The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

P R E F A C E.

THE Author Dr. John Francis Gemelli Careri, has here oblig'd the World with so excellent an Account of his Travels, that scarce any can be thought to exceed, and very few to be equal to it. He undertook this laborious and dangerous Task only to satisfy his own Curiosity, and gives the Publick a true Relation of what he saw in many Parts, where other Travellers had made it their Business to bring little but Fables and Romances. He omitted nothing in his Round worth observing, because his only Business was to see and be inform'd; and being a Man of Learning and excellent natural Parts, he had all the advantages of taking good Observations, and delivering 'em politely, which common Travellers generally want. He was a Doctor of the Civil Law, which sufficiently evinces his Learning; and as he tells us, besides his natural Curiosity, was further mov'd to travel by Crosses and Misfortunes he met at home. Neither did he go as a Vagabond trusting to Fortune, but well provided with Money to make him acceptable in all Parts, and gain admittance where others under worse Circumstances could not. Nor does he only give a judicious Account of what he saw, which is perform'd by way of Journal, but touches upon all Antiquities deliver'd by the best Authors, of Countries, Cities, and other Places and Things of Note. This of him in general, but to say something in particular of each Part or Volume.

In the First he assigns the Motives he had to Travel, and then beginning at Naples runs along the Coast of Calabria, crosses to Sicily, then sails along that Island till he comes to Malta, of which he gives a very exact Description; the same he doth of Egypt whither he sail'd next, and there of the Pyramids, Mummies, &c. whence he proceeds to the Holy Land, the Island of Rhodes, the City of Smyrna, several small Islands, the Imperial Cities of Constantinople, Adrianople, Bursa, Trebizond, and many other Places in his way to Persia; with a succinct Account of the Religion, Manners, Antiquities, &c. of the Turks, and the Succession of their Monarchs.

The second Volume contains a curious Description of the Persian Empire, the distances from place to place, beginning at the Frontiers to Ispahan, the Court of that Nation; and thence down to Bander-Congo, a Sea-Port on the Gulph of Persia. He treats of their Religion, Antiquities, &c. as in the other Books, and particularly sets down all the remains of Darius's Palace, with something of the Banians or Idolaters. Gives several Cuts of singular Curiosities; discovers some Mistakes made by Tavernier in his Travels, which he also does in his first and third Parts of Turkey and India. And having deliver'd all that may satisfy the nicest Reader, proceeds on his Voyage to Damian, the first City he came to in India.

The third Volume beginning at Damian, belonging to the Portuguese, runs along all that Coast, particularizing all that that Nation is possess'd of in those Parts, as Goa, Bazaim, Diu, and other Places; as also what is subject to Idolaters, and what to Mahometan Princes; most lively represents to the Imagination the wonderful

Pagod

Pagod of the Island Salzete; not only describes, but gives all the Cuts of the choice Fruits, and Trees that bear them; and excellently informs us of the Superstitions and Customs of these Gentiles. Whence the Author ventures by Land to the Great Mogul's Camp, to acquaint us thoroughly with that Prince's Person, Progenitors, Practices, Wealth, Strength, and all other Particulars. This done he proceeds on his Voyage by Sea towards China; in his Way delivers the best Accounts of those Countries he pass'd by in a Voyage of a thousand Leagues, which are no less than the rich Island of Ceylon, the golden Chersonesus, or Peninsula of Malaca, the vast Islands of Sumatra and Borneo, with many small ones, and the powerful Kingdoms of Bengala, Siam, Pegu, Cochinchina, Tunquin, &c. till he comes to Macao, the first Land of China, where begins

The fourth Volume, which mentions every place great or small he pass'd through in that vast Empire, curiously sets down the distances, describes all he saw on the Roads, and all Cities as they deserve; as also the Rivers, Lakes, and Mountains, and particularly the great Tartar Wall, the Portuguese City of Macao, and all that relates to it; and the manner of Travelling to the Court of Peking. He distinguishes ingeniously between what he saw and consequently writes of his own knowledge, and what he had from others, which still he took upon good Authority, and mentions it for the satisfaction of the Reader. Having had the honour to see the Emperor he relates all that Ceremony, and what he knew of the Palace as an Eye-witness, the rest as he receiv'd it. The manner of the Emperor's going abroad he had from others, but so curious as the Reader cannot but like it. Other things, as the Religion of China, the last persecution of Christianity, the Antiquities of the Empire, Government, Courts, &c. are collected, but curiously and well grounded.

The fifth Volume treats very particularly of all that is to be known concerning the Philippine-Islands, and then follows an exact Journal of his long and dreadful Voyage thence to Acapulco in New Spain, which is altogether new, and by the way describes California, laying down the Reasons there are to believe that the North Continent of America joins with that of Asia, or the great Tartary.

The sixth Volume, being the Account of what he saw in New Spain, mentions all that part he travell'd through, which is the Port of Acapulco, the Road thence to Mexico, which is not common, and thence again to Vera-cruz. But the Particulars he gives us of the Mines, of reducing the Ore and refining the Silver, of separating the Gold from the Silver, of the Conditions upon which all Persons hold their Mines, and of the royal Mines, are most singular and curious.

In short, it is one of the most compleat Works of this nature, and therefore I shall not need add any more in commendation of it, for it will sufficiently commend it self to the Reader.

A Voyage round the World by Dr. John Francis Gemelli Careri. Part I.

Containing the most Remarkable Things he saw in
T U R K Y.

B O O K I.

C H A P. I.

The Reasons that induced the Author to Travel, and an Account of what happened to him in his Way from Naples to Messina.

The Author's
Reasons
for Travelling.

WERE it always in the power of cruel and unsteady Fortune, with whom we are daily to struggle, to reduce us to a miserable and wretched condition and could not a wise man, by bearing up against its injuries and assaults, open himself a way to a more peaceable state of life; our condition would certainly be too rigid and unhappy; and the great work of that all-wise artificer, who drew us out of nothing, appear the less perfect and valuable. Yet it often happens, that we are much in the wrong when we complain of fortune; because when she seems most averse to us, she then often forwards us, to undertake some worthy enterprize, and helps to raise us to a higher degree, obliging us, through necessity, to perform good and noble actions. This may be plainly evinc'd by the whole course of my life, which has been interwoven with such strange accidents, that the very remembrance of them terrifies me; and yet to them do I owe the seeing of so many countries, the sailing of such vast seas, and if it may be allow'd me to hope for any, the glory of these unpolish'd lines. I cannot deny, but that it was my natural curiosity and desire of travelling about the world, (tho' often disappointed) that made me undertake the voyage of *Europe*, in the year 1683, whereof I afterwards printed only the first volume; but it is as certain, that I had no other reason to undertake this other dangerous and painful voyage, but the unjust persecutions, and undeserved outrages I was forc'd to endure.

Vol. IV.

Being therefore resolv'd to set forward, not regarding the loving persuasions of friends, who made an argument of the distemper I labour'd under, to divert me from my purpose; and having provided all necessaries, I took my leave of them, and particularly of the counsellor *Amato Danio*, of the judge of the *Vicaria D. Joseph Chaves*, now a counsellor, of *F. Alonso Riji*, knight of *Malta*, and of *Dr. Laurence Sandalari*. This done, without farther delay, I embark'd on Saturday the 13th of June 1693, on a feluca of *Naples*, to carry me into *Calabria*, in order to go over from thence into the *Levant*.

Having sail'd fifty miles, we landed at night on the shore of *Amalfi*, so call'd of a city of that name, which owes its foundation to certain families of *Romans*, who sailing towards *Constantinople*, about the year of our Lord 829, and finding in this place a safe harbour, after a dreadful storm at sea, stay'd here to build it, and settled their abode. Nor do I think it at all strange, as some do, that they should build it in so craggy a place among such steep rocks; when I consider, that in those times, when all *Italy* was infested by barbarous nations, every one endeavour'd to fix himself in the strongest place he could. From that time forward it was govern'd as a commonwealth, till times changing, and the *Grecian* emperors having lost that kingdom, this city became subject to barons. At present it is a demesne of the crown, and beautify'd with many curious structures, erected by several Families

GEMELLI milies on account of the wholfomness of the air.

The *Spanish* nation owes the discovery of a new world, and the *Portuguese* that of the *East-Indies*, to *Flacio Gioja*, a native of the city of *Amalfi*, as being the inventor of the use of the loadstone, without which they could never have ventur'd out so far into the vast ocean, to discover unknown empires, nor have found any method to steer their ships so regularly through the boundless waves of the sea. *Amalfi* is also famous, because a citizen of it was founder of the noble order of St. *John of Jerusalem*, or *Malta*; but above all, for preserving in its cathedral, which is an archbishop's see, the body of the glorious apostle St. *Andrew*, brought thither from *Constantinople*.

The weather proving unfit for sea on Sunday the 14th, we let out on Monday the 15th, and having sail'd about 40 miles, near night fall, put into the point of *Licofo*, formerly call'd *Leucofo*, where we found very bad entertainment at the inn.

Tuesday 16, putting to sea again, we sail'd 36 miles to *Palinuro*, a place so call'd from *Palinurus*, Pilot to *Aeneas*, who is said to have dropp'd into the sea near this shore, and swimming to land, to have been kill'd by the inhabitants. Here we found a wretched inn; not because there was any want in the place, but because our host was a compound made up of an excellent thief, and a base cook.

Running 40 miles farther, on Wednesday 17, we put into *Scalca*, a town on a rock, at the foot of vast high mountains, where we were forc'd to continue Thursday 18, by reason of the foul weather. Friday 19 we advanc'd as far as *Paola*, where the inn was nothing better than that of *Palinuro*. The chief thing this city can boast of, is its being the place of the birth of St. *Francis*, the founder of the *Minims*, and where he wrought his greatest wonders. As to other particulars, it has good buildings, and a castle on the eminence that commands it.

Saturday 20, we sail'd 60 miles, and came betimes to *Pizzo*, a town seated on a rock almost flat at top; whence there is a delightful prospect along the pleasant shores of the noble country of *Calabria*, and upon the open sea. I stay'd there Sunday 21, at the request of friends, but Monday 22, taking leave of them, went aboard the vessel, and having run 30 miles, arriv'd at the city *Tropea*, seated after the same manner as *Pizzo*. The nobility there have the privilege of acting in a distinct body from the commonalty in public affairs.

Having stay'd here Tuesday 23, upon some business; on Wednesday 24, we cut across the bay, and having sail'd 24 miles, ended this short voyage on the shore of *Gioja*. Having landed my baggage, I caus'd it to be carry'd on horses to the town, a mile distant, where I continu'd all Thursday 25, to rest my self, being weary of the sea.

Friday 26, my brother Dr. *John Baptist Gemelli*, a man of an exemplary life, and most innocent behaviour, came to meet me from *Redicina*, bringing horses with him, and would needs have me spend those few days I had, to provide necessaries for my voyage at his house. I thankfully accepted his kind offer, and on Saturday the 27th, we went together to *Redicina*, which was 10 miles distant. Several persons came on Sunday 28, to bid me welcome, and with me a good voyage. Monday 29, I went out a shooting, the country being plain and full of game; and would have done the same the two following days, had I not been employ'd in providing for my voyage, yet on Thursday the 2d of July, I went out upon the plains of *Gioja*, and had the pleasure of killing some pheasants. The air of the place being bad, I return'd to *Redicina* on Friday the 3d, much tir'd.

Considering with my self what unexpected dangers and accidents might happen in so long a peregrination, on Saturday 4, I made my Will, and left it seal'd, and on Sunday the 5th made a confession of my sins, and tho' unworthy, receiv'd the blessed sacrament; praying to God to bring me home safe from the difficult undertaking I had in hand. I shall not stay to mention the tears and tender embraces at parting with my brother, as not knowing whether he should ever see me again: To lessen his grief, I told him, I intended only for the *Holy Land*, and thence to return as soon as possible; tho' at the same time I had absolutely resolv'd not to settle till I had taken a view of *China*, and could be an eye-witness of so many fables as are deliver'd to us, among some few truths.

I set out on Monday 6, to embark at *Palmi*, 12 miles distant, and came thither before noon; where I was generously entertain'd by *John d' Aquino*, a gentleman of that town. Then dismissing *James Romeo* my steward (who came out of kindness to bear me company) I embark'd on Tuesday the 7th for *Messina*, and having cross'd the narrow streight, sailing in all 24 miles, arriv'd in that city before night. *Joseph Lacquanti*, a gentleman of *Rosarno*, who was marry'd there, entertain'd me at his house.

CHAP. II.

A short Description of Messina, and an Account of all the Author saw till he came to Malta.

Messina
describ'd.

THE city *Messina*, formerly call'd *Zancle*, is seated in the province of *Valdenone*, in the eastern part of the island of *Sicily*, and in 39 degrees and 12 minutes of latitude. It is reported to have been built by the giant *Zancle*, in the year of the world 1435, and that it was join'd to *Italy*, as well as the rest of *Sicily*. Its figure is long, by reason of the hills that surround it, and has the finest harbour in the world for capaciousness and safety, and for its delightful shores, embellish'd above a mile in length, with stately palaces uniformly built, the curious iron balconies being all of an equal height. Here the ships seem to ride secure in the arms of the earth, their opposite element, the anchoring is so very good, which makes me admire that *Tavernier*, lib. I. II. par. cap. 13. who reckons *Goa*, *Constantinople*, and *Toulon*, the best ports of our continent, should make no account of that of *Messina*, which is so far from being inferior to any of those abovementioned, that it may be call'd the prime mart of *Europe*, and a necessary thoroughfare to all parts of it. The mouth of it is guarded by the castle *Salvadore*, by the citadel, and other forts.

As for the city, it is an archbishoprick, and the mint of that kingdom. Famous men have flourish'd there in all ages, and at present it is adorn'd with professors of all sciences, and an academy of virtuoso's. The churches are beautiful enough, the palaces magnificent, the streets wide; the ladies beautiful and witty; the air temperate, the soil fruitful, the suburbs large, and the sea may be call'd a pond, containing all sorts of fish to please the appetite. In short, this city is plentifully furnish'd with all that can be desir'd for food, cloathing, and delight, and the more for the neighbourhood of *Calabria*, which continually affords it a most pleasing prospect of its rich and fruitful lands. It has ever been loyal to its king, and the inhabitants ready to serve him with their lives and fortunes; and if of late years some of its natives, of restless spirits, and lovers of novelty, incur'd the royal displeasure, the crime of a few, and the corruption of part of the members, is not to lay a blemish upon the whole body, and infect the

other members; since those being cut off, as rotten limbs, and the part that was tainted being cauteriz'd, the evil has been not only retriev'd, but absolutely abolish'd.

That very day, being the 7th, I look'd out for some vessel bound for *Malta* (there being none so ready for the *Levant*, as I had imagin'd, by reason of the war then raging throughout *Europe*) and agreed for my passage aboard a tartan of *Malta*, then ready to sail; the master of it telling me, he would sail on the 9th in the morning, I endeavour'd to make my self ready on *Wednesday* 8, but found he was endeavouring to get away that very morning. Thinking I could not get ready in time, I caus'd my baggage to be put aboard, and in the mean while apply'd my self to dispatch a business of moment. I concluded what I went about with all possible expedition, but yet found the tartan was gone, and, what was worst, with all I had; and I knew neither the master's, nor the vessel's name. This did not daunt me, but enquiring at the custom-house, was inform'd that the tartan was gone to *Ali*, to load with wine; and therefore not thinking fit to lose any time, for as much as the loss of my equipage would quite break off my intended journey, I went that same day aboard a feluca, bound for *Agusta*, taking a short leave of *Acquanti* and his wife.

We sail'd with a fair wind through the famous and dangerous streights of *Messina*, diverting my melancholy by casting my eye towards the left, upon the delicious gardens of *Cotona* and *Reggio*, and towards the right on the beautiful *Drommo*, a suburb of *Messina*, which stretches out for several miles in pleasant country-houses and gardens; then upon the village of *St. Stefano*, and upon *St. Placido*, a monastery of benedictines, seated on an eminency, which by reason of its advantageous situation, was the cause of many bloody frays between the *French* and *Spaniards*, in the last war of *Messina*. Keeping my eyes still fix'd upon the land, in expectation of finding the tartan, I observ'd *Briga*, *Pezulo*, *Giampieri*, *la Scaletta*, *Aitola*, *Ali*, *Fiume de Nisi*, *Savoca*, and other villages seated near the sea-side. The tartan

GENELLI
1693.

was close up in *Ali*, but the master of the feluca, to save putting me ashore, said it was another, and therefore continuing our voyage, not without anguish of heart we pass'd by *Tauromina*, a royal city seated on a mountain, and 30 miles distant from *Melina*. From this place appear'd to the view *Calatubiano*, *Mascari*, *Jaci*, *Ognari*, and the ground of the city *Catania*, utterly ruin'd, and bury'd in the ashes of its neighbouring mountain, after the dreadful earthquake which happened that same year. The few Citizens that remain'd unbury'd, live in poor cottages about *Jaci* gate. Having seen this deplorable spectacle, the sun shining out on *Thursday* 9, we proceeded on our way, (having run 60 miles) without landing, and leaving behind us the royal cities of *Levimi* and *Carlolentini*. At noon we put an end to this short voyage of 90 miles, arriving at *Agusta*.

Agusta
City.

Xipbona, now call'd *Agusta*, was first put into a posture of defence by the emperor *Frederick II*, and afterwards better fortify'd. Hither the knights of *St. John* of *Jerusalem* retir'd, after the loss of *Rhodes*, before *Malta* was given them. This city had the same misfortune as *Catania*, being overthrown by the last earthquake, and therefore the people, like the others, liv'd in cottages. The castle which was one of the best in *Sicily*, as well for the natural strength of the place, as for the great fortifications about it (having two bridges and four gates to the sea) was much damaged, especially the dwellings of the soldiers. The city lay to the east along the hill, and had a good port, defended by four forts.

Siracusa.

Going aboard another vessel, I came in the evening in sight of *Siracusa*, or *Zaragoza*, a city that had suffer'd much by the earthquake. As far as I could perceive from the sea, it is commodiously seated, with a large castle on the south, and a fort on the north. Here we were seiz'd with much fear, seeing the boat of a vessel which we thought to be a turk coming aboard us, inasmuch that we ran ashore to defend ourselves under the shelter of the neighbouring rocks; and, in short, we obliged the boat to make away; which it seem'd belong'd not to pirates, but to the town of *Trapano*.

That night we could not advance much, and therefore on *Friday* the 10th lay in sight of the city *Noto*, destroy'd as well as the rest by the earthquake. At night we lay at the fishery of *Cape Passaro*, where I had salt-fish presented

me for my voyage. Here the *Maltese* galliot and brigantine, that guard the channel, were at anchor, but they could give me no account of the vessel I went in quest of.

Going aboard again on *Saturday* 11, the contrary wind obliged us to land on the shore of *Spaccasurmo*, 55 miles from *Siracusa*. *Sunday* 12, having sail'd 40 miles, we arriv'd at *Brazetto*, a town on the shore of the town of *Santa Croce*, whence that night I went to *Scoglietti*, in the county of *Modica*, to get another vessel to carry me to *Malta*.

Accordingly *Monday* 13, I went aboard a small bark to cross that narrow sea, there being no better vessel, and being becalm'd a few miles at sea, we stood in great fear of *Turkish* pirates, that passage of 60 miles being never free from them in summer.

The calm continu'd *Tuesday* the 14th, when seeing the boat of a tartan making towards us, and believing them to be rovers, we forsook ours laden with Wood, and defenceless, and fled in our boat, the seamen not allowing me so much liberty as to take my gun. The others seeing us fly, forbore pursuing any further; by which we perceiving that the tartan was of *Malta*, return'd to our bark, and continu'd there all the rest of the day. The wind coming up in the evening, we sail'd all night, and got into the port of *Malta* on *Wednesday* the 15th before day, but waited for *Pratice* till two hours after sun rising.

The island of *Malta* was given to the knights of *St. John* of *Jerusalem*, by the emperor *Charles the Fifth*, for the yearly tribute of a hawk, which at present the vice-roy of *Sicily* receives in the name of his catholic majesty. Its length from east to west is 22 miles, the breadth 12, and the compass 60. The city of *Malta* is in 35 degrees, 40 min. of latitude, and enjoys an excellent climate. It was besieg'd by the *Turks* with a great power, in the year 1565, but without success. The port lies to the northward, and is large, and can contain very many ships, dividing it self into several very deep bays; in the most retir'd part whereof is the place call'd *Bormola*, on the right of it the borough, and on the left the island, places inhabited by the common sort, who are about three thousand souls. The entrance of this port is well defended on the side of the city, by the castle of *St. Elmo*, which is well furnish'd with cannon, has a deep ditch, and other fortifications; and by ten pieces of cannon planted on the wall; further up by *Barracca Vecchia*,

The city.

The Port.

chia, on which there are ten pieces of cannon above, on arches, and as many below: still further up beyond the gate of *Italy*, by seventeen guns on the upper, and twenty on the lower battery. On the opposite side, it is defended by the new fort of the island, castle *St. Angelo* of *Borgo*, and the new castle of *Recajoli*, where the guns were not yet mounted, but it may be speedily furnished from the city, if there be need; so that the port is inaccessible, and the city impregnable, because seated on a vast high rock, which towards the sea is naturally fortify'd by precipices, and furnish'd by art with mighty forts, walls and towers. On the land-side, the whole compass of three miles, which contains the city, it is well furnish'd with cannon, not only on the particular forts and batteries, but along the whole extent of the wall, being a delicate walk from the port to the *Lazaretto*, and may be gone in a coach.

The port of the aforesaid *Lazaretto*, call'd *Marciamfiet*, which growing deeper within, keeps ships in safety close under a rock, would not be inferior to the other for conveniency, were it not appointed only for the ships that come from the *Levant*. Besides these two ports, they told me, there were many more very commodious in all the three islands, and all defended by forts.

The city. The city, tho' small, is not inferior to the best in *Italy* for beauty; for tho' seated on a barren rock; yet art has exerted it self to make it delightful, yielding an excellent prospect from the sea, and from the land, representing a curious flower, always odoriferous; neither the hardness of winter, nor the violence of other seasons ever withering it, tho' it is very hot in summer, as being seated on a rock. The plain of it is like the superficies of a hand the length from north to south, with ten strait streets, very well pav'd, which divide it; that is, five on the west, three on the east, which are steep and crooked, and two on the top plain. This unevenness of the ground is no way offensive to the sight, but rather adds to its beauty, there being no place for any filth to lie, all being carry'd away to the sea, which makes the palaces and publick places of the city appear the more graceful. The breadth of it is cut by two streets running from east to west, both large and plain. It has three gates, the most frequented of them is that of *Molo*; in the ditch whereof, there is a great orchard of lemons and oranges for the use of the great master. The other

VOL. IV.

is the land-gate, and the third that of *Gfemelli* the *Lazaretto*, without which there is a powder house, besides those within. On the land side, there are two deep ditches running from the *Lazaretto* to the port, with a double wall undermined.

The three islands I mention'd before, are *Malta*, sixty miles in compass, shaped like a tortoise, and in it, the old and new city, from which it takes name; but the old one at present does not contain 2000 souls. The second island is *Comona*, ten miles in compass, with a fort in it; and the third call'd *Gozo*, the most fruitful of them all, and has a good fort commanded by a knight of the order. All three islands contain about 60000 souls, in thirty towns and villages; most of them fierce and warlike, as being of *Moorish* extraction and customs. The knights of the order, who are subjects to his catholic majesty, have the privilege of being governors of the castles of *St. Elmo*, and *St. Angelo*, excluding all other nations, and their government lasts two years.

During my stay at *Malta*, I lodg'd in the monastery of the *Franciscans*, of the invocation of *St. Mary* of *Jesus*, where the religious men entertain'd me civilly. After dinner I went to the *Carmelite* church, where I heard good singing of eunuchs, it being their festival of our lady. *Thursday* the 16th, the Great Master came to hear mass in that church, a canopy being prepar'd for him. Thence he went to *St. John's*, whither I follow'd to see the ceremony. The great master sat on the right hand of the altar, on a throne of purple velvet, with gold fringes, plac'd within the rail of the high altar, and enclos'd with banisters of fine marble: opposite to him sat sixteen of his pages, on benches cover'd with red, laced with silver, and two others waited behind his chair. On the floor of the church, four steps below their prince, sat the great crosses on benches, made fast, cover'd with leather, on which were seats for thirty two with desks before them, to kneel at, cover'd with carpets; on the sides, and along the middle, were ten other ancient knights, and below them places for the rest. The great master had the gospel brought him to kiss, and was incens'd: The great crosses kiss'd the *Pax*, and were incens'd with two censors at the same time, one on the right, and the other on the left. The great master was clad in a thin black silk, with a long vest, as is worn by our seminary students, but with a cape behind, and over

C

all

GEMELLI all, a cassock like a priest's, but shorter, on which was the cross of the order; the rest of his garment was black, made after the *French* fashion; when the service was over, the great crosses and knights attended him. I was told, the great master was much given to country sports, as is natural to the *French*, and was generally in his little wood. His name is *Adrian Vignacourt*, he is of an indifferent stature, his countenance lively and strong though he be seventy six years of age. His chief favourite is *Philip Charles Fredac*, grand prior of *Hungary*, whom he always keeps at his table, as also the great seneschal *D. Charles Caraffa*, of the noble family of the dukes of *Bruzzano*, and one other knight in his turn. They say, the great master is allow'd 6000 ducats for his table, a revenue of 20000 as a temporal prince, and as much as makes that up 60000, out of vacant commendaries and customs.

St. John's church. The church of *St. John* has three isles, the middlemost of them arch'd, as are the twelve chapels on the sides. The walls are rich in gold, and the floor adorn'd with marble. On the two opposite sides, were the tombs of the renowned great masters *Cottonier*, and *Gregory Caraffa* of the race of the illustrious princes of *Rocella*. As for the divine service, the church is well supply'd with chaplains of all nations, who devoutly recite the divine office in the choir every day.

Great master's palace. Friday the 17th was a happy day for me, the tartan that had my equipage on board arriving at noon, and delivering me from the apprehension that my travels would end at *Malta*. After dinner I went to see the great master's palace, seated on that plain part, where the two streets are. Entering at the east gate, on the right and left, were the stables with fifty horses and mules. Further on is a garden, and that, leaving the second gate on the left, which is the way to *St. John's* church, leads into another court, in which there are two opposite doors to the great master's apartments. He makes use of that on the left for his private abode, and of that on the right (whither I saw him go) for publick functions. The hall is one of the biggest that may be seen, richly hung with crimson damask, with a canopy of the same fring'd with gold. In this hall, and the first room within it, are painted the most glorious enterprises and exploits perform'd by the order. The third room was adorn'd with the same silk. The whole palace is beau-

tify'd with curious iron balconies, which grace it on every side. On the west side of it is a large square, with a stately fountain in it, and another on the south, where the chancery-court of the order is kept, and the treasure that is daily paid in and out; the treasure, design'd to supply publick necessities, being kept in the little tower in the great master's palace.

The *Multese* women wear a veil after Women. the *Moorish* fashion, like the hood of the *Spanish* *Chia*, with a long peak spreading like a hollow tile on the forehead, being made of strong paltboard. This dress is common to the gentry, who add to it an indented edging, or purling, and to the vulgar sort, the meanest of them wearing veils of coarse woollen, with a little sort of petticoat across the head, which in summer is as good as a stove, in a country so very hot, that I could not sleep in all the night. In other respects the women are very beautiful, agreeable, and in short, of the best blood in *Europe*.

The common coin is of brass, and of high value, for changing a zecchine (a piece of gold worth eight shillings) they give me but six pieces of brass for it, valuing each of these pieces at four *Taris*, three whereof make a crown; a false coiner here would make a vast profit.

Saturday the 18th, I went to see the *Albergo de Italia*, or *Italian* house of entertainment, where there is a table for the poor knights of that country; but there are few that will come to this hungry table, because the order allows but two *Sicilian* *Taros* a head for their expence. The structure is stately, and of late embellish'd by the great master *Caraffa*. Not far from it is the *Albergo*, or inn of *Castile*, and *Portugal*. Thence I went to see the churches of the *Jesuits* and *dominicans*, and another of the souls in purgatory, which are all but indifferent fabricks. In my way home I went into the *Polverijha*, a palace of the order, little inferior to that of the great master, which is left, being divided into several apartments. Below it I saw another, call'd *Della Camaretta*, a retiring place, where the knights that are piously given, live in community, paying a yearly stipend, and apply themselves to godly exercises.

The hospital of *Malta*, is one of the The hospital. famous in *Europe*, as well in regard to the sick are serv'd by great crosses and knights, and all in plate; as for the good order observ'd, notwithstanding the great number of sick. Before it is a great court, and on the sides a noble apothecary's

cary's shop. Going up there is a small gallery with sick persons, and such another opposite to it; but going down, there is another of a vast length, with a great number of beds on both sides, as there are in the other two arms that form a cross, the chappel for divine service rising in the middle. This hospital is so well serv'd, that many knights when they are sick go into it to be cur'd.

Sunday the 19th, the great crosses were at high mass, in long garments of black coarse stuff, with wide sleeves, but short, hanging under the passion embroider'd on a scarf of black silk, the end whereof is ty'd to the sword-hilt. The great master wore the same, having besides, a purse by his side as almoner. Behind the great crosses, sat on twelve benches, the elders and commendaries, and below them on the sides the knights, of whom there was a great number. On the left of the great master, were the officers of the palace; that is, the receiver, the master of the horse, the chamberlain, and others, who sat on a plain wooden bench, but they wore the same habit as the great crosses. The mass was sung by the prior of the church. The chief place next to the great master was taken up by his nephew, who sat on the first seat of the great crosses (as he did at all other ceremonies) clad after the *French* fashion. He alone, after the great master, kiss'd the gospel, and so made his offering, having had the *Pax* given him, and been incens'd before the great crosses. I was told, that the great crosses, when they sat in council, wore another garment with longer sleeves, like that worn by the senators of *Venice*.

After mass I went to see the great

master dine. The table was spread in the great hall near the canopy, under which was his chair of crimson velvet, and four others of leather lower at the end. On the first of these sat his nephew, on the second, the grand prior of *Hungary*, on the third, the great cross *Cavarretta* of *Trapano*, and on the fourth, the great seneschal *Carassa*. The great master was serv'd in gilt plate, and his meat was brought apart; the three knights that serv'd were cover'd. The great master drank in a little glass, the health of the knights present, which was as good as dismissing many of them, who made their court round the table; and it may be truly said, that no prince in the world of his quality is more nobly attended.

The first place in the island, where this noble order resided, was old *Malta*, afterwards castle *St. Angelo*, where they withstood the terrible siege of the *Ottoman* fleet. At last they remov'd to the place where they now are, building such a beautiful city by reason of the convenience of its quarries, like *Naples*.

Monday the 20th, there put into *Malta* a *French* tartan, sent by the merchants of *Marseilles* to carry advice to the *French* vessels then lying at *Alexandria*, *Cyprus*, and *Tripoli* of *Soria* for fear of the *Dutch* privateers, that they might safely venture out of those ports on their several voyages, three *French* men of war then cruising in the *Mediterranean*, which would secure them. Therefore to avoid wasting my time in expectation of a better opportunity to sail for *Constantinople*, whether I had resolv'd to go, I readily agreed to give twelve crowns for my passage to *Alexandria*.

CHAP. III.

The Author's Voyage to Alexandria.

HAVING provided all necessities, I embark'd on *Tuesday* the 21st with a fair wind, which held all night, and *Wednesday* the 22d. It fail'd a little on *Thursday* the 23d, but came fair again on *Friday* the 24th, and carry'd us in sight of the island *Gozza*, west of the kingdom of *Candia*, along whose coast we ran with the same wind, *Saturday* the 25th, and *Sunday* the 26th. It held on all *Monday* the 27th, but *Tuesday* the 28th, we had a tedious calm. *Wednesday* the 29th it blew somewhat fair. The master of the tartan being young and unexperienced, ignorantly took a fancy to make

the high-land, for fear of falling in unawares upon the flat of *Egypt*, and at break of day, he found himself fifty miles above *Alexandria*, in the neighbourhood of *Roseto*; so that being to turn back, the wind was full in our teeth, and after much tacking, we put in at *Bicber*, eighteen miles beyond *Alexandria*. This is a small castle, provided with many piece of cannon, and a garrison of 200 *Turks*. About it, there are a few huts of *Arabs*, barbarous in name and manners, and hideous to behold; these tho' miserably poor, being wholly devoted to idleness, will not work upon

GEMELLI
1693.

GEMELLI 1693. upon any account. There is a plentiful fishery, and particularly of mullets, whereof for a farthing they sell a large cut, and the roes of them dry'd for a quarter of a ducat. The natives live on the plenty of fish and fruit, for no sort of flesh is sold there.

The master of the tartan went ashore that same day, being *Wednesday*, and tho' it was late, would needs go to *Alexandria*, to deliver his letters to the consul; wherefore going ashore with him, we spoke to the *Aga* in the castle, who gave him a janizary to conduct him thither and back again, for three pieces of eight and a half, taking along with them a horse and an ass, which in those parts travel wonderfully to serve them both. The master return'd on *Thursday* 30th, betimes, and had a contest with the janizary, who would have as much more as had been agreed, for conducting him back, so that he was forc'd to go before the *Aga*, with the jew of the custom-house, who decided the matter to the french-man's cost, tho' he had before paid three pieces of eight and a half to go and come; a piece of knavery those barbarians often put upon christians. This made me very apprehensive about the landing of my equipage, which I much dreaded to expose to the avarice of such miscreants, by landing it; but the tartan being order'd for *Cyprus*, I resolv'd to put it aboard another boat, without venturing ashore among such thieves, to carry it by sea to *Alexandria*, where I knew there were christians, who could help me out, in case the *Arabs* should go about to put upon me; but the contrary wind would not permit me to stir. Therefore on *Friday* the 14th, I was forc'd to land all I had; I put my self into the power of a jew that was customer, of the two evils choosing the least. But to say the truth, he attended me very kindly, causing his wife to dress my meat, and giving me a room in his house, for half a piece of eight a day.

The jew having search'd my baggage, *Saturday* the 1st of *August*, about sun-rising, I set out for *Alexandria* in a *Germa* or boat, and arriv'd there in the afternoon. Here another customer jew search'd my baggage, to recover his duty, because he of *Bickier* had search'd them only as his deputy, but I found ways at both searches to hide some small things that were of most consequence. I went to lodge at the *Hospitium* of *St. Catherine* of the *Franciscan* fathers of the holy land, in whose church I confess'd, and receiv'd on *Sunday* the 2d, to gain the

indulgences of the *Portiuncula*, giving thanks to God for my happy arrival in *Egypt*, after a voyage of 1200 miles, or 400 leagues from *Malta*.

Alexandria, or *Scandaria*, as the Turks *Alexandria* de-scrib'd. call it, was built by *Alexander* the Great, according to the form drawn by *Dinocrates*; 322 years before the birth of *Christ*, and in the latitude of 30 deg. 58 min. It is seated on the shore of the *Mediterranean*, on a sandy ground, and is longer than it is broad. The old city is much disinhabited, and the antient spot serves to preserve the rain-water for the use of the citizens. The new city is but ill-peopled, stretching along the shore two miles in length, and half a mile in breadth; and it would have been reduc'd to a worse condition, and perhaps utterly abandon'd, by reason of the unwholsomeness of the air, had not the conveniency of its harbour and free trade, which makes it the chief mart of the *Levant*, brought thither the commerce of all the *Mediterranean*, and ocean, because of the convenient carriage of goods brought from the *Indies* up the red sea, and of those *Egypt* it self affords. It was formerly a city 15 miles in compass: It was reduced to the miserable, ruinous condition it is now in, by falling under several masters, and enduring many bloody sieges; but above all, by the destruction made in it by *Antoninus Caracalla*, who fill'd it with blood and dead bodies, not to mention what *Maximilianus Hercules* did to it.

Many learned men flourish'd in *Alexandria*, bred up in its universality; and it produc'd many glorious martyrs for confessing our holy faith. And were there nothing else, its former antiquity appears by so many obelisks, pillars, and other publick structures, the remains whereof are to be seen to this very day.

That same day, I went about out of curiosity to view the modern buildings, in which I found nothing great, nor any thing remarkable in its market places, there being in its *Bazar* or great market, only two rows poorly covered, and wretched shops on both sides; and the inhabitants are not in all, above 15000 souls. The port is almost round the new city, taking up one eighth part of it on the south-side. On the north is the entrance defended by a useful tower on the east, and an indifferent castle on the west, but weakly fortified, with a bulwark to retire to, near which is the *Mosque*, not to be seen, for they will not allow any body to go into it; and I drawing near to take a view of it,

Pompey's pillar. Observe, that in the book the height of the pillar is set down to be 100 foot, and in the cut but 100 spans, which is a fourth part less, and seems most probable. The first may be a mistake in the press, being but once mentioned, whereas spans are 3 times named in the cut.

Cleopatra's pyramids.

was in great danger, for the *Moorish* children drove me from it with stones, and some came forwards with their naked knives in their hands, demanding money, by means whereof, I sav'd my life, still flying as fast as I could, because the crowd increas'd, so that my perriwig drop'd off; a misfortune the *French* often meet with, and sometimes it proves fatal; for among those barbarians it is dangerous to be given to curiosity, which is natural to me. In short, the *French* consul charg'd me not go far from his quarter, but I not regarding it, broke the injunction, tho' with such eminent danger. In my return I observ'd, that there was another convenient harbour to the northward, form'd by a neck of land lying between the city and the sea.

Pompey's pillar. Monday the 3d I went with a *Janizary*, assign'd me by the consul, out of the city, to see *Pompey's* pillar, it stands on a high ground, which the sea leaves between north and south. It is all of one entire piece of red marble, except the capital, pedestal, and base, on which there are certain *Egyptian* hieroglyphicks carv'd. The height of it is 100 foot, the circumference 25, that of the base and pedestal 85. Some will have this pillar to be four times as big as that of the *Rotonda* at *Rome*; and the consul, who is a very ingenious man, told me, that a *French* ingenier had offer'd his king to take it down, and land it safe in *France* without breaking, but that the *Grand Seignior* would not consent to it. The following cut will give the reader a better idea of it.

See Cut Number I.

Wednesday the 4th, I went to see *Cleopatra's* pyramids. There are two of them near the port, one of them demolish'd, the other standing. They are of a mix'd marble, and carv'd with *Egyptian*

hieroglyphicks on all sides. I took *GEMELLI* 1693. not the dimensions of them, but by what I could guess by my eye, they seem'd to be 40 spans about, and 70 in height. About the old city, there are several monuments of antiquity to be seen, in great hew'd stones, and other structures demolish'd by time.

Marc. Antony *Tamborin* the *French* consul, born at *Marseilles*, would not suffer me to continue any longer in the monastery of the fathers, but that I should lodge in his house, and diet with some of his country merchants, and accordingly I remov'd thither *Wednesday* the 5th. Here we liv'd very well, especially at supper, at which we had above an hundred little *Cyprus* birds, as the *Venetians* call them, which I should call little *Beccaficos* of *Alexandria*, because they are fat and melt in the mouth, there being nothing to throw away of them but the feathers. Nine other *Frenchmen* that din'd at the table, treated me with the same civility, vying who should be most obliging to me, saying, That I being a stranger, who out of curiosity went about spending my money, and observing what I saw, to make it known to other curious persons, they were obliged to assist me as parties concern'd, and use all their endeavours that I might observe, and write all things completely; insomuch that other nations paying 20 per Cent. custom, and the *French* but three, as has been stipulated between the traders of *Marseilles* and the *Turks*, they made me enjoy their privilege, as if I had been their country-man, which was much forward'd by *Arrigo* *Grimano*, a merchant of that city, in whose house I left my equipage, when I went thence to *Jerusalem*. This is a thing not to be slighted in that country, where the customs are farm'd for 250000 crowns a year, including *Grand Caire*, *Roseta*, and *Damiata*.

CHAP. IV.

The Author's Voyage on the Nile, and description of Grand Caire.

THE *French* perswaded me to cloath my self after the country fashion, that I might appear less odious in the sight of the *Arabs*, and particularly the *Biduiues*, who are herdsmen, and live in tents about the country, carrying their houses about, like the antient *Nomades*. I took their advice, being to meet with several bands of those barbarous people in the way I design'd to

Vol. IV.

take. I order'd all my affairs on *Thursday* the 6th, and on *Friday* the 7th in the morning, being clad like an *Arab*, went aboard a small *Saïque* bound for *Biehier*, whither I arriv'd after three hours sail. Aboard the same vessel came a *Capigi*, porter to the *Bassa* of *Caire*, who gave me to understand by means of a *Jew*, that he should be glad to go with me, and to share what convenience

D he

Gemelli

GENEVE 1693. he had for himself, offering me money if I stood in need. Tho' I understood this to be a *Turkish* compliment for his own ends, I took no notice, but returned him thanks, being in a barbarous country, where he alone could secure me against the insolency of the basest rabble in nature, for the *Turks* are as wild in comparison of the *Arabs*. The *Capigi* for a piece of eight hired a small *Germa*, or boat, in which I lay that night for want of an inn.

Saturday the 8th, we set out at break of day, but we had scarce sail'd 4 miles, when the old *Capigi* began to be afraid, because the wind blew hard, and the sea ran high; and tho' the *Bey*, or master encourag'd him with good words, yet he could not shake off fear, but made the boat return to *Bichier*. The *Turks* and *Arabs* are very fearful of the mouth of the *Nile*, which is 5 miles below *Rofeto*, because ships are often lost there, coming in from sea, and it is become a proverb among them, *That he who fears not the Bogasi* (so they call the mouth of *Nile*) *fears not God*.

We therefore resolv'd to go one half of the way by sea and the river, and the other half by land; whereupon the insolent *Capigi*, making the *Bey* or master return what he had paid for the boat, which he ought not to have done, because the other had not been in fault, he hir'd another at the same rate to carry us as far as the village of *Etbeo*.

Being aboard again with a fresh gale, when after three hours sail, we came to the mouth of the bay of *Media*, we had like to have been lost, the mast of the boat coming by the board, and I was washed from head to foot, with all my manuscript. This mouth is made by the sea, running 20 miles into the land, like a long deep lake, a *Turk* compar'd it to the entrance of *St. Malo* in *France*; people that travel by land cross it in a small boat, but the entrance from the sea is dangerous. In this place it is usual to pay four *Medinos* (an *Egyptian* coin) a head, but the authority of the *Capigi* clear'd me.

Being come to *Etbeo*, 15 miles from *Bichier* and as far from *Rofeto*, we took the common convenience of the country, and about sun-set came to *Rofeto*, all a sandy way, which produces no grass, or any thing but palm-trees, and it is so difficult going, that I wonder it did not kill the asses. Generally speaking all *Egypt* is of this nature, the natives making several uses of this sort of trees, without losing any part; for of the leaves they make baskets, of the twigs cages,

and lettuce windows, of the tree beams for houses, and the fruit serves for food.

The *Capigi* very civilly bore me company to the *French* vice-consul's house, where I took up my lodging, after giving some few *Medinos* for the ass. This is an *Egyptian* coin, worth about a *Roman Bajocco*, ten of which make a *Julio*, worth little more than six-pence *English*.

Rofeto, or *Raschet*, as the *Turks* call it, was formerly *Cleopatra's* most beloved place of abode, because seated on the bank of the best branch of the river *Nile*, and the easiest for conveying the merchandize brought from the *Mediterranean*, and thence to *Alexandria*. All along this branch of the river as far as *Grand Caire*, there lie above 300 villages, and small dwellings. This city is but five miles from the sea, the mouth of the river there, being guarded by an excellent castle. As for the buildings, it looks more like a village, and the more because it is open without a wall, yet it may be counted very populous, as containing about 80000 souls, whereas *Alexandria* has not above 15000. Its circumference is six miles, its figure almost round. For three miles about it, there are good orchards of softer fruits; cassia trees, which are like the plane palms, and other sorts, but planted without any order; nor are the gardens divided into alleys, those barbarous people taking no care to make them delightful, as the *Europeans* do, which yet would be very easy for them, by reason of the goodness of the soil.

The *Bazar* of *Rofeto* is more light than that of *Alexandria*, and all cover'd with vines, producing delicious grapes, as are the best houses, which have all pretty good gardens.

At *Rofeto* the *Capigi* gave me to understand his design, sending on Sunday the 9th, to ask some *Medinos* (a coin before-mention'd) of me, which I sending him, and he perceiving how freely I gave, came himself at noon to exact a greater sum, making the interpreter magnify the great service he had done me by the way, protecting me against the insolencies of the natives; in short stating the account after his own mind, he requir'd what was not due to him; and tho' he was convicted of lying, yet he handled his grey beard to gain credit to his imposture, as if it had been a known truth, and therefore to avoid contending with *Turks*, I gave him what he demanded. The vice-consul told me, That those people were not satisfied to have the charges of their journey born, by those that travel with them, but will get

Art. 5 p. 10
Egypt, Tur.
Prov.

Nile river. Z.

get by them, sucking the very blood, much more the money of a *Frank*, for so they call the *European* christians.

Having paid the vice-consul for my diet, and made the necessary provision, I embark'd with a servant on *Monday* the 10th for *Grand Caire*, aboard a *Measli*, with a *German Franciscan* father. This *Measli* is a large boat, with three masts, and as many sails, which carries a great burden, and about an hundred passengers; but persons of any quality pay some small matter more than the common fare, and have a cover'd place apart from the rabble, where I went commodiously with the friar. The wind blowing fresh, carry'd us on briskly, always in sight of curious dwellings and meadows; for the *Nile* rendering the soil on both sides delightful, and fruitful in rice, corn, and fruit, easily allures people to settle their abode there; but especially the island formed by the two arms of the river between *Roseto* and *Damiata*, is the fruitfulest in all *Egypt*.

First, we pass'd by two villages, and after sailing ten miles by *Mirimbel*, seated on the island; then by *Mutubus* on the right, and *Deffin* on the left, then by *Samfeir* on the right, and *Figar* opposite to it, higher up by *Beruths* on the left, and *Zendigon* on the right, all large towns on the river, not to mention other villages. Here, they say, the best *Sal Ammoniack* in the world is dug, by reason of the dampness of the soil, and camels piss; but this reason is of no weight, there being no want of camels throughout all *Asia*, and yet no *Sal Ammoniack*.

This arm of the river we speak of, is about a quarter of an *Italian* mile over, in some places more, in some less; the stream gliding so gently, that with two sails abroad, we run seven or eight miles an hour against the current, so that it is delicious sailing along in good company.

The river *Nile*, or *Abanabi* (which in the *Abissine* language signifies father of rivers) or *Tacui*, as the *Ethiopians* call it, proceeds from two lakes, or pools, in the kingdom of *Goyama*, subject to the emperor of *Abissinia*, one of them call'd

Nile river. *Zambre*, and the other *Zaire*, whence crossing that kingdom, *Ethiopia*, and other countries, it runs down to fertilize *Egypt*, and loses it self at last in the *Mediterranean*. The water is muddy, but when settled, very good to drink.

The arm of the river we sail'd upon is winding, so that there is no knowing how

many miles it is from *Roseto* to *Grand Caire*, because it is not gone by land, but some reckon 150 miles. We had a good voyage, the river being then at fullest. Modern authors assign two reasons for the inundation; one is the constant rains, which in *Ethiopia* begin with *April*, and continue five months, the other the many lakes, pools, and rivers, in the country, which being swell'd, communicate their waters to the *Nile*. They say, the river begins to swell when the sun enters *Cancer*; it is highest in *August*, and declines in *September*, fatning the soil to such a degree, that the husbandmen are forc'd very often to qualify it with sand; were they not so sloathful, they might gather two harvests in a year. The common maps divide the *Nile* into six branches, and make the greatest of them to run by *Alexandria*. In my time, I saw none but the two here mention'd. This mistake may perhaps proceed from the several cuts made from the *Nile*, when it overflows the country; which is a necessary evil, because in the upper *Egypt* it never rains, and in the lower, only three months in the year, which are *December*, *January* and *March*.

The same wind continuing fair for us, and all our three sails being spread, tho' the vessel crack'd, between noon and sunset, we run about sixty miles, leaving on the right *Fex*, *Selmib*, *Minicuirafed* and *Edjuck*, and on the left *Asthab*, *Sumgrath*, and *Mecas*, all great towns. At night the wind fell, and the *Nile* which before ran high like the sea, grew calm; so that we made little way, but always in sight of well-peopled villages on the shoar. There were no crocodils to be seen, because they never come down below *Grand Caire*, tho' the water be one or two pikes length deep, which is not so at all times; for in the winter the voyage lasts eight or ten days, by reason of the shallowness of the water, and sometimes they are forced to lighten the boats to go forward, and the country-people use other inventions to water the land.

The *Turkish* diet is continual penance; for the common sustenance, even of those that are well to pass, is a sort of ill-made bread, garlick, onions, and four curds; and if they have a little boild mutton, it is a great feast among them. Pullers and other fowl are utterly banished the table, tho' in that country they are very cheap. The honest *Capigi* said no better; but a *Janizary* his companion, being less scrupulous as to the observance of the *Alcoran*, having spy'd a bottle

1693.

GENELEE 1691. a bottle of wine, I carry'd for my own use, brought it to a small quantity, asking for drink every moment; and therefore I to encrease the little that remained, ordered my servant to put water to it, and by that means was deliver'd from the importunity of the infidel, who afterwards did not like it, saying, *It was weak.*

The wind quite ceasing, on Tuesday the 11th, nine persons went ashore, and hal'd the boat along with a rope, without rowing, and thus we pass'd by *Scilmo*, famous for corn shipp'd off there; then we left *Abici* on the left, and *Nabari* on the right, with other small villages and islands form'd by the river in some places. The land, tho' naked of trees, was plow'd with oxen and buffalos. The *Arabs* love the flesh of both, as also mutton, which is there large and fat; the sheep's tails often weighing several pounds, but it is tough. These *Mahometans* eat a small sort of grain they have, which has the taste of a chestnut, mix'd with parch'd fitches.

About noon the wind freshned, and we made more way, but the winding of the river made it much longer. On the right side of the river, I saw abundance of trees like white mulberry-trees, which bore a fruit near the trunk like medlars, and sweet-tasted, they call them *Giummis*, or *Pbaraob's figs*; to eat them the *Arabs* slash them before they are ripe, to let out the bad juice. When we came to *Chisforzeer*, they told me, we were half way. At sun-set we found our selves near the villages of *Sicabul*, *Nigili*, and *Comfirich*, the wind being fair, which tho' it continu'd, yet the boat stay'd at *Terrana*; the *Bey* or master refusing to go any further on account of their great festival call'd *Agiram Bairam*, or the sacrifice to *Mabomet*.

Stopping at this village two hours after sun-rising on Wednesday, till they had ended their hellish ceremonies, I took notice of a great heap of earth, which they call *Natron*, dug out of a neighbouring hill, which they told me was shipp'd off for several parts of Christendom, to whiten cloth, and take out spots. On the left side of the river is a long sandy hill, which runs as far as *Grand Caire*.

Wednesday the 12th we continu'd our voyage, always in sight of villages on both sides, and within few of *Mennuf*, a great city six miles up the land, on the right of the island. About sun-set we pass'd by *Dulap* and *Nixas*, a village where the Nile divides it self into two branches, the one running towards

Rofeto, and the other to *Damiata*. We came to *Bulac* three hours after night, by reason of the time spent on account of the aforementioned festival. Here all the boats that come from the upper *Egypt*, *Alexandria*, and *Rofeto*, make a stop.

Thursday the 13th, at break of day I went ashore, and saw the country overflow'd by the river, like a sea, being then out at its full extent. I was told, that on Friday the 7th of August, the *Bassa* attended by a great retinue, performed the ceremony used every year, of cutting the bank of a small branch of the Nile, call'd *Xalick*, that the water might run by new *Caire*, enriching the country, and rejoicing the hearts of the *Arabs*, who judge whether they shall have a good or a bad harvest by the rising of the waters at the *Nileoscope*, or measure of the swelling of the Nile, set up in an island near old *Caire*. This ceremony varies every year 7 or 8 days, according as the waters increase sooner or later, which being come to the height, a crier proclaims it to the people. The Nile at that time appear'd to me greater than the *Danube*; what it is when lowest, I shall say when I see it.

Having taken my leave of the *Janizary*, who lov'd strong wine, I set out for New *Caire* upon asses, and being come thither, lodg'd at the house of the *Franciscans*, in the quarter of the two gates, being that of the *Venetians*, call'd *Hart*.

I found them at *Caire*, celebrating the festival of *Bairam*, which had been kept the day before in the villages. There was a great number of people in the burying places, holding lights over the tombs of their dead friends; in the publick places, all persons vy'd in offering sacrifices to their prophet, of oxen, gelt goats, lambs, and fowls. Besides the mutual invitations and treats, the multitude diverted themselves with beholding eight children turning round upon a wheel. During these days, they did eat the flesh of their horrid sacrifices, especially of the fowls, which are very cheap, as are the pigeons, whereof there is a prodigious number in the dovecotes of all the villages.

Having rested my self in the father's house, after dinner, I hir'd two asses, and went with a friar to Old *Caire*, crossing the *New*, for the space of two miles and a half, and as far over the fields. Here also I lodg'd at the *Franciscans*; then I went to visit the church of the *Grecians*, built within the fort, to see the arm of St. George kept there in a chapple.

Joseph's granaries.

chappel. The church has nothing great, and the castle is a dark prison. They say it belong'd to the ancient *Coptis*, or circumcis'd people, as did another adjoining to it, destroy'd by the *Turks*. These *Coptis*, they say, were masters of the country. The wretched remains of them, are still to be seen in a particular quarter; but joining to *Old Caire*, where they have five churches, say mass after their manner, obey their schismatick patriarch, and consequently are enemies to catholicks. They lead an austere and wretched life, feeding only on bread and water, or at best on herbs and pulse.

Joseph's granaries.

Old Caire, seated on the right side of the branch of the *Nile*, is almost inhabited, there being not above 3000 souls in it, and it is dreadful to see its ruins scatter'd in all parts. *Joseph's* granaries which are there, are about a mile in compass, with a wall that closes them in. They are divided into fourteen large squares, in which corn is laid up at this time in the open air, because either it does not rain in *Egypt*, or but a few small drops.

The father superior of the house, and another father his companion, both *Spaniards*, carry'd me to see the place where *Moses* was found floating on the *Nile* in a basket, by *Pharaoh's* daughter; the royal palace then standing near that place; at present there is a *Mosque*, with gardens and houses of pleasure. Not far from it is the island before-mentioned, where they measure the increase of the *Nile*. Along the banks of *Caire*, there is always a number of boats laden with corn, much better than ours, brought from the kingdom of *Seyd*, which signifies happy country, belonging to an *Arabian* *Mabometan* prince, tributary to the *Great Turk*. These boats perform their voyage in twenty two days, but with some trouble, because of the crocodils. Opposite to this great city, on the left side of the *Nile*, is another call'd *Ciza*, the head of a government, and famous for the houses of pleasure, built there by the *Mamaluks* princes. In the villages about *Caire*, the *Arabs* usually hatch eggs in fourteen days, placing them in a room, and making a fire in the middle; during which time, they take care to turn them now and then, that they may receive sufficient heat. I would have gone to see this, but was told they did it in *Lent*.

Afterwards I went with the aforesaid fathers into the holy house, in which the blessed virgin dwelt seven years, with the infant *Jesus*, and *St. Joseph*, when they

fled the cruelty of *Herod*. This is with-
in the church of the *Coptis*; going down
nine steps, near the left side of the
choir, supported by three pillars on the
right, and four on the left, which make
three little partitions. In the middlemoit,
about four spans from the ground, they
show a hollow in the wall, where our
lady lay with her infant. In the apart-
ment on the right, is the place where
St. Joseph lay, and in the hollow of the
wall on the left, another little place,
where at first our saviour rested, when
he came into the grot. There is also
a stone, on which they say, the
blessed virgin wash'd, and a stone table
on which they eat; they also shew'd me
a great piece of timber and a nail, which
they said was of *Noah's* ark. I went to
see the *Greek* church behind it, which is
not large, and has but one altar in the
choir, near which ascending eight steps,
in the high part of the wall is the seat
of their patriarch. At this altar the
priests say mass, in the old *Egyptian* lan-
guage, whereof they understand little
or nothing, they are so ignorant. Not
far off is the font, made like a well, in-
to which they let down the water, bap-
tizing the females eighty days after they
are born, and the males forty, and
sometime after they circumcise them
both.

Having heard mass, I mounted my ass
to go home with the two *Spanish* fathers.
By the way I observ'd, that *Old Caire*
in former ages was a great city, its ru-
ins extending many miles in compass.
I also took notice of the aqueducts,
which convey the water of *Nile* into the
Bassa's castle, drawn with engines out
of the stream, as of a wonderful thing,
as well because of the height of the ar-
ches, as for the distance of three miles.
Then we met part of the *Bassa's* retin-
ue, going to with a good seal to a lord
of *Old Caire*, beating four drums, and
before them two *Dervices*, or *Mabome-
tan* religious men, with their conical
caps on their heads. But the best was
to see a *Santone* of theirs, that is another
sort of religious men, naked, with a cap
on his head made of several rags, and a
half coat on his back, and how those
barbarians ran in crowds to pay their
respects to him; so that what for the
solemnity and this concourse we could
not go on, and were forc'd to take ma-
ny affronts from the rabble, to save be-
ing bastinado'd for answering. After
some stop, because of the narrowness of
the streets, one of the servants step'd
forward, and taking one of the fathers
by the hood, had like to have pull'd him

E down

GEMELLI
1693.
down to the ground; and at the same time reviling the other, because he had a little dog in his hand, saying, *One dog carry'd another.* As I was going by I observ'd, that an *Arab* made a shew as if he would strike me with a long staff over the head (for there the servants carry cudgels, and the masters clubs shod with iron, hanging at the pummel of their saddle) and he had certainly done it, but that a *Mahometan* christian held him; therefore the danger making me more cautious, I took off my hood that was so odious to those barbarians.

Turkish
Festival.

The *Turkish* festival continu'd Friday the 14th, abundance of cattle and fowl being continually slaughter'd, whose flesh the catholicks do not eat, because of the superstition us'd in sacrificing of it, and therefore they provide some time before. During this three days festival (which comes eleven days sooner every year) abundance of *Arabian* men of note appear'd mounted on good horses (which is not allow'd to christians) who are oblig'd to alight when they meet with or pass by any officers of justice. The *Janizaries* at the same time exercise their weapons in their several quarters. Other vagabonds with bottles in their hands sprinkle those that pass by with rose-water, to get money of them. From the window I saw eight women in masks go by, crying out as if they had been possess'd by the devil. I was told this was the sign of a wedding, and that they went about inviting the kindred of the bride and bridegroom.

Caire, by some call'd *Memphis*, which others will have to be *Babylon*, is seated in the latitude of 29 deg. 50 min. near the right-hand bank of *Nile*. It was very flourishing whilst it had *Sultans* and kings of its own; and from that time has ever declin'd for 160 years past, since it has been under the dominion of the *Turkish* emperors, who send thither a *Bassa* in the nature of a viceroy. This great city was built triangular, and tho' the head of the lower *Egypt*, is not peopled as formerly; nor such as some now pretend it to be, consisting of 2400 quarters or wards, and as many *Mosques*; for the plague which continually infests that country, has left it void of inhabitants; and tho' the missionaries and *French* merchants told me, That as it now is, it contains five millions of souls, I will not be taken for their voucher, for I never counted them, and the reader may believe as he pleases; I shall only add, that this report inflaming my curiosity, I resolv'd to surround it, and desir'd the *French* consul to procure me a *Janizary*,

Bigness of
Caire.

that I might do it with more safety. The said consul lending me the *Janizary* on Saturday the 15th in the morning, we mounted two asses, and kept still close going round, only stepping aside in some parts because of the ruins. We left behind us the aqueducts, and came to the castle, which is commanded by a hill east of it, whence it might soon be destroy'd by reason of the weakness of its walls and towers. For many miles about in several parts, are the burying-places of the *Turks*, with *Mosques* in them, and tombs for persons of note, rais'd on four pillars, with a covering over, after the manner of a cupola. We went about it in two hours and a half, so that considering the time, and the swiftness of those asses, *Caire* in my opinion may be about ten miles in compass. Now let the judicious reader make his own computation, and consider whether that circumference can contain five millions of people, for I will only add that the streets are very narrow, and twenty or thirty persons live in a small house, as also that we do not include in this compass *Bulach*, *Old Caire*, and the suburbs.

The houses of this metropolis are not embellish'd with marble, or built with free-stone, but with bricks ill burnt, and mud without any magnificence. Only two gates of the city towards the east, which are shut up, have some ornament of marble. In other respects it may be call'd a magazine of the most valuable commodities brought by the *Persians*, especially along the canal of *Istis*, and of all things necessary for the support of human life; flesh, fish, fruit, bread, and other things being sold there at a very low rate; insomuch that for the value of a *Carline* of *Naples* (which is about sixpence) a man may make a plentiful entertainment.

To return to what we were saying, this conceit of so many millions has been produc'd by the fame of the ancient and vast city of *Caire*, which they will persuade us consisted of five several cities, yet not divided, the one beginning where the other ended, like the links of a chain, which are all distinct, but not divided. The prophet *Isaiah*, chap. xix, speaking of them, call'd one the city of the *Sun*, which was the chiefest, because there perhaps king *Pharaob* resided. Or this there appears no other footsteps and remains but only an *Obelisk*, and some few ruins, the very name being lost, and this now call'd *Masaria*. But there continues a tradition, convey'd from the christians to the *Turks* themselves, that the blessed virgin passing this way with her infant, rested

rested under a tree, which stood there till our times, but afterwards was remov'd, as well on account of the Christians devotion, as for the Infidels sake; as I was told by the father *Custos* of the house of the *Franciscans*, who shew'd me a great piece of the wood of it in the choir of their church.

The second city was call'd *Aamis*, which was the same that *Pharaob* gave to *Joseph* and his family. The third was *Mjrin*, built by *Mesrin* son to *Ham*, and grandson to *Noah*. The fourth was call'd *Bubrillon*, built in honour of and nam'd by an idol call'd *Abrillon*, whose temple was near *Old Caire*, and at present there is a christian church in the place. The fifth was *Membis*, destroy'd by the *Mabometans*, under the emperor *Heraclius*, and afterwards rebuilt by the name of *Tesdar*, that is victory, now *Old Caire*.

The new one, as we were saying, has nothing of the greatness or magnificence of the old (which according to the traditions we have, consisted of the above said cities) being built, as is reported by *Kabara*, the wife of a *Saracen* king, from whose name it was afterwards corruptly call'd *Caire*, through the ignorance of the people.

Maillet the *French* consul, a person of known virtue, and born in *Champagne*, several times offer'd me lodging and diet in his house, which at first I civilly refus'd; but he repeating it two or three times with tokens of affection, I accepted of it, and began that same *Saturday* to partake of his kindness at a plentiful table. In the afternoon I saw a dead body carry'd by, on a high bier, and several priests went by singing, and women howling. They say, that upon the like occasions, those that are well to pass kill cows, sheep and lambs, and give the flesh to the poor. Nor should this seem strange, since so much charity is practis'd there towards birds, to whom at *Caire* a certain quantity of corn is given daily upon a tower, being a legacy left them by a *Mabometan*.

Sunday the 16th, in the morning, I went to see the castle, which is in the highest part of the city, taking along with me the two *French* fathers, the *Jewish* interpreter, and the same *Janizary*. Being all mounted on lusty asses, we began to ride through the city, follow'd by the insolent scoffs of the *Arabs*, who now and then pull'd the fathers by their cloaks. After passing by several *Bazars* or markets, we came into a wide street, which is rare in *Caire*; and in which there were good houses and *Mosques*. Then into a large place twice as big as the breadth of the castle of *Naples*, in

which there were two great *Mosques*, ^{GEMELLI} about it good shops, and mountebanks ^{1663.} in the middle. Two gates at the entrance of this place led into the castle. We entered at that on the right hand, and passing through three others, saw a round high wall, like the *Cupola* of a church, but open at the top, where they told me was the *Divan*, or tribunal where *Joseph* gave audience; there is nothing else valuable but only 38 large and high pillars of marble. Going further up from this court, through two other porticos, I went into a plain square, opposite to which there are two gates, that lead into another court, through which they go to the tower, where the publick treasure is kept for the pay of 40000 *Janizaries*, that are ever to be in the kingdom. They suffer no man to go into it, nor into the apartments of the *Aga* of the *Janizaries* and the *Bassa*, which are adjoining to the same place. Having obtain'd leave, at the price of a *Zecchine*, of the *Bassa*, to see *Joseph's* well; we went out again at the two gates, and going up a way on the left hand, in the highest ground of the castle eastward, found four oxen near the well, which turning a wheel, drew up the water with ropes of a vast length in earthen vessels. I went down with a light, to the first landing place on steps all cut out of the rock; there I found four other oxen, two whereof by turns work'd about the engine to draw up the water from the bottom of the well into a cistern, made for that purpose in that place, whence the oxen above afterwards drew it up. I caus'd a lighted torch to be thrown in, to observe the depth, and after it cords to measure it. By what I could perceive, it has two even sides, but it is not quite square, two sides being of 22 foot each, and the other two of 15. As for the depth, it is 141 foot from the mouth to that resting place, where the second oxen were, and as many more to the spring, being in all 282 foot. The steps in many places are worn out, and in others clogg'd with dirt, by the continual going up and down of oxen; and for the most part they are uneven and broken, and therefore having begun to count them, I forbore continuing that trouble; however there may be about 154 steps down to the first resting place. From the second oxen to the spring, it is no wider than for the wheel of the engine, and measuring it, I found two sides of twelve foot, and the other two of four. The most wonderful thing in this work, is its being cut out of a hard rock,

not

Gemelli not only the well, but the steps to go
 1693. down to it, which in some places are 7
 foot in length, in others five. The wall
 between the stairs and the well is six
 inches over, or little more. Some say,
 this well was made by *Joseph* the *Sultan*;
 and their reason is, because there was no
 such city in the time of the other *Joseph*,
 whose it is generally believed. However
 it is, if the most received opinion be true,
 it was dug about the year of the world
 2298, after the flood 642, and before
 the coming of Christ 1606, from which
 time to this year is 3399 years. Coming
 out of the well, I went to divert my
 dimm'd sight by the river of the city,
 which is all discover'd from the castle;
 and to enjoy the noble prospect of an in-
 finite number of stately *Mosques*, and some
 squares, and particularly a large plain
 in the midst of the city, cover'd with
 the waters of the *Xalic*.

The castle we speak of, is a little
 city, about three or four miles in com-
 pats; but as to the fortification, there
 is none modern, that can make any long
 defence. The towers are old, and the
 walls ruin'd in many places, and with-
 out the necessary cannon; so that a few
 shot would lay it level. I should rat-
 her call it a heap of disorderly houses,
 than a regular fort.

At my return I met a bier, on which
 was a green covering, or pall held up
 at the four corners by four *Mabometan*
 priests, carrying as many banners of the
 same colour in their hands. I asking
 the question, they told me that was the
 covering or pall of a tomb of one of
 their *Santones*, or religious men, which
 they carry'd about to beg alms.

Palaces.

Being desirous to see some palace of
 any one of the great men of the city,
 the interpreter conducted me to that of
Ibrahim Beg; but the owner of it, who
 then commanded in the island of *Candia*
 being absent, we saw only a part of
 it. His steward receiv'd us courteou-
 sly in the gallery, giving us coffee, sher-
 bet, and tobacco to smoak. A stair-
 case on the left hand of the entrance,
 all cover'd with vines, form'd in the
 nature of *Pyramids*, led to this gallery;
 where was the *Soffa*, cover'd with mats
 and fine carpets, as was that in a room
 adjoining, and in both of them abun-
 dance of cushions to sit down after the
 eastern manner. I was willing to spend
 some time in the first gallery, to enjoy
 the cool air, and the prospect of the
 court and garden, which was set out
 with vines, cypress, palm, orange, and
 other sorts of trees. Next I saw some
 very good rooms, curiously painted and

gilt after the fashion of the country,
 with very fine *Persian* carpets on the
 ground. In the court which was very
 large, there were beautiful deer and wild
 goats grazing.

Thence we went to see the Admiral's
 palace, who is superintendent of the *Ca-
 ravan* of *Mecca*, and was at that time
 abroad with it, which consisted of above
 60000 pilgrims, an Employment that
 yields about 100000 crowns; for the
 grand seignior allows 1000 *Zecchines*
 a day whilst the journey lasts. The court
 before this palace was larger than the
 other; in the midst of it, under a large
 white mulberry-tree, was a *Soffa* to take
 the air; there was also a white goat
 of *Mecca*, beautiful enough to behold,
 with hair as soft as silk. The goats
 of *Grand Caire* differ very much from
 them, for they have ears like a hound,
 and hair like a grey-hound; the *French*
 for their beauty carry them into *France*.
 Here, I know not for what reason, they
 would not allow us to see the lodgings;
 and therefore nor to keep the consul in
 suspense, who expected me to dinner,
 with all the religious of the *French* house,
 I return'd home.

Monday the 17th, I went betimes four
 leagues from *Caire* eastward, to see an
Obelisk standing in the place call'd *la Ma-
 teria*, in a garden call'd the garden of *Bal-
 sam*: Within it is a fountain, at which
 there is a tradition that the blessed virgin
 rested, when she came into *Egypt* with
 the infant *Jesus* and St. *Joseph*, in the
 shade of a great tree that was hard by,
 which was long preserv'd through devo-
 tion, as was said above.

Not far from this garden, stood for-
 merly the antient *Hierapolis*, or city of
 the sun; the first the divine sun of justice
 enlightned by his presence, when he
 entered *Egypt*. I saw some remains of
 its antiquity, particularly the abovement-
 ion'd *Obelisk*, which is three foot and a
 half in breadth, and 58 in height, with
Hieroglyphicks cut on all the four sides, as
 may appear by the following cut.

See Cut Number II.

Returning a good pace on our asses
 towards the city, I came in time to see
 the entry of the *Aga Hamet*, who
 brought the *Bassa* a present of boots,
 saddle, and breeches from the grand
 seignior, which denotes, that he is soon
 to depart, and another succeed him in
 the government. The ceremony was after
 this manner. The *Aga* was first receiv'd
 in a garden without the city by the *Chia-
 ga*, lieutenant, or deputy of the *Bassa*,
 who

who they said, was a crafty knave; and having stay'd there a few days to furnish himself with necessaries, he afterwards made his solemn entry. Before him went little drums and trumpets, after the country fashion, beaten and sounded by men on horse-back, and 200 soldiers well clad and mounted. Then follow'd two Persons, one of whom carry'd the scimitar, the other on the left, in a bafon cover'd with silk, the breeches of red cloth, call'd stuff, and the boots; after them follow'd 100 Janizaries on foot, well clad in green and red cloth, with their great wide caps hanging down on their backs, held up on the fore-head by a silver plate a span long, curiously wrought. Lastly came the *Aga*, carrying the *Or-*

toman emperor's letter on his breast, and the *Chiaga*, and after them two other troops of horse, like the first, clad in red, and marching two and two, some of them having clubs hanging on their backs, cas'd at the end with silver, to denote they were officers. All this company went to the castle, where the *Bassa* expected them, and thus the solemnity ended.

We return'd home through the market-place of *Enaxin*, or of brass, and other *Bazars*, where we saw rich shops of several sorts of rarities, brought thither to sell from several parts of the world; and besides in the city, there are excellent silk weavers, who weave curious thin silks for the use of the country.

CHAP. V.

An Account of what the Fathers James Albani, and Joseph Mary of Jerusalem, Franciscans, and Missioners saw in their Travels in the upper Egypt, or Thebaida.

IT being rare in *Europe* to meet with any good accounts of the kingdoms and countries of *Africk*, I thought it would be acceptable to the reader, to give him a relation, which is not my own, but deliver'd by *F. James Albani*, and *F. Joseph Mary of Jerusalem*, born in *Palestine*, and bred up at *Rome*, both missioners to *Grand Caire* in the upper *Egypt*, to whom full credit may be given, because they either saw what they write with their own eyes, or else they learn'd it from the *Arabs*, of whose language they are absolute masters.

These religious men set out from *Grand Caire*, with the president of the *Hospitium*, or house of the *Franciscans*, on the 4th of May 1691 towards *Bulac*, a city but two miles from *Caire* westward, which they say, was built by one *Polo*, there look'd upon as a god. It is about two miles in length, one in breadth, and contains above 50000 souls; is seated on the river *Nile*, and there being nothing remarkable in it, the fathers after a short stay, took boat to prosecute their voyage. About night-fall, they came to a place call'd *Cbercalfib*, or *Crisopolis*; but the wind being fair they would not stop there, so that about break of day the 5th, they were near *Bussic*, a very antient city, formerly call'd *Osios* in the *Captan* language, signifying a high place. At night they came to *Hermopolis*, which in the *Greek* imports the city of *Mercury*, antiently the greatest on the borders of the lower *Thebaida*, where there

are still many ruins of former buildings; at present the *Arabs* call it *Beniscuf*: *Abulfede* believes here stood a famous temple of *Mercury*, embracing a statue of *Venus*, and that it stood under the government of the *Greeks*, but was afterwards destroy'd by the *Mahometans*, when they came into *Egypt*.

Advancing further, they came to the village call'd *Habfelnarab*: Near to it *Habfelnarab City* is the city *Bebnese*, built by an antient *Abagus*, or philosopher, call'd *Bebnes*. Without it is a well made by one *Rogoes*, a notable magician, to discover the increase of *Nile*; it is now call'd *Bir-El-giernus*, that is, *Rogoe's* well. The natives believe, that on the fifteenth of June at night, there falls in that place a dew, call'd *Boftaa*, or dropping, through the intercession of *St. Michael* Well. A notable the arch-angel, sent that night by God to stir and bless the river; and they are the more confirm'd in this opinion, because they see the river swell from that time forward: For this reason the *Copti* christians throughout the kingdom, celebrate the feast of *St. Michael* with great solemnity, in their way; the ceremony is thus: On the fourteenth at night, their bishops, and the *Cadi* of the country go thither, and stop up, and seal the well. The next morning the bishop having said mass, they again go to open it, to measure the water, and by the greater or less increase of it, they judge of what there will be in the *Nile*, and consequently of the plenty, or scarcity of the year. This Magician

Voyage
up the
Nile.

GEMELLI 1693. we have spoke of, having done wonderful things through his knowledge of the secrets of nature, was by the ignorant multitude plac'd among the number of their gods; erecting a statue to him over the well, which was adorn'd by the natives for a considerable time.

Being pass'd *Habfel arab*, the fathers came to very uncouth mountains close to the banks of Nile. At the foot of one of these mountains call'd *Giebal-ellbeir*, that is, the mountain of the bird, are the ruins of the city *Siribis*, which they will have to be built by the magician *Siribio*; and that over one of its gates, there was an idol of that name. They further affirm, that the magician by his art set up a bird on the top of the mountain, which in a fruitful season turned his head towards the river, and in time of scarcity towards the desert; and that when any invasion of enemies was at hand, it turn'd towards that part from whence they were to come, clapping its wings, and crying very loud to give the citizens notice. At present there is a monastery of *Copti* monks in this place.

Ten miles from it is a city call'd *Munieleben-Echafrin*, and many other ruins of vast cities, where the *Arabs* have their dwellings, being places inaccessible to any but them.

On the 6th of May, they came to *Sachiel-musa*, that is, *Moses's* well, near which, towards the east side of *Tbebaida*, is *Antinopolis*, a most ancient city, and of great renown, as may appear by its ruins, and vast pillars; one of which is not much less than *Pompey's*. In this city, *Dioclesian* martyr'd 160000 christians; and *Nestorius* was confin'd to it, by order of the first council of *Ephejus*.

Further on they saw the city of *Mellani*, and went thence under an impenetrable mountain, still along the river, where the boats are in great danger, the channel being shallow, and all rock; and from thence forward they began to see crocodils.

At night they came to the foot of the mountain *Abafede*, or *Apud-finem*, as the *Romans* call'd it, once famous for being inhabited by many great magicians and masters in the art of *negromancy*. who afterwards began to fall under the *Grecian* monarchy, and had there placed idols, particularly one they call'd *Oseas*. *Egypt* afterwards falling under the dominion of the *Romans*, they call'd this mountain *Apud-finem*, because of the wonders and prodigies seen on it, holding it in great veneration. Some will have it that King *Pbarao* brought the magicians from this place to work their wonders before *Mo-*

ses. The christian faith afterwards increasing, it began to be inhabited by holy fathers and hermits, living in several caves dug out of the rock, which inspired dread and devotion in the minds of such as see them. The latitude here, is 37 deg. 2 min.

Five miles further westward, is a city *Marrofa*, call'd *Marrofaluk*, and on the mountain that overlooks it, call'd the *Green Mountain*, stood the monastery of *Elpa-bar-rach*; where there is a tradition that the blessed virgin, her son, and St. *Joseph* stay'd some time.

Thence they went to the city *Ajsul*, *Ajsul* city. formerly call'd *Bubastus*, seated on a vast high mountain, antiently inhabited by holy *Anchorites*, whose caves are still to be seen. Near to it, there were two other cities, the one call'd *Doranche*, of the name of a goddess; the other *Sciolt*, where there are still many antiquities to be seen. Here the heat of the sun is so violent, that the *Franks* have much difficulty to endure it, and the journey is dangerous because of thieves, who every night swim over to plunder the boats.

Going still forwards they saw *Abritisch*, *Abritisch* or the city of *Venus*, where there are many ancient structures ruin'd. The bishop of this place subscrib'd to the council of *Cacedon*.

On the 11th they came to *Giabel-essa*, *Giabel-bare*, that is, the mountain of *negro-mancers*, formerly call'd *Isis*, of the goddess of that name, to whom the people of the middle *Tbebaida* us'd to offer green leaves of several sorts, and made sundry sports after the *Egyptian* manner. The statue of this goddess of a prodigious bigness, is still to be seen half bury'd in the ground, at the entrance into a cave. The *Egyptians* believe, there is a great treasure under it, which the *negromancers* have often endeavour'd to dig up, but all in vain. On the top of this mountain is a cave, in which they say, there lives a viper, as long as a man's arm, which winds it self about the necks of the *Turks* that go to visit that place, which they esteem most holy, without doing them any harm; and persons of credit in other cases report, that it has been several times cut into four or five pieces, and always join'd again by means of the devil. Let him that pleases believe it. Under this mountain, the fathers stood expos'd to intolerable heat till evening, resting at night about the same place in danger of thieves.

The next day being the 12th, for want of wind, they drew the boat to the foot of

Labia, Benuoid, and Fay cities.

Abnim and Ajsul cities.

Nabopolis and Grege cities.

Labia, Benavid, and Fau cities.

of another dreadful mountain, under which is the city *Labia*. Ten miles from it is another destroy'd, call'd *Benavid*, which in the *Copti* language signifies, house of the stars, because the inhabitants worship'd the stars. Proceeding further they came to the antient city *Fau*, in the *Copti* language call'd *Saupt*, and in the *Greek* *Crocodiopolis*, the vast ruins testify its antient greatness.

Acbmim and Asjilb cities.

After many sufferings and hardships, the fathers arriv'd at *Acbmim*, by the *Greeks* call'd *Oxyringus*, a city of the middle *Thebaida*, antiently a bishoprick, as may appear by the acts of the council of *Constantinople*, *Dorotheus* bishop of this place subscribing to it. This was the second city built in *Egypt*, by the philosopher *Hermes*, in the eastern desert. Thence they went to another call'd *Asjilb*, antient as the other; its bishops *Colosirius* and *Andrew* having been present at the council of *Calcedon*. Here they found the latitude to be 26 deg. 4 min. Ten miles from this city the fathers entered into a long valley, where there are caves, and little monasteries on the mountains, in which there once liv'd holy, religious men, and which stir up devotion in the most stony hearts. Here they stay'd two days and a night to visit them, and admire the narrow dormitories and small cells cut out of the hard rock. Then they travel'd nine miles along the valley, and saw a spring gush out of the solid rock, which is call'd of the *Abissine* *Moses*, a holy hermitage in past ages. Hence they advanc'd eighteen miles further a-foot, and found a lake they call'd *Birbel-Elban*, furrounded with pleasant trees, where there were also sundry caves, hermitages, and solitary dwellings, some whereof run a quarter of a mile into the rock. The biggest cave had a large entrance, adorn'd with crosses, and other devout works. These holy places draw tears from the faithful, seeing them serve as receptacles to infamous filthy men, addicted to negromancy.

Nalopolis and Grege cities.

The fathers returning to the entrance of the vale, prosecuted their voyage, and after advancing some time westward, arriv'd at the city *Mascia*, in former times call'd *Nalopolis*, where there are many antient monasteries, and other structures to be seen, now ruin'd. Going forwards they came to the city *Grege*, but before they arriv'd at it, they saw the air covered with locusts, as big as wheat-ears, which come from *Nubia*, and do much harm in the country. *Grege* is ten miles from the *Nile*, for which reason they were forced to travel by land on camels. Here the fathers were entertain'd in the

house of a christian, whither many other christians of the country came, very desirous to be instructed, and therefore propos'd several doubts concerning the catholick rites, the *Roman* church, and the pope. They remain'd very well pleas'd and convinced by the discreet answers of those religious men, who were well vers'd in their language; saying, they had never heard such sound doctrine; and not having seen such a habit before, they were never satisfy'd with beholding it. *F. Joseph* being in a christian's house, and *F. James* without, the officers came to apprehend *F. James*, on account of the tribute, *F. Joseph* reprovd them, but it avail'd nothing; but when he was gone half way, he was rescu'd by some christians of the country.

They continu'd at *Grege* till the 20th of May, and setting out on the 21st, the same christian furnish'd them with all necessaries for their journey, and bore them company to the boat; but finding it was gone, gave them two asses, and made two of his servants conduct them to *Pardis*, six miles distant. At *Pardis* they took boat, and setting forward with a fair wind, came to the town of *Elbeliani*, where the master of the vessel stay'd to mend it. Sailing thence and coming to the island of the river, they saw a crocodile six or seven fadom long: At night they came to the foot of wild mountain, call'd *Eliareg*, where they were forced to continue that night for want of wind.

The next morning, being the 22d, they advanced to the other little island, where they found two other frightful crocodils, and continuing their voyage under dreadful mountains altogether unpeopled, still met with more crocodils. About night-fall they stop'd at a place, where one *Joseph* was head of the *Arabs*. Their provision being quite spent, they stay'd the 23d at a town call'd *Dijne*, *Dijne* and sent a *Turk* to buy a *Medine*, that is about six-penniworth of bread; but finding none they went away fasting. Some *Arabs* coming along the road to plunder them, they put them to flight with their shouts.

Next they came to the antient city *Dandara*, being the third built by *Hermes* the philosopher, in which was a magnificent temple, with many statues, and stately structures all ruin'd. Passing thence, they came to *Caane* or *Bericon*, in the middle *Thebaida*, three miles from whence the *Egyptians* had a port on the *Red Sea*, now call'd *Chosfir*, whence in *Pbarao's* time they traded to *India*, and part

GEMELLI 1693.

Pardis and Elbeliani to vns.

Caane, or Bericon.

Chosfir port on the Red Sea.

GENELEE
1693.

part of *Arabia*. There they lay that night in great fear, because three robbers came swimming, and fifteen upon the land to clap another boat aboard theirs, but they kept them off as they had done the others with their shouts.

On the 24th the master of the boat went about to gather his passage-money, and the fathers being still aboard, the judge of the country came with an officer, to enquire who they were, and what they went about. He seeing a different sort of garment, suspected they were religious men, and therefore would not be pacify'd, saying, they were *Franks* that came as spies, whilst their *Sultan* was making so great a slaughter of *Turks*. The fathers pleaded the best they could; but the judge still replying, that they were come in that habit to carry on their deceits; order'd the master of the boat not to depart without his leave. A christian of the country, the rest of the inhabitants being *Mabometans*, interposed with the judge, saying the *Franks* were come with him to visit the churches and monasteries of the christians, and that when they had performed their visitation, he himself would see them back. Yet this did not satisfy him, but he would needs send some persons with the fathers, to enquire into their proceedings. They seeing no other way to rid themselves of this trouble, produced a letter of recommendation they had from the secretary of the chief of the *Arabs*, which the judge having read, and receiv'd six *Medines*, he was appeas'd, being able to get no more of the poor fathers.

Coptus
city.

Six miles further, entering into the upper *Thebaida*, is the antient City of the *Copti*, from which not only the nation of the *Copti*, but all *Egypt* took name. This metropolis had a trade in the port aforementioned, and was seated in 26 deg. of latitude, and 62 of longitude; *Strabo* speaks of it thus. Next to the Temple of *Venus* is that of *Isis*; and then those they call *Typhonnia*, and the cut that runs to *Coptus*, a town common to *Arabians* and *Egyptians*: Then follows the *Isthmus* running out into the Red Sea, near the city *Berenice*, which tho' it has no port, yet has convenient places of entertainment, because of the nearness of the *Isthmus*. *Philadelphus* is said to be the first that open'd this way with his army, when it was destitute of water, and erected inns as well for foot-travellers as camels; and that he did so, because it was difficult sailing on the Red Sea, more especially from the upper part of it. Experience has shown, that this was of great

advantage; and now all the Indian, Arabian, and Ethiopian commodities brought up the Arabian gulph, are convey'd to *Coptus*, the mart of these goods. Not far from *Berenice*, is the port of *Muris*, which city has an arsenal, or place for building of ships. Not far from *Coptus* is the city of *Apollo*; so that there are two cities, which shut up the *Isthmus* on both sides; but *Coptus* and the port of *Muris* are now the chief. The bishop of this city of *Coptus* went to the council of *Ephefus*, as may appear by its acts.

Proceeding on their way, the boat was ^{Kno, or} forc'd to stop till midnight for want of ^{Cosborbir} wind, in a dismal uncouth place; but the wind coming up fair again, they went on, arriving at last, after many sufferings at the city *Kno*, or *Cosborbir*, which they say was *Apollo's* city, and one of the greatest on the banks of *Nile*. They could not go any further for want of wind, and the men trying to tow along the boat with ropes, were not able to endure the heat of the scorching ground against their feet; and therefore being half parch'd with the sun, they turn'd back to put in with much labour at night to the city *Niccade*, ^{Niccade} city. The fathers being come thither, went to the bishop's house almost famish'd, having been some time without provision; and producing the letter of recommendation they had, directed to him, when they thought to make amends for their past fasting, they had a wretched supper of a little cake, and fair water to refresh them. Here many doubts were propos'd to them concerning our holy faith, to which they gave excellent answers, the bishops in those parts being very ignorant. The city is beautiful, antient, and abounding in monasteries of *Copti* christians.

On the 29th, having hired another boat of a christian, they set out for *Afsun*. The wind blew so hard, that they were three times in danger of being cast away; and afterwards coming about against them, they lay still. Then towing the boat with ropes, they came on the 30th to the city *Luchferem*. It was in past times call'd *Luchfo*, or light, and built on the east side of the river, in honour of an idol; but in process of time, another idol being set up, it was call'd *Luchferem*, that is, two lights, or else had the name for being compos'd of two cities. In it, besides the remains of noble structures, there are to be seen two pyramids, each of them forty spans about, and all the four sides full of hieroglyphicks. There are also, before the gate of the old city, two idols of a prodigious

digious bignefs, of which all from the
shoulders upwards being broke down,
what remains is twenty-one spans high,
the shoulders are twelve spans in breadth,
the ears five spans long, and three and a
half broad. These statues might have
remain'd whole still, had not the natives
gone about to break an urn they had
on their heads, hoping to find some trea-
sure in it. The marble they are made
of, is wonderful bright, and as it were a
mixture of gold somewhat greenish, all
of a piece. The christians conducted the
fathers into the city, shewing them six-
teen pillars of several pieces, but forty
seven spans about, and further on a great
square building, compos'd of one hundred
pillars, thirty seven spans about. Hence
they went to a temple of idols, cover'd
with vast great stones, each of which was
thirty spans long, nine in breadth, and
fix in depth.

Chak city. Having seen this, they were conducted
to the city *Chak*, now inhabited by *Arabs*.
In the four principal streets of it, they
saw abundance of idols in the shapes of
bucks, goats, camels, lions, and bulls.
Going into the old city, they found the
gate of it of an extraordinary height,
and fix rods in breadth, all of large free
stone, with hieroglyphicks cover'd both
within and without, and the walls being
fallen, this stood still. Further on they
found a wonderful theatre, encompassed
with a wall of vast great stones curiously
carv'd, fourteen spans thick, and of a
proportionable height. In the midst of
it is the place for the shows, almost a
mile about, hemm'd in by six rounds,
making in all about 200 large pillars,
adorn'd with hieroglyphicks, each of
them 150 foot high, with a capital, on
which five persons may sit at their ease.
In this theatre some christians and *Arabs*
live; and because of its strength, the
robbers, when pursu'd by the *Bassa*, re-
tire to it. In the same city is a lake of
green salt water, not colour'd by corrup-
tion, but as they will have it, by art ma-
gick; nor is it known whence it springs,
or whether it flows; but it swells as the
Nile grows small, and sinks as that river
rises: what is more, dirty linnen put in-
to it immediately turns white. They say
it had formerly a hard stone bottom in
all parts, being a quarter of a mile a-
bout.

At a small distance from the lake, is
another parcel of pillars, which in times
of christianity was a church, there being
still the pictures of our saviour, the blest
virgin and angels to be seen, painted
after the *Grecian* manner. They call this
place *Sameavenegium*, that is starry hea-

Vol. IV.

ven, because the roof, through certain *Gfmetli*
holes, artificially represents several stars, ^{1693.}
and signs of the zodiack; at present it
serves the *Arabs* for a stable.

In another place, there are two obelisks of a very great height; the pedestal of one of which is seventy six spans about, that of the other forty, half way bury'd in the ground; near to which there are two others of the same make and bignefs, but thrown down by misfortunes of times. Not far off there were two idols of the finest marble, fourteen spans high, on columns of porphyry, of a prodigious bignefs, which led into a street, cover'd with flat stones thirty six spans long, and twelve in breadth, all over cover'd with hieroglyphicks, and supported by a wall of stones of an incredible bignefs. As they were going to see another parcel of pillars, they found in their way another very large idol of curious marble; and being come to the place they design'd, saw 150 pillars sixty spans about, but made of several pieces, and an hundred spans in height, besides the capitals, on which an hundred persons might stand. At the entrance into this structure, there were two idols of the same marble, little inferior to porphyry, and of such a monstrous bignefs, that the very foot was eight spans long. A few paces further, is a fort or castle, where entering at a gate, and going up stairs, they came into a great open place, with several rooms about it, and as many more above them, in three other apartments. Close by this castle is a way under ground, that leads to the *Nile* and city *Hepalimus*, on the west side, now called *Medinalbabu*. In this city, there are also many remains of temples and theatres. There is also a small lake that fills when the *Nile* increases, and sinks as it decreases, near to which, there are two idols so big, that they are discernable ten miles off; one of them by the country people is call'd *Samula*, and the other *Damula*.

