the legs tied a- bout his neck; the other two about his middle, with another over his belly, and the legs tied in like manner behind him: Then two more, made like a pair of bales, serveth him for breeches; with a little close

cap to his skull of black felt, and they use exceeding much of this felt for carpets, for bedding, for coats and idols. Their houses are much worse than your *Irish*, but the in-land countries have none but carts and tents, which they ever remove from country to country, as they see occasion, driving with them infinite troops of black sheep, cattle and ulgies, eating all up be- fore them as they go.

For the *Tartars* of *Nagi*, they have nei- ther town, nor house, corn nor drink, but flesh and milk. The milk they keep in great skins like burrachoos, which though it be never so fower, it agreeth well with their strong stomachs. They live all in *Hordias*, as do the *Crim-Tartars*, three or four hundred in a company, in great carts fifteen or sixteen foot broad, which are co- vered with small rods, wattled together in the form of a bird's nest, turned upwards, and with the ashes of bones, temper'd with oil, camels hair, and a clay they have, they loam them so well, that no weather can pierce them, and yet very light. Each *Hordia* hath a *Murfe*, which they obey as their king. Their gods are infinite. One or two thousand of those glittering white carts drawn with camels, deer, bulls and ulgies, they bring round in a ring, where they pitch their camp; and the *Murfe*, with his chief alliances, are placed in the midst. They do much hurt, when they can get any *Stroggs*, which are great boats used up- on the river *Volga*, (which they call *Edle*) to them that dwell in the country of *Pe- rolog*, and would do much more, were it not for the *Muscovite* garrisons that there inhabit.

## CHAP. XIV.

*The Description of the Crim-Tartars; their houses and carts, their idolatry in their lodgings.*

*The de-  
scription of  
the Crim-  
Tartars  
Coart.*

NOW you are to understand, *Tartary* and *Scythia* are all one, but so large and spacious, few or none could ever perfectly describe it, nor all the several kinds of those most barbarous people that inhabit it. Those we call the *Crim-Tartars* border upon *Moldavia*, *Podolia*, *Lithuania*, and *Russia*, are much more regular than the in-

terior parts of *Scythia*. The great *Tarta- rian* prince, that hath so troubled all his neighbours, they always call *Chan*, which signifieth emperor; but we the *Crim-Tartar*. He liveth for the most part in the best champion plains of many provinces; and his removing court is like a great city of houses and tents drawn on carts, all

so orderly placed east and west, on the right and left hand of the prince's house, which is always in the midst towards the south, before which none may pitch their houses, every one knowing their order and quarter, as in an army. The prince's houses are very artificially wrought, both the foundation, sides and roof of wickers, ascending round to the top like a dove-coat; this they cover with white salt, or white earth, tempered with the powder of bones, that it may shine the whiter; sometimes with black felt, curiously painted with vines, trees, birds and bealls; the breadth of the carts are eighteen or twenty foot, but the house stretcheth four or five foot over each side, and is drawn with ten or twelve, or for more state twenty camels and oxen. They have also great baskets, made of smaller wickers, like great chests, with a covering of the same, all covered over with black felt, rubbed over with tallow and sheeps milk, to keep out the rain, prettily bedecked with painting or feathers; in those they put their household stuff and treasure, drawn upon other carts for that purpose. When they take down their houses, they set the door always towards the south, and their carts thirty or forty foot distant on each side, east and west, as if they were two walls: The women also have most curious carts; every one of his wives hath a great one for herself, and so many other for her attendants, that there seem as many courts as he hath wives. One great *Tartar* or nobleman, will have for his particular, more than an hundred of those houses and carts, for his several offices and uses,

His houses  
and carts.

Eight.

but set so far from each other, they will seem like a great village. Having taken their houses from the carts, they place the master always towards the north; over whose head is always an image like a puppet, made of felt, which they call his brother; the women on his left-hand, and over the chief mistress's head such another brother, and between them a little one, which is the keeper of the house; at the good wife's bed's-foot is a kid's-skin stuffed with wool, and near it a puppet looking towards the maids; next the door another, with a dried cow's udder, for the women that milk the kine, because only the men milk mares: Every morning those images in their orders, they besprinkle with that they drink, be it *Coffmos*, or whatsoever, but all the white mares milk is reserved for the prince. Then without the door, thrice to the south, every one bowing his knee in honour of the fire; then the like to the east, in honour of the air; then to the west, in honour of the water; and lastly to the north, in behalf of the dead. After the servant hath done this duty to the four quarters of the world, he returns into the house, where his fellows stand waiting, ready with two cups and two basons, to give their master, and his wife that lay with him that night, to wash and drink, who must keep him company all the day following, and all his other wives come thither to drink, where he keeps his house that day; and all the gifts presented him till night, are laid up in her chests; and at the door a bench full of cups, and drink for any of them to make merry.

is mares  
milk.

# CHAP. XV.

*Their feasts, common diet, princes estate, buildings, tributes, laws, slaves, entertainment of ambassadors.*

Their  
fish.

FOR their feasts they have all sorts of beasts, birds, fish, fruits and herbs they can get, but the more variety of wild ones is the best; to which they have excellent drink made of rice, millet and honey, like wine; they have also wine, but in summer they drink most *Coffmos*, that standeth ready always at the entrance of the door, and by it a fidler; when the master of the house beginneth to drink, they all cry ha, ha, and the fidler plays, then they all clap their hands and dance, the men before their masters, the women before their mistresses; and ever when he drinks, they cry as before; then the fidler stayeth till they drink all round; sometimes

they will drink for the victory; and to provoke one to drink, they will pull him by the ears, and lug and draw him, to stretch and heat him, clapping their hands, stamping with their feet, and dancing before the champions, offering them cups, then draw them back again to increase their appetite; and thus continue till they be drunk, or their drink done, which they hold an honour and no infirmity.

Though the ground be fertile, they sow little corn, yet the gentlemen have bread and hony-wine; grapes they have plenty, and wine privately, and good flesh and fish; but the common sort stamped millet, mingled with milk and water. They call

*Cassa* for meat, and drink any thing; also any beast unprofitable for service they kill, when they are like to die, or however they die, they will eat them, guts, liver and all; but the most fleshy parts they cut in thin slices, and hang it up in the sun and wind without salting, where it will dry so hard, it will not putrefy in a long time. A ram they esteem a great feast among forty or fifty, which they cut in pieces boiled or roasted, and put it in a great bowl with salt and water; for other sauce they have none; the master of the feast giveth every one a piece, which he eateth by himself, or carrieth away with him. Thus their hard fare makes them so infinite in cattle, and their great number of captivated women to breed upon, makes them so populous. But near the christian frontiers, the safer fort make little cottages of wood, call'd *Uluſi*, daubed over with dirt, and beasts dung covered with fedge; yet in summer they leave them, beginning their progress in April, with their wives, children and slaves, in their carted houses, scarce convenient for four or five persons; driving their flocks towards *Precopia*, and sometimes into *Taurica* or *Oſow*, a town upon the river *Tanais*, which is great and swift, where the *Turk* hath a garrison; and in October return again to their cottages. Their clothes are the skins of dogs, goats and sheep, lined with cotton cloth, made of their finest wool; for of their worst they make their felt, which they use in abundance, as well for shoes and caps, as houses, beds and idols; also of the coarse wool mingled with horse hair, they make all their cordage. Notwithstanding this wandering life, their princes sit in great state upon beds or carpets, and with great reverence are attended both by men and women, and richly served in plate, and great silver cups, delivered upon the knee, attired in rich furs, lined with plush, or taffety, or robes of tiffue. These *Tartars* possess many large and goodly plains, wherein feed innumerable herds of horse and cattle, as well wild as tame; which are elkes, bisons, horses, deer, sheep, goats, swine, bears and divers others.

In those countries are the ruins of many fair monasteries, castles and cities, as *Bacafaray*, *Salutium*, *Almassary*, *Precopia*, *Cremum*, *Sedacom*, *Capba*, and divers others by the sea, but all kept with strong garrisons for the great *Turk*, who yearly by trade or traffick, receiveth the chief commodities those fertile countries afford, as bezoar, rice, furs, hides, butter, salt, cattle and slaves, yet by the spoils they get from

the secure and idle christians, they maintain themselves in this pomp. Also their wives, of whom they have as many as they will, very costly, yet in a constant custom with decency.

They are mahometans, as are the *Turks*, God save the king, yet no law from whom also they have their laws, but no lawyers nor attornies, only judges, and justices in every village or hordia; but capital criminals, or matters of moment, are try'd before the *Chan* himself, or privy-councils, of whom they are always heard, and speedily discharged; for any may have access at any time to them, before whom they appear with great reverence, adoring their princes as gods, and their spiritual judges as saints; for justice is with such integrity and expedition executed, without covetousness, bribery, partiality and brawling, that in six months they have sometimes scarce six causes to hear. About the prince's court, none but his guard wear any weapon, but abroad they go very strong, because there are many bandittoes and thieves.

They use the *Hungarians*, *Russians*, *Wallachians* and *Moldavian* slaves (whereof they have plenty) as beasts to every work; and those *Tartars* that serve the *Chan* or noblemen, have only victuals and apparel, the rest are generally nasty and idle, naturally miserable, and in their wars better thieves than soldiers.

This *Chan* hath yearly a donative from the king of *Poland*, the dukes of *Lithuania*, *Moldavia*, and *Nagayon Tartars*; their messengers commonly he useth bountifully and very nobly, but sometimes most cruelly; when any of them do bring their presents, by his household officers, they are entertained in a plain field, with a moderate proportion of flesh, bread and wine, for once; but when they come before him, the *Sultans*, *Tuans*, *Ulan*s, *Marbies*, his chief officers and counsellors attend; one man only bringeth the ambassador to the court gate, but to the *Chan* he is led between two counsellors; where saluting him upon their bended knees, declaring their message, are admitted to eat with him, and presented with a great silver cup full of mead from his own hand, but they drink it upon their knees. When they are dispatched, he invites them again; the feast ended, they go back a little from the palace door, and are rewarded with silk vestures, wrought with gold down to their ankles, with an horse or two, and sometimes a slave of their own nation; in those robes presently they come to him again, to give him thanks, take their leave, and so depart.

CHAP. XVI.

*How he levieth an army; their arms and provision; how he divideth the spoil, and his service to the great Turk.*

How he le-  
vieth an  
army. WHEN he intends any wars, he must first have leave of the great Turk, whom he is bound to assist when he commandeth, receiving daily for himself and chief of his nobility, pensions from the Turk, that holds all kings but slaves, that pay tribute, or are subject to any: signifying his intent to all his subjects, within a month commonly he raiseth his army, and every man is to furnish himself for three months with victuals, which is parch'd millet, or ground to meal, which they ordinarily mingle with water (as is said,) hard cheese or curds dried and beaten to powder; a little will make much water like milk, and dried flesh, this they put also up in sacks: The Chan and his nobles have some bread and *Aquavite*, and quick cattle to kill when they please, wherewith very sparingly they are contented. Being provided with expert guides, and got into the country he intends to invade, he sends forth his scouts to bring in what prisoners they can, from whom he will wrest the utmost of their knowledge fit for his purpose: Having advised with his council, what is most fit to be done, the nobility, according to their antiquity, doth march; then moves he with his whole army: If he find there is no enemy to oppose him, he adviseth how far they shall invade, commanding every man (upon pain of his life) to kill all the obvious rusticks, but not to hurt any women or children.

Ten or fifteen thousand, he commonly placeth, where he findeth most convenient for his standing camp; the rest of his army he divides in several troops, bearing ten or twelve miles square before them, and ever within three or four days return to their camp, putting all to fire and sword, but that they carry with them back to their camp; and in this scattering manner he will invade a country, and be gone with his prey, with an incredible expedition. But if he understand of an enemy, he will either fight in ambuscado or flie; for he will never fight any battle if he can chuse, but upon treble advantage; yet by his innumerable flights of arrows, I have seen fly from his flying troops, we could not well judge, whether his fighting or flying was most dangerous, so good is his horse, and so expert his bowmen; but if they be so intangled they must fight, there is none can be more hardy or resolute in their defences.

Regaining his own borders, he takes the tenth of the principal captives, man, woman, child or beast (but his captains that take them, will accept of some particular person they best like for themselves;) the rest are divided amongst the whole army, according to every man's desert and quality; that they keep them, or sell them to who will give most; but they will not forget to use all the means they can, to know their estates, friends and quality, and the better they find you, the worse they will use you, till you do agree to pay such a ransom as they will impose upon you; therefore many great persons have endured much misery to conceal themselves, because their ransoms are so intolerable; their best hope is of some christian agent, that many times cometh to redeem slaves, either with money or man for man; those agents knowing so well the extreme covetousness of the *Tartars*, do use to bribe some jew or merchant, that feigning they will sell them again to some other nation, are oft redeemed for a very small ransom.

But to this *Tartarian* army, when the Turk commands, he goeth with some small artillery; and the *Nagayans*, *Pracopeans*, *Crimis*, *Ossovens* and *Circassians* are his tributaries; but the *Peligoroes*, *Oczaconians*, *Bialogordens* and *Dabruzen Tartars*, the Turk by covenant commands to follow him, so that from all those *Tartars* he hath had an army of an hundred and twenty thousand excellent, swift, stomachful *Tartarian* horse, for foot they have none. Now the Chan, his sultans and nobility, use *Turkish*, *Caramanian*, *Arabian*, *Parthian* and other strange *Tartarian* horses; the swiftest they esteem the best; seldom they feed any more at home, than they have present use for; but upon their plains is a short wood-like heath, in some countries like gail, full of berries, much better than any grafs.

Their arms are such, as they have surpris'd or got from the christians or *Persians*, both breast-plates, swords, scimiters, and helmets; bows and arrows they make most themselves; also their bridles and saddles are indifferent, but the nobility are very handsome, and well armed like the *Turks*, in whom consisteth their greatest glory; the ordinary fort have little armour, some a plain young pole unshaven, headed with a piece of iron for a lance; some an old christian pike, or a Turk's cavarinel; yet those tattertallions will have two or three

three horses, some four or five, as well for service, as for to eat; which makes their armies seem thrice so many as there are soldiers. The *Cban* himself hath about his person, 10000 chosen *Tartars* and *Tanizaries*, some small ordnance; and a white mare's tail, with a piece of green taffety on a great pike, is carried before him for a standard; because they hold no beast so precious as a white mare, whose milk is only for the king and nobility, and to sacrifice to their idols, but the rest have en-signs of divers colours.

For all this miserable knowledge, furniture, and equipage, the mischief they do in *Christendom* is wondrous, by reason of their hardness of life and constitution, obedience, agility, and their emperor's bounty, honours, grace, and dignities he ever bestoweth upon those, that have done him any memorable service in the face of his enemies.

A description of the Caspian sea.

The *Caspian* sea, most men agree that have passed it, to be in length about 200 leagues, and in breadth 150, environed to the east, with the great deserts of the *Tartars* of *Turkomania*; to the west by the *Circasses* and the mountain *Caucasus*; to the north, by the river *Volga*, and the land of

*Nagay*; and to the south, by *Media* and *Persia*: This sea is fresh water in many places, in others as salt as the great ocean; it hath many great rivers which fall into it, as the mighty river of *Volga*, which is like a sea, running near 2000 miles, thro' many great and large countries, that send into it many other great rivers; also out of *Saberia*, *Taick*, and *Yem*, out of the great mountain *Caucasus*, the river *Sirus*, *Araß*, and divers others, yet no sea nearer it than the black sea, which is at least 100 leagues distant: In which country live the *Georgians*, now part *Armenians*, part *Nestorians*; it is neither found to increase or diminish, or empty itself any ways except it be under ground, and in some places they can find no ground at 200 fathom.

Many other most strange and wonderful things are in the land of *Cathay*, towards the north-east, and *China* towards the south-east, where are many of the most famous kingdoms in the world, where most arts, plenty, and curiosities are in such abundance, as might seem incredible, which hereafter I will relate, as I have briefly gathered from such authors as have lived there.

## CHAP. XVII.

*How captain Smith escaped his captivity; flew the Bashaw of Nalbrits in Cambia; his passage to Russia, Transilvania, and the midst of Europe to Africa.*

How Smith escaped his captivity.

ALL the hope he had ever to be delivered from this thralldom, was only the love of *Tragabigzanda*, who surely was ignorant of his bad usage; for altho' he had often debated the matter with some christians, that had been there a long time slaves, they could not find how to make an escape, by any reason or possibility; but God beyond man's expectation or imagination helpeth his servants, when they least think of help, as it hapned to him. So long he lived in this miserable estate, as he became a threshers at a grange in a great field, more than a league from the *Tymor's* house; the *Bashaw*, as he oft used to visit his granges, visited him, and took occasion so to beat, spurn, and revile him, that forgetting all reason, he beat out the *Tymor's* brains with his threshing bat, for they have no flails; and seeing his estate could be no worse than it was, clothed himself in his clothes, hid his body under the straw, filled his knapsack with corn, shut the doors, mounted his horse, and ran into the desert at all adventures; two or three days, thus fearfully wandring he

knew not whither, and well it was, he met not any to ask the way; being even as taking leave of this miserable world, God did direct him to the great way or castragan, as they call it, which doth cross these large territories, and generally known among them by these marks.

In every crossing of this great way is there planted a post, and in it so many bobs with broad ends, as there be ways, and every bob the figure painted on it, that demonstrateth to what part that way leadeth; as that which pointeth towards the *Crim's* country, is marked with a half moon; if towards the *Georgians* and *Persians*, a black man, full of white spots; if towards *China*, the picture of the sun; if towards *Muscovia*, the sign of a cross; if towards the habitation of any other prince, the figure whereby his standard is known. To his dying spirits thus God added some comfort in this melancholly journey, wherein if he had met any of that vile generation, they had made him their slave, or knowing the figure engraven in the iron about his neck, (as all slaves have) he had been sent back again

again to his master; sixteen days he travelled in the fear and torment, after the cross, till he arrived at *Æopolis*, upon the river *Don*, a garrison of the *Muscovites*. The governor after due examination of those his hard events, took off his irons, and so kindly used him, he thought himself new risen from the dead, and the good lady *Calamata*, largely supplied all his wants.

This is as much as he could learn of those wild countries, that the country of *Cambia* is two days journey from the head of the great river *Bruapo*, which springeth from many places of the mountains of *Innagacbi*, that join themselves together in the pool *Kerkas*; which they account for the head, and falleth into the sea *Disfabbacca*, called by some the lake *N'rotis*, which receiveth also the river *Tanas*, and all the rivers that fall from the great countries of the *Circassi*, the *Cartacbes*, and many from the *Tauricaes*, *Precopes*, *Cummann*, *Cassunka*, and the *Crim*; thro' which sea he failed, and up the river *Bruapo* to *Nalbrits*, and thence thro' the deserts of *Circassi* to *Æopolis*, as is related; where he stayed with the governor, till the convoy went to *Caragnaw*; then with his certificate how he found him, and had examined with his friendly letters, sent him by *Zumalack* to *Caragnaw*, whose governor in like manner so kindly used him, that by this means he went with a safe conduct to *Letch* and *Donko* in *Cologofke*, and thence to *Bernists*, and *Newgrad* in *Siberia*, by *Rezechica*, upon the river *Nieper*, in the confines of *Lithuania*; from whence with as much kindness, he was conveyed in like manner by *Corofki*, *Dubersko*, *Duzibell*, *Drobobus*, and *Ostroge* in *Volonia*; *Saslaw*, and *Lajco* in *Podolia*; *Halico* and *Colonis* in *Polonia*; and so to *Hermontat* in *Transilvania*. In all this his life, he seldom met with more respect, mirth, content and entertainment; and not any governor where he came, but gave him somewhat as a present, besides his charges; seeing themselves as subject to the like calamity. Through those poor continually foraged countries, there is no passage, but with the caravans or convoys; for they are countries rather to be pitied than envied; and it is a wonder any should make wars for them. The villages are only here and there, a few houses of straight fir trees, laid heads and points above one another, made fast by notches at the ends, more than a man's height, and with broad split boards, pinned together with wooden pins, as thatched for cover-

ture. In ten villages you shall scarce find ten iron nails, except it be in some extraordinary man's house. For their towns *Æopolis*, *Letch* and *Donko*, have rampires made of that wooden walled fashion, double, and betwixt them earth and stones, but soatched with cross timber, they are very strong against any thing but fire; and about them a deep ditch, and a palizado of young fir trees; but most of the rest have only a great ditch cast about them, and the ditches earth, is all their rampire; but round well invironed with palizadoes. Some have some few small pieces of small ordnance and flings, calivers and muskets, but their generallest weapons are the *Russe* bows and arrows; you shall find pavements over bogs, only of young fir-trees laid cross one over another, for two or three hours journey, or as the passage requires, and yet in two days travel, you shall scarce see six habitations. Notwithstanding to see how their lords, governors and captains are civilized, well attired and accoutred with jewels, fables and horses, and after their manner with curious furniture, it is wonderful; but they are all lords or slaves, which makes them so subject to every invasion.

In *Transilvania* he found so many good friends, that but to see, and rejoice himself (after all those encounters) in his native country, he would ever hardly have left them, though the mirror of virtue their prince was absent. Being thus glutted with content, and near drowned with joy, he passed *Higb-Hungaria* by *Fileck*, *Tocka*, *Cassovia* and *Vnderoroway* by *Ulmicht* in *Moravia*, to *Prague* in *Bobemia*; at last he found the most gracious prince *Sigismundus*, with his colonel at *Lipswick* in *Misenland*, who gave him his pass, intimating the service he had done, and the honours he had received, with fifteen hundred ducats of gold to repair his losses: With this he spent some time to visit the fair cities and countries of *Dresden* in *Saxony*, *Magdeburgh* and *Brunswick*, *Cassel* in *Hessen*; *Wittenberg*, *Vilum*, and *Minekin* in *Bavaria*; *Augsborg* and her universities; *Hama*, *Frankford*, *Meitz*, the *Palatinate*; *Worms*, *Spies* and *Strasbourg*; passing *Nancie* in *Lorain*, and *France* by *Paris* to *Orleans*, he went down the river of *Loyer* to *Angiers*, and embarked himself at *Nantz* in *Britain*, to *Bilboa* in *Biskay*, to see *Burgos-Valladolid*, the admired monastery of the *Escorial*, *Madrid*, *Toledo*, *Corduba*, *Cuedyrial*, *Sevil*, *Cheriet*, *Cales* and *St. Lucas* in *Spain*.

## CHAP. XVIII.

*The observations of captain Smith; Mr. Henry Archer, and others in Barbary.*

Being thus satisfied with *Europe* and *Asia*, understanding of the wars in *Barbary*, he went from *Gibraltar* to *Centa* and *Tangier*, thence to *Saffee*, where growing into acquaintance with a *French* man of war, the captain and some twelve more went to *Morocco*, to see the ancient monuments of that large renowned city: It was once the principal city in *Barbary*, situated in a goodly plain country, 14 miles from the great mount *Atlas*, and sixty miles from the *Atlantic-Sea*, but now little remaining but the king's palace, which is like a city of it self, and the christian church, on whose flat square steeple is a great broach of iron, whereon is placed the three golden balls of *Africa*: The first is near three ells in circumference, the next above it somewhat less, the uppermost the least over them, as it were an half ball, and over all a pretty gilded *Pyramid*. Against those golden balls hath been shot many a shot, their weight is recorded 700 weight of pure gold, hollow within, yet no shot did ever hit them, nor could ever any conspirator attain that honour as to get them down. They report, the prince of *Morocco* betrothed himself to the king's daughter of *Albiopia*, he dying before their marriage, she caused those three golden balls to be set up for his monument, and vowed virginity all her life. The *Alfantica* is also a place of note, because it is invironed with a great wall, wherein lie the goods of all the merchants securely guarded. The *Juderea* is also (as it were) a city of it self, where dwell the *Jews*: The rest for the most part is defaced; but by the many pinnacles and towers, with balls on their tops, hath much appearance of much sumptuousness and curiosity. There have been many famous universities, which are now but stables for fowls and beasts, and the houses in most parts lie tumbled one above another. the walls of earth are with the great fresh floods washed to the ground; nor is there any village in it, but tents for strangers, *Larbes* and *Moors*. Strange tales they will tell of a great garden, wherein were all sorts of birds, fishes, beasts, fruits and fountains, which for beauty, art and pleasure, exceeded any place known in the world, though now nothing but dung-hills, pigeon-houses, shrubs and bushes. There are yet many excellent fountains, adorned with marble, and many arches, pillars, towers, ports, and temples; but most only reliques of lamentable ruins and sad desolation.