The fathers having taken some rest in the house of a christian, set forward again with much fear of robbers, and a violent heat of the sun, and at two of the clock in the morning came to the city *Licopbi*, now call'd *Armant*, renowned for many temples, and great structures, besides statues and columns. It was once the seat of a bishop, and *Volusianus*, one of those prelates, was at the council of *Ephefus*; St. *Epiphanius* also makes mention of him. Opposite to this city, in a small island made by the *Nile*, there are daily seen hundreds of crocodils of several sorts.

G

The

GENELLI
1693.
Democrat
city.

The next morning at sun-rising, they pass'd by the city *Democrat*, built by an ancient philosopher of that name; at present it is call'd *Democrat*. On the 31st they came to the village of *Alfon*, three miles distant from the river, on a hill, where the houses are meanly cover'd with mats, for want of better materials. Close by is the city of *Latona*, now call'd *Asue*, under the tropick of *Cancer*; the country about it is a continual oven to Europeans, not us'd to such violent heats.

On the first of *June*, they went with a letter from the bishop of *Naccade*, to find a christian, whose name was *Marc*, to carry them to see the monastery built in the plain four miles from *St. Helena*, where *Dioclesian* put to death 460000 martyrs, and of the invocation of the holy martyrs, now inhabited by some religious men; but they were dissuaded from going thither by a chief of the *Arabs*, called also *Marc*, because at that place, there was a judge, who was an enemy to *Franks*, and would either put them to death, or imprison them, and therefore not being able to perform their holy design, they resolv'd to return.

Having taken a small boat that was out of repair, it soon fill'd with water,

which oblig'd them to return to the city. Going aboard again, being call'd by the owner of the vessel, who had repair'd it, they found the men so weaken'd with fasting their *Ramadan* or *Lent*, that they could not row; wherefore *F. Joseph*, and one waterman falling to the oars, row'd the boat to the aforementioned city *Arman*, forty miles from *Alfon*, forbearing to row at night through weariness. In the morning *F. Joseph* fell to the oar again, with the same man, and they labour'd so hard, that at noon they came to *Naccade*. There they went to visit the bishop, but found him not at home; yet he returning with six *Copt* priests, receiv'd them with his usual civility. After supper, with the bishop's leave, they propos'd several questions about religion; and tho' their ignorance was convinc'd by the fathers learning, yet they would not submit, but said they would the next day produce their *Arabic* books, which did not avail them, for those very books serv'd the more to confound them; yet they would never give over, nothing talking to the purpose. After which, the good fathers return'd down the same river to their *Hospitium*, or house at *Grand Caire*.

CHAP. VI.

The Description of the Pyramids of Egypt, and Mummies of the Desert.

IT still remain'd, that I should see the pyramids of *Egypt*, and mummies of the desert, which not being practicable without a good company, for fear of the *Arabs*, I spoke to the consul for him to find some method for me to go safely. He out of his goodness took the pains to speak to some *French*, who were preparing for the same design with a good guard, and so I made one of their company.

We were to set out on *Tuesday* the 18th, but found my eyes sore, having left the window open at night, by reason of the great heat; tho' I had been forewarn'd not to do so, because that distemper is an inevitable consequence of it, and therefore in the afternoon, I rode on an ass, about the *Bazars* or markets, and publick places of the city. In my way I met a man about forty years of age, with a long beard, and all naked from head to foot, whose hands all people ran to kiss, which my ass-driver did with much devotion. Some women kiss'd the end of those parts, which in modesty ought to be cover'd, to render themselves fruitful. Asking who this was, they told me he was a great *Santone*.

We set out on *Wednesday* the 19th for *Bulac* or *Paiaac*, on twelve asses, mids. Being come thither we took boat, there being no going by land, because of the overflowing of *Nile*. We came before noon to the pyramids, or rather vast mountains of stones, the whole way being but twelve miles. Curiosity prevail'd with me and some *Frenchmen*, to go up to the top of the first of them, rather on our knees than feet, the first steps being four foot high, and three in breadth, going equally all about, and growing narrower by degrees till the top. From the top of the pyramid, is a prospect over a vast extent of country, or rather a great desert of sand. Being come down with much trouble, we prepar'd to see that they call *Pharaob's* tomb, into which the entrance is through a hole half fill'd up with sand. *F. Fulgentius de Tovar*, a capuchin, superior of their house at *Caire*, and an able mathematician, having drawn the pyramid, and taken all the dimensions, both within and without, I prevail'd with him to give it me, as also that of the well within, which *F. Lazarus*, another capuchin, had taken

taken twenty years before, causing him-
self to be bound and let down with a rope
into that dark place, out of meer curiosity.

This great pyramid, which is the
nearest to *Caire* on the north-side, has
208 stone steps of several heights, which
are suppos'd to have been cover'd with
marble, since taken away for other stru-
ctures. Its perpendicular height is 520
foot, the length of every side 682, the
flat on the top is made of twelve stones,
being sixteen foot eight inches square;
wherefore they say, that an arrow shot by
a strong arm, would not fly beyond the
pyramid. There are sixteen steps up to
the entrance, which leads to a square way,
all of an equal bigness, that goes down-
wards. Its height is three foot and a
half, its breadth three foot and a quarter,
its length seventy six foot. At the end of
it is a place about ten foot wide, which
leads into another way, of the same length
of seventy six foot, which goes upwards,
at the end whereof there are two ways,
the one upon a level, twelve paces in
length, with a room at the end, and the
other that goes upwards, six foot
four inches wide, and 162 long. At the
end of this is a gallery to go through
into a room thirty two foot in length, six-
teen in breadth, and nineteen in height,
the roof whereof is plain, and made of nine
stones. Within this room, which is about
the third part of the pyramid, is an em-
pty sepulcher, said to be *Pbaraob's*, of
white, red, and black marble, seven foot
two inches in length, three foot and an
inch broad, and three foot and three in-
ches high, a narrow space to contain so
great a monarch. By the measure of this
tomb, it appears, that men now are as
big as they were 3000 years ago, and that
we are no less than our fore-fathers; as
also that this stone must be lay'd before
the structure was finished, because there
is no way it could be carry'd in.

Between the two ways already men-
tion'd, on the right hand, is a wall,
which appears on the ground perpendi-
cularly from the *Horizon*, making the
Figure of the *Hebrew Lamed*, in which
down seventy seven foot, there is a square
window, or inlet to a small cavern, cut
out of the soft stone that runs westward;
the pyramid being built on the hard rock.
Down fifteen foot in this cavern, there is
an oblique way, cut in the same stone,
two foot and four inches in breadth, and
two foot and an half in height, descend-
ing 123 foot, where it is stopp'd up with
sand and stones. Those *Barbarians* say,
there was a passage there under ground,
to the empty head of an idol, that stood
not far from the pyramid. As much of

this idol as remains, which is from the *GEMELLI*
shoulders upwards, is twenty six foot in *1693.*
length to the top of the head, and from
the ear to the chin fifteen. All this that
has been said, will appear the more plain-
ly, by the following cut.

See Cut, Number III. Page. 9.

- A. The entrance into the pyramid, three foot
six inches big, and three foot three inches
wide.
- B. The descent seventy six foot long.
- C. The space at the end of the descent, ten
foot wide.
- D. The ascent seventy six foot long.
- E. The ascent six foot, four inches wide,
one hundred and sixty one foot long.
- F. The way between eight and ten foot long.
- G. The empty room.
- H. The room thirty two foot long, sixteen
wide, and nineteen big.
- I. The empty sepulcher, or tomb, seven foot
two inches long, three foot and an inch
broad, and three foot three inches deep.
- L. The way into the room where the tomb is,
eight or ten paces in length.
- M. The plain on the top of the pyramid,
sixteen foot, eight inches square.
- N. The perpendicular height being five
hundred and twenty foot.
- O. The length of each side, being six hundred
and eighty two foot.
- P. The first depth of the well being seventy
seven foot.
- Q. The second depth of the well being one
hundred and twenty three foot.

The other pyramid is equal in height
to that already describ'd, and 200 paces
distant from it westward; the square at
bottom is somewhat less, and it is hard
getting to the top of it, the stones are
so worn with Age; and the more because
there are no steps jetting out like the other.
Near these two pyramids is a third, a fourth
part less, seated on a rising rock; each of
its sides is twenty foot less than the first;
and tho' it is low, and smaller, it is all of
a white stone, and the breadth equal to
the height.

In the evening, all the good company
went away northwards to the pyramids
of the mummies, two hours travel from
the others, and at an equal distance from
Grand Caire, where we pass'd the night
pleasantly in tents.

Thursday 20th, whilst our comp nions *Other Py-*
were bargaining with the *Arabs* to shew us *ramids.*
the mummies, *F. Fulgentius* and I, went
into the first of the eleven pyramids there
are in that place, whereof he taking the
dimensions both within and without, we
found every side to be 643 foot. The en-
trance

GEMELLI
1693.

trance is on the north side, about the fourth part of its height, but not in the middle of the horizontal line; for there are 316 foot towards the east, and 327 towards the west. There is but one way three foot and a half wide, and four foot high, always descending for 267 foot; at the end of it is a room twenty seven foot and a half long, and eleven in breadth arched. At the end of this room is another way upon the level, three foot wide, and nine and a half long, which leads into another room twenty one foot long, and eleven broad, vaulted like the other, and very lofty, with a square window on the west-end, which is its utmost length, twenty four foot four inches from the floor. From this room we went into another way of a considerable breadth, as high as a man, upon the level, and thirteen foot two inches long; at the end whereof is a great room, arched after the same manner, twenty six foot and eight inches long, and twenty four foot one inch broad. The floor is of solid rock, with some points jetting out unequally, leaving some space in the middle.

There is no going up to another pyramid near this, because there are no steps in the stone outward, like those already describ'd, measuring the bottom of it, we found each side to be 631 foot long.

The other nine pyramids, excepting only one, which is equal to the last spoken of, are all little, or of a middle size, but differing in workmanship; and some of them are very beautiful compos'd of stones of a prodigious greatness, such as seem impossible to be placed there by art of man.

An Arabian Fable.

The Arabian historians and writers are of opinion, that these pyramids were erected by a king of Egypt, whose name was Saurid, 300 Years before the flood, and they intermix their account with so many fables, that they lose the little truth they deliver. They write that this king having had a vision, wherein it appear'd to him that the earth was turn'd upside down, that men lay stretch'd out with their faces on the earth, and that the stars fell from the firmament; he was much terrify'd, but kept it secret. After this he saw the stars fall from heaven in the shapes of birds, which serv'd as guides to men to conduct them into two great mountains, by which they were afterwards crush'd, and the stars darkened. Being frighted at this vision, he brought together 130 footslayers, or forcerers, from all parts of Europe, among whom was the famous Adimon, and declaring his dream to them, they guess'd and foretold, that there would happen a mighty deluge, which would endanger drowning the country of Egypt, and that

this would come to pass within some years. The king hearing this, order'd these pyramids to be built, and some conveyances under ground, to turn away the water of Nile into the province call'd *Alfeida*, in the mean while conveying all his wealth into the pyramids. When they were finish'd, he caus'd them to be cover'd with rick silk, and celebrated a great feast, all his subjects resorting to it. They tell many other ridiculous Fables, and among the rest the *Coptis* write a pleasant one in their books, viz. that under the great pyramid there is an inscription of this purport.

King Saurid has built the pyramids in time, &c. and has finish'd them in six years. Whoever comes after him, or believes himself as powerful as he, let him undertake to destroy them in six hundred years; tho' it is easier to pull down a structure than to erect it. He cover'd them with silk, let another try to cover them with moss.

When the Caliph *Almamoun* came into Egypt, he had a curiosity to see what was shut up in these pyramids; and tho' the thing was represented to him as impracticable, yet he with fire and vinegar, and iron tools, temper'd after a particular manner, overcame all difficulties. In short, the entrance that is in the great pyramid was his work, and he found in a mighty thick wall such a treasure, as made good the expence of opening it. They also found a square well, and doors on all four sides, which led into certain vaults, where there were dead bodies wrapp'd up in clothes. Towards the top of the pyramid, they fell upon a stone, in which was the statue of a man, with a gold plate on his breast set with jewels; a sword of a great value, and on his head a bright carbuncle, as big as an egg. Under the stone there were characters, which no man in the world could explain to him. They add, that after *Almamoun* open'd that way, many went in, whereof some dy'd, and this is the fabulous account the Arabian writers give.

The truth is, that these pyramids were built to serve for sepulchres or tombs, The true Origin of as *Strabo* and *Diodorus* affirm; and is made out by the tomb, to be seen in the biggest of them, whether it be of *Cbeopos*, as *Herodotus* writes, or of *Cbemis*, as *Diodorus* affirms. And tho' *Aristotle* says, the kings of Egypt undertook to raise these structures to exercise their tyranny; and *Pliny*, that they did it to shew their power, and to keep their subjects employ'd, that they might not think of revolting; nevertheless the principal end of them was to serve as sepulchres, and preserve the bodies for a long time; for they believing, that the souls would continue

continue so long with the bodies, as these continu'd entire, not to inform, but to keep them, as their first habitations; they therefore us'd all possible means to preserve them from corruption, by embalming and placing them in such famous structures. Nor have they been altogether disappointed in their design, since their bodies have been found whole, and found after lying two or three thousand years. Which mov'd *Plato*, who was thirteen years in *Egypt*, to conclude from it, that the soul was immortal.

Those good kings built the pyramids in that shape, that they might last the longer, because the tops do not press the bottom, nor the rain cannot damage them; tho' some say they made them so, to represent the figure of their gods. Yet it is believ'd, and with some reason, that the *Egyptians* from the top of them made their astronomical observations, and settled their year.

The steps of these pyramids being made of solid stone well polish'd, *Diodorus* and *Herodotus* are of opinion, they were cut in the mountains of *Arabia*, which are beyond the *Delta*. *Herodotus* further believes, that such vast stones were drawn up by wooden engines placed on the first step to raise them to the second. But *Diodorus* says, that such engines not being yet invented at that time, there was a mount of earth rais'd of such a height as was requisite, and the stones being drawn up to it, they were then let to run down towards the structure; which can never be swallow'd by any man that has not a *Greek* fancy.

We purposely forbore seeing the others that were further off, being above thirty, scatter'd about the desert, and were led by the *Arabs* to see the wells or sepulchers of the mummies, which those covetous barbarians keep conceal'd to get money of the *Franks*. In short, they would have twenty pieces of eight of us. Many are of opinion, that the mummies are found up in the deserts of *Arabia*, and that they are the bodies of people stifled and buried in the sand when the south winds blow; but they are much deceiv'd, for they are no other but the bodies of ancient *Egyptians* embalm'd. There are many of them found in caves under ground, near the ruins of the ancient *Mempis*, which is all hollow above and below. The way into those caverns is through square wells, so contriv'd that a man may go down putting his feet into holes on the opposite sides. These wells are cut in a soft white stone, found all about those parts, after going a fadom deep in sand; nor are they all of a

VOL. IV.

depth, but the shallowest of them is forty two foot. At the bottom of them are square openings, and a passage ten or fifteen foot long, which leads into square arch'd rooms, each side of them being fifteen or twenty foot in length. By each of them is a stone, on which the embalm'd bodies lie, some of them in chests or coffins of black mulberry-tree; others in tombs cut out in the same stone shap'd like a man with his arms stretch'd down by his sides. There is generally found under the tongue of these bodies a plate of gold, weighing about two pistoles; and therefore the *Arabs* deface all the mummies, which they afterwards sell to the *Mabometans*, and they to christians, tho' sometimes they find nothing. Near the heads of these mummies there are idols found, and the shapes of birds at their feet. On the walls there are hieroglyphicks cut, which perhaps serv'd for epitaphs; and besides there are in each room several sepulchers of children and others. Going down each of these wells, there are several rooms and caves, having a communication from one to another, without any other light but what comes from the mouth of the well.

Going down into one of these, we found a room twenty foot square, cut, as has been said before, out of the stone; about it were tombs of persons of quality, and on the floor of servants. There were in it but two ordinary mummies, which I believe had been lately put in by the *Arabs* to get money. They were swath'd like children, and laid in two chests of mulberry-tree very thick and solid, in which there were some little figures in chalk, kept by me to this day, with a skull embalm'd that fell to my share; being good as they say for wounds, and some distempers.

The *Egyptians* embalm'd these bodies, I mean those of persons of note, ripping up their bellies with a very sharp stone; then taking out their bowels, wash'd them with wine, and drawing them thorough an aromatick powder, fill'd them with pure myrrh, cassia, and other sweets, without frankincense, and putting them again into the body, clos'd it up. This done, they laid the body in niter, and left it there seventy days, after which they wash'd it again, and wrapp'd it close in linnen swaths, which they anointed on the outside with a sort of Gum, which they made use of instead of salt. These bodies they plac'd in chests or coffins of black mulberry-tree, coarsely hew'd to the shape of man or woman, as they are daily found in those caves.

H

Being

GIBELL
1693.

GEMELLI
1693.
A labyrinth.

Being come out of the well, the *Arabs* conducted us to see a labyrinth, where the ancients bury'd birds. We went down a narrow passage into a room, out of which we crept on our bellies through a hole to certain ways where a man may walk well enough upright. On both sides of them there are urns, in which the birds were bury'd; there is now nothing in them but a little dust. These ways are cut out of a nitrous stone, and run several miles, like a city under ground, which they call a labyrinth.

At night we return'd to *Grand Caire*, my share for the expence of this short journey amounting to four zecchines, that is thirty two shillings.

In the way between *Old Caire* and the *New*, I saw the *Turkish* soldiers exercise in a curious plain near the *Nile*. They were about 4000 horse, who ran two and two, dextrously striking a piece of palm-tree with their lances in their full career. *Hali*, then *Bassa* of *Caire*, came every *Wednesday* and *Saturday* to see them from a balcony in a great man's house; besides the great resort of *Begs* and princes, with their subjects and slaves well enough clad. I was told that the eighteen *Begs* that are at *Caire* have many lands, and 500000 crowns revenue each of them, which they spend in supporting the *Mabometan* pride and arrogance with magnificence, keeping hundreds of horses in their stables.

CHAP. VII.

The Author continues his Travels to Jerusalem.

Monsieur *Benovist Maillet* having invited me to be at the feast of *St. Louis*, with all the *French* merchants, would not have me depart upon any account; but I having resolv'd to leave *Grand Caire*, return'd thanks for all the favours so generously bestow'd on me during my stay there, and prepared to set forwards. Accordingly on *Friday* the 21st I went to *Bulac*, which is but a mile distant. By the way I met the funeral of a *Turk* of some note, with a great turbant on his coffin. Priests of the *Mosque* went before singing, and his women follow'd weeping on asses. Many of these ceremonies ought to be perform'd in a day to satisfy the desires of the *Mabometans*; for they say, that it being dear living in company of former times, when they might buy thirty eggs, or two pigeons, or a fowl for a penny, and therefore now a plague were necessary, that the survivors might live the better.

I embark'd on the *Nile* before noon for *Damiata*, and running down the stream without sails, got into the arm of the river that passes by that city. To say the truth, I should not have made it my business to go to this place, had not the ships bound for *Mecca* been gone three weeks before from the port of *Sues*; for I should have embark'd aboard them, to take a short cut to the *East-Indies*, as the consul had advis'd me, whereas the way I was now going was very tedious.

Saturday the 22^d, we continu'd our way with our oars, because the boat was small. This arm of the river towards

Damiata is not so full of water as that of *Roseto*; which is the reason it often happens that the boats, by reason of the shallowness, are stop'd for several months near the sea, without being able to get out. There are dwellings enough along the banks of this branch of the river, but not so large as those on the way to *Roseto*.

Sunday the 23^d we arriv'd at *Damiata*, within an hour after day, having run 103 miles; yet we stay'd in the boat till the custom-house was open'd, and were clear'd without that strictness used in *Italy*. I took up my lodging in the house of a *Maronite*, procurator to the religious house at *Caire*, to whom I was recommended by the father president, because at *Damiata* there were no religious men, nor consul, or *French* merchants.

Damiata is seated on the right side of *Damiata* the *Nile*, in 30 degrees of latitude. It is ill-inhabited by reason of the unwholsomness of the air, and is not above half a mile in length, and as much in breadth; yet because of the convenience of the port, and shipping off, it is much resorted to, and has a vast trade.

Not very far from it eastward, on the top of mount *Casius*, is the tomb of *Pompey* repair'd and beautify'd by the emperor *Adrian*.

I endeavour'd immediately to inform my self, whether there was any convenience of vessels bound for *Jaffa*, or *Joppe*, and being told there was one ready at the mouth of the river, I would not slip the opportunity, laying in at once all the necessary provision for the voyage, and particularly of excellent dry'd

dry'd rows of mullets which are there extraordinary cheap. As I pass'd by the custom-house, the *Janizary* demanded a zecchine for my permission to embark; but I telling him I was a *Frenchman*, he was forced to be satisfied with the third part of a crown. This happened to me because there was no consul, and the *Jewish* interpreter would not speak one word to my advantage, for fear of being bastinado'd; and when I would have had him go four miles down with me to the vessel, to be my interpreter with the master, he refus'd it, letting me go alone at the discretion of the watermen whom I did not understand. These presented me to the customer of *Hiba* on the right side of the river, who took no duty of me, because I carry'd nothing but provisions. But a *Black* of that place, not willing to let slip so fair an opportunity of cheating, seeing me alone, and without any body to stand by me, stop'd me, demanding a zecchine for my liberty to pass, and tho' I answer'd it was not his due, and that I would write to the consul at *Caire*, to complain to the *Bassa*; yet he continuing positive in his demands, bid me pay first, and then write at pleasure; nor did he desist, tho' I offer'd to go back to do as I said. Therefore not to let slip the opportunity, which once lost I must have stay'd some months for another, (as happen'd to a religious man, the mouth of the harbour being choak'd up with sand) I turn'd again and gave the *Black* two *Dutch* crowns.

The watermen would also have play'd their knavish part; for tho' we had before agreed what I was to give them, yet now they demanded more, before they would take me into the boat; holding me in suspense when I was most eager to be gone, till they had got their will; after which they carried me abroad the great bark which was then taking in that part of her loading of rice, salt, and beans, which she had left behind, to be able to get over the flats of the river. Being come thither, the *Rais* or master began to play his part, asking twice as much for my passage as was usual to pay, which if I would not pay, I might return to *Damietta*, which he knew was not in my power. After much contending, I being sometimes silent because I did not understand, and other whiles expressing my self by signs, I comply'd with his will, to avoid protracting the dispute to no purpose. Truly a christian that falls into the hands of these barbarians, is much to be pity'd, for they have not the least spark

of modesty or compassion. They are never satisfy'd till they have empty'd a man's purse, giving one another notice of the nature of the prize; for which reason in these countries, but particularly in *Europe*, it is absolutely necessary to be stock'd with patience as well as with money, which I endeavour'd to furnish my self with in order to visit the holy land.

Setting out about evening that same *Sunday* the 23d, we sail'd all night with a fair wind, and coasting along a sandy desert country on *Monday* the 24th, with the same prosperous gale, arriv'd at *Jaffa* an hour after night-fall, having run 150 miles. I had no other disturbance by the way, but the continual cries of those barbarians, who are but little skill'd in the art of navigation; for tho' they have learn'd it of the christians, and therefore use the same sea-terms, yet they are not so expert at it.

Having rode at anchor all night, we landed with much difficulty on *Tuesday* the 25th, after paying the master of the vessel a zecchine and a half for mine and my man's passage. I took my lodging in a *Jew's* house who was an interpreter, as all those do that go to the holy land, there being neither friars nor *French* in that little place.

Jaffa, *Joppa*, *Zaffa*, or *Artusa*, *Jaffa* city as others call it, is thought to have been built by *Japhet*, *Noah's* son, before the flood. It is seated in the latitude of 32 degrees, and is the port all pilgrims resort to, who go to visit the holy places at *Jerusalem*. Here it was the materials for the building of *Solomon's* temple, brought from mount *Libanus*, were landed; and here the ancients feign that *Andromeda* was expos'd to be devour'd by the sea-monster. Here it was *St. Peter* rais'd *Tabitba* to life again, and in its neighbourhood he saw the sheet let down from heaven with all sorts of creatures in it, by which God gave him to understand, that he ought not to scruple admitting the *Gentiles* to the faith and baptizing them. Whilst I was here expecting the caravan of camels, which comes from *Rama*, there rose such a violent storm on the sea, that no vessel could come in for several days, and those that were in the unsafe harbour were all lost, particularly ours which took in its loading in the day, and on *Wednesday* night, the seamen going all to sleep, without taking care first to secure her, she sunk with all the goods, only those sleepy beasts being sav'd by swimming ashore.

GEMELLI
1693.

The camel-driver came betimes on Wednesday the 26th, to awake me, in order to let out with a small caravan of thirty camels, but I chose to ride upon an ass. Having travel'd ten miles thorough a plain country, part untill'd and part till'd and planted with olive-trees, we came to *Rama* at break of day, where I was receiv'd by the superior of the house of the capuchins of *Jerusalem*, who presently gave an account of my arrival to the father guardian of *Jerusalem*, that with his leave I might go to that city.

Rama
town.

Rama, *Ramma*, *Ramle*, or *Ramola*, memorable for the sepulcher of *Rachel*, and slaughter of her innocent children, is a little open town, inhabited by *Arabs*, *Jews*, and *Christians*. The country about it is fruitful, producing besides wheat, good fruit, as grapes, figs, melons, and other sorts. It was, as some believe, the country of *St. Joseph* of *Arimathea*, a secret disciple of *Jesus Christ*.

Thursday the 27th, I went with some fathers three miles off (I always mean *Italian miles*) to visit the place call'd *Lida*, where *St. George* was beheaded, being a church serv'd by *Greeks*. As I return'd I was shew'd a *Mosque*, which had been a christian church built by *St. Helena*, where under the high altar forty martyrs are bury'd, brought thither by her out of *Armenia*, but the *Arabs* do not allow us to go in. The fathers also shew'd me, near the church of their *Hospitalium*, the house of *Nicodemus*, who took our saviour down from the cross.

Friday the 28th, leave being come from the father guardian of *Jerusalem*, I paid the customer for *Casparre*, or tribute, fourteen *Albulchels*, worth so many ducats of *Naples*; and he according to his duty furnishing horses, I set out on Saturday the 29th with some fathers, and the *Cadi* who was returning to *Jerusalem*. We travell'd twelve miles over the plain, and eighteen more over

mountains planted with olive-trees; passing thorough the village of the good thief, so call'd because he was born there, consisting of about 300 houses, and seated on a mountain, with a ruin'd castle. About half way we saw *Jeremy's* village, where they shew'd me a ruin'd monastery of *Franciscans*, who had abandoned it, because some of them had been kill'd by the *Arabs*. Not far from it is seen the village where *St. John Baptist* was born. Passing over the bridge we came into the valley of *Elab*, famous in holy writ for the combat between *David* and the giant *Goliath*, whilst *Saul's* army look'd on from the mountain next *Jerusalem*; and that of the *Philistines* towards *Rama*. Hereabouts I also saw the noted cattle of *Emaus* on a hill, where the building is still preserv'd standing (if it be the same) in which the two disciples, after the resurrection knew our saviour in his breaking of bread.

Being come to *Jerusalem* about the evening, the fathers directed me to go in at the gate of *Damascus*, that the *Turks* might see me and receive the tribute, because I had not been at *Jerusalem* before. I went thither accordingly with a servant, and finding no body at the gate, proceeded directly to the monastery of *St. Saviour*, without any stop; but the guardian fearing some mishap, persuaded me to return and send some christian to give notice to the *Turks*, that they might come to the place appointed to enter my name, as they did. Then I went to the monastery, where the guardian receiv'd me very courteously. The structure of this monastery is not large, nor lofty, but convenient. There are five small altars in the little church; three at the upper-end, and two against the pillars that support the arch. The floor is laid with good black and white marble, but the main point is, that the church is decently and devoutly served by fifty fathers.

CHAP. VIII.

The Description of Jerusalem, and the Holy Places.

Jerusalem
city.

Jerusalem, formerly call'd *Salem*, *Solima*, and *Capitolina*, by the *Turks* *Curumbarech*, and *Leucost*, and by the *Natives* *Cbutz*, and *Godtz*, is in 31 degrees of latitude. It was built by *Melchisedec*, between two mountains, *Calvary* on the west, and *Olivet* on the east, between which and the city runs the brook *Cedron*, that loses it self in the dead sea. The remains of so many no-

ble structures as are to be seen about this city, are a sufficient testimony of its ancient splendor, tho' it be now quite alter'd from what it was, through the vicissitude of fortune, and terrible havoc made in it at several times by sundry nations. What cruelties were not executed in it by *Antiochus*, the son of *Seleucus*, and the other *Antiochus* his son? who spar'd neither the walls, nor *Solomon's*

trees; paf-

mon's temple. *Simon Maccabeus* having fubdu'd and reftor'd the regal feat to it, 611 years after its firft erection, *Pompey the Great* came eighty one years after, took it, and left only the name and fhadow of its magnificence. The tyrant *Herod*, having taken it after a long fieve from *Antiochus*, in whom after 106 years the race of the *Affamoneans* ended, cruelly abandon'd it to fire and fword. Nor was *Agrippa* any better, being the laft of his flock, who dy'd wickedly as he had liv'd, about the time of *Julius Cæfar*. In him ended the regal title among the *Jews*, but not the calamities of *Jerufalem*, fince not only the city was afterwards deftroy'd, but its famous temple wholly overthrow'n by the emperor *Titus*, who with famine and fword flew a million and an hundred thoufand citizens about the year of our lord 71. He that would have a further account of its miferies, may find enough of it in both facred and prophane hiftories, that being a fubject from my purpofe.

The prefent *Jerufalem* is not the fame it was formerly, for its compafs is lefs than three miles, and the inhabitants under 20000. It is feated at the foot of the aforementioned mountains, high on the weft, and low on the eaft. It has fix gates, which are thole of *Bethlem*, mount *Sion*, *Sterquilinia*, or the dunghil-gate, *St. Stephen's*, *Herod's*, and of *Damafcus*; befides the golden gate, which is shut up. The walls are not ftrong, nor have they any bafions, but fmall towers, without cannon, or a ditch, except on the weft fide, where it is not very deep. Clofe by is the caftle built by the *Pifans*, on the ruins of *David's* tower, which reaches over the walls of the city. There is but a fmall garrifon in it, and fome pieces of cannon difmounted, which they dream to have been *Godfrey of Bolloign's*. The old caftle, when *David* had fix'd his court in it, after expelling the *Jebufites*, was by him call'd *Sion*.

In the city they drink no other water but what they keep in cifterns, which fcours the belly like a purge; for that of the *Fons fignatus* runs only to the temple of *Solomon*, and the *Cadi's* Palace, and for many years paff water is as dear as bread. The city and country about is govern'd by a *Sangiack*, fubordinate to the *Baffa* of *Damafcus*.

The fathers had been shut up feven months by reafon of the plague, which had rag'd all about them; and the chriftians being to be admitted to the bleffed facrament, within a few days, the time was anticipated for my fake. Hereupon

VOL. IV.

all the faithful went on Sunday the 30th to hear mafs at the father's church, where I obferv'd that the women there do not cover their faces, with a mask, like the *Egyptians*, and all their body is wrap'd in a white fheet, wearing on their head a *Tadema*, that is, a cap with feveral points. An infant was baptiz'd, and the father chofe me for godfather.

About Evening I went to vifit the holy places, attended by a father appointed for that purpofe, and the interpreter of the monaftery. Firft we went to mount *Calvary*, and afcending many Mount fteps, entred into a fmall church, fup- *Calvary*. pos'd by the *Greeks* to be the place where *Abraham*, by order from God, would have facrific'd his fon *Ifaac*. A few fteps further is a dark vault, formerly *St. Peter's* prifon, and the *Turks* ftill make ufe of it as fuch.

In another *Greek* church, which was once the houfe of *Zebedee*, they fhew the place, where *St. John Evangelift*, and *St. James's* fons were born; and behind it the apartments that belong'd to the knights of the holy fepulcher. Then we pafs'd through a midling arch, which they call the iron gate, through which *St. Peter*, when deliver'd out of prifon, went out of the city with the angel. Not far from thence we came into *St. Mark's* houfe, where they fay *St. Peter*, when the angel left him, withdrew to meet the reft of the apoftles; who are faid to have there begun to baptize in a ftone-font, ftill to be feen: at prefent this place is a little church of *Sirians*. At a fmall diftance is the houfe where *St. Thomas* liv'd, which now is a *Mofque*, and the houfes of the three *Marks*, of *Cleopbas*, of *James*, and of *Salome*, into which there is no entering, becaufe they are inhabited by *Turkifh* women. Further on, entering into a fpacious court, I faw the church of *St. James*, with a good monaftery inhabited by fifty *Armenian* fathers. There are two great gates to the Church, which is fupported by four large pillars, making a fquare, and three ifles, laid with good marble. It was built by the *Spanifh* nation, in honour of *St. James*, who was beheaded in that place; and the particular fpot on which he fuffer'd martyrdom is feen in a fmall arch, in the third chappel on the left fide of the gate. In the firft on the fame fide, is worfhip'd the body of *St. Macarius*, *Bifhop of Jerufalem*. The *Armenian* patriarchs feat it on the right hand of the altar. In a mile of the womens little church, on the left of the great one, there are three fpeckled ftones, on the biggeft whereof, brought from

mount *Sinai*, *Moses* broke the tables of the law, when the people would not keep it; the other on the right was taken out of the river *Jordan*, near the place where *Christ* was baptiz'd by *St. John*; the third on the left, was on mount *Thabor*, in the very place where our Saviour was transfigur'd. All the pilgrims that come to visit the holy places, are well treated by these *Greek* fathers, who find them good lodgings, and stables for their horses.

Houſe  
where the  
blessed vir-  
gin died.

Going out of the city at king *David's*, or mount *Sion* gate, we saw the burying place of all our catholic christians, and close by the remainder of an old wall of the house in which the blessed virgin dy'd, and *St. John* laid mafs sometimes.

Church of  
the apo-  
stles made  
a Mosque.

Then paying a zecchine, I went in to see the church of the holy apostles, which now serves for a *Mosque*. It has but one isle, but large after the fashion of the country, with only two pillars. At the west end is the tower or steeple, whence the *Santone* calls the people to prayers. A few steps lead down to the under-church, which is low, but longer than the upper. In this place our Saviour kept the passover with his disciples, instituting the most holy sacrament of the Eucharist; appear'd to them after his resurrection, and consecrated *St. James* bishop of *Jerusalem*. Here the holy ghost came down upon the apostles in fiery tongues. Hither they say *St. Peter* came when he was by the angel deliver'd out of prison; *St. Matthias* was elected into the number of the apostles, instead of *Judas*; *St. Stephen* was made deacon with his six companions; the apostles hid themselves during the persecution of king *Agrippa*; and they held the counsel where it was decreed that circumcision was not necessary. Here the pillar was kept at which our Saviour was scourg'd. Here *St. Peter* said his first mafs on the feast of *Pentecost*, as did *St. John*. Here is to be seen King *David's* sepulcher sixteen spans long, made by *Solomon*. Some authors also affirm that *St. Stephen's* tomb is here. Near the *Cenaculum*, or great room, they shew the place where king *Manasse* was bury'd. They will have it, that the lamb our Saviour eat with his disciples at the last supper was roasted under the stairs that come down to this place; which as it may be likely, is a matter of no moment. Without the church is the cistern, where the apostles parted in order to go preach the faith throughout the world. This church was built by *St. Helen*, as were all the others

of the holy places, and afterwards repair'd by *Sancta*, Queen of *Naples* and *Sicily*.

On mount *Sion*, which is close by, Mount and where the ruins of *David's* palace *Sion* are still to be seen, is another small but neat church, kept by the *Armenians*, in the place where *Caipbas* the high priest's house stood, in the porch whereof was the fire at which *St. Peter* was warming himself, when he deny'd *Christ* three times; and therefore they shew in the wall of the same church, the place where the cock crow'd, the pillar not being there at present. They also shew on the left of the altar, a vault in which *Christ* was confin'd and scourg'd the first time. On the altar is fix'd, and takes up a great part of it, the stone of the holy sepulcher, which the *Armenians* took from that church, during the war of *Candia*, when it was given then in custody, the catholic fathers being cast into prison. In this same place *Judas* sold *Christ* for thirty pieces of money, and here he restor'd them to go hang himself in despair.

In a cross-way without the city, they shew'd me where the blessed virgin wrought the first miracle after her death, as the apostles were carrying her body to bury it in the valley of *Josaphet*.

Returning into the city by the same gate, I took notice, behind the garden of the monastery of *St. James*, of the house of *Annas*, where *Christ* was bound to an olive-tree, the branches whereof are still in the porch of the church built there, and held in great veneration by the *Armenians* that officiate there. On the left hand within the same church, they shew the door, now made up, at which our Saviour went out, after he had been examin'd, concerning his doctrine and disciples, and struck over the face.

We went out at again at the *Porta Sierquilinia*, or dunghill-gate, so call'd because of the filth hard by it, thorough which our Saviour was led bound to *Annas*. An hundred paces from it I saw a grot or cave, now ruin'd, where *St. Peter* bitterly bewail'd his offence in denying his master.

Entering the city again, we went down where the towards the lower part, and pass'd thro- b. virgin rough a garden under the arches of was pre- the temple, where the virgin *Mary* was sented. presented by her parents. It was once a church call'd of the *Presentation*, with a monastery of nuns; but is now a *Mosque*, where the *Turks* keep their young daughters to be educated under the tuition of certain matrons, till they are

are marriageable. The structure is magnificent, being built of very large smooth stones, the least of them being four spans square; and by what could be discern'd going under it with a light, the church is large with seven out-lets, compos'd of the six orders, each of which has three pillars.

Going along the Bazar, or market, we came to the gate call'd *Speciosa*, through which Christ entred when he went to the temple, and disputed with the doctors. The blessed virgin entred at the same when she came to present the child *Jesus* in the hands of holy *Simeon*, and there it was *St. Peter* heal'd the *Paralytic*. This leads to long and lofty arches that run to the temple of *Solomon*, absolutely forbid being seen by christians.

Monday the last day of *August*, I went to see the hospital of *St. Helen*, which is really a great structure. It was built to lodge the pilgrims that visited the holy places. For which purpose there are several long galleries, and there still remain seven great cauldrons, in which they dress'd meat for the poor. The *Turks* now do the same, giving alms some days even to christians.

Bethesda  
Pool.

Going on near the gate of *Cedron*, now call'd *St. Stephen's*, I was shewn the *Piscina Probatica*, or Pool of *Bethesda*, where our saviour heal'd the man that had lain thirty eight years under his distemper. It is a hundred paces long, sixty in breadth, and forty in depth, all made of good stone. In the upper street is the house of the *Pharisee*, where *St. Mary Magdalen* pour'd forth her precious ointment on the feet of our Lord, washing them with her tears, and wiping them with her hair; by which means she obtain'd pardon of her sins. In memory whereof there is adjoining to it a devout chappel of the invocation of the same saint; tho' the house is inhabited by *Turks*. Near the same gate of *St. Stephen*, adjoining to the wall of the city, is the house of *St. Anne*, where the blessed virgin was born, with a good church, but not well adorn'd, as being in the power of *Mabometans*. Without the gate, along a street that goes down I was shewn the place where *St. Stephen* was ston'd, and the cistern cut out of the solid hard rock into which his body was cast.

A Church  
of several  
Nations.

Going further, beyond *Cedron* I went into the church where the blessed virgin was bury'd. Descending forty seven steps, I saw on the right, the altars, where *St. Jacobim*, and *St. Anne* were bury'd, and on the left about half way the stairs, where *St. Joseph* was interr'd; on the floor of the church, near the

well, stands the altar on which the *Coptic* priests say mass; on the right is that of the *Jacobites*; on the left that of the *Gregorians*; the high altar without them belongs to the *Armenians*; on the right that of the *Sirians*, and behind that of the *Grecians*. Within another very little chappel, to which there are two small doors, is the altar where the blessed virgin was bury'd, which is serv'd by our catholics; there I heard mass, celebrated by two fathers of *St. Saviours*. Without the church on the right is the grotto, or cave, where our saviour sweated blood. It was enlarg'd and made more lightsome, that it might contain a greater number of christians; and because (besides the inconveniency) it seem'd less decent to go into it from the garden of *Getsemani*, through that narrow hole our saviour went in at, the door was made which serves now, the other being shut up out of respect. There still remain in this garden of *Getsemani* eight olive trees, which as they say, are sprung from those that were there when our saviour pray'd; the ninth having been burnt by the *Turks*. There is also the place where the blessed virgin was, whilst *St. Stephen* was ston'd; as also where she left her girdle to *St. Thomas*. In other respects it is no fruitful place, being for the most part bare rock; but there are excellent figs, whereof I eat as many as I could, the fathers inviting me so to do, because the place belongs to them, through the charity of an *English* Man, who bought it of a *Mabometan* to give it to them.

Returning to the city, I went along the dolorous street (which begins at *Pilate's* house, and ends at mount *Calvary*) the same way our saviour pass'd with the cross on his back. First we went into *Pilate's* house (near which is a black arch'd room, where our Lord was scourg'd the second time) and went up other stairs than those our saviour was carry'd up, which were long since remov'd to *Scala Santa* at *Rome*. In the first floor is a lightsome arch'd room, which was the *Pretorium*, or court, where *Pilate* gave sentence of death against our saviour; here being a sort of *Divan*, or place lifted up one step: Under it is a dark room, now made a stable, in which our Lord was crown'd with thorns. Going up to the top of the house, I took a full view of *Solomon's* temple.

This temple was built by that king, *Solomon's* with an incredible charge, in the space of eight years, laying out on it, not only his own excessive wealth, but also the rich spoils his father had taken from

GEMELLI  
1603.

**GEMELLI** from his enemies. I will forbear speaking of its glory and magnificence, because holy writ speaks of it at large, and shall only by the by hint at the many calamities it fell under at several times. First, *Sefac*, king of *Egypt*, rob'd it of all its ornaments, being afterwards restor'd by king *Jofias*; in the eighteenth year of his reign, it was again utterly subverted by the impiety of king *Zedechiab*; who went not unpunish'd for his wickedness, being taken prisoner by *Nebucadnezzar*, and his eyes put out, after he had seen his wretched sons cut in pieces. Being again rebuilt, *Antiochus* the son of *Seleucus* plunder'd, and profan'd it; and being still restor'd, tho' not to its first splendor, it was destroy'd by the emperor *Titus*, and the whole city subverted in the year of Christ seventy one. At last *Adrian* the emperor, on its ruins, erected a temple to *Jupiter*, after he had subdu'd the rebellious country of *Jury*; not to mention other vicissitudes, this wonderful structure has run through since those times, so that it is now quite another thing than what it was.

What I could observe from the afore-said place, is a large square a mile about, with twelve gates. About it there are many chapels, and dwellings of priests, as also the *Cadi's* palace, where our patriarch once liv'd, and several trees in the middle. Thence they go into the second place which is round, and less than a quarter of a mile in compass, enclos'd with walls, with several stately gates and marble pillars. In the midst of this place is *Solomon's* temple, in the form of an octagon, with four gates diametrically opposite to one another, built on the out-side of tile, or hard brick, till where the cupola begins, which is of lead, which closes it beautifully. Adjoining to the temple on the east-side, is an open gallery, supported by small pillars, where they say, there is a stone brought from mount *Olivet*, on which our saviour stood when he ascended into heaven. I could discover nothing else at that distance, for the *Turks* put to death all christians that go into it, or oblige them to renounce their faith.

*Herod's Palace.*

Opposite to *Pilat's*, is *Herod's* house, tho' all late built, and little of antiquity to be seen in it; yet we went in at a little door, the first being shut, near which is a small arch, where our redeemer stood, before he was carry'd into *Herod's* presence; and going up, we saw the court of justice, like a little hall, where he was examin'd by *Herod*, and not answering clad in a white garment, and sent back to *Pilat*.

In the square is the arch that supported the balcony, or open gallery, where *Pilat* shew'd him to the people, saying, *Behold the Man*; and there is no doubt of its being the same, because the stones worn by time testify its antiquity.

Further on is the door, through which the blessed virgin passed to meet our saviour, not being able to come the street-way because of the throng; and seeing him fall down under the weight of the cross, she fainted; for which reason, the church that now stands in that place is call'd of the *Swooning*. There they say, *Simon Cyreneus* help'd to carry the cross. A few paces further, is the little house of *Lazarus*, and further still, that of *Dives*, built on arches, under which, there is a thoroughfare. In this the governor lives, in *Pilat's* the *Bassa*, and in *Herod's* one

*Mustapha* a *Turk*. In the same street of sorrow, is the little house of *St. Veronica*, who, as the ancient tradition affirms, brought a cloth to wipe our saviour's face, and the picture of it, remain'd imprinted on it. Not far from it is the justice gate, through which our saviour went out, with the cross on his back, now shut up; where there is a marble pillar, on which the sentence of death was affix'd according to custom. At a little distance is a small tower of hard stone, which deserves not the name of a fort, call'd the tower *Antoniana*, where *Saladine* fortify'd himself, when he took the holy city; and hard by are the ruins of the palace of *Godfrey of Bolloign*, king of *Jerusalem*.

That same Monday in the evening, the father *Guardian* perform'd the ceremony of washing mine, and six other religious pilgrims feet, with so much solemnity, that it lasted two hours. This good religious man, whose name is *F. John Baptist d'Antine*, daily exercises himself in virtuous acts of christian humility, even to washing the dishes of the refectory. I am much oblig'd to his goodness, because he continually attended me in some indisposition I had, and treated me affectionately with sweetmeats of the country.

Going out on Tuesday the first of September, betimes in the morning at *Beit-lehem* gate, and ascending to mount *Sion*, the way the apostles carry'd the blessed virgin to her tomb, as has been said before: I was shewn opposite to it, the valley call'd of *Ill-Connfel*, because there *Caiphas* and his counsellors resolv'd our saviour should die; which has also given the name to the little village, inhabited by *Arabs*, on the top of the mountain,

mountain, which over-looks the valley. Going over a-foot to the further end of the said valley, we found several tombs of Jews, and at the foot of the mountain, the holy field, bought with the thirty pieces of money Christ was sold for, to bury pilgrims. This sepulcher is thirty foot square, cut out of the rock. In the upper part of it, there are some vent-holes, through which the Armenians let down their dead bodies. Below that is the cave, where eight of the apostles hid themselves, when Christ was crucified; and below that again, is a deep well, where Nebemiah the high priest hid the holy fire, when the Jews were carry'd captives to Babylon. A little higher is the place, where the prophet Isaiah was saw'd in the middle; and a white mulberry tree instead of the cedar, that open'd and hid him in its trunk. Close by the said mulberry tree, is the pool of Siloe, where our Lord gave sight to the blind man. It is all artificial, forty spans long, sixteen in breadth, and twenty in depth, with water in it, which is not very good, and runs out to the fountain, where they say, our blessed lady wash'd the linnen of her infant Jesus; there are above twenty steps down to the water.

Proceeding along the valley of Josaphat, they shew'd me on the right, the country house of Siloe, where Solomon kept his concubines, and on the top of the hill, the palace of the daughter of Pharaoh king of Egypt; which for that reason, is now call'd the mountain of scandal. At the end of the same valley, and at the foot of another mountain, which is the very same on which Judas hang'd himself on one of Pharaoh's fig-trees, are the sepulchers of the Jews, who on that score, pay the Turks a Zecchine a day, whether they bury or not. Further on, is the sepulcher of Zachariab, the son of Barachias, who was slain between the temple and the altar, all of one piece, cut out of the rock: close by which is the cave in which St. James hid himself, when our saviour was crucify'd, swearing, *He would not eat, till he saw him risen from the Dead*; for which reason, our saviour appear'd to him the third day, bringing him something to eat. A few paces further, is the sepulcher of Abjalom, all of a piece as far as the first cornish, like St. James's cave, and it being empty, I went in as far as the cupola. Behind this was made such another sepulcher, cut out of the hard rock to bury king Josaphat. In the midst of the brook Cedron, which at present is quite dry, on a stone, is to be seen the print of our saviour's foot when he fell there, as he was led bound.

Going up again, I went to see the two <sup>GEMELLI 1693.</sup> arches of the golden gate, through which our saviour entred in triumph on Palm Sunday, but it is now shut, 's was said before. After evenfong, the holy sepulcher being open'd, I went in to visit all the holy places belonging to it.

Having heard mass betimes on Sun- <sup>Bethania.</sup> day morning, being the 2d of September, I mounted one of the father procurator general's horses, and set out for Bethania, attended by the interpreter and fathers. Having travell'd a mile and a half on the mountain, I was shewn the place where Christ coming from the river Jordan, curs'd the fig-tree, of which no memory remains. Beyond that on the right hand is a great wall, which they say, is an outlet of the house of Simon the leper, who invited our Saviour. Below that, and above the city Bethania, is the castle of Lazarus, whereof a wall is still standing fourteen spans thick, and as firm as a rock. Under it, entering at a narrow door, there is a descent of twenty eight steps to his sepulcher, cut like the rest out of the hard rock. First, there is a little room, out of which is a passage through a narrow hole, that was shut up with a stone to another, where there is only a small altar, to say mass upon the very tomb, whence he was called by our Saviour. Above that, is seen the foundation of St. Mary Magdalen's house, and of Martha's, with a cistern cut in the stone, whose water I found was not good to drink.

Not far off, they shew a sharp stone, on which they say, our Saviour fate, whilst he was talking to Martha about the death of Lazarus; and going on the way of mount Olivet on the right, in the place call'd Bettafen, they shew a hillock, where Christ mounted upon the ass, to enter Jerusalem upon a Palm Sunday.

Above that is mount Olivet, whence Mount Christ ascended into heaven, leaving Olivet. two prints of his feet behind, one of which was carry'd into Solomon's temple, and the other remains there upon a hard pebble stone. This place is shut up within a round chappel, the key whereof is kept by a Mebometan Santone. Next, in a great court, enclosed with a wall, I saw the stone on which the apostles fate, call'd Viri Galilei, or men of Galilee. Descending from the mount on the left hand, a pillar lies on the ground, near which, the angel appear'd to the blessed virgin, who was visiting the places of the passion, giving her a branch of palm tree, as a preface of her death; and on the same side is

K the

GENELLI the cave, where St. *Pelagia* did pennance  
1693. and dy'd.

Opposite to it, is the place, where they say, Christ compos'd the lord's prayer; at a small distance on the right, where he wept on the city of *Jerusalem* (now there is a house) and not far from it he preach'd to the apostles upon the day of judgment. Lower still are the sepulchers of the Prophets, that open'd at our Saviour's death; and twelve caves cut in the rock, where the report is, that the apostles compos'd the creed.

There being no going to the river *Jordan* at any time but *Easter*, when there are many pilgrims, and a good guard of soldiers for fear of the *Arabs*; I was satisfy'd with beholding it from the top of mount *Olivet*, as also the dead sea, where the five cities of *Sodom*, *Gomorrah*, &c. were destroy'd; and which they told me was 160 miles long, and sixteen in breadth, and its water very stinking. They also shew'd me at a distance another mountain, called of the *Quarentine*, where Christ fasted forty days.

After vespers, going out at the gate of *Damascus*, a *Dervis* came to open us their *Mosque*, where there is a vast cave cut in the solid rock, 150 paces about, and thirty in height. In the midst of it, is a large plain place, where they say, the prophet *Jeremiah* walk'd, when he compos'd his *Lamentations*; and up high on the right hand coming in, the stone on which he lay. Half a mile further, are the tombs of three kings cut out of the rock. The first entrance is thorough a narrow hole, crawling on all fours, into a handsome room fifteen foot square, in which there are little doors. The first on the left, leads to a room little less than the other, about which, there are six other small doors, being the passage to as many tombs. The second door is the way to such another room, containing seven sepulchres; but there are two or three tombs in every one, and particularly one of marble uncover'd, where they said, a king had been bury'd. The third also, is a thoroughfare to a room, that has nine little doors to other Sepulchers, with two or three burying places on a side. Entering at one of these doors artificially made of marble, and which only is now standing, of many more there were, we saw another king's tomb open, which had for its device a bow, and a bottle carv'd at the head of it. The fourth door in the first room gives passage, tho' difficult, to the third royal sepulcher, whose marble tomb is broken. These sepul-

chers are certainly the most rare and wonderful work to be seen at *Jerusalem*; and the more because all the necessaries for shutting and opening are made of the same stone.

Going thence towards the wall of the city, is *Jeremiah's* dungeon, which is a double arch'd pool, in which they say, that prophet stood up to the neck in water. All these places are seen at the expence of a few *Medines*, or sixpences, because the miserable condition of those *Arabs* makes them be satisfy'd with a little.

*Thursday* the third, the father procurator lent me his horse to go to *Betlehem*, ordering two interpreters and three fathers to bear me company. We could not get out of the city betimes, because the *Turks* kept the gates shut, by reason of the prayers, the grand seignior had order'd to be said every *Thursday*, for the good success of the war; the which being ended, and the gates opened, we went on, seeing near the city *Bathsheba's* bath, enclos'd with high walls, one hundred paces in length, forty in breadth, and thirty in depth, so seated, that it might be overlook'd from king *David's* palace, which stood on the side of the hill, as has been said before.

Two miles from *Jerusalem*, on the left, is a fig-tree, in the very place where the oak was planted, under which the virgin *Mary* rested with the infant *Jesus*, when she came to present him in the temple. Opposite to it, but a mile from the road, on the top of the hill, is a tower, where they say, St. *Simeon* dy'd. Further on, in the midst of the way, is a cistern, near which, the three wise men saw the star again, and on the right of the road, a few paces from it, there appear two walls standing, which, as they say, belong to the house where the prophet *Habakkuk* was, when the angel carry'd him to *Babylon*, to give food to *Daniel* in the lion's den. At a small distance is the place where *Elias* the prophet rested, when he fled the persecution of *Jezabel*; a plain proof whereof, is the print of his limbs left in the hard rock on the right hand of the road. The *Greeks* in memory hereof, have built a monastery close by on the left, under the same title, where they celebrate the divine office.

Further on the right, there is still standing part of the wall of the tower where *Jacob* rested, when he came out of *Mejopotomia*; and the remains of the sepulcher of his wife *Rachel*, who dy'd there, are half a mile further.

Before

Before we came into *Betlehem*, we took notice of the cistern, of whose water, *David* having a desire to drink, yet afterwards refus'd it, because his commanders pass'd through the midst of the enemies army that lay about it, with great danger of their lives to fetch it for him. At last, after six miles riding, we came to *Betlehem*, and rested our selves in the monastery of the *Capuchins*.

*Betlehem*, the most glorious city in the world, for the birth, not of *Benjamin*, but of the Saviour of the world, is seated in 31 degrees of latitude; thinly inhabited, and by very few catholics. Being seated on a pleasant hill, it enjoys an excellent air, so that *St. Paula* the *Roman* had much reason to choose it for her place of abode, and dy'd there in the year 404. The chief church of this city, restor'd not long since by the *Greek* religious men to the catholics, is one of the best in the east, for it has five isles, made by four rows of good marble pillars, ten in a row, in all forty; besides which, there are ten in the choir, which is enclos'd quite round with a wall. The pavement is handsome, and the roof of a proportionable height. The monastery has a good garden, and convenient lodgings, in which twelve religious men live. They have another small church, dedicated to *St. Catherine*, pav'd with good marble of the country, which they made use of, before they recover'd the great church. The *Greek* fathers have also their church and monastery adjoining to the great one, separate from that of the *Armenians*, which is near to the great gate, with a way into our church, that they may have the conveniency of worshipping the holy manger, and the place where our Saviour was born. There is a descent to this happy, and most venerable place, out of the choir of the great church, down two opposite stair-cases of sixteen steps each.

Place of  
our Savi-  
our's birth

The very place of the nativity, at the end of the cave, is cover'd with a great marble stone, in reverence to it, on which a star is cut; and they use to lay mafs, as on an altar. The manger is adorn'd the best it could be, with three pillars, one in the middle, and the others at the ends. In the angle, a step lower, are two other small pillars of an equal bigness, between which, is a thing like a manger, of marble, with a little space in it, big enough to hold an infant; and opposite to it is the stone, on which the blessed virgin sat, with her son in her arms, when the wise men came to adore him. This little cave is all become

black, and unequally cut out in the rock. GEMELLI 1693. On the west side it has been a little enlarg'd, that it might contain the faithful; the floor is pav'd with a marble, and all the place breaths sanctity and devotion.

From the little church of *St. Catherine*, there is a dark descent of twenty four steps cut in the rock, to a cave, where many of the holy innocents were bury'd, that were slain by *Herod*; and an altar erected in honour of them. On the left is *St. Joseph's* chapel, whither they say, he retir'd at the birth of our Saviour: and then going up ten steps, there is another door at the foot of the cave of the nativity. Turning back at the end of these stairs on the right, a little door leads to a path cut in the rock; on the right hand whereof, is the tomb of *St. Eusebius* the abbot; and then again, entering into a little cave on the right, is the tomb of *St. Jerome*; and on the left that of *St. Paula*, and of *Eustachia* her daughter. Beyond that, in another larger room is *St. Jerome's* oratory, where he translated the holy bible. On the left of the church, there are certain stately oracles, supported by five pillars, where they say, the same Saint taught; at present it serves the *Armenians* for a stable.

After dinner, I went about to see the other memorable places without *Betlehem*. In the first place, about a mile and a half out of the city, I saw in a plain, the village and cave of the shepherds, to which there is a descent of fifteen steps under ground. Within it is an altar to lay mafs, and by it an arch, under which, there was formerly a church, since decay'd with age. In this same village, now almost disinhabited, is the cistern they call our lady's; because she passing that way, and being refus'd drink, the water of it self miraculously swell'd up to the brim, and when she had drank, return'd to its place, as is deliver'd by tradition. Three miles thence appears a round hill, which they call of the *French*; because that devout and valorous nation, maintain'd it self there forty years after the taking of *Betbalia*, which was at the foot of the hill. There are still remains of structures on the top.

Within *Betlehem*, a pistol shot from Our lady's the monastery, is the cave call'd our lady's, because the blessed virgin retir'd thither as she was flying to *Egypt*. Entering through a narrow hole, there is a descent of ten steps, at the bottom whereof is the little cavern, with an altar in it. True it is, the devotion of the

GEMELLI  
1693.

the faithful has been always making it bigger than it was, by carrying away some of that white stone, which is very good for people in fevers, and for women that have lost their milk, and therefore it is now call'd the cave of the milk. Not far from thence, are the remains of the hospital, built by St. Paula. The ruins of the monastery built by her, are half a mile from the shepherd's cave. St. Joseph's house was a musket shot from our lady's cave; but at present there remains no other memory of it, but only some small part of the foundation.

Solomon's  
country  
house.

Two miles from *Betlehem*, on the way to *Tecue*, where the prophet *Habakkuk* was born, on the top of a hill is *Solomon's* country house, and a plentiful fountain of water, which perhaps was that king's delight; as also somewhat lower, his enclosed garden (truly enclosed by nature) where formerly there was fruit of all sorts, but at present it is a meer field. Ascending from the garden to the house, about two miles from it, there are three great fish-ponds, so ordered, that the spare water of the upper, falls into the lower. The first is 200 paces in length, and 90 in breadth; the second 220, and 90; the third of the same breadth, 160 in length; and all three eighteen paces in depth. In *Solomon's* time, they were fill'd with water, from the *Fons signatus*; but the conduit being now ruin'd, they receive none but rain-water.

*Fons signatus*.

Since we have mention'd the *Fons signatus*, it will be convenient to inform the reader, that it is in the road to *Hebron*, above the fish-ponds, and fourteen spans lower than the road; and that the water has three several sources, which being all join'd, are convey'd by an aqueduct, to the holy city, into *Solomon's* temple, and the *Cadi's* palace. This may be suppos'd to have been some place of recreation of King *Solomon's*, there being several curious pillars, and pieces of *Mosaic* work about the hill, perhaps the remains of some delightful mansion-house.

S. George's  
chain.

A mile from the aforesaid fountain, is a church, dedicated to St. George, with a monastery, inhabited by four *Calovers*, or *Greek* priests, very poor, yet respected by the *Turks* for the Saint's sake, because they have the chain he was bound with, which being laid upon the neck of *Turk*, *Arab*, or other person of any religion whatsoever, infallibly cures madness. Having seen all this, we return'd very late at night to the monastery in *Betlehem*.

Tuesday the 14th having heard mass, and receiv'd the blessed sacrament at the altar of the holy nativity, I set out with the aforesaid company. A mile from *Betlehem*, I saw a plain in the valley, call'd *Senacberib's* field, where the angel in one night slew 185000 men that went to besiege *Jerusalem*; but tho' the story be certain, as deliver'd in holy writ; yet there is much reason to doubt of the place, because of its small extent for so great a number of men to encamp.

Further forward, on the right of the hill, they told me, was the place where the men (sent to discover by *Moses*) found that great bunch of grapes, which was carry'd between two. Going on along the same valley, we came to a fountain of excellent water, where they told me, St. Philip baptized queen *Candace's* eunuch; and towards the top of the mountain, is the country house where that Saint was born.

Two miles beyond the mountain is the desert, where St. John Baptist liv'd twenty three years, flying the cruelty of *Herod*. There is to be seen a haw-tree, on which they say, the Saint fed, and a spring of good water. Going down a considerable way into the hollow of the rock, is the cave, where he led a very penitential life, lying on a hard rock; there is now an altar to say mass.

Keeping on the way towards St. John's monastery, half a mile short of it, is the house of *Zachary* (formerly a nunnery) whither the blessed virgin went to visit St. Elizabeth, and there compos'd the *Magnificat*. The building is half bury'd in the ground, so that there is a descent of twenty five steps. There is an altar to say mass, and by it, two great arches, which were the cellar and refectory of the nuns; in the biggest of them, is a cistern of extreme cold water, but not very good to drink.

Thence we went to the monastery, St. John's. where the fathers receiv'd us very courteously. The church is small, and has a cupola supported by four pillars. On the right, there is a descent of ten steps to the place where St. John was born, made in the same manner like our Saviour's. On the top of a hill, opposite to the desert, is a country house, call'd *Modin*, or *Suva*, in the language of the country, in which the *Maccabees* were born, and afterwards bury'd near St. John Baptist's house, where there are still seven arches of their tombs standing. St. Samuel was interr'd on the same mountain, and there is now a church on the place.

Four

Holy  
crofs.

Four miles from St. John Baptift, in the fame valley, is the monastery of the holy crofs, with thirteen Greek fathers, in the place where they fay, the wood of the crofs was cut. The ftructure is good, and the church, tho' small, handfome; adorn'd with painting, and the pavement of Mofaick work. On the high altar is a hole, where the tree flood, that was cut down to make the holy crofs.

Drawing near to Jerufalem, is the place call'd Gibon, once the place king David delighted in, where Solomon was crown'd. Very little appears of the ftructure, be- fides a fish-pond fifty paces in length, thirty in breadth, and fifteen in depth. Here are the fepulchers of Turks, and they talk as if it had been the habitation of giants.

Not being able to go thither for fear of the Arabs, I endeavour'd at a diftance to take a view of the place, where Chrift fell into the company of the two difci- ples, Luke and Cleophas: The village of Belezazar, where Abfalom murder'd his brother Amnon, for forcing his fifter Tamar: The houfe of Cleophas, where Chrift made himfelf known in the break- ing of bread: The field call'd Gabaon, where Jofhua overthrew five kings, mak- ing the fun to ftand ftill, that he might have a compleat victory: Samuel's foun- tain, and his fepulcher: The fepulchers of the Jews: The fepulcher of queen Helen, and that of the queen of Sheba: The cells of St. John Chryftome, St. John Damafcen, and St. Bafil; the grave where forty martyrs were found: The orato- ry of the abbot Arfius: The fountain and oratory of St. Sabas; and laftly the cave of Engeddi, where David cut off the hem of Saul's garment, when he perfecut- ed him.

The holy  
fepulcher.

Saturday the 5th, I paid sixteen piaftres, to have the holy fepulcher open'd; which charge, no chriftian that enters the gates of Jerufalem can avoid, the Turks to that effect taking notice of their com- ing in. After dinner, I was very cha- ritably receiv'd by the guardian, and twelve friars that live there; they mak- ing the ufual proceffion, together with the priefts of the upper monastery, that I might vifit all the holy places; which ceremony is alfo practis'd at Beblehem, when pilgrims arrive there. That night I was shut up in this facred place, becaufe the Turks lock it up and carry away the keys.

Sunday the 6th I heard mafs, and re- ceiv'd the blefs'd facrament in the holy fepulcher. In the court before the gate of the church, there are fix chappels, or little churches, call'd St. Mary of

Vol. IV.

Golgotha, St. George, St. John Baptift, St. Mary Magdalen, St. Michael, and St. Angel; kept for the moft part by Greeks, Armenians, and Coptis, who all have their churches and dwellings in the fame place. The Greeks are about twelve, the Armenians forty one, and only one Copti. The Sirians and Abiffinians have no place there.

The church of the holy fepulcher has nothing beautiful, but it fpires, piety and devotion. It is very antient and dark, having no light but what comes from the top of the cupola, clos'd by a net of filed iron, through which, of necef- fity, it rains down in winter upon the chappel of the holy fepulcher, there be- ing no light to be let in any other way. It is all round up to the top, with four- teen marble pillars, and fix very antient pilafters, which fupport the arches about the church, over the which, there are feveral rooms, eleven of the Francifcans, and fix of the Greeks, but dark, and with- out ornament.

These lift have a beautiful church on the right hand of the gate, with good paintings, and a cupola, as alfo an excellent choir, and altar; near which is a majestick chair for their Patriarch. The Francifcans officiate in theirs ad- joining to the fepulcher, which though small, is decently adorn'd. There are in it two round pieces of marble, near which our Saviour appear'd to the blefs'd virgin after his refurrexion. Tho- rough an iron grate is feen the pillar, at which Chrift was feourg'd, which is of marble, of feveral colours, and three fpan high; near which is a ftone, that was found in the fepulcher. In the fame great church, defcending four fteps, is the place where our Saviour appear- ed to St. Mary Magdalen like a gar- dener, but cover'd with a round mar- ble out of refpect. Still proceeding along the firft arch'd way on the fide of the church, which on that fide has two ifles; there is a defcent of three fteps into the prifon where our lord was kept, whilst the crofs was prepa- ring: it is a dark arch'd chappel, fup- ported by small pillars, which divide it into three ifles. Turning back towards the left, there are two holes, where they fay, Chrift fell: And going on to the fecond arch'd way, behind the Greek church, is the chappel of Longinus, arch'd like the reft, meanly adorn'd, and poffefs'd by the Greeks, as is that of the prifon. Clofe to it is another chappel, with the place where the fol- diers divided our Saviour's garments, kept by the Armenians. On the fame

L

side.

GEMELLI  
1693.

**GENEVI** side, there is a descent of thirty steps to the chappel of *St. Helen*, which is bigger than the rest, with a good cupola, supported by four pillars, which on the sides leave two small isles; where on the left, is the chappel of the good thief, kept by the *Armenians*: On the other side is a chappel, kept by the *Greeks*, in which, near the stairs of mount *Calvary*, is the pillar of reproach, made of marble, of several colours, three spans high, and six about.

Eleven steps cut in the rock, lead into the place, where *St. Helen's* cross was found: This is a lofty dark chappel, belonging to the catholicks.

Mount  
Calvary.

A little further, behind the *Greek* church, there is an ascent of eighteen steps up to mount *Calvary*, with four arches. In the first on the right, three spans above the pavement, is a hole in the stone, in which the holy cross was fix'd, with a round piece of marble, on the floor, covering the spot, on which the blessed virgin stood, whilst the cross was raising; and near by it, a great and very deep opening; and this belongs to the *Greek* fathers. On the left, is the place where our Saviour was nail'd to the cross, with two altars, a great, and a little one. Under the fourth arch, there are five stones, which denote the place where christ was stripp'd, belonging to the catholicks, as does our lady's chappel, close by it, to which there is a door from without. There it was, the blessed virgin and *St. John* stood, when Christ looking on them from the cross, said, *Woman, behold thy Son*; and to *St. John*, *Behold thy Mother*. On the same mountain is the dwelling of the *Greeks*.

Descending from mount *Calvary*, we went into a chappel, kept by the *Greeks*, call'd *Adam's* chappel, because there they say, our first parent's head was found. On the right of the door, is *Baldwin's* sepulcher, and on the left, that of *Godfrey of Bolloigne*, brothers. There is another, they say, is *Melchisedek's*; but I know not what ground they have for it.

Opposite to the great gate, is the stone of the holy anointing, on which our redeemer was anointed. It is of white marble, eight spans long, and four broad, enclosed within iron banisters. Below it, is a place kept by *Armenians*, mark'd on the pavement by a round stone, where Christ's friends stood to observe where he was bury'd. All these places are lighted by several lamps, and I visited them in this order, in procession with the fathers.

The chappel of the holy sepulcher is about twenty four spans in compass, in the midst of the church, with a little cupola, supported by twelve small columns. Entering into it, at a little door, there appears by the light of seventeen small lamps, that burn day and night, the stone the angel remov'd from the mouth of the sepulcher, half bury'd in the ground. A narrow hole gives a passage into the sepulcher, which is eight spans square, where is the tomb, of the same length, which being cover'd with a marble stone, serves for an altar to say mass on. Tho' there be three holes on the top to let out the smoak, yet the place is excessive hot, by reason of forty seven lamps burning there continually. Both this, and the oratory that contains it, are all hung within and without with silk. The *Coptic*s have their chappel adjoining to the back part of it; opposite to which (first passing through the chappel of the *Sirians*, and then through a way cut in a rock) are to be seen the tombs of *Nicodemus*, and *Joseph of Arimathea*, cut out at length in the stone; besides that, which the latter caus'd to be made for himself, in imitation of our Saviour's.

Then I went up the stairs near the place of Christ's friends, to the chappel of the *Armenians*, and saw them say mass. The priest had on a cope, with a collar, like that of the habit of the *Theatins*, and a long cap on his head. He came out into the chappel, with a small chalice, cover'd with a veil; several silver horsebells the people there present had in their hands ginglyng, because they are not allow'd there to ring other bells; but instead of them, they make use of a piece of wood twelve spans long, which upon occasion, they beat with a wooden mallet.

The plate that has been given by so many kings and princes to the holy sepulcher, is kept bury'd, for fear of the *Turks*, nor do they shew it to any pilgrim; but the father guardian did me this special favour, by ordering it to be taken up, which the sacristan was unwilling to do. This rich church stuff, consisted of a lamp of about 300 pound weight, sent thither by *Philip III.* king of *Spain*; a cross, chalice, and most costly vestments, the gift of the most christian *Lewis XIV.* king of *France*; other vestments adorn'd with gold, pearls, and precious stones, sent by king *Philip II.* and other christian princes; a chalice by queen *Catherine of England*, and six candlesticks, four flower-pots, and a silver cross, given by the city of *Messina*, in memory of the

Greek  
Sanctum  
Sanctum.

the letter, which those people verily believe was writ to them by the blessed virgin: The Festival whereof they celebrate with great pomp, on the second of *June*; of which furniture, for its excellent workmanship, they make use upon the greatest festivals.

Greek  
Sanctum  
Sanctorum.

The *Greeks* also open'd to me their *Sanctum Sanctorum*, where I worshipp'd some precious reliicks; as an arm of *St. Mary Magdalen*; a great piece of the holy cross, and *St. John Baptist's* scull. Besides this, I saw several boxes, censers, and other vessels all of silver, such as they use in their ceremonies, and a wooden cross of wonderful workmanship, carv'd by a *Greek*, with such small figures, that it requires a microscope to discern them; as also some excellent pictures, drawn by *Candiots* and *Muscovites*.

Over this holy place, a *Mabometan Santone* has his dwelling; not so much to guard it, as to receive the money paid for opening of it: And therefore on *Monday* the seventh, after having perform'd my devotions in the holy sepulcher, I made him open me the door to go out. I went directly to *St. Saviour's*, where I was shew'd the curious and artificial lamp, sent by the commissary of *Naples*, worth fourteen thousand crowns; and the copy of the holy *Sudarium*, or picture of our Saviour, imprinted on the cloth-where-with the *holy woman Veronica* wip'd his face, sent by the duke of *Savoy*.

It is fit the reader be inform'd, that these holy places were many years since seiz'd upon by the *Greeks*; but after a long trial before the *Divan* at *Constantinople*, they were restor'd to the *Capuchins*; the marquis *de Chateaufort*, his most christian majesties ambassador to the port, particularly supporting them for twelve years together, with the assistance of *B. Dominick* of *Ruizaval* a *Biscainer*, a person of admirable capacity, tho' a lay-brother. In memory of which benefit, those fathers have put down

the marquis in their table of masses GEMELLI 1693. for benefactors, immediately next to the crown'd heads. Thus seven masses being sung every week in the holy sepulcher; the first is appointed for the pope, the second for the emperor, the third for the king of *Spain*, the fourth for the king of *France*, the fifth for the king of *Poland*, the sixth for the republic of *Venice*, and the seventh for the marquis *de Chateaufort*.

To return to the business in hand; this country is most holy and worthy of all veneration, as having been sprinkled with the most precious blood of our Saviour; but on the other side it is to be fled from, because of the *Turks* and *Arabs*, who forbear no robbery or insolency they can commit; and therefore the discreet pilgrim, as soon as he has perform'd his devotions, must make haste and be gone, to be out of the power of those *Barbarians*, who are utter enemies of the christian name. Nor is it allow'd on any account, for a christian to stand upon his defence, but he must suffer himself to be beaten; for if a christian happen to kill a *Mabometan*, his blood alone, which is certainly spilt, and his goods seiz'd, is not a sufficient atonement, but all his abettors, and his whole nation must pay several thousand crowns.

*Tuesday* the eighth, being the day of the nativity of the blessed virgin, and I to prepare for my journey, I heard mass four hours before day, in the very house she was born in. Many religious men, and christians of the country were present; and besides private masses at several altars, there was one mass sung, after which, I, and all the catholicks receiv'd the blessed sacrament. I should not have had that convenience at another time, because the *Turks* have a *Mosque* over it, and do not suffer mass to be said there, but only on that day; and this privilege bought with a considerable sum of money.

## CHAP. IX.

*The Author's return to Alexandria the same way he came.*

I Return'd before day to *St. Saviour's* church, where the reverend father guardian gave me his blessing in his patriarchal vestments; and then came to my lodging to wish me a good journey, with many expressions of tender affection, and with him the father procurator general, both of them presenting me with chocolate, and some devout gifts; and to compleat their kindness,

caus'd two masses to be said, one in the holy sepulcher, and the other on mount *Calvary*, for the happy success of my voyage.

Getting on horse-back without *Belebem* gate, with only the guard of the muletier, whom there they call *Muccaro*, I took along *Jeremiab's* road, and met with no trouble till I came to that mountain, where two peasants, who observ'd me at a distance, would have me

GEMELLI  
1693. me go to them. I stopp'd till my *Muccaro* came up, who had stay'd behind to eat figs (whereof as also of grapes, olives, and pomegranats, there is great plenty on the neighbouring hills) he being come, had a quarter of an hours dispute with the peasants. They seeing I had a red coat on, thought I was some merchant loaded with money, and had a mind to rob me; as I, tho' ignorant of the language guess'd by their actions, so that the *Muccaro* had enough to do to persuade them, I carry'd no money, whilst I fretted to see my self in a country, where two naked men durst impose upon me.

But I fear'd worse in the village of the good thief, where a wretched barefooted fellow ran after me, call'd to me to stay, till the receiver of the tribute, or duty, who was his master, and an *Arab* came up. I obey'd, and he being come, began by signs to demand money of me, tho' the *Muccaro* had already pay'd the duty, because he also by my habit, took me for a merchant. Having told him I had none about me, because I had left it at *Rama*; he fell to search me, beginning at my breeches, as being excellently skill'd in the art of robbing; and finding I had none, would have me promise to pay him a piastre at *Rama*, or else he would carry me away prisoner to the next mountain. To avoid this danger, I promis'd what was not his due, and he came punctually to receive it, but I made the muletier pay it, who had undertaken for twenty eight piastres, to clear me from all such impositions, and carry me to *Jaffa* upon his own charge.

By these passages, any one may judge how little justice is to be had in those countries, since the tax-gatherer robs so openly, and without controul: Nor is this to be admir'd at, because the people of that nation are naturally, or through custom lazy, and therefore love to live by robbing, without taking the pains to till the ground. Besides, if any of them would labour, he should not reap the fruit of it; and therefore there are continual scuffles between the country people and the *Arabs*, who are always stealing their corn. One day, before I came to *Beiklebem*, seven *Arabs* and three country men had been wounded in a fray. There are mortal enmities among the *Arabs* themselves, some being of the white banner, and some of the red, which is the cause that many of both parties are kill'd daily. Thus both *Arabs* and peasants live a wretched life, lying on the bare ground, and feeding on a little bread, without any other food,

because they cannot always meet with *Franks* to rob. After the tax-gatherer had left me, I put on a scurvy black garment of the *Muccaro's*, that my own might not call thieves, and made halt to *Rama*. Being come thither, I stay'd all *Wednesday* the ninth expecting the convenience of some *Caravan* to *Jaffa*.

*Thursday* the tenth, I paid the visit to some christian *Maronites* of note that had been to see me. *Friday* the eleventh I went with some fathers to the holy places about *Rama*. *Saturday* the twelfth we saw a cavalcade of *Arabs*, with pipes, carrying two children to be circumcis'd, which ceremony ended in a plentiful treat of many dishes of *Pilau*; that is, meat boil'd with rice.

*Sunday* the thirteenth I set out after dinner for *Jaffa*, with a *Caravan* of *Arabs*, and came thither at sun-set. The *Muccaro* would have me give him another reward, besides what he had from the customer, but I would not hearken to him. The visiting of the holy places, cost me seventy crowns of our money in all. The poor and disabled pilgrims, who cannot go up to *Jerusalem*, gain all the indulgences of the holy land at *Jaffa*, as if they had visited it, and from *Jaffa* return into *Europe*.

I embark'd on *Monday* the fourteenth *St. John* with a fair wind, and sailing all night, arriv'd on *Tuesday* the fifteenth at the ancient *Ptolemais*, now call'd *St. John of Acre*, mostly ruin'd and void of inhabitants. I went to the monastery of the *Franciscans*, where I was furnish'd with necessaries to go to *Nazareth*.

*Wednesday* the sixteenth I set out with an interpreter, and got into *Nazareth* about evening, the days journey being twenty five miles. *Thursday* the seventeenth I perform'd my devotions, worshipping the holy place, where the angel saluted the blessed virgin, serv'd by the *Capucins*, who receiv'd me with much civility and affection. *Friday* the eighteenth having visited some other devout neighbouring churches, I return'd to *St. John of Acre*, it being impracticable for pilgrims to go further to see *Galilee*, and other holy places, for fear of the *Arabs*.

*Saturday* the nineteenth there was no convenience of boats, and therefore I departed on *Sunday* the twentieth after noon. That night we were becalm'd, but *Monday* the twenty first made much way, yet came not to *Jaffa* till *Tuesday* the twenty second, *Wednesday* the twenty third I bargain'd for my passage to *Damiata*, aboard a *Saïque* that was returning thither, on *Thursday* the twenty fourth to return to *Alexandria*, where I had left my equipage.

Friday

Friday the 25th the wind prov'd fair, and so continu'd till midnight, but came about almost in our teeth on Saturday the 26th. Sunday the 27th, it blew brisk and fair, so that on Monday the 28th, we arriv'd at the *Bogasi*, or mouth of the river of *Damiata*, near which St. *Lewis* king of *France*, after taking that city, caus'd a fort to be built, which is still to be seen. I took a boat to carry me to the city, and tho' I endeavour'd to shun the knavery of the *Black of Huba*, yet I could not shun the *Janizaries*, who exacted half a piastre for suffering me to pass, and then search'd my portmanteau for the duties of the custom-house.

I thought I should have a good night's rest, in the house of the christian *Maronite*, who is procurator to the religious of *Jerusalem*; but it was my misfortune to pass it much worse than I had done the four last at sea, because of some small night insects there were in the room; and of a black woman, who being in labour close by, cry'd out all night as if she had been possess'd.

I resolv'd in the morning to complain to the customer against *Selim the Black*, who had extorted two piales more than his due: He answer'd me, he had no power over him, but that I might acquaint the *Bassa of Caire* with it. The boat being ready to depart, I was obliged to go aboard it with the customer, who went the same way, lest I should let slip that opportunity.

Wednesday the last day of the month, we sail'd with a fair wind up the same branch of the river *Nile*, before describ'd; and on Thursday the 1st of October, we run up the river. The customer was pleas'd to live two days without eating any meat, because there was never a Jew there, who with a knife, without any blemish, might kill some gelt goat, hen, or other fowl there were aboard, according to the *Mabometan* superstition.

Friday the 2d of October we arriv'd at *Bulac*, and that being the day the boat was to set out for *Roseto*, I only went out of one vessel into another, running down the *Nile*, which had drown'd all the coun-

try. I said before, and I say it over a-  
gain, that a christian who travels into  
*Egypt*, and the holy land, must arm him-  
self with patience, and be deaf, because  
christians are equally hated by *Turks* and  
*Arabs*, and must take abundance of affronts  
from them both; for very often a naked  
scoundrel, that has not rags to cover him,  
has the impudence to scoff at grave peo-  
ple. The other mischief is, that they  
think all the *Franks* are Physicians, and  
therefore, tho' they be in health, will have  
them feel their pulse, which I was forc'd  
to do, to avoid some greater trouble,  
knowing I should not be thank'd for it.

Saturday the 3d, the wind was contra-  
ry, so that we made little way; the same  
on Sunday the 4th. Thro' the negligence  
of the ignorant sailors, the bark run a-  
ground, and they were forc'd to unload  
it to get off, and then load again, which  
took up a great part of the day; but the  
wind coming up fair, we arriv'd at *Roseto*  
about sun-setting. Monday the 5th, I  
imbark'd for *Alexandria*, and landed there  
before night. In that port, I found a  
*French* vessel ready to sail for *Leghorn*,  
with whom, if I would have returned in-  
to christendom, I should have ended this  
curious voyage in three months and a  
half; but being resolv'd to go on into  
the east, I slighted that opportunity. On  
the other side, being inform'd there were  
some vessels at *Bicbier* ready to sail for  
*Constantinople*; I made it my business  
to have a passage aboard them, wherein I  
was much forwarded by the civility of  
*Arrigo Grimaud*, a merchant of *Marseilles*,  
who during my whole stay at *Alexandria*,  
very affectionately labour'd to clear me  
from any trouble at the custom-house.

Tuesday the 6th, I got a letter writ to  
the *Aga* of *Bicbier*, to procure my pas-  
sage aboard one of those vessels. Wed-  
nesday the 7th I went about to take my  
leave of the consul and merchants. Thurs-  
day the 8th, monsieur *Grimaud* treated me  
with all that the country affords; and  
Friday the 9th, being to depart the next  
day, I supp'd at the consul mounfieur  
*Tamburin's*, with all the *French* that diet-  
ed there.

## CHAP. X.

### Of the Religion, Government, Customs, Habits, Fruit, and Air of Egypt.

BEFORE I depart *Egypt*, it will not be  
amiss, but rather very advantageous,  
and delightful to the reader, if after these  
particulars, I give some general account  
of the present state of that kingdom,  
which has suffer'd so many revolutions:

VOL. IV.

First under the yoke of the *Pharaoh's*, and  
since, from time to time under the *Ptole-  
mies*, *Romans*, *Agarenes* of *Arabia Felix*  
and *Turks*, who are now possess'd of it.  
The christians of the country call'd *Egypt  
Maffr*, the *Turks* *Misir*, and the *Jews*

M

Ereft-

GEMELLI  
1693.

*Eretmisraim*. It is bounded on the north by the *Mediterranean*, on the east by *Arabia* and the *Red Sea*; on the south by *Abissinia* and *Nubia*, and on the west by the deserts, and kingdom of *Barca*. It is generally divided into three parts, which are *Babri*, or the *Lower Egypt*; *Vostani*, or the *Middle Egypt*; and *Said*, or the *Upper Egypt*. The *Lower* contains all the space between the sea and *Caire*, being that which the antients call'd *Delta*, because the arm of the *Nile*, and the sea that bounds this part, make a triangle, which is the same as the *Greek* letter *Delta*; and the chief city of this *Lower Egypt*, is *Alexandria*. The *Middle Egypt* is bounded by the village of *Giza*, and *Momfalot*, and its principal city is *Caire*. The *Upper Egypt*, otherwise call'd *Thebaida*, has for its chief city *Aina*, or *Igne*, formerly *Syene*, built on the banks of *Nile*.

*Egypt* is inhabited by *Coptis*, *Moors*, *Arabs*, *Turks*, *Greeks*, *Jews*, and other nations. The prevailing religion is the *Mahometan*, of which I shall speak in the description of the *Ottoman* empire. The *Coptis*, so call'd from *Copt*, the son of *Misraim* king of *Egypt*, were formerly idolaters, like all the other *Egyptians*, worshipping not only *Isis* and *Serapis*, but many other monstrous deities; but after the coming of Christ, they were the first in *Africk*, converted to the christian faith, by the preaching of St. *Mark the Evangelist*, their apostle. They continu'd catholic till the time of their patriarch *Dioscorus*, who fell into the error they still continue in to this day. In past ages they were a very considerable number, 600000 paying tribute; at present they do no more amount to 15000 souls. One of the principal causes of their decrease, has been their contancy in the christian religion, which so provok'd the rage of the *Pagan* governors under the *Roman* empire, that they butcher'd many thousands at a time, and now they are the people most oppress'd by the *Turks*. The government of *Egypt* is subject to the *Ottoman* laws, and manag'd by a *Bassa*, sent thither by the port.

As for the inhabitants, as formerly they were accounted ingenious, courteous and civil, some attributing to them the invention of geometry, arithmetick, astrology, and physick; so now, they are barbarous, rude, fierce, sloathful, false and treacherous; great thieves, and extremely covetous; insomuch, that they will sell their own brother for the value of six pence; but above all, they hate the very name of a christian, and have insus'd that aversion into their very beasts; for even the dogs run after the *Franks*, knowing them by their apparel. The habit of the better sort of *Arabs*, is almost the same as that of the *Turks*; but the inferior people wear a sack, or as they call it, a *Caban* over their shirt, wrapping a poor piece of cloth or silk about their heads instead of a turban. The women cover their faces with a mask of cloth or silk, and their bodies with a long cloth over their garments; the better sort of them wear high wooden clogs, insomuch, that to us, they look like monsters. Of themselves, they are low and brown, and their greatest beauty in the opinion of the natives, is a sparkling eye.

Their seasons are three months before ours, for they eat figs and grapes at the beginning of *June*. All the sorts of fruit known in *Europe*, are there in a greater perfection, by reason of the goodness of the soil, especially pears, pomegranates, apples, and some others; not to speak of dates, which are peculiar to *Africk*. As for birds, there are all sorts we have in *Europe*, and many particular. There are most delicious *Beccaficos*, like wheat-ears; and the turtles are so numerous and tame, that they walk about the streets and houses like pigeons, but their partridges are small and hard.

The air of the country is unhealthy, by reason of the great heat, and therefore there is no travelling at all times of the year; partly by reason of the overflowing of *Nile*, and partly because of the violence of the sun.

*The End of the first Book.*

A

# *A Voyage round the World by Dr. John Francis Gemelli Careri. Part I.*

Containing the most Remarkable Things he saw in  
TURKEY.

## BOOK II.

### CHAP. I.

*An Account of the most remarkable Things the Author saw in the Islands of Rhodes, Stanchio, and Scio, and in the City of Smirna.*

THE boat being ready, I went aboard it on *Saturday* the 10th of *October*, being bound for *Bichier*, where I arriv'd about noon, and gave my letter of recommendation to the *Aga* of the castle, who spoke to the *Rais*, or master of the vessel for me. Being agreed about my passage, I caus'd my baggage to be put aboard the ship, which was under sail, and began to make way within two hours, with a fair wind, which lasted all night, I pass'd it indifferently, because these sort of vessels, call'd *Londras*, have the poop, deck, gang-ways, and masts like a galley, only they have one little mast and sail more.

The wind continu'd fair *Sunday* the 11th till noon; but after that, it began to blow so hard, and contrary, that it oblig'd the fearful master and sailors to turn back. Thus on *Monday* the 12th, we came again into the port of *Alexandria* at two in the afternoon, and going aboard I went to pay my respects to *monfieur Tamburin*, who oblig'd me to stay in his house, where he and all the *French* often drank to my good voyage.

*Tuesday* the 13th, we sail'd again with a fair wind; but when we had run forty miles, the master, who was better skill'd upon rivers than at sea, out of a vain fear, stood about again for *Alexandria*, tho' neither the sea ran very high, nor the wind was very boisterous. Being sensible of his mistake, he stood his course again, but we had not sail'd far, before fear and ignorance brought him about again, and we put into the port

of *Bichier*: on *Wednesday* the 14th. It was a torment to me to see my voyage retarded by his folly, and would have given any money to be aboard a christian ship to be out of the hands of scoundrels.

*Thursday* the 15th, there was as dreadful a storm by sea and land, as was ever known in *Italy* in *December*. *Friday* the 16th it rain'd hard, by which it appears they are much deceiv'd, who think the sky is clear all over *Egypt* in winter; for the ancients, who deliver'd this account, meant it only of the *Upper*, but not of the *Lower Egypt*.

*Saturday* the 17th, I went ashore to divert the melancholy I was troubled with for being among *Turks* and *Greeks*, where no body understood me. Going aboard again at night, all the provision I carry'd with me was eggs, the country affording nothing else.

*Sunday* the 18th, the wind began a little to fall. *Monday* the 19th it rain'd again, and held on *Tuesday* the 20th, which settled the sea. The seamen stay'd *Wednesday* the 21st to dry their sails, and prepare to sail; and at length, *Thursday* the 22d, the *Rais* or master, encourag'd by other vessels that shew'd him it was safe going to sea, crept out of his hole. The wind blew so brisk and favourable that day and *Friday* the 23d, that our vessel carrying three sails, left three *Saiques* a-stern; and *Saturday* the 24th, before noon, we happily arriv'd at the port of *Rhodes*, having run 500 miles in forty seven hours.

The

GEMELLI  
1693.  
Rhodes.

The city *Rhodes*, once one of the most flourishing in *Asia*, is in the latitude of 36 degrees. It maintain'd it self a long time as a commonwealth, gaining so much reputation by sea, that the emperor *Antoninus Pius* doubted not to decree, That the pretensions of one *Eudemus* should be decided according to the laws of the *Rhodians*. But this city afterwards falling under the dominion of several princes, was at last granted by *Emanuel*, emperor of *Constantinople*, to the knights hospitallers of *St. John*, who had been expell'd the holy land. The knights being in possession, fortify'd themselves, and defended it bravely in the year 1444, against the sultan of *Egypt*. In the year 1480, under the empire of *Mabomet II*, they held out a siege of three months, by the valour and conduct of the great master *Ambusson*; but afterwards in 1522, after a vigorous defence made by *Adam* the great master, the island fell under the dominion of *Soliman II*.

The city.

This city is seated on the east side of the island; part on the plain, and part on the hill. It is three miles in compass, the streets are wide, strait, and well-pav'd; and in the midst of the greatest is a row of white marble stones from one to the other. In this street are to be seen the lodgings of the knights of *St. John*, and the palace of the great master. The buildings are after the *Italian* manner, of square stone, harder than the *Naples* stone; the *Bazars* or markets, are furnish'd with all the island, or adjacent continent affords, sold at a very easy rate. By the building it appears to have been in the hands of christians, their magnificence being nothing diminished by the brutality of the *Mabometans*, who have not abolish'd the antiquities; and the arms of the knights of *Jerusalem* are every where to be seen, even upon the artillery.

After hearing a *Greek* mass on *Sunday* the 25th, I walk'd about to see the city, which is a good fortress; for besides being all round furnish'd with good cannon, it has a treble wall, and two ditches, and on the castle side three. The gates on the land-side are five; but three of them shut, and two open, secur'd by several works and draw-bridges; and to the sea there are two more. The inhabitants are *Turks* and *Jews*; for all the *Greek* christians, being the greater number, live in the suburbs and country-houses about it, which yield a pleasant prospect amidst the gardens and vineyards. The *Turks* drive them all out of the city on *Friday*, to say their prayers at noon with

the gates shut, punishing those severely that do not make haste out, when the signal is given.

*Monday* the 26th, I went to see the Palace. great master's palace, seated on the highest part of the hill, which at present serves for a prison, and dwelling-place of two *Chams* of *Little Tartary*, depos'd out of jealousy, and kept perpetual prisoners by the *Great Turk*; to the end, that if he who rules, behaves himself amiss, one of the prisoners may be set up in his place, and he succeed the other in the prison. I saw nothing curious in it, but only a great structure which the *Turks* suffer to run to ruin, without taking care to repair it. The church of *St. John* adjoining to the said palace, is now the chief *Mosque*.

I said before, the city was encompass'd by three walls, and as many ditches; I must now add, that it has as many ports for security of its ships and galleys. That which serves the ships is defended by the bastion *St. Elmo* with ten pieces of cannon, which also serves for a light-house. The other adjoining to it, is defended on the left by a tower with eight small guns, and on the right by the enchanted, or *Moors* tower with twenty eight guns, but only the eight that lie level with the water carry a large ball. A man may almost creep into one of them, on which, close by the arms of the knights, I read this inscription, *Opus Francisci Mantuani, A. D. 1486*.

They told me, that when the city was taken, there were found three pieces of a prodigious bigness, which shot stone-bullets so large, that two men could scarce fathom them; for which reason they were afterwards transported to *Constantinople*. The aforesaid fort is square, The fort having four little towers at the angles, and an octagon in the middle, all made by the knights. From it to the opposite bastion, they draw a chain to shut up the port, which is not very safe, for in my time the admiral of *Algier* was cast away in it, and a little before my coming, a ship and a *Saique*.

From this port they go into the other <sup>The C.</sup> <sup>Colossus.</sup> within it, which is like an arsenal, and serves for small vessels. It has two mouths, one in the middle, and the other near the aforesaid port, from whence to the city it is shut up by art. man could fathom its thump, every finger being as big as the largest of the ancient statues; so that the space between the two legs serv'd for vessels to pass under, that went to anchor there. It held a vessel in its hand, in which they kept a great fire, to light ships in the dark of the night; but when it had stood fifty six years, it was thrown down by an earthquake; the *Rhodians* threaten'd by their oracle, not daring to set it up again; and thus that wonderful work lay on the ground for several ages, till the year 654, when it was knock'd in pieces. In 1136, about 1460 years after it had been erected, it was utterly destroy'd by one *Mabavia*, a chief of the *Saracens*, who made himself master of the island, and fold the metal to a *Jew*, who landing it in the lesser *Asia*, had it carry'd into *Egypt* on 900 camels.

The port of the galleys is the best for security and conveniency. There were at that time three galleys, the other two being abroad under the command of their general *Ammaza-mamma*.

*Tuesday* the 27th, I went to see the *French* consul, who was a *Grecian*, that he might secure me against any insult of the *Turks*. I found him not, but understood he could do me little kindness, as being in no esteem among the *Turks*; besides that they are not there so insolent to the *Franks*.

*Wednesday* the 28th I walk'd in the suburbs, in a good garden that produced excellent grapes and figs, and at night return'd aboard the vessel. *Thursday* the 29th, meeting with the *Rais*, or master, I perceiv'd he had no inclination to leave his house so soon, being detain'd by the embraces of his wife, who was a beautiful *Turkish* woman. The *Rhodian* women out of modesty cover their foreheads with a handkerchief, and their chin up to the nose with another. *Friday* the 30th, being the day of prayer, I took my way towards the palace along the knights street, to see the aforementioned *Cham*, who was to pass by to the *Mosque*. At last he appear'd with a train of twenty followers, clad after the *Tartar* manner; he was of a good stature, and had only a blemish in his right eye.

The island

The island of *Rhodes*, formerly call'd *Osusa*, *Asteria* and *Ætirea*, and by other names, is 140 Italian miles in length. The climate is temperate, and pleasant; the soil abounding in fruit and wine, but produces not corn enough, but is plentifully supply'd out of *Natolia*, which is but twenty miles distant from it on the north side. Formerly there were several cities in it, now reduc'd to villages; as

VOL. IV.

*Filerno*, *Lyndo*, the country of the famous *GEMELLI* 1693.  
statuary abovementioned, *Basilica*, *Catala-*  
*via*, and others, inhabited by wretched  
*Greeks*, *Jews*, and *Turks*.

My continual instances to the *Rais*, or master, prevail'd with him at length to leave his fair, and set sail on *Saturday* the last day of *October*; but we had scarce sail'd two miles, before he return'd, the thoughts of her perhaps carrying him away. Besides, these base *Turks* and *Greeks* are afraid when they perceive the wind rise, and act with such disorder and noise, that they know not themselves what they are about; so that ten christians are more serviceable at sea than fifteen *Turks*. *Sunday* the 1st of *November*, I did my devotions in the *Greek* church, and so *Monday* the 2d; *Tuesday* the 3d a *Saïque* enter'd the port with a company of soldiers bound for *Constantinople*.

*Wednesday* the 4th, as I was walking, a *Turk* call'd to me to go into his house, but I fearing the penalty of being impal'd kept on my way. *Thursday* the 5th, a *Sicilian* told me the *Turks* suspected me for a spy, and therefore advis'd me to take care they did not make me a slave; it being the practice there to use *Franks* so upon slight pretences; as had happened the year before to four *Frenchmen*, who came from *Napoli di Romania* at the same time the fleet lay before *Canea*, and were made slaves in *Rhodes*, upon pretence that they were spies. This troubled me, and the more because I had forgot to get a pass from the *French* consul, seeing I had travell'd through the holy land without being molested by the *Mabometians*. *Friday* the 6th, being the day of prayer, and I not having taken notice of the usual signal, perceiv'd when it was too late, that the gates were shut; therefore there being no going out, I hid my self for fear in a tower, where, had the *Turks* found me, I had certainly been taken, and secur'd as a spy. Perceiving what dangers I ran, I spent all *Saturday* seeking some other vessel to carry me out of *Rhodes*, but it was my misfortune to find none.

*Sunday* the 8th, I heard mass in the *Greek* church, with leave of the superior. *Monday* the 9th, a *French* tartane arriv'd in the port, but prov'd to be bound for *Cyprus*, so that it was not for my turn. *Tuesday* the 10th, another came in, carrying four *French* merchants from *Seyde* to *Smirna*, who courteously offer'd me my passage, advising me to bring my equipage, and lie aboard the vessel myself, because I was in danger of being made a slave by the *Turks*, as they had been inform'd by capt. *Sanjon*, a renegade of *Mar-*

N

Mar.

GEMELLI  
1693.

*Marfeilles*, and vice-admiral of the *Algier*-vessel loft in the port. Accordingly I carry'd my equipage, and went to lie aboard that night, paying the master of the first vessel the full we had agreed on for the whole voyage.

Thus after so long a stay, I set out on *Wednesday* about noon. There were aboard the tartane, besides the four *Frenchmen*, seven *Turks*, and the *Aga* of *Seyde*, who had quitted the *Turkish* ship, because of the ignorance of the owner. What I observ'd in these barbarians, was, that they had laid aside the foolish fierceness and arrogance they practice aboard their own ships, where they seek all occasions to wrong a christian; and it was a great satisfaction to me to see them aboard our tartane, as quiet as lambs; not venturing to say their prayers in publick, for fear of being laugh'd at. Having sail'd twenty miles, we pass'd by the island *Scimo*, and at the end of thirty by *Piscopi*, *Calce* and *Nissaro*, islands inhabited by *Grecians*, and nests of pirates. *Thursday* the 12th, we could not weather cape *Creo*, the wind being in our teeth; which continu'd *Friday* the 13th, but growing calmer, we with difficulty put into the island *Stanchio*, one hundred miles distant from *Rhodes*, three hours before night, having all the way coasted along the continent of *Natolia*.

*Stanchio*  
island.

*Stanchio*, *Stanco*, *Stingo* and *Stancu*, or according to the antients *Merope* and *Cos*, is a longish island, on the east, looking towards *Natolia*, from which it is parted by a strait of six miles. It is famous for having brought into the world the famous painter *Apelles*, and the renowned physician *Hippocrates*, who is said to have become so learned by reading the many tablets brought to the temple of *Esculapius* in this island; because all that recover'd of any distemper, were oblig'd to leave an account in writing, in the temple, of the medicines that had cur'd them.

The city.

Going ashore to see a wonderful tree, as also the city, I took notice it was seated near the sea, on a rising ground, and defended by good walls, and a deep ditch fill'd by the sea; as also by a castle well stor'd with cannon. It has no port, but an open road is all the shelter the ships have. The houses are low, but of stone; but there is one stately structure, which they call *Hippocrates's* palace. On the west side of it is a large suburb, in which, as well as in the city there live *Turks*, *Jews*, and *Greeks*, but the latter much oppress'd by the *Mahometans*. About it there are good gardens and vineyards, which produce excellent wine. The wonderful tree

is a palm, by the *Turks* call'd *Cinor*, standing within the city between the castle-gate, and the *Bazar* or market-place. It is most certain there is not the like of it in *Europe*; for 4000 men can stand under its boughs, which are held up by thirty six props, or little pillars, under which there are two fountains, and several benches fix'd, to take the air.

We sail'd not the same day, both because we expected the vice-admiral *Sanjon*, who stay'd that night in the city about some business, and because the *Bassa* would send a servant of his aboard the tartane.

*Saturday* the 14th, we sail'd about noon with a fair wind, which failing us three hours after, we were forced to lie upon a bowling, but could not that night get beyond the islands of the *Bassa*, *Carino*, and *Lero*, inhabited like the others by *Greeks*.

*Sunday* the 15th early, we pass'd by *Lysio*, an island not inhabited, and then by *St. John de Parno*, formerly possess'd by the knights of *Malta*, *Naccaria*, *Lisorni*, and *Samos*, formerly consecrated to *Juno*, who had a temple there, and famous for having been the country of *Pythagoras*, the fortunate *Policrates*, and one of the *Sibils*; not to speak of many more islands on the right and left, dispers'd about that archipelago. The wind coming right against us, we were forc'd to turn back, and take shelter under the rock of *Artivo*, where there are several ports, with water enough for great ships; yet the place is not inhabited, and only the shepherds carry their flocks to graze there, in continual dread of the pirates. A little before our arrival, three sail departed thence, after taking a *Saigue*, leaving a quantity of wood on the shoar, which our tartane took aboard. *Monday* the 16th, the wind continuing contrary, the seamen went about the rocks gathering shell-fish; and having given the *Aga* of *Seyde* a sea-urchin, that brute put it to the fire to roast, as if it had been a fish: and to say the truth, he shew'd himself like a beast, in his words and actions, and wore a beard like a conjurer, or rather like a he-goat, bred wild on a mountain.

*Tuesday* the 17th, we sail'd three hours before day, but had little wind, so that by noon, we had much ado to pass the strait, between the islands *Soma* and *Formi*: after noon it freshned, and we ran under a top-sail to *Scio*, where we arriv'd at night, after running 130 miles, the computed distance, between *Stanchio*, and *Scio*. *Wednesday* the 18th, we all went ashore, and I was entertain'd by the capuchins.

*Estalia*,

*Scio* island

The city.

The port.

*Scio* island. *Etbalia*, according to some, was the first name of this island, afterwards call'd *Scicos*, or rather *Sciros*, from an antient nymph. The *Turks* call it *Salzizadai*, or *Sacbezadai*, which signifies the island of *Mastick*. It is one of the chiefest in the *Archipelago*, and of those call'd *Cyclades*, being eighty miles in compass. On the north of it, is the island *Metelin*, or *Mytilene*, on the east *Natolia*, from which it is separated by a channel three leagues wide, call'd the stright of *Capo Bianco*, or the white cape, and on the south the island *Naccaria*. The inhabitants divide it into two parts. *Aponomoya*, or the upper, which is towards the north, and *Catamera*, or the lower towards the south. The soil next the sea, is extraordinary rich, but that further up barren enough, being for the most part a bare rock, and serves only for goats to graze on. Between the inhabitants of the metropolis, and of eighty villages, there are reckon'd to be about one hundred thousand, whereof eighty thousand are *Greeks*, and the rest catholicks, *Jews* and *Turks*. Their principal revenues come of milk, and butter, wine and silk; whereof they make every year to the value of one hundred and twenty thousand crowns, which employs the poor.

The city. The city *Scio*, seated in 38 deg. of latitude, is longish, lying on the sea coast, and being narrow towards the mountains for want of room. It is encompass'd by good walls, with eight gates, but it is defended by a castle near the port; which tho' on the land side it has a broad deep ditch, with two bridges and gates, yet has such weak antient walls, and so bare of out-works and cannon, that they can make but a few hours resistance. In one angle of the city towards the south, is another fort with ten pieces of cannon, and another in the middle, lately rais'd on the ruins of a *Greek* church.

The port. The port is large, but not safe, the bottom being soft, so that the anchors have no hold; in the midst of it, is the light-house for the conveniency of ships that come in by night. In this port, lie the five galleys of the island, commanded by as many *Begs*, to whom the grand seignior allows twelve thousand crowns, for the charge of each of them.

Considering the smallness of the city, forty thousand inhabitants is a considerable number, most of them being christians, as well *Latins* as *Greeks*. For this reason, there are also two bishops, one a catholick, who has about fifty priests under him, and the other a schismatick. The *Turks* and *Jews* are oblig'd by the

natives to live in the castle. The houses are of stone, after the *Italian* fashion, with the roof like a pyramid, cover'd with tiles. The streets are narrow, but pav'd with pebbles; and the *Bazars* or markets abound in all things at easie rates, because the nearness of *Natolia* supplies all the island wants.

The christian women are clad after Women. the *Italian* fashion, except their head-dress; but their coats are short to their knees, gather'd behind like a priest's surplice, a ridiculous habit, like that of the country women about *Offuni*, a city in the kingdom of *Naples*. The widows cover their heads with red veils, other women with white, with a rowl round their fore-head, like the *French* fore-head cloth; behind, towards the left side, hangs a fringe of the coil, that covers the head, which, together with variety of flowers, they wear at all times of the year, is a very pleasant sight. The women themselves are extraordinary fair and beautiful, and very witty, and familiar with men; even the maids being very free with strangers, and all of them have their breasts immodestly bare.

The chief churches in *Scio*, are five, Churches. the *Duomo*, or cathedral, that of the *Jesuits*, the *Dominicans*, *Capucins*, and *Recolets*, besides other small ones, both within and without the city.

The mastick of this island is the best Mastick. in the world; for which reason, the grand seignior sends one every year, to be present at the gathering of it, with an expres prohibition against exporting it for any part but *Constantinople*, where the servants and women in the *Seraglio* consume it, chewing it all the day to make their teeth white, and their breath sweet, and therefore the *Turks* call it the island of *Mastick*. The cotten gather'd here, yields the natives some profit, the poor people getting their living by working at it.

Thursday the 19th. at the French consul's house, I saw a young Venetian re-negade, a handsome fellow. He, after saying three masses one morning in *Scio*, from an *Augustinian* friar, became a *Mahometan*; but afterwards repenting, desir'd the consul to contrive his escape into *Christendom*. This was a matter that requir'd much management, because he was kept in the *Bassa's* house, who perceiving something of his change, because he delay'd being circumcis'd, had caus'd him one morning to be cut by force, telling him, if he fled, he should at least carry the mark with him to *Italy*. The cause of this misfortune was,

CEMELLI  
1693.

GIBELLI  
1693.

was, that he leading an ill life in his order, and the superior intending to punish him, he fled to *Scio*, and had recourse to the catholic bishops, to obtain his pardon of the order, which being refus'd, in despair he turn'd *Mabometan*. From that time forward, he always did the bishop ill offices with the *Bassa*, falsely accusing him of holding correspondence with the republick of *Venice*; which calumny could not be taken off, without a great deal of money. I hope God will give this man grace to follow the example of *B. James*, a lay-brother of *Calabria*. He being cast into prison for some heinous offence, by the superior of *Eriza*, a small monastery in the mountains of *Syria*, subject to that of *Jerusalem*, fled to *Barut*, and thence to *Seyde*; and not being admitted, because of the plague, stay'd without, with three other religious men of his order. In the mean while, the president of *Seyde* talk'd to, and comforted him from the wall, with the hopes that he should obtain his pardon of the father guardian; but the plague still continuing, and there being no admittance, they agreed to retire for some time to *Darbessin*. *B. James* perceiving the business was protracted, and despairing of pardon, return'd to *Seyde*, in the beginning of *May* 1693, and going to the seraglio, desir'd to be made a *Mabometan*. He was receiv'd, and circumcis'd, but before two months were over, becoming sensible of his crime, he had recourse to a *French Capuchin*, who was superior in that city, humbly begging absolution, and declaring with many tears, that he for ever abjur'd, and detested *Mabometanism*. The other answer'd, he must fly into christendom; for he could not absolve him, because he was in imminent danger of relapsing into the same state of damnation, if he continu'd among *Mabometans*. *B. James* reply'd, he publicly own'd his crime, and was ready to die a martyr for his faith and religion. He still persisted in this holy purpose, and returning on *Wednesday*, the aforesaid father superior gave him absolution, and the blessed sacrament. The next day, that good father advis'd him to make his escape aboard some *French* vessel, because he was not sure he could overcome human weakness, and obtain of Almighty God the grace of martyrdom. *B. James* answer'd no, I will die for the faith, and I find my self resolv'd, that I do not fear being burnt to death, which at first terrify'd me. Adding further, give me a crucifix, and to morrow you

shall see what I will do; in the mean while pray for me. Perceiving he was settled in his resolution, he gave him a second time absolution, and the blessed sacrament. On *Friday* being the *Turks* festival, *B. James* went to the *Bazar*, or market-place where abundance of people were, carrying a cross in his bosom, and setting one foot on his turban, and the other on his green garment, holding the cross in his hand, he began to preach, and declare, that being penitent for his offence, he was resolv'd to die for the catholic faith, and that the *Mabometan* religion was a cheat, and their prophet an impostor, who led souls to hell. A great multitude flock'd about him, hearing these words, and some understanding *Italian*, ran to acquaint the *Bassa*, who order'd the friar to be brought before him, in the most abusive manner, as was perform'd, those barbarians breaking the cross. Being brought, he ask'd him, whether he was mad to behave himself after that manner? *B. James* told him, he was in his right senses, and had been mad when he embrac'd so infamous a religion. A court was held after this, and the *French* labour'd with the *Cadi* to save his life, or at least that he should be put to an easy death; and the *Cadi* offering to pardon him, provided he would own what he did, was in a fit of madness, the good man would not do it, but expected death with an unparallel'd resolution. Being therefore led in the beginning of *July* in his shirt and breeches to the gate of the seraglio, the executioner struck him with the back of his scimitar, to terrifie and make him unsay what he had said; but not prevailing, with a second stroke, he at last struck off his head, hacking the dead body, which being bought by the *French* for fifty *Piastrs*, to be bury'd, was put into lime to save the bones, but the place being open'd after three months, it was found as fresh as it was bury'd, not so much as a hair being dropp'd off his beard. This was told me, by monsieur *Ripera*, and other *French* merchants, who were eye-witnesses to it; and because all the christians of the east have celebrated his festival, I thought fit to make mention of it, for the information of those who have not heard of it.

*Friday* the 20th, the wind blew so hard, that the vessels in the harbour were forc'd to drop another anchor, which lasted all *Saturday* the 21st. *Sunday* the 22d, I walk'd about the city, with the consul's son, and four other *Frenchmen*, who conducted me to an enclosed court,

about

Greek  
nuns.Maffick  
trees.Time par-  
tridges.

Greek  
nuns.

about which, there were many little houses, inhabited by Greek nuns. To say the truth, it appear'd more like a Jew than a monastery, because of the liberty those counterfeit religious women take, being allow'd to go about the city at their pleasure, and to admit men whensoever they please.

Mastick  
trees.

Monday the 23d, the same company went to see the trees that produce the mastick, or the *Sakes*, as the *Turks* call it. They are small, and their branches bow down to the ground, turning up again. To make the mastick, they give a gash in some parts of the trunk; whence, from the beginning of May, till the end of June, that liquor drops down on the ground; and therefore they endeavour to keep the place very clean to gather it. They say there is good turpentine made in the same island, but I did not see the tree. Then we went three miles from the city, to see a rock near the sea, in which there was a seat cut in the middle, and others about it, which they told me was *Homer's* school; but I never read that *Homer* taught.

Tame par-  
tridges.

The partridges are so tame in *Scio*, that they feed about the fields in summer, and at night return to their master's house, upon the call of a whistle, as was shew'd me in a village we came thorough, in our return home.

I had resolv'd to go from *Scio* to *Constantinople*, aboard another vessel; but *monsieur Ripera*, who deliver'd me from the danger I was in at *Rhodes*, would not consent, saying, it was better for me to go to *Smirna* to take my pass, and continue my voyage thence; because if I went aboard *Turks* or *Greeks* again without a pass, I might easily be made a slave in any island of the *Arcbiipelago*, where there were no *French*; which being also told me by the consul, I alter'd my resolution, and took the good advice they gave me, and the sooner, because the winter being well advanced, and the voyage 500 miles, I might have lain some months by the way.

I embark'd with the same company aboard the same tartane, on *Tuesday* the 24th, and the wind being fair, soon left the land of *Cubimel* on our right hand; but near the island *Spalmatore* the wind fail'd us, and therefore we advanc'd but little that night, between the continent and the island, which is inhabited by *Turks* and *Greeks*. *Wednesday* the 25th the calm continu'd, and a little gale coming up in the evening, we pass'd by *Cape Caradorus*, leaving *Metellin* on the left. The wind freshning at night, we entered the gulph of *Smirna*, steering towards the city, thorough the passage the continent leaves on both sides, for the sea. The wind fal-

VOL. IV.

ling again on *Thursday* the 26th, we made little way, but about sun-set, it blew hard against us, so that with much tacking, we got at midnight within the fort, and anchor'd by it. They say this castle was built thirty years since, because a Jew, who farm'd the customs, fled into christendom with two vessels, at the same time that the grand seignior sent orders by a *Bassa*, to have him carry'd to *Constantinople*; others say, it was on account of the *English* and *Dutch*, that were in the harbour refusing to serve against the *Venetians*. This fort is low built, with two bastions at the angles, and without any modern fortification; but it is furnish'd with twenty one pieces of cannon, lying level with the water, and well garrison'd. The commander of it suffers any to go into the port, but none to go out without his leave.

The same contrary wind continuing on *Friday* the 27th, we tack'd up into the harbour of *Smirna*, and came to an anchor in the evening, going immediately with the four *Frenchmen*, and captain of the vessel to the *French* consul's, who receiv'd us courteously, giving us a good collation, and making us drink merrily. Taking leave of the consul and friends, I went to provide me a lodging, and took one in a *Frenchman's* house for half a piece of eight a day, and a quarter for my man; but any man that would be saving, may find in the city some *Xani*, or vault apartments, capable to contain some thousands, especially the *Xancelebi*, cover'd with lead; and that of the *Armenians*, where the caravan of *Persia* sets up; where for a *Dutch* piastre, or little more, a man may have a room without a bed for a month, and live suitably to his purse.

*Smirna*, *Lamira*, *Lamires*, or *Sarchi-Smirna* city, is seated in 38 degrees of latitude, partly on the plain along the *Egean* sea, commonly call'd *Arcbiipelago*, and partly on the hill. It is thought to have been founded by the *Amazons*, in the year of the world 3203, or by *Thesens*, as others will have it. It was once an archiepiscopal see, and at present is the metropolis of the country, and mart of the east, because standing in a place, by which the commodities of *Europe* and *Asia* must needs pass. The city is not so famous for the birth and death of *Homer*, if it be lawful to decide so ancient a controversy, as it is renowned for the holy bishop *Polycarpus*, who writ upon the mysterious book of the *Apocalypse*, or revelation in *Smirna*, *Ephefus*, *Pargamo*, *Thyatira*, *Philadelphia*, and *Laodicea*. The compass of the modern city is about four miles,

O

its

GEMELLI  
1693.

The castle  
at the port  
of Smirna.

**General** its shape irregular, somewhat drawing  
1693. towards a triangle, whose side next the  
mountain, is longer than either of the  
two that lie upon the sea, and this for  
want of ground. There is no beauty  
in the buildings, for they are little hov-  
els, after the *Turkish* fashion; some of  
them very low, and of mud-walls, re-  
built since the last earthquake, which  
levell'd the greatest part of *Smirna*;  
but the *Xans*, as I said before are mag-  
nificent, and cost much building. The  
streets are large, and all the city is one  
continu'd Bazar or fair, where nothing  
that can be wish'd for is wanting, either  
for cloathing, sustenance, or pleasure,  
because all the best commodities of *Eu-  
rope* and *Asia*, are brought hither to be  
sold at good rates. Provisions are not  
so cheap as in the other *Turkish* domi-  
nions, because of the great resort of  
strangers, who amount to above 50000  
souls, between *European* christians, *Greeks*,  
*Armenians*, *Jews*, *Turks*, and others.

**The port.** The port is capable of containing several  
fleets, in which there are always hundreds  
of ships of several nations. The four  
galleys of the place are in the inward  
port, defended by a mean fort, with  
few pieces of cannon, and a weak gar-  
rison.

There being an ancient castle in the  
upper part of the city, said to be built  
by the empress *Helen*, I went to see it  
**The castle** on *Saturday* the 28th. Being upon the  
hill that commands the city, I observ'd  
on the left hand, an ancient structure,  
which they said, had been the palace of  
the *Greek* council, when *Smirna* was the  
metropolis of *Ionia*, and the lesser *Asia*.  
Going into the castle, at the great gate,  
towards the city, I found on the left  
hand, a statue of half the body of the  
afore said empress, and under it some *Tur-  
kish* characters, with a marble tomb,  
and by it an ancient church, converted  
into a *Mosque*, but all ruin'd, and fev-  
eral marble pillars lying about the  
ground. Close by, there is a descent  
into a place under ground, in which  
there are twenty four vast great columns  
that support certain vaults; the bottom  
of it being well pav'd, shews it was a  
cistern for the use of the castle. The  
compass of the said castle is almost a  
mile, in the nature of an amphitheatre,  
with six plain towers next the city; the  
others on the opposite side being ruin'd.  
Within this space, there lie many stones  
and pillars about the ground, which shew  
there were several dwellings within it.  
They say, *St. Polycarpus* was expos'd to  
be devour'd by lions, in the square place  
of this castle.

Coming down a-foot from the hill, I  
saw a very antient fabrick, which seems  
to have been a fort of the old city;  
whereof on the north side, some small  
part of the walls remain, which time has  
not yet demolish'd. The new city is all  
open.

The consuls of *France*, *England*, and *Consul*,  
*Holland*, live very great, in stately hou-  
ses upon the shoar; for that employ-  
ment, in a place of such great trade, and  
where there are so many rich merchants,  
is very profitable.

There are three monasteries for ad-  
ministring the sacraments to catholicks;  
one of the *Jesuits*, another of *Capucins*;  
who being *French*, are maintain'd by their  
king; and the third of poor *Venetian Re-  
colets*, who live miserably. There are fev-  
eral other monasteries of *Greeks*, and  
synagogues of *Jews*.

*Monday* the 30th, I went a little way  
out of the city, to divert my self with  
shooting, there being abundance of all  
sorts of game; as wild boars, deer, and  
other wild beasts, besides partridges,  
godwits, thrushes, ducks, and innume-  
rable other birds. This I could do with-  
out any apprehension of the *Turks*, be-  
cause the *Franks* have all imaginable li-  
berty at *Smirna*, cloathing themselves af-  
ter the *French* or *Italian* manner, as they  
please; and going about, either within,  
or without the city, by water, or by land,  
without any restraint, or molestation. Fish  
is as plentiful as game, and the sea pro-  
duces as much variety of shell-fish, as the  
land does of fruit, which is extraordina-  
ry good and delicious, particularly the  
pomegranates, which are far beyond those  
of *Naples*, and whole sacks full of them  
are carried to *Constantinople* to sell. This  
place also produces *Scammony*, *Opium* and  
galls.

All these delights and pleasures are al-  
lay'd by the uncomfortable dwelling ther-  
in in that city, where the malignity of the  
air causes pestilential fevers, but especial-  
ly in the months of *May*, *June*, and *July*,  
and the great heat of the summer, makes  
people weary of their lives. Add to this,  
the frequent plagues and earthquakes,  
which if they fail one year, are sure to  
be felt the next, burying the inhabitants,  
and levelling the houses.

*Tuesday* the 1st of *December*, I went to  
see the four galleys of the city, which are  
under a *Bassa*, call'd commandant; a *Cadi*  
governing the city. I made use of a *Jew*  
for my interpreter, hiring him for a small  
matter a day; for the *Jews* are in such a  
miserable condition in the dominions of  
the *Mahometans*, that they think them-  
selves happy to be hired at any rate.

They easily speak *Spanish*, their mother tongue being no other than a corruption of that language ; and therefore any man that has this tongue, may travel through the East, without any difficulty, there being *Jews* throughout all *Turky* and *Persia*, that serve as interpreters at an easy rate. This *Jew* led me on *Wednesday* the 2d, to see the two custom-houses of the city ; one a great one, call'd of the trade, where is paid the duty of the great quantity of raw silk the *Armenians* bring out of *Persia*, and the *Franks* transport into *Europe*, as also spun cotton, camelot, hides, wool, rhubarb, and other commodities. The other custom-house, which they call of *Stambul*, standing in the left angle of the bottom of the port, is for the trade of *Constantinople*, *Salonichi*, and other places of *Turky*. They are both easier than ours in *Europe* ; for there my trunks were open'd, and look'd into, no farther than the top, and that very civilly ; but in *Syria*, I found them severe, examining every thing in a very ill manner.

Going to hear mass, on *Thursday* the 3d, at the church of *St. Anthony*, of the *Recolets* ; I saw they carry'd a corps in procession, with a cross on high before it, and the religious men in surplices, as is us'd in *Italy* ; which the *Turks* do not allow elsewhere. Being to go to *Constantinople*, and wanting a pass, I went on *Friday* the 4th, to the *English* consul ; and beginning to tell him, that I was of the kingdom of *Naples*, and a subject of his catholick majesty's, who was then in alliance with *England*, he would not allow me to proceed, understanding what it was I desir'd ; but interrupting me in a haughty manner, said, I can grant no protection ; and have you a care of the *French* consul, lest he knowing you are a *Neapolitan*, put the *Turks* upon doing you some kindness. Perceiving by his way of talking, that he would not easily be prevail'd upon to alter his mind ; I took my leave, and going to the *Dutch* consul, had the same answer. Not knowing what to do, I went to the *French* consul, and telling him very plainly who,

and what countryman I was, and that I <sup>GEMELLI</sup> desir'd a pass for *Constantinople*, he ver- 1693.  
civilly granted it.

*Saturday* the 5th, the great rain kept me from seeing any thing. *Sunday* the 6th, going to the *Xan*, to look for my *Jewish* interpreter, a servant of the *Caragi Bassa*, or chief of the receivers of the taxes, ask'd me, whether I was a *Portuguese*, meaning whether I was a *Jew* ; and I telling him I was not, he would not believe me, but carry'd me before his master, who having ask'd me the same question, and I answering that I was a *Frenchman*, and tax-free, he would have a pledge of me, which the consul soon caus'd him to restore.

Three ships of *Ragusa* were under sail upon *Monday* the 7th, for *Leghorn*, but the *French* consul stop'd them, upon pretence they brought *English* and *Dutch* cloaths from thence to *Smirna* ; but others said he would have had 1000 pistres of each to discharge them, w<sup>h</sup> of they sent their complaints to the *French* ambassador, but what the event was I know not.

*Tuesday* the 8th, I went to the *Jesuits* church to take the advice of a friend concerning my voyage. The church was finish'd, but the house or monastery was then building ; the fathers in the mean while living in boarded rooms. They are allow'd for their maintenance to receive fifty pistres of every vessel that comes in under *French* colours. *Wednesday* the 9th, I din'd with monsieur *Ripera*, with whom I left my luggage till my return. *Thursday* the 10th, in the morning, the *Aga* of *Seyde* came to see me, and having treated him with chocolate, the brute, who had never tasted such liquor, whether that or the fumes of tobacco disturb'd his head, complain'd grievously of me, saying I had given him a sort of liquor to make him mad ; and had his distemper continu'd, I had suffer'd as I deserv'd, for giving chocolate to an ass. He said he was grandson to the visier *Kupurli*, and flatter'd himself with the hopes of rising to that dignity ; as if there went nothing to the obtaining of it, but being grandson to the other.

## CHAP. II.

*The Author's Voyage to Adrianople, and the Description of that City, as also of the Isles of Tenedos, and Mitylene, and the City of Gallipoly.*

**F***riday* the 11th, the weather being fair, I took leave of my friends, and bargaining for my passage aboard a *Turkish*

vessel call'd a *Cbiamber*, imbark'd on *Saturday* at night, paying for a cabin a-part, that I might be separate from those

GEMELLI those scoundrels. About midnight we  
1693. fail'd with a fair wind.

*Sunday* the 13th, two hours before sun-  
set, we found our selves opposite to, and  
two miles from the fortrefs of *Foggia*,  
seated on that point of land, which is  
on the left, entering the bay of *Smirna*,  
which is forty miles in length, and this  
secures the entrance into the port of that  
city, standing at the bottom of the bay.  
This *Foggia* is small, but wall'd, and de-  
fended by a castle. We arriv'd at *Me-  
tellin* about night, and landed there, ha-  
ving fail'd 80 miles.

*Metellin*  
island.

*Metellin*, or *Mitylene*, antiently known  
by the names of *Lesbos*, *Homerte* and  
*Macaria*, is call'd by the *Turks* *Medilli*,  
and is 360 miles in compafs. No island  
in the *Archipelago* is more famous; for  
it was the country of *Pittacus*, one of  
the seven wise men of *Greece*, of the  
learned *Sappho*, of *Arion* the musician,  
and of other renowned men. The me-  
tropolitan city is seated on the north  
east side, on a rock, which butting into  
the sea, makes two several ports. That  
on the east side serves for the galleys,  
and there were two in it; the other for  
all sorts of ships. They are both de-  
fended by a castle on the hill, and an-  
other fort at the foot of it, looking to-  
wards the west.

The houses of the city are low, and  
inhabited by *Turks* and *Greeks*; yet there  
is an excellent *Bazar* or market. The  
fertile soil produces good wine, and all  
things else necessary to live well. This  
island was taken by *Mahomet II.* in the  
year 1464.

*Monday* the 14th, we weigh'd anchor  
five hours before day, and set out with  
little wind, which prov'd contrary after  
noon. At sun-set we pass'd the streight  
of *Baba*, which is five or six miles  
over, made by the westernmost point of  
the island of *Metellin*, and cape *Baba* on  
the continent of *Natolia*. It was call'd  
*Baba*, as they told me, in memory of an  
old man bury'd there, who, whilst he  
liv'd, gave the *Turks* notice, whether  
there were any christian privateers either  
within the streights or without. About  
two hours after night, we came to an  
anchor in an open road beyond the cas-  
tle of the town of *Moleva*, having run  
sixty miles.

*Troy ruins.*

*Tuesday* the 15th, four hours before  
day we fail'd again, the *Turk* not daring  
to keep out at night for fear of pyrates,  
and not for want of wind. The good  
weather continuing, two hours before  
sun-set we pass'd between the island of  
*Tenedos*, or *Bosciada*, as the *Turks* call  
it, and the continent of *Natolia*, ha-

ving run fifty miles. The ruins of old  
*Troy* were to be seen close by, inasmuch  
that the wind ceasing, I caus'd my self  
to be set alhoar, to divert my self,  
viewing the remains of that famous  
place. I found for above a mile along  
the coast, white marble stones and co-  
lums both standing and fallen; which  
appear to have belong'd to the port,  
and walking above a mile up the coun-  
try, among the trees, saw old structures  
all of free-stone, some standing, some  
fallen. I also saw a large square tower  
of great stones, which had some small  
windows about the first cornish, and the  
roof was round, by which I judg'd it  
in antient times to have been a temple.  
I went no further, because the *Rais* or  
master, would allow me no more time;  
who told me, that for a days journey  
up the country, there were all along  
such ruin'd structures, and good marble  
lying about. The *Turks* call it old *Con-  
stantinople*.

These *Mahometans* never neglect to  
say their prayers five times a day; the  
first at break of day, the second at  
noon, the third about evening, the fourth  
at night-fall, and the fifth two hours  
after night, only altering the third in  
summer, which begins sooner. Every  
one prays by himself, kneeling on a  
cloth, and facing towards *Meca*; but  
when they are in towns, they all go to  
the *Mosque*, one of their priests calling  
them with frightful cries from the top of  
a steeple.

The wind freshning, we put into  
the island of *Tenedos*, that same day.  
This island formerly call'd *Leucopbris*,  
and *Lyrnessus*, and now by the *Turks*  
*Bosciada*, is one of the most northerly  
in the *Archipelago* towards *Asia*. It was  
very populous and rich in the reigns  
of the kings *Priam* and *Laomedon*. It  
is famous among writers for the *Greeks*  
lying conceal'd there in the *Trojan* war;  
and for the differences between the *Ve-  
netians* and *Genoeses* about the possession  
of it. The middle of the island is plain,  
the edges mountainous, and produce  
good muskadine wines. Its compafs  
is fifty miles, wherein there are several  
villages, and the chief city of the same  
name, stands at the foot of a moun-  
tain in the east angle of the island,  
looking towards the *Dardanelles*, from  
which it is but 18 miles distant. It is  
none of the meanest cities in the *Archie-  
pelago*, and was famous among the an-  
tients, for a temple near it dedicated  
to the God *Neptune*, to which the na-  
tions far and near made their vows, and  
sent offerings. It is open, but large,

its low houses inhabited by *Greeks* and *Turks*, reaching to the foot of the hill, and along the sea-shore. The castle that commands it, built on the point of a rock, has many dwellings of *Turks*, and garrison soldiers within the walls. The same castle secures the port, which is very good and capacious enough for a fleet; the two galleys of *Rhodes* were then there under the command of *Am-maza-mamma*.

Not far from *Tenedos*, is an island twice as big as it, call'd *Toffi*, and in the *Turkish* language *Himbros*, in which *Greeks* live, who pay tribute both to the *Turks* and *Venetians*.

Wednesday the 16th, at night it rain'd hard, which was bad for the passengers that lay upon the deck; but at break of day the weather clear'd up, and the wind came up fair to enter the *Dardanelles*; which made the drowsy *Rais*, or master, weigh anchor, after he had lain a night in port, as if he had been to row in a boat. The wind fail'd in sight of the village of *Ghiaurcbivij*, in *Asia*, three miles from the entrance of the *Dardanelles*; so that they were forced to row the *Cbiamber* with twenty oars, beyond the castle of *Natolia*, by the *Turks* call'd *Anadolissar*. Opposite to it is the other the *Turks* call *Urmeli-Issar*, that is, the castle of *Romelia*, because seated in that province. These forts were built not long since to secure the entrance of the streight, which being twelve miles distant from one another, cannot obstruct the passage of ships that will pass between them in the middle. That on the *Asian* side is seated on a plain, with two bastions parallel to the entrance, and two to the streight, all furnish'd with heavy cannon; as is the curtain, on which there are at least sixty pieces, besides small ones planted on the upper part. There is in it a garrison of five hundred soldiers, as I was told, who live partly in the castle, and partly in several little houses without it; the village of the *Greeks* is on the top of the hill. That of *Romelia* stands on the cliffs of a hill, reaching over a great part of it with good buildings. In the midst of it are the houses of the commandant, and other *Turks*, with a *Mosque* and magazine. That side, towards the streight, has as many bastions as the other in *Natolia*, and built after the same form; but it has two others on the land-side, and is not inferior to the other for goodness, or number of cannon. The village of the same name is on the top of the hill.

Thursday the 17th, we set sail three hours before day, with a good north-

VOL. IV.

wind, which before noon brought our *Cbiamber* between the two other forts by the antients call'd *Seftus* and *Abydus*, which being in the narrowest part of the channel, but two miles distant, do so secure the passage, that it would be dangerous to attempt passing without the *Turks* consent. *Abydus*, seated in *Natolia*, is stronger and better than the other, because it had six bastions on the three sides that secure the streight, with about thirty heavy pieces of cannon on them, besides the small ones on the upper port. In the middle is a good bulwark, and about it a deep ditch with a draw-bridge. The neighbouring town is not wall'd, and is unwholesome in summer, by reason of the bad water; yet there is a *French* consul, appointed by the ambassador that resides at the port. The other castle in *Romelia* is not so regular as this, by reason of the unevenness of the ground it is built on; but it has a bastion at the angle that points towards the other castles; in the midst of a place to retire to, defended by a large and well built bulwark; and three little towers on the land-side, with a long curtain on the streight. As for cannon, it has as much as the other; and besides one piece of such a prodigious bigness, that a man may sit in it. The houses of the *Turks* are between the wall of the fort, and another at a distance on that side, that looks towards the new castles. The top of the hill is adorn'd by art with good houses, and by nature furnish'd with good water, a fertile soil, and excellent air.

The *Rais* having landed some bales of rope, we held on our course, leaving behind us after three miles sailing, *Maidas*, a good town on the shore of *Romelia*, abounding in wine; which the *French* merchants use to buy cheap, being about three pints for a half penny. Nine miles further is the ancient city of *Sebie-Stambul*, the first the *Turks* took when they drove away the christians, and made themselves masters of *Constantinople*; nothing remains of it at present but a ruinous castle. To conclude, we arriv'd at the city *Gallipoli* before sun-set, it being thirty miles from the two castles. I admir'd the wonders of nature in sailing through this streight, for in some places it is but three miles over, in others ten, and in the widest thirty, stretching three hundred miles in length to the black sea, and much differing in all parts where its waters have a rapid course.

P

Being

GEMELLI  
1693.

**GALLIOLI** Being landed, I went to the *French* vice-consul's, to procure some safe way of travelling to the court of *Adrianople*. He would not permit me to lodge any where but in his own house; which I willingly accepted, rather than lie on the ground in a coffee-house; there being no *Xany* in *Gallipoli*. He gave me an excellent supper, and good bed, which I had need of, having had five bad nights at sea; but he being a *Jew*, and *Rabbi*, and consequently learned, and a punctual observer of the *Hebrew* superstitions; I could not conform to his pharisaical way of living, as to the manner of eating. He would never allow me to cut the bread with my own knife but with his; and what made me laugh most was, that he made no other use of those knives he cut the meat with; and they were all to be spotless. As for my journey, he said, if I had arriv'd one day sooner, I might have gone with a *Janizary*, who carry'd some letters from the king of *France* to the ambassador, deliver'd to him by a *French* captain, who was come from *Marseilles*, in twenty four days; however he would use all his endeavours, to get me a secure passage; since I had refus'd to go aboard the said vessel to *Constantinople*, being very desirous first to see the *Ottoman* court.

*Gallipoli*  
city.

*Gallipoli*, in the *Turkish* language call'd *Jebbole*, seated in 42 degrees of latitude, is a city three miles in compass, seated in *Romelia*, towards the west. It is not wall'd; and the houses tho' low, are of free-stone, and have good pleasant gardens. Formerly there was a fort on the hill, which commanded the port, but it went to ruin through the laziness of the *Turks*. On the sides of the mole were also the arsenals, one on the right to secure three galleys, and the other on the left for twelve, where the vice-consul told me the *Turks* laid up their galleys that escap'd the havoc a *Venetian* ship made among them at the mouth of the streight, which rotted away there. The arches are now fallen down, and only the walls are standing. There is a good exchange cover'd with lead, with several little cupola's, which is let to traders by the governors of a *Mosque*. The inhabitants of this city are about 6000, *Greeks*, *Jews* and *Turks*, whose greatest employment is to make excellent arrows. It is a place of great trade, by reason of its convenient situation, being in the way to *Constantinople*, and *Adrianople*; inasmuch, that the *Bassa*, who governs it, makes about one thousand *Pia-*

*fires* a year of it; besides the profits of the *Cadi*, *Aga*, and other officers. This city formerly was the out-let for pleasure to an antient city seated opposite to it in *Asia*, whereof nothing remains at present, but the ruins on the shore and hill; where afterwards a little city call'd *Lassie* was erected. *Gallipoli* has plenty of corn, wine and fruit, especially excellent winter melons, of which I bought nine very good ones for three *Carlines* of *Naples* money; about eighteen pence *English*. The country wants for no game, as deer, hares, partridges, ducks, and other fowl. The *Bazar*, or market of the city is very large, and better furnish'd than that of *Alexandria*, there being variety of commodities, of artists, and handicrafts, each in their proper place.

*Rapbael*, son to *Simon* the vice-consul, us'd all his endeavours on *Friday* 18th, to find some safe conveyency for me to travel to *Adrianople*, but could neither meet with the *Caravan*, that uses to carry silk, nor any other company that I might go with, free from the danger of the *Janizaries*, who returning from the war to their winter quarters in *Natolia* scatter on the road, to rob and murder all they meet. In the mean while the *Xaxan*, or *Rabbi*, perswaded me to take the way of *Constantinople*, or *Rodeston*; and he would give me his letter, which would render the way easier and safer; but this did not make me alter my resolution. He was so much concern'd about the safety of my journey, because I had signify'd to him, that I was sent by the merchants of *Marseilles* with letters of great moment to the ambassador. It must not be thought strange I should sometimes make my advantage of a lye; for being in a country of barbarians, who are enemies to christianity, and in time of war, it was necessary to counterfeit, change my habit, disown my country, and pretend other business to prevent losing my baggage and liberty. The *Turks* are very jealous, and easily wrong a *Frank*, when he is too open, and has not words to shift the danger that threatens him.

Whilst I was contriving for my journey, good fortune ordain'd that a coach came, which was returning empty to *Adrianople*; therefore sending for the coach-man, by an *Armenian* that was to go the same way, I agreed to give him a zecchine for my self, and a *Piastre* for my servant. Then carrying him before the consul, to ask his opinion whether I might go safely, he said,

I might,

the profits of officers. This let for pleated opposite thing remains on the shore a little city Gallipoli has fruit, espesons, of which ones for three about eight-country wants hares, par-fowl. The city is very d than that variety of handicrafts,

the vice-con-s on Friday veniency for er, but could van, that uses her company from the who return their winter on the road, ey meet. In n, or Rabbi, way of Con-and he would would ren-fer; but this ry resolution. d about the use I had fig-sent by the th letters of assador. It nge I should ge of a lye; barbarians, nity, and in ry to coun-disown my r businels to and liberty. , and easily s too open, the danger

for my jour-that a coach ng empty to ng for the n that was ed to give and a Pia-en carrying sk his opi-ly, he said I might,

I might, because the coach-man was a Bulgarian christian, of the country of *Felibe*, four days journey from *Adrianople*, and known for having made several journeys to *Gallipoli*. After which, the bargain being ratify'd, the Bulgarian gave me ten *Para's* earnest, contrary to the custom of *Italy*, where the coach-man gives not, but receives.

In the mean while, the consul took care to make much of me; he being well to pass, and having many slaves, and *Italian* furniture; so that after a good dinner at noon, he gave me a plentiful supper at night, of fish for me, and flesh for himself, without omitting his *Jewish* superstitions in eating, as well in praying, as not allowing me to cut the bread. Finding the melons better than those of *Parabita*, in the kingdom of *Naples*, I laid in a stock of them on *Saturday* the 19th, after which the *Rabbi* took his leave of me to go to the synagogue or school; desiring me to excuse him, that he did not bear me company, and to give his respects to the ambassador, believing I was a great friend of his. In the mean while, the *Armenian* hastned me, because the Bulgarian was ready, and might go without us, so that I was in great trouble to get my baggage carry'd, it being *Saturday*, when no *Jew* would carry it, the *Turks* being above that employment. My servant and the *Armenian* supply'd this want, carrying it to the *Xan*, where the Bulgarian was with the coach ready. Getting into it, we travell'd thro' a plain and well cultivated country, with now and then a pleasant small rising ground, still keeping the freight on our right hand. We left *Buloyr*, a great town behind us, having rode fourteen miles, and lay that night at *Cane*, the same number of miles further. The *Xans*, or *Caravanseras* in *Turky*, are nothing but long stables, in the midst whereof the horses stand, and on the sides somewhat higher, their masters, who are to provide themselves with meat, and dress it. There is this conveniency in it, that a man is not impos'd upon by his host, as is done in *Christendom*; for the lodging is given *Gratis*, being legacies left by *Turks*, for the good of their souls. A *Janizary* that came afoot assisted me in all I wanted, making my bed with mats, and keeping a fire all night to warm the cold room. True it is, I could not sleep for his prating and smoaking with three *Spabies* his friends.

*Sunday* the 20th, we took coach before day, and travell'd a plain road thro'

a cultivated country ten miles to the village of *Julgia-Mussurma*; after which we entr'd many mountains cover'd with small trees fit for nothing. Having drove eight miles of this way, we came again into the plain, and went seven miles further to rest at *Malgara*.

This is a city seated at the foot of a *Malgara* mountain, containing about 10000 souls <sup>city.</sup> *Turks*, *Armenians* and *Greeks*, under the government of a *Bassa*, to whom 300 villages about it are subject. Here are seven *Mosques* cover'd with lead; and a large place enclos'd with six cupola's, which serves for an exchange, or *Bazar* of the richest commodities. Had it not been for the mountain, we had that day travell'd forty miles, for the Bulgarian kept his horses to a round trot. But I not being us'd to sit after the *Turkish* fashion, with my legs across like a sailor, suffer'd much in that coach without seats, and so contriv'd that any *European* would have found it very uneasy. At night we lay as before, for nothing, in a *Xan*, or *Caravansera* with our horses.

*Monday* the 21st, we set out an hour before day, travelling over a plain country but little cultivated, and at the end of twenty miles, came to the village of *Armanli*, and going twenty miles further, stay'd at night in the village of *Casim-chiupri*; near which is a famous bridge <sup>A long</sup> with one hundred and sixty four stone-arches <sup>bridge.</sup> two miles in length, over the river and morafs of *Cogbine*. This river is as wide as the *Volturdo* of *Capua*, in the kingdom of *Naples*, and its channel being too small, it often over-flows.

*Tuesday* the 22d, I walk'd over the bridge, and thought its structure as remarkable as its length. Then we advanced four miles along a deep chalky way, where the horses had much difficulty to draw. It being night, and seeing the Bulgarian, who would go no further, talk in private with a *Janizary*, made me suspect some treachery; but the *Janizary* seeing me with my gun in my hand went his way, and we at break of day continu'd our journey with a *Caravan* of camels. We met several companies of *Janizaries*, in thirty miles we had to travel, the way all along good, and the country little cultivated for want of people, and at last came towards evening to *Adrianople*.

*Orefesit*, *Orefte*, or *Viscudama* in for-<sup>Adrian-</sup>mer times, now in our language *Adri-*anople, from the emperor *Adrian*, and in the *Turkish* *Adrine*, is seated in 43. deg. of latitude. It stands in so pleasant a country, that *Amurat* the *Turkish* emperor, leaving *Bursa*, remov'd his

**GEMELLI** his imperial court thither, and some  
1693. of his successors continu'd it; so that it  
was not only supported, but the number  
of its inhabitants increas'd: its compass  
is between seven and eight miles, including  
the old city and several gardens. There  
is nothing beautiful in it, the houses being  
low, built of wood and clay, and some of  
brick; and the streets so dirty, that a man  
must wear boots in winter; so that it looks  
more like a great village than a city. There  
is no doubt but the Ottoman emperors have  
made it much more populous, as appears by  
the increase of its buildings; for the old city  
where they dwelt before the taking of  
*Constantinople*, was much less. I told in  
the compass of its wall, from the structure  
call'd *Ali Bassa*, to the gate of *Magnasiassi*,  
that is, the gate of the river, only twenty  
four towers, some standing, some fallen,  
and very near to one another, which shews  
the smallness of the place. The rest of the  
wall being fallen, the *Turks* take no care to  
rebuild it, and so leave all *Adrianople* open.

Several waters encompass the city; but  
the chief of them are the three rivers *Tungia*,  
over which there are three stone-bridges, *Arda*  
and *Merici*, and there are some hills that  
command it on the east side. It is inhabited  
by *Greeks*, *Jews*, *Armenians*, *Turks*, *Valacians*,  
and other nations; but the number is not  
always the same, for in winter there are  
many soldiers that return from the war;  
however, little more or less, they are about  
100000. It is dear living there, because  
most things are brought far. The air, as  
has been said, is wholesome, and the country  
delightful, especially in summer, because  
of the green fields and gardens water'd by  
so many streams, and in winter for plenty  
of game. For the most part, the streets are  
set out with good shops, cover'd with  
boards, after such a manner that there is  
light enough comes in at the sides. The  
greatest part of the city is on a flat, the  
rest in valleys and on hills, which makes  
it so dirty.

I was hard put to it that night to get  
a room, and had not a *Frenchman* given  
me one that belong'd to another, that  
was then in *Constantinople*, I must have  
lain in the street; because there are not  
lodgings enough for every body in the  
city, and what few there were, the soldiers  
had taken up, that staid with the emperor  
after the campaign.

*Wednesday* the 23d, I went to pay my  
respects to the *French* ambassador, who  
liv'd beyond the bridge and village of  
*Jenimaret*, two miles from my lodging,

and near the grand seignior's seraglio,  
call'd by the *Turks* *Serrayoussi*. He receiv'd  
me very courteously, and offer'd me his  
protection, which I had need of in that  
barbarous, and false country. After dinner  
I went to see a wonderful exchange, half  
a mile in length, call'd *Ali Bassa*, taking  
the name of the founder. It is a vast arch  
with six gates, and 365 rich shops on both  
sides, furnish'd with all sorts of rich goods,  
including those that are under the arch of  
the great gate. These are kept by *Turks*,  
*Jews*, *Armenians*, and *Greeks*, who pay  
five piales a month for each shop to the  
founders heirs, or such as have purchas'd  
them, and half a piale to the *Mosque* of  
*Vecerfeli*, granted by the grand seignior,  
to whom it belong'd.

Near this exchange is the street call'd  
*Seraci*, full of good shops of all sorts of  
commodities, which afford a delightful  
sight for a mile in length. It is cover'd  
with boards laid one over another, with  
small holes on the sides to let in the light.

Taking a *Jew* along with me on *Tburni*, *Selim's*  
day the 24th, I went to see sultan *Selim's*  
*Mosque*, so call'd because built by him,  
which standing on the side of a hill that  
is in the midst of the city, exposes its  
magnificent structure to be admir'd on  
all sides. There are four gates to the  
first spacious place about the *Mosque*,  
and three others to the inner, cover'd  
with thirteen leaded cupola's, and supported  
by sixteen good marble pillars like a  
cloister, among which there are four  
green ones before the gate of the *Mosque*.  
In the midst of this cloister is a good  
marble fountain, for those that go in to  
pray, to wash them, after the *Turkish*  
fashion. There are five gates to the  
*Mosque*, two whereof are shut, being the  
way into the grand seignior's feats; the  
others open for all people. Eight large  
columns support the cupola in the middle,  
and twelve arches, on which the other  
eight cupola's rest, all full of *Arabick*  
characters. About it are galleries supported  
by marble pillars, and surrounded with  
banners below. All the pavement is  
cover'd with good carpets, and from the  
arches hang five great iron rings, or  
branches with a vast multitude of lamps  
after their fashion. In the midst of the  
*Mosque* was a great square scaffold rais'd  
eight spans above the ground, and  
enclos'd with wooden bannisters, as I  
suppose, for the *Mullahs*, or *Mahometan*  
priests, near which was a fountain. The

principal nich, which we should call the high altar, is enclos'd with latices, and eight spans above the ground. On the left was a handsome stone pulpit, and opposite to it several little chairs for the *Mullabs*. The cupola's we have spoken of are cover'd with lead, and look glorious when the sun shines on them. The apartments of those that serve are answerable to the grandeur of this *Mosque*; as are four stately towers at the angles, of different workmanship and of stone, very high, which afford a noble prospect at a distance. I went up one of them, which is on the side of the great gate, to behold how artificially it is built, having never seen the like in my days; for going in at one only gate it has, I found three staircases, one of which leads to the first, the other to the second, and the other to the third story of the tower; in such manner that three several persons may go up rounding the tower at once, without ever meeting one another; and if they will pass thorough other doors to the other staircases, they may. The surveyor that contriv'd it was one of the best in *Europe*, and the contrivance is worth seeing.

I went thence to see the *Mosque Ecbigiani*, that is, the old *Mosque*. It has two high towers of free stone, and about it eight cupola's cover'd with lead, besides the great one in the middle. It has no court, or fountain like the rest; but six large pillars before the great gate to support the roof, and five arches. Within there are three wings supported by four square columns, and about it galleries of wood above, and marble below. The pavement is like the other, cover'd with carpets, and the pulpit and tribune for the grand feignior is after the same manner; for all *Mosques* are alike within, having a nich made in the wall, and many lamps hanging.

Going thence, I went into the *Bisfen*, which is close by, a place cover'd, and sustain'd by large pillars, forming two rows in the middle, where there are about 200 rich shops of cloth of gold, and silver, scimiters, pistols, saddles, bridles, stirrups, and other furniture of gold and silver set with jewels, for a compleat horseman. These shops also pay two piastres a month to the owners, and half a one to the aforesaid *Mosque Ecbigiani*, by grant from the grand feignior. It was almost noon, and I heard a disagreeable sort of musick founding in this rich place, and a multitude of *Turks* answer it in a barbarous manner, and asking the *Jew* what it meant, he told me they were praying for the grand feignior. Adjo-

VOL. IV.

ing to this exchange, are the shops of the *Gewelt* silvermiths and goldsmiths in a long cover'd street.

After dinner I went with the *Jew* to the *Mosque of Uccersali*, without being hindered by four *Mullabs* that were praying in it. This has only one court or cloister about it, out of which three gates lead into the *Mosque*, where is a gallery sustain'd by twelve good pillars of green marble; besides six white ones bigger than the others, which are before the aforesaid gates. The roof is cover'd with fifteen handsome cupola's leaded over. At the four outward angles of the *Mosque*, are four high towers of free-stone, and in the midst of the cloister a curious fountain for the *Turks* to wash in. On the inside it has five cupola's, four at the angles, and a great one in the middle held up by two great columns, all painted with *Arabick* characters. In the middle many lamps hang, according to their custom, and on the left of the nich is a marble pulpit; and on the right a high tribune enclos'd with latices for the grand feignior, and another on the left close to the pillar, but without latices. The floor was cover'd with good carpets.

Thence I went to view the grand *Vifier's* palace; where I found nothing suitable to his great post, but only a convenient dwelling after the *Turkish* fashion. We went first into a great court, in which were the stables and officers belonging to them. We pass'd out of that into another, in the midst whereof was a fountain, and several persons on horseback, who attended that great minister. At the front of the court was a long *Soffa*, or place a little rais'd, where many persons stood expecting audience. We could not go into the lodgings, and therefore turn'd back.

By the way we met a bride conducting to her bridegroom. Fifty *Turks* rode on horseback two and two, and after them came the bridegroom on the left, which is the upper hand among the *Turks*; then follow'd the bride in a close coach, with two others following for state. A little further I met the *French* ambassador going home upon a dun horse, follow'd by eight footmen, clad in red, two gentlemen in blew, and four *Janizaries* all on foot.

At last the *Jew* led me to one of their schools, before which there were many women holding their children by the hand. Going in I saw abundance of garments hanging about it, and six persons playing upon instruments. They told me they gave every year about that time 500 suits of cloaths to poor scholars of their reli-

religion, which costs the publick 2000 crowns; and I actually saw several scholars new clad from head to foot in my presence.

Friday the 25th, being *Christmas-day*, I went to hear mass, and receive the blessed sacrament in the church of the *Ragufians*, in the old city, whither a *Capucin*, chaplain to the *French* ambassador came to say the mass, there being no more catholic priests. Friday being the *Turkish* festival, on which the grand seignior goes to the *Mosque*, as has been observ'd before, after performing my devotions I went to see him; but found he was already got into the *Mosque* of sultan *Selim*, and therefore waited two hours to see him come out. In the mean while I observ'd his coach and retinue.

The grand  
seignior's  
attendants.

It was all of wood gilt on all sides, with wooden lettices open every way but behind. Instead of leather it was cover'd with fine red cloth, and lin'd with yellow silk, with sprigs of gold, turn'd up, so that all the wood appear'd, and on each side was sixteen silver nob's gilt for ornament. It being high from the ground, there was a little silver ladder of three steps to go up to it. Six white horses drew it, on the first whereof, and the third on the left, sat the coachman and postillion. In a word, it was a coach fit for any private gentleman in *Italy*, even the horses being but very indifferent; but within there were some quilts or coverlets folded for two to sit on cross-legg'd, and more it would not hold. As for the attendance, there were 200 *Janizaries* with their high caps worn upon solemn occasions, made of white felt, three spans long, and one and a half broad, which falling down upon the back, end in two points; but before, to keep them upright on the forehead, there is a silver plate handsomely wrought and gilt, fastened on a piece of board, as I observ'd speaking of *Grand Caire*; but some officers do not wear it, and others cover it with green cloth. There were also about eighteen *Cbiaus* on horse-back, with every one a little black feather in his turban; and fifty other courtiers well clad, besides thirty *Baltagis* mounted, who had sharp caps of a cinnamon colour. There were several *Bostangis* a-foot, who wore long red caps round at the end, and as

wide as at the head: and it is to be observ'd, that these attendants are only distinguish'd by what they wear on their heads, for every one wears his cloaths of what colour he pleases. There were besides twelve *Obadscis* standing about the coach, (these belong to the grand seignior's bedchamber, and wore little white caps on their heads, like the ducal cap of *Venice*, edg'd about with gold, but the point turn'd back, and open'd.) On one side of this cap was a great white plume like a fan, and below it another of black feathers to please the eye with the variety. The *Aga* of the *Janizaries* wore the same sort of cap, edg'd about with cloth of silver, but without feathers. There were fourteen other attendants clad after the *Roman* manner in silk wrought with gold, with another vest under that fringed with gold, and breeches of crimson sattin. These went a-foot, and had on caps of silver gilt exactly like a piss-pot, with a black plume standing upright before. The *Turks* call them *Jicogban*, that is, the grand seignior's pages.

Prayers being ended, I saw the grand seignior *Hamet II.* come out, and get into his coach, from the steps of the *Mosque*. He was of a low stature, full-body'd, brown of complexion, round fac'd, and wore a black beard that began to grow grey, and by his countenance seem'd to be about fifty years of age. He wore herons feathers in his turban, embellish'd with diamonds, and was clad in white. The *Sclatar*, who carries his sword, and drives away the flies in summer, went into the same coach, and sat next the horses. The people saluted him with shouts, as had also been done in the *Mosque*, with a disagreeable concert of musick whilst he play'd. When he was to depart, the *Janizaries* made a lane in an humble posture, with their hands on their stomach along the court; and the *Cbiaus*, and other officers follow'd him in such order as has been said. *Hamet II.* lov'd to play on a *Turkish* instrument, like a little guitarr, and to sing to it, to divert his melancholy, proceeding from forty years imprisonment. All that has been said of his person and garment, will appear better by the following cut,

Saturday the 26th, crossing over both arms of the river *Tungia*, which waters the north side of the city, on two stone-bridges, I saw on the right a great Mosque call'd *Grogni-Jenimaret*. Before it is a spacious court encompass'd with beautiful structures cover'd with lead, for those that serve the Mosque, and poor people maintain'd there. Three gates on the front and sides lead into this court, and there are as many more to the cloister within, compos'd of twelve white marble columns on the three sides, and of six green ones on that side where the gate of the Mosque is; all of them sustaining twenty little cupola's about the cloister, cover'd with lead. In the middle is a fine fountain, and two high towers on the sides, near which there are other structures with lead cupola's; so that there are in this building, besides the great one, about one hundred little cupola's. This, like all other Mosques, has

vast revenues for pious uses, which are bestow'd accordingly, as in instructing of children, maintaining the poor, and mad people, &c. Besides, they every week distribute to other poor, a thousand okes of boil'd rice (which makes 1800 pounds of our weight) and a sufficient quantity of flesh. Leaving the Jew to keep my shoes, I went into the Mosque, where I found the pavement cover'd with good carpets, and above 1000 lamps hanging in the middle; on the right of the nich was a large scaffold, a little one on the left, and a very high pulpit to preach.

That same morning, being the feast of St. Stephen, I heard mass at the French ambassador's, and din'd with him, as did a French gentleman, call'd the count of *Friol*, and marquess of *Orade*; who every campaign follows the grand visier, to direct warlike affairs, and improve military discipline.

Saturday

Sunday

GEMELLI  
1693. Sunday the 27th, after mass, I went to see the palace of *Caia Mustapha*, once grand visier, and strangled after the siege of *Vienna*, and inhabited by the grand seignior's sister, who was his wife: there is nothing in it to compare to the structures of *Italy*, but only a great square meadow, wall'd in for their diversion. After dinner, I went to see a great vaulted place, a quarter of a mile in length, and cover'd with lead; from one side whereof, there is a passage into another, fifty paces long, where all the shoemaker's shops, who pay the hire to the *Mosque* of sultan *Selim*, near which they stand. The day being fair, and the first time the sun had appear'd since my arrival, I went again into this *Mosque*, to see whether the tower on the left had also the three wonderful stair-cases, as I I said, I saw in that of the right, and the better to see the bigness of the city from its high top. The keeper of the gate, for a few *Paras's*, carry'd me up to the third story, where all three stair-cases end, which are winding, and have 252 steps each. But there is this difference, that the first and second, which lead to the first and second stories, run up quite to the third; but the stair-case on the right, leads only to the third story, or wonderful structure, and answerable to the grandeur of the founder: the other two towers have but one stair-case each.

The *Muradie*.

Going on *Monday* the 28th to see the service dance at the *Muradie*, I found a dead horse by the way, and abundance of *Turks* striving who should cut the best bit out of him. The *Muradie* is a monastery of *Turkish* monks, seated on a hill within the city. Coming up to it, I found a small *Mosque*, before the gate whereof, there were five leaded cupola's, supported by five pillars. Taking off my shoes, as I had done at the other *Mosques*; and going in without any hindrance from the *Turks*, as they do in *Egypt*, I found two places rail'd in on the sides, for Persons of note. On the right of the nich was a closet, enclos'd with lattices, eight spans above the ground, which they told me was for the grand seignior. On the left, was the pulpit to preach in, and two others on the sides of it, four spans high, and made like a square bier, without any covering, where the *Mullah* uses to read, setting cross-leg'd. Eight spans above the ground, the wall was all crufted over with fine tile, the pavement cover'd with carpets, and abundance of lamps hanging in the middle.

Thence I went to see the dwellings of these religious men, which are about the *Mosque*; and then into other apartments, where I found abundance of poor, who receiv'd as alms, plates of boil'd rice, with a little meat and bread, which is distributed every *Monday* and *Thursday*, these being call'd days of turning round. After the mid-day prayers, the superior, with the dervices, or religious men, went from the *Mosque*, to a room near by, in the midst whereof was a square scaffold, three spans above the ground, and enclos'd with bannisters, four spans distant from the wall, in which space several *Turks* sat about. Ten steps led up to another scaffold along the wall, with a closet board'd up, in which, six of eight dervices that went in, play'd on pipes, and beat drums; one sung, and another, when the musick ceas'd, preach'd. At the upper end of the room, there were two chairs bare, six spans above the floor; the superior sat down in one of them, and in the other, an old man clad in red, at whose feet sat another old man, clad in green, like the superior, and the other dervices about the afore said scaffold on the inside.

Their habit is not fix'd, for every one of them wears what cloth, and colour he pleases; but their caps must be of white wool, shap'd like a sugar-loaf; but the superior, and two old men wore a border, like the lower part of a turban about it, and a towel about their necks.

One of those that were upon the upper scaffold, began the ceremony of turning round, to a doleful tune, like that we use to sing, the *Lamentations* of the prophet *Jeremy*, in the holy-week; after which, the superior made a short speech, or sermon, expounding a book, out of which, a dervice that sat by his side, read two and two verses with much gravity; the religious men in the mean while hearkening with great submission, their heads hanging down. This expounding lasted half an hour; after which, the superior came down from his chair, and sat down on a carpet cross-leg'd, after the *Turkish* fashion. The dervices began again to sing from the scaffold, and to read in a little book in the same doleful tone; when he had done, the pipes were play'd on, and drums beaten; to which the superior, and his companion clad in green, danced after a ridiculous manner. Then the eight dervices stood up, and passing by the place, where the superior

He had fate down again, made a low bow to him, which the superior return'd, then he up, and then fate down again. After this, the eight religious men took off their upper garment, and remain'd with the under one, which was close, like a petty-coat, and a short jacket over it. In this habit, they pass'd one after another before the superior, and making their obeisance to him, began to turn round, with their arms spread, and their bare feet, one fix'd upon the other; so that I wonder they did not fall. This painful dance was regulated, according as the musick play'd quick, or slow, and lasted half a quarter of an hour. This ending at a certain sign given, the superior stood up, and made a bow to the mad dervices, who answer'd the same in humble manner; after which, they began the second turn, which lasted the same time, with like bowing at the end. Then the third began, and ended in the same manner. After which, the superior walk'd forward gently with his old companion, into the middle, and turn'd cleverly round upon one foot, as his dervices had done; the fringe that hung down from his half turban, giving him the more grace. Among them was an old man above sixty years of age, who I admire, did not drop down with giddiness. During this fourth turning, the instruments play'd, and one of the eight that were above, sung; and it ended with the usual bowing. Then an old man read, I know not what, in a book, and the superior repeated it, all the company answering with a frightful acclamation, and the dervices withdrew after kissing the superior's hand.

I return'd home in the evening, having stay'd so long to see this *Turkish* folly, like the turning of stags in rutting time; and the boards with the continual use of it, shine like marble. I found some bundles of cloaths before my chamber-door; and enquiring of my landlady what they were, she told me, they belong'd to a *Turk*, just come from *Constantinople*. In the mean while came monsieur *Vanderve*, who had provided that lodging for me, and told me he had words with that *Turk*, who came very saucily to put me out of my chamber, to take it for himself; saying, he was a just man, and of a good religion, and I of a bad one, and an infidel, and therefore he ought to be prefer'd; and the more, because he had lain there other times. *Vanderve* answer'd, That the room had been taken for a *Frank*, who would never bear with his

VOL. IV.

insolence, and therefore he might provide elsewhere; but the *Turk* persisting in his impertinence, left his baggage at the door, and was gone in a rage to the *Cadi*, to make good what he had said. Hearing this, I shut the door, and expected his coming; and accordingly he return'd within an hour, and knock'd at the door three times, but I would not open it, and sent him away with a flea in his ear. He seeing I was no more complying than the *Cadi*, who would not concern himself with the *Franks*, took up that night under a pent-house, open on all sides, and violently cold, the weather being frosty, and the snow lying three spans deep; where his companion, and he being pierc'd with cold, spent the night, burning fire to warm one side, whilst the other froze to the boards. I hearing them often blow the fire, could not forbear laughing, to think that the man of the good religion had so wretched a night of it, and he of the bad, lay in a good room and bed. At break of day the *Turk* went away half starv'd.

*Tuesday* the 29th, I went a shooting to the village of *Caragascbi*, inhabited by *Greeks*: passing over the river *Tungia*, that runs close to the east side of the city, on a bridge of arches, by the *Turks* call'd *Jeniciupri*, that is, the new bridge; and 100 paces beyond it, the river *Merici*, on a wooden bridge, and the marsh on another. These two rivers meet half a league from the city. I had little sport; the *Jew* that went with me being better at his tongue than at sporting.

*Wednesday* the 30th, I was kept in by the snow and cold, but on *Thursday* the 31st went out, and had the good luck to meet the *Cham* of *Tartary*, riding on a dun horse from the seraglio, to his palace, in a village six miles from *Adrianople*. He was of a proportionable stature, brown of complexion, and of a fierce countenance; but about 80 years of age. He was clad in green, and had on his head a *Carpas*, or cap of the same colour, after the *Tartar* fashion; on which two upright feathers were fix'd, which cross'd one another at the top. Twenty servants on horse-back follow'd him, well clad after their manner; besides as many more sent by the grand vizier to do him honour.

*Friday* the 1st of *January* 1694, being a festival day among the *Turks*, I went before the seraglio, to see the grand seignior go abroad. Four *Bustangis* a horse-back went before, carrying red cloth to cover the closet, or tribune.

R

Some

GEMELLI

1693.

GEMELLI 1694. Some time after, it being about noon, twenty *Chians* appear'd on horse-back, after whom came fourteen *Isiogians*, or pages of the grand seignior's, and ten great men of the court, all on horse-back, and lastly the coach, attended by twelve *Obadajcis*, or gentlemen of the bed-chamber; twelve white and black eunuchs on horse-back, and several *Baltagis* a-foot; near the *Mosque* there were about four hundred *Janizaries* in arms. The grand seignior was in the same coach, I mention'd before, and came out of it, at the gate of the *Mosque*, call'd *Muxadia*, near the seraglio. I took notice he had a silk vest on, of a pale red, like a wither'd rose; his cap was adorned with small black feathers, on the ends whereof, there were small red and white spots, which look'd very handsome; upon the edge of the cap there were large diamonds, set together in a jewel, like a pyramid, on the sides whereof, there hung several little gold chains, fastned behind. Being saluted by the people, he return'd it civilly, bowing his head low. After him came the *Sclatar* out of the coach (contrary to the practice of *Christendom*, where the master comes out last) carrying the scimiter. Prayers being ended, which lasted an hour, I saw him come out of the *Mosque*, with the same attendance; but he had not the cap on, which he had given to a servant, but a green turban, with the lower part white, and another yellow silk vest. When he was in his coach, the people saluted him on both sides; and when he was pass'd, all the *Janizaries*, and lords of his retinue, went away about their business, without accompanying him. I have distinctly set down his manner of going abroad upon two several *Fridays*, that the reader may himself observe some small difference there is in his attendance these two times; reserving it for a particular chapter, to give an account of the several names of the *Turkish* officers, that make up the numerous and imperial court of this monarch.

Mistake in Tavernier. There is no truth in what *Tavernier* writes, in his relation *du Serraille* To. 3. pag. 384. viz. that the grand seignior wears three plumes of feathers in his turban, to shew he has three empires under his dominion, which are those of *Constantinople*, *Trebizond*, and *Babylon*; for both the times I saw him, he had but one. And what he says of the grand vizier, is as false; to wit, that when he goes to war, the grand seignior gives him one of those feathers, in virtue whereof the *Janizaries* salute, and own

him for their superior; and therefore it is known when the vizier is in the field, by his master's having but two plumes in his turban. Not satisfy'd with what I had seen with my own eyes, I enquir'd of several *French*, who told me, they never saw him wear any more than one plume; and that having seen the vizier set out for the army several times, they had never known any such thing given him; but that the grand seignior sitting on a high scaffold, that minister passes under it, and dismounting from his horse, humbly prostrates himself on the ground, and has a vest or garment thrown on his back, given him by the grand seignior; which is also done to all the *Bassa's* that go to the wars.

Saturday the 2d of *January*, I stay'd some time in a street, to see the grand vizier go to the seraglio. Before him went thirty *Chians*, and about sixty *Turks* of note, who being come from their governments, made court to him for preferment. About sixty servants follow'd a-foot, in the midst of whom came that prime minister, clad in red, on a fine black horse. He was of a middle stature, and by his looks seem'd to be about fifty four or fifty five years of age. I was told he was much addicted to hunting.

Sunday the 3d, after hearing mass, I went to see the palace of the great muphti, who is in the nature of a pope among the *Turks*, near the *Mosque* of *Alim Selim*, and found it but a mean structure. There were two coaches in the court; but about noon, I saw him go abroad, with about twelve persons attending him. He was clad in green, and had a great turban of the same colour. On solemn days he is clad in white, and seem'd to be between eighty and eighty three years of age.

Monsieur *Granie* having some acquaintance in the seraglio, by his means I was carry'd after dinner to see part of it, which is allow'd to *Franks*, with much difficulty. He went first into the two stables near this royal palace. In the first of them, there were fifty horses for the pages; in the other, as many for the grand seignior, better than the others, and carefully look'd after. A *Buflangi* shew'd me in a room adjoining, the saddles, bridles, targets, foot-cloths, and other rich furniture of gold and silver, set with rubies, emeralds, and *Turky* stones to adorn the horses the grand seignior and his favourites ride. Before the palace, is a square a mile about; in the midst whereof is a fountain, and the colours staff, on which they set up *Mabomet's*

met's standard, when there is any mutiny, that the loyal party may take up arms to punish the offenders.

The *feraglio* or *Serray*, which in the *Perſian* tongue ſignifies a royal houſe, is a regular ſtructure on a plane near the river *Tungia*. It is two miles in compaſs, and has ſeven gates for the conveniency of comers and goers; beſides thoſe of the gardens, which take up ſeveral miles about. We went with the *Buſtangi* in at the biggeſt gate, which is moſt frequented, to a large place 100 paces ſquare, cover'd round for the conveniency of paſſing from one gate to the other, there being three. Entering on the right, into the firſt and ſecond kitchens, I ſaw ſeveral *Halvaggi's*, or *Haccis*, that is cooks, with their ſharp white caps, who dreſs'd meat for the grand ſeignior and his court; but in a diſtinct place from that where hens, and gelt goats are dreſs'd. In the third, I found the confectioners, who make ſherbet, and ſweetmeats; theſe clad like the others. Oppoſite to the great gate, are the apartments of the *Iſcioglans*, or grand ſeignior's pages. There is no

thing remarkable to compare with our palaces of *Italy*, but they are like long halls, where they perform all their exerciſes. Over this is a balcony for the women, who lodge near it. The third gate leads into the emperor's apartments, which are not allow'd to be ſeen.

I can give no account of *Hamet* the ſecond, then reigning, becauſe, tho' I took much pains to get ſome information, no man could tell me how he was inclin'd, having been many years a priſoner, and therefore unacquainted with all things. He was little addicted to hunting, and to women as much as human frailty drew him. But he delighted in doing juſtice throughout his dominions, in rewarding good, and puniſhing evil. By his ſultana, he had two ſons at a birth, of which only one was living, call'd *Ibrahim*. But there are ſtill alive two nephews of his, the ſons of *Mabomet* the IVth, his brother; one of them call'd *Muſtapba*, 13 years of age, and the other *Hamet* of 18, but kept priſoners according to the antient policy of that family.

### CHAP. III.

*A particular Account of all the ſeveral Officers belonging to the Ottoman Court.*

THIS emperor's court being with him at *Adrianople*, and I having had occaſion to uſe ſome *Turkiſh* terms; it will be convenient to explain them in a ſeparate chapter, being fully inform'd concerning them, by particular enquiry, made among the *Turks* themſelves, and *Europeans*, who have reſided there many years.

Eunuchs.

To begin with the Eunuchs, who are the moſt in eſteem at court, they are of two forts, black and white. The blacks have the keeping of the *Ottoman* delight, that is, the women's apartments; and to this purpoſe they pick out the moſt deform'd, whoſe very ſight is frightful. They are cut cloſe by the belly, becauſe of the great jealousy of the eaſtern people, and live apart in good rooms, with excellent order and diſcipline, tho' they are a prodigious number. The chief of them in the *Turkiſh* language, is call'd *Kiſlaragaſi*, or *Kutzliragaſi*; that is, keeper of the virgins, or ſuperintendent of the women's rooms; the keys whereof he keeps. His authority is ſo great, that he ſpeaks to the ſultan when he pleaſes; and by this means, and ſharing in the preſents the *Baſſa's* give the ſultana's for their protection, he gathers vaſt treaſures.

The *Kiſlaragaſi*.

The white eunuchs are cut after the common manner, and have the keeping of the grand ſeignior's lodgings. Before we proceed further, it is proper to obſerve, that there are many thouſands of both kinds in the eaſt; every *Mabometan* that is any thing well to paſs, having ſeveral of them to keep his women. This is a reaſon, they make a great trade of them; for poor parents ſell their young ſons to merchants, who cauſe them to be cut, and ſell them at dear rates; eſpecially thoſe that have all cut off, it being a difficult matter for them to ſurvive it, are ſometimes ſold for 600 crowns, whereas the others may be had for little above 100. Thus, that which makes them moſt valuable to the buyer, is their greateſt miſery, for they cannot piſs but thorough a pipe of ſilver, or ſome other metal. Moſt of the white ones come from the kingdoms of *Aſſan*, *Butan*, *Pegu*, *Ara-can*, and *Golconda*, and the blacks from *Africk*, among whom the moſt deform'd are deareſt and moſt valued; and in them they look upon it as a great beauty to have a flat, or wry noſe, a frightful aſpect, a great mouth, thick lips, and teeth out of their natural order

GEMELLI 1694.

GEMELLI 1694. der. Both sorts of them are proud and stern, but the white ones less than the others, treating those under them with more humanity; nor are they so jealous and mistrustful as the blacks.

The Capi-Aga. The chief of these whites, is call'd Capi-Aga, or Capu-Agasi. He, besides being the first in authority among all the white eunuchs, is always near the grand seignior; he introduces embassadors, and all persons of note; nor can any go into, or out of the grand seignior's lodgings without his leave; so that being useful to all men, he must of necessity grow vastly rich. The grand vizier himself cannot go into the emperor, without being conducted by him; and if any business would admit of no delay, and is brought in writing, the answer must pass through his hands. He by a peculiar privilege granted to no other, wears a turban. He rides on horse-back within the seraglio. He waits on the emperor to the door of the sultana's apartment, where he stops, his authority reaching no further. He is allow'd ten zechines a day for his table.

Four great Eunuchs. Next to him there are four others, which are the *Nozadabafci*, who has the government of forty pages of the bed-chamber; the *Sera-Agasi* who has the charge of seeing all the grand seignior's apartments kept clean, and in repair; he has also particular charge of the pages that keep the linnen, and attend the emperor when he travels. He has under him a deputy, call'd *Seraikejadasi*, to whom it belongs every half year, to change the carpets of the rooms in the seraglio. The third is the *Haznadar*, or *Chaznadar-Bafci*, who is entrusted with the emperor's private treasure, or privy-purse, and the pages of his bed-chamber; the publick treasure for paying of the army, being manag'd by the prime vizier, and three *Teslerdars*, or treasurers general. Of late, it is true, the *Haznadar* has nothing left but the bare title, the *Chaznaket-adasi* having ingross'd all the management. The fourth eunuch is the *Kilargi-Bafci*, or chief of the pages of the *Kila*; who keeps the drink for the emperor himself. He has also all the keys of the *Akagis*, that is, the kitchens and confectionaries; his assistant is the *Kilar-Kesadasi*.

Dogangi-Bafci, and others. The other officers of the seraglio are the great falconer, call'd *Dogangi-Bafci*; the *Kokedar*, who puts on the emperor's vest; the *Kikabdar*, who holds the stirrup when the emperors get a horse-back; the *Selettar*, who carries his sword; the *Hammargi-Bafci*, who has charge of the baths; the *Cianaci-Bafci*, chief of those

that wash the linnen; the *Geritbeg*, chief of all those that practise shooting with a bow every Friday, in the place before the palace. These principal posts, are possessed by those who have gone through the employment of the *Iscioglans*. They wear what colour cloaths they please, and turbans out of the seraglio.

Others, who are in meaner employments, are distinguish'd by what they wear on their heads, being of three sorts; for every one, as has been said, wears what cloaths he will. Those are call'd *Bullangis*, who wear a long red cap, falling back, round at the end, and as broad as at the head. Many hundreds of these look to the gardens of the seraglio; saddle and lead out the horses, and go a-foot with persons of note, who attend the grand seignior upon publick occasions: others row in the barges, when the emperor goes to divert himself upon the water. The *Bostangi-Bafci* is chief of these, and has the charge, not only of the gardens in *Constantinople*, but of others in the country about. And tho' he be taken from so mean a degree as the *Aza-Mogians*, which are christian slaves taken young in war, or paid by way of tribute, yet his employment makes him considerable, and respected by all the *Bassa's*; who endeavour with presents to gain his good will, whom they know to be in their sultan's favour; as being always about him, and sitting near him to steer the barge, when he goes by water.

The *Baltagis* wear a long cap of a *Baltagi*, cinnamon colour, ending in a conical point, or like a sugar-loaf; and serve partly to cut wood, partly to ride out when the grand seignior goes out of the palace; and part of them, which I suppose to be eunuchs, stand at the gates of the first and second courts of the seraglio. These are distinguish'd by the name of *Capigis*, and their chief is call'd *Capigi-Capigis-Bafci*; whom the emperor makes use of to execute his commands.

Those that wear the white cap not *Halvagis*, very long, nor ending sharp, but resembling the ducal *Venetian* cap of maintenance, are call'd *Halvagi*; and among them those that are particularly employ'd in the kitchen, have the peculiar Name of *Aragis*, or *Xaccis*, over whom, as also over all the rest of the *Halvagis*, the *Kisargi-Bafci* has full authority; yet every kitchen has its superior call'd *Aragi-Bafci*; besides the *Machek-Enuri*, who provides all things necessary for the kitchen and tables, even of

of ambassadors, according to the orders he receives from the grand vizier.

*Hajaler-Agasi.*

The *Hajaler-Agasi* is head of the infirmary, and takes notice of all that goes into, or out of the seraglio; but above all takes care that no wine be brought in. All this great number of people (which sometimes, according as the sultan is inclin'd, may amount to 10000, but are not at present above 3000) are born of christian parents, and taken in war, or forcibly by the *Bassa's* in the conquer'd provinces to send them as presents to the grand seignior. He chooses out the handsomest to distribute them among the seraglio's, and have them brought up to the *Mabometan* law and exercises, dividing them into two ranks; one of the *Azamogians* being the ablest for service, such as *Baltagis*, *Halvagis*, and *Bostangis*; the other of the better sort design'd for the greatest employments of the empire, call'd *Isiogians*, in whom besides form, a good promising wit is requir'd. They are bred very carefully and strictly, passing through four rooms they call *Odas*, where they are taught noble exercises, fit for persons that are to serve so great a monarch, and to have the title of his pages and gentlemen. The white eunuchs are their masters, who treat them with severity, and beat them cruelly for the least fault; so that they must have much patience to get to the fourth chamber, where the best of them are with certain hopes to rise to the greatest employments in the empire. Tho' they are to be of christian parents, yet the *Capi-Agi*, or great master of the seraglio, does not fail to put in some sons of *Turks* that are promising lads.

There are also in the seraglio about five, or six hundred maidens, either taken in war, or for tribute of the provinces, or sent as presents by the *Bassa's* for the *Sultan's* pleasure, who now and then withdraws from the heavy care of empire to divert himself in their apartment.

Before we leave the seraglio, it will not be amiss to say something of the *Bassa's*; because they are not only chosen from among the *Isiogians*, but make up the best part of the emperor's court.

*Bassa* is an honourable title common to all great men at the port, who are distinguish'd by their employments; but the four chiefest of them are the *Vizier-Asem*, or grand vizier; the *Caimacan*, governor of *Constantinople*; the *Bassa* of the sea; and the *Aga* of the *Janizaries*. These are of such great authority, that they sometimes depose, and raise sultans to the throne, as

Vol. IV.

happened to the emperors *Mustapha* and *Ozman*; the latter of these being put to death in prison by an executioner; yet these same great men, are liable to the emperor's displeasure for small offences, who takes not only their heads, but their goods from their children, tho' born of their own sisters. The *Vizier-Bassa's* carry three standards, with each a horse's tail, of what colour they please, except green, of which colour only the staff must be. They say the original of this custom was, that having lost their standard in a battle with the christians, and the soldiers being discourag'd at it, the *Turkish* general cutting off a horse's tail, fastned it to a pole, and lifting it up said, *Behold the colours, let them that love me follow me*; whereupon the *Turks* taking courage, fell upon the christians, and got the day. Inferior commanders may not put these tails to their armour. The *Bassa's*, who are not viziers, have but two, as also the *Begs*; but the governors of little provinces are allow'd but one. The grand seignior, when he is in the field has seven, to denote his dominion over seven parts of the world; which makes the *Turks* give him the title of lord of all kings.

The *Grand Vizier* is lieutenant-general of all the empire, and armies, as also chief of the council; and commands absolutely under the grand seignior, whose seal he keeps. In the *divan* he has six sitting viziers, or counsellors to advise with, but their voices are not decisive, but only consultive; nor can they meddle with state-affairs without being ask'd. This minister's reputation is so great, that the sultan himself, in matter of the greatest moment, depends on his judgment, and in council whatsoever he proposes is a decree; however, it behoves him to be very much upon his guard, for if he ventures to offer any thing contrary to his master's inclination, he is soon strangled. His court is made up of about 2000 domesticks. When he is visited by any body, tho' of never so great account, he does not rise to compliment them, except to the *Muphti*, who has the same honour paid him by the grand seignior.

The *Caimacan*, or governor of *Constantinople*, is the viziers lieutenant, and he alone performs the functions of his office in his absence, even to giving audience to ambassadors; without being expos'd to the princes anger in case of any failure, because all faults are laid at the prime vizier's door.

The *Bassa* of the sea is captain general, and admiral of the fleet; and the

S

the

GEMELLI

1694.

**GEMELLI** the *Begs* governours of the maritime provinces, and captains of the grand feignior's galleys, which are to be always in a readiness to put to Sea.

**Aga of Janazaries.** The *Aga*, or colonel general of the *Janizaries*, call'd by the *Turks*, *Vingeri-Agasi*, is in such reputation, that no man but he can come near his prince with his hands at liberty, the grand vizier himself being bound to hold them across on his stomach with a great deal of submission. Besides, he commands a considerable army of about 100000 *Janizaries*; not that there are really so many, but because several persons to be tax-free, endeavour to get themselves listed among them.