When *Muly Hamet* reigned in *Barbary*, *Abbas*, he had three sons, *Muly Seck*, *Muly Sidan* and *Muly Busferres*, he a most good and noble king, that governed well, with peace and plenty, till his empress, more cruel than any beast in *Africa*, poisoned him, her own daughter, *Muly Seck*, his eldest son, born of a *Portugal* lady, and his daughter, to bring *Muly Sidan*, to the crown, now reigning, which was the cause of all those brawls and wars that followed betwixt those brothers, their children, and a faint that started up, but he played the devil.

King *Huly Hamet* was not black, as many suppose, but *Molata* or tawny, as are the most of his subjects; every way noble, kind and friendly, very rich and pompous in state and majesty, though he sitteth not upon a throne nor chair of state, but crost leg'd upon a rich carpet, as doth the *Turk*, whose religion of *Mabomet*, with an incredible miserable curiosity they observe. His ordinary guard is at least 5000, but in progress, he goeth not with less than 20000 horsemen, himself as rich in all his equipage, as any prince in christendom, and yet a contributor to the *Turk*. In all his kingdom were so few good artificers, that he entertained from *England*, goldsmiths, plumbers, carvers and polishers of stone, and watch-makers, so much he delighted in the reformation of workmanship, he allowed each of them ten shillings a day standing fee, linen, woollen, silks, and what they would for diet and apparel, and custom free to transport or import what they would; for there were scarce any of those qualities in his kingdom, but those, of which there are divers of them, living at this present in *London*. Amongst the rest, one *Mr. Henry Archer*, a watch-maker, walking in *Morocco*, from the *Alfantica* to the *Juderea*, the way being very foul, met a great priest, or a *Sante* (as they call all great clergymen) who would have thrust him into the dirt for the way, but *Archer* not knowing what he was, gave him a box on the ear; presently he was apprehended, and condemned to have his tongue cut out, and his hand cut off: But no sooner it was known at the king's court but 300 of his guard came and broke open the prison, and delivered him although the fact was next degree to treason.

Concerning this *Archer*, there is one thing more worth noting: Not far from mount *Atlas*, a great lionsess in the heat of the day, did use to bathe her self, and teach her young puppies to swim in the river *Cauzef*, of a good breadth; yet she would carry them one after another over the river; which some *Moors* perceiving, watched their opportunity, and when the river was between her and them, stole four of her whelps, which she perceiving, with all the speed she could passed the river, and coming near them, they let fall a whelp (and fled with the rest) which she took in her mouth, and so returned to the rest: A male and a female of those they gave Mr. *Archer*, who kept them in the king's garden, till the male killed the female, then he brought it up as puppy-dog lying upon his bed, till it grew so great as a mastiff, and no dog more tame or gentle to them he knew: But being to return to *England*, at *Saffee* he gave him to a merchant of *Marjeilles*, that presented him to the *French* king, who sent him to king *James*, where it was kept in the tower seven years: After one Mr. *John Bull*, then servant to Mr. *Archer*, with divers of his friends, went to see the lions, not knowing any thing at all of him; yet this rare beast smelled him before he saw him, whining, groaning and tumbling, with such an expression of acquaintance, that being informed by the keepers how he came thither, Mr. *Bull* so prevail'd, the keeper opened the grate, and *Bull* went in: But no dog could fawn more on his master, than the lion on him, licking his feet, hands and face, skipping and tumbling to and fro, to the wonder of all the beholders; being satisfied with his acquaintance, he made shift to get out of the grate: But when the lion saw his friend gone, no beast by bellowing, roaring, scratching and howling, could express more rage and sorrow; nor in four days after would he either eat or drink.

In *Morocco* the king's lions are altogether in a court invironed with a great high wall; to those they put a young puppy-dog: The greatest lion had a fore upon his neck, which this dog so licked, that he was healed: The lion defended him from the fury of all the rest, nor durst they eat till the dog and he had fed; this dog grew great, and lived amongst them many years after.

*Fez* also is a most large and plentiful country, the chief city is called *Fez*, divided into two parts; old *Fez*, containing about 80 thousand households, the other

4000 pleasantly situated upon a river in the heart of *Barbary*, part upon hills, part upon plains, full of people and all sorts of merchandize. The great temple is called *Carucen*, in breadth seventeen arches, in length 120, born up with 2500 white marble pillars; Under the chief arch, where the tribunal is kept, hangeth a most huge lamp, compassed with 110 lesser, under the other also hang great lamps, and about some are burning 1500 lights: They say they were all made of the bells the *Arabians* brought from *Spain*. It hath three gates of notable height, priests and officers so many, that the circuit of the church, the yard, and other houses, is little less than a mile and half in compass; there are in this city 200 schools, 200 inns, 400 water-mills, 600 water-conduits, 700 temples and oratories; but 50 of them most stately and richly furnished. Their *Alcazer* or *Burje* is walled about, it hath twelve gates, and fifteen walks covered with tents, to keep the sun from the merchants, and them that come there. The king's palace, both for strength and beauty is excellent, and the citizens have many great privileges. Those two countries of *Fez* and *Morocco*, are the best part of all *Barbary*, abounding with people, cattle, and all good necessaries for man's use. For the rest, as the *Larbs* or mountainers, the kingdoms of *Cocow*, *Algier*, *Tripoli*, *Tunis* and *Egypt*; there are many large histories of them in divers languages, especially that writ by that most excellent statesman, *John de Leo*, who afterwards turned christian. The unknown countries of *Guine* and *Binn*, these 26 years have been frequented with a few *English* ships only to trade, especially the river of *Senega*, by captain *Brimslead*, captain *Brocket*, Mr. *Crump*, and divers others. Also the great river of *Gambria*, by captain *Jobson*, who is returned in thither again, in the year 1626, with Mr. *William Grent*, and thirteen or fourteen others, to stay in the country, to discover some way to those rich mines of *Gogo* or *Tumbatu*, from whence it is supposed the *Moors* of *Barbary* have their gold, and the certainty of those supposed descriptions and relations of those interior parts, which daily the more they are fought into, the more they are corrected: For surely those interior parts of *Africa*, are little known to either *English*, *French* or *Dutch*, though they use much the coast; therefore we will make little bold with the observations of the *Portugals*.

A brief description of the most unknown parts of Africa.

## CHAP. XIX.

*The strange discoveries and observations of the Portugals in Africa.*

How the  
Portugals  
coasted to  
the East-  
Indies.

THE Portugals on those parts have the glory, who first coasting along this western shore of Africa, to find passage to the East-Indies, within this 150 years, even from the Streights of Gibraltar, about the cape of *Bonne Esperance* to the *Perfian Gulf*, and thence all along the *Asian* coast to the *Moluccas*, have subjected many great kingdoms, erected many commonwealths, built many great and strong cities; and where is it they have not been by trade or force? No not so much as *Cape de Verd* and *Sermleone*; but most bays or rivers, where there is any trade to be had, especially gold, or convenience for refreshment, but they are scattered; living so amongst those blacks, by time and cunning, they seem to be naturalized amongst them. As for the isles of the *Canaries*, they have fair towns, many villages, and many thousands of people rich in commodities.

Or Ed-  
ward.

*Ordoardo Lopez*, a noble Portuguese, Anno Dom. 1578, imbarcking himself for Congo, to trade, where he found such entertainment, finding the king much oppressed with enemies, he found means to bring in the Portuguese to assist him, whereby he planted there christian religion, and spent most of his life to bring those countries to the crown of Portugal, which he describeth in this manner.

The king-  
dom of  
Congo.

The kingdom of Congo is about 600 miles diameter any way, the chief city, called *St. Savadore*, seated upon an exceeding high mountain, 150 miles from the sea, very fertile, and inhabited with more than 100000 persons, where is an excellent prospect over all the plain countries about it well water'd, lying (as it were) in the center of this kingdom, over all which the Portuguese now command, though but an handful in comparison of the negroes. They have flesh and fruits very plentiful of divers sorts.

Wild ele-  
phants.

This kingdom is divided into five provinces, viz. *Bamba*, *Sundi*, *Pango*, *Batta* and *Pembo*; but *Bamba* is the principal, and can afford 400000 men of war. Elephants are bred over all those provinces, and of wonderful greatness; though some report, they cannot kneel nor lie down, they can do both, and have their joints as other creatures for use: With their fore-feet they will leap upon trees to pull down the boughs, and are of that strength, they will shake a great *Coco* tree for the nuts, and pull down a good tree with their tusks, to

get the leaves to eat, as well as fedge and long grass, *Coco* nuts and berries, &c. which with their trunk they put in their mouth, and chew it with their smaller teeth; in most of those provinces, are many rich mines, but the negroes opposed the Portuguese for working in them.

The kingdom of *Angola* is wonderful populous, and rich in mines of silver, copper, and most other metals; fruitful in all manner of food, and sundry sorts of cattle, but dogs flesh they love better than any other meat; they use few clothes, and no armour; bows, arrows and clubs are their weapons. But the Portuguese are well armed against those engines, and do buy yearly of those blacks more than five thousand slaves, and many are people exceeding well proportioned.

The *Anchios* are a most valiant nation, but most strange to all about them. Their arms are bows, short and small, wrapped about with serpents skins of divers colours, but so smooth, you would think them all one with the wood, and it makes them very strong; their strings little twigs, but exceeding tough and flexible; their arrows short, which they shoot with an incredible quickness. They have short axes of brass and copper for swords; wonderful, loyal and faithful, and exceeding simple, yet so active, they skip amongst the rocks like goats. They trade with them of *Nubia* and *Congo* for *Lamach*, which is a small kind of shell-fish, of an excellent azure colour, male and female, but the female they hold most pure; they value them at divers prices, because they are of divers sorts, and those they use for coin, to buy and sell, as we do gold and silver; nor will they have any other money in all those countries, for which they give elephants teeth; and slaves for salt, silk, linen cloth, glass-beads, and such like Portuguese commodities.

They circumcise themselves, and mark their faces with sundry flashes from their infancy. They keep shamblers of mens flesh, as if it were beef or other victuals; for when they cannot have a good market for their slaves, or their enemies they take, they kill, and sell them in this manner; some are so resolute, in shewing how much they scorn death, they will offer themselves and slaves, to this butchery to their prince and friends; and though there be many nations will eat their enemies in *America* and *Asia*, yet none but those are known to

be so mad, as to eat their slaves and friends  
also.

Religions and idols they have as many  
as nations and humours; but the devil  
hath the greatest part of their devotions,  
whom all those blacks do say is white;  
for there are no saints but blacks.

But besides those great kingdoms of *Congo*, *Angola* and *Azicbi*, in those unrequented  
parts are the kingdoms of *Lango*, *Matania*,  
*Battua*, *Sofala*, *Mozambique*, *Quivola*, the  
*Ile of St. Lawrence*, *Mombaza*, *Melinda*, the  
empires of *Monomotapa*, *Monemugi* and  
*Prebyter John*, with whom they have a kind  
of trade, and their rites, customs, cli-  
mates, temperatures and commodities by  
relation: Also great lakes, that deserve  
the names of seas, and huge mountains of  
divers sorts, as some scorched with heat,  
some covered with snow; the mountains  
of the sun, also of the moon, some of chry-  
stal, some of iron, some of silver, and  
mountains of gold, with the original of  
*Nilus*; likewise sundry sorts of cattle, fishes,  
fowls, strange beasts and monstrous ser-  
pents; for *Africa* was always noted to be a  
fruitful mother of such terrible creatures,  
who meeting at their watering places, which  
are but ponds in desert places, in regard of  
the heat of the countrey, and their extremi-  
ties of nature, make strange copulations,  
and so ingender those extraordinary mon-

sters. Of all these you may read in the hi-  
story of this *Edward Lopez*, translated into  
*English* by *Abraham Hariswel*, and dedicated  
to *John* lord archbishop of *Canterbury*,  
1597. But because the particulars are most  
concerning the conversion of those pagans,  
by a good poor priest, that first converted  
a noble man, to convert the king, and  
the rest of the nobility; sent for so many  
priests and ornaments into *Portugal*, to so-  
lemnize their baptisms with such magnifi-  
cence, which was performed with such  
strange curiosities, that those poor negroes  
adored them as gods, till the priests grew  
to that wealth, a bishop was sent to rule  
over them, which they would not endure,  
which endangered to spoil all before they  
could be reconciled. But not so trouble  
you too long with those rarities of uncer-  
tainties; let us return again to *Barbary*,  
where the wars being ended, and *Befferes*  
possessed of *Morocco*, and his father's trea-  
sure, a new bruit arose amongst them, that  
*Muly Sidan* was raising an army against  
him, who after took his brother *Befferes*  
prisoner; but by reason of the uncertainty,  
and the perfidious, treacherous, bloody mur-  
ders rather than war, amongst those perfid-  
ious, barbarous *Moors*, *Smith* returned  
with *Merham*, and the rest to *Saffee*, and so  
aboard his ship, to try some other conclu-  
sions at sea.