**Beglerbegs.** The next in dignity are the *Beglerbegs*, who are like sovereigns in their general governments, having the *Sangiac-begs*, or governours of *Sangiacks*, and particular provinces, under them, which last are accounted the bravest of the *Turkish* soldiery.

**Spahis, and Zabims.** The *Spahis* compose a considerable body of horse, and live on their *Timars*, or lands given them by the grand feignior, proportionably to their services, like to many lords, nor can this grant be taken from them without destroying the best soldiers they have in time of need. The *Zabims* are also horse, and have lands like the others.

**Cbians.** The *Cbians* are messengers to fulfil the emperor's commands, when he will have some *Bassa's* head, or imprison him. They attend the grand feignior a horse-back, when he goes abroad, as was observ'd before. The *Cbians-Baschi* is chief of them.

**Emirabur-Baschi.** The *Emirabur-Baschi*, tho' he lives abroad, serves as first gentleman-usher in the seraglio, and when the grand feignior appears in publick, he goes before him.

**Ckmeoggi-Baschi.** The *Ckmeoggi-Baschi*, tho' he lives abroad, has the key of all the bread that is spent in the seraglio.

**Caragi-Baschi.** The chief of those that receive the taxes is call'd *Caragi-Baschi*, who together with the customer and chief of the merchants, is to furnish money for the publick expence, as occasion requires; the grand feignior being no way oblig'd

to make use of his private treasure. This is a tax of five ducats a head paid by every christian, except *Franks*, and every *Jew* residing in the *Levant*; but the *Armenians* pay less than the *Jews*.

The great *Muphti* is the head of the *Muphti*. *Mabometan* religion, and interpreter of the *Alcoran*; but the *Turks* confounding civil government with religion, the *Muphti* and *Cadi* are indifferently look'd upon as men of the law, as if there were no difference between lawyers, and divines, for which reason the *Muphti* very often gives his opinion in civil, and criminal causes. Hence it is that there is no ecclesiastical superiority among them, and that there lies no appeal from the other *Muphti's* to the great one; as also that he is not superior of the *Imans*, or priests; every one owning only his own superior. In other particulars the great *Muphti* of *Constantinople* is respected by all men, as following the grand feignior's court, which distinguishes him from the others, of whom there are many throughout the empire. The soldiers being to be try'd by none but their own peculiar judges, who are the *Cadeleschers* of *Natolia*, and *The Cadet-Romania*, render these men's dignity very considerable, and gives them a seat in the divan near the vizier, next, to the *Muphti*. In great cities there are judges and *Mullabs*, or *Mula's* subordinate to the *Cadeleschers* in civil affairs, but have no superior in the criminal; the *Cadis*, who administer justice in great towns, and the *Naispis* of small ones are subject to these.

The priests that serve in the *Mosques* *Imans*, *H.* in the nature of curates, are call'd *Imans*, *gias*, *Sebe*, or *Emoms*; the readers of the law to youth *Hog*; the preachers *Sebekis*; and those that call the people to prayers from the steeples *Muezins*.

The *Derives*, or religious men, tho' they make a very hypocritical outward shew, do not live in community, nor in their monasteries, but in their own houses with their wives and children, upon an allowance the sultan gives them of thirty, forty, or fifty aspers a day; they are also oblig'd to repair to the monastery at certain hours.

#### CHAP. IV.

##### The Author's Journey to Constantinople.

**B**Eing resolv'd to depart for *Constantinople*, I took my leave of the baron de *Chateaufneuf*, the *French* ambassador, a person excellently qualify'd, as

appears by his administration there, having prevail'd with the sultan not to make peace, as he was solicited; obtain'd the restoration of the holy places

ees in *Jerusalem* to the catholics, after the *Greeks* had been long possess'd of them; and brought the grand seignior to oblige the *Bassa of Grand Cairo* to take but three *per Cent.* for all goods of the traders of *Marseilles*, whereas others pay twenty, and to restore what had been receiv'd over.

Having hir'd two horses for me and my man, at five ducats a piece, I set out for *Constantinople* on *Monday* the 4th, with a small caravan of forty people, and having rode twenty miles thorough plains cover'd with snow, lay at the village of *Hapfa*, in a caravansera among our beasts.

*Tuesday* the 5th, I suffer'd more than I had done in six months travels before; for setting out before day, we rode over snow and ice, thorough a country partly hilly and partly plain, till I was frozen a horse-back, and had no feeling in my hands or feet. After twenty miles riding, we pass'd thorough the great village of *Bala*, and over a good stone-bridge; and at the end of fifteen miles more, set up in a great town call'd *Bergasi*, where there is another stone-bridge of many arches over the river. At night the *Janizaries* had a long discourse concerning the war in *Hungary*, saying, the *Germans* shed much blood of the *Mussulmans*, and that their soldiery was discourag'd seeing so much slaughter. Here I observ'd, that as the *French* call the place where passengers lie *Gisse*, so the *Turks* give it the name of *Cunac*.

The great snow that fell on *Wednesday* the 6th, and what lay on the ground before, would not permit us to travel above fifteen miles, and we lay that night at the village of *Calestrom*. Setting out betimes on *Thursday* the 7th, we could travel but twenty miles, to the village of *Obiorla*, by reason of the same impediment of snow, the horses not being able to draw their feet out of it.

*Friday* the 8th, we got into a country better inhabited, but the soil nothing better; and having pass'd by some villages in ten miles riding, we came to the shore of the streight, along which we continu'd our journey all the day, to the village of *Sivirli*, where we pass'd at the end of twenty miles more. This village is large, and has a little port, and a famous bridge of thirty two arches over the river and morafs. On the hill there is another place enclos'd with a very antient wall, which appears to have been built by the *Greeks*, by an old inscription found there in their language. We

made no long stay here, seeing the way clear of snow, and the road good, but riding six miles further, came to the village of *Burgadus*, on the bank of the same streight.

*Saturday* the 9th, at fifteen miles end we pass'd thorough *Cbeck-mangia*, a small village still upon the streight. Here is a good fishery, for the streight makes a little bay eight miles in compass, like the little sea of *Taranto*, and there are four stone-bridges over it. The people there shut up the mouth of it, which is about a mile over, with pallisadoes, and then go in at the gap left in the middle with a wooden house, to take the fish, which is the reason there are three other little villages upon the bay. Eight miles further we pass'd over another bridge built upon an arm of the sea, as convenient as the other for fishing; for running a great way into the land, it has a great quantity of fish, and is the cause there are several villages about the country.

*Sunday* the 10th, having travell'd ten miles further, part hill, part plain, I came at last to the famous city of *Constantinople*. Thence after contenting the *Catergi*, or owner of the horses, I went to *Galata* to seek a lodging; but the inn kept there by a *Frenchman* being full, I was forced to make the best shift I could that night upon the boards in a *Greek's* house. In this short journey I found not the civility *Tavernier*, *Lib. I. P. 1. c. 10. pag. 118.* speaks of in his description of the caravanseras of *Persia* and *Turky*; where he is pleas'd to write, that from *Belgrade* to *Constantinople*, a traveller and his horse has his charges born by the overseer of the caravanseras, who does it out of a legacy left by a founder departed, and that in the morning there is nothing to do but thank him and be gone, without putting hand to purse; for I was so far from finding this entertainment, that it cost me two carlines (about a shilling) every night to get boards to keep me from the dirt on the ground; and as for eating, I far'd as I pleas'd, as all the rest did for their money.

*Monday* the 11th, I took a room in the *Frenchman's* inn, paying half a ducat for my self, and a quarter for my man. We eat well enough at a round table; and I being half starv'd, as having found nothing good upon the road, nor any convenience to dress it, did eat heartily, whereat a captain of a *French* vessel admiring, he turn'd to his companions, and said, This man eats like a devil, thinking I did not understand *French*.

CHAP. V.

The Description of Constantinople, and its Greatness; as also of the Grand Seignior's Seraglio.

Constantinople described.

Constantinople, at present the metropolis of the Ottoman monarchy, was known to the ancients by the name of *Byzantium*; but the emperor *Constantin* the great having beautify'd it, and repair'd the harm done in it by *Alexander Severus*, forsaking *Rome*, made it the seat of the empire; and as a perpetual memorial would have it call'd *New Rome*; and the province of *Thrace*, in which it is seated, *Romelia*, or *Romana*. After his death, this *New Rome* took the name of *Constantinople*, and for brevity that of *Polis*, that is, city, like the *Old Rome*, which *per Excellentiam*, was called *Urbs*. So that the *Greeks* of *Romelia*, when they would express, they were going to *Constantine's* new city, us'd to say, *ei ten polis*, *Eis ten Polis*, that is, to the city; whence, it is suppos'd, came the other corrupt name of *Stam-pol*, or *Stambol*, now given it by the *Turks*.

It is advantageously seated on the streight of the black sea, once call'd *Bosphorus Thracius*, in 42 degrees of latitude. Its shape is triangular, and the sea which washes two sides of it, makes there the finest port in *Europe*, beyond all dispute. The angles of this triangle are call'd *Tedacula*, or seven towers; *Serra-ovasi*, or seraglio; and the gate of *Agevassaco-cassi*, towards the point of the bay, or little streight of *Cbitana*. 'Tis true, the sides are not equal, that between the seven towers and the seraglio, being much longer than the others; and that between the seraglio and the point of the streight of *Cbitana* crooked; opposite to it, beyond the streight, stood *Chalcedon*, an ancient city of *Bithinia*. *Constantinople* is reported to have been built by *Pausanias*, king of *Sparta*, in the year of the world 3469, and 96 after the destruction of *Troy*, at the same time that *Taranto*, in the province of *Otranto*, and *Gerace*, in the province of the further *Calabria*, in the kingdom of *Naples*, were built. Like *Old Rome* it is enclos'd by seven hills, which does not at all lessen its beauty, or the delights its air and soil afford. Within its compass, being twelve miles, or rather fifteen, including the seraglio and its gardens, are contain'd about a million of souls; it being the most populous city in *Europe*, next to *Paris*. The houses are low, being built of wood, or wood

and mud, and therefore very subject to fires.

The royal *Mosques* are noble structures, as are the other publick buildings, and the palaces of great men magnificent. There are rich and graceful *Bazars* or markets, suitable to the greatness of the city; and several fountains of good water, brought from far in long aqueducts, to serve all parts. The streets are narrow and crooked, and tho' pav'd, not to compare with ours in *Italy*. It abounds in good fruit all the year; as also in fish, flesh, excellent bread, and all an *Epicure* can desire, at very reasonable rates. This city was the theatre of religious controversies betwixt catholicks and hereticks, according to the inclination of the emperors and emperesses; and therefore four general councils were celebrated there; the first under pope *Damasus* in year 381; the second under *Vigilius* in 553; the third under *Agatho* in 680; and the fourth under *Adrian II*, in 869.

The grand seignior has two seraglios. The first in this metropolis; one in the midst of the city call'd the old seraglio, where *Mahomet II*. liv'd, after taking the city by assault on the third day of *Pentecost*, in the year 1453, and there every new grand seignior shuts up his predecessor's women. The other call'd the great seraglio, is that where the sultans reside, when they are in *Constantinople*, being in the east part of the city, water'd on two sides by two freights; that is, the great side by the great streight, running out of the white to the black sea, and the other by the little one, made by the waters of the great one running up the country six miles towards the fresh water of *Cbitana*. It is enclos'd by a single wall with old towers, those towards the sea square, and those towards the city round, where the *Azameglans* keep guard to hinder all persons approaching. The sultan has built a summer-house to take his view all round upon one of the towers that looks towards *Asia*, whither he often resorts to divert himself. There is nothing regular in the inward structures; but only confuse apartments, and gardens on its uneven ground planted with cypresses, and other trees; but the leading of the top, and the gilt *Minarets*, or turrets, yield a noble prospect, as also

also the *Mosque* within it, especially when the sun shines on them. Towards the sea there are some galleries, on the outside cas'd with marble, and within painted and gilt, where the grand seignior takes the air, when he comes to divert himself with fishing. On that point which looks towards *Scutaret*, there are several pieces of cannon in a row on the ground to secure the place; and on the side of the little strait there lie several barges prettily gilt, for the service, and diversion of the sultan. Besides the many gates all about the three principal ones, are those on the side of *St. Sophia*, which lead to three spacious courts. In the first on the one side are the apartments of the *Asanoglans*, and on the other side the infirmary of the slaves of the seraglio. The second court has cypress-trees planted in the middle, and the sides are taken up with the kitchens of the seraglio, the stables, the divan, which is a large room where the vizier, and other counsellors meet to consult about affairs of state, the *Hafna*, or treasury-chamber, where taxes and revenues are laid up, and on the other side the *Odet*, or lodgings for the *Isciohlans*. In the third is a great hall where the grand seignior gives audience to the ambassadors of princes that come to the port; which is the same as the sultan's court. Further in are the *Odaliche*, or apartments of the maiden slaves, kept for the emperor's pleasure; whether none may pass but the eunuchs that serve them.

Having, the best I could, describ'd the seraglio, whereof no further account can possibly be had, unless from the mouth of some of the eunuchs that reside in it, I cannot pass by the noble prospect *Constantinople* affords. For tho' we have given but a rough draught of its buildings within, because the narrowness of the streets hinders the pleasure the eye should take in beholding them; yet on the outside the houses standing upon several rising grounds, the roofs being lofty, and the fronts beautify'd with several colours, as well towards the sea or strait, as towards the land, it yields a most wonderful and surprising sight. It may be boldly asserted, That the wit of man could not choose out a better situation in the world; the same place at the same time affording the delights of *Europe*, and the pleasures of *Asia*; for when the eye is glutted with the sight of the beautiful plains of *Romelia*, it is but looking about beyond the strait into *Asia*,

VOL. IV.

and after lamenting the ruins of *Calcedon*, it is re-created on the fruitful soil of *Scutaret*, cover'd with a regular wood of cypress-trees, improv'd by abundance of fruit-trees to please the palate at all seasons, and peopled from many villages along the strait. Which prospect extends twenty miles to the black sea, where *Pompey's* pillar was erected, which is now no more, but there are trees of a prodigious bigness on the sea-shore. Then looking again upon *Europe*, which by reason of the winding of the strait, seems to join to *Asia*, it is curious to behold many considerable towns both on the hills and villages. The first that appears, is *Biscitafi*; then the villages and cities of *Sondach*, *Topana*, *Galata*, *Pera*, *Asticappi*, *Caracbioy*, *Cassun-Bassa*, *Tarjana*, *Dranamara*, and *Ancy*; besides many magnificent palaces and gardens of *Bajsa's* and great men of the country, on the hills, and on the banks of the little strait. Hence it is, that coming from the sea, the eye is as it were distracted with such variety of prospect, and knows not where to fix; for the nearer the vessel approaches on the water, the more the scenes change, and new ones appear.

Galata being look'd upon as a suburb *Galata* of *Constantinople*, as being but half a mile distant, which is the breadth of the narrow strait, it is not to be parted from its metropolis. This city, long possess'd by the republick of *Genoa*, has excellent buildings within the compass of two miles its walls extend. Its situation is part plain and part hill, on the top whereof is a strong and high tower, by means whereof the republick kept the city eight years, whose arms are still to be seen on the walls. Most of the *Franks* live in this city, and the rest in *Pera*, for whom the divine service is attended by the *Jesuits*, *Dominicans*, *Capuchins*, and *Recolets*, with whom the catholic patriarch lives, and their church is a parish, as is that of the *Dominicans*.

Pera is seated along the little hill ad-*Pera* joining to *Galata*, being but narrow and uneven. Here the ambassadors of christian princes reside, as the Emperors, those of *France*, *England*, *Venice*, and *Holland*; and here are other monasteries, one of *French Capuchins*, within the palace of *France*; the other of *Recolets* of the holy land, who administer the sacraments indifferently, like the others, without any separate quarters or jurisdiction, but according as those please that make use of them. Tho' it be an

GENEVE
1694.
open place, there are good houses in it, which by reason of their high standing have the finest prospect in the world, overlooking *Constantinople*, and the places before-mention'd.

Tuesday the 12th, I went up thither to see the devices turn round, and found two French *Jesuits*, who had the same curiosity; it was perform'd after the same manner as I mention'd at *Adrianople*, and therefore no more needs to be said of it.

Bilicini's
village.

Wednesday the 13th, I went a-cross the streight in a boat, to see another monastery of devices in the village of *Bilicini*, where I saw such another dance, in a stately room painted, near the sea-shore. A Turk seeing me laugh at that folly, said to me, *This is like your religious men disciplining themselves*. In my return, I discover'd at the end of the village near the shore, a noble palace all leaded at top, and with handsome galleries to the sea. Near this place was another seraglio of the grand seignior's built by sultan *Mahomet*, who went thither sometimes to divert himself, but none of the court living there at present, it runs to ruin. Going into it, I found a confus'd number of apart-

ments along the canal, some of them of wood, and all without any rule or method; a few paces from it is a great garden without a wall, and about that a cypress-grove enclosed with a summer-house in the middle.

Having seen this village, I went to *Fondaci*, the other call'd *Fondaci*, where there is nothing great; but the houses lying along the streight have the prospect of it, and conveniency of fishing, whereof there is great plenty all along there; which is the reason fish is so cheap at *Constantinople*, that tunny fish, taken all the year about, is sold for a farthing a pound, an eel of eight pound weight for about eighteen pence, and an hundred of large oysters for five pence; the Turks being no admirers of fish. Going on still by land, because the streight was high, I came to the village and quarter of *Topana*, where the cannon is cast. Before the arsenal, was a prodigious culverin, thirty spans long, and several pieces of cannon; and among them one that shot out three balls, at as many mouths at once firing. Walking still along the bank, about sun-set, I came to the suburb or city of *Galata*, having gone about three miles by land.

CHAP. VI.

The Description of St. Sophia, and other Imperial Mosques; as also of other remarkable Things in Constantinople.

Thursday the 14th, having hir'd a boat, and a Jew to be my interpreter, I went over to *Constantinople* to see *St. Sophia*. This noble structure is only part of a greater, begun by *Justin*, and finish'd by *Justinian*, emperors of the east, who consecrated it by the name of *St. Sophia*. The Turks have destroyed great part of it, and preserv'd only the *Duomo*, which is the middle part of the old church.

St. Sophia

The diameter of this *Duomo* is about 113 foot. About the *Mosque* there are two rows of galleries, each supported by many pillars. The great cupola is built upon wonderful arches, sustained by large columns, cas'd with marble: in the intervals between which, on both sides, there are four stately marble columns, and two others further back. At the upper and lower end of the *Mosque*, are four other pillars, with lofty arches, which divide it into three parts. These arches, and part of the body of the *Mosque*, are of *Mosaic* work; which tho' time, and the Turks have destroy'd much, still shews several figures, made

in the time of the *Greeks*. The pavement is all marble, as is the pulpit on the left of a half tribune, made by the high altar, to explain my self the better by terms us'd in *Enrope*. Besides the aforesaid columns, there are six very large ones in the intervals to support the first gallery, which goes round, as does the second. On the right of the niche is a good closter, to which the grand seignior has a private stair-case. The Turks have a particular respect for this *Mosque*, on account of a stone they keep there, on which they say, the blessed virgin wash'd the infant Jesus's linen. They also shew a tomb, which they say is the emperor *Constantine's*. A-bundance of lamps hang all about.

Having given the *Iman* or priest ten para's, he permitted me to go to the first gallery, up a large arch'd stair-case of marble, where I found seven several large spaces about it, like seven chappels; but on every side there are three arches, which leave a great space between the wall and the gallery. The columns on the inside are five to every arch,

Tombs.

arch, of green veiny marble, and four bigger of white marble, on both sides next the wall. At the lower end of the *Mosque*, over the great gate, which makes the seventh arch or chappel, there are four others of green veiny marble; so that in all they make thirty four of black and green marble, and twenty four of white, standing on the arches rais'd upon the lower pillars. The arches of the gallery are also of *Mosaic* work; but the faces of the saints and angels have been all batter'd and spoil'd by the *Turks*; filling up those places with colours, and writing thereon the name of god in *Arabick* characters. The pavement, walls, and pillars are all cas'd with good marble. The priest shew'd me a burial place of a prodigious depth in the same place on the left, where he told me, the *Turks* were in-terr'd.

There are two long arches that lead to this famous temple; the first has two gates at the end, and four in the middle; the second which is *Mosaic*, has five in the front, and two on the sides. When in this second, there appear nine doors, the middlemost whereof is of brass; the two on the sides of it are open, and the other six kept shut, so that they take up almost all one side of the *Mosque*. Over that brazen gate, the *Turk* that was with me, shew'd me a dove, the symbol of the holy ghost, and an image of a saint in *Mosaic* work, half defac'd by the barbarity of the *Mahometans*; besides these nine doors, there are four on the sides, and two behind the niche, or high altar opposite to the great seraglio.

At the angles of this structure, there are four towers, with balconies about them, into which the *Muezzins* go five times a day to call the *Turks* at the set hours to their *Nama*, or prayers. Before the front is a porch, where the *Mahometan* women sometimes go to say their prayers. To conclude, the structure is so prodigious, and the wall of it so thick, that it seems to have been built for a fort, rather than a church.

Besides the dwellings of the *Imans*, about the said *Mosque*, there are on the left side, separate from the body of it, tombs of several sultans along the enclos'd church-yard. The first is *Mahomet*, the second of *Selim*, the third of *Amurat*, the fourth of his children, which were about 120; and the fifth, next the *Mosque* of the sultans *Mustapha*, and *Ibrahim*. These tombs are made like cupola's, leaded without, and paint-

ed within, after the country fashion; ^{GEMELLI 1694.} as the walls without are cas'd with ordinary marble, and within with a finer fort, and fine tiles. The ground is cover'd with good carpets, and in each tomb two great flambeaux weighing about 300 weight in wax each, with a great turbant on them. Within them are bury'd their wives, children, and brothers; but the sultans and sultaneſſes tombs, are bigger than those of their children, which have no turbants on them. There are *Imans*, or priests appointed to look after all these sepulchers. One thing peculiar, I observ'd in *St. Sophia*, which is, that no women being allow'd to go into the other *Mosques*, in this they may enter, if they are not satisfy'd to pray in the porch.

Friday the 15th, I went to see sultan ^{Sultan} *Hamel's Mosque*, in the *Ajmedian*, or ^{Hamel's} *Hippodrome*. For beauty, it exceeds *St. Sophia*, but is not so large, and it shews, no cost was spar'd about it. The great cupola of this *Mosque*, (for they are all built after the same fashion, and sustained by four large round pillars) cas'd with fine marble, of several colours, beautiful to behold; and there are four smaller at the four angles. By the great pillars, there are other thick marble columns, besides the little, supporting a curious gallery, that goes round it. The ground is laid with good marble, and cover'd with rich carpets; and there are lamps hanging in all parts, with other works of crystal, of several colours, to adorn the place. At the end, is a large tribune of fine marble, and on the left of it a pulpit of the same stone. It has three brass gates well enough wrought at the three sides. The first place, or church-yard, is enclos'd with ordinary marble, and there are several doors to it, with iron steps. On both the outsides of the *Mosque* there are two galleries adorn'd with several hundreds of small pillars, worthy the observations of curious persons, and along them several fountains for the *Turks* to wash them, they being of opinion, they thus cleanse both body and soul from all filth.

There are also three gates that lead out of the first into the second court, or church-yard; on the sides whereof, are twenty marble pillars, that hold up the arches of twenty leaded cupola's. All the ground is laid with marble, with a great fountain in the middle. There are six other handsome cupola's gilt at the top; three on each side of the *Mosque*. In all these *Mosques* of *Constantinople*, and *Adrianople*, besides the apartments of those

GEMELLI 1694. those that serve them, there are others for poor people, who are there instructed in virtue, and maintain'd out of the revenues of the *Mosque*.

Saturday the 16th, in a place near *St. Sophia*, I saw several lions, tigers, wolves, and foxes, which are shewn, paying a few para's.

The *Atmedan*.

Next I went to see the *Atmedan*, or place where the soldiers exercise, so called, because it was formerly the *Hippodrome*, or place of riding horses, in the time of the *Greek* emperors. In the midst of it, on the ground, are fix'd three serpents, twining about with their mouths open, at the end of the coil, a good piece of workmanship, remaining from the christian times, of which writers tell many fables. Lower than that, is a tall obelisk, almost consum'd with age; and on the other side a pyramid erected on four round pillars of brass, a span high, on a pedestal made of one square piece of marble, and writ all round in *Latin*, and *Greek* letters; but it is very difficult reading of three latin verses, a great part of it being bury'd in the ground; the verses are these:

*Difficilis quondam Dominis parere serenis
Jussus, Et extinctis palmam portare Ty-
rannis,
Omnia Theodosio cedunt, sobolique perenni.*

By which may be gather'd, that it was erected in honour of the emperor *Theodosius*, whose figure is seen on the top, and this for the union of the *Greek* and *Latin* churches, which happen'd in his time. It is not so large, or high as *Cleopatra's* pyramids at *Alexandria*; for the foot is not six spans square, and the height fifty; but it has the same hieroglyphicks and characters on it, as that in the balsam garden at *Caire*.

Hamel's Sepulcher.

Near this place is the sepulcher of *Hamel*, and his children, built after the same manner as those already describ'd, that is, cas'd with marble, inside and outside, and the ground cover'd with carpets.

The slaves market.

I went out of curiosity to the *Jassir-Basar*, to see the market of slaves. This is a place enclos'd, with many trees in the middle, and many walks or galleries about it, under which the slaves and the sellers are. The manner of selling them is odd; for after praying for the grand seignior, the seller holds the slave that is to be sold, by the end of a cloth, and on the other side, the crier goes proclaiming the price. He that has a mind to buy, uncovers the slave's face, and feels him or her, in several parts of

the body, as we do in buying horses or asses.

Hence I went to the *Bisfisten*, a place *The Bisfisten* cover'd, where there are many rich shops, in which they sell all the richest things to cloath and arm a gentleman, as also horse furniture; all the arms being gilt, and the furniture embroider'd and cover'd with jewels. The arch is sustain'd by eight pillars, leaving three long walks across the middle, to which there are four doors from the sides. Not far from hence is the *Searici*, where there are walks full of tables, with good shops, afford- ing all things a man can desire.

In my return I pass'd thorough the *Validaxan*, which is a large square enclos'd, about which, there are many shops in the first floor, and in the second above it. This structure was erected at a vast expence, by the mother of *Mahomet* the IVth, and the revenue of it assign'd for the maintenance of the *Mosque* built by her.

Before I took boat to return to *Galata*, I saw the *Janisarcis*, on the shoar of the *Janisarcis* freight. This is a structure consisting of two long arches, in one of which, there are several druggsters shops, and in the other linnen-draperies. This is commonly the first place in the city, where the plague breaks out, because it is very moist, and the drugs make the air unwhollome, as has been found by experience in the late plagues.

Sunday the 17th, after hearing mass, I went again to *Constantinople*, to see the celebrated *Mosque* of the favourite *Sultana*, mother to the emperor now reigning, and to *Mahomet* the IVth. In the first court or church-yard, is her tomb, and those of her sons, brought thither from *Adrianople*. Its cupola is supported by four pillars, in the intervals between which, there are rows of marble columns, orderly dispos'd, and all the walls crusted with marble, and til'd. There is a way to go all round the *Mosque*, under the arches; on the angles whereof, there are other handsome half cupola's. In a word, the eye can behold nothing more beautiful, either for symmetry or costliness; as well on account of the marble, with which the ground is laid, and then cover'd with carpets, as for the rich lamps hanging in the middle: at the end of it, is a good marble tribune, or closet for the sultan, who goes thither up a noble stair-case, and thorough a cover'd gallery in the first court, and behind the *Mosque*. On the left of the niche, is a marble pulpit, as also a beautiful gallery about it, adorn'd with curious pillars.

In the first court, which is enclos'd, there are several dwellings for the *Imams*, or priests that serve the *Mosque*, with mountains and trees in the midst of it. There are three doors out of this first, into the second court or cloister; in which there are about twenty columns of good marble, and about twenty eight leaded cupola's on all the four sides. The *Mosque* on three sides, has three gates wrought with brass, and two beautiful high towers gilt at the top, at the end of it.

The E. quidular. Monday the 18th, I went in the morning to see the old quarter, or *Corps de Guard* of the *Janizaries*, call'd *Eski-dar*, which signifies old house. This is a structure enclos'd with high walls, within which are the apartments and lodgings for the *Janizaries* and their officers, capable of containing some thousands. In the midst of it is a great court, with several fountains for their use. They have another quarter call'd *Genegni-Odar*, or new-house, where others reside.

Soliman's Mosque. Then I went in to see the *Mosque* built by *Soliman*, the finest without dispute of all I had seen yet, with four fine towers upon the angles. The way is first into a great court, wall'd in; and out of this there are three doors to pass into the second, in which there are twenty four columns of mix'd marble, that sustain the galleries, and twenty eight leaded cupola's. The ground is all laid with marble, with a fountain in the middle, compos'd of eight pillars, of the same sort of marble. The *Mosque* has one door facing the second, and four on the sides. The great cupola, as in all the others, rests upon four pillars, having two other smaller adjoining to it, rising from both ends of the niche, and there are five on each side of it, with four large marble columns above fifty spans high.

On the right hand is a curious marble tribune for the grand seignior, supported by six pillars. On the left was the pulpit, and another open tribune, for the ceremonies of the *Mosque*. The pavement is all cover'd with fine carpets, and the place lighted with lamps. A stately marble gallery adorns both sides of the *Mosque*; behind which, at the side of the niche, is a round chappel, embellish'd with good marble, and the pavement cover'd with carpets, where is the tomb of *Soliman*, and others of his family. In the inner part of the chappel, is a row of pillars of fine stones, and without it a row of bannisters. The tombs, as I observ'd elsewhere, are cover'd with silk, turbants lie on them, and there are great flambeaux at the sides. Hard by

is another cupola, of a meaner structure, with some tombs after the same manner.

Going home, I took sultan *Bajazet's Mosque* in my way. The first court of it is large, and has three gates; the second in which, are eight tall cypress-trees; has about it twenty pillars of mixed marble, and eight others in the middle, which hold up a roof over a fountain; twenty four leaded cupola's cover the galleries about the court. The *Mosque* has three doors on one side, and two on the other. The great cupola stands upon four large pillars, with two middling ones by it. At the ends are four other cupola's all white within, and adorn'd with *Arabick* characters. On the left of the niche, near the pulpit, is a tribune for the grand seignior, held up by six columns, and another lower for the ceremonies of the *Mosque*; which on that side spreads out into two arms. In short, not to tire the reader, there are, as in all other *Mosques*, carpets on the ground, lamps hanging about, and towers at the angles to call the people. *Bajazet's* sepulcher is a-part in a round chappel, crust'd with marble within and without, with all the ornaments mention'd in the other imperial sepulchers.

It was very dangerous going to *Constantinople* for me, because there was a *Caimacam* or governour, who was a great enemy to christians. He had caus'd fifty bastonados to be given a *Frenchman*, for wearing yellow shoes, he having forbid *Franks* to cloath themselves after the *Turkish* fashion; and the same to a poor *Greek*, because he carry'd a bottle of wine. He carry'd himself so rigidly, aspiring to be grand vizier, that he valu'd no man, not even the ambassadors of crown'd heads, to whom he gave to understand, that he would punish the least offence committed by their family. Particularly the *Dutch* ambassador, who takes great delight in shooting of pheasants, which are to be found at *Belgrade*, six miles from the city, had word brought him, that if he went thither any more, he would cause him to be hang'd before the gate; he was therefore cry'd up as the dreadfulest man in the world. For this reason, I desir'd the *French* consul to appoint a *Janizary* to go along with me, which he refus'd to do, saying, it would expose him; for if the *Caimacam* offer'd me any affront, it would reflect upon all the nation, and therefore I should take care how I went to *Constantinople*, for I should certainly be thrown into goal. But, since I was travelling the world out of curiosity, I would not

GEMELLI

1694.

for any danger omit seeing one of the prime cities of Europe, and therefore I continu'd to go every day. The French ambassador us'd all his endeavours to have the *Caimacam* depos'd, but found it difficult, because he was supported by the sultans, and the chief of the black eunuchs; tho' he was an enemy to the grand vizier, to whose orders he gave little deference. They call'd him *Calicos*, a name given him by *Mabomet* the IVth, when he serv'd as a *Boltagi*, because he was a good horse-man.

Tuesday the 19th, I hir'd a boat, and went over into *Asia*, crossing a streight of two miles, which runs from the black sea to the *Dardanelles*, and landed at *Scutari*. This is a great open village, seated part in the plain, and part on the hill, but pleasant enough, especially in summer, because of the greens and good fruit-trees it has. There are good *Bazars* or markets in the plain part.

Leander's towers

Then I went to see *Leander's* tower, call'd in the *Turkish* tongue *Chisculafi*, seated in the midst of the streight, on a plain rock, 100 spans square, which tho' so small, and in the midst of the sea, has fresh water. I found nothing remarkable in it, but only a few *Pedre-roses*, and eight pieces of cannon, level with the water. It is fabulously call'd so by the *Turks*, for being the prison of *Hero*, mistress to *Leander*, who swam over to her, from the lake where now the *seraglio* stands, every night; but if we believe our poets, and particularly *Ovid*, this happened at the castles of *Sejzus* and *Abydus*. Returning home, the stream carry'd us near the point of the *seraglio*, whence we return'd along the shoar of the streight.

Arcadius and Honorius's pillar.

Wednesday the 20th, I went to the place of *Auret-Bazar*, to see the famous pillars erected, in honour of the emperors *Arcadius* and *Honorius*. The pedestal is made of eight pieces of marble, besides the base, which is bigger and square. The pillar is made of several pieces, on which there are small figures cut in half relief, which to me seem'd to represent a triumph, being like the work of *Trajan's* pillar at *Rome*. It is almost gone to ruin, and they have put three iron hoops about it, to prevent its falling. It is hollow within, and there was a winding stair-case to go up to the top of it; there being a door at the foot of it, and another small one upon the capital, round which, there was room to walk. Twelve spans higher is another capital, where the column ends. Having a mind to go in, I found the stair-case stopp'd up with abundance of

stones, nor could I take its height, because of the jealous temper of the *Turks*, and severity of the *Caimacam*; but as near as I can guess, it may be 147 foot high, as *Peter Gaglio* observes. Thence I went to see the aqueduct, call'd *Cbemer*. It is about half a mile long, on many arches of brick, sometimes one upon another, to raise them to the height of the water. They told me, that three hours walk from the city, at the place they call *Antebemer*, there are a greater number of arches, better made, and larger.

Thursday the 21st, I went to see *Mabomet's* *Mosque*, which differs little or nothing in structure from the rest; and therefore I will not be more particular concerning it. Behind the *Mosque*, in a plain round chapple, is the tomb of sultan *Mabomet* the founder.

All the way I went that morning, was among houles and streets, consum'd by the last fire, which has oblig'd the *Turks* to live in wooden barracks, from the place call'd *Aretet-Bazar*, as far as *Cbemer*, or *Mabomet's* *Mosque*. For several miles along the streight, there was nothing to be seen but dismal memorials of the fire, and the same in the place, call'd *Zugbure-Yuchci*, where they were re-building.

After dinner, I went to the *Vizier's* *Xan*, a great square building, full of shops above and below, where they print stuffs. Next to it, is a pillar of red marble, of several pieces, sixty spans high, on which *Constantine* set his own statue, which in process of time fell down. The pedestal is enclos'd with a wall, and the *Greek* letters on its capital, testify it was erected in the year 440. Time has decay'd it, and to prevent its falling, they have strengthened it with twelve iron hoops. It has this peculiar beyond the other columns, that there are about it eight *Corians* or wreaths of stone running up to the top of it.

I proceeded to the *Atmedan*, or *Hippo-Ibrahim's* *drome*, to the *seraglio*, or palace built by *Ibrahim-Bassa*, son-in-law, and favourite to the emperor *Soliman* II, where they told me, there were 600 rooms, which I could not see, the entrance being forbid. It is seated on one side of the aforesaid square, which is made use of upon publick sports, as for skirmishes and games at the circumcision of the *Ottoman* princes, and the grand seignior comes to this palace to see them.

Friday the 22d, having heard mass sometimes, I pass'd over to *Constantinople*, to observe the compass of its walls. Beginning

ginning next the streight, and going out at the gate of *Egri-Capli*, or the black gate, I went towards that of *Age-vassare-Capli*, close to which the streight runs; then turning back along the land-side, I went about the wall, on a way pav'd with flint, which goes round. Passing by five gates on this side, I saw near that of *Adrianople* call'd *Edriene-Capli*, the place where the *Turks* made the breach, at which they entred, and took the city. Coming to the great streight, which at the point of the seraglio stretches out a small arm, I went in at the seventh gate, call'd *Yedicala*, or of the seven towers, there being no more on the land-side.

The seven towers

The place properly call'd the seven towers is at a small distance, and is a prison for prisoners of state, whom the sultan will not put to death; and to keep hostages. I had the curiosity to go into the first court, and as far as I could observe, it is like a square castle with seven towers in it leaded, where there are good apartments for prisoners. The air is wholesome, and good to dispel melancholy. In the mutiny that happened in 1648, the soldiery incens'd against *Ibrahim* their sultan, drew him from the seraglio to the seven towers, and there strangled him. The sultan *Osmán* dy'd in the same place, and the same sort of death, upon another mutiny in 1622.

The revenues of *Mosques* that are any thing considerable are also kept in these seven towers; some of them being worth above 100000 crowns a year. This treasure is kept to make war upon christians, in defence of their law; nor dare the *Turks* put it to any other uses. On the outside, I saw a door shut between two towers, near which there where angels and saints cut in the marble in half relieve, which shew it was built by the christians.

The walls of *Constantinople* next the streight are in some places fallen down; the part that remains standing has towers on it at equal distances. On the land-side, there are small weak towers after the antient manner, with a shallow ditch, before which there is a wall breast-high for musketers.

Continuing my walk round within the gate of *Yedicala*, there being no going on the out-side but by water, I came to the seraglio; and proceeding from thence along the streight, I made the tower or round at a moderate rate, in four hours; so that I look upon *Constantinople* to be twelve miles in compass, as was said before, besides three

miles the seraglio makes, which in all is fifteen. By the way I saw the *Mosque*, and sepulchre of sultan *Selim*.

Near the gate of *Agri-Capli*, are the remains of the emperor *Constantine's* palace, whereof a part towards the city is still standing. It appears to have been a large structure, but standing at the end of the city, it is rather to be suppos'd to have been a house of pleasure than any other; because it overlooks all the streight, and fresh waters; and that his residence was near *St. Sophia*, where there are remains of pillars and marble about the garden of the seraglio. In this palace of *Constantine's*, I was told, a youth seven years before that time found a diamond among the rubbish, which he sold for about three pence or a groat *Englisb*, next it was parted with for about two shillings; and the stone being good, sultan *Mahomet* then reigning, came to hear of it, who bought, and had it cut, when it was found so large and fine, that it was valu'd at above 100000 crowns.

After dinner I return'd to *Constantinople* to see the *Esqui-Serray*, that is, the old habitation. This is a royal seraglio, where all the women are kept up that have serv'd former sultans, as was said before, whence they never come out unless marry'd to some *Bassá's*. This place is enclos'd with a wall twenty four spans high for two miles in compass, within which are the lodgings, and gardens for those ladies diversion. There is no going into it, the gate being guarded by *Janizaries* and *Capigis*.

Near the *Esqui-odolar*, or street of the *Cesade-Bassi*, I went in to see the *Mosque* of *Cesade-giamissi*, built by the son of a sultan. About it is a noble court, with several buildings for *Imans*, with three gates leading to the second court, or cloister, where there are about fifteen marble columns that sustain twenty two cupola's all leaded. In the middle is a curious fountain, the top whereof is held up by little marble pillars. There are three doors to the *Mosque*, whose cupola stands on four large columns; for the rest there are the tribunes, carpets and lamps as in the others. Having seen a sepulchre, which they told me was *Ibrahim Bassá's*, I went out, and seeing others in my way, curiosity led me again into the first court; where in a chapel I observ'd two tombs of sultans with feathers in their turbans under silk canopies, after the *Turkish* fashion. As I was going out to view the rest, I met a *Janizary*, who call'd me; but I fearing to be robb'd, being in a solitary place,

place, and having forty zecchines about me, made hast away, and perceiving him pursue, began to run out of the place. The *Janizary* seeing one of his companions call'd out to him to stop me, which he did, there being no way for me to escape. These *Turks* having search'd, and found nothing about me, led me to the *Esqui-odolar*, which was close by, and bringing me before a man, whom I suppos'd to be an officer, accus'd me as a spy. He examin'd me in good *Italian*, and I told him I was come out of curiosity to see the tombs. He reply'd there was no seeing of them, because of the extraordinary jealousy of the *Turks*, but that he excus'd me this time as being a stranger, who knew not the custom of the country, and warn'd me to make haste to *Galata*, and return no more to *Constantinople*; as also to be thankful to the *Turk* that set me at liberty. I thought I had seen my angel guardian, who deliver'd me out of prison; and doubtless he was some *Italian* renegade, for he spoke the language better than my self. I accordingly made haste back to *Galata*, which I had fear'd I should not see in some days; so dangerous is curiosity among barbarous people.

Greek church.

In my return, I pass'd through the quarter call'd *Fener*, and went into the church and house of the *Greek* patriarch. The church is narrow and low, with five arches on each side, which divide it into three isles, and has a few silver lamps hanging in it. On the left is the patriarch's seat, ascending four steps, on the right hand going in is a piece of our saviour's pillar, three spans high, about the same thickness, and red and white.

The assem-
nal.

Saturday the 23d, I hir'd a boat the day being fair, to divert my self on the freight. It is much pleasanter being on it, than on the *Posilipo* at *Naples*, for it is to be enjoy'd at all times of the year, and the prospect is better by reason of the view of *Constantinople*, whereof we have spoke before. I went along as far as the villages of *Asacassi*, *Caracbiy*, *Cassun-Basfia*, and *Tarfena*, where the galleys are. Going ashore, I had the curiosity to see them building galliots, brigantines, and other vessels under fourteen arches. There were five galleys finish'd, and the keels of three others; besides six large galliots, which they told me would soon be launch'd to serve on the *Danube* in the *Hungarian* war. Close by was the captain *Bajja's* house, water'd on three sides by the freight, and handsomely built. At a small distance, on the top of a hill, near the shore was the village of *Dra-*

nana. There were also in the same water twenty men of war built in the black sea, the biggest of which carry'd seventy guns; and that being *Friday*, which is the *Turkish* holiday, they had all their colours abroad. There are along the shore above forty cover'd arches, and as many open for the service of the ships and galleys. The water is so deep that they step ashore from any vessel upon a plank.

Proceeding further in the boat, I saw *Serray-Basfia*, on the freight, adorn'd with many rows of cypress-trees, and abundance of lobbies in the galleries; and embellish'd with such variety of colours, that it, in a manner obliges the eye to behold it. At a great distance, all the way inhabited, appears the village of *Asuy*, where the freight turns away to the right, growing narrower towards the river. For this reason the three miles they reckon from *Galata* to this village, by water, are not only delightful on account of the beauty of this shore; but also for the other opposite to it where *Constantinople* stands, and for the many notable houses on the water, even without the gate of *Jvassere-Capfi*, and its suburb *Jupb*. The water four miles from *Galata* is fresh, by reason of the river that runs from *Belgrade* into the freight. Seeing that river run smooth, I caus'd the boat to go on, leaving on my right a wooden-house, well gilt and painted upon the water, built to take the air in summer; and passing under a stone-bridge three miles further came to *Cbitana*. This is a place that has but few houses, but of curiosity, because of a machine there is on the river, which turning a wheel, blows five pair of bellows belonging to so many forges, to melt the iron, which is thence convey'd to the moulds to cast bombs for the war. There being no going further, because of a fall the river makes down the rugged hills, I turn'd back.

Mr. *Whitton*, a rich *English* merchant came at night to our inn to sup and drink with us; for tho' there were six *French-men* at the table, yet the wars between nations are not to break private friendship, especially in a strange and barbarous country. The *Englishman* eat, and drank heartily, as did a *Genoese* his companion, and the six *French-men*; for by the same token they were all drunk, and painted one another's faces without being angry. Not being able to hold out at drinking with them, I went away to bed, making fast

fast my door, which these *Bacchanals* came to break open; but finding it fast, were forced to go their way without doing any thing.

Sunday the 24th, I was told that the day before the *Caimacam* had been at *Galata*, and sent twelve *Greeks* and one *Jew* to the galleys. Going afterwards to the village of *Caracbioy*, I met the son of *D. Joseph Marciese* of *Messina*, who bought and sold wine to get his living, as his father had done before, he got away to *France*, by special favour of the grand seignior's.

Monday the 25th, it was known that the *Caimacam* of *Constantinople* had been put out of his employment, after holding it three months and a half; and that the *staf* of the castles was to succeed him, he being sent to the government of *Derberker*, the metropolis of *Mesopotamia*; and this because in so small a time he had gain'd the hatred of both *Turks*, and christians in that government, so little suitable to his birth, he being the son of a *Greek* priest.

No remains of *Calcedon*.

After dinner, I went over in a boat to *Asia*, to see the remains of the ancient *Calcedon*, where landing, I found nothing to prove there had been such a city, but the fair ground it stood on. It is two miles west of *Scutaret*, opposite to the seraglio. Near to it the grand

seignior has a good pleasure-house, with a curious garden adorn'd with cypress-trees, which are very common in those countries.

I using sometimes to visit *James Colver*, ambassador from the states of *Holland* at the port, because he was a virtuoso, and lover of travellers, he out of Mr. *Spon's* book put me in mind, that I had omitted to see the emperor *Marcian's* pillar, which others besides me had forgot; which gave me an itching to return to *Constantinople*, to satisfy this new curiosity; notwithstanding I had promis'd the renegado I would go no more. In spite of the danger I took boat *Tuesday* the 26th, and saw the pillar in the court of a private *Turk's* house, near the same quarter of the *Janizaries*. As near as I can guess it is fifteen spans high, made of one piece of speckled marble, with its capital of the *Corinthian* order, on which was a square stone, with four eagles at the four corners. I could not see the *Latin* verses the ambassador told me were at the foot of the column, they being perhaps sunk into the ground with the pedestal. Besides I was in such haste to get out of danger, for fear of meeting the *Italian* renegado, who this time would have done me some diskindness, that I would not stay to have it uncover'd.

GEMELLI
1694.

CHAP. VII.

The Author's Voyage to Smirna.

DESIGNING to go by land into *Persia* with the caravan, I resolv'd to return to *Smirna* by sea; which *John* and *David Mener*, *French* merchants of *Marseilles*, and the latter consul of the nation understanding, they both of them very civilly offer'd me my passage aboard the ship call'd the *Jupiter*, commanded by captain *Duran*, of the said city of *Marseilles*. The same offer was made me by captain *Sereni* of the same city, aboard his vessel call'd the *Swallow*; for the *French* are very ready to forward any body that travels only to see and write; and talking of me, they would say to one another, *This is a worthy Man, who Labours for the publick, and therefore we are all Bound to Assist him.*

I thank'd them all, and accepted of the kindness aboard the first that should happen to sail; but perceiving on *Wednesday* the 27th, that they were uncertain when they should sail; for fear of losing the opportunity of the caravan, which I fear'd would set out very soon,

I resolv'd to go aboard a *Turkish Chibamber*, that was bound for *Smirna*. Having laid in my provision, we set sail with a fair wind on *Thursday* the 28th; but scarce had we run thirty miles before the *Rais*, or master, according to their custom, came to an anchor in an open road, on the side of *Natoia*.

Friday the 29th, we weigh'd three hours before day, and that evening drew near the island *Marmora*, but the wind being contrary at night, we could get but little by tacking.

Saturday the 30th, about noon, we were still opposite to those islands. There *Marmora* are five of them; the biggest is call'd *Marmora*, on which there are four small villages, or hamlets; the second *Bacialiman*, which are five villages; the third *Ecbnich*, has but one; the fourth *Baglia*, has two; and the fifth *Imaral*, has two more. The soil is so good, that they supply almost all *Constantinople* with wine at a moderate price; for an *Oka*, weighing forty eight ounces, which

GEMELLI is about three pints, is sold for three *Grano's* of *Naples* money, being about three farthings *English*.

The wind blowing hard at night, and the channel being widest about *Marmora*, we were forc'd back thirty miles, to put into the port of the island and village of *Ecnich*, on *Sunday* the 31st. The same wind continuing, kept us all *Monday* the 1st of *February* in the same place; and failing on *Tuesday* the 2d, three hours before day, after six hours sail, we came to *Gallipoli*, 160 miles from *Constantinople*. We fail'd not on *Wednesday* the 3d, because the sea ran high. That same night *Ussin Vizier-Bassa* came to *Gallipoli*, with a retinue of two hundred persons on horseback, going from the castles to *Constantinople*, to take possession of the place of *Caimacam*; *Calicos* being depos'd, as was said before, for his ill management. This vizier had been *Caimacam* the year before, and was much esteem'd by the *Franks* for his good qualities. *Xaxan*, the *French* vice-consul entertain'd me in his house very civilly; but at supper omitted none of his pharisaical superstitions before spoken of.

Thursday the 4th, I saw the *Londra* or vessel I came aboard of from *Bickier* in *Egypt*, and left at *Rhodes*; which in four months time had not perform'd its voyage, by reason of the drunkenness of the *Rais* or master, who thought of nothing less than his business; and had I not resolv'd to leave the brute, I had still lain languishing about those wafts, and the course of my travels had been considerably interrupted.

We could not fail before *Friday* the 5th, because of the bad weather. Yet we came in good time to the castle of *Natolia*, where we stay'd, because the wind made the sea run high. I was forc'd to lie aboard that night, and therefore *Saturday* the 6th, in the morning, being no longer able to endure the sea-sickness, I would go ashore, tho' the snow lay in the country two spans deep. Going to the *French* vice-consul, who resided there, I found him a rude unmannerly man, who ask'd me several impertinent questions, and at last carry'd me to the *Aga* of the castle, giving him a very ill account of me, and telling him, I feign'd myself a *Frenchman*, but in short could be no other but some friar; grounding his conjecture upon seeing me cover'd with a cloak like a friar's, because of the cold; so that I was much afraid I should have been thrown into goal. However, the *Aga* being a discreet man, said it was enough if he saw

my pass. And the base vice-consul answering he had seen no pass, and that I to excuse myself, said it was aboard the vessel, to prevent the *Aga's* growing jealous, upon so many objections, I took my leave, saying, I was going for it, to shew them; but would not return thither any more, seeing how mistrustful the *Frenchman* was.

Sunday the 7th, after dinner we had the usual visit of the customer, and *Janizary*, who taking an account of all there was aboard the ship, ask'd me whether I was bound, and whether I had a pass. I answer'd, I was bound for *Smirna*, and the consul had seen my pass.

Monday the 8th, the weather was not fit to sail, but the sea growing calm on *Tuesday* the 9th, we set out in the morning, and lay that night at *Tenedos*. Tho' the wind continu'd fair on *Wednesday* the 10th, the *Rais* would not fail, and it coming about afterwards against us, we were forc'd to continue there whilst it lasted.

Thursday the 10th, we all went ashore, and I took up my lodging in the house of a *Greek*, where there were also two *Frenchmen*, and two *Venetians*; one whose name was *Paul*, and the other his wife, in man's apparel call'd *Clare*. *Friday* the 12th, we all went to divert us two miles from our place of abode for the country air, and found all parts well cultivated with vineyards; so that *Muscadine* wine is there sold for two para's the *Oka*, and the more ordinary sort cheaper, but they are both light wines, fit to drink at meals.

Saturday the 13th, we din'd at a *Greek* priests, who gave us a good dinner for our money. *Sunday* the 14th we heard mass in the *Greek* church, whither all the christians of the country resorted. At last, *Monday* the 15th, we sail'd, being in company four *Chambers*, one *Saïque*, and a *Londra*, but ours being the best sailer, outstrip'd the others, and came first to the strait of *Baba*, which the others could not enter, the wind changing upon them.

We held our course all night, so that *Tuesday* 16th, at break of day we were in sight of *Focia*; which we entred, with much tacking, the wind being a-head of us. Going ashore, I hir'd two horses for a piastre, to carry me in the morning by land to *Smirna*, which was forty miles distant; considering I might perhaps spend much time by sea, because the weather was bad. A storm blew at night, but the sea grew so calm in the morning, that they sent word betimes, they were ready to depart.

Focia
town.

Wednesday the 17th we set out early. Going out of the harbour, I observ'd a small castle, with nine pieces of cannon level with the water. A *Bassa* would have built another on a small island, a mile distant, but death prevented him. The Town of *Focia* is small, wall'd, and has two gates, and an excellent harbour, fit for great ships close under the wall. The wind continuing fair, we arriv'd at *Smirna* in the afternoon, having spent twenty one days in this tedious voyage; for a christian may destroy himself, unless he be arm'd with *Job's* patience, among the *Turks*, who always use the affronting words, *Naji Naji*, and *Giaur*; and a man has not always the command of his passion. This their presumption proceeds from their being in their own country, and superior in power, else they would not dare to speak. Therefore it is convenient, that a christian, as much as may be, avoid going aboard a *Turkish* vessel; for tho' there be more *Greeks* than *Turks* aboard, yet the first are worse than the latter, and bear the same hatred to catholicicks. Besides that in matter of trade, they are greater cheats, and knaves than the *Turks* themselves. The *Armenians*, tho' schismatics, have not so great an aversion; but rather endeavour, whensoever occasion offers, to do catholicicks all the service they can; as I have often found by experience. For this reason, on *Thursday* the 18th, I took a room in the *Xan* of the *Armenians*, where the caravan of *Persia* puts up. Rooms are there cheap, but without any furniture.

Falleneſs
of the
Greeks.

Friday the 19th, my friends did me the honour to visit me. *Saturday* the 20th, I din'd with monsieur *Ripera*. *Sunday* the 21st, being *Shrove-Sunday*, the *Dutch* consul treated the *Dutch* and *English* merchants, and they danc'd till next day. The *English* consul did the same on *Monday* the 22d, and several *French* went thither mask'd and unmask'd; the war between the two crowns no way obstructing the fair correspondence between them in a strange country; and therefore they said, at sea they would have fought and done their duty, but that they ought to be friends in a strange country. In short, during those days of *Shrove-Tide*, they met together forty at a time, *French*, *English*, and *Dutch*, drinking merrily in the neighbouring villages, and among them the sons of the *French* and *English* consuls. The same, as I mention'd before, was practis'd at *Constantinople*, between the *Dutch* ambassador, and mr. *Mener* the

French deputy. Perhaps other nations would not be able to conceal their aversion, and behave themselves so nobly. In other respects, these *English* and *Dutch* ministers are so little regarded by the *Turks*, that they protect none but their own country-men (as they several times refus'd me) knowing that the *Turks* do not value them. On the contrary, the *French* refuse their protection to no body, not even to *Venetians*, who continue in the *Levant*, when the republick, and grand seignior are at war.

GEMELLI
1694.

Tuesday the 23d, being the last day of *Shrove-Tide*, about three hours in the night there happened an earthquake, a very frequent misfortune at *Smirna*; and it was repeated on *Wednesday* the 24th in the afternoon, with the same violence. *Thursday* the 25th, I went a shooting among the vineyards, where there are abundance of thrushes, and woodcocks. *Friday* the 26th at night, the earthquake return'd twice, but not so violent. *Saturday* the 27th, I paid visits to friends, and *Sunday* the 28th went out of town with other *Europeans* to take our pleasure.

Monday the first of *March*, I was brought into the strongest trouble that could possibly happen to a traveller. I was summon'd before the *French* consul, by one *Brancaleone* of *Ancona*, marry'd to a *French* woman, who would persuade me I was not my own self, but one *John Massacueo* of *Messina*. This *Brancaleone* had receiv'd some goods in the name of that *Messinese*, for which he had given an authentick receipt; and he alledging, that the custom-house of *Smirna* had seiz'd and sold them, would have me cancel the instrument, so like it seems was I to his creditor. To undeceive him, I told him my name and country; and he not crediting me, I writ some lines, that he might compare my hand with the *Messinese's*, and put that notion out of his head.

Tuesday the 2d of *March* arriv'd a numerous caravan from *Persia*, of one hundred and twenty stately camels, laden with fine and coarse silk; but the merchants durst not set out with so small a company for fear of robbers, which oblig'd me to take other measures; my design of travelling through *Natolia* being disappointed. The mistake of the *Anconeſe* made good sport in *Smirna*. *Wednesday* the 3d, a friend came in the morning to acquaint me, that he still persisted I should cancel the instrument, and that there was no persuading him I was not the *Messinese*; and therefore he would again summon me before the consul, being satisly'd I should be imprison'd,

Wed-

GEMELLI 1694. if I did not comply with what he desir'd; his wife having great influence over the consul, who could not deny him so reasonable a request; and the more, because some said, I was very like *Maffacueva*, and only differ'd from him in my voice. This gave me some trouble, and I knew not what to do because I had no protection but the consul's. Therefore on *Thursday* the 4th, I spoke to monsieur *Ripera*, to see what method might be taken to undeceive the *Anconeſe*; there being no reason that I, to rid my self of that encumbrance, should personate another man, and cancel an instrument I was not concern'd in. He told me, he was his friend, and therefore he would not be concern'd in it, and the more, because he saw the consul had undertaken the business. To conclude, *Brancalone* not satisfi'd with seeing my hand, summon'd me, on *Friday* the 5th, a second time before the consul, persisting that I should discharge him, he being satisfi'd I was *John Maffacueva*. The consul added, this man does not demand any money of you, but only that you discharge him, and therefore you must not deny so reasonable a demand. I could have run my head against a wall, hearing them talk thus; considering he was so much mistaken in a man he had dealt with, which is somewhat more than a mere acquaintance, and that no writing of mine could discharge him. The consul blush'd seeing me fret, and telling him I was not the pretended *Messinese*; but if he in conscience could press me to do so false an

act, I would do it, there being no other way to escape that trouble; since I had declar'd to him I was a doctor of the civil law, and desir'd him to call some learned jesuit to examine me. *Brancalone* reply'd, I might have study'd since that business happened. At length not knowing how to decide the matter, he went out, leaving me and the *Anconeſe* to wrangle, and bidding us agree among our selves. The dispute held till night, the debtor contending that I was the *Messinese*, tho' he heard me talk a different language. At length I told him, I have none of those writings you ask of me; for I have receiv'd none since I came out of *Europe*; come to my lodging and search my baggage and writings, which perhaps will convince you. Taking monsieur *Ripera* along, and coming to my chamber, I open'd my trunks before them. *Brancalone* began to search my baggage and writings whilst I fretted, and turning often to him said, *You give me such a subject to insert in my Manuscripts, as has not happened to me in all my Travels, nor perhaps has any other Traveller met with the like.* *Brancalone* answer'd, *Indeed it is a mighty matter to make so many Words about.* Night coming on in this tedious troublesome search and they having seen several authentick writings seal'd, which I could not have counterfeited; he was at last satisfi'd, and went his way, leaving me in my chamber to reflect on the strange accidents a poor traveller is subject to.

CHAP. VIII.

The Author's Journey to Burſa, the Metropolis of Bithynia, and the Description of that City.

Being apprehensive, lest *Brancalone's* mad fit should return upon him, I went on *Saturday* night late to find out the *Catargi*, or muletier of *Burſa*, in order to go by land to that city with the first opportunity. I hir'd two horses for my self and servant for fifteen piasres, paying half as much a-part for my equipage. *Sunday* the 7th, I endeavour'd in haste to take leave of my friends, but not of the consul, for fear of the *Anconeſe*; and my baggage, which I had left with monsieur *Ripera*, being ready on *Monday* the 8th, we could not set out, because the chief of the caravan was detain'd by some business.

Tuesday the 9th, we began our journey betimes, with the caravan, consisting

of one hundred and ten horses and mules. Every fifteen days, such a company goes from *Smirna* to *Burſa*, like the *Procaccis*, or messengers of *Naples*. We travell'd thirty miles, ten plain, and twenty mountain, to *Manasia*. Here we joyn'd part of the caravan, that set out the day before, and lay that night at *Bungarbaci*, to wait for the other travellers.

Manasia is a city as large as *Smirna*, *Manasia* is seated at the foot of a high mountain. city. The houses are low, and of mud walls, except some belonging to persons of note. There are in it abundance of *Mosques*, and on the top of the mountain an old ruin'd castle, which yet was commanded by a higher rock. It is govern'd by a *Cadi*, who is allow'd 500 alpers

aspers a day by the grand seignior, which the *Turks* look upon as great pay.

I left off going by sea, because of the insolvency of the *Turks*; and thinking I should fare better by land, found just the contrary, meeting with no lodging that night but the bare ground, on which I laid my little bed, and cover'd my self from head to foot, without taking off my boots, because of the great cold. Had I known the language, I might have got lodging in the city, but it was dangerous parting from the caravan. The *Turks*, who are hardy, thought it no difficult matter to lie on the ground in the open air; as they all did, sleeping as sound, as if they had been in good Beds; tho' they were at the foot of a mountain cover'd with snow.

I walk'd quite frozen on *Wednesday* the 10th, and having nothing to defend me from the cold air, endeavour'd to warm my inside with chocolate, and the outside with a good fire. We set forward betimes through a plain country, bating three miles of mountain-way, and making no halt all day, but only to take a small repast, lay that night at the *Cunac*, as the *Turks* call it, of *Balamuc*, a small village seated in the plain. Our lodging was in the caravanera, or stable with our beasts. Three miles from *Manafia*, we rode along a causeway made over marshes; which must needs have been very expensive, there being no stones in the country about. Yet, tho' it was built at the cost of the sultan, and neighbouring city, they do not exact any toll on it, as would be done in other parts. At the end of this causeway, we cross'd over a large river on a wooden bridge.

Thursday the 11th, we mov'd before break of day, but there being abundance of loaded beasts, could travel but thirty two miles, or ten hours, to speak after the *Turkish* fashion, which is the distance to the *Cunac* of *Jalembi*. It is very troublesome travelling at such a time with *Turks*; for they do not only refuse to allow their horses any time to rest, but even to travellers; so that by the way, I was forc'd to make use of the pannel for a table, those muletiers using no saddles. To this, was added the inconvenience of the caravanera, where we were forced to keep company with our beasts. For my part, I made my bed in the manger, after taking much pains to dry it, my *Armenian* servant having fallen from his horse with it into the river. But my *Catergi* had a good ingenious boy, who attended me as carefully, as if he had been my servant, for

* VOL. IV.

a few para's I gave him now and then. GEMELLI 1694. The other *Mahometans* were also civil to me, and among the rest a *Moor* of *Tunis*, treated me with coffee and melons.

Friday the 12th, we travel'd over uncouth mountains, suffering much from the snow that lay on the ground, and that which then fell from the clouds. After riding twenty four miles in eight hours, we came about noon to *Curungiacb*, a small village among the mountains, where I had conveniency to rest me. In the *Turkish* dominions there are not above one or two towns to be met with in a days journey; and therefore travellers must take up with the conveniency of the *Xans*, or caravaneras. And here I remember that those barbarians use the words *Nasi Nasie*, which signifies to ride one's father and mother, and *Giaur* to make their horses go the faster, which same words they use to affront christians whensoever they meet them. Provisions are not very dear on the road, seven eggs being sold for a para, and a hen for ten; good winter melons for two para's a-piece, and as much bread as will serve a man a day for the same price.

Saturday the 13th, we mounted betimes, and riding thirty three miles in eleven hours, over mountains cover'd with snow and ice, we came to *Mindoyra*, passing along a cause-way of flint, three miles from the *Xan*. This place, and eight small ones are seated in a plain, enclos'd with mountains, much like that of *Apulia* in the kingdom of *Naples*, and resembles it in goodness of soil.

At sun-rising, on *Sunday* the 14th, we continu'd our journey over wretched mountains, and having travelled thirty three miles in eleven hours, came late to *Sufegreli*, a place of few thatch'd houses, near a great river, with two stately *Xans*. This day was unlucky to me, for staying behind to shoot, and then putting on my horse apace, he fell four times with me in the water, and I was well wash'd.

Monday the 15th, we held on our way through a plain but dirty country; in-somuch, that going about to make all the day's journey without baiting, as is usual, many of the horses tir'd, so that we could ride but fifteen miles in five hours to the village of *Hiermurgia*, where there being no *Xan*, we were forced to lodge in *Turks* houses. As we cross'd the river, the horse that carry'd my baggage fell, and wet it all.

Tuesday the 16th, having rode fifteen miles in six hours, along a dirty way,

Y we

GEMELLI 1694. we came to *Lubat*, where we ought to have lain the night before, had it not been for the bad way; which oblig'd us to fend the horses unloaded by land, and the baggage by water against the stream, paying a zecchine for the boat.

Lubat city *Lubat*, by its walls and towers appears to be an antient city. There has been a great stone-bridge over the river, but the *Turks* let it run to ruin, and go over in a ferry. Of five *Jews* that were going with the caravan for *Bursa*, or *Brussa*, as the *Turks* pronounce it, the tax-gatherer made one a prisoner, because he had not the billet to shew he had paid the head-money, or tribute, which is four zecchines for a rich man, two for others not so well to pass, and one for the poor.

Wednesday the 17th, we set out in a boat upon the aforesaid river, which is about a quarter of a mile over, and runs out of a lake or pool, through which we afterwards pass'd in sight of the small villages of *Caragaci*, and *Bulugnat*, formerly wall'd, as appears by the ruins. After six hours, in which time we run twenty four miles, we landed near the village of *Nacilar*, where the muletiers expected us. Loading the horses, we advanced six miles further in two hours, and rested at the *Cunac* of *Hassan-Agachioy*, where we found no *Xan*, but a small stable, all on a floor, too little to contain all the men and beasts, and yet we were not above twenty persons, most of the company having left us at *Sufegreli*, to go to *Sardac*, and thence to *Gallipoli*, and so to *Adrianople*. The great *Xan* was at *Taatale*, two hours journey further.

Bursa city *Thursday* the 18th, we set out again before day, and riding eighteen miles in six hours, came to *Bursa* or *Prusa*. This city seated in 41 degrees, 40 minutes latitude, is at the foot of the mountain *Olympus*, which the *Turks* call *Gefcisdag*, or *Rescisdag* and *Ana-Tolaydag*. Some say it was built by *Hannibal*, after the victory obtain'd by the *Romans* over *Antiochus*; others by king *Prusias*, in the year of the world 3279, and that it was the court of the antient kings of *Bitbynia*, before it was subdu'd by *Orcanes* the II. *Ottoman* emperor, in the year 1300. It was first a bishop's see, and afterwards a metropolis, which honours it did not lose when it fell under the barbarian yoke, for it was the *Ottoman* court, before they took *Constantinople*; and rightly consider'd is nothing inferior to it; for besides that several sultans have resided in it, and many princes of the *Ottoman* family are there

bury'd, it has as great a trade, and more plenty of silk, because of the vast quantity brought out of *Soria*, and all the east, which is there wrought, and some with gold and silver to trade into *Europe*. On the back of it, as was said, is mount *Olympus*, whence the river *Rbindacus* flows, which passes *Bitbynia* from the lesser *Asia*, and is the greatest of all those that fall into the *Propontis*. The mountain is vastly high, barren at the top, and always cover'd with snow; in the middle part it abounds with pomegranates; and at the foot, where most of this famous city is built, there are most delicious gardens; but is much disgrac'd by the prodigious number of monstrous serpents it breeds. The *Turks* call this mountain *Caloyeronoron*, because of the monasteries there are on it. *Bursa* was the country of the famous physician *Asclepiades*; and of *Dion Prusias*, call'd for his eloquence *Chrysothomus*, who left ten books he had writ of the virtues of *Alexander the great*, and eighty orations in *Greek*.

This city, which for its baths may be call'd the *Pozzuolo* of *Bitbynia*, as to its plan is irregular, and a meer confusion of buildings; for being seated eastward at the foot of two mountains, making a figure like an arm bent, part of it stands high, part in the vale, and part on cliffs. On a high rock appears the grand seignior's palace, where the *Ottomans* resided a long time, enclos'd with a good double wall, with towers at proper distances; but all goes to ruin, through the carelessness of the *Turks*. Another part of the city stands on the side, and at the foot of another high mountain, or rather an arm of that before mention'd, which over-tops the castle, and has a curious prospect of the country, planted with vines for several miles about, and adorn'd with pleasant gardens, and populous villages; so that in summer the gentry and citizens go over to divert themselves at *Bagarbafci*, which is a great plain water'd by a plentiful spring of good water, running down from the mountain to supply several quarters of the city.

Continuing to take a view of the parts of this noble city, and to begin at the castle, or seraglio, I saw first the quarter of the *Jews*, at the end whereof on the same side of the mountain, I found a good *Bisicsten*, an enclos'd cover'd place, or exchange, where they sell rich commodities, and better *Serfici*, or *Bazari*, with rich shops; and going on, saw several streets of all sorts of handicrafts, and all very populous. The houses and streets

Noble
Baths.

Noble
baths.

streets of this city are very good, considering they are in *Turky*, and better than those of *Smirna*, than which it is bigger, but I believe not better peopled.

Having laid up my baggage in the *Xan* of *Efciengi*, I took a *Jew* to shew me the city, but as we were going to the cattle, he was sent to go by the tax-gatherer for the tribute; so that I was forc'd to get another, who led me to the so much fam'd baths, half an hours walk from the city. Going into the first, call'd in the *Turkish* language *Capigia*, which signifies a hot place, I found in the first room, which had two cupola's, a good fountain of cool water; here they strip, there being *Soffa's* round about to sit, and lay the cloaths on. There are two doors out of it to the bath. On the left is a room to lie in, for such as will stay all night, and other convenient places with hot fountains, and a cold one. Still further on there is another room, the roof whereof is like the others, cover'd with a cupola, with vent-holes for the heat to evaporate, with a fountain in the middle, and three little ones luke-warm on the sides. Further still on the right is a very little room with three other springs of water, and two on the left. Thence they go into the bath, which is round, cover'd with a cupola full of vent-holes, and seven spans deep, two pair of stairs to go down into it, and about it seven springs of hot water. When I went there were many *Turks* who swam, wash'd, and shav'd themselves. When I had wash'd, and had my back rubb'd with a woollen-cloth, not being able to endure the heat, I went out, and was shav'd by a *Turk* in the second room. This water comes so hot from the mountain, that it soon boils an egg, and were it not temper'd with other cold water, no man would bring his skin out of it. The women's bath is a-part, but near the men's; on *Mondays* the women come into the men's bath, and the men may go to the women. A stones throw from it is another bath call'd *Chicbiurili*, or the sweating-place, and its water is very different from that of the others, being good against old aches. I went into the first room, and found it like the others, with a fountain of cold water, and places to sit. I went thence into a room, about which there were six fountains of water intolerably hot, and as many in another dark room; whence I went very hot into the sweating-place, where there is a spring of scalding water, a sick man lay there sweating on

the ground. The structure of this is not so beautiful as that of the great one, which is all pav'd with marble of several colours. GEMELLI
1694.

Thence I mounted a very steep ascent to see the seraglio, which *Tavernier* reckons among the best, next to those of *Constantinople* and *Adrianople*. I found it an ordinary palace very ill built, and all gone to ruin; for they told me the sultans had not come to it for thirty five years past; only *Mahomet IV.* having been there at the beginning of his reign. Formerly, as has been said, *Bursa* was the settled abode of the sultans, and therefore there are five tombs of them bury'd in the *Mosque* of *Amurat Beg*, and three others of sultanesses and their children, after the same model as those of *Adrianople* and *Constantinople*, but not so rich in marble.

Friday the 19th, the *Jew* led me three miles from the city towards *Montagna*, to the bath of *Efci-Capigia*, or the old bath, where is the third mineral water different from the other two, and good for aches, and other distempers. Going in, there is a large room with two cupola's, and a fountain in the middle, as at the other baths; and passing thorough it into another room, in the midst of it is a fountain of cold water, and two on the sides, of hot. Within that is the place where they bath, pav'd with marble, and six spans deep, with five large conduits of hot water about it. This yields but little profit, because many go in for nothing; but the great one of *Capigia*, the grand seignior farms out for eight hundred piastres a year; and a lord on whom the sultan has bestow'd it, makes a considerable revenue of the other. The mineral waters run out of the bath of *Efci-Capigia*, into another little bath in the village of *Cicberic*, for the service of the inhabitants.

After dinner, I went to *Bugarbaschi*, to see the *Dervises* turn round, the *Jew* that had been apprehended by the tax-gatherer, going with me. This mad devotion was perform'd in a good room, after the same manner as was describ'd at *Constantinople* and *Adrianople*; only with this difference, that here they take but three turns, omitting the fourth in which the superior should dance.

In my way back to the *Xan*, I went in *Uli-giam* to see the *Mosque* of *Uli-giam*, that is, the great one. There is this singular in it, that in the middle of it there is a great fountain encompass'd with bannisters; they say it is very antient, and built by the first sultan that came to *Bursa*.

GEMELLI
1694.

To return to the city, it is govern'd by a *Malli*, or *Cadi*, who is chang'd every year; but a *Bassa* has the command of the country, and must not reside in *Bursa*. Its air is not very wholesome, as being seated at the foot of high mountains cover'd with snow, and near to morasses and waters, so that every

morning it is cover'd with fogs rising from them. Provisions are not dear, for there is plenty of good flesh, bread, fish, and excellent fruit, whereof I eat much, and that rare at such a time of the year, and good fresh grapes, melons, apples, chefnuts, hazelnuts, and the like.

CHAP. IX.

The Author's Return to Constantinople.

Montagna
town.

Saturday the 20th, I set out for *Montagna*, and arriv'd there three hours before night, having travell'd eighteen miles of dirty way. This town is seated part on the hill, and part in the plain, on the shore of a bay made there by the streight, thirty miles in compass. The houses for the most part are low; I lodg'd in a large and stately *Xan*, which has good rooms, and a fountain in the middle of it, and over it a gallery cover'd with boards, whither the *Turks* resort to pray five times a day.

Sunday the 21st, two *Caicks*, which are small barks with three oars, being ready to set out, I embark'd for *Constantinople*, and tho' it was customary to search goods, yet mine were not open'd, I producing the *Thefchere*, or billet of the custom-house of *Alexandria*. One of those *Turkish Santone's*, whom they call *Derives*, went aboard with me; he was not one of those that live retir'd in community, but rather a vagabond knave, that made shew of an austere life to cheat the world. He was cover'd from the navel upwards with two sheep-skins, and downwards with other skins put together like a petticoat. On his head he wore a white cap, with long strings ravell'd at the ends about his neck; about his waste hung several pieces of marble, and about his right arm a close bracelet of the same. In his hand he carry'd a wand, with a piece of ivory at the end like a saw, to scratch his back where he could not reach with his hand; as also a thick club, and a horn hanging by his side, to blow upon occasion; a habit so ridiculous and extravagant, that it deserv'd to be painted. Having run thirty miles, we came to the village of *Bosborza*, at the point of the bay made by the streight, where the wind being contrary, we were forced to stay.

Monday the 22d, leaving the hard bed we had on the sandy shore, we went aboard four hours before day, with but little wind, so that with the help

of the three oars, which were but slowly ply'd, we came about noon to *Carli*, a small town on the shore of the streight, thirty miles from the place we left last. I cannot compare the lovely hair of the *Greek* women in this place, to any I have seen in so many countries I have travell'd through. When loose, speaking modestly, it hangs down to their heels, and when made up into large tresses, to their mid-leg; but their faces are not answerable to the ornament of their heads, for they are not beautiful.

Tuesday the 23d, we lay still because of the bad weather, and had an ill night, there being no *Xan*. Wednesday the 24th, we went aboard in the evening, and sail'd all night with a fair fresh gale, which made the sea run so high, that it wet us and our baggage.

When I expected on Thursday the 25th, in the morning to be at *Constantinople*, I found my self after a run of forty miles, on the shore of *Romelia*, four hours journey from *Constantinople*, and the wind being against us, we landed near a mill. Some *Turks* went away a-foot, but I stay'd all night because of my baggage, and lay in the mill, the noise and coolness of the water inviting me to sleep. Friday the 26th, perceiving all the *Turks* were resolv'd to go, some by land and some by Sea to *Constantinople*, and our *Rais* having no design to go that tide, I thought fit to go too, and leaving my man to look to my equipage, went aboard a little boat, which in seven hours, the wind being contrary, carry'd me to *Galata*; observing as we ran along the streight, that a great part of the wall is fallen, and the *Turks* take no care to repair it. Saturday the 27th, I thought to return to the bark for my baggage, that it might not be carry'd to the custom-house. I was disappointed, for going in a vessel call'd a *Caick* to meet it, I found it at the point of the seraglio; and desiring the *Rais* to deliver me my equipage, he

said

said he could not do it, because he was in sight of the custom-house.

Sunday the 28th, I went to the custom-house with monsieur *Mener*, and with much difficulty the customer condescended to take single duties, pretending to the double, without regarding the *Tafchare* of *Alexandria*, saying it was a separate kingdom, where the custom-house, like those of *Allep* and *Seyde*, is by the grand seignior assign'd over to the *Bassa's* that govern.

Notwithstanding the *Turkish* officer's prohibition, I went over to *Constantinople* on Monday the 29th. There I found a galley ready to depart, to carry over into *Asia*, a *Bassa* that was going to *Mecca*, to visit that *Mabometan* place of devotion. He went in a triumphant manner, his servants carrying clubs adorned with myrtle, and a sort of rich turbant, beautiful for its variety of colours; others had feathers of several sorts at their javelin heads, which they told me was a preparation to that devotion. Having observ'd this novelty in my way, I went near *St. Sophia*, to see two pillars of white marble, which I was told were in the houses of two *Turks*. I found one of them had a curious wrought capital, the other had none, it being purposely cut off to enclose it in the wall; they said they were of equal height, which, as near as I can guess, is forty spans, and sixteen in thickness; they could give me no other account of them. Between the two columns is a little street twenty spans wide. Having satisfy'd my curiosity, I made haste home for fear of the *Turks*.

I came from *Smirna*, with a design to embark for *Trabezond* on the black sea, with some *French Jesuits*, that go thence to their missions, being satisfy'd I could not do amiss in their company, they taking the shortest way, the most frugal and safest from robbers, to go into *Persia*. Finding therefore at my coming, that some of them had agreed for their passage, together with a *Dominican*, aboard a *Saïque* belonging to a *Greek*, I would not slip the opportunity; but taking boat after dinner, went ten miles off to the castles where the *Saïque* lay to secure my passage. The four *French* fathers and the *Dominican* had hir'd a cabin for twenty five piastres, and I offering them to pay my share, they refus'd, because they would be more at their ease. Therefore applying myself to the *Rais*, I ask'd him what place he had for me aboard, to see whether it were convenient. He led me into the father's cabin, which being good, I had no cause

to complain, but only ask whether any *Turks* were to be in it; he told me not, and that only I, and five *Papa's* should go in it; and this, because the *Turks* will rather be expos'd to the rain, than pay above the common rate of a piastre; and thus, without being oblig'd to the fathers, I had a place in their cabin for six piastres, and my man's passage besides.

The castles before-mentioned, seated where the streight is but a mile over, one of them in *Europe*, which has four small towers at the angles, and others at the middle of the curtain, with small pieces of cannon on them; the other in *Asia*, which has five small towers, besides others bigger at the curtains. In both these castles, there are only a few dwellings for soldiers.

Near them, the current sets so hard towards the white sea, that small barks cannot stem it, unless drawn with ropes from the shoar; the other current is a mile from this towards *Constantinople*, and on both sides of it there are little cottages, and a ruin'd light-house.

Tuesday the 30th, I carry'd my equipage in a boat aboard the *Saïque*, having paid the customer his due, who farms all the customs of the *Ottoman* empire, except those of *Caire*, *Allep*, and *Seyde*, for 1500 purfes of 500 ducats each. I had the prospect of the streight over again, pleasing my eyes on the side of *Europe*, with the sight of *Galata*, *Toppana*, *Biscataci*, *Orla-chioy*, *Crey-Jafmy*, and *Arnaut*; and on the *Asian* shoar, the delicious *Scutaret*, *Eufongiu*, *Eftauros*, *Cinghil-cray*, and *Elissar*. Having left my Baggage aboard, I return'd home to order other matters for my voyage.

Wednesday the 31st, for want of other business I went again to see the emperor *Marcian's* pillar, to observe where those two *Latin* verses, transcrib'd by monsieur *Spon* might be; since the *Caimacan* being depos'd, I might be safer in *Constantinople*. I went to *Saraviara*, which is much lower than *Cejada Bassi*; and going into the ruin'd house of a *Turk*, saw the pillar again. Viewing it now on all sides with less fear, I could read no such verses, but only saw four birds like eagles, cut on the four angles of the capital; and on the pedestal next the bath, two angels carv'd, supporting a plain shield or escutcheon, over which there were three verses, so defac'd by time, that there was no knowing the characters, much less reading of them; so that monsieur *Spon* could never read them for these hundred years past; besides that they look'd more like *Greek* than *Latin* characters. On the

GENEAL other three sides, there were three escutcheons or shields, like that *Fortune* is painted with. Returning home, I pass'd by the mint, where I saw money coin'd.

1694.
Cavach
seraglio.

Monday the first of April, being a fair day, I hir'd a boat, and pass'd over into *Asia*, by the upper-part of the end of the great seraglio, to divert my self at the seraglio of *Cavach*, belonging to the grand seignior, opposite to that in *Europe*. I found all shut, but from without, saw four apartments, after the eastern manner, all built several, and an iron gate to them. There are other structures at the angles, and all the garden is enclosed with good walls, and has excellent rows of cypress, fir, beech, and many fruit-trees.

Calcedon.

The seraglio being near *Calcedon*, I went again to observe some remains of it, but could not find, as I had been told, the church standing, in which the council was held. Returning home, opposite to *Leander's* tower, I saw another seraglio, inhabited by sultan *Mabomet's* daughter. It is larger than that of *Cavach*, but not so pleasant.

Friday the 2d of April, being the feast of my saint, I perform'd my devotions, and after dinner, out of meer curiosity to see twenty four brigantines of twenty eight oars each, and six galliots of forty two and forty four, design'd to serve against the emperor in *Hungary*, I run my self into the dismal accident I am now to give an account of. Landing at the *Darfena*, I saw that small fleet, well man'd with sailors, and 8000 soldiers, being to pass through the straight into the black sea, and thence into the *Danube*, to fight the enemy. Having for a long time view'd these vessels, my ill fate guided me to observe the hulks of two galleasses, which having been begun several years since, are yet unfinished, no body working upon them. Designing to go some steps forward, after a great number of people, I heard a *Turk* that was upon the guard call me. I return'd no answer, but went on; but he overtook and carry'd me to the barrack of a *French* renegado captain. He ask'd me several questions, and enquiring at last whither I was going, I told him to look for a friend. This did not clear me; but carrying me before the commander *Mouco Morto*, they altogether began to put several questions concerning my friend, as to his name and quality; and tho' my answers were satisfactory, they led me before the captain *Bassa*, where I waited half an hour before I could speak to him. At last they sent word to the proveditor-general of

the fleet; who going to the captain *Bassa*, when he return'd, sent me away with an officer, who in pursuance to the order he had receiv'd, carry'd me to the slaves bath, and deliver'd me to the goaler, by order of the captain *Bassa*. I was seiz'd with much dread, considering my self to be taken up as a spie, by a barbarous people, who have no compassion, nor will hear reason, but ground all their actions on conceit. When I came to the bath, I would have spoke to a *Jew*, that he might acquaint monsieur *Mener* with my imprisonment; but the *Turk* call'd out, and threw stones after him, so that the *Jew* fled and skipped like a doe. The first thing the barbarous goaler did was to search me, whether I was circumcis'd, and perceiving I was not, began to threaten without examining me. Finding I was no *Venetian*, but went out of meer curiosity to see the galliots, and hulks of galleasses, with a great number of people, he was not satisfy'd, but search'd whether I had any writings about me; finding none, because I was always so cautious as to leave them at home, when I went to suspicious places, he began to execute what further orders he had receiv'd from the captain *Bassa*. He made me pull off shoes and stockings, and lift up my feet, in order to be bastinado'd, two slaves holding the cudgels in their hands, whilst two others held up my feet. But I still persisting in the same story, and giving him a particular account of all my travels, and the captain *Bassa's* orders being only to search me, without proceeding to bastinadoing, he let me down, but search'd all my cloaths over again for writings, because they said, I was drawing the stem of a vessel in a pocket-book; and it was well for me, that I had left all my manuscripts at home; so that he only found a small letter, a *Frenchman* had given me to carry to *Ispahan*; for I had hid my watch and twenty zecchines, which if the *Turk* had found, he would never have restor'd. After these searches, he clap'd a heavy chain of fourteen links on my left foot; then he led me to the coffee-house, and thence to an *Armenian* bakers, who seeing me lie at night upon a bare board, had the charity to give me a sack to cover me. But a thousand thoughts between hope and fear disturb'd me more than the hardness of the board, and yet these were less troublesome than the noise and unpleasant singing of the bakers, and the biting of the vermin that place swarm'd with. I continu'd there but two nights, because the

Turkish
belicf.

the *Turk* who was overseer, complain'd that I walk'd in my shoes on the bread-boards, which made them remove me to another place, where the bread was deliver'd out. Here a *Polander* laid me a quilt on the boards, giving me for a pillow, a cloak of his, so well stock'd with vermin, that I caus'd it to be wash'd the next night to make use of it, or else I had been better pleas'd to lay my head on a flint. Tho' the *Turks* had forbid me talking, or writing, I so order'd it on *Saturday* the 3d, that I sent an account of my imprisonment to monsieur *Mener*. He went immediately to the captain *Bassa* to procure my liberty, but finding him busy about setting out the little fleet, could not succeed: yet he came to the bath, to get an order from me to the *Rais* or master of the *Saïque*, to deliver my equipage to the *Jesuits*, to keep for me at *Trabezond*, because his servant came not in time to the castles to have it loaded and carry'd to his house, when I was taken up, but the *Rais* was gone.

Sunday the 4th, two *Jesuits* came to say mass in the bath to all the prisoners, and the father superior express'd much concern for my misfortune. *Monday* the 5th, I walk'd about the bath, discoursing with some captains of privateers secur'd there, the sultan refusing to hear of any ransom; every one with sighs told me his misfortunes, and how the *Ottoman* ministers would not give ear to what they propos'd.

Tuesday the 6th before noon, my chain was knock'd off, and I set at liberty, at the request of *Griman* and *Fabri*, the

deputies of the *French* nation, who by the interpreter *Bruneti*, represented that I was no *Venetian*, nor any suspected person, but of their country, and well known. *Bruneti* led me from the prison to the captain *Bassa* and provéditeur-general, and spoke to them for me. Being deliver'd out of that dreadful goal, where there was a hellish noise, made by the chains of 1000 slaves, who went at break of day to work upon the ships and galleys, I went to dine with *John* and *David Mener*, and the wife of the latter, and then without losing one moment of time, hasten'd away to find the *Rais* or master of a *Saïque*, bound for *Trabezond*, and agreed for a cabin by my self for four piastres. The *Jesuits*, who did not like I should go in their cabin, were also forc'd to take another vessel; for being unwilling to lie two nights at sea aboard the *Saïque*, where mine and their baggage was, they staid in their monastery, expecting to be call'd when it was ready to sail; which they also persuad'd me to do, and this was the cause of my imprisonment. When the weather was calm, the clerk came honestly, but it requiring some time to go six miles, and the fathers making some delay, when they came to the castles, they found the *Saïque* was gone with the baggage. Thus, being now the second time in danger, never to see my equipage again, I set out in quest of it; and the fathers did the same with the clerk, aboard another *Saïque*. All these disasters beset me in passion week, and certainly I never had one so lamentable and dismal.

CHAP. X.

The Religion, Manners, Government Civil and Military, Revenues, Habit, Coin, Fruit, Temperature, and Border of the Ottoman Empire.

ALL my travels hitherto having been thorough the *Turkish* dominions, it will be convenient before we leave them, to give a short account of their religion.

Turkish
belief.

They believe in one only God, and one only person, who has created heaven and earth; and who will punish the wicked, and reward the virtuous, having made hell for the former, and heaven for the latter. That the bliss of this heaven consists in enjoying fine women, yet so as not to go beyond kissing and embracing; and in being satiated with most exquisite meats, which will produce no excrements.

They believe *Mahomet* is a wonder-

ful prophet, sent by God, to teach men the way of salvation; for which reason the *Mahometans* call themselves *Mussulmans*; that is, chosen for God, or sav'd. They allow of the decalogue, or ten commandments, and are oblig'd by the *Alcoran* to keep them.

Their festival day is *Friday*, as *Sun-* Their festival
day is among christians; but they do
not keep it so religiously, every man labouring at his trade; tho' at noon they all resort to the *Mosques* to pray, more than on other days. They are oblig'd to pray five times a day, that is at sun-rising, at noon, between noon and sun-set, which they call *Lazaro*, at sun-set, and an hour after night.

They

GEMELLI
1994
Ramadan
fast.

They keep a months fast from the new-moon of April, till the next new-moon, which they call *Ramadan*, saying the *Alcoran* descended from heaven at that time. During this time, they do not eat, nor drink in the day-time; but they fet up all the night, spending it in eating fish and flesh, like ravenous wolves; excepting only swines flesh, and wine forbidden by their law.

Bairam
east.

After this fast, they have the feast of the *Great Bairam* (like *Easter* among christians) which they celebrate with public rejoicing. They are also oblig'd at the beginning of every year, to give to the poor the tenth part of all they have got the precedent year; which their avarice makes them unwilling to observe.

They are very vain in building mosques and hospitals, and believe, that when they have well wash'd their bodies, muttering some certain prayers fit for that purpose, their souls remain clean from any filth of sin; which makes them bath often, especially before they pray.

Circumci-
sion.

They use circumcision, which they perform, when their sons are seven or eight years of age, and can distinctly speak these words in the *Turkish* tongue, *There is but one only God; Mahomet is his only prophet and apostle*; and this is their profession of faith. But there is no mention of circumcision through out the whole *Alcoran*, they say, they use it in imitation of *Abraham*, whose law is recommended to them by *Mahomet*. They believe the *Alcoran* was brought to *Mahomet* at several times to the cities of *Medina* and *Mecca*, because the *Jews* and *Christians* had corrupted the holy scripture and divine law.

Matrimo-
ny.

The *Mahometans* are allow'd to have four marry'd wives at once, and as many concubines as they can keep; but they may dismiss these wives when they please, only paying what was agreed on in the matrimonial contract, that they may marry again at pleasure. The women before they marry again, are oblig'd to stay till it appears they are not with child; that is, four months, and widows ten nights more. The husbands are oblig'd to keep the children they have by their slaves and wives, they being all counted equally legitimate. He who has put away one woman three times, may not marry her again, unless another marry her first, and be divorce'd from her.