## CHAP. XX.

*A brave sea-fight betwixt two Spanish men of war, and captain Merham, with Smith.*

*Merham*, a captain of a man of war  
then in the road, invited captain  
*Smith* and two or three more of them a-  
board with him, where he spared not any  
thing he had to express his kindness, to bid  
them welcome, till it was too late to go on  
shore, so that necessity constrained them to  
stay aboard; a fairer evening could not be;  
yet ere midnight, such a storm did arise,  
they were forced to let slip cable and an-  
chor, and put to sea; spooning before the  
wind, till they were driven to the *Canaries*;  
in the calms they accommodated them-  
selves, hoping this strange accident might  
yet produce some good event; not long it  
was before they took a small bark coming  
from *Tenerif*, loaded with wine; three or  
four more they chased, two they took, but  
found little in them, save a few passengers,  
that told them of five *Dutch* men of war,  
about the isles; so that they stood for *Boia-  
dora*, upon the *African* shore, betwixt which

Vol. II.

and cape *Noa*, they descry'd two sail. *Mer-  
ham* intending to know what they were,  
hailed them; very civilly they danced their  
topsails, and desired the man of war to  
come aboard them, and take what he would,  
for they were but two poor distressed *Biskay-  
ners*. But *Merham*, the old fox, seeing him-  
self in the lion's paws, sprung his louse, the  
other tacked after him, and came close up  
to his nether quarter, gave his broad-side,  
and so loused up to windward; the vice-  
admiral did the like, and at the next bout,  
the admiral with a noise of trumpets, and  
all his ordnance, murderers and muskets,  
boarded him on his broad-side; the other  
in like manner on his ley quarter, that it  
was so dark, there was little light, but fire  
and smoak; long he stayed not, before he  
fell off, leaving 4 or 5 of his men sprawl-  
ing over the grating; after they had bat-  
tered *Merham* about an hour, they boarded  
him again as before, and threw four ked-

gars

gars or grapnels in iron chains, then shearing off, they thought so to have torn down the grating; but the admiral's yard was so intangled in the shrouds, *Merbam* had time to discharge two cross-bar shot amongst them, and divers bolts of iron made for that purpose, against his bow, that made such a breach, he feared they both should have sunk for company; so that the *Spaniards* was as yare in slipping his chained grapnels, as *Merbam* was in cutting the tackling, kept fast their yards in his shrouds; the vice-admiral presently cleared himself, but spared neither his ordnance nor muskets to keep *Merbam* from getting away, till the admiral had repaired his leak; from twelve at noon, till six at night, they thus interchanged one volley for another; then the vice-admiral fell on stern, staying for the admiral that came up again to him, and all that night stood after *Merbam*, that shaped his course for *Mamora*; but such small way they made, the next morning they were not three leagues off from cape *Noa*. The two *Spanish* men of war, for so they were, and well appointed, taking it in scorn as it seemed, with their chafe, broad-side and stern, the one after the other, within musket shot, plying their ordnance; and after an hours work, commanded *Merbam* amain for the king of *Spain* upon fair quarter; *Merbam* drank to them, and so discharged his quarter-pieces: Which pride the *Spaniard* to revenge, boarded him again, and many of them were got to the top to unslung the main-sail, which the master and some others from the round-

house, caused to their cost to come tumbling down; about the round-house the *Spaniards* were so pelted, that they were forced to the great cabin and blew it up; the smoke and fire was so vehement, as they thought the ship on fire; they in the fore-castle were no less assaulted, that they blew up a piece of the grating, with a great many of *Spaniards* more; then they cleared themselves with all speed, and *Merbam* with as much expedition to quench the fire with wet cloaths and water, which began to grow too fast. The *Spaniard* still playing upon him with all the shot they could; the open places presently they covered with old sails, and prepared themselves to fight to the last man. The angry *Spaniard* seeing the fire quenched, hung out a flag of truce to have but a parley; but that desperate *Merbam* knew there was but one way with him, and would have none, but the report of his ordnance, which he did know well how to use for his best advantage. Thus they spent the next afternoon, and half the night, when the *Spaniards* either lost them or left them. Seven and twenty men *Merbam* had slain, and sixteen wounded, and could find they had received 140 great shot. A wounded *Spaniard* they kept alive confessed they had lost 100 men in the admiral, which they did fear would sink ere she could recover a port. Thus reaccommodating their sails, they sailed for *Santa Cruz*, cape *Goa* and *Magadore*, till they came again to *Saffee*, and then he returned into *England*.

## CHAP. XXI.

*The continuation of the general history of Virginia, the Summer-Isles and New-England; with their present estate from 1624 to this present 1629.*

Concerning these countries, I would be sorry to trouble you with repeating one thing twice, as with their maps, commodities, people, government and religion yet known; the beginning of these plantations, their numbers and names, with the names of the adventurers, the yearly proceedings of every governor both here and there. As for the misprisions, neglect, grievances, and the causes of all those rumours, losses and crosses that have happened; I refer you to the general history, where you shall find all this at large, especially to those pages where you may read my letter of advice to the council and company, what of necessity must be done, or lose all and leave the country, page 70, what commodities

I sent home, page 163, my opinion and offer to the company, to feed and defend the colonies, page 150, my account to them here of my actions there, page 162, my seven answers to his majesty's commissioners: Seven questions what hath hindered *Virginia*, and the remedy, page 165. How those noble gentlemen spent near two years in perusing all letters came from thence; and the differences betwixt many factions, both here and there, with their complaints; especially about theillery which should have been a new office in *London*, for the well ordering the sale of tobacco, that 2500 pounds should yearly have been raised out of it, to pay four or five hundred pounds yearly to the govern-

 of forty or fifty pounds yearly for their  
 clerks and other officers which were never  
 there, page 153; but not one hundred  
 pounds for all them in *Virginia*, nor any  
 thing for the most part of the adventurers  
 in *England*, except the undertakers for the  
 lotteries, setters out of ships, adventurers  
 of commodities, also their factors and many  
 other officers, there employ'd only by friend-  
 ship to raise their fortunes out of the la-  
 bours of the true industrious planters by  
 the title of their office, who under the  
 colour of sincerity, did pillage and deceive  
 all the rest most cunningly: For more than  
 150000 pounds have been spent out of the  
 common stock, besides many thousands  
 have been there consumed, and near 7000  
 people that there died, only for want of  
 good order and government, otherwise long  
 ere this there would have been more than  
 20000 people, where after twenty years  
 spent only in complement and trying new  
 conclusions, was remaining scarce 1500,  
 with some few cattle.

Then the company dissolved, but no  
 account of any thing, so that his majesty  
 appointed commissioners to oversee and give  
 order for their proceedings. Being thus  
 in a manner left to themselves, since then  
 within these four years, you shall see how  
 wonderfully they have increased beyond  
 expectation; but so exactly as I desired,  
 I cannot relate unto you: For altho' I  
 have tired my self in seeking and discour-  
 ting with those returned thence, more than  
 would a voyage to *Virginia*; few can tell  
 me any thing, but of that place or places  
 they have inhabited, and he is a great tra-  
 veller that hath gone up and down the ri-  
 ver of *James-Town*, been at *Pamaunke*,  
*Smith's-Isles*, or *Acomack*; wherein for the  
 most part, they keep one tune of their now  
 particular abundance, and their former  
 wants having been there, some sixteen  
 years, some twelve, some six, some near  
 twenty, &c. But of their general estate,  
 or any thing of worth, the most of them  
 do know very little to any purpose.

Now the most I could understand in ge-  
 neral, was from the relation of Mr. *Nathani-*  
*el Cassey*, that lived there with me, and  
 returned *Anno Dom. 1627*; and some others  
 affirm, Sir *George Yerely* was governor,  
 captain *Francis West*, Dr. *John Pott*, cap-  
 tain *Roger Smith*, captain *Matthews*, cap-  
 tain *Tucker*, Mr. *Clabourn* and Mr. *Far-*  
*rer*, of the council: Their habitations many.  
 The governor, with two or three of the  
 council, are for most part at *James-Town*, the  
 rest repair thither as there is occasion; but  
 every three months they have a general meet-  
 ing, to consider of their publick affairs.

Their numbers then were about 1500, *Their*  
 some say rather 2000, divided into seven-  
 teen or eighteen several plantations; the  
 greatest part thereof, towards the falls, are  
 so inclosed with palisadoes they regard  
 not the *Salvages*; and amongst those plan-  
 tations above *James-Town*, they have now  
 found means to take plenty of fish, as well  
 with lines as nets, and where the waters  
 are the largest, having means they need  
 not want.

Upon this river they seldom see any *Their con-*  
*Salvages*, but in the woods many times *dition with*  
 their fires: Yet some few there are, that up- *the salva-*  
 on their opportunity, have slain some few *ges.*  
 straglers, which have been revenged with  
 the death of so many of themselves; but no  
 other attempt hath been made upon them  
 this two or three years.

Their cattle, namely, oxen, kine, bulls, *Their in-*  
 they imagine to be about 2000; goats great *crease of*  
 store and great increase; the wild hogs, *cattle and*  
 which are infinite, are destroy'd and eaten *poultry.*  
 by the *Salvages*; but no family is so poor  
 that hath not tame swine sufficient; and  
 for poultery, he is a very bad husband,  
 that breedeth not an hundred in a year, and  
 the richer sort doth daily feed on them.

For bread they have plenty, and so good, *Plenty of*  
 that those that make it well, better cannot *corn.*  
 be: Divers have much *English* corn, espe-  
 cially Mr. *Abraham Perce*, which prepared  
 this year to sow two hundred acres of *Eng-*  
*lish* wheat, and as much with barley, feed-  
 ing daily about the number of sixty per-  
 sons at his own charges.

For drink, some malt the *Indian* corn, *Their*  
 others barley, of which they make good *drink.*  
 ale, both strong and finall, and such plenty  
 thereof, few of the upper planters drink  
 any water: But the better sort are well fur-  
 nish'd with sack, *Aquaviva* and good *Eng-*  
*lish* beer.

The servants commonly feed upon milk *Their ser-*  
 homily, which is bruised *Indian* corn pound- *vants diet.*  
 ed and boil'd thick, and milk for the fawce;  
 but boil'd with milk, the best of all will feed  
 oft on it, and leave their flesh; with milk,  
 butter and cheese; with fish, bulls-flesh,  
 for they seldom kill any other, &c. And e-  
 very one is so applied to his labour about  
 tobacco and corn, which doth yield them  
 such profit, they never regarded any food  
 from the *Salvages*, nor have they any trade  
 or conference with them them, but upon  
 meer accidents and defiance: And now  
 the merchants have left it, there having  
 gone so many voluntary ships within these  
 two years, as have furnished them with  
 apparel, sack, *Aquaviva*, and all necessaries,  
 much better than any before.

For arms, there is scarce any man but *Their arms*  
 he is furnish'd with a piece, a jack, a coat *and exer-*  
 of *cise.*

of male, a sword or rapier; and every holyday, every plantation doth exercise their men in arms, by which means hunting and fowling, the most part of them are most excellent marksmen.