Publick
structures.

They have mosques, colleges, and hospitals with good revenues, as also monasteries of dervises, who are religious men, who lead an exemplar life, under obedience to their superior.

They have also another sort of vagabond religious men, call'd also dervises, who are clad like mad-men, and sometimes go naked, and some of them slash their flesh in several parts of their body. Thus they are look'd upon as saints, and live upon alms, which no body refuses them. These men may take up and marry when they please.

They do not believe that *Jesus Christ* is God, or the son of God, nor in the most blessed trinity, but only say that *Jesus Christ* is a great prophet, born of holy *Mary*, who was a virgin before and after her delivery, and that he was conceiv'd by inspiration, or by a divine breath, without a father, as *Adam* was created without a mother. That he was not crucify'd, but that God took him up to him into heaven, in order to send him back upon earth, before the end of the world, to confirm the law of *Mahomet*, and that the *Jews* thinking to crucify *Jesus Christ*, crucify'd another that was like him.

They pray for the dead; invoke their saints, to whom they pay great honour; but believe not in purgatory, and many of them think that the souls and bodies remain together, till the great day of judgment.

The *Turks* have a great respect for the city of *Jerusalem*, as the place where many prophets were born; but that is extraordinary which they pay to *Mecca*, where their false prophet *Mahomet* was born, and to *Medina*, where he was bury'd; for which reason they call it a holy land, and perform many pilgrimages to it.

They use no bells in their mosques as has been said elsewhere; but at the hour of prayer the priests go up to the top of the towers, at the angles of the mosques, and call the people with loud cries. It is also forbid them to dispute about religion, and if they are oblig'd by any body to answer, they must do it with their weapons, and not with their tongues.

As for their manners they are altogether barbarous, rude, haughty above any other nation, deceitful, given to laziness, covetous, ignorant, and enemies to christianity. Nor is their government any better than their manners, for their trials are very short, and subject to the corruption of false witnesses; causes being carry'd by those that give most, not by them that have most right; and this because all employments in the *Ottoman* empire being venal, all ministers make it their business to rob, and oppress the people, to repay the great sums

sums of money they have taken up at excessive interest of the *Jews*, and reimburse the vast expence they have been at. But were the laws observ'd, they would appear agreeable to those of nature; for among criminals they condemn a thief to be hang'd; a murderer to be beheaded; an offender in matter of religion to be burnt; a traitor to be dragg'd at a horse's tail, and then impal'd; and if a man has cut off another's limb, or maim'd him, he is as our civil law directs to suffer the same penalties. Persons convicted of perjury are led through the city in their shirts on asses, with their faces to the tail, which they hold in their hands, their faces daub'd, and on their shoulders a parcel of guts, and other stinking garbage; then they are burnt on the cheeks and forehead, and are incapable of ever being witnesses again.

Their executions are speedy; for in criminal cases, every *Cadi*, tho' but of a little village, has no superior to whom there lies any appeal; but if he is not a lawyer by profession, the assessor must subscribe to the sentence before it can be executed, tho' he were one of the prime *Bassa's* of the empire.

In civil causes, both parties being heard, and the witnesses briefly examin'd, and writings produc'd, they are oblig'd to decide all controversies without delay. Matrimonial contracts are made before the *Cadi*, who often judges of the validity, or nullity of matrimony; for as has been said elsewhere, the *Mahometans* do not distinguish between religious and secular causes, and pass themselves indifferently from ecclesiastical to secular employments, and the contrary. But avarice makes the *Mussulman*-judges utter strangers to reason and justice; which is the cause that the laws seldom take place; and if several christians, whom they hate, should happen to kill a *Turk*, when one of them is executed, the rest buy their pardon of the judge and kindred of the dead man to whom it belongs to execute the sentence.

Soldiers.

The *Janizaries*, who are the strength of their armies, are arm'd with muskets and scimiters. The *Spahis* or horse carry bows and arrows, swords and pistols. The *Asian* soldiers have lances, axes, and javelins. They make use of cannon, as christians do. In battle they observe no order, which is the main point, reposing all hopes of victory in their numbers. They charge the enemy with great fury to break his order, and make hideous cries as they fight; but if they meet opposition the first and second onset, they

Vol. IV.

dare not give a third, but fly so precipitately that no authority of officers can stop them.

It is hard to give an account of the great *Turk's* yearly revenues, because they arising out of many kingdoms in *Asia*, *Europe*, and *Africk*, as also out of the spoils of the wretched *Bassa's*, and other ministers of the empire, are not always the same. Every man that obtains an employment is oblig'd to make the emperor a great present; as for instance, the *Bassa* of *Grand Caire* cannot give less than half a million for that post, and as much to the chief *Sultana's*, the *Mustî*, *Grand Vizier*, *Caimacan*, and other persons in favour, who are to protect him. If he has not this sum of money of his own, he must borrow it of friends, or of the *Jews* at *Cent. per Cent.* interest. Nor is the sultan satisfy'd with what he receives at first of the *Bassa*; but when he has paid his debts, and begins to grow rich, he sends him by a messenger a present of a vest, a sword and a dagger, which the receiver is to return with ten times the value, and if he does it not, another fatal one is sent him, consisting of a battle-ax, or sword, a token that he stands not well in the emperor's favour, and that if he does not endeavour to appease him, he will soon lose his head; a barbarous policy practis'd by the *Ottoman* princes, to make themselves respected, by sucking the very blood of their subjects.

It is not only these, to appearance, free gifts, that help to fill the sultan's coffers, but when the *Bassa's*, or other ministers die, they owning they hold all they have of his bounty, he seizes all their goods, and becomes sole heir, tho' the children are born of his own sister. It were nothing if he stay'd till they dy'd a natural death; but the worst of it is, that scarce a year passes, but he takes off the heads of some that think themselves much in his favour, and this on very slight occasions, or perhaps only to secure their wealth. Besides this, all the subjects of that vast monarchy pay three in the hundred of all they have; not to speak of the duties and impositions for taking possession of their inheritances. And were there nothing else to shew for it, we have a sufficient argument of the vast wealth of the *Ottoman* princes in the prodigious sums they must have to maintain so many garrisons in *Europe*, *Asia*, and *Africk*, and several armies at the same time against christian princes.

The habit of the *Turks* is long, the Habit. under-garment reaching down to the ankle, the upper a little shorter, with close

A a sleeves,

GENELLI
1684.

1694. **GEMELLI** sleeves, all generally of red, blew, or green cloth. On their heads they wear turbants of the same cloth made close, and wrapp'd about with several rounds of fine white linnen, or silk. Their breeches are long, and almost serve for hose and socks, these being sew'd to them. Then they put on the *Papuchies*, which are like slippers, and which they take off when they go into the *Mosque*, or into friends houses to avoid dirting the *Soffa*, or carpets. The women wear much the same habit, only that the dress of the head is different, for instead of a turban they cover their face with two handkerchiefs, one from the nose upwards, and the other from the mouth down, leaving just space enough to see.

Coin.

The coin in these dominions is of several sorts, according to the several kingdoms. At *Constantinople* there are pieces of gold call'd *Scerifes*, worth less than the *Venetian Zecchine*. In silver a *Groschen*, that is, a ducat; a *Jerum-Groschen*, or half ducat; besides *Para's* and *Aspers* of silver. In *Egypt* instead of these there are *Medines*, and in other kingdoms, other sorts of money.

The fruit, to speak of the countries I have gone through, in *Egypt* is excellent, and of almost all sorts we have in *Europe*, besides those peculiar to the country, and particularly dates, which are in perfection. In *Romelia*, and the lesser *Asia*, there are all sorts that *Italy* affords, and much better, as winter melons, Pomegranates, grapes, pears, chestnuts, hazelnuts, and others which they keep all the year about.

The climate also differs according to the several positions of so many kingdoms. In *Egypt* the air is bad for strangers. *Romelia* and *Thrace* are every where temperate, and the soil fruitful; but this fruitfulness is almost of no use, through the laziness of the *Turks*, and by reason of the oppression the christians lie under, who chuse rather to leave the land untill'd, than to till it for others. The lesser *Asia* affords all that is requisite to lead a happy life in this world, both the soil being fertile, and the air temperate; for which reason it may be prefer'd before the best countries in *Europe*. *Cicero* declares it in the following words, *The Revenues of other Provinces* are such, that they scarce suffice to defend those very provinces; but *Asia* is so rich and fruitful, that it far exceeds all countries in fertility of land, variety of fruit, plenty of pasture, and variety of such things as are transported.

The confines of this vast monarchy are *Germany*, *Poland*, *Muscovy*, *Persia*, and *India*, and in *Africk*, *Abissina*, and *Lybia*. In *Europe* it is bounded by the *Mediterranean*, the *Adriatick*, and *Ionian* seas; in *Asia* by the *Euxine* and *Egean*, and next the ocean by the gulphs of *Persia* and *Arabia*. The chief rivers that part it from other dominions, are the *Boristhenes* and the *Tanais*. To conclude, it is of so large an extent, that bating *Italy*, *France*, *Spain*, *Germany*, part of *Hungary* and *Greece*, it contains all that the *Romans* subdu'd, and some other provinces which never knew the *Romans*, much less were subject to them.

The End of the Second BOOK.

A

A Voyage round the World by Dr. John Francis Gemelli Careri. Part I.

Containing the most Remarkable Things he saw in
TURKEY.

BOOK III.

CHAP. I.

The Chronology and Succession of the Ottoman Monarchy.

THeir opinion is very probable, who will have this powerful nation to derive its original from the vast woods near the *Palus Maotis*, because of the great plenty of game those woods afford, which is their usual sustenance.

Osman Ottoman.

The first that laid the foundation of this mighty monarchy was *Osman*, call'd *Ottoman*; a bold and daring man, by birth a *Tartar*, and foldier under the great *Cham*. He, offended at some wrongs done him, went into *Cappadocia* to live by robbing, with sixty followers, infesting all the country about. Others allur'd by hopes of plunder, or despairing of pardon for the crimes they had committed, joyn'd him; so that growing by degrees more powerful and formidable, and having taken several cities, he made himself master of *Cappadocia*, *Pontus*, *Bitbynia*, *Pampbilia*, and *Cilicia*. This some say happened in the year 1300. He reign'd eighteen years.

Orcanes.

His son *Orcanes* succeeded him, who taking the same measures, not only kept what his father had left him, but making his advantage of the intestine broils, between the emperors of *Constantinople*, subdu'd *Misia*, *Lycæonia*, *Phrigia*, *Caria* and *Nicea*. He reign'd thirty six years.

Amurat the first.

Amurat, a great master in the art of dissembling, or reigning, succeeded his father *Orcanes*. He in 1363, took *Gallipoli* in *Thrace*, and after it *Adrianople*, *Misia*, *Servia*, and *Bulgaria*; but being at last vanquish'd and slain by *Lazarus Despot of Servia*, he ended his base life after a reign of thirty one years; leaving two sons, *Solyman* and *Bajazet*.

Bajazet.

Bajazet having murder'd his brother,

subdu'd all *Thrace*, *Thessaly*, *Macedon*, *Phocis*, *Attica*, and *Bosnia*. Then he held *Constantinople* eight years besieg'd; but finding an obstinate resistance, he rais'd the siege to give battle to the christian princes, whom he overthrew. Then returning to the siege, and having after three years prosecuting of it almost reduc'd the place to a necessity of surrendering, his design was disappointed by *Tamerlan*, the great *Cham* of *Tartary*. For he marching out of his country, and waisting *Asia* with fire and sword; *Bajazet*, with much reason, thought it convenient to leave the siege to oppose that torrent, and meet him on the confines of *Galatia* and *Bitbynia*; there coming to a battle, the wretched *Bajazet* was overthrown in the year 1397, with the loss of two hundred thousand men, and thrust, loaded with chains, into a cage; where despairing of ever recovering his liberty, he beat out his own brains against the bars. He reign'd twelve years and a half, leaving three sons, *Calapin*, *Mabomet* and *Mustapba*.

GEMELLI
1694.

Calapin, or *Alpin*, was put to death by his brother *Mabomet* the first, who ascending the throne, conquer'd *Valachia*, and *Macedonia*; fixing his court at *Adrianople*. He dy'd in 1422, having reign'd seventeen years.

Mabomet
the first.

Amurat the second, next mounted the throne. He passing over into *Thrace* by the assistance of the *Genoeses*, overthrew his uncle *Mustapba*; and then, *Uladislaus*, king of *Poland* and *Hungary*, breaking the peace at the persuasion of pope *Eugenius* the fourth, he paid the *Genoeses* 100000 crowns for liberty to pass over into *Europe* at *Gallipoli*, and accordingly

Amurat
the second.

Gambelli cordingly wasted over his whole army. He fought three days incessantly, and at length *Uladislaus* being kill'd remain'd victorious, always reproaching the christians with breach of faith. When *Amurat* had reign'd thirty years he dy'd at *Bruggia*, the seat of his empire.

Mahomet the second succeeded him. He having tyrannically establish'd himself on the throne, by the murder of his brother, reduc'd *Constantinople* about the year 1435, on the thirtieth of May. Then he conquer'd *Bulgaria*, *Dalmatia*, *Croatia*, *Trabezond*, and *Theodocia*, a city belonging to the *Genoefes*, now call'd *Cassia*. He dy'd in 1481, when he had reign'd thirty one years, and liv'd fifty eight, leaving two sons, *Bajazet* and *Zizi mis*.

Bajazet the second, having expell'd his brother, conquer'd several countries in thirty two years he reign'd.

Selim the first, his son ascend'd the throne, subdu'd a great part of *Egypt*, and returning to *Constantinople* dy'd in 1520, when he had reign'd eight years, and liv'd forty six.

Soliman succeeded him, and subdu'd *Belgrade*, *Rhodes*, *Gran*, and *Buda*. He dy'd in the forty seventh year of his reign.

After him came *Selimus* the second, who took *Cyprus* from the *Venetians*, but the christians gain'd the famous victory over him at *Lepanto*.

The next was *Amurat* the third, and then *Mahomet* the third, who came to the empire embruing his hands in the blood of several brothers.

Then came *Achmet*, and then his brother *Mustapha*, who was depos'd, and *Ojman* set up; and he being unfortunate in the war against the *Poles*, and endeavouring to curb the insolency of the *Janizaries*, was at procurement of the *Muphti*, murder'd by them.

Mustapha was taken out of prison and restor'd to the throne, but his ill fate, after a years time, sent him again into prison, the subjects deposing him for inability.

Achmet the second, brother to *Ojman*

succeeded, at the age of fourteen; after *Achmet* whom reign'd *Amurat* the fourth, who dy'd at *Constantinople* in 1640, at the age of thirty three.

Ibrahim, the first of the name succeeded his brother *Amurat*, and in 1645, made war on the *Venetians* and knights of *Malta*. In the island of *Candia* he fought with various success. He was at last murder'd by his rebellious subjects, who not long before had kill'd the grand vizier, this was in the year 1648.

Mahomet the fourth, came next to the empire at sixteen years of age. He tho' so young continu'd the war with the *Venetians*, without ever giving ear to any accommodation till in the year 1672, he had made himself master of *Candia*, the metropolis of that island; after which he concluded a peace, the *Venetians*, continuing posses. of some places in the same island. Growing weary of the long peace with the empire, at the persuasion of his prime minister, he made war on the emperor, laying siege to *Vienna* in 1683, with a formidable army of 300000 fighting men; and after some weeks vigorous attacks reduc'd it to such a condition, that it must have fallen into his hands, had it not been reliev'd by the powerful *Polish* and *German* armies, which rais'd the siege, with the defeat of the *Ottoman* forces. This prov'd the ruin of the *Turks*, who the following campaigns lost *Buda* and all *Hungary*. The soldiery, and *Muphti* imputing all these losses to the unfortunate *Mahomet* the fourth, they depos'd and imprison'd him, and his two sons *Mustapha* and *Hamet*, the first twenty four, the other eleven years of age. *Mahomet* reign'd thirty nine years.

In this place they set up *Hamet* the second, after he had been forty years a prisoner, who being unexperient in warlike affairs did not at all recover the monarchy, nor did his reign continue long, tho' he kept at *Adrianople* for fear of the *Janizaries*.

His successor was *Mustapha* the second now reigning.

CHAP. II.

The Author's Voyage on the Black Sea to Trabezond.

HAVING recover'd my liberty, as I said above, which cost me forty six piaſtres, laid out in a vest of brocade I gave the captain *Bassa*; I embark'd on Wednesday the 7th, aboard a *Saick*, belonging to a *Rais*, or master, call'd *Agi-Mustapha*, thinking every hour an age till I got out of that to me unfortunate city. I lay aboard that night, because

my landlord understanding I had been prisoner in the bath, would not entertain me any longer, looking on me as a dangerous man. Monday-Tuesday the 8th, we did not sail, because the *Rais* had business, and I went ashore to visit the holy sepulchres. Good-Friday the 9th, I din'd with monsieur *Menor*, bid him adieu, and thank'd him for all favours receiv'd.

receiv'd. *Holy-Saturday* the 10th, I perform'd my devotions, and took leave of friends; and *Sunday* the 11th, being *Easter-day* in the morning, the *Saïque* left the port of *Constantinople* in such haste, that I had not time to hear mass. Having run nine miles to the village of *Gregni-chioy*, the *Rais* put in there for water, and continu'd there all day, the wind coming up contrary.

Monday the 12th, we set out with little wind, which afterwards turning to a dead calm, the *Saïque* was tow'd by its skiff, and at last was drawn with ropes from the shoar as far as *Umuriar*, five miles distant. Going up here to the top of the hill, to see the mouth of the black sea; as I came down, a *Turkish* shepherd ask'd me, why I went thither, and understanding by signs, that he said I was viewing the country; my last sufferings having taught me experience, I made haste aboard the *Saïque*. *Tuesday* the 13th, the wind coming up fair, we sail'd at break of day, and two hours after entered the black sea. All the way between the first and second castles, the shoars of the stright are no less populous and pleasant than those from *Constantinople* to the first; for on the side of *Natolia* are the villages of *Calignia*, *Cibuchi*, *Erigerli*, *Beicos*, and *Cavach*; and on that of *Romelia*, *Stegni*, *Gregni-chioy*, *Tarabia*, *Buyuch-dare*, and *Sanjar*; with good pleasure-houses and gardens between them, which make the prospect of them agreeable.

The second castle is worse than the first, for that on the side of *Europe* has but two little towers on the plain, and very weak curtains; and the other in *Asia* near *Cavach*, is a square tower; both without cannon. On the top of the hill, half a mile distant, stood a castle, whose out-works reach to the other, but its walls are all ruin'd.

On both the opposite points of the stright there are light-houses, and small dwellings. Near that on the side of *Romelia* on a rock, is the remainder of the pedestal of *Pompey's* pillar.

We made but little way on *Wednesday* the 14th, the wind being contrary, but it coming up fair on *Thursday* the 15th, we coasted along *Natolia*, and at night were opposite to *Erzele*, where is a good port, a rarity in the black sea. The same wind continuing till two hours in the night, those drowly brutes furl'd their sails, and making fast the helm laid them down to sleep, leaving the *Saïque* to rock upon the waves.

The same wind blew again on *Friday* the 16th, carrying us about twelve

VOL. IV.

miles an hour, and at noon came up with the other *Saïque* that made the same voyage with us, and carry'd above 150 soldiers and servants of the *Bassa* of *Trabezond*, who was gone before with twenty five of his family in six small *Feluccas*, carrying with him six horses, besides as many more aboard the *Saïque*. The country that appears along the sea, is most mountainous, and abounding in chest-nuts, hazle-nuts, and apples, to furnish *Constantinople*, and several neighbouring provinces.

Saturday the 17th, the wind came up directly contrary, so that we had much ado to put into cape *Sinope*, for fresh water. Weighing betimes on *Sunday* morning we pass'd in sight of the city *Sinope*, seated on the easternmost part of a point of land, with a high mountain near it. A thick fog which held till evening, hinder'd our view of the pleasant coast. So the storm that rose was the cause we made little way in the day, but the wind coming fair in the evening, we advanc'd considerably till midnight.

Monday the 19th, a great rain fell, after which the wind was so fair, that we made a great run the night following. The same wind and rain continu'd *Tuesday* the 20th, which set us very forward. The *Bassa's* family was wash'd from head to foot; and I admir'd the patience of the *Turks*, who rather than give a zecchine for a cabin, are content to be expos'd to the weather, like so many beasts. In other respects they were persons of good behaviour, who convers'd with me civilly, both during the passage, and my stay at *Trabezond*; nor was I wanting to shew them more courtesy, that I might make use of their friendships if I had need; and particularly to recover my baggage out of the hands of the *Rais* *Lester*.

The same rain and rough sea continu'd all night, and *Wednesday* the 21st till noon, carrying us within three miles of *Trabezond*; but there it fail'd, and in the evening was contrary, so that we were forced to have the *Saïque* tow'd by its skiff. I still bless'd the two crowns and a half I had given for my cabin, for I could not have endur'd the weather; but he that hir'd it to me, at last rais'd a knavish controversy, asking more than we had agreed for before the Interpreter, and mounseur *Mener*. Yet I satisfy'd him with a small matter, notwithstanding he had found out two *Tartar* false witnesses, who depos'd they had heard me make the bargain, as he said.

B b

All

GENELLI
1694.

All the *Bassa's* retinue stay'd aboard that night; but I, who long'd to be out of the *Turkish* territories, went ashore immediately, and to the little *Hospitium* the *Jesuits* had settled there within three years, for the conveniency of their missions. There I found *F. Vilot* superior of the mission of *Armenia*, with three companions, and the *Dominican*, all clad after the *Armenian* fashion. They were very glad to see me deliver'd out of prison, and safe arriv'd after three days storm, and a voyage of 900 miles. And certainly we had perish'd, but that the *Euxine* sea, whose circumference is 5000 miles, its length 1100, and the breadth 200, and where most 400, is not so boisterous as the open sea, as some pretend. I also found my equipage recover'd by the fathers, and carry'd to their house, which completed my joy.

The fathers told me what they had suffer'd during their voyage. Imbarking aboard the second *Saïque*, as was said before, they were carry'd to *Unia*, 500 miles from *Trabezond*¹ coming whence in small boats, they were in danger of being lost; and at last they were taken up for the tribute, and put into the hands of the master of the boat, for him to give an account of them to the receiver at *Trabezond*, to decide whether the *French* ought to pay or not; and this because they falsely alledg'd, That their king had broke the peace with the grand seignior; but the *Cadi* declar'd they were not oblig'd to pay. That night, out of excess of joy we drank together merrily, congratulating our safety, and forgetting past sufferings.

Trabezond
city.

Trabezond, by the *Turks* call'd *Tarabassan*, is seated in the latitude of 42 degrees, on the utmost bank of the black sea, and at the foot of a mountain that looks towards the north. Its whole circumference is but a mile, but its large suburbs make up room for 20000 inhabitants. It is an archiepiscopal see, and metropolis of *Cappadocia*, a province between the lesser *Asia*, and greater *Armenia*. When the empire of *Constantinople* was destroy'd, the *Greeks* chose this place for the seat of their empire, but it was not lasting; for the family of *Lascari* having reign'd there two hundred years, that is from 1261 till 1460, at length in the reign of *David*, it was taken and destroy'd by *Mahomet* the second, emperor of the *Turks*. At present they call it the head of the province *Genich* or *Jenich*. It was rendered the more famous by the martyrdom of forty faithful soldiers, who were put to death in a frozen lake by the com-

mand of *Licinius*; as also for the birth of *George Trapezuntius*, a most learned man, who dy'd in the year 1486, at ninety years of age; and of *Bessarion*, who for his excellent wit and learning, was, by pope *Eugene* the fourth, made cardinal, and patriarch of *Constantinople*.

Trabezond has not only suffer'd many calamities in past ages, but even in this present; for in 1617, the *Russians* crossing over the black sea, plunder'd and burnt it; as they did *Sinope* and *Caffa* cities seated upon the same sea. So many disasters may sufficiently persuade, that nothing of its ancient splendor remains; it being now more like a village than an imperial city; so that it looks like a wood inhabited, every house having a large garden, with olive and other fruit-trees, besides some fields intermixt.

Thursday the 22d, I observ'd that the city has two small citadels; one on a mountain commanded by a *Chians*; the other on the plain, being sometimes the place of abode of the *Bassa* or *Beglerbeg*, who governs the city without any *Sangiac* under him. They have both weak garrisons, and little cannon; and if the townsmen upon occasion do not take up arms, they can make but a small defence.

Friday the 23d, I took notice the suburbs were for the most part inhabited by *Armenians* and *Greeks*, with their bishops, for the exercise of their religion. Provisions are dear, to what they are in other parts of the *Turkish* dominions, and not good neither, especially the bread; the neighbouring villages furnishing wheat, both the hills and plain about the city being barren; and the high mountains cover'd with snow cause more cold than plenty. Flesh is to be found in the market only some few months in the year; and fish is never to be seen, because the city has no port, but an open shoar, expos'd to the inconstancy of the sea, which renders the little fishing there is very difficult. Of all the land produces, only the oyl is good; and the wine indifferent; other sorts of fruit for pleasure are sent in from the villages further off. They keep their oil and wine in earthen vessels, and rack off the liquor from one to another with cranes made of canes.

The custom-house of *Trabezond* is not severe, for they never search'd my equipage, nor the fathers, so that any thing may be carry'd into the city. But mistrusting lest the officers on the way might give me some trouble. I went of my own accord, without being call'd,

on

Citadel.

Provision.

Custom
house.

on Saturday the 24th, to the customer, for a *Taschbare*, or billet. He would know what I paid at *Constantinople*, and take my word for it; and I telling him that all I had being but a few trifles, I paid four piaſtres; he took the same of me, besides a prospective-glaſs I presented him with.

The *Bassa's* family was maintain'd several days at the expence of the poor *Greeks* and *Armenians*, who are to make a good contribution when the *Bassa* himself arrives; nor does this exempt them from the pole-tax; and it is a dismal thing to hear their complaints, they being to earn all that money by their labour and industry. The worst of it was, that provisions were then at the dearest, it being the month of *Ramadan*, or the *Turkish* fast, when they make amends for the abstinence of the day by their gormandizing at night, spending most of it in eating of the best.

Sunday the 25th, after hearing mass, I went to see the low citadel. It is seated on a rock, with a double wall, and deep ditch, and by its building it appears to be antienter than the other.

My *Rais Lester*, refusing to give me the *Taschbare* of *Constantinople*, and I on that account demurring to pay the freight for my goods, we went on Monday the 26th, before the *Cadi* to decide the controversy; and it was given for him, because he brought the *Cadi* in his *Saïque*.

Whilst we diverted our selves with the

Jesuits, we provided to set out for *Arzerum* with the first caravan. In order to it we hir'd horses for a zecchine a-piece (which in christendom would perhaps have cost ten crowns) for eleven days journey; laying half a load, besides the rider on each, after the custom of the east, and so the fathers and I did. Travelling is very cheap in the *Turkish* dominions, provisions being at reasonable rates on the road; but on the other hand there is the inconvenience of lodging in the caravanfara's, where nothing is to be had, every thing being to be bought elsewhere, and dressed there. The *Turks* carry all sorts of utensils for the kitchen of brass, and very neat.

Our company was made up of *F. Villot*, a *Lorrainer*, superior of *Arzerum*, re-established in his mission, by express command of the grand seignior, two years after he had been expelled by the *Bassa*, (like those of *Trabezond*;) at the instigation of the schismatic *Greeks* and *Armenians*; of *F. Dalmatius* of *Auvergne*, who was going missionary into the province of *Sciamaki* in *Persia*; of *F. Martin* of *Guienne*, who was to reside at *Isfahan*, on the same account; and of *F. Dominick* of *Bologna*, a *Dominican*, design'd for the same religious employ in the monastery of *Naxivan*; *F. Lau* of the country about *Lyons*, staying at *Trabezond* to exercise the same function.

CHAP. III.

The Author's Journey to Arzerum or Erzerum.

Tuesday the 27th, I set out after dinner, with the aforesaid fathers, and a good caravan. After four hours of mountain and dirty way, we lodg'd at the high caravanfara of *Oreglan*, where we lay in the open air, with the noise of the great river close by, and of wild dogs that run about the mountains in troops.

Wednesday the 28th, at break of day we proceeded on our journey leisurely over dreadful mountains, and having travelled twenty four miles in nine hours, stay'd at the caravanfara of *Cuscan*, so convenient, that the sky covers very many. This was not the most beaten road, but us'd in winter; because that of *Aggibasci*, which is shorter by two days journey, is impracticable by reason of the snow; for which reason, when we came from *Trabezond*, we left it, passing over the bridge on the left, where the custom-house officers use to be.

Thursday the 29th, we went on over high and uncouth mountains cover'd with snow, and thick of fir-trees; and mounted so high, that at the latter end of the day, we found our selves almost in the second region of the air, on the top of mount *Zigana*. There the wind us'd to be so violent, that two years before this time *Calolics* passing the same way to his government of *Trabezond*, in February, lost about ten of his retinue, stifled with the wind and snow. *F. Villot* to confirm this, told me, that he passing over there five years before with *F. Vanderman*, a *Flemming*, this last lost the use of his tongue through the excessive cold, staying behind in the snow, without being able to follow the caravan; but that he recover'd with chewing cloves, and therefore ever since the missionaries call that the mountain of cloves. *F. Dalmatius* being out of patience on the top of this hill,

being

GEMELLI being quite spent with labour of climbing aloft, broke out into these words.

1694. *Come hither Gentlemen of the Propaganda, and see what a condition we are in here. And a few steps further. Come along you who do not give a penny; whereas we come upon the Alps of France; and I am satisfy'd you'll give all you are worth to be at home again* As he repeated these words, I smil'd, and the more to tempt him, said, *Do you think that coming to the Mission in the Levant, is like taking a walk in the Tuilleries at Paris, or at monsieur's Palace?* To save my self the pains I would not alight, but went up a horse-back, in danger of breaking my neck down those dreadful rocks. We descended four miles of craggy way to the *Caravanfera*, which takes name from that mountain; after travelling twenty four miles in eleven hours. Friday the 30th, we went down a more easie way, but very long because of its winding about the mountain which abounds in fir, beech, and nut-trees. Then we pass'd over the third stone-bridge near a mountain, at the foot whereof we entered into a way under ground, to come to a *Caravanfera* at the other side. After riding twenty two miles in ten hours we lay at night in the *Caravanfera* of the village of *Giumis-Kane*, that is, silver-house, because of the ruins of this metal there are in that neighbourhood, where the country produces plenty of apples, hazle-nuts, and bad wine. Here we had but an ill night of it.

Mines. Saturday the first of May, after six hours riding, we pass'd by a gold mine, where they did not work because it was spoil'd by the inundation of the river, and at a small distance thence by one of silver. The natives told me there were many more of lead, and copper, which is therefore very cheap among the *Turks*, who have all sorts of utensils of it tinn'd both within and without. Thence we pass'd by *Cuvans*, and after travelling twenty miles in ten hours, night coming on we lay at *Balasor* in the house of our *Catergi* or muletier. This village is seated in an excellent and fruitful plain. I cannot decide whether the houses are caves or stables; for they are dug out of the earth, which serves as a wall, with great beams lay'd across above to support the roof which is of earth also, and even with the roads they ride on. They leave a large gap in the middle to let in the light, not regarding that all they do within, can be seen through it. Men and beasts lodge together in them; so that I was forc'd to spend that night in such good company. I

was much pleas'd in this country at their ovens to bake bread and for other uses. Strange They make a trench three spans deep in the ground, plaister'd with plain mud, with a small hole for the flame. Making a wood fire in it, they fasten an iron across the mouth, and to that another that is moveable, so shap'd that five pots may stand and boil on it. This turns round for the conveniency of the person that dresses the meat. The pots being taken away from the top, and the fire from the bottom, and the oven cleans'd from ashes, they put in the dough unleaven'd after the fashion of the east, and thus the bread or cake is soon bak'd, which the *Mabometans* like extremely. This done it serves to spread the table on, and keep the company warm, without any other fire. And shutting the hole they make use of it to keep the meat warm, in case strangers should come in.

The village being for the most part inhabited by *Armenians*, they all flock'd in crowds to our stable, to be instructed in the divine mysteries by *F. Villot*. He had learn'd the *Armenian* language perfectly to this purpose; and invented a game like that of the goole, to make them the better remember those things, calling it a game of devotion, because the said mysteries were printed on it.

I was not a little edify'd to see what pains those good people took to get room in our stable, calling one another to hear the word of God, which lasted till night. The harvest in *Asia* is great, and the labourers but few. Did a missionary stay in this place but a few weeks he would draw all the people out of the darkness of heresy; so easily are they brought to own their error. The *Jesuits* apply themselves very zealously to this good work in many parts of the *Turkish* and *Persian* dominions; suffering the affronts and outrages of the *Mabometans* with heroick patience, having been several times persecuted and expell'd by them. They are maintain'd out of revenues set apart for this purpose in *France*.

At Night came a *Chiaus*, who was hastening the march of the *Asian* troops; because they advanc'd slowly, to be at *Belgrade* at the end, rather than at the beginning of the campaign: This put us to a great deal of trouble, for at midnight he took two of our horses for his own use; and in the morning we were at a loss, the caravan being ready to set out, and no other horses to be had in the village. Therefore that we might not be left a prey to robbers or *Janizaries*

Janizaries we made the half-loads whole ones; and so a horse remain'd quite light to ride by turns all day, and this made amends for the joy of the foregoing night being *Sunday* the 2d, when we suppd merrily and had a pleasant time of it, in remembrance of the persecution suffer'd by the *Jesuits* at *Arzerum* and *Trabezond* on that day two years, as was said before.

However encouraging one another, we set out like pilgrims on *Monday* the 3d, following the caravan through a plain, and well cultivated country. The *Jesuits* would not make use of the horse, but like the apostles travell'd all the day afoot, *F. Dalmatus* still calling upon the gentlemen de *Propaganda* to come and see him walk. The *Dominican* father and I rode by turns, and the country being full of pigeons, and mallards, I shot many flying both a foot and a horse-back, to the great admiration of the *Turks*, who could not hit one; which made *F. Villos* say I was one of the king of *France's* huntsmen, sent to serve the king of *Persia* in that employment. After travelling twelve mile in six hours, we pass'd through the suburb, into the city *Beiburt*, where they pay a quarter of a ducat toll for every horse.

Beiburt
city.

This city is seated on a rock, wall'd, and furnish'd with but a few pieces of cannon. Good woollen carpets made there, are fold cheap. Its suburb is part in the valley, and part on the side of the mountain. We went six miles further along the river, near which we encamp'd at the place call'd *Meaciur*, where we recover'd our horses, the *Cibians* having left them. A great rain at night wet us all.

Tuesday the 4th, we advanc'd but ten miles in four hours, setting up in the village of *Avirac*, seated on a mountain, because the next days journey was long. We lay in the house or rather stable, of an *Armenian*, built after the same manner as was said before. Here they were then sowing of wheat, because the soil being fruitful, it grows in a very short time, and yields a plentiful harvest,

provisions are generally cheap there; *GEMELLI* 1694.
six eggs being sold for a penny, and a hen for fifteen pence.

Wednesday the 5th, we climb'd up most dreadful high mountains cover'd with snow, on the last whereof we saw a good quarry of white marble. The *Turks* of the caravan being afraid of robbers would come one after another to bid me stand upon my guard; relying much on me because I had a gun and pistols, and they thought me a good marksman; whereas they had but few fire-arms, and some wanted powder, some flint, and some ball. Others came to me to fix their guns, and give them ammunition, for fear of the danger that threatned. From the vast height of the third mountain we again descended into a deep valley, the horses with their loads every where slipping on the snow, and took our rest in a stable in the village of *Carvor*, having travell'd twenty four miles in eleven hours.

Thursday the 5th, being to ford over the river *Euphrates*, then swoln with water, we thought better to go three leagues about than expose our selves to such danger. Therefore parting from the caravan, with a few more that follow'd us, we went away to pass over a stone-bridge, near which the river *Gerzime*, carrying not much less water falls into the *Euphrates*, or *Ceraste*, which is there less than the *Vulturius* of *Capua*, in the kingdom of *Naples*. We travell'd along on the left of it eight miles on the plain of *Erzerum*, our days journey being ten hours to the village of *Teurischuil*. There were persons appointed in all those villages by the tax-gatherer to receive the head-money of all travellers, but we as *Franks* defended our selves by virtue of the grand seignior's *Firman*, or order.

That night, being near our journey's end, with the consent of the *Catergi*, or muletier, to whom I promis'd a reward, I clap'd some small things that were to pay custom, into a bag of straw, which in those countries they lay under the loads instead of pannels.

CHAP. IV.

The Author's Arrival at Erzerum, and the Description of that City.

Friday in the morning, travelling over a beautiful, and well cultivated plain, scatter'd with several villages, and encompass'd with mountains cover'd with snow, at the end of twelve miles we arriv'd at *Erzerum*. As soon

as we entred the suburbs, we paid fifteen grains of *Naples*, that is about three pence half penny for each horse. Then we went to the custom-house, but the customer being at noon-day prayers, when he came, we desir'd him

GEMELLI 1694. to seal the trunks, that he might come home some time after to search them. He very civilly comply'd, sending soon after one to search them, who found nothing liable to pay; so that I found not that severity monsieur *Tavernier* mentions of sealing the trunks and bails a day before they come to *Erzerum*, by people appointed by the customer, that things liable to pay may not be taken out to defraud the custom-house.

I took a stately room in the *Caravan-fera*, near the custom-house, that I might often enjoy the company of mr. *Prescot*, an *English* merchant, who acted as consul, and liv'd opposite to me. He coming to bid me welcome, carry'd me home, and entertain'd me well at dinner and supper, being sorry he could not treat me, as he would have done in *Christendom*, because the country does not afford those dainties that are to be had in *Italy*, and other parts; but he tormented me with often drinking to me, requiring I should do the same, which I could not. He inform'd me to my sorrow, that the day before my arrival, a great caravan was gone for *Tauris*, which had been an excellent opportunity for me.

Erzerum city. *Erzerum*, or *Adirbegian*, by some is plac'd in the lesser *Armenia*, and by others made the metropolis of the greater, where they think it likely the first man

Asie Nov. was created, and placed by God in the *defc. lib. 5.* most delightful garden of paradise. *cap. 1.*

Gen. 8. The country is noble for having been first cultivated by *Adam*, when expell'd paradise; and because *Noah*, after the flood came there out of the ark, and offer'd sacrifice to God. A country, that on the top of its mountains long kept the remains of the ark, according to antient traditions, and upon the credit of antient patriarchs. *Euphrate* authors will have it that *Thessalus* took the name of the *Armenian* hero.

Joseph lib. 1. antiq. cap. 4. *Erzerum* is seated on a long plain, under high mountains, at the end of the plain thirty miles long, and ten in breadth. Its walls are two miles in compass, and are double, but not fill'd with earth, or ramparts. About it is an indifferent ditch, and several towers at convenient distances, with small pieces of cannon, such as they call falconets, so that on the out-side it looks much like *Constantinople*. At the east end is a castle and a fort, for the *Aga* of the *Janizaries*, both of them commanded by a kull, and a tower on it, whence the enemy may be discover'd at a great distance. Near this castle is the *Armenian* cathedral, much decay'd, except-

ing two towers built of brick. There are three iron gates to the city; at that call'd of *Tauris*, there lie on the ground twenty good pieces of cannon; the rest being broke up to be carry'd to *Constantinople*. The houses, as also those in the suburbs, for the most part inhabited by *Armenians* are low, and made of wood and mud; the streets narrow, and unpav'd; and the *Bazars* mean; but it is so populous, that there are in the suburbs only, twenty two caravan-fera's for the caravans of *Persia*. The air is very cold, by reason of the snow lying continually on the neighbouring mountains; but it is not so bad for the eyes as *Tavernier* pretends; but this makes the fruit ripen very late, for which reason it is first brought out of *Georgia*, and were it not supply'd from the villages about, it would be scarce. Yet provisions are very cheap, for a pennyworth of bread will serve a man a day, and he may buy almost thirty pounds of bisket for a *Carline*, or six-pence; five eggs for a *Tornefe*, or penny, and a hen for five, and so other things proportionably. All this plenty proceeds from the fruitfulness of the aforesaid plain. But, as I was told, corn does not ripen in sixty days, and barly in forty, (according to *Tavernier's* account) for whilst I was there, they were actually sowing to reap in *Septemper*.

The river *Euphrates* has its springs in a mountain call'd *Abbrat*, or *Mingol*, river, six hours journey from *Erzerum*; wherefore the springs of this river, according to scripture and fathers, being in paradise, I was within six hours of paradise. But others are of opinion that its true source is in *Georgia*, and that the frequent earthquakes have cover'd it.

The government of *Erzerum* is very beneficial, and much esteem'd among the *Turks*. The women in the city are clad in cloth, and wear boots, and a black thing before their forehead to hide their face; on their head they have a long piece of stuff hanging down to their knees.

Saturday the 8th, monsieur *Lacroniere*, of the province of *Blois*, came with the caravan from *Persia*, and the next day turn'd *Mabometian*, despairing of ever obtaining his pardon for two duels he fought, killing two men in *France*. He gave out he was sent into those parts by the king, as a spy upon the *Turks*, and that all the *Franks*, who go into the *Levant*, are spies sent by the king to stir up the *Persians* to recover *Bagdat* and *Erzerum*; and others into *Muscovy*, to persuade that prince to seize the towns on

on the black sea; and that therefore they carry their credentials few'd up in their shoes. Tho' the *French* look upon him as a mad-man, yet those barbarians seem to credit him, to have the opportunity of doing the *Franks* harm; and this made me live in some fear.

Sunday the 9th, I heard mass at the *Jesuits* church. Having left my gun at the city gate, according to custom, I sent Monday the 10th, the usual duty to the *Turk* at the gate to have it return'd, but Mr. *Prescot's* man going in his master's name, he restor'd it without taking any thing. But on Tuesday the 11th, as I was going to Mr. *Prescot's*, I saw the *Turk* that had restor'd the gun making signs to me to stop. I went on nevertheless, for not understanding him, I thought it in vain to stay. The *Turk* enrag'd that I slighted him, ran after me with his knife drawn, and had hurt me, but that Mr. *Prescot* laid hold of him about the middle. I had not fear'd him in another place, but in *Turky* the laws are too severe against a *Frank* that opposes a *Turk*, and therefore to be rid of him, I gave what he demanded.

Extortion
of the
Turki.

Wednesday the 12th, I din'd with *F. Villot*, and we rejoiced at our safe arrival, but my satisfaction was disturb'd on Thursday the 13th, three persons coming to me from the *Mussellin*, or *Bassa's* lieutenant, to command me to depart the city within three days; which order was also sent to the *Jesuits* and *Dominican*, they believing we were all five *Papa's*, or religious men. We guess'd this was not only brought about by the *French* renegado, but by the schismatick *Armenians*, to obstruct the fathers settling in *Erzerum*, and the spreading of the word of God. They had two years before presented the *Bassa* with 2000 piastrres, to send them away together with *F. Philip Grimaldi*, who was going to *Cbina*; which was done with some tumult rais'd by the *Armenians*, 2500 persons going in a seditious manner to the *Bassa's* house, and about 400 to the monastery, where the fathers had been in danger of their lives, had they not been well barr'd. To put a stop to this mischief, brother *Manfredi*, who play'd the physician to reconcile the people to the society, was sent to the *Mussellin*, to shew him the grand seignior's *Firman*, or order for re-settling the fathers at *Erzerum*; but he without so much as seeing it, order'd we should return that same day towards *Trabezond*. The great distance from court made him not value the *Firman*, and he said the *Papa's* had represented things as they thought fit

to the sultan; and therefore he would acquaint him how averse the whole city was to their re-establishment. The brother went thence to the *Cadi* to obtain at least some longer time, and was civilly answer'd they might go with the first caravan, that they might not be expos'd to be robb'd and murder'd by thieves. The *Mussellin* hearing of it, sent for *Manfredi*, and railing at him for having been the occasion of the fathers return first, and then of their stay, committed him to prison; but being told that the *Cadi* had consented to the delay, he releas'd him within two hours; threatening to make him stay in the city, and after formal process to cause him to be bastinado'd till the nails of his toes flew off.

That same day the *Mussellin* would be inform'd what I was by Mr. *Prescot*, who giving him an account of my travels, told him I was no religious man, nor of the society, but a lay-man that travell'd out of meer curiosity. As he was returning home, the *Dominican* father came to desire him, that he would acquaint the *Mussellin* that he was not of the society, but a *Dominican*, sent into *Persia* by his general, and that his order not being comprehended in the petition of the *Armenians*, he would get him leave to proceed on his journey. But the consul's words were of no force with that barbarian, whom nothing but money could mollify. *F. Villot* was very angry that the *Dominican* should have made that use of *Prescot*, and therefore came in a passion at night to tell me, every one might shift for himself, because he and his companions had the *Firman* to go into *Persia*. I bid him mind his own business, for I did not mistrust God's providence, and was ready to suffer those crosses, and therefore without being at all dismay'd, I resolv'd if I could not go directly from *Erzerum*, to return to *Trabezond*, and thence pass thorough *Georgia* into *Persia*.

Going on Friday the 14th, to hear mass at the *Jesuits*, I saw brother *Manfredi* go to the *Mussellin*, and return with a favourable answer, which when *F. Villot* had heard, he said to me, monsieur *Gemelli*, the matter is adjusted for twenty five ducats; two zecchines will be your share to go into *Persia*. I might have answer'd, that since the foregoing night they would not admit me into their number, I had taken other measures; and that he did me that favour to save charges, because the *Mussellin* would have as much for three as for five; but that he might see I was not led away by interest, I said I would

1694.

After dinner the *Nazar*, or protector of strangers, who had been acquainted with the business by his brother the *Muffellin*, sent for *Manfredi*, and made a great noise because we were not gone. The other answer'd we had leave to go for *Persia*. No, said the *Nazar*, you shall go for *Trabezond*, with the caravan that is now ready. *Manfredi* understanding his design was to have share of our money, he told him he would bring him an answer the next day. But it pleas'd God that, news being brought both the brothers on *Saturday* the 15th, that the *Bassa* had sent others to take their places, they being taken up, refusing to resign to the others, never thought of us.

In the evening, the *Muffellin* sent for some fathers that could speak the *Turkish* language, to expound some maps given him by the renegade *Laeroniere*, who could not do it: *F. Villos* went, who, having given him satisfaction concerning part of *Asia*, tho' the *Turk* was not much the wiser, was ask'd, where he had learnt the *Turkish* language; and he answering that in a year he resided at *Constantinople*. The *Muffellin* reply'd, he could not learn to speak so well in a year. It falling then opportunely to talk of our affair, the father added, I liv'd some time in this city, and was here when the fathers were expell'd; which I am given to understand you design to do again, notwithstanding the grand seignior's order. The *Muffellin* reply'd, why do you not go upon the mission into *Germany*? Because the *Germans*, said the father, are our kings enemies, and would kill us, and therefore we come into this country who are our

friends. Then they went together to the *Cadi's* (a man whose wisdom had raised him to the greatest employs of the empire in the reign of sultan *Mabomet*) and having shewn him several countries of *Asia*, he ask'd whether the father durst undertake to make such a map in the *Turkish* tongue, and how long he would be about it. Being told he could do it in a week, they sent him home, bidding him stay and do it.

F. Villos being to stay, eight zecchines were sent by brother *Manfredi*, on *Sunday* the 16th to the *Muffellin*; after which the *Cbiaga* sent to enquire about the rest and hasten our departure, signifying that *F. Villos* must go when the map was made. The *Nazar* sent for brother *Manfredi* again on *Munday* the 17th, to let him know he would be presented as well as his brother; both of them had good words, and were put in hopes of that which was never to come to pass. The same day two servants of the *Nazars* came to the caravanfera in his name to ask a vest of me. Being sensible this was an invention of their own, that they might not go away dissatisfied, and contrive to do me some mischief, I promis'd mr. *Prescot* should give them a piastre after I was gone, that they might not send others on the same errand. Seeing my self expos'd to be cheated and robb'd on all sides, I resolv'd to be gone without a caravan, hazarding all dangers whatsoever; both the fathers and I thinking it better to go on, venturing to be robb'd by thieves, yet with the liberty of defending our selves, than to stay in the city, like sheep among wolves, without being allow'd to speak for our selves. Having therefore hir'd horses for four piastres a piece, we prepar'd to leave *Erzerum* privately.

More exacti-
ons.

CHAP. V.

The Author's Journey to Kars, and the Danger he was in of being robb'd.

They proceed on their journey.

Tuesday the 18th, the fathers *Dalmatius* and *Martin*, French *Jesuits*; *F. Dominick* of *Bologna* a *Dominican*, and I, took our flight out of the city after midnight, like the *Israelites* persecuted by *Pharaoh*. Near break of day the custom-house officers came out of a tent to stop us six miles from the city; but shewing them the customers discharge and giving them a *Rup*, which is a quarter of a *Neapolitan* ducat, they let us pass; notwithstanding my muletier, who was a *Georgian*, falling out with an *Armenian* belonging to those

officers, had buffeted him very well. Three miles from thence my horse starting threw me; and with the fall broke the stock of my gun, which I could put but into an indifferent posture to serve me by the way. All the country we travel'd over that day was plain, and much resembling the plain *Apuglia* in the kingdom of *Naples*. They were actually sowing, tho' they had not plow'd. Having cross'd a great river about the evening, we went to take up our quarters at the village of *Axa*, our *Catergi's* place of birth, in whose house we lodg'd; having

in eight hours travell'd twenty miles out of the common way of the caravan, which always paffes thorough the little but beautiful caſtle of *Haffan-kale*, feat- ed on a hill, and four miles diſtant from the aforeſaid village, where a *Rup* or quarter of a ducat is paid for every horſe. We were lodg'd in the muletier's houſe, and had an excellent ſupper, becauſe the place is plentiful of proviſions; four pi- geons being fold for five *Torneſes*, or five pence.

Wednesday the 19th, a *Janizary* croſſing the road, would make us return to the fort to pay a certain duty, and with much difficulty we perſuaded him to re- ceive it, without giving us the trouble of going back to the fort. Twelve miles further we had a worſe re-encoun- ter, through the fault of the muletiers, who would take a road not uſ'd by the caravans. The officers of the custom- houſe of *Toliſci*, and of the bridge of *Scio-ban-nupri*, ſeeing we did not take the way of the bridge, came up and com- manded us to go with them, as far as the village. Being willing to buy off this trouble, they aſk'd us five piaſtres, but ſeeing we coſt'd at their impertinent de- mand, they began to fly for fear of being beaten. We on the other hand fearing ſomething worſe might befall us, thought it better to overtake them and compound for two piaſtres.

The fruitfulneſs of the ſoil, makes pro- viſions theſe worth little or nothing; and the more becauſe the natives live up- on four milk, cakes inſtead of bread, and water. Having travel'd twenty eight miles in ten hours, we came to the village of *Koraſon*, where another of our *Catergis* was born, on the left of the river *Araxes*, which runs from the foot of mount *Min- gol* into the *Caspian* ſea. The houſes of this village are under ground like thoſe of *Balaxor*.

Thursday the 20th, being *Aſcenſion-day*, we ſtaid in that village to pleaſe the *Ca- tergi*. One ſent by the cuſtomer, came home to view my trunks, and ſee the *Taſcare* of the cuſtom-houſe of *Erzerum*. He took nothing; but a *Nazar* that came with him, ſeeing we had no paſs came again at night, and would have a piaſtre by way of compoſition, which the cuſtomer did not approve of. It is moſt certain the poor *Franks* every where ſuffer through the avarice of the *Turks*, but in ſome places a ſmall matter con- tents them. The women of this village cover their faces, almoſt after the man- ner of *Egypt*, with little plates of ſil- ver, worth about a *Carline* of *Naples*, which move prettily with their heads;

VOL. IV.

and they wear two rows of buttons on each ſide their veſts, with other little ſilver plates.

Friday the 21ſt, we travell'd eight miles of mountain way, and halted on the bank of a river, where our *Catergis* would waſh themſelves, that place a- bounding in mineral waters. Going thence we met with three *Janizaries*, who pre- tending they belong'd to the poll-tax gatherer, would have us pay that duty.

We reſuſing to pay it on account of our *Firman*, they would make us turn back; and therefore tho' we were ſtronger, we were forc'd to give a piaſtre to be rid of them. All about theſe plains there were curious wild tulips, which would be much valu'd in *Europe*. We lay that night at *Mifingbirt*, a village in a val- ley at the foot of a rock, on which is an antient and almoſt ruin'd caſtle. Here tho' there were many chriſtians, yet we lay in the open field. The natives to get ſomething, gave us to underſtand that but a few days before, the rogues on the mountain had robb'd ſome tra- vellers. The fathers and one *Coggia A- bram* born at *Erzerum*, being put into a fright at this news, would needs take four men along to convoy us. I was ſatisfy'd they were ſpies, and worſe than thieves, and that they had no good arms, yet that they might not think I kept off out of covetouſneſs, I condeſcended to pay my ſhare of five *Rups* we gave them, which is a ducat and a quarter.

For the more ſecurity we travell'd by night, through woods of pine-trees, and over ſteep mountains, the neſts of rob- bers; two of whom meeting us, had not the courage to make any attempt. I loſt the ſcourer of my gun in lighting to walk part of the way, and be ready upon any occaſion.

Saturday the 22d, about break of day, we found our guards ſuch as I had ima- gin'd them; for two of them had match- locks without covers to the pans or match, another had neither powder nor ball; and the fourth had nothing but a long ſtaff which only wanted a good arm to ſtrike. Theſe being as great thieves as any in the world, ſeeing it was day, demanded their pay before we were out of the wood. *F. Dalmatius* reſuſing, be- cauſe we were not yet out of danger, one of them threatned to run him thro- rough with his ſpear; which made me perſuade him to pay, rather than indan- ger his perſon. When they had receiv'd the money, they ſtay'd behind, without regarding their duty, for we had ſtill two miles to go through the wood. We had advanc'd but a few ſteps to get out

D d of

GEMELLI 1694.
Danger of robbers.
of it, before twelve men, some a foot and some a horseback appear'd before us, at sight of whom my *Catergi* drawing near me, said, *Crusi*, or thieves, and ask'd for one of my pistols, but I would not give it him. Our company was in a consternation, but *Coggia* above the rest, who tho' the night before I had fix'd his gun, that he might help to defend us in case of need; yet chose rather to trust to his horse's heels, without regarding the shame of running away, than hazard his life, by shewing courage.

The frightened fathers and I being left to oppose the robbers, I alighted with my guns and pistols in a readiness; and leaving them a horseback with bad pistols, and without powder, posted myself on the left, behind some rocks, waiting under covert to see what the rovers would do. They being badly arm'd, and some of them only with staves, tho' twelve in number, would not stand the test, but turning off, went up the mountain, leaving the way free to us. The

Turks extoll'd my behaviour, and the fathers much more, who from that time forward us'd in jest to call me *Caravan-Bashi*, or captain of the small *Caravan*. I was so enrag'd against the run-away *Coggia*, that as a punishment for his cowardice, I would have left his goods to the mercy of the robbers; but at the request of the *Jesuits*, I suffer'd them to be carry'd on. Being out of the wood, we rested our horses in a plain, near which there was good pasture, and a village of *Kurds*. Three hours after we set forwards a good pace, and went to lie at the village of *Cotanlo*; having travell'd that day thirty six miles in ten hours. This place was inhabited by *Armenians*, who disturb'd us with their sick, to get some medicine of the *Jesuits*, who carry several forts; which happened to us where-soever we came. All the way beyond the mountains, which made one half, was an excellent soil, but untill'd for want of people.

CHAP. VI.

A short Description of Kars, and the Continuation of the Author's Journey to the Frontiers of Persia.

Sunday the 23d having travell'd twelve miles in five hours, we came to the city *Kars*, the frontier town of the *Turkish* dominions, and lodg'd in a caravan-sera in the suburb.

Kars city. *Kars* is a large, but not populous city, tho' there be plenty of provisions, and very cheap, seated in a most fruitful plain, and 78 degrees 4 minutes of longitude, and 42 degrees 40 minutes of latitude. The reason of its being so ill inhabited is, because being on the frontiers, it has suffer'd sometimes by the *Persians*, and sometimes by the *Ottoman* arms; being no sooner recover'd from the one, than it has fallen again under the other, as has happened to many other places, which have been ruin'd by the *Persians* for eight or nine days journey. *Kars* is a sufficient testimony to posterity of the behaviour of the *Persians* in taking of strong holds; and how dreadful the strokes of their scimitars are to the *Turks*.

Lex. Geograph. Phil. Err. Verb. Conf.
But to return to the business in hand. *Kars* is seated in *Turcomania*. Its shape is long, looking towards the south, and two miles in compass, on the side of a rising ground. Its two walls are of earth, with small towers, two gates, and as many bridges on the side of the river and suburb. The fort which stands on the rock, is inaccessible on that side next the

river. In it is a good garrison, out of which every night a detachment of forty horse goes to scour the country on the frontiers. The houses by reason of the thinness of the inhabitants are more like dens, made of timber and mud. For 130 years last past, since subject to the *Ottoman* empire, it has always been govern'd by a *Bassa*; rather out of jealousy because it is a frontier, than because the greatness of the place deserves it.

In compliance to the *Catergi*, we stay'd there all Monday the 24th. The *Georgian* would have all the money for the journey paid him here, whereas the custom is to pay at the journey's end; and we refusing, he stood in it, that he would go no further. We were forced to get the *Armenian* customer to oblige him to go; or else we would have provided our selves otherwise at his expence. But the cheating *Armenian* made us pay for his kindness; for whereas his duty was half a piastre a loaded horse, he demanded a zecchine, and with much difficulty took a piastre.

Having agreed with the custom-house, we proceeded on our journey on Tuesday the 25th, taking as a good omen four guns the *Turks* fir'd on account of the solemnity of their *Bairam*, their fast of *Ramadan* being ended; which rejoiced the

the hearts of the poor country people, seeing themselves deliver'd from the hardship of working on the fast-day, and watching to eat at night. All that day riding over those excellent plains, we met several troops of *Kurds* with their moveable houses on oxen, with pannels on them.

The
Kurds.

These people live like beasts, and are so brutal, that they wander about all the year, seeking good pasture for their herds, living upon the same food as they do. After riding thirty miles in ten hours, we lay in the village of *Chiala*, consisting of but a few caves. Here the insolent *Catergi* began again to refuse going any further, unless he were paid his whole due; and we did nothing but wrangle from morning till night. I had much ado to forbear beating of him, for fear of bringing my self into further trouble.

Ani-kagae
city.

We set out late on *Wednesday* the 26th, and were not a little mov'd to compassion by the way to see so many places destroy'd by the wars, whose ruins still shew their former greatness; and particularly the city *Ani-kagae*, six miles from the aforesaid village. It was founded on an advantageous, tho' marshy ground, by a king of *Armenia* of the same name. A good part of its walls are still stand-

ing, near the east side, whereof runs the river *Arpafuy*, which rising in the mountains of *Mingrelia*, falls into the river of *Kars*. There are still to be seen the ruins of several monasteries, two whereof are almost entire, which they say were founded by kings.

Going on at a distance, we discover'd the high mountain *Ararat*, where *Noah's* ark is said to have rested. Then we entered upon a valley, on which there were several things like pyramids scatter'd about, made by the water in stone, very pleasant to behold. Next we pass'd by the fort of *Arpafuy*, the last garrison of the *Turks*, seated on a rock after such a manner, that it needs no wall on three sides; but only on that where the entrance is. Within it there is a good garrison, and without a village, where a *Rup*, or quarter of a *Neapolitan* ducat is paid for every horse that passes. In this same valley we pass'd a bridge over a river, which parts the *Ottoman* and *Persian* empires. As soon as I got to the further side, I alighted to kiss the ground I had so long wish'd for, that I might be deliver'd from the frauds of the *Turks*. What happened to me from that time forwards, shall God willing be deliver'd in the second volume.

The Author's Entering upon the Persian Dominions, and Journey to Erivan, with the Description of that City.

GEMELLI
1694.

THE possession of those things we have long desir'd, produces in us such joy and satisfaction, that it makes us forget past sufferings, and disposes us willingly to undergo such as are to follow. This happened to me at my entering upon the *Persian* dominions, for the pleasure of it made me not think of a tiresome ascent we had to climb; and taking heart now I was in a country, where more honesty was practis'd, I with good cudgelling made the *Cateris* go on, who would needs then, at an improper season, stay to rest their horses, having advis'd me but just before to be upon my guard, because the *Turkish* garrison us'd to make excursions on that side.

First vil-
lage of
Persia.

After ten miles riding, we met a multitude of *Kurds* incamp'd in tents (which they set up in a moment, fixing a pole in the earth, with a great wheel at the top of it, to which other crooked staves are fastned to bear up the tent) they exacted half a pialtre a horse of us for passing; for in *Persia* it is not usual to open trunks, but to give something according to the quality of the persons. Having reared, and fed our horses, we went on a very stony way, and having in all travell'd twenty eight miles that day in ten hours, the chief muletier set up at *Talen*, the first village of *Persia*. In this place was a good church for the use of the christian *Armenians*, who are the best part of the inhabitants. On the high altar are the pictures of the holy apostles; but it is now gone to ruin, as is another near it. Having taken up our lodging in the house of a christian, as we had done all through *Armenia*, that is subject to the *Turks*, a

Versabietto, or *Armenian* preacher, but to look to, a rude ignorant clown, came to visit us, who seeing one of our horses sick, fell to blessing of water for him, crossing it, mumbling some words, and making ugly faces, and throwing a needle into it three times, in the most superstitious manner imaginable. To this village they bring on oxen, with pannels on them, abundance of stone-salt, which they cut out of a mountain a day's journey from thence.

In these fields I saw a curious and rare flower, which any *Italian* prince would perhaps give a considerable sum of money to have in his garden. The stalk of it is not above half a span long, at the end whereof there are three white flowers standing upright, like a plume of feathers, and three other purple ones hanging down in a triangle, with a little black rose in the middle, and three others of a brighter colour, twining about the afore-said flowers.

Tuesday the 27th, at break of day we set out again, and after riding twenty four miles in nine hours, came to the three churches, call'd by the *Armenians* *Eghiamisfen*, that is, only son, which is the name of the chief of them. This, as their histories tell us, was built 300 years after the coming of Christ; and they add, that when the walls were as high as a man, the devil in the night destroy'd all they built by day; but that at last Jesus Christ appearing one night, the devil could no longer obstruct the building of the church. It is dedicated to St. *George*, to whom the *Armenians* pay a great veneration. Within, the structure is in the form of a cross, with a cupola in the middle, under which they shew the stone, on which they say

our favour appear'd to St. Gregory, much honour'd by them. There are three doors into it, and all the pavement is cover'd with good carpets. It has three altars; to the high one there is an ascent of four steps, and near it on the right side is the patriarch's chair. There are six steps up to the altar on the right hand, and three to that on the left, with each a patriarchal chair against mass is solemnly celebrated at them. On the outside there are four small towers at the four angles, in one of which the bells are, and the standards of the cross every where set up; which is not permitted by the Turks on any account.

Closet by the church is the monastery, where the bishop and fathers reside, with an excellent garden in the middle. The patriarch's apartments are over the first great court, where the fountain is; thorough which they go into the second, which with its arches serves only for a caravanserai for pilgrims; for the monks go through another court and larger gate to their cells and church. The whole place is enclos'd with high mud walls, within which compass there are several vineyards and gardens.

The patriarch is counted one of the first among the Armenians, and has such a conceit of himself and his authority, that not very long since, he had the boldness to excommunicate S. Leo Pope, because he approv'd the council of Calcedon, which condemn'd theirs and the Greek heresy.

The second monastery, with the church dedicated to S. Cagana, is a musket-shot from the first. It was built in honour of a princess, who coming from Italy with forty maidens, to see St. Gregory, was by a king of Armenia cast into a well full of snakes, because she would not consent to his will; where having remained fourteen years, without receiving any harm, at last in a rage he put her to death with the forty maidens; as the Armenians relate.

The structure of the church is like the other, but less. There is but one altar, with the body of an heretical Armenian, whom they call a saint, under it. There are two other tombs without, one on each side of the great gate. As for the monastery it has a small cloister, with a garden, and cells for a few monks, who look to a small number of ignorant idle country people.

The third monastery a mile and a half from these, is very small, and dedicated to St. Revima. There is but one altar in the church, which has three doors, and good vineyards and fields belonging to

VOL. IV.

it, as well as the others. The Armenians that go out or return to Persia, use generally to stay three days at these churches, to perform their devotions, and receive the patriarch's blessing.

This plain of Erivan is very fertile, and full of vines and fruit-trees; as also abounding in wheat, rice, and other grain; and this because the natives improve it, making use of the waters of the river Araxes, which runs a-cross it, besides several other rivulets; and levelling the ground with a long rowler drawn with a rope by one man, and help'd forward by another, with a handle. Hence it is, that when the corn is ripe in Persia they are sowing in Turkey.

Mount Ararat is but eight miles from these monasteries. A constant tradition deliver'd down to our days, will have it that Noah's ark rested on it. At the foot of it runs the river Araxes, and rises another large mountain, but small in respect of mount Ararat, of which we shall speak hereafter.

That night I lay in the great monastery, and Friday the 28th in the morning, went into the church, to see about seventy priests officiate in two rooms in the midst of it. Three hours after we continu'd our journey to Erivan on a good road, and passing by many villages, after ten miles riding, came to that city. I took a room in the only caravanserai there was in the suburb, to avoid troubling the Jesuits, who did not live like the Italians.

The present city of Erivan was built on the ruins of another of the same name, in the longitude of 64 degrees and 20 minutes, and 42 degrees and 15 minutes of latitude, next the river Zangsi; it is seated on a rock, and the other parts on the plain. Its whole circumference is but a mile, with a deep ditch, a double wall, and bastions of earth, subject to be beaten down with cannon, and wash'd away with the rain. Nor are the houses any better, and inhabited only by a few traders, and the garrison. It has three iron gates; and but a few, and those small pieces of cannon. The Bazar is indifferent. The palace of the Chah or governor fronts the river, and is as great as earth can make it.

Saturday the 29th, I went to see the mint, where the silver and brass is coin'd; there being no gold coin in Persia, but what little is made at the king's coronation, which is either scatter'd among the people, or given to those that have deserv'd well. The Persians coin their money after this fashion. Having placed the metal in a trench, with coals and

Gambelli wood over it, they melt it by the blowing of two pair of bellows; they cast it into long slips, which they afterwards beat out into plates; others cut it out and others make the pieces round, others weigh, and others hammer them smooth, after which they are stamp'd by force of men.

The bridge. Sunday the 30th, I went to take the air on the bridge there is over the aforelaid river, consisting of good arches, near which, under the shade of thick trees, there are small rooms for the diversion of the *Cbam*, to whom the government of the city is worth full 200000 crowns a year. This river comes from a lake call'd *Gigaguni*, eighty miles distant from *Erivan*, and falls into the *Araxes*, running three leagues off on the south side.

The suburb. Monday the last of the month, I walk'd about to see the suburb, or rather the inhabited country, because of the many farms and gardens it contains. It is twenty times as big as the city, most of the traders, and all the artificers and *Armenians* living in it. There is an excellent *Bazar* and *Meidan* along the city wall; but there is an infinite number of ruin'd houses, by reason of the continual wars betwixt the *Turks* and *Persians*, which have reduc'd the city and country about it, to a deplorable condition. The whole compass is about ten miles, for the most part enclos'd with a work thrown up of earth, and by the neighbouring hills, which in time of war, might much en-damage the city. All this space produces excellent wine, and abounds in delicious fruit, besides pleasant poplar, and willow-trees.

From *Tocat* to *Tauris* the country is for the most part inhabited by christians, who get their living by silk-works, and other trades; because of the continual passage of the caravans, which carry silk from a province near *Erivan*, and other commodities of *Persia*. It is incredible how great an income these caravans bring to the king; because the custom-house being nothing severe, for no bales of goods are open'd, the merchants are willing to resort thither with the best commodities they can, paying but some small duty to the officers on the way.

Kiekart church. Tuesday the 1st of June, not to lie idle at *Erivan*, I hir'd a horse to go with some others into the country, to the church of *Kiekart*. I came thither after eight hours riding, and found a monastery of *Armenians* cut out of the rock, whereof the pillars are made that support the church. According to their tradition, the spear that pierc'd our saviour's side,

is preserv'd in this place; which they say was brought by St. *Matthew*. Near this church is a lake, and five other monasteries of *Armenians*.

As soon as I came to *Erivan* I hir'd horses for *Tauris*, for ten *Abassi* a piece (every *Abassi* is worth about thirty eight grains and a half of *Naples* money, that is, two shillings wanting three pence) but understanding the road was not safe, was satisfy'd to stay for company. At length finding some, I resolv'd on Wednesday the 2d, to go along with a *Georgian*; but whilst he was preparing his fardle, I sent for my horses, and found the *Ma-bometan*, who had hir'd them, broke his word with me, counterfeiting himself sick. This disappointment fretted me, seeing my companions go away, without hopes of finding any more at that time: because the caravan that came from *Erzerum*, had stopp'd half way for fear of thieves.

Thursday the 3d, I din'd in the monastery of the *Jesuits*; and being inform'd on Friday the 4th, that there was another small company of *Georgians* going to *Nakivan*, I resolv'd to go with them, the *Persian* dominions being more free from robbers than the *Turkish*; and accordingly I hir'd two horses, at the rate abovementioned, and prepared for my journey.

Before I go further it is fit I give an Mount account, that all the while I was at *Erivan*, I observ'd mount *Ararat* was always clear in the morning up to the top; but towards evening the many vapours the sun draws, both from the mountain itself, and from the waters on the plain, thicken the air, and it thunders and lightens, and at last the vapours dissolve in rain. It is also to be noted that this mountain is higher than *Taurus*, or *Caucasus*; and that being above the first region of the air, and always cover'd with snow, it is as cold as possibly can be. However the *Mulst. de. Dutchman's* relation is fabulous, who *del Univ. tells us* that in the year 1670, being to 2. p. oblig'd to go up it, to cure a religious man, he spent seven days in the ascent, travelling fifteen miles a day; and lying at night in certain hermitages he met with, at every five leagues; and that he pass'd beyond the bounds of the first region of the air, where the clouds are form'd, the first of which he found thick and dark; and the others vehement cold, and full of snow; and that the third cloud he pass'd through, he must have dy'd with cold, had his dreadful passage lasted but a quarter of an hour longer; but that the next day as he mounted,

mounted, the air grew more temperate and that coming to the cell of the religious sick man, he was inform'd, that in twenty years he had liv'd on the mountain, he never had felt heat, cold, or Wind, or seen any rain fall. Besides that the good hermit would give him to understand that *Noab's* ark was still whole on the ridge of the mountain, the good temperature of the air having sav'd it from rotting. An excellent invention of the *Dutch-man* to persuade us

the terrestrial paradise is there; but I GEMELLI 1694. and all that have seen it, have observ'd the top of it surrounded by a very thick mist, from the evening forwards, as has been said. It is true about the sides of it, there are many hermitages inhabited by religious christians, who endure very much cold, there being not so much as a stump of a tree about the mountain to make fire of. The *Armenians* call it *Mesefusar*, that is, mountain of the ark, and the *Persians*, *Agri*.

CHAP. II.

The Author continues his Journey to Tauris, with the Description of that City, and of Nakkivan.

Saturday the 5th, that I might not lose the second opportunity, I caus'd my luggage to be loaded on my man's horse, and let out in hast, with *F. Dominick*; *F. Dalmatius* being gone that morning to his mission at *Sciamaki*, and *F. Martin* staying at *Eriwan*. We put on a good rate to overtake the *Georgian*, and others that were gone before. About an hour in the night began the usual lightning and rain on mount *Ararat*; and we coming an hour after that to the bank of the river *Gavury-ciny*, which was much swollen and was to be forded, thought it more advifible to defer it till the next day. We lay in the village of the same name where there were many *Kurds*, having travell'd but eighteen miles. The smallness of the caravanfara oblig'd some *Turks* who were with us, to lie on the ground in the open air.

Sunday the 6th, at break of day we cross'd the river with a guide of the country, because, being two muket shot over, it is hard for strangers to ford. Then we rode along a plain country, some untill'd and some cultivated and improv'd with the cuts drawn from the neighbouring rivers to water the corn, and other grain; which has this great fault that it will not keep above a year. This day we travell'd thirty miles in eleven hours, and at night lay in the village of *Satarach*, where instead of sleeping, every man watch'd to guard his baggage, for fear of the country people, who are most expert at robbing of travellers.

Munday the 7th, we set out betimes, and held on our journey through a valley very dangerous for robbers. Being got out of it, at fifteen miles end we ford'd another deep river. Here we found the *Rattars* or guards of the roads, who demanded an extraordinary sum of me, and *F. Dominick*, so that I was forc'd to

make my way with pistol in hand. They still would not quit *F. Dominick*, who seeing they held his horse by the bridle would have the other pistol to fright the *Rattars*; but at last they seeing me resolute let him go, taking an abassi head. The guards being again crept into their cottage, we pass'd through another deep river, into a cultivated country, and two miles further another river call'd *Arpaci* or *Arpaju*. This river tho' divided into three branches is very rapid, and we had like to have perish'd in it. The stream before our eyes carry'd away for a large musket-shot, an *Armenian* catholic woman a horse-back with her son behind her, and she was never the least daunted; no more than was another that rode behind a *Turk*, for in *Persia* three or four will get upon a horse. When the water is higher by reason of the thawing of the snow, they pass it a league lower. Riding on along fields altogether untill'd, we went to lie by the caravanfara of *Keraba*, having travell'd thirty miles in eleven hours.

This structure was square, and one of the most capacious and beautifullest I had seen. There a plentiful spring of good water gushes out of a cut stone. The *Armenians* say it was made by *Sbem*, the son of *Noab*. As for this water's petrifying in a ditch ten miles off. Tac. lib. 1. Ta-chap. 4. Ta-chap. 4. Ta-chap. 4. *vernier* dreamt it, for none of the *Persians* or *Armenians* that were acquainted with the country, knew any thing of it; much less that the caravanfara was built with those stones.

Tuesday the 8th, riding fifteen miles we came to *Nak-civan*, whence *F. Dominick* went directly for the monastery of *Abarener*, whither he was bound, but with great fear of the *Rattars*, who are great thieves. I was left alone expos'd to their knavery, and they ask'd me

GEMELLI 1694. me twenty abassis for my horse, whereas the *Armenians* pay but two or three, and I had much to do to content them with nine. They use none so ill as they do the *Franks*, who must give them what they will have for fear of some affront, they being insolent in the highest degree. It may therefore be truly said that *Nak-civan* is the most troublesome place in *Persia*, on account of these *Rattars*, and like another *Erzerum* in *Turky*.

Nak-civan city. Some will have *Nak-civan*, to be the antientest city in the world, pretending that *Noah* when he came out of the *Ark* liv'd there; perhaps because it is but thirty miles from mount *Ararat*. They add that *Noah* was bury'd there, and they support their opinion by the etymology of the city, because *Nak* in the *Armenian* tongue signifies a ship, and *Civan*, staying. Whatever there is as to this point, there is a sufficient testimony of its antiquity in the ruins of its buildings reduc'd almost to nothing, by the continual wars; and particularly by the barbarity of *Amurat*, who utterly destroy'd it, leaving no token of the noble *Mosques* built by the followers of *Hali*, and held as profane by the *Turks*; for which reason wherever their arms come, they destroy them; as the *Persians* do by those of the *Turks*, through difference in religion, whereof we shall speak hereafter.

In the new city, there is but one long and narrow street, with one good *Bazar*, and four large and excellent caravanferas, for the conveniency of the many caravans, that of necessity must pass that way. The suburb is small, with houses built like caves. Near the city is a great brick-building, above seventy spans high, and octangular, ending like an obelisk. The entrance is through a great gate, within which, there are winding stairs up to two towers, that are on the sides, and have no communication with the obelisk. They say it was erected by *Tamerlane*, when he went to conquer *Persia*: The city and country is govern'd by a *Cham*.

Finding my self in the power of such base people as the *Rattars*, or guards, who threaten bastinadoing at the same time they demand their toll, I endeavour'd to fly the soonest I could. Accordingly, I provided that same day to go along with a *Persian* envoy, who was going to *Ispahan* to carry a present to the king. Having therefore hir'd two horses for my self and man for five abassis apiece, I set out of the city alone about three hours after night, to expect the envoy at a place appointed. Two miles

from the town I cross'd a river that falls into the *Araxes* on a good bridge of twelve arches, and at a small distance thence join'd the envoy: We held on our way through a plain country, cross'd by many cuts to water the fields, which made their waters run thick and muddy, as does the *Araxes* itself.

Having travell'd twenty seven miles in nine hours, we rested on Wednesday the 9th at *Zulfa*, to cross the *Araxes* there in a boat. *Zulfa* at present may be said to be altogether disinhabited, because *Scia-Abas* the first, king of *Persia*, transplanted all the inhabitants to new *Zulfa* in the province of *Guilan*, and to other places, that they might not be left expos'd to the continual incursions of the *Turks*; yet what remains of it under barren rocks, on the left of the *Araxes*, sufficiently demonstrates, it was no very considerable city, being a heap of mud, and of caves under ground. The two caravanferas built by *Coggia Nazar* an *Armenian*, one on the one side of the river and the other on the other, are also ruin'd; and therefore only a few *Armenians* live there, because but a mile from thence there is an excellent and fruitful soil.

The *Araxes* being here confin'd between two mountains is not narrow but deep, being swell'd by the water of that river, which three miles from thence we forded four times. It is thought to be the same that *Moses* and the holy scripture call *Gihon*, which springs in the terrestrial paradise, because it has its rise in the same mountain, and at a small distance from *Euphrates*, the one running east and the other almost west. The boat to ferry over the *Araxes* is ill built, and worse managed, having only two oars to bear it up, so that when it comes to the further side, the rapid stream carries it a musket shot lower than it should go, and then it must be hal'd up with a rope. The ferriermen have half an abassi a horse, and there is one appointed by the *Rattar* of *Nak-civan*, who delivers a letter seal'd in token that the duties are paid, which if it were omitted, they would oblige them to pay again; so base and deceitful is the officer, and he that employs him. There was formerly a stone-bridge, afterwards broke down by the king of *Persia*. Having pass'd the *Araxes*, we rode fourteen miles further in four hours, and lay at the caravanfera of *Deradus*, which not being big enough to hold all, we were forc'd to lie in the open air.

Thursday

Thursday the 10th, three hours before day, we entred into a valley betwixt two mountains, much frequented by robbers, and being out of it, travell'd over a barren plain to the caravanfera of *Alachi*, the whole journey being fifteen miles, in four hours. It is a brick building, large, and square, with four towers at the four angles. Then riding twenty miles further, we came to the village of *Maranta*. Here they say *Noab's* wife was bury'd. The village is large or rather a wood of houses, by reason of the trees and gardens among them, which hinder the sight of the mud-houses, at any distance. It is seated in an excellent fruitful plain, three miles in length, and two in breadth, with many more villages about it. Here is a great noble caravanfera, with four towers at the four angles, and a curious spring of the best water I ever tasted out of *Italy*. Four miles short of this place, I was met by the *Rattar*, or guards of the ways. These are more to be fear'd than robbers, because under colour of their employment they rob securely, being arm'd with knotty clubs (a weapon common to both noble and ignoble in *Persia*) like *Banditti*, and they cheat *Franks* more than any other people, exacting what they please of them without respect to the nature of the commodities; and because they do not open the bails, they will have as much for a parcel of rags, as for the richest jewels in the world. The common duty is five abassis a horse, but they are scarce satisfy'd with all a poor traveller has.

Friday the 11th, before day we entred upon a mountainous road, at the end whereof we met the other *Rattars* of *Schiachit*, who take an abassi a parcel. After riding ten miles in three hours, we pass'd by the excellent caravanfera of *Jangbet*, well built of brick, with four towers at the angles, and big enough to hold an hundred persons. Having travell'd as many miles more over a sandy plain, we came to the city, or rather forest of *Sephana*; for there are so many trees, and delicate gardens about it, that the houses cannot be seen till a man is upon them. Having stay'd there two hours, we travell'd eighteen miles further in six hours, and came to *Tauris* an hour before night. By the way I saw a hill on which they told me *Amurat's* army incamp'd in the year 1638, when he besieg'd, took and burnt this city. They tell it as a notable instance of sedateness of *Scia Sepbia* king of *Persia*, that he little or nothing concern'd

Vol. IV.

at that news, said; *Let Amurat come forward, for he will destroy himself*; and at the same time gave orders, that all the waters about should be turn'd away, there being no other rivers beyond *Tauris*. His prediction prov'd true, for *Amurat* advancing with one hundred thousand fighting men through dry and barren plains, lost a great part of his army, and was forced to turn back with dishonour.

Tauris, or *Ecbatane*, is seated in the *Tauri* province of *Adirbeitzan*, (as the *Persians* call it) in 33 degrees of longitude, and 40 of latitude. It was once the metropolis of the empire of the *Medes*, whose original was eight hundred and seventy six years before the birth of Christ. There is nothing but the bare shadow of its ancient splendor now remaining, having been the stage on which the *Turks* and *Persians* exercis'd their weapons during the wars between those two monarchs. What remains now is a great plain, encompass'd on three sides with mountains like *Erzerum*; and it resembles *Erivan* in the mutability of the weather. Its compass is thirty *Italian* miles, by reason of abundance of gardens and open places in it. The houses are ill built of mud; but the *Bazars* and caravanferas are good, because the conveniency of its situation draws a vast number of merchants, as well *Muscovites* and *Tartars*, as *Arabs*, *Georgians*, *Mingrelians*, *Indians*, *Turks*, *Persians*, and several others with all sorts of commodities; more particularly with silk brought from the province of *Gilan*, and other places; so that a great number of people is employ'd in that work. Tho' its compass be thirty miles, and a *Jesuit* compares it to *Rome*, in his account of it, yet I do not believe it contains above two hundred and fifty thousand inhabitants, both because of the gardens and fields, and by reason the houses are but thin of people.

Sunday the 12th, I went to see the tower of *Scian-Cafan*, which some without any good ground for it, will have to be that of *Babel*, mention'd in holy writ. It is made of brick two hundred and twenty of my paces in compass, its diameter forty paces, and the thickness of the wall twelve, but it is ruin'd on two sides. A winding stair-case of one hundred and ten steps goes up to a room on the top of it, and on the out-sides of the walls of this room there are cyphers and characters. At the bottom is a place with iron gates, where the *Persians* say the founder lies bury'd.

Next, I went to see the *Atmeidan*. This is a great square, to which most of the merchants and artificers resort, because there is a better trade there

F f than

than elsewhere. The chief thing sold there, are good horses, and those cheap, (for I bought one for ninety abassis, which at *Naples* would be worth three hundred) as also shagreen-skins, whereof there is a great consumption, all gentile people wearing shoes and boots of them. They make them of horses, asses, and mules hides, but only of the rump part.

The *Mosque* of *Hassan-Bajcia* being in this place, I went to see it. This structure was erected by the *Osmanlis*, without sparing cost or time. At the first coming in, there appears a front curiously wrought in brick, with reliefs of marble carv'd after the *Italian* manner in flowers, birds, and fruits of several sorts. The gate is all of one entire piece of white marble, like that of *Osmanla*, which leads into a cloister, or square court, and then to a treble arch, on the sides of the *Mosque*, without any ornament. At the end thereof there are two small gates to the *Mosque*, whose front with two high towers is of the same sort of work; but the tops of the towers are gone to ruin. The *Mosque* is only one great cupola of the same marble curiously wrought with *Arabick* characters in blew and gold, and in some places curiously painted with fine flowers, in others with odd fancies. The nich, whether few go to pray, is on the side of the *Meidan*, or square; therefore the gates are only on the sides answering to the two cloisters, which are uniformly built one on each hand.

The upper gallery of the *Mosque*, is from the cupola supported by twelve arches, three on every side, whereof those next the aforesaid east and west gates are equal, the others greater, but those on the north and south are kept shut. At the upper part of every angle there are as it were separate balconies, to see what is doing. On the sides of the nich are two curious marble-stones as clear as alabaster; on the left is a pulpit with an ascent of fifteen steps; on the pavement poor mats, because the *Persians* make small account of that *Mosque*, and think it polluted, as having serv'd *Osman's* followers. Behind it at the north-end is a large square garden, with trees of several sorts.

Near this *Mosque* is another structure, with the same outward ornaments, now going to ruin. They call it the place of waters, because there the *Persians* wash their dead. In the same place is a church belonging to the *Armenians*, almost fallen to decay, whether they say *St. Helen* sent a piece of the cross. At the end of the *Meidan* is a great pa-

lace built by the *Turks*, whilst they were masters of that place. Every evening there is a pleasant consort of drums and trumpets in a gallery of this place.

About noon, the *Cham*, or governor's lieutenant made his publick entry into the city, attended by five hundred horse he brought with him; besides one thousand five hundred that went out to meet him. But before we proceed, it will be convenient to say something of the other lieutenant his predecessor, who dy'd a little before in *Tauris*, because he was always a great friend to the christians, and especially protector of the *French Capuchin* missionaries, whom in publick assemblies he placed by his side, to the great regret of the *Persian* priests.

His name was *Sultan-Bigian Beg*, son ^{A notable story of a Persian.} to the great *Russian Cham*, call'd *Spasalar*, great general of the *Persian* army, which drove the *Osmanlines* or *Turks* out of the country of *Tauris*: The great *Russian* had a grandson; and *Sultan Bigian*, who dy'd *Cham* of *Erivan* was his uncle. His family had always kept in the king's favour, being of the blood of the *Georgian* princes. But *Bigian* was disgrac'd during the command of *Atmat-Dolet*, or the grand vizier his enemy, who made the king look upon him as a mad-man and drunkard. This man we speak of, seeing fortune frown on him, after governing *Sciamak*, retir'd to live a private life at *Tauris*, with twenty five servants, placing his greatest delight in drinking the best wine in the country. His nephew *Russian Cham*, now general of the army, and *Divan-Beg*, or chief of all the judges, being then in the king's service, and well advanc'd in his favour, he one day bid him ask some grace. He modestly answer'd he was satisfy'd with the honour and bread he daily receiv'd; but the king still pressing him to ask some grant, he said, *Since Your Majesty Orders it, I beg nothing but that you restore my Family to the same Honour it enjoy'd in the time of my Grand-father Russian*. The king ask'd whether he had any kinsman to prefer. *Russian* reply'd, *There was his Uncle Sultan Bigian Beg*; and the king enquiring, where he liv'd, he said, *He eat the Bread His Majesty's Goodness had left him at Tauris*. The king said, *That Mad-man, your Uncle Sultan Beg. He is not Mad, said Russian, but our Enemies have represented him as such to your Majesty; and if you please to let him appear in your Presence, you will be sensible how much you have been impos'd upon*. Well, said the king, send for him. Sir, reply'd *Russian*, we have sent for him several

several times, and he would never come, nor will he now, without your special Command. I will do it, answer'd the king, and will send the son of a Cham to Conduct him. Sir, said Rustan, he is not in a Condition to present an Envoy of Your Majesty's, and therefore it will suffice to send him a written Order by an Express. In short, three expresses were sent with the king's orders in March 1692. He being a drinking, when they came, tols'd of a glass to the king's health, laying his majesty's letter on his head, and from that time never drank wine. Being come to *Ispahan*, he went to the *Ala-Capi*, or house of refuge to which all criminals retire; as also those who are sent for by the king before they know whether it is for their good or evil. The king being inform'd by his nephew that he was come, and lay in the royal house of sanctuary, order'd him to be brought out, and a good apartment fitted for him, because he would see him. *Bigian* being brought before him, two days after he receiv'd him very courteously, saying to him in token of affection, *Baba*, that is grandfather, you are welcome; and asking whether he drank wine, he answer'd, *That tho' he drank merrily during his Abode at Tauris, yet after receiving His Majesty's Orders, and drinking one Glass to his Health, he had never tasted any more.* Then the king causing wine to be brought, made him drink out of his own gold cup, and then smoke out of his gold pipe; then he gave him the post his father the great *Rustan* held of great general, but he generously refus'd it, pleading his age, and beseeching his majesty, if he thought fit to bestow it on his nephew *Rustan*; whose lieutenant at *Tauris* he was contented to be, the government of *Tauris* being ever united to the generalship, which the king graciously granted, and within a few months he went away to his government. 'Tis true, his nephew did not receive the profits belonging to the post of *Cham* of *Tauris*; for the great general never goes thither, but only receives a sum of money of the lieutenant he appoints, who make their advantage of the rest. This is the true history of *Sultan Beg*, the great friend of the *French Capuchin's*; and I hope the reader will not dislike this short digression made on his account.

During my stay at *Tauris*, I lodg'd at the *Capuchin's*, who have a good church and monastery there, through the bounty of *Mirza-Ibrahim*, who was intendant of that province, and a great lover

of the liberal sciences, wherein he would ^{GEMELLI} be instructed together with his sons, by ^{1694.} *F. Gabriel Cbinon*, then guardian.

Sunday the 13th, passing through the *Atmeidan*, I saw a man gently beaten on the soles of his feet with a wand, being bound to a high post, at which they shoot with arrows upon publick festivals. Then I took notice of certain religious *Persians*. They wear a turbant like the *Turks*, with a border about it, and the middle part sharp, and cover'd with red cloth.

After dinner, I mounted a horse-back, and rode about the city. We pass'd over several bridges on the river *Sebenkaic*, which runs through the midst of *Tauris*, and has excellent water; but sometimes it swells so high, that it over-flows a great part of the city. I observ'd there were among the houses several corn-fields, as well as orchards. There are also in them several tombs, some round, and others in other shapes, ending sharp at top, and cover'd on the out-side with excellent black and blew tiles, full of characters and *Arabick* letters. Returning to the monastery, I met a man a horse-back, with a turbant after the *Turkish* fashion, a feather on the forehead, and on the sides two upright horns of tin fix'd to the turbant, between which stood up a thing shap'd like a cylinder, cover'd with red and blew silk. They told me it was a *Giarci* (there are four of them in the city) which are chiefs of the sergeants, and serve to proclaim the price of bread, and the sentences given by the governor, and his lieutenant.

Money falling short to continue my journey, and pay for the horse I had bought; a catholic *Armenian* of *Zulfa*, whose name was *Malacby*, lent me eighty crowns to be paid him at *Ispahan*, upon my bare word; a courtesy I should scarce have met with in *Chriftendom*.