*Their health and discoveries.*

For discoveries they have made none, nor any other commodity than tobacco do they apply themselves unto, tho' never any was planted at first. And whereas the country was heretofore held most intemperate and contagions by many, now they have houses, lodgings, victuals, and the sun hath power to exhale up the moist vapours of the earth, where they have cut down the wood, which before it could not, being covered with spreading tops of high trees; they find it much more healthful than before; and for their numbers few countries are less troubled with death, sickness or any other disease, or have their overgrown women become more fruitful.

*The present estate of Virginia 1629.*

Since this, Sir George Yerely died 1628, captain West succeeded him, but about a year after, returned for England: Now Dr. Pool is governor, and the rest of the council as before: *James-Town* is yet their chief seat, most of the wood destroyed, little corn there planted, but all converted into pasture and gardens, wherein doth grow all manner of herbs and roots we have in England, in abundance, and as good grass as can be. Here most of their cattle do feed, their owners being most some one way, some another, about their plantations, and return again when they please, or any shipping comes in to trade. Here in the winter they have hay for their cattle, but in other places they browse upon wood, and the great hulks of their corn, with some corn in them, doth keep them well.

*Mr. Hutchins. Five thousand people. Five thousand cattle. Goats, hogs, and poultry very infinite.*

Mr. Hutchins saith, they have 2000 cattle, and about 5000 people; but Master Floud, John Daves, William Emerson, and divers others say about 5000 people, and 5000 kine, calves, oxen and bulls; for goats, hogs and poultry, corn, fish, deer, and many sorts of other wild beast, and fowl in their season, they have so much more than they spend, they are able to feed three or four hundred more than they have; and do oft much relieve many ships, both there and for their return; and this last year was there at least two or three and twenty sale. They have oft much salt-fish from *New-England*, but fresh fish enough, when they will take it; peaches in

abundance at *Kekoughtan*; apples, pears, apricocks, vines, figs, and other fruits some have planted that prospered exceedingly, but their diligence about tobacco, left them to be spoiled by the cattle, yet now they begin to revive; Mrs. Pearce, an honest industrious woman, hath been there near twenty years, and now returned, saith, she hath a garden at *James-Town*, containing three or four acres, where in one year she hath gathered near an hundred bushels of excellent figs; and that of her own provision she can keep a better house in *Virginia*, than here in *London* for 3 or 400 pounds a year, yet went thither with little or nothing. They have some tame geese, ducks and turkeys. The masters now do so train up their servants and youths in shooting deer and fowl, that the youths will kill them as well as their masters. They have two brew-houses, but they find the *Indian* corn so much better than ours, they begin to leave sowing it. Their cities and towns are only scattered houses, they call plantations, as our country villages, but no ordnance mounted. The forts captain Smith left a building, so ruined, there is scarce mention where they were; no discoveries of any thing more, than the curing of tobacco, by which hitherto, being so present a commodity of gain, it hath brought them to this abundance; but that they are so disjointed, and every one commander of himself to plant what he will: They are now so well provided, that they are able to subsist, if they would join together, now to work upon soap-shes, iron, rape-oil, mader, pitch and tar, flax and hemp; as for their tobacco, there comes from many places such abundance, and the charge to great, it is not worth the bringing home.

*Commodities much making, black wal-nut, ash for piles, oak for plants, hawthorn for cherries.*

There is gone, and now a going, divers ships, as captain *Perse*, captain *Prine*, with Sir John Harvey to be their governor, with two or three hundred people; there is also some from *Bristol* and other parts of the west-country a preparing, which I heartily pray to God to bless, and send them a happy and prosperous voyage.

Nathaniel Cause, master Hutchins, master Floud, John Daves, William Emerson, master William Barnett, master Cooper, and others.

## CHAP. XXII.

*The proceedings and present estate of the Summer Isles, from Anno Dom. 1624, to this present 1629.*

FROM the *Summer Isles*, Mr. Ireland, and divers others report, their forts, ordnance and proceedings, are much as they were in the Year 1622. as you may read in the general history, pag. 199. Captain Woodhouse governour. There are few forts of any fruits in the *West Indies*, but they grow there in abundance; yet the fertility of the soil in many places decayeth, being planted every year; for their plantains, which is a most delicate fruit, they have lately found a way by pickling or drying them, to bring them over into *England*, there being no such fruit in *Europe*, and wonderful for increase. For fish, flesh, figs, wine, and all sorts of most excellent herbs, fruits and roots they have in abundance. In this governour's time, a kind of whale, or rather a *Jubaria*, was driven on shore in *Southampton* tribe from the west, over an infinite number of rocks so bruised, that the water in the bay where she lay, was all oily, and the rocks about it all bedast with parmacitty, congealed like ice, a good quantity we gathered, with which we commonly cured any boil, hurt or bruise; some burnt it in their lamps, which blowing out, the very snuff will burn so long as there is any of the oil remaining, for two or three days together.

The next governour was captain Philip Bell, whose time being expired, captain Roger Wood possess'd his place, a worthy gentleman of good desert, and hath lived a long time in the country; their numbers are about 2 or 3000 Men, Women and Children, who increase there exceedingly; their greatest complaint is want of apparel, and too much custom, and too many officers; the pity is, there are no more men than women, yet no great mischief, because

there is so much less pride: the cattle they have increase exceedingly; their forts are well maintained by the merchants here, and planters there; to be brief, this isle is an excellent bit to rule a great horse.

All the cehow birds and egbirds are gone; seldom any wild cats seen; no rats to speak off; but the worms are yet very troublesome; the people very healthful, and the ravens gone; fish enough, but not so near the shore as it used, by the much beating it; it is an isle that hath such a rampire and a ditch, and for the quantity so manned, victualled, and fortified, as few in the world do exceed it, or is like it.

The 22d of March, two ships came from thence; the *Peter-Bonaventure*, near 200 Tons, and sixteen Pieces of ordnance; the captain, Thomas Sherwin; the master, Mr. Edward Some, like him in condition, a goodly, lusty, proper, valiant man: The *Lydia*, wherein was Mr. Anthony Thorne, a smaller ship, were chased by eleven ships of *Dunkirk*; being thus over-match'd, captain Sherwin was taken by them in *Torbay*, only his valiant master was slain; the ship with about seventy *English* men they carried betwixt *Dover* and *Calais* to *Dunkirk*; but the *Lydia* safely recovered *Dartmouth*.

These noble adventurers for all those losses patiently do bear them; but they hope the king and state will understand it is worth keeping, tho' it afford nothing but tobacco, and that now worth little or nothing, custom and freight pay'd, yet it is worth keeping, and not supplanting; tho' great Men feel not those losses, yet gardeners, carpenters and smiths, do pay for it.

From the Relation of Robert Chefevan and others.

## CHAP. XXIII.

*The proceedings and present estate of New England, since 1624, to this present 1629.*

WHEN I went first to the north part of *Virginia*, where the westerly colony had been planted, it had dissolved itself within a year, and there was not one christian in all the land. I was set forth at the sole charge of four merchants of *London*; the country being then reputed by your westerlings, a most rocky, barren, desolate

Vol. II.

desart; but a good return I brought from thence, with the maps and relations I made of the country, which I made so manifest, some of them did believe me, and they were well embraced both by the *Londoners* and the *Westerlings*, for whom I had promised to undertake it, I thinking to have joined them all together; but that might well

Y y y

have

have been a work of *Hercules*. Betwixt them long there was much contention; the *Londoners* indeed went bravely forward; but in three or four years, I and my friends consumed many hundred pounds amongst the *Plimothians*, who only fed me with delays, promises and excuses, but no performance of any thing to any purpose. In the interim, many particular ships went thither, and finding my relations true, and that I had not taken that I brought home from the *Frenchmen*, as had been reported; yet farther, for my pains to discredit me, and my calling it *New-England*, they obscured, and shadowed it, with the title of *Canada*, till at my humble suit, it pleased our most royal king *Charles*, whom God long keep, bless and preserve, then prince of *Wales*, to confirm it with my map and book, by the title of *New-England*; the gain thence returning, did make the fame thereof so increase, that thirty, forty, or fifty sail went yearly only to trade and fish; but nothing would be done for a plantation, till about some hundred of your brownists of *England*, *Amsterdam* and *Leyden*, went to *New Plimouth*, whose humorous ignorances, caused them for more than a year to endure a wonderful deal of misery, with an infinite patience; saying my books and maps were much better cheap to teach them than myself; many other have used the like good husbandry, that have pay'd soundly in trying their self-will'd conclusions; but those in time doing well, divers others have in small handfuls undertaken to go there, to be several lords and kings of themselves, but most vanished to nothing. Notwithstanding the fishing ships, made such good returns, at last it was ingrossed by twenty patentees, that divided my map into twenty parts, and cast lots for their shares; but money not coming in as they expected, procured a proclamation, none should go thither without their licences to fish; but for every thirty tuns of shipping, to pay them five pounds; besides, upon great penalties, neither to trade with the natives, cut down wood for the stages, without giving satisfaction, tho' all the country is nothing but wood, and none to make use of it, with many such other pretences, for to make this country plant itself, by its own wealth: Hereupon most men grew so discontented, that few or none would go; so that the patentees, who never a one of them had been there, seeing those projects would not prevail, have since not hindered any to go that would, that within these few last years, more have gone thither than ever.

*A new plantation, 1629.* Now this year 1629, a great company of people of good rank, zeal, means and

quality, have made a great stock, and with six good ships in the months of *April* and *May*, they set sail from *Thames*, for the bay of the *Massachusetts*, otherwise called *Charles's* river, viz. the *George Bonaventure*, of twenty pieces of ordnance, the *Talbot* nineteen, the *Lions-whelp* eight, the *May-flower* fourteen, the *Four Sisters* fourteen, the *Pilgrim* four, with three hundred and fifty men, women and children; also an hundred and fifteen head of cattle, as horse, mares, and neat beast; one and forty goats, some conies, with all provision for household and apparel; six pieces of great ordnance for a fort, with mulkets, pikes, corselets, drums, colours, with all provision necessary for a plantation, for the good of man; other particulars I understand of no more, than is writ in the general history of those countries.

But you are to understand, that the noble lord chief justice *Popham*, judge *Dodderge*, the right honourable earls of *Pembroke*, *Southampton*, *Salisbury*, and the rest, as I take it, they did all think, as I and they that went with me, did; that, had those two countries been planted, as it was intended, no other nation should complaint betwixt us. If ever the king of *Spain* and we should fall foul, those countries being so capable of all materials for shipping, by this might have been owners of a good fleet of ships, and have relieved a whole navy from *England* upon occasion; yea, and have furnished *England* with the most easternly commodities; and now since, seeing how conveniently the *Summer Isles* fell to our shares, so near the *West-Indies*, we might with much more facility than the *Dutchmen* have invaded the *West-Indies*, that doth now put in practise, what so long hath been advised on, by many an honest *English* statesman.

Those countries, captain *Smith* oft times used to call his children that never had mother; and well he might, for few fathers ever payed dearer for so little content; and for those that would truly understand, how many strange accidents hath befallen them and him; how oft up, how oft down, sometimes near despair, and ere long flourishing, cannot but conceive God's infinite mercies and favours towards them. Had his designs been to have persuaded men to a mine of gold, though few do conceive either the charge or pains in refining it, nor the power nor care to defend it; or some new invention to pass to the south-sea, or some strange plot to invade some strange monastery, or some portable country, or some chargeable fleet to take some rich carocks in the *East-Indies*; or letters of mart to rob some poor merchants; what multitudes

*The effect of negard-line's.*

*Spencer left to rest the great city of Mans.*

*Captain Charles Ley.*

*Sir Thomas Roe.*

*Captain Morton.*

multitudes of both people and money would contend to be first employed? But in those noble endeavours (now) how few of quality, unless it be to beg some monopoly; and those seldom seek the common good, but the commons goods, as you may read at large in his general history, pag. 217, 218, 219, his general observations and reasons for this plantation; for yet those countries are not so forward, but they may become as miserable as ever, if better courses be not taken than are; as this *Smith* will plain-

ly demonstrate to his majesty, or any other noble person of ability, liable generously to undertake it; how within a short time to make *Virginia* able to resist any enemy, that as yet lieth open to all, and yield the king more custom within these few years, in certain staple commodities, than ever it did in tobacco; which now not being worth bringing home, the custom will be as uncertain to the king, as dangerous to the plantations.

CHAP. XXIV.

*A brief discourse of divers voyages made unto the goodly country of Guinea, and the great river of the Amazons; relating also the present plantation there.*

IT is not unknown how that most industrious and honourable knight, *sir Walter Raleigh*, in the year of our Lord 1595, taking the ile of *Trinidad*, fell with the coast of *Guiana*, northward of the line 10 degrees, and coasted the coast, and searched up the river *Oranoco*; where understanding that twenty several voyages had been made by the *Spaniards*, in discovering this coast and river, to find a passage to the great city of *Mano*, called by them the *Eldorado*, or the golden city: He did his utmost to have found some better satisfaction than relations: But means failing him, he left his trusty servant *Francis Sparrow* to seek it, who wandering up and down those countries, some fourteen or fifteen years, unexpectedly returned. I have heard him say, he was led blinded into this city by *Indians*; but little discourse of any purpose, touching the largeness of the report of it; his body seeming as a man of an incurable consumption, shortly died here after in *England*. There are above thirty fair rivers that fall into the sea, between the river of the *Amazons* and *Oranoco*, which are some nine degrees asunder. In the year 1605, captain *Ley*, brother to that noble knight, *sir Oliver Ley*, with divers others, planted himself in the river *Weapoco*, wherein I should have been a party; but he died, and there lies buried, and the supply mis-carrying, the rest escaped as they could.

*Sir Thomas Roe*, well known to be a most noble gentleman, before he went lord ambassador to the great *Mogul*, or the great *Turk*, spent a year or two upon this coast, and about the river of the *Amazons*, wherein he most employed captain *Matthew Morton*, an expert seaman in the discovery of this famous river, a gentleman that was the first shot, and mortally supposed wounded to death, with me in *Virginia*, yet since hath been twice with command in the *East-Indies*.

also captain *William White*, and divers other worthy and industrious gentlemen, both before and since, have spent much time and charge to discover it more perfectly, but nothing more effected for a plantation, till it was undertaken by captain *Robert Harcote* 1609.

This worthy gentleman, after he had by commission made a discovery to his mind, left his brother *Michael Harcote*, with some fifty or sixty men in the river *Weapoco*, and so presently returned to *England*, where he obtained, by the favour of prince *Henry*, a large patent for all that coast called *Guiana*, together with the famous river of *Amazons*, to him and his heirs: But so many troubles here surprized him, tho' he did his best to supply them, he was not able, only some few he sent over as passengers, with certain *Dutchmen*, but to small purpose. Thus this business lay dead for divers years, till *sir Walter Raleigh*, accompanied with many valiant soldiers and brave gentlemen, went his last voyage to *Guinea*, amongst the which was captain *Roger North*, brother to the right honourable the lord *Dudley North*, who upon this voyage having stayed, and seen divers rivers upon this coast, took such a liking to those countries, having had before this voyage, more perfect and particular information of the excellency of the great river of the *Amazons*, above any of the rest, by certain *Englishmen* returned so rich, from thence in good commodities, they would not go with *sir Walter Raleigh* in search of gold; that after his return for *England*, he endeavoured by his best abilities to interest his country and state in those fair regions, which by the way of letters patents unto divers noblemen and gentlemen of quality, was erected into a company and perpetuity for trade and plantation, not knowing of the interest of captain *Harcote*.

the country  
(1607).

Captain  
Roger  
North.

Whereupon, accompanied with 120 gentlemen and others, with a ship, a pinnace and two shallops, to remain in the country, he set sail from *Plimouth* the last of *April* 1620, and within seven weeks after he arrived well in the *Amazons*, only with the loss of one old man: Some hundred leagues they ran up the river to settle his men, where the sight of the country and people so contented them, that never men thought themselves more happy: Some *English* and *Irish* that had lived there some eight years, only supplied by the *Dutch*, he reduced to his company and to leave the *Dutch*: Having made a good voyage, to the value of more than the charge, he returned to *England* with divers good commodities besides tobacco: So that it may well be conceived, that if this action had not been thus crossed, the generality of *England* had by this time been won and encouraged therein. But the time was not yet come, that God would have this great business effected, by reason of the great power the lord *Gundamore*, ambassador for the king of *Spain*, had in *England*, to cross and ruin those proceedings; and so unfortunate captain *North* was in this business, he was twice committed prisoner to the *Tower*, and the goods detained till they were spoiled, who beyond all others, was by the much greatest adventurer and loser.

Notwithstanding all this, those that he had left in the *Amazons*, would not abandon the country. Captain *Thomas Panton*, a worthy gentleman, his lieutenant died. Captain *Charles Parker*, brother to the right honourable the lord *Morley*, lived there six years after; Mr. *John Christmas* five years, so well, they would not return, altho' they might, with divers other gentlemen of quality and others: All thus destitute of any supplies from *England*. But all authority being dissolved, want of government did more wrong their proceedings, than all other crosses whatsoever. Some relief they had sometime from the *Dutch*, who knowing their estates, gave what they pleased, and took what they list. Two brothers, gentlemen, *Thomas* and *William Hixon*, who stayed three years there, are now gone to stay in the *Amazons*, in the ships lately sent thither.

The business thus remaining in this sort, three private men left of that company, named Mr. *Thomas Warriner*, *John Rhodes*, and *Robert Bims*, having lived there about two years, came for *England*, and to be free from the disorders that did grow in the *Amazons*, for want of government amongst their countrymen, and to be quiet amongst themselves, made means to let themselves out for *St. Christophers*; their whole num-

ber being but fifteen persons that paid for their passage in a ship going for *Virginia*, where they remained a year before they were supplied, and then that was but four or five men. Thus this isle, by this small beginning, having no interruption by their own country, hath not got the start of the continent and main land of *Guinea*, which hath been laid apart, and let alone until that captain *North*, ever watching his best opportunity and advantage of time in the state, hath now again pursued, and set on foot his former design: Captain *Harcae* being now willing to surrender his grant, and to join with captain *North*, in passing a new patent, and to erect a company for trade and plantation in the *Amazons*, and all the coast and country of *Guinea* for ever. Whereupon, they have sent this present year in *January*, and since 1628, four ships, with near 200 persons; the first ship with 112 men, not one miscarried; the rest went since, not yet heard of; and they are preparing another with their best expedition; and since *January* are gone from *Holland*, 100 *English* and *Irish*, conducted by the old planters.

This great river lieth under the line; the two chief head lands north and south, are about three degrees asunder, the mouth of it is so full of many great and small isles, it is an easy matter for an unexperienced pilot to lose his way. It is held one of the greatest rivers in *America*, and as most men think in the world; and cometh down with such a fresh, it maketh the sea fresh, more than thirty miles from the shore. Captain *North* having seated his men about 100 leagues in the main, sent captain *William White*, with thirty gentlemen and others, in a pinnace of thirty tun, to discover farther, which they did some 200 leagues, where they found the river to divide itself into two parts, till then all full of islands, and a country most healthful, pleasant and fruitful; for they found food enough, and all returned safe and in good health: In this discovery, they saw many towns well inhabited, some with three hundred people, some with five, six, or seven hundred; and of some they understood to be of so many thousands, most differing very much, especially in their languages: Whereof they suppose by those *Indians*, they understand are many hundreds more, unfrequented till then by any christians, most of them stark naked, both men, women and children, but they saw not any such giant-like women as the rivers name importeth. But for those where captain *North* hath seated his company, it is not known where *Indians* were ever so kind to any nation, not sparing any pains, danger or labour, to feed and

CHAP. XXV.

*The beginning and proceedings of the new plantation of St. Christopher by Captain Warner.*

After Ralph Marifield and others, having furnished this worthy industrious gentleman, he arrived at St. Christopher, as is said, with fifteen men, the 28<sup>th</sup> of January 1623, viz. William Tisted, John Rhodes, Robert Bims, Mr. Bensfield, Sergeant Jones, Mr. Ware, William Ryle, Rowland Graycock, Mr. Bond, Mr. Langley, Mr. Weaver, Edward Warner, their captain's son, and now deputy governor, till his father's return, sergeant Aplan, one sailor and a cook: At their arrival, they found three Frenchmen, who sought to oppose captain Warner, and to set the Indians upon us; but at last we all became friends, and lived with the Indians a month, then we built a fort, and a house; and planting fruits, by September we made a crop of Tobacco; but upon the 19<sup>th</sup> of September came a hurricano and blew it away. All this while we lived upon cassado bread, potatoes, plantanes, pines, turtles, guanes, and fish plenty; for drink we had Nicknobby.

The 18<sup>th</sup> of March 1624, arrived captain Jefferson, with three men passengers in the Hopewell of London, with some trade for the Indians, and then we had another crop of tobacco, in the mean time the French had planted themselves in the other end of the isle; with this crop captain Warner returned for England in September 1625.

In his absence came in a French pinnace, under the command of Monsieur de Nombe, that told us, the Indians had slain some Frenchmen in other of the Caribbee isles, and that there were six peryagoes, which are huge great trees, formed as your canoos, but so laid out on the sides with boards, they will seem like a little galley: Six of those, with about four or five hundred strange Indians came unto us, we bad them be gone, but they would not; whereupon we and the French joined together, and upon the 5<sup>th</sup> of November set upon them, and put them to flight: Upon new-years even they came again, found three English going about the isle, whom they slew.

Until the 4<sup>th</sup> of August, we stood upon our guard, living upon the spoil, and did Vol. II.

and maintain them. The English follow their buildings, fortifications and sugar works; for which they have sent most expert men, and with them all things necessary for that purpose; to effect which, they want not the help of those kind Indians to produce; and many other good commodities, which (God willing) will ere long make plain and apparent to this kingdom, and all the adventurers and well-willers to this plantation, to be well worthy the cherishing and following with all alacrity.

nothing. But now captain Warner arriving again with near an hundred people, then we fell to work and planting as before; but upon the 4<sup>th</sup> of September, came such a hurricano, as blew down all our houses, tobacco, and two drums into the air we know not whither, drove two ships on shore that were both split; all our provision thus lost, we were very miserable, living only on what we could get in the wild woods, we made a small party of French and English to go aboard for provision, but in their returning home, eight French men were slain in the harbour.

Thus we continued till near June that the Tortles came in 1627, but the French being like to starve, sought to surprize us, and all the cassado, potatoes, and tobacco we had planted, but we did prevent them. The 26<sup>th</sup> of October, came in captain William Smith, in the Hopewell, with some ordnance, shot and powder, from the earl of Carlisle, with captain Pelham and thirty men; about that time also came the Plover, also a small ship of Bristow, with captain Warner's wife, and six or seven women more.

Upon the 25<sup>th</sup> of November, the Indians set upon the French, for some injury about their women, and slew six and twenty French men, five English, and three Indians. Their weapons are bows and arrows, their bows are never bent, but the string lies flat to the bow; their arrows a small reed, four or five foot long, headed some with the poisoned sting of the tail of a stingray, some with iron, some with wood, but all so poisoned, that if they draw but blood, the hurt is incurable.

The next day came in captain Charles Saltonstall, a young gentleman, son to Sir Samuel Saltonstall, who brought with him good store of all commodities to relieve the plantation; but by reason some Hollanders, and others had been there lately before him, who carried away with them all the tobacco, he was forced to put away all his commodities upon trust till the next crop; in the mean time he resolved there to stay, and employ himself and his company in plant-

Three Indians slain.

The arrival of many English ships.

ing tobacco, hoping thereby to make a voyage, but before he could be ready to return for *England* a hurricano happening, his ship was split, to his great loss, being sole merchant and owner himself, notwithstanding forced to pay to the governor the fifth part of his tobacco, and for freight to *England*, three pence a pound, and nine pence a pound custom, which amounts together to more than threecore pound in the hundred pound, to the great discouragement of him and many others, that intended well to those plantations. Nevertheless he is gone again this present year 1629, with a ship of about three hundred tons, and very near two hundred people, with Sir *William Tuffton* governor for the *Barbadoes*, and divers gentlemen, and all manner of commodities fit for a plantation.