Monday the 14th, I went to see the *Scien evi* royal palace call'd *Scien-evi*. I thought ^{palace.} to have found a noble structure, but was disappointed, for the first floor was only three rooms and a gallery, which leads into the garden. A man must have a care here not to tread upon a certain round piece of white marble; because the *Persians* holding it in great veneration, as a stone of *Mortafale*, whoever should transgress would be bastinado'd. I saw there two indifferent gardens with almond, and apricot-trees, whereof there is great plenty in *Tauris*, and several sorts of roses. In one of them was a small apartment, to take the air in summer: Having given
the

GEMELLI the gardiner a gratuity, I went on to take a better view of the *Mosque* of *Osmanlu*, which is the best in *Tauris*, and the *Persians* let it go to ruin as polluted and heretical; because it was built by the *Sunnis*, who are followers of *Omar*, as was said above. This structure is square, and the front of it over the great gate, to which there is an ascent of eight steps, is curiously wrought, almost like *Mosack* of curious blew, purple, black and white tiles, with two high towers closing above like a turban, cover'd with the like work, but rais'd. Within there are winding stairs, but that on the left was half beaten down by lightning. The *Mosque* within is adorn'd with curious painting, after the *Moorish* fashion, and with ciphers, and *Arabick* letters in blue, and gold. The gate of the *Mosque* is not four foot wide, but all of one piece of transparent white stone, twenty four foot high, and twelve in breadth. Here is a

1694.
Osmanlu
mosque.

Note.

rissake in the author mentioning two several breadths, which I know not how to reconcile, the reader may judge of it. The cupola is thirty four paces diameter, with the same sort of work within, scarce to be out-done by the curious pencil. It is supported by twelve marble pillars within, and by sixteen without, which are very high, and each of them six foot square, with niches on the out-sides to leave the shoes, as is practis'd by the *Mahometans*. About it is a rail with doors to go from one side to the other. There is a way round three parts of it, for the fourth leads to another less cupola, but more beautiful, and gilt. The pavement is of bright marble, like that of the front, and the pillars are cas'd with it eight spans from the ground. This cupola is curiously adorn'd about with a sort of violet-colour work, set off with flowers of gold; and the pavement is two spans lower than that of the first. The outside of the great cupola is cover'd with green tiles, with small white flowers, and the other with white stars on a black ground, which are pleasant to behold. Within the *Mosque* on the left hand, is a walnut-tree seat rais'd upon six steps leaning against the wall of the first cupola; and on the right another of the same sort, but better workmanship. About it is a small rail, with fourteen steps up to it. On the south-side there are two great transparent stones, which look red when the sun shines on them. This they say is a sort of alabaster, made by the petrifying of the water, a day's journey from *Tauris*, where it soon hardens in a ditch.

It is much esteem'd by that nation, who place it on their tombs, and make cups and other curiosities of it, which they present as a rarity at *Ispahan*. All people unanimously affirm'd it was petrify'd water; denying that positively which *Tavernier* speaks of at the caravanera above-mentioned.

On the other side of the street, opposite to this *Mosque*, is still standing the front of the palace of the great priest, or *Shec-Iman*, artificially built of several colour'd stones.

In my return home, I went to see two heathen temples, call'd *Uria-Schiageret*, that is, master and scholar. They are both of them at a distance from the street. That on the left, coming into the city, is the least, and square, with two great gates, and thirty windows about it. The cupola which had been round, was fallen. The temple on the right is of the same structure, but much bigger. Between the great gate and the *Atmeidan*, there are two vast pillars standing, which appear to have supported another temple near the other two. The fronts are of the same workmanship before-mentioned; but the structure, tho' very thick, is of good brick, and so antient, that it cannot last long.

Two musket-shot further is the curious large front of a *Mosque* of the same workmanship, going to ruin. Going in (leaping over the marble of *Mertofale*) there appears a fine large garden full of several sorts of trees and flowers; at the end whereof there are some great fabricks, which they say belong'd to an old *Pagan* temple, call'd *Alusian-Tagbi*, which had two gates on the sides, and one in the front. There is also a great square enclos'd with good brick walls, which serves upon publick rejoycings.

Taking the advice of the *Capuchins*, who courteously entertain'd me as their guest, I left the company of *Persians*, to prevent being robb'd by them on the road, or at least by the *Ratters*; who because they are not paid by the *Mahometans*, among other insolencies, delight in stripping a *Frank*. These fellows are so insatiable, that no purse can hold out to satisfy them, as has been said before; tho' in *Tauris*, because it was a city, they took but five abassis of me. For this reason I resolv'd for the more safety to expect some company of merchants, who do not use to travel unprovided.

Tuesday the 15th, a *Jesuit*, a bare-foot *Carmelite*, and an *Augustinian* set out for *Erzerum*, after they had been several days in the same monastery of the

Capucins. They rode on horses of their own bought at *Tauris*, there being none to hire, but when caravans go. These fathers had gone before by the way of *Bagdat*; and when they came to *Karmanica*, a city on the frontiers, four days journey from *Babylon*, the *Cham*, or *Bassa* would not suffer them to proceed; so that they were oblig'd to turn back to *Hamirdan*, by the way of *Tauris*, in order to go thence to *Aleppo*, or *Trabezond*, and thence to *Constantinople*; but in their return they were robb'd by the *Raitars* both of their cloaths and money, especially the *Portuguese Augustinian*, who lost eighty crowns, and was imprison'd with his servant; nor did the other two *French* fathers meet with better usage.

Salt mines. We must not forget to observe, that about *Tauris* there are good mines of white salt; that within the city there are excellent fresh waters, to which there is sometimes an ascent of fifty or sixty steps; and that there is a mint as well as at *Eriuan*, where during my stay, they coin'd abassis.

The *Capucins* monastery being near the *Meidan*, every evening at sun-setting, I heard the ungrateful musick of drums and trumpets, being the signal for all persons to shut up shop, and for the guards to scour about the *Bazars*. At the same time the *Mullabs* cry out from the tops of houses, not from the towers like the *Turks*, calling the people to prayers. About an hour and a half after night, an untuneable drum beat, being the sign for all persons to keep within doors; after which, none may go without a light, upon pain of imprisonment. Two hours before day the same drum beat again; to give notice to shop-keepers, that the guard, or watch was going off, after having walk'd about the *Bazars* all night, and therefore every man must look to his own.

Wednesday the 16th, F. George of Vendosme, a Frenchman, and superior of the monastery, carry'd me in the morning to see the *Bazar* built at a vast expence by *Mirza-Sadoc*, whilst he was great, and intendant of the province of *Abdergiam*, all cover'd with large bricks, or tiles hardned in the sun. Near it we saw a caravanfera, a bath, and coffee-house, built by the same man, with a prodigious trench fifty foot deep, sixty in length, and forty in breadth, to keep ice, taken out of a pool, where the water soon freezes. Close by it is a college to instruct the *Persian* youth, with a *Mosque* in it.

Next we went to see the *Mosque*, call'd *Vol. IV.*

ravanfera, coffee-house, and ice-house made by *Mirza-Ibrabim*, brother to *Mirza-Sadoc*, who had the charge of *Mustofi Mumalsk*, or high chancellor. There is a great gate to the *Mosque*, whose front and cupola are curiously adorn'd with tiles of several colours ingeniously plac'd. First there is a fine, but small garden, on the one side whereof is a little, but neat *Mosque*, with two little towers on the sides, handsomely cover'd with the same tiles. Opposite to it is a divan with such like towers, and a great fountain of water before it to make the dwelling the pleasanter, all adorn'd after the same manner with stones. At a small distance is another little *Mosque*, set off after the same manner.

Thence we went to the palace of *Mirza-Taer*, son to *Mirza-Ibrabim*, then vizier of *Abderbegiam* (the best of four there are in *Persia*) in his father's place, who was employ'd in receiving the revenues of two provinces. The outward structure was of mud, made but a bafe appearance; but going in, I saw a fine garden with several water-works, and beautify'd with trees and flowers. Thence I went to see the summer apartments; the *Aram* or womens apartment, and a stately divan, tho' not finish'd, to administer justice; all adorn'd with marble, and well enough painted after the country fashion. On the two sides there were four curious marble stones fix'd in the wall, being almost as fine as alabaster, with a great fountain in the middle. Here I much admir'd the simmetry and proportion the *Persians* observe in their apartments, as well in the windows and balconies, as in the roofs and paintings. On the other side of the garden was the winter apartment then finish'd, with a little divan, but curiously painted, and gilt with several flowers in blew and gold after the *Arabian* manner. We also saw another little but curious garden, and another divan well set out, adjoining to which there were very delicate little rooms, all gilt and painted, with some looking-glasses fix'd on the wall, opposite to one another, as also a chimney adorn'd with the same glass, which with the reflexion of the sun dazzled the eyes. The floor was cover'd with good *Persian* carpets, and in the rooms there were alabaster fountains to please the eye; the whole well enough contriv'd by the ingenious *Persians*, according to the aforesaid *Mirza-Taer's* good fancy. He has also built a good caravanfera in the *Meidan*, which

G g is

GEMELLI is therefore call'd *Mirza-Taer*, and another where money was actually coin'd; both of them large and good structures. He has also an admirable garden on that side of the city next *Ispahan*, in which there are all sorts of *European* fruit, and by it two pleasure-houses. Near this palace are those built by *Mirza-Sadoc*, and *Mirza-Ibrahim*, his father and uncle, which are truly magnificent both as to their structure, and inward ornament.

Returning by the mint, I went in to see a large cupola close by it, which the *Persians* call *Esfara*, in which were the richest, and most valuable commodities of the city. Near it is the goldsmiths, and silversmiths street, with stately arches of curious brick, but cover'd like all the streets and *Bazars* in the east.

Superstition of barren women.

Thursday the 17th, passing through the place where the gallows stands, I took notice of a superstition, or folly of the barren *Persian* women; who go three or four times under the gallows, whilst the bodies of malefactors who were actually hanging; which I should scarce have believ'd, had I not seen it. They imagine the dead body can infuse fruitfulness into the womb, and make them breed children; and so they conceive, and hold it for certain. That passing several times over the aqueduct, which conveys the water from the bath, where men are actually bathing, they receive the same virtue of conceiving. I believe the bath may make them fruitful, but not the gallows with the dead bodies.

Instead of razors, the men pull up their beard, and the women their down with pincers, which puts the men to great pain, drawing out the root that it may not grow again, for they fear

that if they should take it off with an ointment, as the *Turkish* women do, the skin would grow hard.

Three miles from *Tauris* is a gold mine, but the cost being greater than the profit, they have given over working at it. Four days journey from the same city is another of copper, which brings a great income into the king's coffers.

Whilst I expected the setting out of one *Jus-Bafci*, a *Georgian* renegado, who was to go to the court of *Ispahan*; to avoid idleness, I rode to take the air out of the city, in the company of a *Frenchman*, who was acquainted with the country, and well known by persons of quality. When we had gone two miles, we saw upon the right hand on a mountain, a bridge fifty paces long, with stately arches, of no use to the publick, because there never was any water there, nor is it possible to carry any thither. Asking what that bridge was built for, they told me that a *Mullah* desiring to be spoken of by the king had built it; knowing that *Scia-Abas* the first, king of *Persia*, was to come to *Tauris*, and could not come any other way. The king accordingly coming, and enquiring after that useless structure, the *Mullah*, who was at hand answer'd. *Sir, it was I that built it, that when your Majesty came you might enquire who did it.* Others say it was built by a woman.

Going two miles from thence, and looking towards the north, on a mountain not far distant from the city, I saw the ruins of a *Mosque*, and below it a fort and temple both destroy'd, and abandon'd by the *Persians*, as being built by the *Turks*; but there is a monastery entire on the brink of the precipice.

CHAP. III.

The Description of the Cities on the Road to Kom.

Returning to the monastery in the evening, I was inform'd that the *Jus-Bafci*, who is a captain of one hundred men of the country troops, was upon his departure; therefore making the best provision I could in haste, I set out at two in the morning on *Friday* the 18th, with *Malacby* the *Armenian*. We went to the *Jus-Bafci*'s house, and stay'd half an hour till he was ready, after which he mounted with only twelve followers, most of them unarm'd; and this because, tho' the king pays for one hundred men, either he has them not, or else lifts townf-

men, who have never handled weapons, and makes his advantage of their pay. We travell'd all night over the plain between barren mountains, and at break of day after riding twenty miles in seven hours, came to the caravanfara of *Sciemi*, built betwixt those mountains by *Scia-Sof*, king of *Persia*. It is a good structure, with a noble front fit to contain one hundred persons, and their horses; because the country between *Tauris* and *Ispahan*, and *Ormuz* and *Ispahan* is inhabited, and there is need of such good large caravanfara.

Here

Caravanfara in Persia.

Here the *Rattars* are, who take an abassi for ever; horse; but I paid it not on the score of the *Jus-Bafci*, who was much respected on that road. Having first climb'd, and then gone down a prodigious mountain, we pass'd by a lake full of wilde geese. Thence there are two roads to *Ispahan*; the one through *Ardevil* and *Cashin*, leaving the lake on the right, and riding along the mountains; and the other through *Kom* and *Kafcian*, leaving the lake on the left. This way we took, riding ten miles through a well-cultivated country to the village of *Agia-Aga*, to which we came before noon. There we found a good caravanera; but *Malachy* and I lodg'd in a *Turk's* house. The night at this time of the year is very cold in *Persia*, and the day as hot as in *Italy*. We lay still the remaining part of *Saturday* the 19th; And,

Sunday the 20th, waiting for the cool of the night to set out, my horse getting loose, took such a run, that I thought I should never have seen him again; but a *Moor* mounting another, follow'd and brought him back. At sun-set we continu'd our journey over the plain, and there fell a mighty rain, which lasted several hours, making it so dark, that we could not see our way; so that we wander'd half the night. This oblig'd us to take a guide at a village, who conducted us to the caravanera of *Guilach*, having rode fifteen miles in six hours. My horse falling in the dark into a ditch, broke one of my pistols, and I was well wash'd.

Monday the 21st, we rested about an hour in this caravanera; and then set out to enjoy the cool air; not that our lodging was bad, the caravanera having been built with great cost by a rich citizen of the province of *Guilan*, whose name it bears. Ten miles from it we pass'd by the caravanera of *Dautler*, built with stone, whereas the others are of brick. In *Persia* there are good caravaneras every four leagues. Eight miles further we came before noon to the village of *Caraciman*, seated in a valley. The country we travell'd through that night was plain, but the next day mountains, yet well cultivated, there being no part of it wast; and I can avouch, there is no plain so green on the frontiers of *Persia* or *Turky* at that time of the year. This is the reason that provisions are so plentiful, that a man may have bread enough to serve him a day for a tornefe of *Naples*, which is less than a penny. But the ground is stiff, and they are

forc'd to plow with four or six oxen; GEMELLI 1694. a child sitting on the yoke of the foremost to keep them going.

The *Jus-Bafci* would needs have me dine with him, expressing much kindness, a thing rare among the *Persians*, who make a scruple of eating with christians, and think their touching of meat, pollutes it; but he being a *Georgian* renegado was not so precise. During the dinner he told me all his life, saying, he was the son of a prince of *Georgia*, and had but lately recover'd his liberty, after two years imprisonment at *Tauris*, where he had chains on his hand, neck and feet, having been misrepresented to the king by his enemies, and being now restor'd to favour, he was going to see the king, and a brother he had that was surveyor of the mint, whom he had not seen for fourteen years past. Others told me he had been imprison'd on account of his extortions in some villages of *Armenians*, where he had the command, who at last sent their complaints to court. We discours'd about the opportunity the king of *Persia* then had, of making war upon the *Turks*, and how easy it were for him to conquer what he pleas'd. He said, he and every body else desir'd it, but that the king being wholly taken up with the pleasures of the *Aram*, let slip so favourable an opportunity.

The sun being almost down, and the heat of his rays abated, we set forwards and travelling twenty one miles in seven hours thro' an uneven country, but cultivated and well peopl'd, we came to the village of *Jus-Bafci-Candi*, leaving behind us the open town of *Turcoman*, seated in the midst of a valley. The *Jus-Bafci* continu'd his *Persian* civility at dinner, making use of his hand instead of a spoon, and taking up the rice by handfuls to put into mine, and *Malachy's* plate; a swinish civility in *Europe*, but a great compliment in *Asia*. There the rice is brought in one dish, and the flesh in another, which are distributed by the chief of the guests. When dinner was over, the *Jus-Bafci* stood a good while with his hand up in the air, waiting for warm water to wash off the grease.

Some of the inhabitants came to see me in this village, the report being spread abroad, that I was an ambassador sent to the king, by the christian princes, and would not make known my character, till I came to *Ispahan*. They were the more easily induc'd to believe it by their own practice, because they receive any person as an ambassador, that brings but a letter of recommendation

Caravan-
eras in

of the
Persians.

GEMELLI
1694.
dation to the king from any prince in *Italy*; and therefore he that comes in this nature, is receiv'd with great honour by the first *Cham*, upon the frontiers, who at the king's expence conducts him to another governor's liberty, till he is brought to the king at *Ispahan*. Several merchants procure such letters, to spare the charge of customs, and the guards on the roads, as also to be carry'd all the way at the king's expence. Here we were warn'd to be upon our guard for fear of thieves; because the inhabitants of the village of *Miana* being run away, not being able to pay the taxes, and having no other way to live, many of 'em wandered about to rob travellers. This did not much fright me, knowing they were most of them unarm'd.

We rested here all the remaining part of the day in a *Persian's* house, and set out towards night. An hour after a good shower of rain fell, which made it so dark that we were forced to take a lantern and a guide. After three hours riding the *Jus-Bafci* would rest near a river. We set forward again two hours before day, and travelling over barren mountains and valleys about sun-rising, after riding fifteen miles in five hours, found our selves in the aforesaid village of *Miana*, a dirty place, as being seated among marshes. There was no soul in it; for as I said, they were all fled, leaving their houses and goods. There were only two *Rattars*, who durst not come near us. We saw an excellent caravanera new built, and another gone to ruin. The country was not bad, and will certainly be peopled again.

A high
Mountain.

Four miles from the village we cross'd the great river of *Miana*, where there was once a bridge of thirty arches, whereof only six are now standing. We forded over all the four branches it is divided into, the last of which is so deep, that in the winter there is no passing it a horse-back, but on camels. Then we ascended a mountain call'd *Kaplanu*, the highest in the road to *Ispahan*, which on the other side has a long upright descent to the river, over which there is an excellent bridge of three arches, newly built, call'd *Casiosan*. This river as well as that before mention'd, after crossing the province of *Gilan*, where they are both of them drawn out into several trenches to water the corn, run down to the *Caspian* sea. The villages about this mountain pay nothing to the king, because they belong to the *Mosque* of *Ardevil*, where there are some tombs of

king's of *Persia*, and that of *Scia-Sefi* accounted a saint, for which reason all the *Persians* go thither in pilgrimages. That *Mosque* has eighty thousand crowns revenue, distributed among the poor, and the priests belonging to it. Not far from the aforesaid bridge is a rock apart from the rest, where there appear some remains of ancient fortifications, and of a castle on the top. The *Jus-Bafci* told me a woman had built that fort, she whilst the liv'd being posses'd of the city and places about the mountains, which could never be taken from her because of the narrow passes on the hills. Having travell'd thirty three miles in eleven hours through a barren country, abounding only in liquorice and thieves, we halted before noon at the caravanera of *Sin-Malava*, seated on a mountain, with seven well built towers, which at a distance make it look like a castle. There were abundance of partridges all about, but as hard as stones, and of another colour and tast than ours; there are some like ours, but on the mountains.

It is not so safe travelling in *Persia*, ^{Dangers on the road in Persia.} as I had thought; for a man may light upon robbers, or *Ciapars*, which are the king's messengers, who carry letters from one province to another, by order of the governors or princes. These have authority to take away any man's horse they meet on the road, which they usually send back a day or two after, and they but a stranger to very great trouble.

The *Rattars* having intelligence sent them by the *Odabafci*, or overseer of the caravanera came in the evening, but, seeing the *Jus-Bafci*, durst not demand the duty; but asking him leave to practise their cheating power upon me and *Malaby*, he chid and sent them away.

Wednesday the 23d, about night we continu'd our journey, and about two hours after began the usual rain with thunder and lightning. Two hours before day we pass'd by the caravanera of *Sarcesma*, well built of brick, with four towers at the four angles. So we travell'd fifteen miles in five hours and a half through a barren country, and unfit for plowing. Having rested an hour and a half, we advanc'd twenty five miles further in seven hours and a half, and came at last in the morning, to the village of *Nubba*, where we unloaded the beasts in the caravanera call'd *Nickbe*. To avoid ^{Caravan. I ferus de ferio'd.} so often repeating the same thing, I must observe once for all, that the caravanera's in *Persia*, are all built with brick, after the same model, and are large and magnificent; but so uniform and

and well proportion'd, that they are not inferior to the best structures in *Europe*. About the court are the rooms for travellers, who if they will not put their horses into the large stables, which are behind, may tie them before their rooms to a stone with a hole in it, plac'd there for that purpose. In the stables over the mangers, there are niches for the muletiers or grooms to lie, who naturally love being there better than elsewhere. This caravanera of *Nichbe* has four towers at the angles, and an excellent front, where on a long piece of fine marble, the founders name and quality is writ in *Arabick* characters; for these caravaneras are commonly built by rich persons for the benefit of their souls. The lower part of the structure is of white and red stone, mix'd like marble.

Having rested the remaining part of *Thursday* the 24th, we set out before midnight by the light of a lanthorn, which was not so clear but that we went out of our way twice, which we afterwards found out by the natural brightness of the serene air. Having travell'd twenty four miles in eight hours through an uneven country, we came to *Zangan*, a large town, but dirty, whose houses were ill built with mud, and in no order. But there are excellent gardens with variety of fruit and flowers, as also trees for fuel, planted by the industry of the natives (a rarity in that part of the country, where there is not a tree to be seen all about to shelter a man) and with that wood they give the fire some nobler matter to feed on, it being generally made of the dung of their beasts. What I most admir'd, is, that tho' there was such scarcity of trees, yet the gentry and country people all carry'd clubs in their hands, which they call *Afeu*.

We thought to have gone on that same day to *Sultania*, but considering the horses had the day before travell'd forty miles and better, and to save exposing our selves to the sun, we alter'd our minds, and stay'd in a coffee-house, where we rested all *Friday* the 25th, enjoying the fresh air all the while by the noise of a cold large spring which rises in the midst of it, preferring our stay here before the good caravanera at *Zingan*. The *Rattars* came to the coffee-house, but durst not demand anything. After supper we mounted, ten *Turks*, and two of the king's soldiers joining us. We travell'd without a lanthorn through a plain dry country, the sky being bright, and passing by the little

VOL. IV.

caravanera of *Difa*, at the end of nine miles, at break of day on *Saturday* the 26th, after travelling fifteen miles further we came to *Sultania*.

This city was formerly several times the court of the kings of *Persia*; and the great structures laid level with the ground, make it appear that it would still be one of the best cities in the kingdom, had it not been destroy'd by its own kings, and not by *Tamerlane*. There still remain the ruins of three *Mosques*, whose cupola's and towers were cover'd with tiles of several colours. One of them has the two front towers still standing, but without the tops, by reason of their extraordinary height.

Sultania is seated in a valley, whose greatest breadth from east to west is not above three leagues. Its compass is of many miles, because of the abundance of fields, gardens, and ruin'd houses there are in it. Some few poor houses still standing are ill contriv'd; the *Bazar* is only one long street, and the caravanera but very indifferent. The air is not wholesome by reason of the neighbouring marshes. It is govern'd by a *Cham*, to whom the adjacent parts are also subject. We should not have taken the way of *Sultania*, but another two miles from it on the left, where is the usual caravanera for the caravan of *Isfahan*. We came this way because the *Jus-Basfi* had some business. The *Rattars* came to us to play their part, and went first to *Malacky*, who to avoid paying feign'd himself a *Georgian*, and inquiring after me, told them I was a *Frank* that went to *Isfahan* to serve the king. Hearing this, and seeing us with the *Jus-Basfi*, a person in authority, they took our words. The same man sav'd me a toman, which is worth nineteen crowns of *Naples*; which was the sum a servant of the king's messenger demanded to pay all the *Rattars* their due.

That same day we set out two hours after night, having first fitted the *Jus-Basfi's* servants pistols, for fear of robbers. We travell'd all night through a plain country well cultivated, without meeting any suspicious person; but had there been occasion, we must have built a small fort to plant a falconet, one of the king's soldiers that was with us carry'd instead of a musket; for my part I could scarce lift it from the ground, nor can I imagine how he could fire it. After three leagues riding we pass'd by the caravanera of *Allab-buper*, and then by that of *Tahse*, and having travell'd

Hi

twenty

¹⁶⁹⁴ **General** twenty eight miles amidst mountains in ten hours, came on Sunday the 27th, to *Habar*. We should have pass'd through the village of *Xorandera*, but took this way for our conveniency.

Habar
city.

We found out this ancient city, as it were in a labyrinth of large and curious gardens, enclos'd with mud-walls and high poplar-trees. In the gardens there are good apples, pears, cherries, plumbs, grapes, and other sorts; as also the finest roses in the world; so that as the time of the year then was, a man could not desire a pleasanter place to pass his time, than amidst the cool and fragrant solitudes of this city. We lay in a small caravanera of a muddy structure, as is the fashion of that country, with very cool arch'd small rooms. Near to it was a large *Mosque* much decay'd, particularly the cloister, in which was a fish pond with good cool water.

As for the city, tho' ruin'd, it is of a vast compass, because of the gardens, which make all about them look more like a wood than a city.

We mounted again two hours after night, in the company of ten of the townsmen known to the *Jus-Bashi*. Having rode eighteen miles in five hours over barren plains, we pass'd by the village of *Parsein*, encompass'd with good gardens, and furnish'd with a convenient caravanera. Here we met a great man with a retinue of fifty men a horseback, and a *Giapor* that conducted him.

All the country about this place being fruitful, is well peopled, but from thence forward barren and untill'd. We met here a caravan of a thousand horses going from *Ardevil* to *Tauris*. Holding on our way still over a plain country; after riding twenty six miles in six hours, we set up before noon in the small caravanera, seated in the village of *Xeare*; the other great one without, being gone to ruin. Here we wish'd for the cool waters of *Zangan*, *Sultania*, and *Habar*, this place affording none but what was very bad and brackish. This village was once for the most part upon the hill, but many houses going to ruin, as being built with mud, several families are come down to live in the plain. The soil produces good wine and fruit.

Monday the 28th at sun-set, we continu'd our journey by moon-light, and riding eighteen miles in six hours through a barren uncultivated country, came to *Senava* where we rested till day. This village is on the plain, and has good houses and gardens, and a caravanera. It is famous for good nuts.

Tuesday the 29th, continuing our journey, we saw a sort of wild cattle feeding on the plain, which are very good meat, call'd by the *Perfians*, *Geiran*, or *Garellis*, which we have not in *Italy*. Their hair is like a buck, and they run like dogs without leaping; at night they feed on the plains in flocks, and in the morning return to the mountains. Having travell'd twelve miles further in four hours, we put into the village of *Karajanch*. Here we enjoy'd the cool air under tall maple-trees there are along the side of a brook. No village in *Persia* is without one, which is the cause of the continual greenness of the fields, and of the plenty of pleasant fruit-trees in their many delightful gardens. Thence we went to dine in certain houses built on purpose for the entertainment of travellers.

In the afternoon came the country *Rattars*, and entering my room, very much admir'd my buckskin-breeches for riding. Some of them said they were *Dutch* cloth, others that they were leather. *Malacky* being ask'd the question, to play upon them, said, I was a wrestler, because the wrestlers in *Persia* wear such. They answer'd, I was too lean for that sport, but *Malacky* knowing that their wrestlers exercise themselves daily in lifting and carrying great weights, answer'd, I was grown lean with too much exercise. The fellows said they would be glad to see it, and some of them would wrestle with me. Come in the morning, said *Malacky*, and you will see him do such things as will astonish you; but as for wrestling he will not be guilty of murdering any of you, for he would certainly throw you so that you would never rise. But he will go to *Ispahan* and do all the king shall order him. Thus we diverted the tedious hours of the day, playing upon their ignorance, and passing the time till the *Jus-Bashi's* servants had dress'd a lamb for supper. At last the *Rattars* taking *Malacky* for a *Georgian*, and me for the king's wrestler, went away without any money; for near *Ispahan* they are not so insolent, and dare not abuse a *Frank*; especially if they believe he is going to serve the king.

Mounting again in the evening on *Tuesday* the 29th, we proceeded on our journey, and riding near twenty miles in six hours, came to the caravanera of *Rebe-ginp*. This caravanera is large and well built, with a lofty arch at the entrance, and four towers on the angles, tho' seated in a desert plain, without any village near it. Then travelling twelve miles further

Cheep travelling in Persia.

Messen-gers.

The Jus-Bashi.

ther in four hours, we rested at such another caravanfara call'd *Koschkeria*. Then going on as many miles more on *Wednesday* 30th, we came to the caravanfara and village of *Dongb*, where the two aforementioned roads to *Spaban* meet: Three miles from this is another good caravanfara, for those that come from *Ardevil* and *Cashin*. That of *Dongb* is singular for structure; for whereas all the rest have rooms about the court with arches before them to sleep in summer, and places behind for the horses, this on the contrary is only a continued row of open arches, the founder being resolv'd that travellers should lie cool there all weathers. The structure is of good brick, and all the front is a large inscription, containing as I was told, the founder's name and peculiar virtues. At a small distance is a good fountain of cool water.

Cheap travelling in Persia.

Before we proceed any further it is proper to observe, that it is very cheap travelling through all the dominions of *Persia*. For in the first place, whether a man buys or hires a horse the rate is very easy, and provisions are sold for a small matter, by reason the *Persians* are sparing and temperate; living a whole day upon a little cheese, or four milk, in which they dip the country bread, which is as thin as a wafer, insipid, and of the colour of a pumice-stone. At noon and night they add to it a little rice, or *pilao*, sometimes boil'd in fair water. I was not able to hold out with that fare, and sometimes made provision of eggs and lamb in the villages we pass'd through; treating the *Jus-Baschi*, as I did my self also with good wine and brandy. Only wood is dear there, and therefore instead of it they make use of dung. About *Dongb* I took notice of the folly of the natives, who tho' they have excellent grapes, do not know how to preserve the wine, but put the must under ground into cisterns daub'd with lime.

Messengers.

That very morning we met an express a-foot coming from *Spaban*. He had six horse-bells hanging about his girdle, just like the mules of our messengers. This they do both to be known, and to cheer them to walk. Those that serve princes may have to the number of twelve, and others according to their quality.

The Jus-Baschi.

To return to our *Jus-Baschi*, his behaviour was rather like a courtier than courteous; for if he eat or drank, he said it was for my sake; and I would have been glad he had been more sparing of his favours. He also represented it as a great piece of respect and civility that he did

not buy a horse, knowing I was about ^{GEMELLI 1694.} him.

That same *Wednesday* about evening we set forward, without fearing the change of weather and rain, as we did at *Tauris*. Having rode twelve miles in four hours (I measur'd the way after this manner, because the *Persian* differ from the *Turkish* leagues, and are not always alike) we pass'd by a caravanfara; and ten miles further gone in four hours, we came to the city *Sava*, where we lodg'd in a caravanfara made of mud.

The city *Sava* is seated in a fruitful ^{Sava city.} plain, with abundance of villages about it; and looks handsome, tho' many of the houses are of mud. The walls which are four miles in compass, are fallen down in several places, only wash'd away by the rains; which has been the fate of the fort standing on the top of a hill. There would be good *Mosques* were they not ruin'd with age. The principal trade of this city consists in certain small long furs, which not only the *Persians*, but all the christians of the east use for lining their garments and caps.

Leaving the city *Sava* on *Thursday* the 1st of *July*, five miles from it, we saw on a high ground another ruin'd fort, in which was a good cistern, because all about there, tho' they have good brooks, they use rain-water, and seven miles beyond that we cross'd a river. We found the country well cultivated, and abundance of villages for above three leagues; and after twenty miles riding came to the caravanfara of *Giavar-Abad*; the largest and best in *Persia*, were not a great part of it fallen down, and out of use. Therefore they have built two others near a good spring, where almost all travellers lodge, and we stay'd after six hours riding.

The *Jus-Baschi*, whose name was *Melich-Sader-Beg*, had invited me and *Malachy* to a village of his an hours riding from *Sava*; and we not to displease him, had promis'd to go dine there one day. Being to go that same day, we understood he was gone to the bath, and therefore we thought fit to proceed on our journey, charging his servants to make our excuse for us; and the more because perhaps he would have stay'd long in his village to gather money, whereof he stood in need. This village was given him by the king for his life, ^{Pay of a Jus-Baschi.} besides fifty *Tomans* a year, the common pay of the *Jus-Baschi's*, which amounts to 950 crowns of our money, it being usual, over and above this, to give all those

^{1694.} *GENELLI* those that have deserv'd well, and are in favour, a village, which is worth to them 1000, or 2000 crowns a year. This the king particularly practises with the *Georgians*, to remove them far from their country, that they may not think of revolting. But before he gives them any employment, he causes them to be circumcis'd either by fair means or by foul; knowing that tho' they be not themselves, yet their children will be absolute *Mabometans*. The same misfortune had happened to our *Jus-Bafci*, once *Cham* of the province of *Gori* in *Georgia*, who, blinded with interest, renounc'd christianity; which his mother and sisters would not do, tho' carry'd for that purpose to *Ispahan*. Yet discouraging together several times he told me, he was not well pleas'd with the king; and that if he did not make good to him 200000 crowns he had been a loser by his imprisonment, he would certainly go to *Rome*, and become a catholic; where, getting letters of recommendation from the pope, he would go into *Hungary* to serve the emperor against the *Turks*, he well knowing what to do on the *Black Sea*, and the country about it, and that his nephew was already gone away to *Venice* with ten thousand crowns. Six *Georgian* servants he had were no better *Mabometans* than he, having suffer'd themselves to be circumcis'd only to follow their master's fortune, never regarding to pray after the *Mabometan* fashion, and cursing that false prophet.

Night coming on, we set forward thorough a barren country like that we had travers'd before, and riding nine miles in three hours, saw the mountain of *Giavar-Abad*, of which they say *Ider-cait-mas*, that is, he that goes to it returns not; it being an old receiv'd opinion among the *Persians*, that many who have attempted to go up it never came back; nor have they any probable reason to give for it. No man therefore dares go up for fear of death; but I who am not credulous of such stories, would certainly have gone had it not been night. Being but nine miles from the city *Kom*, we held on our way thither, but the moon setting, we stopp'd at a small distance from the city, expecting day to go into it. Accordingly on *Friday* the 2d of *July* in the morning, we found our selves in a fruitful plain about two miles in compass, and then crossing a small river on a bridge of ten arches newly built, went to rest us all that day in a caravanfera.

Kom city. *Kom* is seated in 83 degrees of lon-

gitude, and 35 of latitude, and is about ten miles in compass, but as well the walls as houses have been in great measure beaten down by the rains. Neither are the squares beautiful, nor the *Bazars* and shops rich, there being scarce any thing but provisions. But there are several *Mosques* that might be call'd beautiful, were they not let run to ruin, the natives not regarding to repair old buildings out of the vanity of erecting new ones; and they told me that any man who was well to pass would think himself miserable, should he die without founding some *Mosque*. The caravanferas are convenient, and some of them have a floor up stairs. The fruitfulness of the soil plentifully supplies the city with grain, and all sorts of fruit. Here is good *Turkey* leather of all colours made, for the *Pa-puces* or shoes.

That same day, taking a guide along with me, I went to see a *Mosque* held by the *Persians*, in equal esteem with that of *Ardevol*, because in it are the tombs of *Scia-Sefi*, and *Scia-Abas* the second, kings of *Persia*; as also that of *Sidi-Fatima*, the daughter of *Iman-Hacen*, who was the daughter of *Hali*, and of *Fatima-Zubra*, the daughter of *Mabomet*. The great gate of it opens to a long square (with shops on both sides, and a caravanfera next the river) over which is an inscription in gold letters containing the praises of *Scia-Abas* the second. This leads into a longish court, looking more like a garden, because of the many pine-trees there are along the way, and this way is also enclos'd with two low walls, to secure the roses, and other flowers in the middle. On the right hand, coming into this court, there are small rooms, where the poor eat their allowance of rice, flesh, and bread daily given them for the alms of the *Mosque*, according to the intention of the founder. There are other rooms for debtors who are not able to pay, to retire to, who are also maintain'd by the *Mosque*; to the great loss of the creditors, who can expect no honest composition from those that live free-cost, without any care. The first court leads to the second, which is bigger and longish, like the other, with trees about it, and lodgings for the inferior servants of the *Mosque*. At the end of this is a gate into a third square court, about which are the dwellings of the *Mullabs* or priests, and in the middle a curious fountain of spring-water. Ascending twelve steps made of brick, at the foot of a curious front, adorn'd with several colours, is the entrance

trance into the fourth court, in which there are also some lodgings, and the temple or *Mosque*, which is beautiful to behold on the outside. Of three gates that appear in the front, that in the middle leads to the *Mosque*; that on the right to the aforementioned tombs; and that on the left to a hall, where the alms are given out to the poor; with this difference, that the threshold of the middlemost is cover'd with silver plates. Being come to this place, the *Mullabs*, who were within reading in certain great books, as soon as they saw me, stood up, and made signs to me to come in, and one of them very civilly led me all about; contrary to what *Tavernier* says, That christians are not permitted to go into those places. I found the *Mosque* was an octagon, with eight little doors; in the midst was the tomb of *Sidi-Fatima*, grand-daughter to *Mahomet*, made so disproportionably big to the smallness of the *Mosque*, that there was scarce room enough to pass between it and the wall.

Fatima's
tomb.

This tomb is square, cover'd with a rich pall of silk and gold, and round silver bars about it, sixteen spans long, placed like lattices, with knobs of the same metal, where they cross one another; and many silver and gold lamps hanging about. From the pavement of the *Mosque*, up to the top of the columns, that support the cupola, there is curious workmanship in the tiles, of

several colours; and the cupola and arches are set off with *Arabick* fancies drawn in gold and azure. On the right hand coming in, is a large room cover'd with good carpets (as is the *Mosque*) where the alms are given to the poor, who stand in the room adjoining, to avoid confusion.

Going up three steps still on the right of the *Mosque*, and passing through two doors, I came into a stately hall cover'd with carpets, and thence through another door to the tomb of *Scia-Sefi*. It is like an altar four spans above the ground, and cover'd with cloth of gold. The room is arch'd with four doors on the sides, one of which is shut, and answers to the tomb of *Sidi-Fatima*; another leads to a little cloister, and the fourth to the tomb of *Scia-Abas*, the second. This tomb is cover'd with a red silk; the place is round, with small niches in the walls for ornament, and good carpets on the ground (as in the other) and about it great books for the *Mullabs* to read. The walls are all garnish'd with gold and blew, and tiles of several colours handsomely plac'd after the fashion of the country. Returning thence I saw another good *Mosque* near this.

That of
Scia-Abas.

The *Rattars* of *Kom* are not so rude as in other parts, for they took nothing of me. In this city there is a mint, but they did not coin when I was there.

CHAP. IV.

The Author continues his Journey to Ispahan.

WE departed the city with the sound of drums and trumpets that were heard from the *Meidan*, or market, or square, that same day, being the 2d of *July*, about sun-setting, to continue our journey. After riding twelve miles in four hours, we came to the large village of *Kassum-Abad*, and rested in one of the five caravanfara's there are in that place.

Saturday the 3d, we set out with the day on a sandy way, and very barren, which lasted six hours, and fifteen miles to the caravanfara of *Abcirim*, that is, fresh water; because there is a cistern for the use of all the caravanfara's, there being never a drop of water for five leagues about; so that by the way we found a dog dying for thirst, occasion'd by a hot wind that blows there, and almost takes away ones breath.

VOL. IV.

We set out again towards evening that same day, and at five miles distance pass'd by the little village of *Sinsin*, and eight further by that of *Nasfar-Abad*, quite destroy'd; but shewing the ruins of good buildings, where we rested a while in the open air, till *Sunday* the 4th, at break of day: When, departing thence, we came two hours before night to the city *Casfian*, after riding twenty miles in eight hours. The soil for only three miles about the city was fit for tillage.

The city *Casfian* is govern'd by a *Casfian Cham*, like *Kom*, and is but little or nothing less in compass. Its length is three miles, and the buildings not so much ruin'd as in the other. The *Bazar's* are light, and well contriv'd, in comparison of the others, which are every where dark, and ill order'd. Two

11 of

GEMELLI of them particularly deserve to be seen, where among other trades are the braziers, who make all necessities of brass and copper. The streets are also very good, and so the caravanera's, which are large, and well built with two apartments. We saw a stately one on the right hand, without the gate we went in at, with two great courts, in one of which was a cistern of water, whither the merchants in summer carry their beds to lie cool. Both above and below, all about the doors of the rooms there is curious workmanship of bricks of several colour. Those caravanera's within the city, are not built for the good of the souls of the departed, but for private interest, every body paying four abassis a month, or four casbis a night. The principal trade of this city is wrought-silks, on which account an infinite number of merchants resort to it from *India*, and other parts of *Asia*. *Malacby* shew'd me three ells and a half of *Taffeta* two spans and a quarter wide, which he bought for two abassis, which is about eight carlines of *Naples*, about three shillings six pence *English*.

King's
house and
gardens.

I went to see the king's house and gardens near the road we came. A brook runs through, and divides one of these gardens; and along it there are orderly rows of pines, and other trees of several sorts, whose variety is pleasing to the eye. About the garden there are also two ranks of cypress and pine-trees, making a delightful shade with their never-fading green. The other garden nearer the city has also abundance of water, and the trees planted in the same order, by which it appears how much the *Perfians* exceed the *Turks* in ingenuity. The king's house (which like all the rest, is a sanctuary for malefactors) has an indifferent front of tiles of several colours, according to the fashion of the country, and good lodgings within. Before this house was a troop of horse, curious to behold, for the variety of fashions the soldiers wore on their heads; for some had turbants, others plain caps, others plumes of several sorts, and others had a perfect cylinder in the middle of the same cloth of the cap. Drawing near to observe the characters, that were over the gate, one of those soldiers being angry that I had not made obeisance to it, according to their custom, made me do it on my knees, with my forehead on the stone of the threshold, as to a royal and sacred place.

To return to the city, tho' it has a

double wall about it, yet that is so ruin'd, that there is no need to go about to the gates. The best of them was that we enter'd at, which is handsome without, and has a passage through high arches to the *Bazzars*, some of which have particular doors to shut at night, when the noisy signal is made with fics and kettle-drums from the *Meidan*.

That same *Sunday* we proceeded on our journey, and going out of *Casfian*, I perceiv'd the soil was nothing better, than what we had travell'd over from *Kom* thither. Among other mischiefs, there blew such a hot wind, that it oblig'd me now and then to lay a wet handkerchief upon my bare skin. After riding twelve miles in four hours, we came into valleys, and then ascending, rested some time in the caravanera of *Giaur-Abad*, well enough built in those solitary mountains. Six miles thence we came to the pools made by *Scia-Abas*, the second, king of *Persia*, the better to supply *Casfian* with water in summer, in case the rivulet that runs thorough it should not suffice, and yet it is not very small. They say he had them made, because finding once the city deserted by the inhabitants for want of water, he promis'd to remedy that evil, and soon after caus'd a wall above a hundred paces in length, thirty in thickness, and fifty in height, to be built between two mountains, to keep in the rain-water in winter; and afterwards distribute it as need requir'd, through seven sluices there are in it. They shew a house close by, whither they say the king went to forward the work.

Monday the 5th, riding six miles by break of day, we rested a while at the village of *Cone*, seated amidst the mountains, which have not a foot of fruitful land. But the valley in the midst of them makes amends, with the plenty and goodness of all sorts of fruit growing in its gardens (which are wall'd in with stone) caus'd by the plenty of water, tho' they do not ripen so soon. The nuts are excellent, and there is such plenty of them, that they supply several places. Other provisions are dear. There are two caravanera's, the one a good stone-building, the other of mud.

The moon rising, we mounted again, leaving behind us the barren mountains at the *Caravanera* of *Agaka-mala*, which is well built. The country, tho' plain, was as barren as the mountains, and therefore tho' near *Ispahan*, there is no village to be seen for thirty miles.

Tuesday the 6th, we set up betimes in the little caravanera of *Agaka-mala*, a good structure,

structure, which is twelve miles from the great one of that name, and nine from *Cone*; but the miles are so long they might be counted thirty of bad way.

A road of
salt.

In the darkest of the night we met a company of *Armenian* merchants, travelling to the province of *Gbilan*, and *Malacby* told me that there is no going thither from *Casbian*, without riding twelve hours along a road of pure salt, on which it is very hard to find some little water in cisterns.

Being eager to see *Ispahan*, we set out betimes the next day, and riding fifteen miles in five hours, saw the ruin'd village of *Micanor*; then advancing twelve miles in four hours we pass'd by the poor caravanfera of *Aganuri*; and still continuing our journey with horses much tir'd by the dry barren ground, on *Wednesday* the 7th, about break of day we rested at the little village of *Gafsi*; where there is a very large caravanfera, built by the king. From this place to the city, the country is fruitful, producing all sorts of grain and fruit, for which reason it is very full of villages and houses of pleasure. Setting out after noon we travell'd nine miles, and four hours after entred the

city, which at a distance look'd more like a wood than any thing else; this 7th day of *July* being just a year since I set out from *Redicina*.

I was a long time considering with myself, where I should lodge, having my choice of the *Carmelites*, the *Jesuits*, and *French Capucins*; and at last resolv'd to take up with the *Portuguese* fathers of *S. Augustin's*, as well to learn their language, which is much us'd in *India* and *Cbina*; as because theirs being the first nation that settled in those parts, they are much esteem'd by the king. They receiv'd me with extraordinary civility, giving me the best apartment they had in two arch'd dormitories that compose their dwelling. These arches are curiously painted with blew, and gilt after the country fashion, and look into a fine garden artificially divided into squares for several sorts of fruits and flowers.

The church tho' small is beautiful, as are the sacristy and refectory, the structure being very good. The fathers liv'd well enough, having the best meat the place afforded, dress'd by a *Portuguese* cook; and being serv'd in other affairs by twelve men, three blacks, two *Arabs*, three *Armenians*, and four *Indians*.

CHAP. V.

The Description of Ispahan, and the most remarkable Things in it.

Ispahan
city.

Ispahan, *Spaban*, or *Spabon* in the *Persian* tongue, is seated in 90 degrees of longitude, and 32 and 40 minutes of latitude, in the province of *Hierac*, formerly a part of the ancient kingdom of the *Parthians*. Its a large and fertile plain, is enclos'd on three sides, like an *Amphitheatre*, by a ridge of mountains, ten or twelve miles distant from it. It is believ'd to be built on the ruins of the ancient *Hecatompolis*; but it plainly appears to have proceeded from the union of two small villages, the one call'd *Hay-deri-dey-deri*, the other *Guybare-Hamet-Ilay*; for which reason to this day there are these two contending factions of *Hay-deri*, and *Hamet-Ilay*, and their disputes sometimes end in blows.

Tom. 5. l.
4. p. 434.

Yet the *Persians* say it was formerly call'd *Sipaban*, but that *Tamerlane* afterwards subduing those countries, transposing the two first letters, call'd it *Ispahan*. Their modern authors still write it *Ispahan* sometimes. Whilst the kings of *Persia* kept their court at *Casbin*, and *Sultania*, *Ispahan* was no better than a village; but the kingdoms of *Lar* and

Ormus being afterwards united to the crown, *Scia-Abas* remov'd his seat thither for the conveniency of its situation, being invited by the fruitfulness of the soil, water'd by so many trenches drawn from the river *Sanderu*, and supplying most of the houses in the city:

The compass of the mud-walls of *Ispahan* is in all about twelve miles, with small towers, and a ditch full of water, but shallow, near which there are rows of trees to take the cool air. I was curious to walk round it, but in several places the way was interrupted by garden walls, joining to those of the city, or by some publick structures. Nevertheless if we include *Zulfa* and the other suburbs, with all the fields and gardens within them, the compass will be little less than thirty miles.

On the south-side at six miles distance is another mountain, on which may be seen the ruins of a castle, where they say *Darius* stood to see the second battle *Alexander* fought with the *Persians*.

Ispahan has ten gates, call'd *Der-Toczi*, *Der-Dext*, *Der-Abassi*, *Der-Lombun*, *Der-Daulet*,

Der-Guibare; which are small, ill made,

and cover'd with iron. The keys are kept by particular officers; but the walls being down in several places, there is free entrance by night on all sides.

Streets.

The streets are narrow, crooked, and uneven, and many of them dark by reason of the arches that cover the *Bazars*, and serve to walk dry in rainy weather from one house to another. Did not the wholesomeness of the air make amends for the negligence of the people, the dirt of the streets would breed many distempers. At certain distances there are sinks shut in summer and open in winter, to give passage to the water into the shores under ground; besides there is a trench before every house to throw out their filth, which the gardeners take away to manure the ground. Another great inconvenience is the dust in summer and dirt in winter, there being no pav'd streets throughout all *Persia*; and tho' there be persons appointed to water them three times a day, yet they only do it in the *Meidan*, and other places where rich merchants live, who are able to pay them. The same is done with the cold water others carry in skins, within sacks full of ice, to give gratis to any that will have it, they being paid out of the revenues left for that charitable purpose, by *Persians* deceased.

Add to this the filthy custom of casting out dead beasts into the publick places, as also the blood of those the butchers kill, and that the *Persians* ease themselves wheresoever they have occasion. So that I cannot imagine what reason one of our *Italian* writers had to compare *Ispahan* to the neat and beautiful city of *Palermo*, whereas the former is so far from having any street like the *Cassaro* in the latter, that the meanest house in *Palermo* far exceeds the best in *Ispahan*, which, excepting some few belonging to the king and great lords, are all of mud walls, with only some bricks dry'd in the sun intermixt at every four spans. The higher they rise, the narrower they grow, else they could not bear their own weight; and because these walls easily moulder away, they only stop the gap with a little mortar, and they are terrass'd at the top. Tho' the structure is so bad, yet it costs much money; every dauber that makes the walls being allow'd eight carlines, that is, three shillings and six pence; and the labourers about three carlines, near eighteen pence.

The general form of the houses, is Houses to have a portico in the middle with a fountain, or cistern of water. On three of the sides there are windows at the top to receive sufficient light, underneath small arches to take the cool air, and rows of rooms with lattices curiously painted at the windows. Further in there is generally a great room, where there are quilts and pillows stuff'd with cotton to sleep on. The ground is all cover'd with good carpets suitable to the quality of the owner. The palaces of great men seldom exceed two floors, and on the four sides of the portico have two arch'd rooms to each, all adorn'd with *Arabian* painting of several colours. In some rooms built for the women, there are commonly lattices of wood well painted, or of marble cut through with glass in the holes. The roof, as I said before, is after the *Neapolitan* fashion, and in summer they lie upon it because of the great heat. It is made of earth mix'd with lime and bruis'd straw, and with bricks burnt with fire, and they are very careful in winter not to let the snow lie long upon it, for fear of pressing it down.

The *Persians* put their best furniture in those rooms, where they receive visits, in all the rest there is nothing of value. The floor being cover'd with carpets, they lie on it, being satisfy'd with a quilt under and blanket over them.

Ispahan is so populous both on account of the wholesomeness of the air, and the convenience of trade, that they call it half the world; and not without reason, as well for the diversity of tongues spoke there, as for the prodigious wealth of its *Bazars*, and shops of all sorts of commodities.

The father prior of the monastery where I resided, understanding that my horse was quite spent, on Tuesday the 8th, order'd the best in the stable to be saddled for me to make use of. Mounting him I went out attended by his servants to take a turn in the city. The first thing I saw was the tower the *Persians* call *Monar-Kale*, built by *Scia-Abas* the great, covering it all with the bones of wild beasts he kill'd in only one days hunting. They say that the workman telling him there wanted but one head to compleat the work, he caus'd his to be set in the place. It is about eighty spans high, and not above forty in compass.

Thence I went to see the *Dutch* companies house, where I found *James* their agent shooting turtle-doves in the garden, which was delici-

ous for its fountains and curious rows of trees. After we had drank merrily he shew'd me a dozen horses and mares, the finest any monarch in the world can be master of, as well for mettle, as the curious spots of several colours, not inferior to the finest figure, nor could a painter colour them to more perfection. Thence he led me to see his little house of sport, where he had ten hawks fit for all sorts of birds, and beasts, with servants to look to them; a custom they have learnt from the *Persians*, whose greatest delight this is. He had several pipes of gold and silver set with jewels for those to smoke in that came to bear him company, by his fish-pond. In short, he liv'd great in all respects.

Friday the 9th, the father prior of the barefoot *Carmelites*, the father provincial of the *Dominicans* and other *Franks*, gave me the favour of a visit, the provincial inviting me to a consecration that was to be two days after.

Saturday the 10th, I rode several hours about the best streets and *Bazars*, seeing vast wealthy shops of all sorts of commodities. *Sunday* the 11th, I went to *Zulfa* with the father prior and three *Portuguese* religious men; and alighted at the monastery of the *Dominicans*, where the ceremony was perform'd by the archbishop of *Abraner*, an *Armenian* of the same order. Here twenty four of us din'd, among whom was the pope's ambassador, monsignor *Pidic*, consecrated archbishop of *Babylon*, who was to depart for his residence at *Hamedan*; father *Elias* a *Carmelite*, archbishop elect of *Ispahan*, another *Sciran* catholic archbishop, the ambassador of *Poland*, the father rector of the *Jesuits*, and other religious and lay men. There was merry drinking the excellent wines of *Sciras* and *Ispahan*, during the dinner of most exquisite varieties; the pope's and the *Polish* ambassadors, and the archbishop of *Ispahan* doing me the honour to drink my health first. Not to trouble the guests, it was left to the last to drink the pope's health standing, as all did, every man holding a great nosegay in his hand, which went about.

Both going and coming, we pass'd through noble *Bazars*, and through the street of *Sciarbach*, so call'd, because both sides of it are shut in by four gardens of the kings, and in the *Persian* tongue, *Sciar* is four, and *Bach* a garden or orchard. It begins at a delicate pleasure-house with galleries curiously painted, which have a communication with the royal palace, and this

VOL. IV.

way the king comes out when he goes to *Zulfa* to divert himself, or to other gardens. It runs a mile in length to the bridge, and is a musket-shot in breadth. The water runs along the middle of it in an handsome canal of stone, making four great pools in this length. On the sides there are two orderly rows of *Cinar*-trees, which are like the plane, within the walls, and two without, under which there are two pay'd paths, each of them four foot wide, and as high above the rest of the way, for people to walk in the shade free from the horses. Hither the *Persians* come in throngs to divert themselves; smoking, or eating fruit at several shops, neatly built along it. Short of the bridge this way is cut by a branch of the river of *Sanderic*, which runs parallel to another, made after the same manner. To go to *Zulfa*, the bridge over the same river *Sanderic* or *Ruicuria*, must be pass'd. It consists of thirty five arches in length, and as many across; in the intervals whereof the natives stand and smoke, and take the air. Above there are two walls sixteen spans high, and as long as the bridge, leaving a convenient space in the middle, and as much towards the walls as several persons may go abreast, all along adorn'd with arches and niches, at due distances.

Beyond this bridge is the other street or way like this, above two miles long. At one end on the left is a pleasure-house, call'd *Teckci-Seis*, built by king *Scia-Sofi*, for a *Darvis* his favourite. Fifty paces further there are two more, though not so large, yet equally beautiful. Then two other fine structures with balconies above, to have the view of a curious fish-pond in the middle of it. Here the ground rising, to hold on the same way, there are two streets to ascend, between which is a structure, to keep the ground even. On both sides at convenient distances there are little houses of pleasure, with curious fronts, through which there is a passage to several of the king's gardens adorn'd with trees of all sorts.

After enjoying such a curious prospect upon so long and noble a way, we came to the king's great garden call'd *Azar-gerib*, three miles in length, and one in breadth. The first that occurs is a stately front with double rows of balconies next the way, and excellently painted next the garden, like the house, with figures after the *European* manner, in gold and blue. At the four angles are four fine towers, as well for

Kk ornament,

GEMELLI

1694.

GEMELLI

1694.

ornament, as to serve for dovescotes. In the middle is a canal of water, which rebounds pleasantly as it runs over the well-wrought stones; and in other places, the ground being uneven, has delightful falls, which like glasses, reflect the green of the *Cinar*-trees growing along it. Further on opposite to the gate, is a great pool of water, with two galleries on the sides painted after the *Moorish* fashion, where the king uses to stand to take the air. Going still forwards there is a little house in the midst of the canal, under which is a mighty vault to contain water; besides that which, for the diversion of the royal family, is cover'd with a roof delicately painted, and supported by wooden pillars. About the house, there are balconies to enjoy the pleasure of the canal, on all sides. Further on the rising ground, there are two other little pretty houses painted like the rest, for the women of the *Aram* to take their pleasure, who have also a little boat to pass their time on the pool there; and there is another house for them at the end of the canal and garden. On the sides there are other canals for those whose business it is to water the plants, and walks. In short, this garden, what for extent, and what for the beauty of its trees, and variety of fruit and flowers, may compare with the best in *Italy*.

The park. In our return we saw the park, where there were little above twenty tigers, lions, and other wild beasts. Here we also saw three *Pars*, which are small creatures about the bigness of a cat, with which they use to hunt deer, and other game, loosing these creatures after them, when the hawks having fastened on their heads, hinder their flight with their wings.

We met the general of the horse, called *Saperfelar* (we stood till he was pass'd) with fifty soldiers before him, beautifully clad, having plumes of feathers of several colours on their heads. He was about fifty years of age, well-countenanced, and wore great whiskers.

A wonderful shower.

Sunday the 11th, the prior of *St. Augustin* shew'd me, a bit of a root about as big as a fitch, like liquorice, whereof a great quantity fell the year before from the sky, in the village of *Ciafe* in the province of *Meirva*. The matter was thus: There was so great a scarcity in that province, and particularly in the aforesaid village, by reason of the bad harvest that year, that several people every day dy'd for mere hunger. An honest woman one day went out with

abundance of people into the fields, and with many tears, implor'd the divine mercy, that all might not die so miserably. God, who never fails us in distress, heard her prayer, and caus'd this root, like a heavenly manna to shower down from the sky, for three miles about, during a night and a day, and such vast plenty of it, that it was three spans thick on the ground. Gathering it, they made bread, of which the king and many great men at court, tasted; and thus the famish'd multitude was reliev'd. I should never have believ'd it (nor do I think the reader will be easily convinc'd) had it not been attested to me, by all the religious of *St. Augustin*, father *Elias* of *Mons*, a barefoot *Carmelite*, and bishop of *Isfahan*, with all the fathers of his order, the *Armenian* bishop of *Nack-civan*, the ambassador of *Poland*, the father rector of the *Jesuits*, all the *French* that were in the king's service, and all the *Persian* persons of quality I spoke with. I sent a bit of it to my friend the councillor *Amato Dario* at *Naples*, for him to shew it to curious persons.

Monday the 12th, began the persecution an expulsion of the barefoot *Carmelite* fathers of *Zulfa*, the *Divan* Beg, or government of *Isfahan*, going thither in person to carry the king's order: the reader I suppose will not be displeas'd with the relation. Those fathers having of late years settled a little house at *Zulfa*, they thought of enlarging it, and building a good church. To this purpose they bought the house of an *Armenian* for fifty tomans, given them in alms by a catholic, but through neglect they omitted to register the purchase in the king's books, according to the custom of *Persia*. The heretick *Armenians*, being set upon obstructing the work already begun, made a great clamour, pleading the king's order, which prohibits the exercise of any religion in *Zulfa* but the *Armenian*; the fathers on the other side, thought they ought not to give over their work; having the king's leave to build in any part of his kingdom whatsoever. From words it came to actions; for two thousand *Armenians* assembling, went to break open the *Carmelites* gate, and they had doubtless committed some outrage, had not the ambassador of *Poland* sent his people to keep them off. The catholics of *Isfahan* had several meetings to put a stop to this growing evil, but could make nothing of it, because the *Armenians* were rich; and one *Stephen Vert-abiet*, or preacher, having gather'd 3000 tomans, that

that is 57000 crowns of Naples, had presented the queen mother, and the king's favourites, and by that means obtain'd the order he desir'd. The first thing the *Divan Beg*, who put it in execution, did, was to ask father *Elias*, whether he had any instrument, or deed to shew for the sale. The father could shew none, because it was not in due form; and on the other side the seller, being threatened by the hereticks, said he had not fold it, but that being indebted fifty toman to the monastery, father *Elias* had taken it from him by force. He deny'd, alledging he had bought it legally, with the consent of the seller; but the *Divan Beg* interrupting him, said, *What, do you take the king's subjects houses away by force, without any deeds to shew?* At the same time order'd all the works to be demolish'd, and shutting up the monastery, seal'd the gates. Father *Elias* asking, *Whether that was the usage they gave the king's guests in Persia?* The other answer'd, *That therefore it was they did not proceed to punish them more severely.* The *Divan* returning to the city, sent twelve of his men to command father *Elias* and his three companions in the king's name, immediately to depart *Zulfa*; and not presume to set foot there again, upon penalty of 100 toman. The good fathers set out amidst that rabble, that was to conduct them by order of the governor of *Isfahan*; but by the way they met two fathers of *St. Augustin* (sent to meet them out of civility by father *Gaspar dos Reys*, prior of the monastery where I lay) who mounted them on their horses. Being come before the *Divan*, they with much difficulty obtain'd leave to remain in the *Polish* ambassador's house. The mutiny had been great at *Zulfa*, and no less the joy of the hereticks, who with extraordinary insolence, threaten'd to expel the *Jesuits* and *Dominicans*; relying on the protection of *Aga-Camal* (a black eunuch, the king's favourite) the queen-mother, and several great men, for which reason the aforesaid ambassador thought fit to send his retinue, to guard the *Jesuits* house. There being reason to fear that all the catholick missionaries would be banish'd, the aforementioned father *Gaspar*, and other *Portuguese* fathers, who were in great esteem, went on Tuesday the 13th to *Zulfa*, to acquaint *Vert-abiet*, that if he intended to expel the other religious men, as he had done the *Carmites*, it would be look'd upon as an open declaration of his being an enemy to catholicks; and if so, the king of

Portugal, and other catholick princes ^{GESELL 1694.} would not fail to take their measures accordingly. Adding, that as a friend, he forewarn'd him, that this indiscreet zeal of his would be the cause of all the mischief that should befall the *Armenian* merchants in christendom. Tho' this *Vert-abiet* was a hot-headed old fellow, and answer'd at first that he valu'd not kings when the salvation of his flock lay at stake; yet the prior and his vicar, who was excellently skill'd in the oriental languages, manag'd it so discreetly, that they prevail'd with him, before their faces, to teat the *Rogam* or king's order for banishing all the catholick fathers; declaring he did it for their sakes.

It is not to be admir'd, that all these fathers having *Rogams* for their foundations, the *Armenians* should so easily obtain others contradictory to them; because the king liv'd in stupidity, being altogether govern'd by others. The life he led, can scarce be call'd life; for no sooner did he awake from the profound sleep, caus'd by the brisk wine of *Sciras* and other places in *Persia*, but he fell to drinking again, and when he could not hold the glass, his cup-bearer gave him three bumpers. Then being somewhat recover'd, he took three more with his own hand, till being again overcome with the fumes of wine, he lay down to sleep; and thus he spent his days between sleeping and a shadow of waking. He could not forbear drinking as he sat in council; and very often sleep overcoming him, the assembly broke up without doing any thing. Persons of credit told me, that *Scia-Abas* the great, having slain the king of the *Usbecks*, he made a dish of his skull set in gold; and that the king we now speak of, out of his barbarous and bloody inclination, using to drink out of it upon solemn occasions, it once happened he did so in the presence of that king's successor's ambassador. He ask'd him in jest, *whether he knew what that dish was made of?* and the other answering, *he did not*; he said, *This is your king's head.* The ambassador turning away, very discreetly answer'd, *No, king was happy amidst his misfortunes, in dying by the hand of so great a monarch; but to me he appears much more glorious at present, since I see his memory preserv'd by so mighty a king as your majesty.* This answer was so well taken, that for the future the ambassador was deny'd nothing he ask'd.

Whilst

GEMELLI 1694. *Whilst the Portuguese fathers labour'd with much christian charity about the affair of Zulfa, another no way contemptible accident happened on Wednesday the 14th. The king's order was notified to Coggia Marcara, a catholick Armenian, for him to pay 500 tomans. Some said this was because he had been concern'd in the last troubles, by assisting father Elias; others, and this was the most probable opinion, said it was, because having alter'd his religion, he had not embrac'd the Mahometan, as the laws of the realm direct. They said, that the Divan Beg being inform'd of it, had sent to ask the opinion of the Axond (who is the chief in religious matters, and judges of weddings, divorces, buying, selling, bartering, and other contracts, whether they are valid or not) and that he had declar'd he ought to be burnt alive. The king thinking this sentence too severe, chang'd it into a fine of 2000 tomans, but afterwards, at the request of Marcara's daughter, who was in the Aram, he came down to 550.*

Punishment of an Armenian convert.

The Armenians not satisfy'd with persecuting the catholicks, us'd their en-

deavours to do all the ill offices they could to the ambassador, who supported their cause. The Vizier had some months since given him his answer, that the king did not design to break the peace with the Turks, and the ambassador pressing to be dismiss'd by the king, these base Armenians represented him in such manner to the ministers of state, that on Thursday the 15th, they again sent him orders to be gone; adding, that since he was not satisfy'd to be dismiss'd by the prime minister, they would send an inferior person to do it; refusing at the same time to give him the allowance for three months since he was first dismiss'd, and a suitable attendance to go away, much less to pay the hire of his house, for the time to come.

Friday the 16th, as I was at dinner with the fathers, the ambassador came in, and sitting down among us, said, he would certainly be gone for Poland by the last day of August, whether he had the kings answer or not; since there was no likelihood of the Persians engaging in a war against the Turks; as his master desir'd.

CHAP. VI.

The Description of the Meidan and Royal Palace, and an Account of some Passages that happened.

The Meidan.

THE Meidan or square I went to see on Saturday the 17th, is the best structure in Spaban, built by king Scia-Abas; being made by the model of another, now ruin'd near the monastery, where I lay, where there liv'd a prince of the Persian race. It is a quarter of a mile in length from north to south, and about half that breadth from east to west. It may compare with, and perhaps exceed the best squares in Europe, in the uniformity and beauty of the arches, shops, windows of the second floor, and of all its other parts. There is this difference betwixt it and that of St. Mark at Venice, that the arches of the Meidan are shut up with walls and portico's at convenient distances, to give way to go in; whereas in Venice they are open. The front of this last is adorn'd with marble and statues, and the other with bricks. But on the other hand the Meidan is much larger than St. Mark's place.

The shops below serve for trade, and the rooms above to live in, being all arch'd. About it is a stone canal, which has not water at all times, or in all

places, and sometimes it stands in several parts of it and stinks. Of all the trees Scia-Abas caus'd to be brought thither, there are but few standing, and they have neglected to plant others in the place of those that decay'd.

The royal palace has two principal gates, one call'd *Ala-Capi*, the other *Daulet-Cuna*, near the Meidan on the west side of it. That of *Ala-Capi* leads into a long walk, where there are small rooms for the criminals that retire thither, as to a safe sanctuary. The king cannot refuse to hear their complaints, perhaps of wrongs done them by his ministers, because being there, they think themselves under the shelter of his mercy. At the end of this lane or way is a gate call'd *Hali*, on the threshold whereof is a round stone, held in great veneration by the Persians. Over it is a great square balcony with the roof nobly gilt and painted, and supported by twenty wooden pillars adorn'd after the same manner. About it hang several pictures of Europeans with dishes in their hands, to flatter the prince's humour. In the middle of it

is a delicate fountain, to which the water is convey'd with much labour and expence. This place is open on three sides, and on the fourth is the royal throne; because he uses to come thither to see all the publick rejoycings or sports in the great square. The most diverting is that of the arrow, the king causing a gold cup to be hung to a tree, which is given as a reward to him, who riding a full speed, when he is past the trees, turns about and shoots it down with an arrow.

The gate of *Daulet-Cuna*, that is, the gate of justice, which is most us'd, is guarded by several companies of foot, and troops of horse. Along before these two gates there are one hundred and ten pieces of cannon brought from *Ormuz*, when it was taken from the *Portuguese*; but they are all falconets, except nine middling pieces. Beyond this useless front of cannon is a portico, which leads to the back door of the palace, call'd *Der-mod-back*, or the gate of the kitchen, through which all provisions are brought in. Near it is the great treasurer's apartment, who was then a white eunuch, who has the keys of the great treasure, which is never touch'd but when the crown is in the utmost want, there being another apartment for the soldiers pay. Only the revenues of gardens, caravanferas, and other structures belonging to the king are put into the great treasury. And it is here to be observ'd, that taxes and impositions being forbidden by their false prophet, the *Mahometan* princes think the money rais'd by them wrongfully got, and therefore do not lay out a farthing of it for their table, but make use of the revenues of their gardens and houses. The great *Mogul* now reigning is so scrupulous in this point, that he will not maintain himself upon his revenue; but tho' he is above eighty years of age makes caps himself, and presents them to the *Chams*, who whether they will or no must pay twenty or thirty thousand crowns a piece for them. Opposite to this gate of *Der-mod-back* is a building enclos'd, where there are several forts of artificers, and particularly *Franks*, who work for the king. There are several other gates about it, and especially a private one, through which the king uses to go to the *Mosque* of *Masjit-Scia*.

On the north-side hangs, to no purpose, the bell belonging to the clock of *Ormuz*, given by the *Augustinians* to *Scia-Abas* the great. On the east is the *Mosque* of *Scieb-loft-alla*, consisting of only one cupola, cover'd with small tiles of several colours.

VOL. IV.

On the south is the king's *Mosque* call'd *Masjit-Scia*. It has a beautiful front of the same workmanship, with two towers on the sides, ending at the top like turbanets. The first gate leads into a court or cloister of an irregular sort of figure, whose arches are adorn'd with the same bricks or tiles. The second gate which is cover'd with plates of silver is the way into the *Mosque*, which is all over painted within after the *Arabian* manner and gilt, so that the arches seem to vie in beauty with the pavement, which is cover'd with the richest carpets the country affords.

In the middle of the square or market-place, from the tree of the arrow to this *Mosque*, they sell wood and coals; from the *Mosque* to the bell, old iron, horse-furnitures, carpets and other things, but all of them at second hand; thence to the *Mosque* of *Scieb-loft-alla*, they sell fowls, pigeons, meat ready drest. The rest of the square towards the palace is quite clear and without shops, because the king comes thither sometimes to see bulls and other wild beasts baited. But there are mountebanks and merry-andrews that repair thither to impose their nonsense upon the ignorant multitude, and divert them with their fopperies; and the peasants on *Friday*, which is their festival, come to sell their fruit, and the labour of the rest of the week. On the inside along the *Bazar* there are shops where they sell red leather, skins to carry water under the camels bellies, and other things made of leather. Hard by there are shops that sell bows and arrows, and others of drugs and spice. Then in the caravanferas there are in this great square, on the south-side, that is from the *Mosque* to the east angle, they sell saddles, bridles, and all horse-furniture; from the *Mosque* to the west angle, are book-sellers and book-binders. The west side, from the north angle to the palace, is taken up with people that sell glass baubles brought from *Nuremberg* and *Venice*. Between the two gates of *Agacapi* and *Daulet-Cuna*, there are wretched *Armenians* who make rings, and cut seals on common stones. From the palace to the south angle, all the arches serve for coffee-houses where they smoke; for besides the noble prospect which is like an amphitheatre, there is a great fountain of water in the middle, where the *Persians* fill the bottle they have to their pipes, that the smoke may come the cooler to their mouths. This place being very much frequented, the *Devices* repair to it morning and evening.

1694.
Caravan-
serai.

The Armenians have the shops in their little caravansera near the *Meidan*, not far from the famous caravansera founded by the mother of *Scia-Abas* the second. This has two floors, a great pond in the middle, and gates at the four angles, which formerly led to four other caravanseras, but at present there are only two.

It is to be observ'd that tho' people are not receiv'd gratis in these caravanseras, of royal foundation, yet they are preferable to the others for the security of the goods; for if any thing happens to be lost, the keeper of them is accountable for it; as also for all commodities trusted out and enter'd in his book, with the names of the buyers and sellers. On this account the sellers pay two in the hundred, and the keeper is oblig'd to recover the full price. Besides the *Meidan* is well guarded at night (as are all the other *Bazars*) by persons kept in pay for that purpose; for tho' the traders shops and chests be well lock'd, yet the things of small value and great bulk are left in the open market-place, cover'd with a tent.

From the angle form'd by the north and west sides there is a passage into a great *Bazar*, where they sell linnen and shoes. Thence is a way into a greater, where they sell all manner of braziers ware, and saws, and there live the dyers; at the end of it is an excellent caravansera where they sell musk and red leather.

On the north side there are scimitars, tongs, and other instruments of iron and brass, and before the gate several sorts of precious stones. Over these shops is a long gallery supported by pillars, where every night there is a displeasing concert of fifes, drums, and other instruments, as has been said of other cities; within it there are rooms for the chief of the musick. Opposite to it, in this place, there are two pillars seven spans high, and the same distance from one another, to play at mall a horse-back, which is done striking the ball a gallop to drive it between the two pillars.

The gate before mention'd leads to some arches where they sell rich cloth of gold and silver, silks, and *Indian* stuffs. The east side of the *Mosque* to the north angle, is taken up with shops of all sorts of small works in silk. From thence to the south angle there are turners, and people that beat cotten, and in the porticos there are smiths,

who make nails, horse-shoes and the like.

Going home I pass'd by the castle, ^{The castle,} which is near the house of the *French Capuchins*, and adjoining to the south wall of the town. It is two miles in compass; for within it there are *Bazars*, and the dwellings of the king's slaves, who are voluntary renegadoes, only for this honour, and their maintenance. It is twice as long as broad, and altogether defenceless; its scurvy towers being of earth, as is all the wall. Here the king keeps all the rarities he buys, or are sent him as presents by the governours of provinces and strangers.

Sunday the 18th, I went to hear mass at the church of the bare foot *Carmelites*, to repay the visit to *F. Elias*, bishop-elect of *Ispahan*. Monday the 19th, I went again to the *Meidan*, to see the *Divan-Begs Sciatter*, or foot-man run, in order to be admitted to serve the king. He had on a pair of short open breeches, as our foot-men wear, with three horse-bells hanging down from his waste. His thighs and legs were naked, and anointed with a sort of grease to prevent weariness; as formerly those that exercis'd in the *Gymnasia*, anointed themselves with oil. He run from the gate of *Ala-Capi*, to a stone on the mountain three miles from the city. He was to run it seven times without eating, but only drinking; every time taking up a little flag plac'd by the goal, and then, if found fit to be the king's *Sciatter*, he was admitted. The *Persian* nobility generally keep many of them for grandeur.

In the mean while, *Stephen* the *Vert-^{Difference between the Armenians.} abiet*, who was independent of the patriarch, with four other bishops, not ceasing to contrive against the remainder of the catholick missionaries at *Zulfa*; it pleas'd God that another *Vert-abiet*, whose name was *John*, rais'd a furious persecution against him. This man had been arch-bishop of *Zulfa*, but being depriv'd of his dignity by *Stephen*, he became a catholick; and retiring to *Ala-Capi*, with one of his religious men (relying on the protection of the former *Kalantar* of *Zulfa*, who was become a *Mabometan*) accus'd him of having books against *Mabomet*. His house being search'd, two books were found, one of them printed fifty years before in the *Armenian* language by another *Stephen* a *Vert-abiet*, containing many reproaches against the *Mabometan* religion. The matter being examin'd, and the book interpreted by a renegado *Armenian*, in the presence of the *Nabab*, and the *Seik-Iesson*, or *Axond*, two persons

fons transcribing it into the *Persian* tongue; *Stephen* was condemn'd to be burn'd alive; notwithstanding he urg'd before the court, that the book was compos'd by another *Stephen*, a *Polish Vert-abiet* at *Ismaiz-n*, and that the other manuscript was falsify'd by the informers. The king, who had no good opinion of those ecclesiastical judges, would not suffer the sentence to be executed; all the city being in expectation to see that criminal put to death. Knowing how rich the archbishop was, it was always my opinion, That by the help of his powerful friends he would save his life, which did not only prove true, but moreover instead of being punish'd, he receiv'd from the queen-mother, the *Calant*, or vest of honour; with orders to his accusers to return to *Zulfa*, under his jurisdiction, or to live with the *Franks*, if they were catholicks.

Tuesday the 20th, in the evening I saw

the nuptial ceremonies us'd in *Persia*, a ^{GEMIII} man and woman both slaves, that liv'd ³⁶⁹⁴ near our house being marry'd. When ^{a wed.} they had eaten their bellies full of pilauding, at the bridegroom's house, a great company of men and women, most of them with lighted candles in their hands, it being then night, went to receive the bride. Half an hour after, she was conducted between two women, cover'd with a white linnen cloth from head to foot, which made them look like ghosts. After them follow'd many other women, and then men, one of whom carry'd a great wax candle worth ten crowns. The bridegroom very unmannerly, went out but four steps from his house to meet the bride. This is the custom among the poor people; but among the better sort these ceremonies are perform'd a horseback in great state, and abundance of lights set up in the streets they are to pass through.

CHAP. VII.

The Funeral of Scia-Selemon, King of Persia; the Sacrifice of the Camel; the Original, Marriages, Funerals, Religion, and Habit of the Goris.

^{Sickness of the king of Persia, and his charity} **W** *Eduesday* the 21st, it was known abroad that the king was fallen sick, or rather grown worse of his continual apoplectick fits, occasion'd by too much wine. Being with good reason apprehensive of his life, on *Thursday* the 22d, he order'd 3700 tomans to be distributed among the poor; and orders to be sent to all the governors of provinces to release all the prisoners in the kingdom.

Friday the 23d, I din'd with the director of the *Dutch* company, who was extraordinary civil to me; and *Saturday* the 24th, I went out a shooting, and kill'd abundance of doves, whereof there are vast numbers about the country. *Sunday* the 25th, going to hear mass at the barefoot *Carmelites*, I was inform'd by father *Elias*, That the *Vert-abiet*, by his great power, had disappointed all the endeavours of the catholicks, for re-establishing their mission in *Zulfa*. *Monday* the 26th, having nothing to do, I went out to divert me with the prior, and other fathers of our house. *Tuesday* the 27th, the news was spread abroad that the king was in his agony. *Wednesday* the 28th, father *Elias* came to visit me, and to tell me, that there being no hopes of redress in their affair, they must have all that had happen'd authentically attest'd, in order to obtain letters of recom-

mendation from all the christian princes in *Europe*, to the court of *Persia*.

Thursday the 29th, the king's death was ^{The king} made publick about noon, the eunuchs ^{dies} and *Kilar-Agasi*, or chief of the slaves appearing with their garments rent, which is the mourning us'd among the *Persians*; upon which news the *Saper-Selar* ran so hastily to the palace, that his horse fall'd him, and he broke his leg. The body was remov'd the same day to the garden call'd *Baz-se-keel-Sultan*; where it was wash'd in a fountain by the *Casul-Baschi*. This man is the chief of the washers of the dead, who never exercises his office, but when the king dies, and has for his reward fifty tomans, and the cloaths, with all that is found upon the king, even to the carpet that covers him. After he was wash'd after the *Mabometan* fashion, he was laid in a room stretch'd out on a carpet, to be carry'd thence to *Kom*, to the tombs of his ancestors. The physician that attended him in his sickness, was apprehended to be put to death, or banish'd, according to the custom of the *Persian* court, to keep the *Mabometan* physicians in awe. But it was reported this man would be kept a prisoner for life. It was also reported, that as the king was breathing his last, being exhorted to make a good end by the *Axond*, who

GENELEE 1694. is the second judge in religious affairs; he sent to the *Nabab* their high priest for a cloth to wrap his body in, saying, *He would carry nothing that belong'd to this world.*

Alms. All the while till the coronation of the new king, a thousand *Cangaris*, or great dishes of pilau were distributed out of the king's kitchen, with as many of sweet-meats to *Mullab's*, and poor people, for the good of the dead man's soul.

Why this king changed his name. *Scia-Selemon* dy'd at the age of fifty three, when he had reign'd thirty years. He was exalted to the throne by the name of *Scia-Sofi* the second, but afterwards falling desperately sick, he chang'd his name as follows. It is the custom of *Persia*, that when the king falls sick, all the prime men, and governours of provinces send a great quantity of gold coin in a bason of the same metal, set with jewels. This is wav'd over the king's head three times, saying these words, *Patsia basena carbon olson*; that is, *This money is sacrific'd for the health of the king's head.* If the king recovers, it is given to the poor, with other gifts of his servants; if he dies, it is put into the treasury. The *Armenians* also send their money, but the same words are not spoke, only, *Barasad-duk*; that is, *Design'd for alms.* The king being nothing the better for all these presents, the three physicians that attended him were ill us'd; as if it had been in their power to cure him immediately. The others therefore fearing they should fare worse, perswaded the king, that the cause of his sickness, was the astrologers not knowing how to chuse a lucky hour for his exaltation to the throne, and therefore it was requisite he should again take possession in a more favourable minute, and change his name. The *Persians* having much faith in such fopperies, the king easily give ear to their advice; and the astrologers and physicians having chosen a fortunate hour, a day was appointed for the new coronation. But it being unlawful for the king, according to the *Mabometan* superstition to perform this action, without he had first overthrown and expell'd some wrongful pretender, or usurper of the crown; he caus'd a *Gori* to be apprehended, who said he was descended from the antient stock of the *Russians*, who were sovereigns of *Persia* and *Partbia*, and to be plac'd on the throne on his back against a wooden image. Then he caus'd all the great men to come to honour him as their lawful king, till the fortunate hour

was come, and as soon as it did, that very moment an officer with his scimitar cut off the head of the wooden image, and the *Gori* ran away; after which the king ascended the throne, was saluted by the nobility, girt on his scimitar, and put the *Sofi's* cap on his head, which are the ceremonies of taking possession of the crown among the *Persians*, changing his name of *Sofi* for that of *Selemon*. From that time the astrologers lost the king's favour, and the physicians regain'd it.

Scia-Selemon was born of a Georgian woman, and having led his life before he came to the crown, either among women, or black eunuchs, he could learn nothing but cruelty or lasciviousness. Giving way to his bloody genius, he at first govern'd with too much rigour and severity, whereof what he did by one of his concubines is no small example. It being the custom, tho' unfit and barbarous, for the kings of *Persia* to marry their concubines to mean persons, contrary to the practice of the *Ottomans*, who bestow them on the prime *Bassa's*, *Scia-Selemon* gave her the lov'd best to a *Gozor*, or washer; but the great love he bore her prevailing, he took her away again into the *Aram*, sending her husband, by whom she then had six children, away upon some honourable employment. The king one day out of curiosity, or rather jealousy, ask'd her, which of the two she lov'd best; and she answering boldly, her husband, because with him she liv'd in God's grace; the king in a rage, order'd her to be cast into the river. Love prevail'd over his barbarous inclination, so that execution being delay'd, he inclin'd to forgive her, as it did some months after, when he order'd her to be burn'd alive; so that she is still living in the *Aram*.

He continu'd this severity for several years, putting to death many great men of his court upon very slight occasions; but afterwards addicting himself altogether to drunkenness, and the pleasures of the *Aram*, he so absolutely lost his authority, that he had nothing left but the bare name of a king; leaving the whole charge of the government to *Mirza-Taber*, the prime *Vizier*, who had gain'd the first place in his favour. This man was the greatest thief in the world, and not regarding his great age of eighty years, because he found himself strong in body, he minded nothing but who bid most, and sometimes would stoop so low as to take a crown. They said, that being one day ask'd by the king how

how many children he had, he answer'd, he did not remember their number; but that he would go home and write them down. He rose to this high pitch of preternatural by the king's liking some verses he made.

His drunkenness.

Among other extravagancies committed by this king through excessive drinking, it is reported, that *Acbar*, the son of the *Great Mogul* (who fled under his protection from his father) being in presence among many *Persian* noble men, he laid his hand to his sword to wound those great men, and had done it, but that they sav'd themselves by flight. Some time after he ask'd *Acbar*, what he thought of that action; who wisely answer'd, That he was very absolute in his throne. He allow'd this prince twelve *mans* a day, besides his house, and all necessaries for his stable.

Sr. pity.

When he was sometimes press'd to make war upon the *Turk*, the opportunity being so favourable, that a better could never be had; he answer'd, That having once consented to make a peace, he was not to break his faith. His friends still urging that, nevertheless the *Turk*, when he had ended the war with the christians, would begin again with him; he inconsiderately answer'd, he should be satisfy'd, as long as he had *Spaban* left him. These thoughts were infus'd into him by his prime minister: who was look'd upon to be of the *4th* sect, and by some counsellors, who were of opinion, that when the christian princes had destroy'd the *Turks*, they would not forbear falling upon others.

Fraud.

Yet he was at war with *Suban Colican*, king of the *Usbecks*, and to his great loss, for the following reason. That king's brother being to go to *Mecca* with the queen, and a retinue of 3000 *Tartars*; *Scia-Selimon* in the first place, would not allow above 200 of them to come into *Spaban*; and afterwards having a casket of jewels left in his custody, to be restor'd when those princes return'd; knowing the queen came without her kinsman, who dy'd by the way, he made her go by the way of *Sciras*, and not through *Spaban*, without ever restoring her jewels.

Friday the 30th, I return'd to the *Maidan*, to see the preparations for the funeral, and found a great multitude of poor in the king's *Mosque*, to devour the pilau given them for the good of the dead man's soul. I din'd with the *Polish* ambassador, who invited me to be one of his company, when he attended the new king, which was very acceptable to me, that I might see the palace. That night

being chosen as fortunate by the astrologers, at seven of the clock the cloth was to be cut for the king's coronation robes.

General.

1694.

Saturday the last day of the month, all persons were forbid departing the city till the king was proclaim'd. The ambassadors were confin'd to their houses, and the *Mogul's* son had guards set upon him. *Sunday* the 1st of *August*, after noon, the obsequies were perform'd. An hundred camels and mules led the way, loaded with sweetmeats, and other provisions, to be given on the road to a thousand persons that accompany'd the body. Then came the body in a large litter, cover'd with cloth of gold, and carry'd by two camels, led by the *Nazar*, or king's steward. On the sides went two servants burning the most precious sweets in two fire-pans of gold, and a multitude of *Mullah's*, saying their prayers in a very noisy manner. Next follow'd another horse-litter cover'd with red and green cloth, to serve in case the first should break, and then all the great men of the court with their garments rent, and a-foot, except the *Atmat-Dulet*, who was permitted to ride, because of his great age. Whereforever he went there were heard lamentations, and a dismal noise of the subjects: the company still increasing, till they came to be ten thousand. He was carry'd a mile from the city to the garden of *Bax-Sofi-Mirza*, whither I went to see him. I found him in the same litter encompass'd by *Mullah's*, under a great arch. Not long after the *Kilar-Agasi* came to distribute pilau to those that were to attend the body; which, when they had eaten, they set out about half an hour after night, to carry it to *Kom*, without any order, but in confusion; having taken off the camels usual trappings, and dock'd the horses tails. They said, that as they pass'd through the villages, the peasants would come out to meet them, and would cut their flesh in a barbarous manner, in token of grief.

Monday the 2d of *August*, being the feast of the *Portiuncular*, I perform'd my devotions. The sacrifice of the camel being to be perform'd on *Tuesday* the 3d, I mounted betimes to go see it; and passing by the *Deroga's* house, saw abundance of people waiting to see the wretched beast that was condemn'd to death, come out. In short, within an hour we saw it led in a collar by two executioners, and the *Deroga* after them. Following the crowd out of the city, I took notice of the stately bridge, call'd *Sciras*, over the river *Sanderu*. It has thirty three

M m

good

GENELLI
1694.

good arches, and on them high walls of colour'd bricks, leaving a great space in the middle, with a cover'd gallery, and narrow paths on the sides towards the river. At last we came to a great field call'd *Musfilla*, where there were abundance of tombs of *Turks*, built after several manners. Here tying the camel's legs, he was stretch'd out on the ground; and the *Derega* putting on a *Sofi's* cap (which is round above, with a horn in the middle, and a little label hanging behind like that of a bishop's mitre) struck him with a spear; then an executioner cut off his head with an ax, to present it to the king. The four quarters were divided among great men, and the rest to the multitude, who almost kill'd one another to get a bit. The solemnity had been greater, but for the king's death. I saw this same camel pals by three days before with three children on his back, and two things like falvers beating before him, a great company of vagabonds following, some arm'd with hatchets, and some with lancets, who led him from house to house to get money. This ceremony is perform'd every year by the *Perfians*, in memory of the sacrifice *Abraham* would have offer'd, which they say was of *Ismael*, and not of *Isaac*, and that God sent him a camel instead of his son, and not a ram. Every one that can get it, eats that day of the camel's flesh with much devotion; killing in their own houses sheep, lambs, and abundance of fowl, to solemnize the festival, the christians eat not of these creatures, because of the superstitious words they utter when they kill them.

Then I went to *Zulfa*, to see the house of the *Jesuits*, and by the way in a field, saw the tombs of the *Armenians*, well enough built. The *Jesuits* church was well contriv'd, small and curiously painted after the fashion of the country. They have an excellent garden and vineyard, and will in time be very well to pals, if the *Vers-abiet* will let them go on.

Village of
the *Goris*.

A *French Jesuit* conducted me hence to see the village of the *Goris*, by some writers reckoned among the suburbs of *Spabam*. It is one long street about a mile long, without any way into it but at the ends, and one in the middle. It is adorn'd with two rows of green *Cinnar-trees*, and two trenches of water.

Their
temple
and fire.

Some of the *Goris* led me to their temple built in the form of a cross, and arch'd, with windows in the lower part of the wall, cover'd with lattices. There was no altar in it, and but one lamp

hanging in the middle; ascending six steps, they shew'd me in a room adjoining to the temple, their fire, which they feed with wood, and sometimes burn on it the fat of the sheep's tail. If any of them happen to let the fire go out in their houses, they must go to light it at the temple, and therefore they are very careful to keep it in.

These *Goris* live upon tillage. Tho' ignorant, they believe in one only God, the creator of all things. They honour, but do not adore the fire, as some write, in honour of the fire, from which *Abraham* escap'd unhurt, when he was cast into it by order of a king of the *Caldees* (these people boasting that they are descended from *Abraham*, and the ancient kings of *Persia*) according to those words of the scripture, *Gen. xv. v. 7. I am the Ur is his lord thy god, who brought thee out of Ur of the Caldees*. So that *Tavernier* is much mistaken, when he says, that this is to be understood of *Abraham-Ebraimzer-Aleuch* their prophet, who was preserv'd from fire.

Their marriages are after this manner. The couple being come before the priest, he before witnesses receives the consent of both parties; then he washes their foreheads, muttering certain words, after which they may not be divorc'd without a lawful cause. They wash the children that are born a few days after in water, in which abundance of flowers have been boil'd, their ignorant priests praying over it.