Captain *Prinn*, captain *Stone*, and divers others came in about *Christmas*; so that this last year, there hath been about thirty sail of *English*, *French* and *Dutch* ships, and all the *Indians* forced out of the isle, for they had done much mischief amongst the *French*, in cutting their throats, burning their houses, and spoiling their tobacco; amongst the rest *Tegamund*, a little child, the king's son, his parents being slain or fled, was by great chance saved, and carefully brought to *England*, by master *Merifield*, who brought him from thence, and bringeth him up as his own children.

The description of the isle.

It lieth seventeen degrees Northward of the line, about an hundred and twenty leagues from the *Cape de tres Puntas*, the nearest main land in *America*; it is about eight leagues in length, and four in breadth; an island amongst 100 isles in the *West-Indies*, called the *Caribbees*, where ordinarily all them that frequent the *West-Indies* refresh themselves; those, most of them are rocky, little and mountainous, yet frequented with the canibals; many of them inhabited, as *St. Domingo*, *St. Mattalin*, *St. Lucia*, *St. Vincent*, *Granada* and *Margarita*, to the southward; northward, none but *St. Christophers*, and that but lately; yet they will be ranging *Marigalanta*, *Guardalupo*, *Decado*, *Mouniferat*, *Antegua*, *Mevis*, *Bernardo*, *St. Martin* and *St. Bartholomew*, but the worst of the four isles possessed by the *Spaniards*, as *Portorico* or *Jamaica*, is better than them all; as for *Hispaniola* and *Cuba*, they are worthy the title of two rich kingdoms, the rest not respected by the *Spaniards*, for want of harbours, and their better choice of good land, and profit in the main. But captain *Warner* having been very familiar with captain *Painion*, in the *Amazon*, hearing his information of

this *St. Christophers*; and having made a years tryal, as it is said, returned for *England*, and joining with master *Merifield* and his friends, got letters patents from king *James* to plant and possess it. Since then, the right honourable the earl of *Carlisle* hath got letters patents also, not only of that, but all the *Caribee Isles* about it, who is now chief lord of them, and the *English* his tenants that do possess them; over whom he appointeth such governors and officers as their affairs require; and although there be a great custom imposed upon them, considering their other charges, both to feed and maintain themselves; yet there is there, and now a going, near upon the number of three thousand people; where by reason of the rockiness and thicknes of the woods in the isle, it is difficult to pass, and such a surff of the sea goeth on the shore, ten may better defend, than fifty assault. In this isle are many springs, but yet water is scarce again in many places; the valleys and sides of the hills very fertile, but the mountains harsh, and of a sulphurous composition; all over-grown with *Palmetas*, cotton trees, *Lignum Vita*, and divers other sorts, but none like any in christendom, except those carried thither; the air very pleasant and healthful, but exceeding hot, yet so tempered with cool breaths, it seems very temperate to them, that are little used to it; the trees being always green, the days and nights always very near equal in length, always summer; only they have in their seasons great gulfs and rains, and sometimes a hurricano, which is an over-grown, and a most violent storm.

In some of those isles, are cattle, goats and hogs, but here none but what they must carry; *Guanes* they have, which is a little harmless beast, like a crocodile or alligator, very fat and good meat; she lays eggs in the sand, as doth the land crabs, which live here in abundance, like conies in boroughs, unless about *May*, when they come down to the sea-side to lay in the sand, as the other; and all their eggs are hatched by the heat of the sun.

From *May* to *September*, they have good store of *Tortoisés* that come out of the sea to lay their eggs in the sand, and are hatched as the other; they will lay half a peck at a time, and near a bushel ere they have done, and are round like tennis-balls: This fish is like veal in taste, the fat of a brownish colour, very good and wholesome: We seek them in the nights, where we find them on shore, we turn them upon their backs, till the next day we fetch them home, for they can never return themselves, being so hard, a cart may go over them; and

and so big, one will suffice forty or fifty men to dinner. Divers sorts of other fish they have in abundance, and prawns most great and excellent, but none will keep sweet scarce twelve hours.

*Birds.* The best and greatest is a *Passer Flaminga*, which walking at her length, is as tall as a man; pigeons and turtle-doves in abundance; some parrots, wild hawks, but divers other sorts of good sea-fowl, whose names we know not.

*Roots.* *Cassado* is a root planted in the ground, of a wonderful increase, and will make very good white bread, but the juice rank poison, yet boiled, better than wine; potatoes, cabbages and radishes plenty.

*Fruits.* Maize, like the *Virginia* wheat; we have pine-apple, near so big as an artichoke, but the most daintiest taste of any fruit; *Plantains*, an excellent and most increasing fruit; apples, prickly-pears and pease, but differing all from ours. There is pepper that groweth in a little red husk, as big as a walnut, about four inches in length, but the long cods are small, and much stronger and better for use, than that from the *East-Indies*. There is two sorts of cotton; the silk-cotton, as in the *East-Indies*, groweth upon a small stalk, as good for beds as down; the other upon a shrub, and beareth a cod bigger than a walnut, full of cotton-wool: *Anotto* also groweth

upon a shrub, with a cod like the other, and nine or ten on a bunch, full of *Anotto*, very good for dyers, tho' wild; sugar-canes, not tame, four or five foot high; also mastic and locust-trees; great and hard timber, gourds, musk-melons, water-melons, lettuce, parsley; all places naturally bear purslain of it self; sope-berries like a musquet bullet, that washeth as white as sope; in the middle of the root is a thing like a fedge, a very good fruit, we call pengromes; a pappaw is as great as an apple, coloured like an orange, and good to eat; a small hard nut, like a hazel-nut, groweth close to the ground, and like this grows on the palmets, which we call a mucca-nut; mustard-seed will grow to a great tree, but bears no seed, yet the leaves will make good mustard; the mancinel tree, the fruit is poison; good figs in abundance; but the palmets ferveth to build forts and houses, the leaves to cover them, and many other uses; the juice we draw from them, till we suck them to death, it is held restorative, and the top for meat doth serve us as cabbage; but oft we want powder'd beef and bacon, and many other needful necessities.

By Thomas Simons, Rowland Grafscocke, Nicholas Burgh, and others.

## CHAP. XXVI.

### The first planting of the Barbadoes.

**T**HE *Barbadoes* lies south-west and by south, an hundred leagues from *St. Christophers*, three-score leagues west and south from *Trinidad*, and some four-score leagues from *Cape de Salinas*, the next part of the main. The first planters brought thither by captain *Henry Powel*, were forty *English*, with seven or eight negroes; then he went to *Disacuba* in the main, where he got thirty *Indians*, men, women and children of the *Arawacos*, enemies both to the *Caribbees* and the *Spaniards*. The isle is most like a triangle each side forty or fifty miles square, some exceeding great rocks, but the most part exceeding good ground, abounding with an infinite number of swine, some turtles, and many sorts of excellent fish; many great ponds wherein is duck and mallard; excellent clay for pots, wood and stone for building, and a spring, near the midst of the isle, of *Bitume*, which is a liquid mixture like tar, that by the great rains falls from the tops of the mountains; it floats upon the water in such abundance,

that drying up, it remains like great rocks of pitch, and as good as pitch for any use.

The mancinel apple, is of a most pleasant sweet smell, of the bigness of a crab, but rank poison, yet the swine and birds have wit to shun it; great store of exceeding great locust-trees, two or three fathom about, of a great height, that beareth a cod full of meal, will make bread in time of necessity. A tree like a pine beareth a fruit so great as a musk-melon, which hath always ripe fruit, flowers or green fruit, which will refresh two or three men, and very comfortable; plum-trees many, the fruit great and yellow, which but strained into water in four and twenty hours, will be very good drink; wild fig-trees there are many; all those fruits do fat the hogs, yet at sometimes of the year they are so lean as carrion; guane trees bear a fruit so big as a pear, good and wholesome; palmets of three several sorts; pappaws, prickly-pears, good to eat or make drink; cedar trees very tall and great; suttick trees

trees are very great, and the wood yellow, good for dying; soap-berries, the kernel so big as a floe, and good to eat; pumpions in abundance; goats so great as will make good great bottles, and cut in two pieces, good dishes and platters; many small brooks of very good water; *Guinea* wheat, cassado, pines and plantains, all things we there plant, do grow, exceedingly, so well as tobacco; the corn, pease, and beans, cut but away the stalks, young sprigs will grow, and so bear fruit for many years together, without any more planting; the isle is overgrown with wood or great reeds, those woods which are soft are exceeding light and full of pitch, and those that are hard and great, they are as hard to cut as stone.

Their numbers.

Mr. *John Powel* came thither the 4<sup>th</sup> of August 1627, with forty five men, where we stayed three weeks, and then returning, left behind us about an hundred people, and his son *John Powel* for his deputy, as governor; but there have been so many factions amongst them, I cannot from so many variable relations, give you any certainty for their orderly government:

For all those plenty, much misery they have endured, in regard of their weakness at their landing, and long stay without supplies; therefore those that go thither, it were good they carry good provision with them; but the isle is most healthful, and all things planted do increase abundantly; and by this time there is, and now a going, about the number of fifteen or sixteen hundred people.

Sir *William Curtine*, and captain *John Powel*, were the first and chief adventurers to the planting this fortunate isle; which had been oft frequented by men of war to refresh themselves, and set up their shallops; being so far remote from the rest of the isles, they never were troubled with any of the *Indies*. Harbours they have none, but exceeding good roads, which with a small charge, might be very well fortified; it doth ebb and flow four or five foot, and they cannot perceive that there hath ever been any hurricano in that isle.

From the relations of captain *John White*, and captain *Wolverstone*.

## CHAP. XXVII.

### The first plantations of the isle of Mevis.

The description of the isle.

BECAUSE I have ranged and lived amongst those islands, what my authors cannot tell me, I thing it no great error in helping them to tell it myself. In this little isle of *Mevis*, more than twenty years ago, I have remained a great time together, to wood and water, and refresh my men; it is all woody, but by the sea-side southward, there are sands like downs, where a thousand men may quarter themselves conveniently; but in most places the wood groweth close to the water-side, at a high-water mark, and in some places so thick of a soft spongy wood like a wild fig-tree, you cannot get through it, but by making your way with hatchets or fauchions: Whether it was the dew of those trees, or of some others, I am not certain, but many of our men became so tormented with a burning swelling all over their bodies, they seemed like scalded men, and near mad with pain; here we found a great pool, wherein bathing themselves they found much ease; and finding it fed with a pleasant small stream that came out of the woods, we found the head half a mile within the land, distilling from many rocks, by which they were well cured in two or three days. Such factions here we

The bath.

had, as commonly attend such voyages, that a pair of gallows were made, but captain *Smith* for whom they were intended, could not be persuaded to use them; but not any one of the inventors, but their lives by justice fell into his power to determine of at his pleasure, whom with much mercy he favoured, that most basely and unjustly have betray'd him.

The last year 1628, Mr. *Littleton* with some others, got a patent of the earl of *Carlisle* to plant the isle called the *Barbadoes*, thirty leagues northward of *St. Christophers*; which by report of their informers and undertakers, for the excellency of the pleasantness thereof, they called *Dulcina*, but when they came there, they found it such a barren rock they left it; altho' they were told as much before, they would not believe it; persuading themselves those contradictees would get it for themselves, they were thus by their cunning opinion, the deceivers of themselves; for seeing it lie conveniently for their purpose in a map, they had not patience to know the goodness or badness, the inconvenience or probability of the quantity or quality; which error doth predominate in most of our homebred adventurers, that will have all things as they

they conceit and would have it; and the more they are contradicted, the more hot they are; but you may see by many examples in the general history, how difficult a matter it is, to gather the truth from amongst so many foreign and several relations, except you have exceeding good experience, both of the countries, people and their conditions; and those ignorant undertakings, have been the greatest hindrance of all those plantations.

Their numbers.

At last, because they would be absolute, they came to *Mevis*, a little isle by *St. Christopher*; where they seated themselves, well furnish'd with all necessities, being about the number of an hundred, and since increased to an hundred and fifty persons, whereof many were old planters of *St. Christopher*, especially Mr. *Anthony Hinton*, and Mr. *Edward Thompson*. But because all those isles for the most part are so capable to produce, and in nature like each other, let this discourse serve for the description of them all. Thus much concerning those plantations, which now after all this time, loss and charge, should they be abandon'd, suppressed and dissolved, were most lamentable; and surely seeing they all strive so much about this tobacco, and that the freight thereof, and other charges are so great, and so open to any enemy by that commodity, they cannot long subsist.