They are very careful to kill all unclean creatures, there being a day in the year appointed, on which men and women go about the fields killing the frogs. They drink wine, and eat swines flesh, but it must be bred by themselves, and not have eaten any thing unclean. They abstain but five days in the year from eating flesh, fish, butter and eggs; and three other days they eat nothing till night. Besides they have thirty festivals of their faints.

When any of them dies, they carry him out of the town or village, to a place wall'd in near the mountain. There they tie the dead body standing upright to a pillar, (there being many for the purpose) seven spans high; and going to prayers for the soul of the person departed, they stand till the crows come to eat the body; if they begin with the right eye, they bury the body, and return home joyfully, looking on it as a good omen; if they fall upon the left eye, they go away disconsolate, leaving the body unbury'd.

423.

Their habit does not differ from that of the other *Persian* peasants. The women is very modest, they wearing a petticoat after the *Italian* manner, and under it breeches and shoes after the *Persian* fashion. About their heads they wrap a piece of stuff made of silk and linnen; and on their back hangs another very large one, which does not only cover all behind, but the breast too, being ty'd under the chin. Their noses are

bored to wear a gold or silver ring in them, somewhat smaller than that the *Arabs* use.

As I return'd to *Zulfa*, an *Armenian* shew'd me a clock of a new invention. It consisted of a wheel hanging by two threads fastned to the spring, and moving regularly between two pieces of wood, by means of some contrivance within, shew'd the hour.

CHAP. VIII.

The Description of the Colony of Zulfa, and of the Religious Rites of the Armenians.

Zulfa, *Sulfa*, or *Giolfa*, is near the village of *Gori*, and two miles and half from *Spaban*, the river *Sanderu* running betwixt them. It is a new colony of *Armenians*, who abandoning the old one of the same name, settled here by command of *Scia-Abas the Great*, when the war was hottest between the *Turks* and *Persians*. It is three miles in length, and nine in compass, by reason of the great gardens in it; so that it looks more like a wood than a city.

The houses are handsome within, tho' of mud without, the streets neater and straiter than those of *Spaban*, with long rows of high *Cinar*-trees on the sides, and a trench of water in the middle full of good crabs. Here I must not omit the notable jest some *Frenchmen*, inhabitants of *Zulfa*, told me, had been put upon *Tavernier*, in relation to these crabs. He being at dinner about forty years since, with monsieur *l'Esfoile*, highly commended the crabs; and the other being a pleasant facetious man, said to him, *They are better now than at any other time, because they feed upon white mulberries*. And perceiving the silly *Tavernier* was curious to know further, how they came to eat mulberries, that he might write it down; he added, that those crabs about sun-set came out of their holes near the trees, and climbing them, fed upon white mulberries all night, and then at break of day return'd to the water; and therefore the gardeners in the night shook the trees, and gathering a good quantity of them, carry'd them to sell in the market. This story told as a jest, was swallow'd by *Tavernier*, and writ down as truth, which is an imposition upon others as silly as himself. All this was told me by the said monsieur *l'Esfoile's* son, by an old *Armenian*, and by three *Frenchmen*, who knew him at *Zulfa*. By this we may judge of the

truth of the rest of his stories, since he was so credulous in a thing, so improbable. The *Persians* are so far from eating, that they have an extraordinary aversion to them.

As for the government of the *Armenians* at *Zulfa*, the king causes justice to be rigorously administred among them in criminal cases; and for the civil, appoints a *Kalender*, or judge of that nation, who rates what they are to pay to the exchequer. There are at present the richest subjects of the nation, become so by the money lent them at first by *Scia-Abas* the first, and by the great trade they have throughout the world, but more especially in silk; besides they are so frugal both in their houses and travelling, that the money hourly increases in their purses.

In spiritual matters they are govern'd by an archbishop, who is independent of the patriarch, and has four suffragan bishops. That *Stephen* we have before made mention of, relying upon this his independency, made a trade of selling the sacraments and burials, openly without any shame, by that means heaping together some hundred thousands of pieces of eight.

Besides their own, the *Armenians* speak the *Persian* and *Turkish* languages. And there are two sorts of the *Armenian* writ with different characters; that is the learned for the clergy and religious worship, and the vulgar for the other people.

Not to speak of the barefoot *Carmites*, expell'd, as was said before, there were *Jesuits* and *Dominicans* in *Zulfa*; but a very small number of two or three in a house, being scarce enough to say the divine office. As for catholicks there are very few, and fewer children instructed in the catholick religion, for as soon as the *Vert-abies* hears of any, he

Millioners

excom-

GEMELLI 1694. excommunicates the parents; who rather than be expos'd to the fury of the multitude, are forc'd to take away their children.

Women. The *Armenian* women are very beautiful without any help from art. They cover their heads with a fine white cloth ty'd under the chin. All their hair is made into one tress, which hangs on their back in a velvet bag; the richer sort wear gold, and jewels like the rest of the world.

Armenian mafs. *Wednesday* the 4th, I stay'd in the city, and going to hear mafs in an *Armenian* church, found but one altar. The choir was five steps higher than the *Isle*, and both parts cover'd with good carpets. The mafs was said by the archbishop, serv'd by two bishops, as deacon and sub-deacon, and during it there was a great number of candles lighted on the right side of the altar. After reading the gospel, the clergy began to ring some small bells fastned to the ends of staves five spans long, and both lay-men and church men sung to that noise. When the bread was consecrated, one of the bishops took the chalice out of a little window, and carrying it about the altar, plac'd it thereon, saying some prayers. Then the priest taking it up, with the bread on it, turn'd to the people (who prostrating themselves on the ground began to beat their breasts) saying, *This is the Lord that gave his body and blood for us*. Then turning again to the altar, he receiv'd the bread alone, dipp'd in the wine; and going down to the bottom of the choir with the bread and chalice in his hands, said three times, the people as often repeating it. *I confess, I believe that this is the body and blood of the Son of God, who takes away the sins of the world, and who is not only our salvation, but all mankind's*. This done, he communicated with bread, dipp'd in the wine, the very children of two or three years old; not considering they might cast it out. They put no water into the chalice, giving for their reason, That our lord when he constituted the sacrament, drank it pure. The bread is unleaven'd, and the priest makes it the day before, of the bigness of our wafers.

Lent. In *Lent*, they do not receive, and they say only one mafs upon *Sundays* in a low voice, the priest not to be seen, and only the gospel and creed are read aloud. They do it in the same manner on *Maundy-Thurs*day, and then all that will may communicate; but most of them use to do it at the mafs which is said on *Holy-Saturday*, before sun-setting;

after which they may eat oil, butter and eggs.

On *Easter-Sunday* another mafs is said, *Easter*, still in a low voice, at which they give the communion, and then all are allow'd to eat flesh, so it be kill'd that same day. Before all their four principal feasts, which are *Christmas*, the *Ascension* of our lord, the *Annunciation* of the blessed virgin, and *St. George*, they have eight days fast, during which they are not to taste flesh, eggs, fish, butter, or oil. They have to great a devotion for *St. George*, that some of them will be three, and others five days, without eating any thing.

When any one has a mind to make his *Priest*, son a churchman, he carries him to the priest, who, saying some prayers, puts the cope upon him. This ceremony is to be perform'd several times in several years; after the fourth, if the youth will not become a monk, he may marry, and if she happens to die, and he will take another, he may not be made a priest. When he is eighteen years of age, the ceremony is perform'd the seventh time, and he is conducted in all the priestly vestments by a bishop, or the archbishop himself to the church, where he must have serv'd a year before. Priests may not eat or drink with their wives five days before saying mafs, and five days after; and both they and monks are to spend the first five in the church, without touching any food with their hands, and for the other five they must eat nothing but eggs, and rice boil'd in water and salt.

The archbishop's life is very austere, *Archbishops* for some of them eat fish, and flesh but four times a year, and all the rest roots and herbs. They, and all other churchmen and laymen have six months and three days fast in the year, during which time they eat nothing but bread, and some raw herbs; the labouring people at best, feeding on garden-stuff boil'd with salt, and with nut-oil if they will; as for flesh they eat none in the most dangerous distempers.

The sacrament of baptism is administer'd on *Sunday*, unless there be imminent danger of death before, and is done in this manner. The infant is carry'd to church by the midwife, where after the priest has said some prayers, he is dipp'd naked into the water, and deliver'd to the godfather. Then the priest putting together two cords, one of red silk, the other of cotton (to signify the blood and water that came from our saviour's side) ties them about his neck, and then anointing his forehead

head with holy oil, says, *I baptize thee in the Name of the Father, of the Son, and of the Holy Ghost*; anointing all the extrem parts of the body, still repeating the same words. When the baptism is over, the god-father goes out of the church with two lighted candles in his hands, and the infant on his arms, and carries it to the mother's house, attended by several musical instruments; where having receiv'd her thanks, he kisses the top of her head. As for the name, they give the child that which falls out on the day in the calendar, or else the next to come. Then they make a plentiful entertainment, according to the peoples quality, to which all the kindred and friends, and all the priests and monks of the parish are invited. They that will save this charge, which is very great, pretend the child is like to die, and baptize it on a week-day. The trouble is greater when women are deliver'd within the fortnight before *Christmas*, for then the christning must be put off till that which is our third of *January*, they following the old account, without the alteration of the ten days. Then they erect three scaffolds cover'd on the river *Sanderu*, and a sort of altar on the middlemost of them; and on *Christmas*-day in the morning before sun rising, all the *Armenian* clergy of *Zulfa* being there with their vestments, crosses and banners; the cross is thrice dipp'd in the river, throwing in holy oil every time; then having said the baptismal prayer, the priest plunges the infant into the cold river-water, with the usual sort of words and other ceremonies.

Holy oils. The holy oil they use is not of olives, but of several flowers, (especially of the flower of paradise, by them call'd *Belesan-Tagbe*) and other sweets. It is blest'd on the eve of the nativity of our blessed Lady, and then the patriarch distributes it throughout *Europe*, *Asia*, and *Africk*.

Marriages. Being invited to a wedding that was to be at *Zulfa* on *Thursday* the 5th, I went thither betimes, and stay'd to dinner with the rector of the *Jesuits*. Then being sent for, we went to the bridegroom's house, where there was a great number of his kindred and friends. He mounting a horseback with a great attendance, went to receive the bride, who being also mounted on a horse richly set out with jewels; they went together to the church, follow'd by abundance of kindred a horse-back with lighted flamboys in their hands. They alighted before the church and went up straight to

the altar, where standing close face to face, the bishop read in a book that rested on their heads, and having receiv'd their consent, gave them his blessing with the noise of drums and other barbarous instruments. Then having heard mass, they return'd in the same order.

It is to be observ'd, that the *Armenians* marry their daughters very young and almost in their infancy, for fear the king should take them into the *Aram*. The mothers generally make the contract, and then acquaint the fathers with it.

When it is concluded, the bridegroom's mother goes with two aged women and a priest to the bride's mothers, and gives the ring from her son; soon after he comes, and is blest'd by the priest together with the girl; and then they all drink merrily. After this betrothing, the bridegroom is oblig'd every year at *Easter*, to send the bride a garment suitable to her quality. When they are to celebrate the nuptials, the husband's father sends a meal three days before to the mother-in-law's house; where the kindred on both sides meet, the men in one room and the women in another. The next day the bridegroom sends the bride a garment, and then goes to receive that the mother-in-law gives him, or the eldest kinswoman, who is also to put it on the first time.

When an *Armenian* dies, the *Mordi*-Funerals.

firi, or washer of the dead takes a vessel of holy water out of the church, and pours it into the pool where the body is to be wash'd, which done, he takes all he had on, and puts him on a white shirt and other linnen, all new, fowing him up besides in a new sack. Then the priests accompany'd by all the kindred with lighted candles in their hands, convey the body to the church, before the altar, and a priest having said some prayers, they place the candles about it, and leave it so all night. In the morning, after saying mass it is carry'd before the archbishop's, or bishop's door, that he may say the Lord's prayer for the soul departed. This done it is carry'd to the church-yard, the bishop and priests singing several prayers by the way, till it is laid in the grave. Then the bishop, taking up a handful of earth throws it on the corps, saying thrice: *From Earth thou camest, and to Earth thou shalt return; remain there till the coming of our Lord*. Then they fill up the grave. When the kindred and friends return home they find a good dinner, made ready, and among the richer sort they treat the priests and monks for seven days.

GEMELLI 1694. When a bishop dies, besides the afore-
said ceremonies, after mass they put a
paper into his hands, with these words
writ on it, *Remember that thou comest
from Earth, and shalt return to earth.* If
a slave dies, his master writes on such a
piece of paper, that he is not displeas'd
he should have his freedom, and that
he gives him his liberty. If any one
kills himself, they do not carry him out
at the door of the house, but break down
the wall and bury him without any ce-
remony.

On the eve of the feast of the holy
cross, both men and women go to the
church-yard with good provisions, and

spend all the night there, lamenting a
while, and then eating and drinking mer-
rily; and there is no poor body in the
city that omits doing this.

To conclude this chapter, I say, the
Armenians firmly adhere to their antient
customs and the christian faith, notwith-
standing the infinite persecutions rais'd
against them by the *Mahometans*. Ve-
ry few of them have embrac'd the *Ma-
hometan* religion, blinded by interest;
for the renegado is put into possession
of all his kindreds goods, and even of
his fathers, who must afterwards live up-
his son's courtesie.

CHAP. IX.

*The Coronation of Scia-Ofien, and the Mangeles, or Audience afterwards given
to the Ambassadors and Nobility.*

Prepara-
tion for
the king's
coronati-
on.

THE hour the astrologers thought
fortunate for the crowning of the
new king drawing near, on Friday the
6th, he put out an order that all who
had any shops in the *Bazars* should
set up lights before them, and stay
there till midnight, upon forfeiture of
twelve toman. I had the curiosity to
go about at night to see these lights
with a *Persian* lord; and having walk'd
about several streets found nothing ex-
traordinary, there being only tallow
candles burning in the shops, without
any fire-works, or wax-flamboys. The
Bazars show'd well, rather for their
length than the number of lights. This
I suppos'd to be because the *Persians*
rather fear than love their king, and
therefore it is not strange that the same
day *Scia-Selemon* dy'd there were publick
weddings kept in *Ispahan*. I thought
I should have seen something great in
the *Meidan*, the place being so proper
for it, but was disappointed.

Whilst they expected the happy hour,
we went in at the gate of *Ala-Capi*.
Within it are two large arches, which
support a great structure several stories
high; especially the second of them, o-
ver which on the left hand is the hall
whither the *Vizier*, the *Nabab*, and the
Axand came to administer justice on the
days appointed.

Going further in along an uncover'd
way but wall'd on both sides, with
arches along them, is a pond of wa-
ter; on the left is the door that leads
to the garden, where the dead king's
body was wash'd, and on the right
the rooms of those that have taken
sanctuary, and both these doors were

guarded by *Sofis*, who pray'd for the
king.

Taking the opportunity of the night
I went to see the king's great *Mosque*, it
being forbid to go into it in the day. A
great gate cover'd with plates of silver
leads into the first arch, which has o-
thers on the sides making a semicircle,
and all of them make the way into the
cloister. There is a curious basin or
fountain of stone, and a double rank of
pillars about, with rooms on the first
floor for the *Mullabs* and other inferior
officers to live in. Opposite to the a-
foresaid gate, there are three beautiful
doors to go into the *Mosque*. All the
outside of the structure hitherto de-
scrib'd of the two towers without, and
of the two joyning to the *Mosque*, is a-
dorn'd with bricks, or tiles artificially
colour'd, as is us'd in *Persia*. The five
isles the *Mosque* is compos'd of, are a-
dorn'd with gold and azure. In the mid-
dlemost, which is the largest, is the cupo-
la supported by four very great square
pillars. Those on the sides which are
lower, rest on thick columns of free
stone. Two great windows give light
to the *Mosque*; they are plac'd in that
part of the wall of the middle isle,
which is higher than the side arches.
At the end of the *Mosque* is a good jas-
per stone fix'd in the wall, eight spans
high and four in breadth. There were no
lamps hanging, as is us'd by the *Turks*;
but there were good carpets on the
ground, and on the left of the nich the
pulpit, with curious stone-steps up to it.

Being weary of walking through so
many *Bazars*, we went under the bell,
on the north side of the *Meidan*, into

a coffee-house, diverting our selves with smocking till the fortunate hour was come. In the mean while a foolish *Mullab* sitting down without an upper vest and turbant, very gravely began a speech in commendation of *Scia-Abas the Great*, and of *Scia-Sofi*, extolling their actions and conquests. He grew so hot in his panegyrick, that he cry'd out like a madman, and roar'd like a bull, foaming at the mouth, especially when he mention'd any particular exploit, the hearers applauding him by clapping their hands, and pipes. This confusion lasted two hours, after which the *Mullab* went about gathering an alms of one or two *Cafis* a head, and carry'd off two *Abassis*.

The king's
inauguration.

The hour the astrologers thought auspicious being come, which yet was unlucky by reason of the rain, about half an hour after midnight, there was heard an ungrateful sound of drums and trumpets, playing to *Scia-Offen*, then seated on the throne; and in this mean manner was the coronation of so great a king solemniz'd. It is, to say the truth, improper to call it a coronation of *Mahometan* kings, because they use no crown, and this ceremony is only receiving the homage of the nobility.

They said that the king being advis'd to take the name of *Scia-Ismael*, answer'd, *Why, have not I a name of my own?* At the perswasion of the *Axond* he confirm'd the donative of 14000 tomans granted by his father to the subjects, but never paid.

Wine forbidden.

Saturday the 7th, the new king prohibited the use of wine upon pain of death, beginning by his own house, where he broke all the vessels his father had kept it in. I believe this severity did not last long, those princes being too much given to wine; and drunkenness is a vice they transfer to their successors with the crown.

A rich present.

Sunday the 8th, the son of the *Great Mogul* sent the king a *Pisces*, or present of 20000 tomans value, consisting of an elephant, a silver cistern, and a great gold basket set with jewels, made like those the *Persians* carry fruit in.

The king his generosity.

At length the king appear'd in publick on *Monday* the 9th, clad in red, having first generously distributed 2000 rich garments among the nobility and courtiers, according to their several qualities.

Punishment.

Tuesday the 10th, two wretches were taken drinking of wine, and tho' they pleaded ignorance of the edict, they were dreadfully beaten in the *Meidan*, till the nails of their toes dropt off, and they lost much blood; and yet they said it was a

merciful punishment, in regard of the fel-
lows ignorance, and simplicity.

Understanding on *Wednesday* the 11th, that the king made the *Mangeles*, that is, of audience, and an entertainment.

I went to the *Polisb* ambassador, and with him to the palace. We entered at the gate of *Ali-Capi*, with the usual displeasing harmony, and ascending four steps, found the room of audience was longish, with the roof well painted and gilt, supported by forty pillars. The length of this hall is divided into three parts, each a step higher than the other, for the nobility to stand according to their rank and quality. On the third ascent stands the royal throne rais'd but two spans above the floor, and eight foot square. We found the king sitting on a brocard cushion, and leaning his back against such another. On his sides stood ten eunuchs, holding his pipe, scimitar, and several other things. In this same part of the room, ten spans from the king, stood the *Atmatb-Dulet*, the *Kilar-Agasi*, the *Cursi-Bajsi*, the *Saper-selar*, and other great men. In the middle part of the room stood the *Chams* or governours of provinces, and the *Kisil-Bajsi*, or military officers. In the lower part were those that play'd on several barbarous instruments.

When the Pope's and *Polisb* ambassadors came in, the *Memunder*, or master of the ceremonies made them bow their foreheads to the ground, and the same when they were before the throne. Then the king made a sign for them to sit, and they were plac'd among the *Chams*, as were we of their retinue. Whilst the dinner was getting ready, the king was inform'd by the *Atmatb-Dulet*, who they were, and what brought them into *Persia*.

About an hour after the table was The dinner cover'd after the manner of the country; that is, every body sitting cross-leg'd,

each had a piece of silk laid before him, with a skin over it. First came several sorts of fruit, and sweet-meats in gold dishes. Then three great basons of pilau, red, white, and yellow, cover'd with pullets and other flesh, which was distributed in gold plates. I being at the ambassadors table, eat no pilau, because I cannot endure butter, and therefore tasted only some fruit season'd with sugar or vinegar. The king had the same diet on a table cover'd with cloth of gold. All persons eat their meat in haste, because the feast was but short, after the manner of the *Levant*. They drink a great deal of lemonade, and rose-water with sugar-candy.

After

GEMELLI
1694.
The king. After dinner about noon, the audience was dismiss'd, and every one went his way. When the king stood up, I observed, he wore a long garment of a gold colour, with a girdle and turban after the *Perſian* manner with a rich jewel of diamonds in it. He was about twenty five years of age, rather short than tall, his eye-brows thick, his complexion fair, and his beard black.

Stables
and hor-
ſes.

As we went out, the *Polish* ambaffador was pleas'd to ſhow me the king's ſtables and horſes. There were noble creatures, with gold troughs before them, and great pins or nails of the ſame metal about to tie them by the feet, as is the cuſtom of *Perſia*. We did not mind to ſee the reſt becauſe it was then late, but were told there were in all 1500 horſes, as well for the king's ſervice (for whom two are to ſtand ready ſaddled every day) as for the ladies in the *Aram*, the eunuchs, and other courtiers. By the great gate there were alſo lions ſerv'd in gold, like the horſes.

Having waited on the ambaffador to his houſe, as I was returning to the mo- naſtery, I met a great multitude of horſe- men going off. Moſt of them to ſhow they were the king's officers had a little drum hanging to the pummel of the ſad- dle, and the rim of it ſilver, which they beat when they want to be aided and af- fiſted in buſineſs of the king's.

Mint.

Thursday the 12th, I went to ſee the mint of *Iſpahan*, near the houſe of the *Engliſh*. Here they coin *Abaffis*, *Mamu- dſis*, and *Sciays*, after the ſame manner as at *Tauris* and *Erivan*. *Friday* the 13th, I only din'd with father *Elias*; and *Sat- urday* the 14th, went a ſhooting, and brought home abundance of pigeons.

The gar-
den.

Sunday the 15th, the prior and I, with all the fathers, went out of town to ſee the garden of *Bach-Xoſeb-curia*, where the king uſes to divert himſelf when he is to undertake a journey, till the fortu- nate hour appointed by the aſtrogers

for him to ſet out. Short of it I ſaw a good *Moſque*, with the uſual ornament of colour'd bricks, but the towers threat- ned ruin. In the garden we found great variety of fruit, but not very good, be- cauſe of the thickneſs of the trees, which ſtarve one another. There is a little brook enclos'd within a canal of ſtone, and in the miſt of it a little ſummer- houſe for the king. This ſtructure con- ſiſts of a great ſquare arch, with a foun- tain of good marble in the middle, and four doors on the ſide. Near the four angles at the bottom, there are four little rooms, and eight on the upper- floor. The arches are all gilt and paint- ed with figures drinking, or women ſhewing all their parts naked through transparent veils. On one ſide of the garden is a little *Aram*, enclos'd with high walls, and a ſmall garden in it. All the houſe conſiſts of one large hall, four little rooms, and a gallery indifferently furniſh'd, as is all the reſt.

Monday the 16th, at night, father *Ema- nuel*, an *Auguſtinian*, made his eſcape pri- vately, in order to go to *Rome* to do penance for his offence. He being vic- ar of the monaſtery four years before, had ſquander'd a great deal of money idly, and therefore fearing the anger of his ſuperior, turn'd *Mabometan*, to the great trouble of all the *Portugueſe*, taking the name of *Aſſan-Culibech*.

The king having been ſhut up in the *Aram* from his infancy, it was known on *Tueſday* the 17th, that they taught him to ride in the garden, that he might ap- pear in publick. This is the policy of the *Perſian* court, contrary to the pra- ctice of the reſt of the world; for even the greateſt men are kept ignorant, whether there is a ſucceſſor to the crown or not; the eunuchs keeping the ſecret inviolably, and having the care of the king's children in the womens apart- ment.

CHAP. X.

Of the Royal Garden of Sarafaber, and the Audience of Leave given the Pope's and King of Poland's Ambaffadors.

Sarafaber
gardens.

W*edneſday* the 18th, I went to *Zulfa*, and as I return'd ſaw the garden of *Sarafaber*, which is on one ſide of the way. The king goes to it from the gardens of *Iſpahan* over a bridge of four- teen ſtone-arches, (upon the river *San- deru*) oppoſite to which, on *Zulfa* ſide, is a gallery, whoſe roof is ſupported by twenty wooden pillars gilt; where the

king, when he is taking his pleaſure, re- ceives ambaffadors. In it are the ſame diviſions as in the hall at *Iſpahan*, a fine fountain, and three rooms behind the royal throne. It has alſo communica- tion with another gallery towards the garden.

In this garden there is a thick wood of fruit-trees of ſeveral ſorts; a ſtone canal,

with little fountains in the middle, and two great ones at the ends; and a little house built after the same model as that in the garden of *Bach-Xofeb-Cuna*. The *Aram* is close by the river with small rooms, without any thing valuable about them.

Having no more to see after dining, on *Thursday* the 19th, with the director of the *Dutch* company, I went on *Friday* the 20th, to visit the superior of the *French Coqueris*. *Saturday* the 21st, the *Polish* ambassador sent betimes, to know whether I would go with him to his audience. Knowing it was to take his leave, and being curious to see the custom us'd there, I dress'd my self immediately, and mounting a horseback, went to the ambassadors, with my own and the prior's servant. We stay'd an hour for the master of the ceremonies, and five horses the king us'd to send, and then we mounted, the ambassador honour'd me with the next place to himself. The train consisted of nineteen persons afoot, armed with muskets, of twenty a horseback, and others, in all to the number of sixty. We alighted at the gate of *Ala-Capi*, where we found four tygers, several lions, and four elephants, two great and two small ones, cover'd with cloth of gold, all in a row. The elephant presented by *Hebar* the *Great Mogul's* son, which had been first given him by *Scia-Seimon*, had a great silver seat on his back, as is usual for those creatures to carry. Having pass'd through the first and second arches, a place was appointed us to stay till the time of the audience. This place was two spans higher than the other floors, and cover'd with good carpets. In the inner part sat the ambassador of the king of the *Imans*, an *Arab*, whose kingdom is near *Mecca*, and came to persuade the *Persians* to make war with the *Iman* of *Mafcate* in *Arabia Felix*. On the opposite side was the *Armenian* the *Pope's* ambassador, and the provincial of the *Dominicans*, with another friar. In another arch on the right, sat, after a barbarous manner, the ambassador of the king of the *Usbecks*, with his retinue. Whilst we were here, the family of *Hebar* pass'd by, being about forty persons clad in silk and gold, with their little turbans, after the *Indian* fashion, made of the finest silk, the king having sent for them.

The kings of *Persia* use to give ambassadors four *Calates*, or rich long gowns at their first and last audiences, whereas the *Turk* gives them only at the first; but the *Polish* ambassador had but one that morning, because he had receiv'd the

VOL. IV.

four in the reign of *Scia-Seimon*, when he was dismiss'd by the *Atmatb-Dulet*. Now that dismissing having taken no effect, by reason of the king's death, and other causes already mentioned, I thought it not consonant to the generosity of so great a king, to reckon upon those he had given before. That he had was of cloth of gold, after the *Persian* manner; an upper vest of pearl-colour silk, with gold stripes, made like a cope, and a turban, and fash of silk and gold, and long sleeves. The king had sent *Hebar* a present worth 3000 tomans; that is 2000 in gold and silver, and 1000 in silks, with twelve garments; but that prince excus'd himself from going to the audience, till forty days after the late king's death, and that his beard was grown, which he had cut a little in token of grief.

The *Pope's* ambassador had three garments; that he wore was of cloth of silver, the upper vest of cloth of gold, and the fash and turban of silk and gold. The other two the *Dominicans* wore were as rich, but of other colours. The *Usbeck* ambassador had his gown or cassack of cloth of gold flower'd, and the upper vest, call'd by the *Persians* *Balapuse*, of cloth of silver. Two persons of his retinue wore the other two garments given him, which were of different colours. But his turban was after his country fashion, small and sharp at the top, with a black feather in the middle.

After we had been above an hour in this indecent place, hemm'd in with servants and footmen, at length the audience began by the ambassador of the king of the *Imans*, who was clad in his own cloaths after the *Turkish* fashion, having had no *Calate* or garment given him. After him we went into the garden, about fifty paces from the arch where the audience was, but were fain to stay a while by a fountain, before we were introduc'd to the king. This garden is about fifty yards square, and has four allies making a cross, adorn'd with tall *Cinar*-trees. On the side adjoining to the *Talar-Tevile*, or hall of audience, is a curious fountain, about twenty spans in length, with a little rais'd place in the middle for the king and great ones to stand cool. At the end of the fountain which reaches to the hall, there were two great silver vessels. In the adjoining alley two hundred *Tapcis* or musketers of the kings were drawn up in a rank; some *Giarci* or executioners with clubs on their shoulders; at the end whereof was a globe cover'd with silver,

O o

call'd

GEMELLI
1694.

GEMELLI
1694.
call'd *Topus*; and then some *Safis*, who had the same fashion'd caps as the *Giar-cis*, but differing from them in that they were cover'd with silk. Under the wall of the hall stood twenty hories with all their furniture adorn'd with great diamonds, rubies, emeralds, and other stones of great value. The stirrups were of massive gold, and the worst saddles cover'd with cloth of gold, with nails of the same metal.

The audience-chamber was not the same we were in before, being a great room joyning to the garden, as has been said, the walls of it painted and gilt, and adorn'd with looking-glasses, as were the four wooden pillars which supported a small scaffold. In the midst was a fountain, and at the end as it were a great niche or closet, containing the royal throne fourteen spans square. On that side next the garden several musicians sat on carpets playing upon variety of instruments, whilst others sang after a barbarous manner. We ascended from the first part of the room where these people were, to the second, as was describ'd in the other hall, where leaving us, the ambassador was led by the right arm by the *Memondar*, and by the left by the *Eficagasi-Baschi*, who is great porter, or master of the ceremonies, up to the king. His majesty sat on a cushion upon good carpets, and had two other brocard cushions at his back. About him stood many eunuchs, as was mention'd in the other hall. When the ambassador came within six paces of the king, he set his hands on the ground, bowing down his forehead almost to the pavement. When he stood up again the *Aimatb-Dulet* came before him, and taking a letter out of a gold basin that was at the king's feet with other letters

and abundance of flowers, deliver'd it to the ambassador, who with great submission laid it on his head. Then the *Memondar* and master of the ceremonies took it and plac'd it on his turban, that it might be well seen by all people. The letter was cover'd with cloth of gold as is us'd among the eastern nations, two spans in length, and proportionable in breadth. Having receiv'd the letter, and compliment of leave by the mouth of the *Aimatb-Dulet*, he made such another obeisance as he had done before, and was by the same officers reconducted down to the garden.

The pope's ambassador went in next, and we stay'd in the garden till he came out, that we might all go away together; since being dismiss'd, we were not to stay to the king's *Mangeles* or dinner. Besides the great letter for the pope, his ambassador had a small one for the republick of *Venice*.

Returning home, with the admiration of the *Europeans*, who saw those letters on the turbans, the *Polish* ambassador honour'd me with his table, which was much better, than the ill-dress'd pilau the others were eating at court, tho' in gold dishes. At this second audience I took better notice of the king. He was tender, and of a puny constitution, had a little face, beautiful eye-brows, black eyes, and a black but short beard. He had on a gown of red cloth of gold, with a short vest over it of a gold colour, without sleeves, call'd in the *Persian* language *Curdis*; on the right side of his turban he wore a heron's feather upon a jewel of rich diamonds.

Sunday the 22d, I heard mass at the barefoot *Carmelites*, which was all I did that day worth remembring.

BOOK II.

CHAP. I.

The doleful Festival, kept by the Persians, for the Death of Hassan, and Hossen.

Doleful
festival.

MOnday the 23d, the new moon of *August* appearing, began the much spoken of, and lamentable festival the *Persians* keep for the death of *Hassan* and *Hossen*, the sons of *Hali*, who were kill'd by *Omar* near *Bagdat*. During the ten days it lasts, every square is set out with lights, and a long black banner is flying abroad, near which a *Mullah* gets into a high pulpit to preach, making the hideouslest noise in the world. All the inhabitants of that quarter go to hear him, clad in silk red and blue gowns, in token of sorrow; after filling their bellies with all sorts of fruit the season affords. The women, who in all countries are of the same temper, yield the *Mullah's* great profit, giving them money, sweet-meats, and rose-water to cool them when they are heated with preaching.

Till the last day of the doleful festival, by the *Persians*, call'd *Asiur*, or mourning is over, no *Turk* can appear in publick, without great danger of his life. I my self saw one on *Tuesday* the 24th, who had been bastonado'd to death, were it not for his nimbleness in shutting himself up. What they did on *Wednesday* the 25th, was ridiculous. They made a figure of straw, round about with cords, set it on an ass, and carry'd it all about the town, beating it; sometimes calling it *Omar*, and sometimes *Abumurgian*, his companion. At last in a hellish rage they kill'd the poor ass, and in that one maukin of straw burn'd both the murderers of their two holy youths; which found me something to laugh at on *Thursday* the 26th, with the ambassador, and father *Elias*.

Friday the 27th, after dinner I went to

Zulfa, to visit father *Bouchier*, superior of the *Jesuits* mission. Returning home through *Sciarbach* road, or street, I met the king riding to *Sarajabel* garden on a bay horse, with furniture of a vast value in gold and jewels. He was clad in a violet-colour silk, and was attended by at least a thousand horse between gentlemen and soldiers, besides a hundred foot, as may appear in the adjoining cut.

Whenever the king goes abroad, ten horse go half a mile before to clear the way; but when he is to carry his women with him, they riding a horseback, and bare-fac'd, proclamation is made two days before, for all men to be out of the way, and not presume to be seen in that street upon pain of death, which is executed without mercy.

To this purpose, they tell the good fortune of a country-man, and the generous goodness of *Scia-Selemon*. The peasant was coming out of the country with his ass loaded with peaches, and meeting unexpectedly in the street, or road of *Sciarbach*, with the king, and having no place to retire to, he fell flat on his face upon the ground, with his eyes shut. *Scia-Selemon* perceiving the poor man's simplicity, and being well pleas'd with it, commanded him to rise. His fear was so great, that he scarce could be persuaded to obey the third command, and the king turning to his women, bid every one of them take some of the peaches, and give the peasant a zecchine. This done, he order'd him to take which soever of those women he lik'd for his wife; and thus, tho' at first he was shie, he went home with the finest woman in *Persia*, and his purse full, to his cottage, whence he came out alone, and poor.

GEMELLI
1694.
The king's
retinue.

A pleasant
passage.

Saturday

GEMELLI 1694. *Saturday the 28th, the Portuguese fathers where I lodg'd, celebrated the festival of St. Augustin, at which the Polish ambassador, father Elias, and several religious, and Frenchmen were present, and were treated at a plentiful dinner. Sunday the 29th, I went to see father Raphael, superior of the Capuchins of Ispahan, who ever since the reign of Scia-Abas the second, serv'd as interpreter for the letters, and to the ambassadors of European princes. He was about eighty years of age, and had resided forty seven at Ispahan, which made me spend several hours with him, to be inform'd in the affairs of the Persian empire; as knowing no man could give a better, or truer account. Tavernier in his travels through Persia, often speaks of this religious man. Monday the 30th, I visited James Norgbcamer, director of the Dutch company, and din'd with him, the time of my departure now drawing near. Tuesday the 31st, I din'd with the ambassador, to whom I was much oblig'd.*

Wednesday the 1st of September, being the festival of Hassan, and Hossen, call'd by the Persians Cail, that is, murder; the king made a Mangeles, or entertainment over the gate of Ala-Capi, at which all the nobility and ambassadors were present. The horses and wild beasts were rang'd in order before the palace, as they had been the time before; and all the Meidan was clear'd from shops, to make room for above a thousand horses belonging to those great

Hassan's Festival.

men that were come to the feast. Several processions from all parts of the town began to enter the Meidan betimes. They carry'd pikes of a vast length, with banners fastned to them, and horses loaded with the arms and turbans of their suppos'd martyrs, singing doleful verses to the noise of two basons beaten at the same time, and dancing in a very ridiculous manner. Some carry'd the images of those very martyrs on beers, dancing about them; others carry'd two children ty'd on a camel, as if they were dead, with two saddled horses led by, on which were the arms or weapons us'd, as they thought, by those children, who dy'd at nine, or ten years of age. All these processions pass'd before the gallery where the king was, those blind people beating themselves severely, to represent the murder the more lively. Many of them made nothing of going home with their heads broke, or even of death it self; because they are fully perswaded that whosoever dies in that confusion, goes directly to heaven; the gates thereof being open all those ten days for *Mabometans*. Many of the loose people imitating the superstitious companies, beat one another, and cut their flesh cruelly. The owners of the shops had cool water ready to give to those that were thirsty, in memory of the thirst *Hassan* and *Hossen* endur'd, after their father *Hali* was wounded.

CHAP. II.

Of the Religion, Marriages, and Habit of the Persians.

IN the Persian dominions there are *Mabometans*, *Pagans*, or *Goris*, *Jews*, *Christians*, *Armenians* that follow *Nestorius*, *Melchites*, *Manichees*, *Franks*, and catholick *Armenians*; but the prevailing religion is the *Mabometan*, tho' differing from the *Turks* concerning the true successors of *Mabomet*. The *Sunnis*, or *Osmalis* say, that *Abubaker* was immediate successor to *Mabomet*, as his vicar; he was succeeded by *Omar*, *Omar* by *Osman-Mortuz-Hali*; nephew and son-in-law to *Mabomet*, whose successors have propagated their religion by the sword more than by reason, and therefore the followers of this sect are not allow'd to dispute, but to maintain it by force of arms, as was said before.

The *Sciays*, or *Halis*, which are the *Persians*, call the *Turks* *Refesis*, or heretics, and abhor the names of *Abuba-*

ker, *Omar*, and *Osman*, saying they usurp'd the inheritance due to *Hali*, *Mabomet's* nephew and son-in-law. They count after him twelve prophets, or high priests, and beginning at *Hali*, the son of *Abusaleb*, they give the second place to *Hassan*, eldest son of *Hali*; the third to *Hossen* his second son, who dy'd at *Babylon* in the place call'd *Herbela*, kill'd by the *Sunnis* in defence of his father's inheritance, and therefore the *Persians* keep his anniversary. The fourth they say was *Imonzin-el-Abedin*; the fifth *Mabomet el-Baker*; the sixth *Jasor-el-Scadek*, who brought up the barbarous custom in *Persia*, that whosoever turns a *Mabometan* becomes heir not only to his own family, as was said above, but even to his grand-father; which is the reason that some covetous *Armenians* embrace *Mabometanism*, and so their brethren

threen follow their example rather than lose their inheritance. The seventh successor was *Mussa-Katim*, the eighth *Ali-el-Rezza*, whose tomb is at *Majud*, and honour'd as much as *Mabomet's*; the ninth *Mabomet-el-Jued*; the tenth *Hali-el-Hadi*; the eleventh *Hozen-el-Askeri*; and the twelfth *Mubemanet-el-Mobadi-Sabel-Zaman*, concerning whom the *Persians* believe as we do of *Enoch* and *Elias*, and therefore they leave in their wills, houses ready furnish'd, and stables full of horses, for him to make use of them when *Saeb-el-Zaman*, that is, the lord of time shall call him. These horses are kept without doing any service, upon the revenues left to that purpose, and the houses shut up.

The Nabab.

The *Nabab* is head of their religion; which dignity is worth 14000 tomans a year. In publick he takes place next to the *Aimab-Dulet* or prime minister, and disposes as he pleases of the legacies left to *Mosques*, which always turn to his profit. There is no difference betwixt the *Persian Nabab* and *Turkish* great *Muphti*, but that the former may pass from religious to civil employments, which the latter may not; and therefore it has often been seen that the *Nabab* or *Sedre* has been made *Aimab-Dulet*. He has two judges under him, call'd the *Seik* or *Axond*, and the *Casi*, who decide all religious matters, grant divorces, and are present at contracts and publick acts; appointing their deputies in all the cities of the kingdom.

The Pistb-namaz.

He that calls to prayers is call'd *Pistb-namaz*, whom the *Turks* call *Iman*; but the *Persians* do not cry out to call to prayers from the top of the towers, but from the cupola or roof of the *Mosque*.

Mullabs.

The doctors who are every Friday to expound the *Alcoran*, are call'd *Mullabs*, and by the *Turks* *Hodgrias*. These are most compleat hypocrites, for they always walk gravely, talk seriously, and when they meet any body, seem to pray; laying a cloth on the ground, and upon that a stone or clod of earth brought from *Mecca*, which they kiss now and then. This superstitious relic is us'd by all the *Persians*, as are also certain little silver pipes ty'd to their arms with some sentence of the *Alcoran* in them, or such like trifle.

Persian belief.

The *Persians* like the *Turks* believe, that after they are bury'd, two angels, the one call'd *Anachir*, and the other *Monchir*, come and raise them to life as far as the waist, to examine them what good and evil they have done; and use them well or ill accordingly, till *Saeb-el-Zaman*, or the lord of time comes,

VOL. IV.

who will kill *Dedgar*, or antichrist, whose followers shall go to hell, and if repenting they turn back, two horns shall grow out of their heads; after this immediately will follow the resurrection of the flesh, which they call *Maavedet-Hurbe*, the souls and bodies uniting to go before the great judge. But they say all men must pass the bridge of *Poljerat*, which is sharper than a knife; and that the *Mussulmans* will pass as nimble as birds, and the infidels at first step will fall under the bridge: where there is a river of fire and abundance of devils, who have hooks to draw them in; which opinion is so fixt in the hearts of the *Persians*, that if any man denies another what is his due, he presently says, he will meet him at the bridge of *Poljerat*, and laying hold of his garment, will not let him pass till he is paid. They believe the porter of heaven, whom they call *Rufian*, will open the door to them, near the great fountain, call'd *Kofer*; where their prophet will give them to drink of that water, out of a large ladle; and that then they shall have a great number of beautiful women, created purposely for that end, and delicious meat of several tastes; but that the enjoyment of the women shall not proceed beyond imbraces and kisses, and the meat shall digest in odoriferous sweats, without turning to excrements, as it does in this world. These follies were a great diversion to me, when I was in the company of a *Persian* lord, and had these questions put to him.

They say their women shall be in heaven in a place apart from the men, and of women. to this purpose the prior of the monastery told me, that some *Portuguese* being much importun'd by a *Mullab* to become *Mabometans*, he using this argument, that unless they profess'd his faith they would not go to the true heaven, but to that separate place where the *Persian* women were; they answer'd they would be satisfy'd to be there, and so they shak'd off the *Mullab*. He being afterwards reprov'd by the *Cadi* for his folly, defended himself by saying, that another paradise would be made for the women, that they might not be among the christians.

The *Persians* marry their children ve-wifes, ry your. They are allow'd by their law four lawful wives at once, one of which is the true one and chief, and call'd *Zana-Codesi*, the others they call *Motba*. Besides they may have as many concubines as they will and can maintain, taken from the quarter of the *Whores* who are call'd *Caipe*, which is in *Isfahan* known

Pp

by

GENELLI by the name of *Bazarnouche*, which says a duty to the king. They are taken for a certain time, and the contract made before a judge. When the time is expired they are to continue chaff forty days, to see whether they are with child.

They may also make use of their slaves; and the children born of either of them are counted legitimate, as to inherit; but with this difference, that the females have but half the portion of the males.

Love.

The *Persians* are so amorous, that sometimes to show their love, they brand their arms with red hot irons, like beasts; perhaps to express that no torment is so great as that they endure in their mind. A *Persian* lord, my friend, took a pride now and then in showing me several such marks of love he had on his arms, made for the love of a concubine, on whose account he was perpetually at variance with his wife.

Marriages.

Before the wife is carry'd home she has her cloaths sent her, and the husband appoints her portion. On the wedding-day, or rather the night, the bridegroom goes to fetch her, attended by his kindred and friends a horse-back, with lighted flambeaux; and is met by her half way, with the like retinue of women, who carry the bride's apparel, with musick of drums, and trumpets. Being come to the bridegroom's house, a *Mullah* reads the matrimonial contract, and having perform'd the nuptial ceremony, the women divert themselves the rest of the day in one apartment, and the men in another. This puts me in mind of *Tavernier's* mistake, who *Tom. I. Chap. 18. page 719. says, That if the Bridegroom has promis'd an extravagant Portion to gain the Bride, when she comes, he shuts the Door, saying he will not take her at that price, and will not receive her unless an Abatement is made and a new Contract sign'd.* For several *Persians* of quality told me there was no such thing, but that in such cases the bride's parents, or kindred understanding how impossible it is for the husband to make good his promise, moderate it; or else the judge does it that the man may not be begger'd. If in process of time they happen to disagree, the woman demands her dower call'd *Tilac*; and being agreed to part, they go before the *Casi*, or *Efsee-Iflon* who is the doctor of the law, and in his presence they dissolve the matrimonial knot, and remain free. This may be done three times; after which the woman cannot be receiv'd again, unless she has first been taken by another and put away. The husband

may put her away the second day, giving her the *Tilac*; and this is us'd among all the *Mabometans*. Father *Francis of St. Joseph*, once prior of the monastery where I lay, told me a comical passage that happened at *Bassora* whilst he resided there, as the king of *Portugal's* envoy. *An Arabian lord falling out with one of his wives, gave her the Tilac; but love making him soon repent, and there being no having her till she had been with another, he look'd out for the opportunity of some stranger to lie with her. This being told the Turkish Bassa who was very amorous, he caus'd a stranger be lighted on to be richly clad, and sent him to the Arab, as it were about some other affair. He seeing an opportunity offer'd, of bringing about his design, after inquiring into his condition, gave him an account of his amorous distemper, and how he might be cur'd by his means. The place and time being agreed on without any difficulty, upon promise of perpetual fecundity, the stranger got the woman into his hands, and immediately deliver'd her to the Bassa, who put her into the Aram. The stranger was never heard of more, and the deluded Arab could never recover his woman.*

As for the *Persian* habit the *Cobayas*, Habit or vests before-mention'd, reach down below the knee, and have straight sleeves down to the hand-wrist. They do not use buttons, but knot them with ribbands under the left arm, and under the right hip. Persons of quality wear it of silk, or cloth of gold, with a silk sash that has gold flowers at the end of it; and over that another of silk and extraordinary fine woollen, which costs more than if it were cloth of gold. They wear shirts of colour'd silk, or of cotton of several colours; as also breeches which reach down to their ankles, and close, for they wear no drawers. Their turbant is made of very fine silk of several colours, embroider'd with gold and silver at the edges, and stands up like a fan upon the forehead. These turbants are very heavy, and some of them have so much gold about them, that they cost seven or eight hundred crowns of our money. Upon the vest some wear a loose doublet, or waistcoat without sleeves, call'd *Curdi*, in winter lin'd with fables, or little lamb-skins, brought from the province of *Korajon*, curiously curl'd. In the hard winter they add a long woollen robe down to their feet, with long sleeves, wove all in a piece, to keep out the rain the better; but some persons of quality wear them of *English* cloth, or cloth of gold, lin'd with ermins; they being very extravagant in their expences. At their sash hangs a dagger, which

which they call *Cangiar*, and the nobility sometimes has it set with jewels. Their hose are all of a width; some wear them of cloth of gold, or woollen cloth, better shap'd; but the peasants wrap coarse cloth several times about their legs. Round the edge of their socks, towards the ankle, they sew a piece of leather, that it may not be torn by the shagrine shoes. These are made like our slippers, with a sharp iron four fingers high under the heel.

The *Persian* women differ little in their habit from the men; for their vests are made open before, reaching but half way the leg, and their sleeves come down to the wrist. On their head they wear a little cap, adorn'd with precious stones, if they be people of quality, from which a veil hangs down behind, together with their tresses, their breeches and stockings are like the mens.

GEMELLI
1694.

CHAP. III.

Of the Civil Government, the Manners, and Funerals of the Persians.

IN *Persia* justice is done with brevity and severity, without so many counsellors and solicitors, as are us'd in *Europe*. The *Chams*, or Governours, have the administration of it in the provinces; and they appoint a *Deroga*, or criminal-judge in every city, who has under him an *Atas* to execute his orders. Besides the king appoints a *Divan Begby* and a *Kalantar*, who is to look that the subjects be not oppress'd by the *Cham*.

Murderers Murderers are punish'd speedily and with rigour, for the *Divan Begby* delivers them up to the parties aggriev'd, and they leading the criminal to the place of execution, put him to death with their own hands, as they think fit. It is allow'd to compound for money, but it is so dishonourable to forgive the wrong on that account, that this is seldom or never practis'd.

Robbers. High-way robbers can expect no mercy, and are punish'd several ways. Sometimes they hang them to a camel's saddle, with their head down, and then rip open their belly. Sometimes they immure the criminal up to the neck, and leaving him a pipe in his mouth for his last comfort, let him die in that miserable manner; so that somebody passing by, in compassion cuts off his head. Some are basted with burning bacon, and then their flesh cut in pieces and distributed about the publick places; besides many other torments, horrid even in the relation. 'Tis true these robberies seldom happen on the roads, because of the guard kept by the *Rattars*; but when they do, the *Cham* of the province is oblig'd to pay the value of what was stole, after four months and ten days allow'd him to find the robber. Some *Chams* pay immediately, that the

complaints may not come to the king's ear.

As for thefts in cities, the criminal is ty'd by the feet to a camel's saddle (as was said before) and his belly being ripp'd up, he is so carry'd about the publick places, the cryer proclaiming that the king has punish'd him for such an offence. After this round, if he be not yet dead, they hang him up at the next tree, and when he has expir'd they bury him. There is also particular care taken to punish all insolencies committed in taverns, stews, and other publick places.

As for what concerns provisions, there is a *Motbesheb*, or superintendent of them, with four assistants, who every first day in the week sets the prices of all things, by weight, not measure. If any man be taken selling but a farthing dearer, the common punishment is to put on him the *Taktekolas*, which is a cap with a small bell hanging to it, and lead him about the city, as if he were whip'd; after which he pays a fine, and is bastonado'd on the feet. The weight of gross things, as wood and the like, is call'd *Buttiman*, and is about twenty five pounds of ours. The small weight they call *Muscal*, whereof seventy two make a pound.

Having spoke of the *Persian* government, it will be proper to give an account of all the *Chams* and *Viziers* the king sends into the provinces, that the reader may form some notion of the vast extent of that empire. A *Persian* lord my friend, nobly born, and actually in the king's service, whose behaviour was his greatest recommendation, with much difficulty procur'd me the following list out of the royal archives.

The difference betwixt *Chams* and *Viziers* is this, That the first have the command of the soldiery, besides the civil and criminal government; and the latter a more limited power; so that in some cases they cannot give sentence of death, but must send the criminal to the next *Cham*.

Manners
of the *Per-*
sians.

The manners of the *Persians* differ much, and are quite opposite to those of the *Turks*; for they are civiliz'd, meek, peaceable, modest, grateful, generous, enemies to fraud, and lovers of strangers. They bear no hatred, like the *Turks*, to the christian habit and name, but are courteous and affable to them; so that every man may be clothed as he pleases, and either ride or walk a foot along the streets, without danger of being scoff'd at; nor are they forbid wearing green, as in *Turky*. Among

other usual courteous expressions among them, they commonly say: *I sacrifice or devote my self to your will. I wish the apples of my eyes might oblige you to tread on them*; or, *I am your slave, it is your part to command me*, &c. When persons of equal quality meet, they salute one another shutting their right-hands, and at the same time lifting them up to the crown of their heads, in token of love and esteem; to superiors they lift up their hand to the head, and then lay it on the stomach, bowing. On great festivals they visit, wishing one another many of those happy days; and great men receive these compliments in their houses from their inferiors.

Every man makes his court to gain the favour of the great ones, to obtain some employment of the king; espe-

especially to carry the *Calaat* to *Chams* of provinces, who they are sure will make them a great present. Every *Cham* when he receives this present from the king, goes six miles out of the city into a garden, to meet the messenger, attended by the chief nobility and officers of the country, with several musical instruments. As soon as ever he sees him at a distance, he bows, and kneels down to pray for the king's health. When he has done praying, the messenger puts the *Calaat* on him, which at most is a garment of silk and gold; and sometimes, in token of greater affection, there is added a sash and turban. Being thus clad, he goes to the king's house, followed by the people, there he kisses the threshold of the door, and prays again, and then goes home, to make a noble entertainment for the prime nobility, for joy of the honour receiv'd.

Persians
revenge-
ful.

The *Persians* wink at injuries, to wait an opportunity of being reveng'd. They are great flatterers, ambitious of honour, and easy to be persuaded; so that the catholic missionaries could with great ease prevail with them to imbrace our faith, were the free exercise of the mission allow'd in *Persia* among the natives. I remember, I several times saw a *Persian* lord, whose house was always open to the *Augustinian* fathers, kneel in the church, to hear the divine office, with more devotion than the catholics themselves; and reprove others who did not make their obeisance to the altar; and yet he was a *Mabometan*.

Diver-
sions.

They seldom play, because *Mabomet* forbid it. They do not usually divert themselves with walking, like the *Europeans*, but sitting after their manner to enjoy the purling of some stream, or the pleasure of a garden. The men never dance, but there are women whose trade it is, that are hir'd on festivals. There are mountebanks, but extraordinary apish, and not at all pleasing. The greatest pastime of youth is to make a hollow past-board case, lapp'd over with some sort of skin, which they toss up into the air with a large rope, when the wind blows, and it sounds like the pipe of an organ; the *Portuguese* call it *Papagayo*, or parrot.

Walking.

They never pray till they have wash'd in running water; or if they cannot come at it in the cistern, every man has it to this purpose in his house. When they have had to do with their women, they go to wash at the bath, which they may do till two hours after sun-rising, the rest of the day being for the women.

VOL. IV.

They wear no long beards, like the *Turks*, but those that belong to the law, ^{1694.} now and then clip it with scissers. The courtiers and soldiers shave, leaving long whiskers, and under the lower lip a patch like a swallow's tail hanging, to make their countenance more honourable or dreadful. Old men dye it black, which holds several days. Other youths pull out the hair of their cheeks to have their skin look fine.

They give much credit to superstitious observations; and therefore if two friends should happen by chance to touch feet, they believe they shall fall out, and therefore each of them immediately takes the other lovingly by the hand, and then each lifts his own up to his head. They look upon it as an ill omen to meet with any melancholy persons, when the new moon is. In short they are so much addicted to superstition and divination, that they never go about any thing but at the hour appointed by the astrologers, who are look'd upon as oracles by them. Therefore no man neglects buying the almanack, or *Tacim*, which sets down what time is lucky to put on their cloaths, go to the bath, purge, and do other things; as also whether the year will be scarce or plentiful, diseases and wars.

They use a sort of divination by even and odd numbers, like geomancy. I have seen the very women make judgments of things to come, upon plants on which the planets and fix'd stars of the first magnitude were engrav'd.

They circumcise their sons very young, like the *Turks*; and make barren women swallow that part which is cut off, as an excellent remedy against barrenness.

The *Persians* have no surnames, but Titles. say such a one the son of such a one. They give learned people the honourable title of *Mirza*, and soldiers that of *Bech*; but they often mistake, and call ignorant persons *Mirza*. Those that are descended from *Mabomet* are call'd *Sabet*, which signifies as much as lords among us.

Sports, and particularly hawking is much us'd among them, so that those who are well to pass keep great numbers of those birds, as also dogs and horses. They take tobacco a different way from the *Turks*; for under the bowl it burns in, is a little bottle full of water, which makes the smoke passing through it come cool to the mouth, and this pipe they call *Caliana*.

Besides tobacco, which no person whatsoever forbears, they use

Q9

Opium,
and

GEMELLI and from it borrow that stupidity and
1694. drunkenness they cannot have from wine,
which is forbid them. They take it
even to the quantity of half a dram,
which an *European* could not take at
fifteen times, without danger, which
makes them pale, cold, and worse than
mad. They use much coffee; and an-
other liquor to make them merry, call'd
Koknar. They go to the shops where
it is sold, or *Koknar-kones*, and after
drinking a great deal, do the most ri-
diculous actions in the world, jeering
and abusing one another; when the
strength of the liquor is over, they are
as good friends again, as if nothing had
happened.

Eating
and drink-
ing.

In eating they use no spoons, but
only for liquids. They do not drink
till they have done eating; and for both
uses have vessels of copper and earthen-
ware, because the laws forbid silver.
The king at his table is serv'd in gold.

In other respects they are temperate.
The poor people are satisfy'd at noon
with *Azeri*, which is bread and curds,
fold in skins, and with fruit according to
the season; at night they eat pilau.
The gentry and richer sort, eat roast
meat and pickles; putting a whole sheep
or lamb into a little oven, hanging over
a great dish of pilau, that the fat may
drip into it. The poor people, if they
will, buy it at the taverns, because of the
scarcity of wood there is in *Isfahan*. The
bread would be excellent were it bak'd
after the *European* manner; but the
dough flatt'd like a cake, being put into
a copper vessel made hot, it can never
be good.

Day how
divided.

They divide the day into four equal
parts, beginning at midnight; and at
every one of them except noon, there is
a displeasing noise of drums made from
some eminent place of the city.

Months.

In religious affairs the *Persians* make
use of lunar months, the first whereof
they call *Muferram*, the second *Sefar*,
the third *Rabrah-al-avel*, the fourth *Rabra-
al-axer*, the fifth *Gemad-il-avel*, the sixth
Gemad-il-axer, the seventh *Regeb*, the
eighth *Sciaabon*, the ninth *Ramazan*, the
tenth *Sciaual*, the eleventh *Zikade*, the
twelfth *Zilagge*. But the astrologers count
by solar months two several ways, ours
and the *Egyptian*.

Year.

Their year call'd *Nuries*, begins up-
on the day of the vernal equinox. Then
all the great men go to with the king
a happy new year, and send him some
exquisite curiosity, or at least *Venetian*
gold crowns, which the absent *Chams*
are also oblig'd to do. The nobility
cloath all their servants and slaves, bor-

rowing many if they have it not, that
they may not make an ill omen for all
the year that is to follow; and this con-
ceit is so deeply rooted in their minds,
that there is no wretch but endeavours
that day to be clad all new from head
to foot. There is besides a great ex-
pence in eating and sending presents to
friends.

The *Persians* being lovers of learn-
ing, they have their colleges, or *Medres*,
where the sciences are taught. Here the
students have only their lodging, and the
Medres or masters expound to them
those books they read. They are par-
ticularly addicted to poetry, and have
an excellent genius for it. They have
choice *Arabick* books, some of them
translated into the *Persian* tongue, but
all written, they having no press, and
in a curious character, for they write
well after several manners, either in ci-
pher or otherwise. Some value themselves
upon writing eleven several sorts of
hands, or characters, which they make
use of according to the business in hand,
or court they have to do with. The
first is call'd *Aestalik*, the second *Curicate-
Nesk*, the third *Sciakeste*, the fourth *Ka-
ber*, the fifth *Talik*, the sixth *Rugum*, the
seventh *Sols*, the eighth *Kaler*, the ninth
Serenk, the tenth *Antumi*, the eleventh
Zaterraka; I have copies of them all
made on half a sheet of paper, by that
Persian lord my friend.

As for languages the gentry use four,
viz. the *Persian*, which they call *Belik*
or sweet; the *Turkish* call'd *Scia-fee*, or
haughty; the *Arabian* *Geficub* or elegant;
and the fourth corrupt, us'd by the pea-
sants call'd *Valaat*.

The *Persian* is of itself barren in words,
and therefore borrows many from the
Arabick, which is the language of the
learned, and in use for all sciences. But
at court the king himself always speaks
Turkish, as the *Great Mogul* does *Persian*
at his. The kings of *Vizapor* and *Gol-
conda* used the same language before
they were made prisoners by the *Great
Mogul*.

The best handicrafts in *Isfahan* are the
silk weavers, some of whom ingeniously
stick flowers with gum on their stuffs.
They also work well in steel; because
this metal which formerly went from
Golconda, where the best is, to *Damaj-
cus*, is now carry'd all to *Isfahan*, where
they now temper as well as at *Damaj-
cus*, with vitriol. Their works in sha-
green and earthen-ware, are nothing
worse; the best of which come from
the country about *Kerman*, and are white
both within and without, but do not
grow

grow hot so soon. On the other side the silver and goldsmiths do nothing to the purpose; and carpenters worse, having no other tools, but a pitiful saw, an ax, a hammer, a chisel, and rarely a plane.

Silk.

The greatest trade in *Persia* is that of silk of the province of *Ghilon*, and other places. The *Dutch* buy abundance, and what remains they weave, part whereof is also fold out of the kingdom. Besides this the *Pistaches* of *Cashin* and almonds of *Yezd* bring a great deal of money into *Persia*; as does the shagreen, *Turkey* leather, dry fruit, and painted stuffs, the *Dutch* carry to the *Indies*, *Japan* and *Europe*; and the camels, horses, mules, and lambs that go into *Turkey* and other parts.

Women.

The women in *Persia* are extraordinary beautiful, because they are brought from the provinces of *Circassia*, *Mingrelia*, and *Georgia*, and from the frontiers of *Poland*, *Muscovy*, and *Great Tartary*; and this by way of trade, the *Persians* besides their wives, and hir'd women, buying slaves to keep in the *Aram*. White and black eunuchs keep them in their apartments; and go abroad with them to keep off the people. In the streets they go cover'd with a long cloth, so that they look like ghosts.

Sickness.

When any *Persian* is very sick, they light several fires on the top of the house, to give the neighbours notice, that they may pray for his health. When he is dead, they make dreadful cries and howling; especially the women, who now and then report the dead man's good actions and qualities, and then give a shriek by fits, that is hideous to hear. Next they find word to the *Deroga*, that

such a man is dead, for him to seal the license to wash his body. This done, the *Mullabs* come from the *Mosque*, with long poles, to which there are tin or iron plates fastned, or some bit of tafeta, and carry him to the grave, crying all the way *Allab, Allab*. The people that pass by help to carry the beer, at the request of the kindred. At the funerals of great men, several horses fiddled follow, one carrying the turbant, another the scimiter, another the arrows, another the bow, and all those things, that may tend to their honour. The grave is commonly made in the great church-yard, call'd *Carbeston*, two foot wide, and six in length and depth. The body being lain in it, with the face towards *Mecca*, they place two stones on each side the head, that it may not stir, and four more about the grave, which then they fill up with earth. For persons of note they erect a covering, or roof, or little cupola upon four pillars; nor is it true, as *Tavernier* says, That they bury their arms with soldiers; but those that are able to distribute meat to the poor. The *Mullabs* also take care to go eat at the dead man's house, besides the payment given them for the funeral. To conclude, the kindred and friends go for several days to condole with the heir.

Only soldiers are forbid leaving pious legacies (such as we have before spoke of in several places) and so those that have been officers of justice, or manag'd the king's revenues; because he is their universal heir, allowing the dead man's eldest son some small portion of the estate, and raising him to the same degree, if he is capable of it.

CHAP. IV.

Of the Flowers, Fruit, Minerals, living Creatures, Coin, Arms, Climate, and Limits of Persia.

Flowers.

IN *Persia* there are flowers of all sorts, and the untill'd fields are full of most beautiful tulips; but above all, it abounds in roses, from which they distil water, and send it into *India*, and other countries.

Fruit.

The fruit is much better than ours in *Europe*, and there are all sorts of it; but the melons have a most singular taste, and exceed those of *Parabito*, in the kingdom of *Naples*, which are counted the best. There are six several sorts, which ripen at several times. The first of them call'd *Gbermeik*, are yellow, and serve to purge the body, nor do they

any harm, tho' a man eat never so much of them; there being *Persians* that will eat thirty pounds in a day. The second which have a green rind, are better tasted than the first, and call'd *Phost-Sabs*; the third *Fasteri*; the fourth *Anagabati*; the fifth *Belgne*; the last *Carpusa-pais*, or autumn melons, which keep all the year about.

Melons.

The peaches are well tasted, and good, for tho' I eat never so many, I did not find they did me any harm, notwithstanding ancient writers say that they are venomous. The figs are good, but not found in all parts of the kingdom, by reason

Peaches:

GEMELLI 1694. reason of the cold of some countries. Almonds there are of several sorts, such plenty, and so good, that they make a trade of them, as they do of the nuts, all about *Indostan*, and the *Portuguese* carry them as far as *China*, which produces none. The country about *Cashin* and *Sultania* yields good *Pistaches*; and in the provinces of *Gbilan*, and *Mafandran*, there are some few chestnuts, olives, oranges, and lemons.

Grapes. Among the rest, there are three sorts of delicious grapes, which they call *Kisimisci*, without any small seeds in them; tho' all others exceed those of the kingdom of *Naples*, which are the best in *Italy*. There is such great plenty of them, that besides what they eat all the year, the wine made of them serves the *Persians*, who from the highest to the lowest are great drinkers, and supplies all *Indostan*, *China*, and other countries. The best and most delicious is that of *Sciras* and *Ted*. In which countries the wine is not kept in cask, as is us'd throughout *Europe*, but in earthen vessels glaz'd within, or else anointed with the grease of sheeps tails. The cellars are not deep, but handsomely contriv'd to carry friends down to drink. To this purpose there is commonly a cistern of water in the middle, carpets on the ground to sit down, and long rows of niches in the wall, with several vessels of different sorts of wine.

Herbs. They have a special method of preserving all the aforesaid sorts of fruit fresh the year about, and particularly a sort of plums call'd *Abuborra*, which are red with some mixture. The best herbs for common use in *Persia*, are lettuce, coleworts, borrag, and spinnage, besides roots.

Mines. As for mines there are some of copper, lead, iron, and steel. In the mountain *Phirusku*, four days journey from *Mesced*, they dig *Turky* stones of great value, of two sorts, the old and new rock. The first sort are kept for the king, being of a more lively and lasting colour. Add to this the excellent fishery of pearls at the island *Babarem*.

Pearls. For serviceable beasts, the *Persians* have excellent horses, good mules, large camels, and two sorts of asses, the *Persian* for burden, and the *Arabian* which are more mettlesome to ride on. For hunting there is store of wild boars, porcupines, red and fallow deer, roes, hares, tigers, lions, bears, and other wild beasts. This is sufficiently demonstrated by *Scia-Abas*, his building a tower in *Ispahan*, with only the bones

of creatures kill'd in one day's hunting, but it must be observ'd that those princes caused the country for forty miles about, or more, to be beset by thirty or forty thousand men to drive all the game to one place. Foxes are counted unclean, and the *Persians* do not only avoid killing or touching them, but will not come near a man that has a garment lin'd in their furs.

There is a prodigious quantity of Fowl. fowls, but particularly of pigeons, wild geese, cranes, ducks, mallards, turtles, crows, herons, and two sorts of partridges; the one no bigger than a quail, and the other like those in *Europe*. The pigeons they keep in towers are taught to decoy the wild pigeons to the dove-cote, or the neighbours; which they often allure by giving them better meat.

They man hawks, and other birds of Hawking prey to kill those birds, and use them also against four-footed creatures, teaching them thus. They use the hawks to feed out of the hollow of the eyes of wild beasts, whose skull and whole skin stuff'd, they preserve to that purpose, that they may look as if they were alive; then they make them move, and by degrees swifter and swifter; so that the bird greedy of food follows them. At last, tying the counterfeit beast on a cart, they make a horse draw it upon a full gallop; and so when the hawk is abroad, expecting to find the same food, he fixes on the living beast's head, and pecking its eyes, gives time to the hunters to overtake, and kill it.

Besides hawks and dogs, they make Onisc. use of a sort of creatures they call *Oniscus*, about the bigness of a fox, very swift, their skins speckled like tigers, and so tame, that they carry them behind them a horseback; but if the hunter through mistake, slips them after their game at too much disadvantage, so that they cannot overtake it, they are so much cast down with shame, that an infant may kill them.

No gold is coin'd in *Persia* (as was Coins. said above) except at the coronation of kings. There are three sorts of silver money; the *Abassi* worth four *Carlines* of *Naples*; the *Mamudi* worth two *Carlines*; and the *Sciae* worth one; there are also pieces of an *Abassi* and a half, and of two, but they are scarce. These pieces have no effigies on them, but only characters, which on the one side import the name of the king then reigning, and on the other the name of the city where they are stamp'd, with the year of the *Mahometan Epoch*.

The brals money is of several forms, and stamps, for in some places they are call'd *Kasbeks*, in others *Gazes*, forty of which make an *Abassi*. The *Gazes* on the one side have a lion, and on the other the name of the city. The *Kasbeks* are round, like the *Gazes*, but there are also some longish.

Weapons
and fol-
diery.

The *Persian* weapons are for the most part bows, arrows, and scimiters; tho' they know how to manage a musket, and have the use of cannon, and mortars. There is no trusting to their infantry, which may be compar'd to our battalions in the kingdom of *Naples*, but their chief strength consists in horse; for the king upon the least call can raise 150000 good men, upon better horses. But they fight in confusion, without any order. For the sea, they have not so much as an arm'd brigantine.

Climate.

The air and climate differs according to the several provinces. *Edzerbagan* is excessive cold, but healthy; *Mazandran* bad by reason of the standing waters; *Isfahan*, which is almost the heart of the kingdom, is more subject to cold than heat, because of the abundance of snow that falls instead of rain, tho' it is seated in 32 degrees, and a few minutes of latitude. The heat is tolerable even in the dog-days, and not attended with the plague of bugs, fleas, gnats, and other troublesome insects.

Snow.

The snow, as I have said, falls in such quantities in winter, that sometimes it ri-

ses above a stone three spans high, a league from the city, towards the mountain; by which the *Persians* judge of the fruitfulness of the year. In the southern provinces, and particularly at the ports of *Bander-Abassi*, and *Bander-Congo*, on the gulph of *Persia*, the heat is excessive, and hurtful; for it breeds in the legs of *Europeans*, a sort of slender worms fifty or sixty spans long, which are afterwards drawn out by little and little, in several days, roll'd on a stick. The great men retire at that time to the cool neighbouring mountains.

Several nations have formerly reign'd *Persian* in *Persia*, and extended their dominion into all the three parts of the world then known. In *Asia* they possess'd *Armenia*, *Hornij*, *Persia*, *India* on this side *Ganges*, *Assyria*, *Syria*, the lesser *Asia*, and the island of *Cyprus*. In *Africk* they had *Egypt*, part of *Ethiopia*, and *Libia*. In *Europe*, *Tbra-* *Proton*, *cia*, and *Macedonia*; besides the islands *Grog*, *lib*, of the *Egean* sea, belonging both to *Eu-* *6*, *rope* and *Asia*. Under the *Partbian* monarchy the *Persian* empire contain'd all that lies between the rivers *Indus*, and *Euphrates*. At present, to come to the matter in hand, that is, to modern affairs, it is bounded on the north by the *Caspian* sea; on the south by the ocean; on the east by the *Mogul's* country, and on the west by the *Turkish* dominions, from which it is parted by the rivers *Ti-* *gri* and *Euphrates*.

CHAP. V.

The Genealogy of the Family now Reigning in Persia.

Tamerlane.

AFTER *Tamerlane* had routed *Baja-* *zeit's* army, and made him and his wife captives; he carry'd his victorious arms into *Persia*, and prescribing laws to those people by the point of his much dreaded sword, he became in a short time the richest, and most powerful prince in the east. His cruel inclination not being satisfy'd with the spoils of nations subdu'd, he drove away many thousands of prisoners out of *Caramania*, with a design to put them to death upon the first opportunity. But it was the good fortune of those wretches, that when he came into the city *Ardevil*, he found a *Sceik*, whose name was *Aidar*, who liv'd with the reputation of sanctity; and growing familiar with him, he not only granted him the lives of all those captives, but the dominion over them. The good *Aidar* having obtain'd this, provided for them

the best he could, and gave them their liberty to return home; in memory of which benefit those people ever continu'd most affectionate to him, and all his race.

The *Persians* finding themselves oppress'd by the *Tartar* yoke from the year 1250, and being consum'd with civil wars, by reason of the divisions in the family of the *Ussum-Cassan's*; *Ismael* the third, son of *Sceik-Aidar*, with the assistance of the *Caramanian's*, taking courage, began to seize the empire; first possessing himself of *Tauris*, which was divided into factions, and afterwards routing *Alamut*, king of *Persia*, or as others will have it *Aluante*, the son of *Tampus*, the son of *Ussum-Cassan*, and killing him with his own hand near that city. This happened about the year of our lord 1499, and from that time forward *Persia* was call'd the kingdom

VOL. IV.

Perfici.

of *Sophi*, as being subject to the race of *Ismael*. Some, tho' without any ground, will have it, that this man was *Usun-Cassan's* grandson, as being born of his daughter, and of *Scaidari*, surnam'd *Arduelle*, of a city of that name he was possess'd of: But the truest opinion is, that he was son to *Sciek-Aidar*, as has been said, the great grandson of *Mortuz-Ali*, *Mabomet's* cousin, and son-in-law.

Tamrus. *Tamrus* succeeded his father *Ismael*,
Ismael 2. and *Tamrus* left for his successor *Ismael* the second, who by reason of his cruelty fate but a short time on the throne, his brother *Mabomet-Codabende*, tho' unskill'd in government, being set up by the great ones in his place. Some are of opinion that this man was blind; but the truth of it is, that his eyes were weakned by a red hot iron his brother caus'd to be held to them, the first day he came to the crown; which custom continues to this day among his successors. After *Mabomet*, *Scia-Abas* the first, his son, reign'd, and was call'd the great, for his extraordinary wisdom and valour, with which he extended the limits of the empire, conquering the kingdoms of *Lar*, *Ormuz*, *Candabar*, and other cities and provinces. Of many sons he had only *Sofi-Mirza* liv'd, who having got a son on a slave; the grandfather grew so fond of the grandson, and so averse to his own son, that he order'd a great man about the court to put him to death. Yet afterwards seeing his head he lamented bitterly, seiz'd all the goods of him that executed the cruel command, and gave them to him he had before banish'd for refusing to obey it. From that time forward, the king's sons have always been kept in the *Aram*. *Scia-Abas* dy'd about the end of the year 1628, having reign'd forty years; and order'd, that after his death the crown should devolve to *Scia-Sofi*, his grandson, which was perform'd by the general of the army, and the rest of the great ones.

Scia-Sofi. *Scia-Sofi* coming to the crown, could not at first give any specimen of his valour, as well because he was yet a child, as by reason of much *Opium* given him by his grandfather to stupify him. The first notable action he did was at *Casbin*, where he order'd the head of *Ali-Cutican* (a man that had deserv'd well from the crown, as having in the reign of *Scia-Abas* conquer'd the kingdoms of *Lar*, and *Ormuz*) and of three of his sons to be cut off. Then making his entry into *Ispahan*, he did the same to seven principal ministers of his court,

whom he had drawn to the palace with fair words, and serv'd the queen-mother in the same manner; so absolute is the power of those monarchs, and so ready the obedience of their subjects. Some may perhaps imagine that the people at the sight of those heads would enquire into the cause why they were cut off, and blame their king's cruelty; but the best of it is, That all the people in the *Meidan*, without any further consideration said, *Since the King has order'd these Dogs to be cut to Death, it is a Sign they deserv'd it.* *Scia-Sofi* dy'd in the year 1642. of hard drinking.

His son *Scia-Abas* the second, succeeded him, having been kept at *Casbin*, so that he did not make his solemn entry into *Ispahan*, till the beginning of the ensuing year 1643. He reign'd twenty one years, with the reputation of a valiant, and noble prince; but so addicted to drunkenness, that one day he caus'd three of his women to be burn'd, because they refus'd to drink more wine. He dy'd of an inflammation caus'd by that vice in the city *Telizon*, and the year 1664.

The great men that were then at court immediately sent the general of the musketiers, with the chief of the astrologers to carry the news to his son; who tearing his garments that moment in token of grief, fate him down at the door of the *Aram*. Then a lord appointed for that purpose drawing near, girt on his sword, saying, a slave of his had obtain'd so great an honour. Then the king put on the *Sofi's* cap, which is wide at the top, with twelve gathers in memory of their twelve prophets, and something like a cylinder, half a span long, and cover'd with the same cloth. Then abundance of drums and trumpets sounding, the people ran into the *Meidan*, every one crying out, *Paschia-Sal-Ameleck*; that is, *I salute thee emperor*; which is all the solemnity of the *Mabometan* coronation, as has been said elsewhere. Not long after, falling sick, by the advice of the physicians, he chang'd his name, and took that of *Scia-Selemon*; as we have related at large in the foregoing book. He dy'd on the 29th of July 1694, whilst I was at *Ispahan*; expressly forbidding his son to practice the ancient but cruel custom of their family, of putting out their brother's eyes with red hot irons.

Scia-Offen ascended the throne on the 6th of August, that same year, at the age of twenty five; and tho' hitherto he has fulfill'd his father's command,

CHAP. VI.

Of the several Employments in the Persian Court.

Atmab-Dulet.

THE prime post in the Persian court is that of *Atmab-Dulet*, who is like the grand vizier in Turkey. All the affairs of the kingdom run through his hands, and he contrary to the Turk, dispatches more business with the pen, than with the sword; nor is he so subject to go to the war, or to lose his head for the least miscarriage. But he is to take the proper measures to govern well, and not propose any thing to the king that may displease him.

Nazar.

The next great officer is the *Nazar*, who has charge of all that is presented to the king.

Metber.

The next is the *Metber* who is a white eunuch, waiting always in the bed-chamber, and about the king's person, with several handkerchiefs in a purse to supply him when he wants.

Mir-akor-Bafci.

The *Mir-akor-Bafci* has charge of the stables, which are also a place of refuge, and takes care that the king's horses be branded on the left leg, to know them from others; and that none of 40000 soldiers the king keeps be missing.

Mirfikar.

The great master of the game is call'd *Mirfikar*. He looks to the hawks, and has under him all the officers that belong to the hunt.

Segon-Bafci.

The *Segon-Bafci* has charge of the dogs, and other beasts for hunting, and is subordinate to the *Mirfikar*.

Sindar-Bafci.

The *Sindar-Bafci* is head of those that keep the saddles, and hold the stirrup, when the king gets a horseback; he is also call'd *Ozangu-cursfici*.

Kebisi-cursfici.

The *Kebisi-cursfici* carries the king's sword.

Oriage-cursfici.

The *Oriage-cursfici* carries the bow and arrows.

Vakanaviz.

The secretary is call'd *Vakanaviz*.

Kaf-nadar-Bafci.

The *Kaf-nadar-Bafci*, is in the nature of a treasurer, that keeps all the money in the king's coffers.

Agati-Bafci.

The great steward is call'd *Agati-Bafci*.

Kasim-Bafci.

The king's first physician is call'd *Kasim-Bafci*, by whose advice the others are receiv'd.

Mib-mandar-Bafci.

The master of the ceremonies or introducer of ambassadors is call'd *Mib-mandar-Bafci*.

Monagem-Bafci.

Monagem-Bafci, is the chief of the astrologers, by whom, as I said before, the king is rul'd in all his undertakings.

The *Divan-Beg*, is supreme judge both *Divan* in civil and criminal affairs, and has his court in the king's house. He is judge of appeals from all provinces in the kingdom, and receives informations against the *Chams*, and other great men.

The *Deroga* is under the *Divan-Beg*, to whom all appeal that are wrong'd by him. He punishes thieves and such that are guilty of capital crimes.

The *Sofragi-Bafci* is he that lays the *Sofragi* cloth of gold on the carpet before the king.

The *Sciraci-Bafci* is to provide the king's cellar with wine.

The *Mefcaldar-Bafci* is chief of those that carry flamboys. He furnishes the court with wax-candles; and takes care that the gold lamps in the royal hall be supply'd. To him belong all the fines laid on those that play at cards and dice, which are forbid by their law.

The *Kavergi-Bafci* has charge of the coffee and rose-water.

The *Giara-Bafci* is the surgeon, who bleeds and shaves the king's head.

The *Capigi-Bafci* is head porter.

The *Meledegiar-Bafci* keeps the king's cloth, and has care to deliver it out to the taylors to make his cloaths.

The *Gelodar-Bafci* is chief of the foot-men.

The *Mirab* is the overseer of the water-towers, who get considerably by the country people, because it is his business to distribute the water for watering the fields.

The *Zegber-Bafci* has power over all those that work carpets with gold and silver, and cloth for the king's household. This is done in the place call'd *Karkron*, where they also make scimiters, bows and arrows, silver rings, because the *Mabometans* may not say their usual prayers with gold rings on their fingers, and they paint in miniature on a sort of vernish made of gum-mastic, and a mineral oil, found not far from *Sciamaki* on the *Caspian*-sea.

The *Nakkase-Bafci* is head of these painters or limners.

The *Negear-Bafci* is nothing but the chief of the king's carpenters.

The *Ambardar-Bafci* keeps the grain and other provisions for the king's own use.

The

GEMELLI
1694.
The
Odunci-
Bafci.

Tufcamal-
Bafci.

Four ge-
nerals.

The *Odunci-Bafci* keeps the wood to burn. All these mechanicks have several assistants under them, who have flesh, butter, rice, and spice allow'd for their daily maintenance.

The *Tufcamal-Bafci* is supervisor of the king's kitchen, and commands those that are to serve at table; whence he always takes the best dish.

In war the king of *Persia* is serv'd by four sorts of soldiers, each of which has its own general. The first is the *Persian* commanded by the *Saper-Salar*, whose commission is worth above 20000 tomans a year. The second is of the *Corseis* or *Kesefbafci*, that is, *Read-head*, because formerly they wore red caps, who make a body of 22000 good soldiers; their general is call'd *Curci-Bafci*, and has about 15000 tomans pay. The inferior officers among these soldiers are the *Mimbafci*, who command a thousand men, the *Jusbafci* a hundred, and the *Ombafci* ten, every foldier has fifteen tomans a year pay. The third sort is of the *Gulams*, or the king's slaves, who for the most part are *Georgian* renegades, or of other nations, who reckon that slavery a great favour, for the allowance of five, or at most eight tomans a year. Their general is call'd *Gular-Agafi*. They are arm'd with scimiters, bows, arrows, coats of mail, and head-pieces. The king sometimes gives them good employments for their lives, and sometimes when they behave themselves well they are continu'd in their sons, so they be men when their fathers die. The *Tufinkgi* compose another body of 50000 men. These are peasants, who fight with musket and scimiter, and have four or five tomans pay. They being generally very ill disciplin'd, the *Chams* of the several provinces make them exercise every three months. Their general is call'd *Tufinkgi-Bafci*.

Guards. The *Efcek-Agafi* is commander of two thousand *Kescekijci*, or the king's peculiar guards, newly brought up, who carry such a heavy musket that it looks more like a falconet.

Artillery. The *Tapigi-Bafci* is general of the artillery, whereof the *Persians* have some small stock, but only in the frontier places; for we said before they have no fighting ships, and those vessels they make use of on the gulph of *Persia* and *Caspian-sea* against the *Uzbeks* and *Kalmuks* are very ill provided.

The *Chams*. The *Chams* or governors of provinces, and all the officers of the king's

household are chosen from among the *Corseis*, or *Gulams*, because they are well shap'd, brave, and of good countenances, which the *Persians* are not, for if they have any of these qualifications it comes to them by the mixture of blood with the *Georgians*, or some other nation dwelling on the *Caspian*, or black-sea; and therefore the king himself, and the great ones endeavour to get children by some renegade *Georgian* woman. This employment of the *Chams* is one of the best a man can wish for, because they are fear'd and honour'd like so many little kings. Their revenues are seven or eight thousand tomans a year, and they continue a long while unless they be found guilty of some heinous crime. 'Tis true at the *Nurus* or beginning of the year they must make the king a considerable present; and every one be at the whole expence of his kitchen for a week. Those provinces where the king has taken away the title of *Chams*, to save the useless expence of his revenue are under governors call'd *Asses*.

Now follows the second rank of those The No. officers, who have the charge of religi- bab. on, administer justice, and inspect accounts, and as in temporals the *Atmaib-Dulet* is the chief, so in spirituals the *Nabab* or *Sedre* sits as supreme with two inferior judges, the one call'd *Sceik*, or *Axond*, and the other *Cafi*, of whom we have said enough in the chapter concerning religion.

The building of every *Mosque* is directed by its *Monteveli*; and every *Mosque* has a *Movazen* to call the people to prayers from the top of it, the words he says when he cries out to them in his language are, *There is but one only God and Mahomet is his prophet*.

In the chamber of accounts call'd *Reveru-Defter-Kone*, the king's patrimony runs through the hands of the *Mosofi* and *Mamalek*. These value the king's farms, most of the land in the kingdom being his, and they let them out yearly, or for lives to private persons; receive all the rents, and enter into their books all the expences on inferior officers. This chamber has its particular *Deroga*, to punish those that defraud the king.

By these several employments and officers, every man may guess how much the *Persian* court exceeds any other of the east, in splendor and magnificence; without my taking the pains to shew it, which would perhaps be offensive to the reader.

CHAP. VII.

The Author's Journey to Sciras.

FATHER Francis of St. Joseph, had persuaded me several times to travel with him to Rome; but finding me fully resolv'd to go on to *Indostan*, he thought fit to take the same course. He therefore hir'd twelve mules of a *Ciarvattar* of *Sciras*, for us and our baggage, and we set out two hours after night, on *Wednesday* the 1st of September; father Francis, father Constantine of the Holy Ghost, both Portuguese Augustinians, father Severinus of St. Joseph, a barefoot Carmelite of Naples, and my self; all of us taking our leaves of the other fathers with tender affection.

Being out of *Ispahan*, and its neighbourhood, we held on our way by moon-light, and travelling nine miles in four hours, through a plain but barren country, came to the little village of *Spaneca*, where we were forc'd to lodge that night in the mud caravanfera, and to stay all *Thursday* the 2d, for the load of wine left at the dwelling-house of the Dutch, through the carelessness of the *Ciarvattar*. In this village king *Scia-Abas* gave many lands to a Persian nobleman in exchange for the two villages of *Ispahan*, taken from him when he remov'd his court from *Sciras*. They say that lord was so powerful, that the king dismounted when he pass'd before his house; but I will not vouch for the truth of it. I having kill'd a great many pigeons, and the load of wine being come by noon, we sup'd merrily at night.

Then mounting an hour after sun-set, we travell'd twenty four miles in ten hours to the village and caravanfera of *Magar*, suffering much by the cold and wind. Here of our own free-will we gave the *Rattars* four *Abassis*, but would give nothing to two wretches that guard'd the way in the mountains. The caravanfera here mention'd, was half a mile from the village, built twelve years before that time by *Scia-Seleman*, and truly the structure is magnificent, being of good brick, adorn'd with long rows of trees, and the game about it preserv'd for the king.

Having rested all *Friday* the 3d, we set out at the same hour as the day before, and after sixteen miles riding in six hours, through a barren country, came to the little mud city of *Cumucia*, seated in a fruitful plain abounding in ex-

cellent fruit. We staying here all day GEMELLI 1694. the fourth, I diverted my self with shooting of pigeons. The knavery of the *Ciarvattars* was the cause of our travelling by night, because they slept by turns on their asses, as found as if they had been in down-beds, nothing concern'd that we lost our sleep. To remedy this evil, I resolv'd with father Francis, to threaten to beat them, if they ever slept again upon the asses; for then they would certainly travel by day. They taking no notice of the warning given, had good correction that night, being taken in the fact; and from that time, as we had foreseen, they began to travel by day.

Saturday the 4th, therefore we set out two hours before night, and riding sixteen miles in six hours, over a barren country, stopp'd at the caravanfera of *Maffur-Bek*, near which there were two country-houses. *Sunday* the 5th, we took our journey about the same time, after travelling ten miles, pass'd in the night by the little village of *Annabat*, where besides the caravanfera is an earth fort, made by the king. Advancing as many miles further, we took up at the good caravanfera of *Yesacas*, seated on the bank of the river; tho' the other dwellings are seated on the rock, and in such manner, that the place is suppos'd to have been formerly a fort. Here we found better bread than at *Ispahan*, the inhabitants being all well to pass. That night the *Ciarvattars* were allow'd to sleep on their assish-bed, in reward for their expedition the day before.

Monday the 6th, we departed at the same time, and travell'd thirty two miles in twelve hours, through valleys naked of all trees, and expos'd to robbers; for which reason *Scia-Abas* built the fort of *Giambet*, in the mid-way, where there is a garrison still kept. At break of day we came to the caravanfera of the village of *Digbirdu*; but finding it taken up, were forced to lie in a ruin'd house, or rather a stable, with our beasts. Nothing troubl'd us but watching to ride by night, and being disturb'd with flies in the day; for we every where found plenty of provisions at reasonable rates; so that we far'd plentifully for three or four *Carlines* of *Naples* money; and the want of caravanfe-

GEMELLI
1694. ra's was supply'd by a portable kitchen
father Francis had furnish'd with all uten-
sils. Thus in short we wanted for no-
thing but snow to cool our drink.

Tuesday the 7th, we had some distur-
bance, upon occasion of father Francis
breaking the head of an *Armenian*, who
very rudely took the part of his compa-
nion, that had cheated him of forty five
tomans. We rested all day in the vil-
lage, father Severinus of *Naples* dressing
the wound; and the rest of us diverting
our selves in seeing caravans of four or
five hundred mules and camels together
pass by; that being the most frequented
road for the trade of *India*.

We mounted at the usual hour, and
six miles from hence pass'd by the ca-
ravanera of *Chenla*; and sixteen miles
further over the river *Ralcuna*, where the
Georgians that came with us, with
the nets they usually carry about them,
took one hundred and fifty pounds weight
of good large fish. Then advancing six
miles beyond it, we lodg'd in the fa-
mous caravanera of the village of *Cus-
chijac*, which signifies dry poison, a cold
place, by reason of the neighbourhood
of the mountains always cover'd with
snow. The country about is cut a-
cross with trenches; the *Persians* using,
wheresoever they find water, to con-
vey it after that manner to enrich their
fields.

While we rested in the caravanera
on Wednesday the 8th, four ostridges, by
the *Persians* call'd *Citor-morgo*, that is,
Camel-Birds, were brought in, and two
wild cows, which the sultan of *Babe-
ren* (a city on the *Persian* gulph, known
for its pearl-fishery) or governour of
the province was sending to the king.
These cows are as big as one of our
calves, but more fat and tender, tho'
they feed on straw. Their colour is
whitish, except the tail and feet, which
are black; and on the head there are
large black spots; their eyes are spark-
ling; their horns slender, strait, smooth,
round, and two spans long, with sharp
black points.

About sun-setting we proceeded on
our journey on a bad way, being ei-
ther marshy plains, or dreadful barren
mountains; among which we saw the
ruin'd caravanera of *Danbayne*, former-
ly good, but abandon'd because the ca-
ravaneradar, or keeper of it, had been
murder'd by robbers. At length ha-
ving travell'd twenty miles in seven
hours, the last three a steep descent,
we came to the ancient caravanera of
the village of *Aipas*, where the coun-
try peoples houses are little better than
cottages.