And it is a wonder to me to see such miracles and mischiefs in men; how greedily they pursue to dispossess the planters of the name of Christ Jesus, yet say they are christians, when so much of the world is unpossessed; yea, and better land than they so much strive for, murdering so many christians, burning and spoiling so many cities, villages and countries, and subverting so many kingdoms, when so much lieth waste, or only possessed by a few poor savages, that more serve the devil for fear, than God for love; whose ignorance we pretend to reform, but covetousness, humours, ambition, faction and pride hath so many instruments, we perform very little to any purpose; nor is there either ho-

nour or profit to be got by any that are so vile, to undertake the subversion, or hindrance of any honest intended christian plantation.

Now to conclude the travels and adventures of captain *Smith*; how first he planted *Virginia*, and was set ashore with about an hundred men in the wild woods; how he was taken prisoner by the savages, by the king of *Pamaunke* tied to a tree to be shot to dath; led up and down their country to be shewed for a wonder; fatted, as he thought, for a sacrifice for their idol, before whom they conjured him three days, with strange dances and invocations, then brought him before their emperor *Powhatan*, that commanded him to be slain; how his daughter *Pocahontas* saves his life, return'd him to *James-Town*, relieved him and his famished company, which was but eight and thirty to possess those large dominions; how he discover'd all the several nations upon the rivers falling into the bay of *Chesapeake*; hung near to death with a most poisoned tail of a fish called stingray; how *Powhatan* out of country took the kings of *Pamaunke* and *Paspabegb* prisoners; forced thirty nine of those kings to pay him contribution; subjected all the savages; how *Smith* was blown up with gun-powder, and returned for *England* to be cured.

Also how he brought our *New-England* to the subjection of the kingdom of *Great-Britain*; his fights with the pirates, left alone amongst a many *French* men of war, and his ship ran from him; his sea-fights for the *French* against the *Spaniards*; their bad usage of him; how in *France* in a little boat he escaped them; was adrift all such a stormy night at sea by himself, when thirteen *French* ships were split or driven on shore by the isle of *Ree*, the general and most of his men drowned, when God, to whom be all honour and praise, brought him safe on shore to all their admirations that escaped; you may read at large in his general history of *Virginia*, the *Summer-Isles* and *New-England*.

Certain exploits of captain Smith.

### CHAP. XXVIII.

*The bad life, qualities and condition of pirates; and how they taught the Turks and Moors, so become men of war.*

AS in all lands where there are many people, there are some thieves, so in all seas much frequented, there are some pirates; the most ancient within the memory of three score years, was one *Callis*, who most refreshed himself upon the coast of *Wales*; *Clinton* and *Purser* his companions, who grew famous till queen *Elizabeth* of blessed memory hanged them at *Wapping*: *Flemming* was as expert and as much fought for as they, yet

Vol. II.

such a friend to his country, that discovering the *Spanish Armada*, he voluntarily came to *Plimouth*, yielded himself freely to my lord admiral, and gave him notice of the *Spaniards* coming; which good warning came so happily and unexpectedly; that he had his pardon, and a good reward; some few pirates there then remained; notwithstanding it is incredible how many great and rich prizes the little barques of the west country

daily

The difficulties of a great navy.

What occasioneth pirates.

Their chief rendezvous.

daily brought home, in regard of their small charge; for there are so many difficulties in a great navy, by wind and weather, victual, sickness, losing and finding one another, they seldom defray half the charge: But for the grace, state and defence of the coast and narrow seas, a great navy is most necessary, but not to attempt any far voyage, except there be such a competent stock, they want not wherewith to furnish and supply all things with expedition. But to the purpose.

After the death of our most gracious queen Elizabeth, of blessed memory, our royal king James, who from his infancy had reigned in peace with all nations; had no employment for those men of war, so that those that were rich rested with that they had; those that were poor, and had nothing but from hand to mouth, turned pirates; some, because they became slighted of those for whom they had got much wealth; some for that they could not get their due; some that had lived bravely, would not abase themselves to poverty; some vainly, only to get a name; others for revenge, covetousness, or as ill; and as they found themselves more and more oppressed, their passions increasing with discontent, made them turn pirates.

Now because they grew hateful to all christian princes, they retired to *Barbary*, where altho' there be not many good harbours, but *Tunis*, *Algier*, *Sally*, *Mamora*, and *Tiunane*, there are many convenient roads, or the open sea, which is their chief lordship: For their best harbours *Masfaquebar*, the towns of *Oran*, *Mellila*, *Tangier*, and *Ceuta*, within the streights, are possessed by the *Spaniards*; without the streights they have also *Arzella* and *Mazagan*; *Mamora* they have likewise lately taken and fortified. *Ward*, a poor *English* sailor, and *Danfer* a *Dutchman*, made first here their marts, when the *Moors* knew scarce how to sail a ship; *Bishop* was ancient and did little hurt; but *Easton* got so much as made himself a marquess in *Savoy*; and *Ward* lived like a bashaw in *Barbary*; those were the first that taught the *Moors* to be men of war. *Gennings*, *Harris*, *Tompson*, and divers others, were taken in *Ireland*, a coast they much frequented, and died at *Wapping*. *Hawes*, *Bough*, *Smith*, *Walsingham*, *Ellis*, *Collins*, *Sawkwel*, *Wollingstone*, *Barrow*, *Wilson*, *Sayres*, and divers others, all these were captains amongst the pirates, whom king James mercifully pardon'd; and was it not strange, a few of those should command the seas? Notwithstanding the *Maltese*, the pope, *Florentines*, *Genoese*, *French*, *Dutch* and *English* galleys and men of war, they would rob before their faces, and even at their own ports, yet seldom more than three four, five or six in a fleet; many

times they had very good ships, and well mann'd, but commonly in such factions amongst themselves, and so riotous, quarrelsome, treacherous, blasphemous and villainous, it is more than a wonder they could so long continue, to do so much mischief; and all they got, they basely consumed it amongst *Jews*, *Turks* *Moors* and whores.

The best was, they would seldom go to sea, so long as they could possibly live on shore, being compiled of *English*, *French*, *Dutch* and *Moors*, (but very few *Spaniards* or *Italians*) commonly running one from another, 'till they became so disjointed, disordered, debauched and miserable, that the *Turks* and *Moors* be an to command them as slaves, and force them to instruct them in their best skill, which many an accursed renegade or christian turned *Turk* did, till they have made those *Sallymen* or *Moors* of *Barbary* so powerful as they be, to the terror of all the *Streights*, and many times they take purchase in the main ocean, yea sometimes in the narrow seas in *England*, and those are the most cruel villains in *Turkey* or *Barbary*, whose natures are very noble and of good natures, in comparison of them.

To conclude, the misery of a pirate, (altho' many are sufficient seamen as any) yet in regard of its superfluity, you shall find it such, that any wise man would rather live amongst wild beasts, than them; therefore let all unadvised persons take heed how they entertain that quality; and I could wish merchants, gentlemen, and all setters forth of ships, not to be sparing of a competent pay, nor true payment; for neither soldiers nor seamen can live without means, but necessity will force them to steal; and when they are once entred into that trade, they are hardly reclaimed. Those titles of seamen and soldiers, have been most worthily honoured and esteemed, but now regarded for the most part, but as the scum of the world; regain therefore your wanted reputations, and endeavour rather to adventure to those fair plantations of our *English* nation; which however in the beginning were scorned, contemned, yet now you see how many rich and gallant people come from thence, who went thither as poor as any soldier or sailor, and gets more in one year, than you by piracy in seven. I intreat you therefore to consider how many thousands yearly go thither; also how many ships and sailors are employed to transport them, and what custom they yearly pay to our most royal king *Charles*, whose prosperity and his kingdom's good, I humbly beseech the immortal God to preserve and increase.

TO THE  
R E A D E R.

**I***T having pleased God, the Creator and Preserver of the Universe, by whose uncontroulable will, the counsels of men are governed, to influence the committee of the Greenland company, to take a resolution of making the most exact enquiry that could be, concerning the true condition of the countrey of Greenland, during the winter: Concerning the nights there, and other curious observations (disputed among the astronomers) it was resolved to select seven of the boldest and ablest seamen, out of the fleet, who for that purpose should tarry there all the winter, which resolution being published, the following seven offered themselves for that service, and were accepted of accordingly: Outgert Jacobson of Groentenbrook, their commander; Adrian Martin Carman of Schiedam, Clerk; Thaunifs Thaunissen of Shermerhem, as cook; Dick Peterfon of Veenhuysse; Peter Peterfon of Harlem; Sebastian Gyse of Delfts-Haven, and Gerard Beautin of Bruges. These seven being left 1633, by their own choice, in the isle of St. Maurice in Greenland, the Dutch fleet set sail from thence the 26<sup>th</sup> of August, and the seamen left us the following account.*

## JOURNALS:

THE FIRST.

Kept by Seven SAILERS in GREENLAND:

THE SECOND,

Kept by Seven other SAILERS at SPITZBERGEN, in  
the Years 1633 and 1634.

THE 26<sup>th</sup> of August our fleet set sail for Holland with a strong N. E. wind and a hollow sea, which continued all that night.

The 27<sup>th</sup>, the wind still at N. E. we went four or five times up to an adjacent hill, but did not observe the least darkness all that night. The 28<sup>th</sup> the wind the same, it began to snow very hard; we then shar'd half a pound of tobacco betwixt us, which was to be our allowance for a week; towards evening we went about together, to see whether we could discover any thing worth our observation, but met with nothing. The 29<sup>th</sup> proving a sun-shiny and clear day, we ascended together in the afternoon the before mentioned hill, when, (and at several other times when it was clear weather) we could distinctly see the *Bears Mountain*. The 30<sup>th</sup> the wind turn'd to the N. W. with some snow in the afternoon, the night cloudy, the wind at N. E. The 31<sup>st</sup>, being a clear and sun-shiny day, we had a perfect sight of the *Bears Mountain*, with a fresh gale from the N. E. a fair star-light night.

The 1<sup>st</sup> of September prov'd a fair day, the wind at N. W. with some snow in the evening, and a windy night from the N. E. We went three or four times by the hill, but saw nothing. The 2<sup>d</sup>, the same wind continued, with some snow and cloudy night. The 3<sup>d</sup>, was a fair day, with some snow; the wind as the day before, which continued the 4<sup>th</sup> and 5<sup>th</sup>, with some snow; the night fair and star-light. The 6<sup>th</sup>, was a fair forenoon, but the night rainy, the wind the same. The 7<sup>th</sup>, the wind continued as before all the day, with fair weather, but turning to the S. E. by S. at night produced a great deal of rain. On the 8<sup>th</sup>

'twas a rainy morning, the wind at S. E. but in the afternoon fair, and the night star-light; at the beginning whereof we were frighten'd by a noise, as if something had fallen very heavy upon the ground, but saw nothing, the wind at S. E. still. The 9<sup>th</sup>, the wind the same; it prov'd a sun-shiny day, and so warm that we pull'd off our shirts and sported in the sun on the side of the hill; we had also a sight of the *Bears Mountain*; the night was rainy, the wind at S. E. The 10<sup>th</sup> was very stormy, the night rainy and the wind the same. The 11<sup>th</sup> was a foggy and rainy day, the wind at S. E. by S. but turn'd to the S. W. in the afternoon, and to the N. E. in the night, the weather cloudy; we made a shift to get some salleting, being fond of a change of diet. The 12<sup>th</sup> it blew hard from the N. E. the weather clear, but the night snowy, the wind as before. The 13<sup>th</sup> was a fair sun-shiny day, the wind at S. E. but the wind turning to the N. E. by N. it began to snow, the night was still and close, the wind at N. W. The 14<sup>th</sup> it was fair weather, the wind in the wet, with some snow; we went up the hill, but saw nothing worth our observation, except that at night we observed the setting of the sun; the wind at N. W. by W. a clear night, and the wind at S. W. The 15<sup>th</sup> it blew very hard, so that the sea foam'd; we observ'd the sun from the S. to the S. W. when it clouded in, but the night prov'd star-light, the wind at W. The 16<sup>th</sup> it was a fair sun-shiny day, the wind at S. W. which made us go about to gather some herbs for salletting; it being a very star-light moon-shining night, we saw abundance