Thursday the 9th, we set out again
two hours before night, and rode six-
teen miles in six hours on a plain road
to the caravanera, of a village call'd
Ugiam, consisting of a few mud-houses,
where we alighted. The soil about it
does not want for corn, by reason of
the neighbouring river, over which there
is a bridge of nine stone-arches. Here
I could not make use of some few pic-
ces of brass coin I brought; because,
throughout the kingdom, every province
makes its own, and will not take any
other; nay, in some places they will
not take the silver that is coin'd in an-
other government.

Friday the 10th, setting out at the
same time, we rode eight miles climbing,
and then going down a rugged moun-
tain; then four miles further, we pass'd
by the village and caravanera of *Ma-
musada*; and lastly, twelve miles beyond
that, took up at the good caravanera
of the village of *Mayn*. In this place,
tho' seated among high mountains, we
eat good figs, there being abundance of
several fruit-trees, and good tobacco,
which they carry to *Ispahan*. Father
Severinus fell twice from his mule be-
fore he reach'd this place, the way was
so bad, and being bid to settle the pan-
nel which was come upon the beast's
neck, he answer'd pleasantly, I will
have it suffer for its fault; and left the
mule in that uneasy condition till the
Ciarvattar came up, who was two miles
and a half behind, that is, half a
Persian league. The *Georgians* and *Arme-
nians* our friends, took a prodigious
quantity of fish, and we had our share
of it.

Saturday the 11th, we rode twenty
miles through a plain country, crossing
the river on a noble stone-bridge, a
quarter of a mile long, and lay at the
caravanera of *Abigberme*, five miles
from the bridge, one side whereof which
was like to fall, being then mending.
Near that place was the mountain le-
vell'd by *Alexander*, for his army to
pass.

We set out late on Sunday evening,
to go to a village near *Darius* his pa-
lace. Having lost our way in a marshy
country, the *Catergis* led us in the dark-
ness of the night to pass over a narrow
wooden bridge; but my *Armenian* ser-
vant, who first try'd to pass, falling in-
to the river horse and all, without re-
ceiving any hurt but being well wash'd,
we alter'd our design, following the
common road, and thus having spent
seven hours in riding twenty miles, we
came to the caravanera of *Policor*. Four

miles short of it, we pass'd upon a causeway two miles in length, and yet had much trouble to get a horse and slave belonging to father Francis out of the mire.

Two bales of carpets being dry'd, we set out on Monday 13th, an hour af-

ter night-fall, and travelling twelve miles over rugged mountains, pass'd by the caravanera of *Besciaga*, and proceeding as many miles further, came at break of day on Tuesday the 14th, to *Sciras*.

GEMELLI

1694.

CHAP. VIII.

A Brief Description of the City of Sciras.

Being come at last to *Sciras*, we were entertain'd in the house of the fathers of *S. Teresa*, father *Amadeus*, a *Piemontese*, the superior receiving us with very courteous expressions.

Sciras city.

Sciras is seated in the latitude of 28 degrees, 44 minutes, and 86 of longitude, in a delightful plain enclos'd with pleasant mountains. Coming from *Ispahan*, there is a way twelve miles long pass'd with flint regularly ascending to the narrow path cut out of the rock, which is the passage into the city. This way is adorn'd by a lofty portico, which can be shut against enemies, and defended by a few men; and for a considerable space the walls of the gardens joining to it, being all built alike, tho' belonging to several owners. Among them is a great pool all of stone, in which formerly there were boats to take the air.

Most valuable things in it.

Gardens.

Some will have it, That *Sciras* took its name from the *Persian* word *Scire*, which signifies must, because of the great quantity of wine made about it. As also that all the plain it stands on was in former times a great lake; and that after the destruction of *Persepolis*, the inhabitants thereof, filling it, settled their habitation there; founding the new city. This they are the more inclin'd to believe, because in some parts of it they have found large iron rings, like those they tie boats to on the shore.

The two most valuable things in *Sciras* are wine, and women, whose beauty is so extraordinary, that it serves instead of a portion. Therefore crafty *Mahomet* had good cause, as some say, not to go into it on any account; for being sensible of his own weakness, he knew it might put a greater stop to his victories, than *Capua* did to *Hannibal's*.

I cannot decide whether the gardens of *Sciras* are more delightful to the taste, by reason of the variety and excellency of their fruit; or to the eye, for their long rows of cypress-trees. Thus the mud houses being hid by their green at a distance, it looks more like a wood

than a city, being fifteen miles about, too great a compass for twenty thousand inhabitants.

There are excellent *Bazars* cover'd with long arches; and better squares, caravaneras, and *Mosques*. Here they make glasses, cut cristal indifferently for several uses, dress leather, and print silks. Abundance of money comes to the city for: dry'd fruit, wine, rose-water, oranges without seeds, and fruit pickled in vinegar, wherewith supplies not only all *Persia*, but *Indagan*, from the ports of *Bander-Abassi*, and *Bander-Condo*.

In the mint of this city they coin brass, Government. but seldom silver. The government of the province whereof *Sciras* is metropolis, is one of the best in *Persia*, its jurisdiction extending towards *Ispahan*, as far as the village of *Alpas*, which is five days journey for a caravan.

Tuesday the 14th, I went to see two gardens fallen to the king by forfeiture.

The first is under the hill call'd *Dilgru-Sci*, from which flows a river that runs through the midst of the garden. I found not only the palace, but the trees were all decay'd, and that the water serv'd the people of *Sciras* for whitening of cloth. On this same mountain is a very antient structure, which appears to have been formerly a fort, to serve which there is a well of a vast depth dug in the rock.

The other garden is on the left of the road, coming from *Ispahan*. This is one of the best about *Sciras*, for it has not only double rows of cypresses all about it, but is a perfect regular wood of roses and fruit-trees, being all cut into squares, like a chess-board. But the wall about it was fallen in many places.

The rest of the king's gardens are in a wretched condition, through the neglect of those that ought to take care of them; as is usual in all parts of the world, where they are not afraid of the prince's eye, and the officers are not call'd to justify their proceedings.

CHAP. IX.

*The Description of Darius's Palace, and other Ruins of Persepolis.*GEMELLI
1694.

THO' many, with reason, are of opinion, there is nothing in the world more wonderful, or to be admir'd by curious persons, than what still remains of the magnificence of the ancient *Rome*; yet there are some that affirm all this is nothing if compar'd with the pyramids of *Egypt*, and the works of *Alexander* the great, that last to this day. But those who have travell'd further do maintain that neither the *Roman* nor *Egyptian* antiquities, nor the structures of *Alexander* the great are to be compar'd to the ruins of *Persepolis*, and among the rest to *Darius's* palace. A justifiable curiosity therefore prevailing upon me, on *Wednesday* the 15th I hir'd two horses, for my self and my servant, for three abassis a day, and setting out rode twenty miles before I came to the river and bridge of *Polixan*. In this place there were *Rattars*, but civil, and not troublesome to travellers like those of *Tauris*. Then leaving the mountains we travell'd a marshy road, and at fifteen miles end an hour before sun set, we alighted at the caravanera of the village of *Mirxascon*, half a league distant from *Darius's* palace.

The caravanfedar, or keeper of the caravanera inquir'd of my servant what brought me thither, and knowing the cause of my coming said to him, if your matter can read an inscription, there is in the palace, he will find a great treasure; but if he cannot, assure him that when he goes into a certain grot he will remain there dead. The *Armenian* being frighted at these words, when I was going on *Thursday* the 16th in the morning to see that antiquity, set himself so positively not to go with me, that I had enough to do to get him at least to stay a mile from the place to look to the horses.

Darius's
palace.

To come to the point, this vast fabrick is at the foot of a high mountain, that overlooks a plain above thirty miles in length, and twenty in breadth, where the famous *Persepolis* is suppos'd to have stood. The front of it looks towards the west, and is five hundred of my paces in length; the north side four hundred, the south two hundred and fifty; on the east it has the mountain instead of a wall. Its shape, as may appear by the dimensions, is irregular, and may be compar'd to a fortress; for tho' it has

no towers, as was us'd when it was built, yet it has on every side several angles at certain distances, uniformly dispos'd, and may be call'd half bastions, according to the true rules of military architecture. The stones it is made of, are of a prodigious magnitude, and it plainly appears they were dug in the neighbouring mountain, as well because of its nearness, as because they make the top of it plain, and equal with the palace. The walls of the first floor still standing, are crufted over with black marble, and in some places ten, in others twenty, and in others thirty foot high.

On the south-side outwards there is an inscription cut on an empty space, fifteen spans long, and seven broad, in such a character, that there is now no understanding-person in the world that can make any thing of it. It is neither *Caldee*, nor *Hebrew*, nor *Arabick*, nor *Greek*, nor any of those languages the learned have knowledge, but only triangles of several forts, severally plac'd, the various placing whereof perhaps formed divers words, and expres'd some thoughts. The most receiv'd opinion is, that they are characters of the ancient *Goris*, who were sovereigns of *Persia*; but this is not easily to be made out, the *Goris* themselves being at present very ignorant as to their antiquities, and unfit to give any judgment of such things.

The great stair-case of the palace is on the west-side, but not just in the middle, being a little towards the north on the side of the village of *Mirxascon*. It parts into two, each of which has the wall on the one side, and a bannister of the same marble on the other. Both of them are of the same workmanship, and in the midst of each is a square landing-place, as broad as the stairs, to rest, and then turning to such another, it leads up to the first floor; so that the stair-case makes three quarters of a circle; and it ascends two opposite ways, that is, on the right and left, circularly up to the first floor, as was said above. I cannot think any words can express its magnificence; for if we regard the breadth, it is of thirty foot, if the easiness of the ascent it is such that there are ninety five steps to rise, twenty two geometrical feet. The stones are thirty and thirty five spans long each, and of a proportionable

nable depth, so that six or seven steps are cut out of one stone; and if it happened to break in any place, it was so artificially mended, that the sharpest eye can scarce find out the joint; and hence it is that those who are less understanding, think those stairs are either made of one stone, which would be impossible, or else cut out of the rock. Besides, both the stairs and walks, are of a sort of black marble, so hard, that it has withstood the injuries of time for so many ages, and preserves the memory of so wonderful and rare a work.

From the square landing place, where the two stair-cases end, you go into a portico of white marble, twenty foot wide. The architrave is now fallen; but by the pillars still standing, it appears to have been built with such art and mastery, that it will be hard to find the remains of any *Roman* structure to compare with it. On it are carv'd in bas-relieve two beasts, as big as elephants, holding out their heads, as if they look'd at the aforesaid stair-cases. They are either some odd fancy of the workmen, or else some *Hieroglyphick* of the ancients to express the empires of the *Medes* and *Persians*, the bodies being like horses, the feet and tails of oxen, long, and turning up like a lion's.

Twenty spans further upon the same line, are two fluted columns with their capitals and bases, of a whitish stone, but somewhat inclining to red. Their height besides capitals and bases is about seventy foot, and so thick, that three men can scarce fathom them, every one of them having forty flutes, each three inches over. At a like distance streight forward there are two other pilasters, neatly carv'd like the first, only with this difference, that the beasts carv'd on the latter have wings and men's heads looking towards the mountain. Over each of these columns there are three inscriptions in the same character, making in all twelve.

Beyond this portal, or hall, for such the order of the columns and pilasters seem to make it, on the right side is such another double stair-case, leading to the upper-chambers. It is narrower, being but twenty five foot broad, and shorter than the first, but incomparably more beautiful and stately; for on its walls and parapets there is something carv'd in bas-relieve, like a triumph, consisting of a great train of people in several parcels, finely clad, carrying some banners, and others gifts to offer. At last comes a chariot drawn by several horses,

VOL. IV.

with a little altar, out of the middle whereof a flame rises. This might upon good grounds be said to be some procession for sacrifice, for we know, and particularly from *Herodotus*, that the ancient *Persians* ador'd the fire; and that the kings carry'd it along with them in a stately chariot when they went to war; and perhaps those I said were offerings, are caskets of perfumes, which the ingenious carver seems to carry'd before it to burn now and then. On the other side are carv'd wild beasts fighting, and among them a lion and a bull are done to the utmost perfection, their fierceness being so lively represented, that it seems to make nature itself blush; and this the more, because the hardness of the stone has preserv'd the most curious workmanship.

At the top of this second stair-case is a square place, encompass'd with columns, whereof only seventeen are now standing, tho' by the pedestals it appears there were an hundred; and some of those left want the capitals. But they are fluted, and of one entire piece of white and red marble, some sixty, others seventy foot high, and twelve of them as thick about as those before mention'd. But that row towards the plain, and the two towards the mountain, are more ordinary than the others. They say these supported the temple of the sun, and not without some show of reason, but nothing can be asserted because of the ignorance of the *Persians*, as to their antiquities.

On the same floor, close by the said columns, is a place fifty foot square, enclos'd with walls six or seven foot thick; where formerly there were many rooms, of a much finer marble than that hitherto describ'd, and so wonderfully carv'd, that I must have spent many days to take a full view of the figures, and whole months to draw them. There are four doors into this place, excellently carv'd, and adorn'd with the most curious and beautiful foliage imaginable, and in some places inscriptions in the same character before-mention'd. Only the walls of these chambers are now standing, being twenty four foot high, all the arches being gone to ruin, and the floor full of the stones fallen down, and of excellent carv'd marble that adorn'd it in some places. The windows look'd into the court, or upon the first floor; and there are several at small distances three foot wide, six foot high, and three foot from the ground.

Which way soever a man turns his eye on this second floor, left standing

T t in

GENELLI

1694.

^{1694.} **GEMELLI** in spite of the malice of time, there appear several figures cut in bas and half-relieve. Particularly in a place fifteen spans square, near the aforelaid parcel of columns, which appears to have been in the nature of a hall. I saw men carv'd fighting with lions, or holding unicorns by the horn; or else stood with knives in their hands like the ancient *Roman Gladiators*, ready to kill the wild beasts they held in their strong and brawny arms. In other places there were princes, as it were in triumph, attended by a numerous train. On two opposite sides were two figures of giants on each; in other places princes sitting giving audience to ambassadors, or else moving under large umbrelloes.

On the south-side wall left standing, which is the highest part of that floor, besides several stones lying about the ground, there are still to be seen princes carry'd in chairs, with courtiers by, shading them with umbrelloes. There are other statues with vessels in their hands, and men leading creatures like rams, which doubtless express some procession for sacrifice. Not far off on a pilaster of the same black marble, is an inscription in the same character, and another on such another stone; which I observing, and remembering those I had seen before, began to consider with my self, how easily humane judgment is mistaken, and how different things happen to what man proposes to himself; for whereas the author thought by means of those inscriptions to have eterniz'd his memory with posterity, which the beauty of the work well deserv'd, yet quite the contrary we see is fallen out.

In the inner-part, and exactly in the midst of the palace, is the amphitheater for the shows of wild beasts, and other sports, as plainly appears, if I am not mistaken, by the figures cut in half-relieve in several parts of it, which are of men fighting with wild beasts with knives in their hands, and others wrestling with lions. There are also princes sitting with truncheons in their hands, or walking under umbrelloes. Other figures have vessels in their hands, others spears, and some play on such a pipe as the god *Pan* is painted with, consisting of seven reeds, orderly joyn'd together. It is possible all these figures might be placed there barely for ornament, but the situation and nature of the place, incline me to believe it serv'd for shows, as was said before. This structure is not above fifty paces of mine square, and stands on the east side, as do all those hitherto describ'd.

Before we proceed further, it is to be observ'd, that besides the rare design and workmanship of all those figures here spoken of, they are very remarkable for their variety of habits; for some have long beards down to the waste, and the hair on the other side so short, it scarce touches the neck; others have a flat round cap on their heads, and their garments down to their heels, wide, full of gathers, just like the gowns of the senators of *Venice*, and with such wide sleeves that they hang down to their knees, and on their feet they have something like wooden sandals, or clogs. Other figures differ from these only in the eyes, which they have somewhat higher over the forehead. Others have shorter hair and beards, and taller caps. There are also servants carrying poles with horse-tails fastned to them to drive away the flies. But the most remarkable thing of all is, that among so many hundred figures as are in that great structure, there is not one of a woman; and next, the hardness and brightness of the marble, which stands as if it were newly finish'd, without the least decay, and yet what is merely a miracle in nature, it has continu'd three thousand years, for we cannot allow it less antiquity than that of the *Assyrian* monarchy, or at least of the *Median*; tho' some think those habits much antienter, but without any good ground.

Ascending a musket-shot towards the mountain there is a front thirty foot square, cut in the rock itself, with figures of white marble set in it, but flatter than those already mention'd. On the upper-part is a man standing, with a bow in his hand, looking on an idol that has a human body, and monstrous feet, carry'd in triumph. By him is a fire burning in a sort of a trough, and a globe carv'd; under it are men supporting this mass with their heads and hands lifted up, and below that several creatures. All these figures of men have short hair and long beards; and wear a sort of caps they call *Cauca*, like those the *Turks* wear, but without any border like the turbant. Under this front-piece there is a low arch cut, creeping into which on all four, I found two tombs cut out of the very rock, and cover'd with two stones seven spans long, and three in breadth; but they were full of water which drops from the arch. Here the royal treasure is suppos'd to be bury'd; tho' that particular grot, *Asia* or cave, the *Parvanfedar* spoke of, was made by order of the *Cham* of the province, on account of the people that went thi-

thither continually to dig to try their fortune.

Two muskets-shot further southward, on the same line and rock, is another frontispiece like the last, with such figures, and such an arch under it, within which, and instead of one there are three separations, with each of them a tomb cover'd with the same stone, but without any water in them.

An hundred paces without the palace southward, is a column standing, like those before-mentioned, whose base is the rock itself; but it is no easy matter to judge what was the use of it.

The *Persians* call all this wonderful work hitherto describ'd *Celmonar*, or the forty pillars, for *Cel* signifies forty, and *Monar* a pillar; and tho' there are now but twenty standing, it is to be suppos'd there were forty when they gave it the name, and that since then they either fell with age, or were carry'd away for some other structure. Some looking back for fabulous originals, say this was built by *Perseus* the son of *Jupiter* and *Danaë*, from whom the *Persian* nation took its name.

Others are of opinion, these are the ruins of a famous temple built by *Abasueras*, at the foot of a mountain which ran into the antient *Persepolis*; others will have it to be *Darius's* palace, but cannot say which of them, by reason of the antiquity of the tradition; and their opinion being the most probable, we will follow it with the same uncertainty. In short, observing these marble and jasper-stones, with the signs of fire on them, which by reason of the hardness, has only spoil'd the beauty of the face, I call'd to mind what antient historians have left written, that *Alexander* being once drunk, set fire to *Darius's* palace, at the instigation of *Thais* his concubine, who thus thought to revenge the burning of *Aibens*, her country, by *Xerxes* and *Darius*. *Alexander* committed this folly about the year of the world 3724, but the unexcusable natives have done it several times since.

None that have seen such beautiful and stately remains of venerable age, will doubt of the great antiquity and magnificence of the city of *Persepolis*; for tho' holy writ and prophane histories give us only an account of the antient *Ninive* and *Babylon*, yet it is not to be suppos'd there may not be others more antient; besides that the precious and almost everlasting relicks of *Celmonar* and the city *Persepolis* are so far in the east, that they have been little frequented by *Europeans*, and unknown to antient historians, so

that they could not give that account ^{GEMELLI 1694.} which the frequent resort of strangers has since communicated to the learned. A good instance hereof we have in the city *Mempbis*, which was not inferior either to *Ninive* or *Babylon*, either for antiquity or its fame throughout the world, by reason of the long and never interrupted race of its kings; and yet what great account do antient historians make of it? and were it not that *Europeans* now often travel into *Egypt*, and relate wonders of those vast pyramids, which after all are only mighty heaps of stone, and rather show the power and wealth than the ingenuity of the founders, who would conceive so great an idea of them, as now generally we do? Now were *Persepolis* as much frequented by *Europeans*, how would the remains of this truly royal palace be extoll'd, where art seems to have done its utmost to surpass nature, in the delicacy of the carving; and nature in furnishing a proper matter for such noble work? for my part I am opinion it ought not only to be reckoned as one of the seven wonders of the world, so much talk'd of by the antients; but that there neither is, nor ever was a wonder in the world to compare to it.

There is no question to be made, but that the antient *Persepolis* stood in this place, considering the fertility of the situation, and the nearness of the river *Araxes*, now call'd *Bendamir*, near which the antients plac'd it. Besides, the authors that write of it say, that four hundred paces from it, in a mountain call'd *Mount Royal*, the sepulchers of their kings are cut out of the rock, which it is plain must be understood of the tombs I have already describ'd, which are cut in the solid rock on the east side; and therefore when they speak of the palace burnt by *Alexander the Great*, at the overthrow of the *Persian* empire, and of the citadel of *Persepolis*, they must needs mean this place. It is a great misfortune that the noble remains of antiquity in *Asia*, should be among such barbarous nations, as endeavour utterly to destroy them; that strangers may want that occasion of resorting thither. There would be no need of so many conjectures, could the unknown characters in several places of the palace be read. All the learned that thought they could have explain'd them, have been disappointed; nor could any man yet be found that could make the least of them. I do not at all admire this; and I am opinion, that when the *Persian* empire was transfer'd to other nations, the new kings, that the natives

GEMELLI 1694. tives might not retain the least memory of their former greatness and affection to their lawful sovereigns, forbid the use of the antient characters, introducing new habits, new customs, and a new manner of writing; that so the next generation might better bear the new yoke. This policy is in use now, as well as in past ages. It is little above half an age since *Cbina* was reduced under the grievous *Tartar* yoke; and these tho' ignorant, rude, and of brutal manners, yet endeavour to make that noble nation forget its ancient customs, and the excellent form of its government; tho' they are sensible of the uncontrollable opposition of the *Cbineses*, who with much reason stand up for the preservation of their just laws, and heathen customs. So should we put a writing in the antient character of those islands into the hands of the inhabitants of the *Philippines*, which is like that of *Cbina*, it is most certain none of them would understand it, because they all apply themselves to the *Spanish* tongue. How much more difficult then must it be for the people of *Persia* to read antient inscriptions, some thousands of years after

the subversion of their empire? Such precious remains of antiquity well deserve to be cut in copper for the satisfaction of the ingenious, before they are quite lost, through the fault of the natives; but it is a difficult matter to draw above two thousand bas-reliefs, and a vast charge to print them. The reader therefore will think it enough that I have drawn the plan of the palace, with some of the principal figures; that there may be some knowledge of the several habits of the antient *Persians*; and two lines of twelve there are in the inscription on the pilaster of the first floor; perhaps hereafter, some more fortunate searcher into the oriental languages may employ his wit on it.

Having very well spent all the day in seeing and distinctly observing, the best part of those antiquities, I return'd, and was scarce come to the place where I had left my *Armenian* servant, before I heard him ask me whether I had found the treasure; he believing the inscriptions were in *Portuguese*, and that I had read them and taken the treasure, as the *cavandekar* had told him; which made me laugh heartily all the way.

Mounting a horseback, I return'd to *Mirxascon*. By the way on the lake I kill'd a strange bird, all white, only a little reddish under the wings; it has long legs and feet like a goose; the beak long and slender at the top than bottom, the *Portuguese* call it *Flamengo* or *Fleming*.

Thursday the 16th, at night, I lay in the same caravanfara, and *Friday* the 17th, betimes got a horseback for *Sciras*. By the way I met three robbers taken by the *Cham* of *Sciras*'s soldiers at *Mirxascon*, for having robb'd and murder'd several travellers on the road. They were led with a triangular yoke about their necks, like that we put upon swine; which put me in mind of that the *Romans* laid on their slaves that had committed a fault, which made the poets call them *Furciferi*. Every one had his right hand made fast with a crooked staff to the thick part of the said yoke, so that there was no getting it loose. A little further on, I saw an engine to draw up water into the gardens, quite different from ours; for whereas in ours a horse or mule goes round, there, an ox drew a rope out-right.

Before I conclude this chapter, I must speak of father *Amadeus*. Whilst we stay'd at *Sciras* he would not permit us to be at any expence, lest it should be a breach of the laws of hospitality; but on the other hand he was so frugal, that

VOL. IV.

we did not only want the power of filling our bellies at his table, but for the most part, the ill relish of his diet was very ungrateful to our palate. The fowl that were left at noon were dress'd again at night; and if they were not eaten by reason of their ungrateful favour, what was taken away roasted, appear'd the next day boil'd: and thus the good father, who was a great *Peripatetic*, endeavour'd, by the means of fire, to reduce the not-eatable substance into the form of straw, from that of a carcas; and it was still worse, if a fifth-day did not follow. To compleat the entertainment, he gave us to drink a sort of liquor, which it would have been equally false to call either wine, or vinegar. In other respects he had the reputation of a good religious man, and of an exemplary life; but because of his excessive parsimony, he was never thought fit by his superiors to govern formal monasteries, lest the religious should starve under him. To conclude, he exercis'd his zeal for abstinence in the *Hospitium*, upon a poor *Polish* religious man, his companion, seventy years of age, making him fast severely at those years; but father *Amadeus* knew his civility would not pass unrewarded with us; and to say the truth, he had a toman, that is, nineteen crowns of father *Francis*, for five hungry days we did penance at his table, and yet he would not, or could not govern his natural covetousness.

A Voyage round the World by Dr. John Francis Gemelli Careri. Part II.

Containing the most Remarkable Things he saw in
P E R S I A.

BOOK III.

CHAP. I.

The Author continues his Journey to Bander-Congo.

TH O' father Francis was indisposed, either by reason of the ill air of *Sciras*, or some other cause unknown, and not in a condition to travel; yet to get away from father Amadeus, he hir'd other beasts, and on *Saturday* the 18th, having loaded our luggage, we began our journey about an hour after it was night, without any supper.

We travell'd all night, and stay'd on *Sunday* the 19th, at the village of *Bagbun*, which signifies gardner, thirty miles from *Sciras*. The common days journey was to *Babagi*, ten miles short of this, but we advanc'd as far as *Bagbun*, because it was our new *Ciarvattar*'s town.

Old way
of cap-
ping.

Monday the 20th, father Francis relapsing, a black woman was sent for to cup him. The manner how she did it being very odd, I shall not omit to set it down. She plac'd a glass like the head of a limbeck on the patient's back, and moving it up and down, suck'd the air strongly through the pipe, then she scarify'd the flesh, and sucking again, drew the blood into the same vessel. Other women instead of a glass, make use of a horn.

Tuesday the 21st, we set out an hour before night, and travell'd as we had done the day before, over a plain well stor'd with wild boars, and gazelles, whereof I rold fifty in three miles riding. We lost our way near the caravanera, and were conducted to that of *Musferi* by a guide, after travelling twenty miles in seven hours, tho' the common road is twenty five miles from the caravanera of *Babagi*. We met a *Ciaier* or expref, who besides the bells about his wattle, to make him be known for a beast, wore long colour'd feathers in his turbant ty'd one above another like a crest, or plume.

Wednesday the 22d, we travell'd along a base stony road, and going up an ascent of twelve miles, came to the caravanera of *Paerra*, after riding twenty miles in eight hours. *Thursday* the 23d, we travell'd twenty five miles in eight hours on a plain road to the caravanera of *Assumayer*, which is built with lime and stone, a rare thing in *Perfia*. Fifteen miles further we came to another caravanera, call'd of *Gbezi*.

GEMELLI
1694.

Before we set out on *Friday* the 24th, a *Dervis* that dwelt in this caravanera, putting on a long shirt, with a sheeps-skin on his back like a rochet, and another on his head for a cap, came to make a ridiculous sermon, for an alms of a few *Gazes*. The road we travell'd was amidst fields of rice, where I saw the first dates, and then barren to the caravanera of *Mokak*, in all twenty five miles, and eight hours riding. Abundance of partridges came tamely to the caravanera door, to feed on the corn the mules dropt. At this place begins the use of cisterns, and continues to *Congo*, because there are few brooks, and the rivers are salt, as running through salt-pits. There are two caravanera's at *Mokak*; the new and the old, which wants but little repair, and yet the *Mabometans* neglect it, they are so inclin'd to new structures.

Saturday the 25th, we set out again about noon, along a good road, and riding thirty miles in ten hours, when we cross'd several small brooks, we came to the city *Gearon*. This city looks more like a wood, because its houses are scatter'd among abundance of palm-trees, which yield a considerable profit with their dates, being the best in *Perfia*. It is seated in a sandy plain, encompass'd with high mountains, and tho' small, has a *Vizier* with ample

GEMELLI
1694.

Simple jurisdiction. The gardens are pleasant, being water'd by the neighbouring brooks, and have plenty of good fruit, or oranges, grapes, and melocotoons. The houles are not amiss, many of them being of lime and stone, which is rare in *Persia*, where they are generally of mud. By the way I kill'd abundance of partridges, those plains abounding in two sorts of them; the one like ours in *Italy*; and the other about the bigness of a quail, with the feathers of the colour of a hawk's breast.

Sunday the 26th, we rested in a noble caravansera, well built, near *Gearon*. Here at dinner I found a roasted line of a gazelle very good meat, it being as tender as the veal at *Sorrento*, in the kingdom of *Naples*; and of a very fragrant scent, those creatures feeding on *St. John's-wort*, and other sweet herbs the fields in *Persia* are cover'd with. They have a head like a sheep, with horns half a span long, and the body and hair like a goat; they live on the mountains, which being generally bare of grass, they come down in the night to graze on the plain, as was said in the first part.

Monday the 27th, we proceeded on our journey betimes; and having scarce travel'd five miles on the plain, began to climb steep mountains for twenty miles to the caravansera of *Ciartak*. That day I saw such multitudes of partridges, only of the *European* sort, feeding on the plain and road, that I believe I never beheld the like. I did not go a step but I saw swarms of them, and kill'd about twenty on the ground, without any trouble; and might have had many more, if I would, for they are not much frightened and only fly a little way, and alight again. I also saw abundance of gazelles. Besides I met several *Persian* peasants, who wore a small cap of white felt, cut on the two opposite sides. These tho' poor, are well-manner'd, sincere, honest, and simple; tho' they love money as well as the *Turks*, they are not so false, and such enemies to christians, nor so haughty, being civil to *Franks*, in saluting and visiting them.

We set out late on Tuesday the 28th, and riding twenty miles in seven hours, over hills and plains, came to the caravansera of *Mauser*, close to which was an excellent orchard of palm-trees full of dates, as also of orange and limon-trees, but not well look'd after. The caravansera's continue all this way to be well built, because of the conveniency of timber; and so does the use of cisterns. Travelling twenty five miles in nine hours all along the plain, on Wednesday the 29th, we came to the village of *Benaru*. Five miles short of this place we pass'd by the caravan-

sera of *Dedomba*, near a little village, but did not stay there, because it was not a caravans days journey, or a *Maral* as the *Persians* call it. Two musket-shot from it along the side of the mountain, appeared the ruins of many dwellings, and the wall of a ruin'd fort, which kept the pass through the mountain.

A few miles eastward of *Benaru*, is Mountain of *Daray*, all of black stone, from which distils the precious and much applauded balsam, improperly call'd *Mummy*, which tho' at first liquid, becomes as hard as gum, somewhat blackish, and is good to knit broken bones, apply'd hot. Its effects are wonderful; for if a leg or an arm be broken, there needs only to place the bones right, and anoint the part with the balsam made hot, and liquid, and then bind it; and after twenty four hours the leg or arm will be as well as it was at first. This mountain is guarded by the king's order, and the *Viziers* of *Gearon*, *Sciras*, and *Lar*, meet once a year to take the balsam out of a trough, into which it drops and congeals, and send it to the king. To prevent any fraud it is sent seal'd up by them; because this *Mummy* is well known, and of great value in *Arabia* and *Europe*, and there are but forty ounces gather'd in a year. There are other mountains in *Persia* that distil balsam or *Mummy*, but none so good as this.

Thursday the last of September, we set out late from *Benaru*, and had a bad road, both plain, and up hill and down, all stony; and riding thirty miles in eleven hours, we came to the village, and famous caravansera of *Beli*. There were *Rattars* about the mid-way, to secure the road, but not so insolent as those of *Tanris*; for if they have an abassi given them they take it, and if not they are not troublesome.

Friday the 1st of October, riding twenty miles over barren mountains, in seven hours, we stopp'd at the caravansera of *Pacitel*; leaving the village and caravansera of *Dacu*, five miles short of it.

Saturday the 2d, we travel'd twenty miles in seven hours over mountains and craggy rocks, and then arriv'd at *Lar*, the metropolis of the kingdom of that name. This city is seated in a plain beset with mountains, and at a distance, looks more like a village, it has so many trees, and particularly palms about it. The houses are of mud walls, and built under a hill, on the top whereof is a fort, whereof scarce the walls are left standing, and some small towers at proper distances; so that tho' it has no cannon, this fort

much resembles that of *Buda*. In *Lar* there is an excellent arch'd *Bazar*, consisting of four rows or walks in the form of a cross, in the midst whereof is a cupola. There is also another good one with shops for several handicrafts and tradesmen, and near it is a spacious square or market-place, all enclos'd with buildings. The city being subject to much heat, they make on the top of the house a work like a chimney, with some funnels for contriv'd, that any little wind gets in underneath, and somewhat cools the room.

The vizier of *Lar*'s jurisdiction is very large, extending as far as *Congo*, whither he sends his deputy. They that will embark at *Lar* have two ways to the sea, the one by *Bander-Congo*, and the other by *Bander-Abassi*.

Sunday the 3d, we rode fifteen miles in the space between two mountains, and came in five hours to the caravanfara and village of *Nimba*.

Monday the 4th, father *Francis* growing worse, we were forced to stay in this place, to send to *Lar*, for a *Caggiaba*, which is a thing like two chairs us'd in the *Levant*, on mules or camels to carry sick persons, or women. *Tuesday* the 5th came the *Catvigi* of the *Caggiaba*, but too late, so that we did not let out till *Wednesday* the 6th. Riding over naked mountains and valleys, we came in seven hours to the little caravanfara of *Kormut*, twenty miles from *Nimba*; there we bought a number of live partridges, for about five pence a-piece.

Thursday the 7th, we travell'd through a plain strew'd with many villages, for fifteen miles; and then proceeding fifteen miles further over a rugged mountain, lodg'd at the village and caravanfara of *Anoe*; a gentle rain held us several hours on the road.

Friday the 8th, we travell'd twenty miles in seven hours through a plain country, and lodg'd at the village and caravanfara of *Seicogi*, always advancing southward, as we had done ever since we left *Ispahan*. The swallows in these parts are of an ash colour.

Saturday the 9th, after nine miles riding over the plain, we had eighteen miles among such dreadful rugged mountains, that in some places there were walls built along the road, that the caravans might not tumble down head-long. Our days journey was nine hours, and we came to lodge at the village and caravanfara of *Bajack*; all the way through a dry barren country, which scarce produces some few dates for the sustenance of the poor near the places inhabited, and barley, whereof

Vol. IV.

they make cakes as thin as a wafer. In this caravanfara I receiv'd a letter from the prior of the *Augustinians* at *Ispahan*, in which he gave me an account that the new king had already began to break the severe law he had made against drinking of wine; and that his subjects seeing him often drunk, made no difficulty of following his example. The prior inform'd me, that among other extravagancies he had committed in his cups, he had caus'd several *Armenian* bishops, and priests to be cruelly bastinado'd on the feet, till they were lam'd, for not paying the yearly tribute in time, according to the number they themselves gave in upon the last persecution of the catholicks. In short, he is the son of a good toper, and not like to degenerate.

Sunday the 10th, we rode over a rugged mountain, and at the end of twenty miles, and seven hours riding, set up in the village and caravanfara of *Kuxeri*.

Monday the 11th, advancing ten miles, we cross'd a small river at the foot of a mountain; and then rode along a road of salt, which is made of the salt-water, and becomes so hard, that it looks like a white stone. Then we entred among some hallows of high rocks, and particularly of mount *Bassac*, where the way was so bad, and full of precipices, that we were fain to walk it. I need say no more, but that we spent twelve hours in travelling ten miles over this mount *Bassac*, and as much more on the plain, being forc'd to stay to load the mules and asses of our caravan that fell now and then. At last we came tir'd and weary, particularly father *Francis*, who, tho' sick, walk'd part of the way a-foot, to the caravanfara of *Banicu*, or *Ciarbuke*, or according to others *Sarcova*, a wretched place as being seated among dreadful mountains, without any village near or any person to look to it; so that we were forc'd to carry all our provisions for three days journey there being none to buy.

Tuesday the 12th, we travell'd twenty miles in nine hours over scurvy mountains and valleys, and lay in the field half a mile from the caravanfara of *Tangu*, knowing the cistern there had no water. We might have stay'd half way at the caravanfara of *Hodundin*, where there was water, but then should not have made a days journey, and we had not so much time to lose.

The road was no better on *Wednesday* the 13th, for we climb'd the high and rugged mountain of *Cianspa*, at the top whereof we found the caravanfara of *Sorku*, newly built. Two miles further

X x

we

GEMELLI

1694.

GIMELLI we began to discover the *Persian* gulph, and *Bander-Congo*. Then we went down to the plain along a steep dangerous way, where they shew'd me several heaps or hillocks of earth for dying, especially red and green. There were also pieces of both white, and red marble, almost calcin'd by the sun, which they make use of instead of *Bole-Armoniack*, and it answers. Two miles further we came to the caravanfera of *Ciampa*. Here we found an *Augustinian* father, vicar of *Congo*, who gave us our supper that night. At table I admir'd an old *Armenian*, seventy years of age, who after filling his belly with several sorts of meat, eat a great pyramid of *Pilau*, which made him as tight as a drum. I thought it would have made him sick; but he had so good a digestion, that at midnight he began again to eat biscuit. He came as a physician to cure father *Francis*, but I would not have trusted him to cure my mule. The same father told me, that a servant of his, three years since, being troubled with the gripes, this physician burn'd his very entrails with a red hot shovel,

which he knew nothing of, till he saw him giving up the ghost with his guts out. He confess'd him, and the man dy'd six hours after.

Thursday the 14th, we set out again four hours before day, and rested at fifteen miles end in the village of *Barfeia*; at night I felt as much heat as is usual in *Italy* in the dog-days. To this village came to meet father *Francis*, *Joseph Pereira d' Azevedo*, comptroler of the king of *Portugal's* revenue, the factor, and secretary, with many servants a horseback. We went with them to *Bander-Congo*, seven miles distant, and din'd together in the monastery of the *Augustinians*, where we took up our lodging. The *Ciarvattar* would have eight *Gazes*, or *Casbeys*, for every *Mano* of *Tauris*, which is six pounds *Spanish* in weight. Every man great or small was computed at thirty three *Mano's*, or one hundred and ninty eight pounds weight. So that I paid for my horse from *Seiras* to *Bander-Congo* thirteen abassis; my servant carrying my baggage on his mule.

CHAP. II.

Of the great Advantage the King of Portugal made of Bander-Congo, and the Extraordinary Trade of that Port.

Power of the Portuguese of Bander-Congo.

THE King of *Portugal* keeps the aforementioned officers at *Bander-Congo*, to receive the tribute of five horses, and one thousand one hundred tomons a year, which is about twenty thousand crowns, paid him by the king of *Persia*, by agreement made between the two crowns, when in the reign of king *Philip* the third, of *Spain*, the *Persians* having taken *Ormuz*, the *Portuguese* with their fleet obstructed the navigation of the gulph of *Persia*, to the great decrease of that king's customs. Besides half the customs, and the five horses, the *Portuguese* had very considerable privileges granted them; as of keeping a house with the standard erected on it, and having the jurisdiction over all the christians that come into the port; but the most remarkable of all are, that no christian can turn *Mabometan* in *Congo*; and what is yet more considerable, that tho' a *Portuguese*, or other christian be taken in carnal copulation with a *Mabometan* woman, he shall not be subject to the cruel Law of suffering death, or turning *Mabometan*, as is invariably practis'd by all the princes of this sect in their dominions; nor are they liable to any

punishment at all, any more than if they had been taken with a woman of their own religion. For this reason the *Portuguese* are better look'd upon at *Bander-Congo*, than any other nation, and have almost as absolute a command, as if they were in *Goa*, not only over their own subjects, but all christians who pass that way.

At first they receiv'd half the duties of the custom-house, but afterwards some contentis arising, between the *Scibandar*, or *Persian* customer, and *Portuguese* commissioner, they agreed by means of the admiral of their fleet for eleven thousand tomons a year. The factor is to receive this money, and lay out part of it by order from the commissioner, which he gives in writing, and is sign'd by the secretary. The commissioner also gives passes to *Mabometans* to sail the *Indian* sea in safety; and sells the prizes taken by *Portuguese* ships. The king allows each of these officers fifty tomons salary, five servants paid, and their dwelling-house. Besides twenty eight tomons to the factor for lodging of strangers; but he that was there in my time, being very sharp, put most of it in his pocket.

The *Englisb*, for lending their ships to the king of *Persia* to conquer *Ormuz*, which the *Dutch* refus'd to do, had half the customs of *Comeron*, which they also exchange'd for 1080 tomans a year. True it is, *Scia-Abas* promis'd the *Englisb* great matters to induce them to join their sea to his land-forces for reducing the fortrefs of *Ormuz*; but he kept not his word, and only gave them half the customs, as aforesaid, for betraying christianity. *Scia-Abas* carry'd away the cannon of the fort to *Ispahan*, and they are to be seen, as was said above, before the palace, with the *Austrian* arms on them; as is on some others of iron at *Bander-Congo*. Some credible persons told me, That the *Persians* fearing the *Portuguese* should again possess themselves of that kingdom, still keep the arms and ammunition, to restore them when this shall happen, lest to be oblig'd to pay an extravagant price for them. Note, *This does not well agree with what was said just before, that all the cannon was carry'd away.*

Bander
Congo
port.

Bander-Congo is seated in 26 degrees of latitude. It is a meer open village on the sea-shore, the houses for the most part of mud walls; and only a few towards the sea, of lime and stone. It is govern'd by a *Deroga*, appointed by the *Vizier* of *Lar*, to whom he is subject. When I was there, the *Scibandar* acted both as customer and *Deroga*. He farm'd the customs of *Bander-Congo*, *Comeron*, and *Bander-Errico*, of the king at 20000 tomans a year. This is not to be admir'd, for *Bander-Congo* is a place of much trade; abundance of ships continually resorting thither from *India*, *Mecca*, *Bassora*, *Arabia Felix*, and other parts, laden with rich commodities; and abundance of caravans coming by land, which carry the commodities into, and out of *Persia*. This is the reason the place is inhabited by very rich merchants, become such in a short time, because they get *Cent. per Cent.* in every commodity they send to *India*.

Pearls
in
the gulph.

But the greatest trade is that of pearls taken about the island *Babaren*, and all about the gulph of *Persia*, being the best in the world. They are bought very cheap in the lump, of the fishermen, to be sold afterwards dear, single, when they have been pick'd, and match'd by putting them through copper-plates full of holes of several sizes, to measure their magnitude; separating those that are true round, from those that are not, and the most oriental from those that are ill colour'd, or spotted. Then the *Arabs* with wonderful dexterity bore the

very least of them, in such manner that the eye can scarce discern the hole, which the best artist in *Europe* cannot do.

GEMELLE
1694.

The manner of buying the pearls among those infidels, is also very strange. They stand all round with the goods they have to sell in the middle; when every one has view'd, and consider'd them, the seller covers his hand with a cloth, and touches the hands of the buyers, putting a price upon his commodity by signs; if he grasps all his hand, it signifies 1000; if he only touches the palm of his hand 500; if a finger 100; if only the first joint of the finger 10. The buyer answers what he bids by the same signs; so that none of the company can know what is offer'd. If he agrees not with the first, he goes on to the next, and so on; and if asking too high a price, he comes to agree with none; he begins again lowering, till they come to a conclusion. After this, the broker joining the buyers and sellers hands, gives a stroke on them with his open hand, and that binds the bargain, as if it had been made by word of mouth.

The profit made by the pearls, is sufficiently countervail'd by the inconvenience of living in this place. The air is not only unhealthy, but so hot in summer, that it is not only difficult for men to endure the violence of it; but even the partridges, and other birds, hide themselves in trees, to get some shelter. The mean sort go quite naked, only covering those parts modestly will not allow to be seen; those that are well to pass, wear an extraordinary thin silk; and both these and the others have that kind of contrivance, we mention'd, speaking of the city *Lar*, on the tops of their houses, to cool them. Yet I was told the heat was greater at *Bander-Abassi* and *Comeron*, seated in 92 degrees, 45 minutes of longitude, and 25 degrees 30 minutes of latitude; and that the air there is still worse, by reason of the south-winds blowing off the sea; tho' it does not rain there in winter above three or four times, and that at most does not last above an hour: Nevertheless both at *Bander-Congo*, and *Bander-Abassi*, a sort of worms, like small sinews, or fiddle-strings, twenty or thirty spans long, breed in the muscles of the body, which must be drawn out by degrees, rolling them upon a stick; for if they happen to break, they cause great swellings till they come out again, and some persons have had them a whole year. Some think them to be bred by the air, and water; but they are mistaken, for some strangers have been

Way of
buying
pearls.

Excessive
heat.

Strange
Worms.

SMELL been there a considerable time, and drank the water, and yet have had none of them; whence it is rather to be concluded to proceed from a disposition of the body and humours, which are not affected in all persons alike by outward things.

Water. Both in *Congo* and *Comeron*, they use water kept in cisterns, which must needs be hurtful; for those few times it rains; the air is very foul, by reason of the exhalations the earth sends forth, which infect the water. We must not omit here to take notice, to the great glory of the divine providence, that in the island *Tombamar*, twenty miles distant from the continent of *Persia*, and nine miles in compass, there is not one drop of fresh water, and yet there are abundance of gazelles, beasts before describ'd, which, as I was told by credible persons, when they want to drink, go down to the brink of the sea, and letting their cloven foot exactly on the edge of the water, suck it up that way. I cannot persuade my self, that the water passing between the hoof, should so soon lose its saltness; but I do not deny it may become less perceptible. Those that had been eye-witnesses of this secret in na-

ture, could give me no further account of it.

Congo has no harbour, but only a safe road; that point of *Arabia Felix*, which forms the *Persian* gulph, breaking the fury of the eastern ocean. When the day is fair, the opposite coast of *Zulfar* is to be seen, the distance being but forty miles. A fort that defends this coast is but thirty spans square, furnish'd with four iron guns, cast by *D. Constantin de Noronba*, when he was the king of *Spain's* viceroy at *Goa*; it is hem'd in by the sea only in the morning, the tide then coming up. *Tavernier* is much mistaken, when he says, *Tom. I. L. V. p. 766*, That there is not water for great ships, and that all the trade is at *Comeron*, for I have seen *Portuguese* vessels there of sixty and seventy guns, and other large ones belonging to *Mabometans*: And I know further, that only the *Dutch* and *English* resort to *Comeron*; whereas all other nations are willing to go to *Congo*, because of the liberty they enjoy under the *Portuguese* power and protection.

The inhabitants are about 10000 *Inhabitants*, *Moors*, *Indians*, *Arabs*, *Jews*, and *Armenians*, who enrich the *Bazars* with their well-furnish'd shops.

CHAP. III.

Of the Pearl-Fishery, and other remarkable things in Bander-Congo, and the Gulph of Persia.

Pearl fishery

HAVING given an account of the rich trade of pearls, it is proper I should say something of the manner and season of fishing for them. This fishery is in the gulph of *Persia* and island of *Babaren*, twice a year; the first time in *March* and *April*, the second in *August* and *September*; the greatest sale being from *June* till the latter end of *December*. It is done five leagues from the city, where there is between four and twelve fathom water, abundance of boats following it from morning till noon. Every boat has a diver who goes down to the bottom, with a stone of six pounds weight ty'd to his great toe, and he ty'd under the arms with a rope fastened to the head of the boat. He dives immediately to the bottom by the help of the stone (which as soon as down he slips off and is drawn up by those in the boat) and then, as fast as he can, he fills a net that has an iron-ring about the mouth to keep it open, with oysters. When he can stay no longer for want of breath, he makes a sign to his companions with the rope ty'd under his arms,

and they with all possible speed draw him up; which is several times repeated for the space of ten hours. The oysters remain at the bottom with a rope ty'd to them, to be drawn up at leisure. Some of them hold oyl in their mouths to stay the longer under water, and see better at the bottom by letting fall a drop now and then. After noon, having drawn up their oysters, all the boats go ashore with a fair wind that comes up from the sea. They take no care to open them, because they gape of themselves as they dry, no body caring for the fish, which is ill tasted. The poorer sort sell the pearls immediately for a small matter; but those that do not want, keep all till the fishing-season is over, and then sell them all together to *Banians* and *Moors*. These afterwards cull and sell them severally, by *Abas* in *Persia*, and by *Ratis* in *Indostan*, which is an eighth part less than our carat in *Europe*, consisting of four grains. This fishery every year amounts to about 110000 crowns.

Error of
the an-
tients.

This shews that what the antients writ, is absolutely false; to wit, that the pearls are bred in the shells by the dew that falls from the sky; and that there is never any more than one in a shell; because they are fix'd at least ten fathom under water, whither no dew can penetrate; and as for the number there have been seven or eight pearls found in one shell, tho' not all of a size, but some bigger, some less. They are bred in the same nature as eggs in the belly of birds, the biggest always advancing nearest the orifice, the small ones remaining at the bottom to obtain their perfection; and even so it is with the pearls, the largest being foremost, and the lesser staying behind till they come to their full growth. Nor are there pearls in all of them, for several oysters have none.

There are pearls taken in several parts of our continent, but the most valuable, that is, the fairest and brightest are those of the aforesaid island of *Babaren*, and the coast of *Catasa* in *Arabia Felix*; because few of them are yellow, or misshapen. The yellowness sometimes proceeds from the merchants, sometimes leaving the shells fourteen or fifteen days to open of themselves; so that some of them in this time losing their water, rot, and their infection discolours the pearl. On the other side they leave them to open of themselves, because should they do it by force, the pearl might be damag'd or broke.

There are some also taken in *Japan*, but neither that nation, nor the *Chinese* valuing pearls, they do not follow the fishery, or take care to search the sands where they lie for the most part. There are very oriental ones found in the *Philippine* islands in shallow water, and even at the mouths of the rivers; but the natives are not covetous of pearls, nor of the gold there is in the same rivers; but being addicted to their ease, think it wealth enough to have a dish of rice boil'd thick, like a pudding, at noon, and another at night. Besides they say, that should they seek after them, either the parish priest or the alcalde would take them away, and the other would become their enemy, because they had not wherewith to satisfy them both. In these islands the very shells are brighter than in other parts.

A vast number is taken all along the coast of *California*; and more especially from cape *St. Lucar* to *Cabo Blanco*, or *White Cape*, by the *Indians* call'd *Alcados*. These wander about naked like brute beasts, without tilling or sowing, but feeding on the fruit, roots, and cattle

the country affords. They open the *Gambell's* shells with fire to eat the fish, and by that means spoil the beauty of the pearls. 1694. The *Spaniards* also fish from cape *Corrientes* as far as *Acapulco*, but the pearls are for the most part of a dusk lead colour and ill-shap'd, so that they will be little valu'd by the ingenious *European* ladies; but the *Mexican* women have their necks, ears, and arms cover'd with them: not regarding their brightness, so they have them cheap, and the strings and bracelets of them be weighty.

On the coast of *Peru* and *Panama*, there are large ones, some having been found bigger than that call'd *la Peregrina*, but they are not so well colour'd as the oriental; but are all misshapen, black, and of a lead colour, by reason of the ill bottom where they breed, sometimes but one or two fathom deep.

Formerly there were good pearls found in the island *Margarita*, both large and well-colour'd; but at present there are few; besides the fishery is broke off. A few are also taken at *Santa-Marta* and in other islands, but of no value.

Having said enough concerning the pearls, it is fit I should give the reader an account of other remarkable matters in these parts. In the first place it is to be observ'd, that all the water about *Babaren* being brackish, and ill tasted; strangers who are not us'd to drink it, as the natives are, there being no better to be had, not even on the continent, cause fresh water to be taken out of the bottom of the sea, a league from the island. Four men go out in a boat, two whereof dive down into the sea, with vessels close stopp'd at their girdles, when they touch ground they unstop their vessels, which being fill'd with the water, that is sweet for two or three foot above the ground, they stop them again, and making a sign with a rope, are drawn up by the other two in the boat.

Their way of building boats in *Congo* is also singular; for instead of iron nails, they use some pins of cane, or bamboo; and for the rest they join the boards together with packthread, and little lines made of rushes. Instead of anchors, they make use of a large stone bor'd through; and for oars, of a pole with a little round board ty'd at the end of it. Friday the 15th, I saw several watermen at work about a new boat, like so many taylors.

Saturday the 16th, I paid the visit to *Joseph Pereira de Azevedo* the Portuguese

GENELLI commissioner. Sunday the 17th, mass was very solemnly sung in the church of the *Augustinians* with the gates open, as if it had been in christendom. Monday

Arabs eat fire.

the 18th, walking about the Bazar I met some *Arabs* accounted rigid observers of the *Mabometan* law; they were asking an alms in a shop of *Banians*, and to get the more and that quickly, clapt burning coles into their mouths, as if they had been cherries. I was told they did it by the assistance of the devil, to whom they had given themselves up, being forcerers; and that this was only done in appearance, and a deceit of the sight. But I really saw them take the coles and put them in their mouths.

Others beat themselves for an alms.

When I return'd to the monastery, I saw two mumping *Arabs* pass by, who for a small alms beat their breasts as hard as they could, with an iron pin a span long, the head whereof weigh'd at least eight pounds, and yet did themselves no harm, tho' the instrument was fit to drive through a wall. How this came to pass they best know, and the devil that teaches them; but this I know, that these cheats and sons of perdition would not suffer another to strike them with the same pin; for then perhaps the charm would have fail'd them.

An idolatrous festival.

Four *Dutch* ships being under sail at *Gomron*, we sent away an express to get a passage aboard them, but he came too late, they being already gone for *Batavia*. That same night the idolatrous *Banians*, to honour the festival of their god *Dravali*, who they say took a fortress, began to set out their houses and shops, both within and without with rich hangings, and lights. This festival lasts three days every year, in memory of the fabulous victory, and taking of the fortress; and they all cease from labour. I went that same night to see it, and was receiv'd with much civility by those idolatrous merchants, they sprinkling my face with rose-water when I came in, as is us'd in the east, making me sit in the chief place, and treating me with such sweetmeats as the country affords. Not long after, women-dancers of *Syndi* came out to dance, as a preface of a good feast to the merchant. They were clad some after the *Indian* and some after the *Persian* manner, and sang in both tongues. Those that were in the *Persian* garb wore a vest of strip'd silk, down half way the legs, but wide at bottom like a petticoat, under that they had long breeches down to their ankles, with a silver edging about them for ornament. Both their fingers and toes were set out with abundance of gold

and silver rings, and dy'd with *Imma* or red earth; as the teeth, the inside of the eyes and forehead were with black. On their heads they had small caps of a fine stuff between silk and linnen, wrapp'd about; under which their long tresses hung down to their waste; a long red or yellow veil cover'd their backs, and coming about, fell before the shoulders. Besides their double pendants, they had a thick gold ring run through between their nostrils, and other jewels hanging and stuck to their foreheads; but I thought that of the nose the most painful ornament, because they had a gilt, or gold nail struck quite through the upper part of the nose, where the bridge rises, which they thought an ornament, and to us *Europeans* was a deformity. About their necks they had gold collars, necklaces of pearls, according to what each could afford, and fine bracelets on their wrists. In this dress they began to dance gravely, to the noise of a drum and two pieces of metal, which sounded very loud, together with the horse-bells they wore on their feet. Then they went on with abundance of immodest motions and postures; snapping their fingers as we do castanets very gracefully, and now and then intermixing singing with their dancing. To say the truth, I was so well pleas'd, that I would set it more than once, and from several dancers, that went about from one room to another.

Tuesday the 19th, saddling four horses that had been receiv'd as the king of *Portugal's* tribute, by the *Portuguese* officers; the father *Vicar*, father *Constantine*, the factor of *Bassaro*, and my self, went out three miles from the town westward, and three from the sea, to see a very antient fort call'd *Calaleston*, or rather a strong city once built by a king of *Persia*, on the top of a high rock. It is three miles in compass, and there is but one narrow steep way to come to it; there is never a house standing at present, time having overthrown them all; for by what I could perceive by the ruins, they have been many ages decaying. There are still to be seen the tombs of the *Mabometans*, and a ruin'd *Mosque*; but nothing more proves its antient splendor, than three hundred good and large cisterns, most of which are full of earth and few of water; of which we drank with sweetmeats we carry'd, and found it well tasted.

ing offended at two rich *Arabian* merchants, took the opportunity of their going to his house to visit him, to give them coffee according to custom; but poison'd as they lay there, with powder of *Diamonds*. One of them drank it, the other out of good manners gave it to the *Scibandar's* uncle; both of them drank their death in the coffee; for the

next night they went out of this world ^{GUMELLI} with their bowels rent in pieces; the *Scibandar's* treachery being at the same time in some measure punish'd by his own poison. It was not known what became of the servant that prepar'd the murdering potion; but it was said he had caus'd him to be kill'd that he might not discover the truth.

CHAP. IV.

Of the Tree and Pagod of the Banians, and other things the Author saw during his stay at Congo.

A wonder at tree.

Thursday the 21st, I went with the father vicar to see the *Pagod* and tree of the idolaters, or *Banians*. This tree is the strangest that can be seen, being so large that a thousand persons can be shaded by it, sitting by a wall three spans high, built about it to that purpose, but square. The greatest wonder is, that it has as many bodies as branches, because these when they are grown to such a pitch, sink their head into the ground, and cast out new roots, thus becoming new trunks, to keep up, and make the tree ever young, as well as increase it continually. The *Indians* call it *Wora*, and the *Portuguese* *Graglia*; the leaf is like that of the plane-tree. Close by it was a small round temple or *Pagod*, about twenty spans in compass, and behind it another less, to receive the offering of butter, rice, and other things. Opposite to the little door of the first, a span lifted from the ground, was the image of a woman call'd *Vavani* sitting, who they say was most free of her beauty, having never refus'd to satisfy any man's desire, prostituting her self to two at the same time. Her head and feet were of silver, and the small body, but two spans long, cover'd with a piece of silk from the shoulders down to the feet. The day being a festival, I saw several *Banians* make three low bows to her, touching the ground with their fore-heads. Their devotion towards her is so great, that to this day they very carefully preserve her house at *Diu* a fortress of the *Portuguese*. Besides the *Brachmans* their priests, every morning colour the forehead and ears of this false deity, with a dye of an orange colour, made of sandal, red earth, and cows piss; which they also receive with great devotion (as catholics do the extreme unction) that the devil may know them; it being their custom to sacrifice to him, because he is wicked, for fear, sooner

than to God that is good, for love. Night and morning they go down to the shore, and having ador'd the sea, throwing in some rice to feed the fish, carry some of that water home, to sprinkle the face and ears of all the family. The men wear a gold ring through their noses, but less than the women's.

Friday the 22d, I din'd at the *Portuguese* commissioners. Saturday the 23d, I went a shooting with the father vicar, and we kill'd some partridges. Sunday 24th, the feast of our lady of the rosary, which had been put off till then for want of priests, was celebrated in the church of the *Augustinians*. There were chambers fir'd, with ringing of bells, and a concert of pipes, and drums beaten by *Moors* with little ivory sticks. Father *Francis* sung mass, and the vicar preach'd. In short it was perform'd among *Mahometans*, with the same solemnity as is usual in christendom. Monday the 25th, a *Moorish* vessel from *Suratte*, arriv'd at *Bander-Congo*. They sail on the *Indian* sea, at certain fix'd times; that which is proper to sail from *Bander-Abassi*, and *Bander-Congo*, is from the middle of *October*, till the end of *April*. Two several currents run along the streight between these two ports, and meet at the point of the island *Kecimi*, within the bay. Tuesday 26th, father *Sanjeverino* of *Naples*, went away for *Gomron*, about some affairs of his order.

Wednesday the 27th, we rode out with the father vicar, to see *Mullab-Hamet's* ^{A curious garden.} garden; *Mullab* in the *Arabian* tongue, is a learned man. It was small but curious, and the best about *Congo*. In it there are abundance of *European* fig-trees, grapes, oranges, and many *Indian* plants, by the *Portuguese* call'd *Palmeiras*, which bear the cocoa-nuts. There was also another tree call'd *Badamas*, which produces a sort of fruit like almonds, and grows about the gulph of *Persia*, as well as in *India*.

GEMPEL
1694.
Idolators
washing.

After mid-night, all the idolaters both men and women, went apart to wash themselves on the sea-shore, the *Brachmans* preaching to the men, and their wives to the women. It is perhaps some superstitious custom they observe of washing every month, upon such a certain day of the moon; for before the washing there is a general fast, either as preparatory to it, or because they think to cleanse themselves of all their sins.

A fachir.

Walking out of town on *Thursday* the 28th, I met a *Cafre* or *Ethiopian*, extravagantly clad like a *Fachir*, or strowler; that is, with a cap on his head, all set off with feathers at the top, and with shells about the border; and a girdle with about two thousand goats hoofs hanging to it, and jingling like so many bells; in this ridiculous habit, did he walk so gravely, that it was pleasant to see him.

Sifting
of Pearls.

Friday the 29th, I went to the house of certain *Banians*, to see how they match'd the several sizes of pearls. They first shake them through a sort of brass cullenders, much after the manner as we make small shot; and then several youths pick the round from the misshapen, and the clean from the foul. There is 30 per Cent. profit, in carrying them but to *Suratte*; and therefore the custom-house is so sharp, that they search all that go thither to the soles of their shoes, and their secret parts, to find pearls. And yet for all this severity the customers are often cheated by the merchants, who lay out fifty or one hundred thousand crowns at *Conjo*, in this noble commodity; and that without any loss of time, by reason of the great quantity there is to sell, and their goodness.

Saturday the 30th late at night, the *Portuguese* privately brought in a cow to be kill'd and divided among them; because the *Deroga* will by no means suffer a creature so highly honour'd by the *Gentiles*, to be slaughter'd in publick, and they pay him considerable sums of money from time to time, on this account. And this is the reason they generally eat very bad mutton, or goats flesh.

Sunday the last of *October*, mass was very solemnly sung in our church; there was a great resort of christians; as there was on *Monday* the first and *Tuesday* the 2d, of *November*. *Wednesday* the 3d, there was a plentiful entertainment at the monastery, all the *Portuguese* officers of *Congo* dining there; but I took more pleasure a shooting on *Thursday* the 4th, with the factor of *Bassara*.

Friday the 5th, an *English* vessel came into the harbour to take in loading for *Suratte*. The heat was so violent on *Sa-*

turday the 6th, that I could not forbear at night having my bed carry'd up to the top of the house, to lie there after the country fashion; for at *Congo* and about the gulph of *Persia*, the natives most of the year, lie either in their courts, or on the tops of their houses built like those in *Naples*, commonly call'd *Asiraci*, that is, flat roofs. All their bed is only a corded bed-sted, with a thin quilt under, and another over them.

Sunday the 7th, we had some of the country musick in our church, which was not altogether ungrateful to the ear. *Monday* the 8th, I din'd with and was well treated by *Joseph Pereira*. *Tuesday* 9th, a *Moorish* woman came to our church to have the gospel of St. *John* read to her, to cure her of a fever; and they told me they had known several persons cur'd by their faith, in that holy gospel.

Wednesday the 10th, we diverted our selves on the sea. *Thursday* the 11th, an express came from *Spaban*, and confirm'd all was said before, concerning the permission to drink wine; and that the new king drank as hard as his father had done. *Friday* the 12th, I walk'd along the sea-side with the father vicar, and took notice that there was great plenty of game. *Saturday* the 13th, there arriv'd a great ship from *Bassara* to load for the *Indies*. *Sunday* the 14th, mass was solemnly sung in our church, many *Mabometans* resorting to it, to see our mysterious ceremonies. *Monday* the 15th, a good entertainment was given in the monastery; the same on *Tuesday* the 16th at the commissioners, this being some diversion for being detain'd in that place. *Wednesday* the 17th, I had the satisfaction to see a fine dance of *Moorish* women, who intermixt it now and then with singing in their language, as was said before.

The *English* vessel being ready to sail, father *Francis* and father *Constantine*, who had agreed for their passage aboard, prepar'd for their voyage on *Thursday* the 18th, and *Friday* the 19th, and then on *Sunday* the 21st, went away to *Bander-Abassi* in order to sail thence to *Suratte*. This they did for fear of being made slaves by the *Moors* of *Mascale*, who were then at war with the *Portuguese*, and had fourteen men of war in that port. The cause of this war was, because the town of *Mascale*, having once belong'd to the king of *Portugal*, the *Arabs* had revolted from them forty six years before this time, and chosen a sovereign of their own call'd *Imam*, who did not only extend his dominions up the country, to the great prejudice of the neighbouring princes; but also along the gulph of *Persia*, from

from cape *Ros-Algate* to *Catifa*, being five hundred miles along the shore. He also took from the *Portuguese* the fort of *Patti*, near *Mombas*, and fix'd his regal seat at *Nazura*. Ever since these two nations have been at war, and committed hostilities at sea; both their fleets continually seeking one another to fight, tho' the *Portuguese* has always come off victorious, with the total destruction of the other. They have sometimes treated about peace, but could never come to any conclusion; because besides a yearly tribute, the crown of *Portugal* demands liberty to build another fort near *Masate*, to keep a garrison there and factory.

Thus I was left alone, to the dissatisfaction of father *Francis*, who endeavour'd to persuade me to continue my voyage to the *Indies* with him. I had resolv'd to embark aboard a *Moorish* vessel of *Gibera*, which was to land eight horses, receiv'd by way of tribute from the king of *Persia* at *Danam*. Several reasons induc'd me to go aboard this ship; the first because it was ready, and the *English* vessel not yet loaden; but was to go to *Bander-Abassi* to land there, which could not be done without some loss of time. The second, because the *Moors* were in peace with all nations, and the *English* at war with the *French*, who lay in wait to fall upon them about *Suratte*, in which case I must have perhaps fled to some place I had no inclination to go to. The third and last, because I knew the custom-house of *Suratte* to be very severe on account of pearls, as was said before, and therefore I should have met with much trouble. All these inconveniencies being avoided aboard the *Moorish* vessel, I thought better to go in it for *Danam*, a city belonging to the *Portuguese*. I spoke to *Joseph Pereira* to agree for mine and my man's passage (which according to the usual rate would have been a toman for me, and thirty abassis for him) but he very generously got it me for nothing; further desiring the master of the vessel to afford me all conveniency, which he willingly did, as standing in need of his friendship. Tho' I never design'd to be carry'd gratis, yet I thought fit to accept of the commissioner's favours, but designing to make the master some return for his civility. Sunday the 21st, *Luis Mendoca*, formerly the king of *Portugal's* factor at *Bassora*, went away for *Gomron* to overtake father *Francis*, and go with him to the *Indies*. Monday the 22d, I spent in shooting, and kill'd some partridges. Tuesday the 23d, I prepar'd for my voyage, which being near at

Vol. IV.

hand, the commissioner was pleas'd to ^{GEMELLI} give me some diversion at his house, ^{1694.} sending for three women dancers. Their ^{Persian} vests were all lac'd open before, and ^{dancers;} with long close sleeves, ty'd under the breast with ribbands, after the country fashion, and bound about the waste with a silver girdle; under it they wore long breeches, like those above describ'd. On their heads they had little caps clos'd at top with a ribband and two clasps, from under which there hung down behind a long silk veil, like a nuns. They had only glass and silver bracelets about their wrists, and others made fast above their elbows, at which hung two silk strings with tassels of beaten silver. Their eye-lids were dy'd black, for ornament, and they had several spots of the same colour, about their faces; under the eyebrows, on the chin, and nose, and some on the cheeks like patches. Their hands and feet were colour'd with yellow, to add as they thought to their beauty. At their noses, which were bor'd, hung rings with two pearls on each side; and between the nostrils were bigger gold rings which reach'd down to their mouths. Their hair made into several tresses hung down their backs, except two locks, which falling upon their cheeks, were ty'd under the chin, as it were to bridle it. Abroad they cover themselves with a piece of stuff of several colours, and their faces with a transparent veil. The *Arabian* women wear black masks with little clasps prettily order'd. The floor being cover'd with carpets, they began their dance, first all three, and then two, to the musick of pipes, flutes, drums and four tabors. It would be tedious to give an account of their several grave motions, and the winding of their bodies and arms, which they sometimes reach'd down to the ground. When they had all sung a while, the youngest stood up, with some small horse-bells about her arms, and danc'd alone, clapping her hands on several parts of her body regularly to make the sound more agreeable, cutting capers, and making strange motions with her body to provoke lasciviousness, and laughter. Then the second, perform'd the same with a better grace; and lastly she danc'd with the same actions, and motions to the sound of two great horse-bells, like those our messengers mules wear, which she jingl'd artificially enough.

Whilst we were thus diverting ourselves with the commissioner, a messenger came from the *Deroga*, or governor of the city, to desire in his name

Z z he

General he would do right to a *Moor*, who had some money due to him from a *Persian*, that was servant to the factor of *Bassora*. This made me observe what respect was given to the *Portuguese*, allowing them to exercise the same jurisdiction as they have at *Goa*, not only over their subjects and other christians, but even over the *Mahometans* that serve in the factory; and besides the power of imprisoning at *Congo*, to bastinado *Mahometans*, who

being summon'd by the commissioner, do therefore make their appearance before him as punctually as they do before the *Deroga*. The *French* themselves have not so much authority in the ports of *Turky*.

Thursday the 25th, there happened a great fray between the *Scibandar's* officers, and the *Arabs*, on account of a seizure of tobacco; two of the former being dangerously wounded.

CHAP. V.

The Author's Voyage to Damam, in Indostan.

ALL things being in a readiness, the *Nicoda*, or captain of the vessel came, on *Friday* the 26th, to order me aboard, and therefore in the evening I caus'd my equipage to be carry'd directly aboard from the monastery, without being search'd by the customer; but a *Moor* dropt a cloak-bag on the strand, and wetted some of my cloaths. Then I went aboard with the captain; where I found all the provisions I had occasion for, laid in generously by the *Portuguese* commissioner.

Angon
island.

Sailing that same evening late, we arriv'd on *Saturday* the 27th at *Angon*, to take in fresh water; which is not allow'd to be done at *Congo*, lest the natives should want. By good luck we found the cisterns dry, which oblig'd us to take it in the neighbouring island of *Kescimi*, two miles distant. *Angon* is not inhabited, because it was burn'd down by a *Portuguese* general, in revenge for the perfidioufness of the inhabitants.

Kescimi
island.

Whilst they were labouring diligently to take in water, which was somewhat brackish, on *Sunday* the 28th, I went a shooting, the island abounding in all sorts of game, both four-footed, and feather'd. On *Monday* the 29th, I went about to see the island. It is longish, stretching out a great way towards *Bander-Abassi*; its compass is about ninety miles. The soil produces grapes, figs, dates, and other sorts of fruit for the support of the natives: but their greatest sustenance is fish, for they dry abundance of pilchards in the sun, which they take there, and in the island of *Angon*, to feed upon all the year. There are good pearls found about both these islands; but the natives love their pilchards better, as being taken with more safety, and less trouble than those jewels. The metropolis of *Kescimi* has been quite ruin'd by frequent change of sovereigns, and wars that have happened

on that account; so that at present there is only the village of *Misjar*, and some few others. There is also a regular fort of four bastions, formerly built by the *Portuguese*, and yielded up by the last treaty to the *Persians*, who keep a garrison in it.

Tuesday the 30th, the sea being calm, the *Nicoda*, and other *Moors* diverted themselves, trying which of them was best at hitting a packthread with a bullet. They shot well, and the captain hit it twice, and I question whether any sportsmen in *Europe* could have hit it better.

Wednesday the 1st of *December*, we sail'd betimes with a fair wind; so that on *Thursday* the 2d, we left the island *Recca*, where the *Portuguese* formerly had a fort, altern betimes, and pass'd in sight of the island of *Ormuz*. This small island is at the mouth of the gulph of *Perfa*, two *Spanish* leagues from the continent. Within its compass of three miles, there grows neither tree nor herb, being all over cover'd with good white salt, which renders the soil quite barren. It has no fresh water but what falls from the clouds, and is gather'd into cisterns, for the use of the garrison. The sand is valu'd, because it is very black and bright; as also the red clay, wherewith the *Gentiles* dye their fore-heads. In this island, before the *Portuguese* conquer'd it, there was a city, where the king of *Lar* resided, being sovereign of it.

Friday the 3d, we lay off the mountain of *Daba*, in *Arabia Felix*; because the wind being contrary, we rather lost than gain'd ground. Towards evening we advanc'd as far as *Soar*, or *Masate*, still in sight of the mountain *Kumuwensk* in *Perfa*. At night it blew a storm, which on *Saturday* the 4th, turn'd to so fair a wind, that it carry'd us out of the strait, into the spacious *Indian* ocean; but still in sight of the continent. In

the mean while, the *Moors* chief employment was to colour their eye-lids every day, with a certain black ointment, good as they said, to preserve the sight; to pluck the hairs off their beards with nippers, where they would not have them grow, and die the nails of their hands and toes with red earth. As to other things they were very civil, never offering that rudeness to strangers, as the *Turks* do; but the captain, and all his ship's crew shew'd me more particular respect, as being recommended by the commissioner.

The *Baluccos*.

Holding on our course eastward, on *Sunday* the 5th, we came in sight of the islands of *Cocaluta*, *Giovar*, *Giavani*, and others inhabited by *Baluccos*; and on *Monday* the 6th, pass'd that of *Goadel*, of the same people. The wind then failing, we lay still without moving a foot. These *Baluccos* are pirates, who lying in wait behind their islands in small barks, watch to seize ships that pass by. They have also a large extent of land on the continent, between *Persia*, and the *Mogul's* dominions. Their king or prince call'd *Jafcebe*, resides in the city *Biscian*, and his brother in another they call *Cbiu*. They are *Arabs* in religion and manners, treating their slaves with incredible cruelty, even to cutting the sinews of their ankles, that they may not run away.

The calm continu'd *Tuesday* the 7th, in sight of desert islands, which are nests of pirates. The heat was so violent, that I thought the winter in *India* equal to the summer in *Italy*, tho' there be no difference as to length of days. Whilst these calms last, the *Persians* use to strip themselves naked betimes, and have a great deal of sea-water pour'd on their heads to wash all their bodies, which generally stink, because of the colour'd smirch they wear several months, without ever shifting.

Pislini island.

The wind came up fair when it was late, and brought us in sight of the island of *Pislini*. We still steer'd due east, to the end, that when we discover'd the point of *Diu*, as butting out furthest into the sea, we might with more safety direct our course for *Suratte* and *Damam*. The wind continu'd fair *Wednesday* the 8th, and at noon we had a false alarm, perceiving a vessel make towards us. I was ready to burst with laughing, to see the *Moors* lay hold of their rusty muskets, which are all matchlocks, and the only defence we had; for our vessel carry'd but eight small guns, and they had but bad gunners to play them. The vessel held on its course, putting up red colours,

to shew she was a friend, and made away *GEMELLI* to westward.

1694.

Sanganos pirates.

Thursday the 9th, before sun-rising, we discover'd a small bark to the eastward, which made the *Moors* very valiant; for laying hold of their rusty arms, they began to bark, like dogs at a distance; but not daring to man out their boat, as I advis'd them, offering to go in it. The bark at last went away to the northward, and so ended the cries and fear of the *Moors*. They believ'd it to be a bark of the pirates call'd *Sanganos* and *Ranas*, who are *Gentiles* in religion, and make no slaves, but take what they find aboard, without hurting any body. They live in some islands, and on the continent in marshy and inaccessible places, as also in woods near *Syndi*, and the kingdom of *Guzaratte*. They go out in small barks, but very numerous, and rob along the coast, and even in the bay of *Suratte*. Their petty king is tributary to the *Great Mogul*, who having conquer'd part of his country, restor'd it to him upon that condition. He resides in the city *Ramora*, on the continent, and sometimes in the island of *Sanganilet*. Another heathen prince of the country of *Varel*, borders upon him. The calm returning, we saw about evening a vessel of these *Sanganos* plying about our ship, and therefore being jealous, with good cause, of their design in the dark of the night; I advis'd our *Nicoda*, or captain, to deliver out powder to twenty soldiers that were aboard, to load his great guns, and place centinels; because the *Moors* sail like brutes, without any precaution, and are giving out ammunition, and charging their fire-arms, when the enemy is upon them. On *Friday* the 10th, in the morning we could not see the pirates. The wind came up contrary, but soon falling, left us in a calm.

It continu'd *Saturday* the 11th. In the afternoon a seaman took a fish about five pounds weight, and being the first taken that voyage, the mariners put it to sale according to custom, hanging it up at the main-mast, to give it to the fairest bidder. A merchant vying with another, offer'd twenty two *Abassis*, which are eight crowns of *Naples*; and the fish might have been sold for more, had there been more merchants; it happens sometimes that they are sold for thirty crowns. The money is divided among the seamen for a dinner.

Sunday the 12th, the wind came up contrary, so that we made little way. The same happened on *Monday* the 13th.

About

GEMELLI
1694.

Flying-
6th and
Dory.

About evening we discover'd to eastward a small vessel, suppos'd to be of the *Sangos*; which made our captain alter his course to shun him; so fearful are those *Moors*. Night deliver'd us from this fear, but a storm that arose frighten'd us worse, and did not only last till day, but blew so violently on *Tuesday* the 14th, that it made the ignorant master and pilot lose all the ground they had gain'd, and return to *Kesimi*. In sight of us was a vessel, suppos'd by us to be the *English* ship, aboard which were the fathers *Francis* and *Constantin*, which beat it out without losing ground as we did. This made me fret, and tho' I took never so much pains to persuade the ignorant *Moors* to do the like, putting them in hopes the wind would soon be fair, I could never prevail. As I had said, the wind fell before night, and we stood our course again; the captain telling me, he did it for my sake. That day I first saw the flying fish which the *Portuguese* call *Aquador*. It flew for about a musket-shot above the water, and then dropt, the little wings not being able to support its weight of ten or twelve ounces. He leaves his natural element to save his life; because the *Abnus*, or *Dorado*, as the *Portuguese* call it, continually pursues to devour it. This *Dorado*-fish that lives by destroying another, is of a blueish colour, well tasted, and big enough to serve four men.

Wednesday the 15th, the storm grew so violent, that we were in some danger, and in the afternoon it rain'd harder than it had done the day before, which lasting all night, wetted those under as well as above deck. The *Moorish* women in the poop wept bitterly, as did their husbands without, calling upon their false prophet *Mabomet* to deliver them from impending death.

Thursday the 16th, the wind came fair, and the sailors thought they discover'd at forty miles distance the continent of *Giasib*, part of the dominion of the *Balucoos*. We held on our course along it; but tho' the ship made good way, we could scarce regain what we lost the day before, much less discover the land of *Goader*, we hop'd to see in the evening. Our misfortune was, that we had an ignorant pilot, who sail'd by guess, without knowing what he was to do, his business at *Congo* having been selling of tobacco. By this we may judge how barbarously the *Moors* act in other cases, since they commit their lives and estates in a ship to a tobaccoist. This consideration made father *Francis* refuse

to go with us, tho' much courted by the master of the vessel. The captain perceiving the ignorance of the pilot, who knew nothing of his business, came in lofty terms to tell me, he had stood again for the *Indies* for my sake, and therefore I should see whether the vessel held her course. I told him it did not, and that the old pilot having swallow'd opium all the day, to add more stupidity to that proceeding from old age, lowering the two top-sails, stood all night for the land, which was the way to be certainly lost on some rock, and therefore, if he had not a mind to perish, he must tack about, and stand out to sea. This he order'd to be done immediately, hoisting his main top-sail and fore-sail, and then pray'd me to stand by the compass, as being now sensible of the tobaccoist's ignorance, and imagining I was well skill'd in navigation. Being equally in danger with the *Moors*, and concern'd for the safety of the ship, tho' not much better skill'd than the tobaccoist, I thought fit to comply with the *Nicoda*, or captain, standing sometimes by the compass, and ordering how we should sail. Besides, I made the men handle their arms when any vessel appear'd, that we might not be lost through their ignorance and cowardize. Thus upon every accident they call'd for the *Aga Gemelli*, believing, as being an *European*, I must understand every thing (so great an opinion they have of us) but I understood as good as nothing, and did nothing all day but steer to the southward; leaving the employment at night, when I could not lose my sleep, to the dull tobaccoist, who lost at night all we gain'd in the day. Thus, tho' the day before we had five sails abroad, and a fair wind, yet on *Friday* the 17th, we found our selves in the same place we were in eleven days before; a plague those are subject to, who sail in *Moorish* ships. Making way in the day, we came up with the lands of *Arabia*, *Pissimelon*, *Setsalau*, and *Ciurna*, of the kingdom of *Syndi*, under the dominion of the *Great Mogul*, about the first part of *Indostan*.

The same fair wind continuing on *Saturday* the 18th, we made much way, because the ship was light, and we had six sails abroad; the *Nicoda* taking no more notice of the fearful pilot, since I advis'd him to make all the sail he could, when the wind was fair. At the sight of the new moon, that had caus'd the afore said storm, all the *Moors* in the vessel in the evening made their usual prayers and adorations to her,

after the manner of the idolaters, with their hands open before their eyes. A gun was fir'd for joy, and all of them shaking hands, wish'd one another a happy month.

Sunday the 19th, the wind continu'd fair, but there was little of it. *Monday* the 20th, it was contrary, so that we made no way. *Tuesday* the 21st, was such a calm, that I lost all hopes of keeping *Christmas* ashoar; and I had such a contest with the pilot, who made no way by night, that I would meddle no more with steering the ship. *Wednesday* the 22d the wind was fair, but so little of it, that we could not make much way; but on *Thursday* the 23d, it freshen'd, and held all night, and *Friday* the 24th; yet we could not discover the continent, and I have the satisfaction of keeping *Christmas-Eve* ashoar.

Saturday the 25th, so great a day for the redemption of man, the sea appearing cover'd with those weeds the rivers carry down into the *Indian* sea, we began to hope we should soon discover land; and casting the lead, we found eighteen fathom water.

Sunday the 26th, we began to see some snakes of the colour of those we call *Cervooni*, drove out by the rivers into the sea; and casting the lead, we found no bottom, which made us begin to fear sands. About evening, a contrary wind started up, and disappointed our hopes of seeing land on *Monday* the 27th. But before sun-rising, on *Tuesday* the 28th, the ignorant sailors and pilot began to fancy they saw the land and fort of *Diu*, which runs further out into the sea than any other. Upon this joyful news, the captain, according to the *Moorish* custom, treated all the sailors with *Cacciaro*, that is, black kidney-beans, rice, and lentils all boil'd together. They eat this *Indian* food, dipping their hands into a dish of melted butter, and then filling it with the *Cacciaro*, and so cramming their mouths. Since we imagine our selves in sight of *Diu*, it is not improper to leave the *Moors* to their soon fading pleasure, and acquaint the reader, That this fortress is seated in a small island very near to the continent and bay of *Cambaya*. Its port is capable of large Ships. The castle stands on the top of a rock, with only a narrow path to it, cut out of that very mass of stone; so that a single man may defend it. This rock is all about precipices, and has no other high ground to command it; for which reason the conquest of it cost the *Portuguese* more blood and treasure, than all their other conquests

VOL. IV.

in *India*; but they ought to spare nothing for the gaining of it, because it is a check upon all ships that fail the *Indian* ocean. The city is on the continent, not far from the fort, and inhabited by Christians, *Mabometans*, and *Gentiles*. Its liberties extend four miles along the sea-shore, till the place where they pass the river *Brancavaria*. It borders on the two kingdoms of *Guzaratte* and *Cambaya*, both subject to the *Mogul*. When *Badur*, king of *Cambaya* besieg'd this place, *Don Nuno d'Acuna*, governour of *Goa*, came to relieve it, and not only rais'd the siege, but kill'd the king; shewing at once the strength of the place, and valour of the *Portuguese*. *Acuna* entering the city *Diu*, in the year 1535, found an old man of 335 years of age, who had a son of 90. He had chang'd his teeth three times, and his beard as often grew grey, after having been black. He beg'd of *Don Nuno*, a *Rupie* a day, worth about five *Carlines* of *Naples*, less than half a crown *English*, telling him, king *Sultan Bader* had allow'd *Maff. Hist.* him so much; but the generous *Portuguese* instead of one, allow'd this *Indian* *pag. 259.* phenix three, in respect to his venerable age. They say, all the accounts he *Ind. l. 11.* gave, agreed perfectly well with the histories of his times, tho' he could not read. At last he dy'd at above 400 years of age, as they relate in those parts. *Fergel. de Flores.* Father *Hiacinto de Dios* tells us further, That this *Indian* *Noah* was first a shepherd in *Bengala* in 1230, and carry'd *St. Francis* over the river on his back, who for his reward gave him a pair of beads; there are several particulars that may render this opinion the more improbable; but the chiefest, that we never read *St. Francis* was in *India*. Thence the old man went to *Diu*, where he liv'd many years, and then returning to *Bengala*, convers'd, and was acquainted with several *Portuguese*, and religious men of the order of *St. Francis*, about the years 1605, and 1606. During the whole course of his life he profess'd three religions, being first a *Pagan* for 100 years; then a *Mabometan* for 300; and lastly, a *Catholic* at the end of his life, the said *Franciscans* baptizing him in *Bengala*, as the same father *Hiacinto* writes. They tell us of another that liv'd 300 years at *Malacca*.

Having in imagination discover'd the point of *Diu*, we stood away to southward for *Damam*, the contrary wind coming fair. It continu'd so till *Wednesday* the 29th at noon, when we were

General becalm'd, and the weather was as hot as it is at *Naples* in *August*. In the evening the wind came fair again. Our tobacco-pipe pilot, being as I said, so ignorant that he understood neither cart, nor compass, all the *Moors* believ'd that some land we saw before us on *Thursday* the 30th, in the morning, had been the village of *Maym*, near *Bazaim*, a city belonging to the *Portuguese*, and consequently that they were at the end of their voyage. All the sailors rejoyc'd, and the merchants much more, as thinking their lives and estates in safety; and the ignorant pilot, vainly puff'd up with pride, for having brought the ship safe to *India*, went about with a sheet of paper in his hand, to enter what the passengers promis'd to give him as a reward for his care; but coming to ask what I would give, I said, I would give nothing; for he rather deserv'd to be punish'd than rewarded; being thoroughly satisfi'd the land we saw, was not that he imagin'd. The same day, discovering a large bark, the *Arab* soldiers of our small vessel had a false alarm; a netting of robes was made on the prow, to cover them, and our ten small guns were loaded, but night drawing on we lost sight of her. The pilot was for furling the sails to come to anchor, but I prevail'd with the captain not to consent to it, as well on account of the bark we had seen, as because all that coast is infested with pyrates. *Friday* being the last of the year 1694, we were becalm'd not far from land.

Saturday the first of the year 1695, drawing near to the shoar upon the mistaken notion, that we were on the *Portuguese* territories, the boat was sent off to discover it. Not regarding danger, to satisfy my curiosity, I went inconsiderately aboard it, both to see the country and hear news of *Antony Machado de Brito*, admiral of the *Portuguese* fleet, with whom I had been acquainted at *Madrid*. The captain of our ship, who took particular care of me for the sake of the *Portuguese* commissioner, oppos'd my going a long while, as not being well satisfi'd that coast belong'd to *Portugal*, and perhaps he fear'd, if it did, some other misfortune might befall me; but seeing I was obstinate, rather than displeas'd, he suffer'd me to go. The contrary wind, which blew hard, would not permit us to make directly for the village; but drove us ashore a mile from it. Being discover'd from land, a bark put out to enquire what vessel ours was, as we went to be inform'd of their country. We

were told that small place was call'd *Mangalor* in the kingdom of *Guzaratte*, 400 miles from *Damam*. This surprising news terrify'd me; and perceiving the *Moors* in our boat, suspected the others were *Sangalo* pyrates, and only persuaded us that was the place it was not, that they might carry us off, without any trouble, the *Sanganos* bordering on the kingdom of *Guzaratte*. I endeavour'd to persuade them for our safety, to cut the rope that held us, and make away to our vessel. They answer'd it was too late, and should perfectly cast our selves away, if the others happened to be too swift for us, as they must be, having a better boat and more oars to fetch us up. There being no other remedy, we suffer'd our selves to be led away like so many lambs before the commander of the place. He receiv'd us not ill, as we fear'd, but with civility; giving us leave to take in water, whereof we had much need. It was brought us in the darke of the night, by the country-women, in earthen vessels, one upon another. They cover'd all their bodies and heads, with long garments like smocks, of silk; in their ears they had gold rings, and about their arms others of glass. Nothing could be seen of them but their feet and faces.

The habitation was a small village on the shoar; I say it was but little in respect of the great *Mangalor*, a dependence whereof it is, five miles distant, and govern'd by a *Nabab*, or governor appointed by the *Great Mogul*, who they told me had two castles there. The inhabitants told us how much we were mistaken; informing us that the point we took for *Diu*, was the country of the *Sanganos* pyrates, and the land we saw next *Mangalorpotan*, of the same kingdom of *Guzaratte*, not far distant from them to the southward; opposite to which place, we lay, as was said before, three days becalm'd, and bearing up against contrary winds.

Having taken water, and obtain'd leave to return to our ship; about midnight the bark, with some *Indian* merchants aboard it, bore us company, to persuade our *Nicoda* to stand in for the shoar, upon hopes of a good market for his goods; but he with good reason, suspecting their honesty, as being borderers on the *Sanganos* pyrates, gave them good words, promising so to do, the next day; yet at break of day, on *Sunday* the 2d, he set sail with a fair wind, which afterwards quite ceas'd, and left us becalm'd.

All

All the sailors and passengers blam'd the pilot for his ignorance, who instead of carrying us to *Damam*, had run us up 400 miles higher eastward, and almost into the mouths of the ravenous *Sangano* pyrates, who were but thirty miles distant. Some were for throwing him over-board; some were satisfy'd with railing, and putting him by the steering of the ship; so that the foolish old fellow had scarce a word to say for himself. I told the *Nicoda* he deserv'd as many strokes as he had agreed to pay him abassis, for his ignorance. Twelve merchants, and *Moorsish Fuchirs*, who went to beg in the *Indies*, for this reason refus'd to go any further aboard the ship, and being set ashore, travell'd along it a-foot, thinking it less dangerous than to continue in a vessel govern'd by a tobacco-feller, who had spent thirty seven days in a voyage of twenty, without coming to his port, steering three days to and fro northward, when he should have stood south. The wind freshing after noon, we coasted along *Indoistan*, making good way at night.

Monday the 3d, the wind prov'd so cross that we could not reach *Diu*, as we had intended, and this because the *Moorsish* mariners are a whole hour spreading a sail; calling *Mabomet* to their assistance, with a tedious song upon every little accident. We came to an anchor in eighteen fathom water, till the tide and wind, which were against us, came fair. The *Indian* seas are but shallow, so that tho' we were 100 miles from land, we were forc'd to keep sounding. Four hours after night-fall we sail'd again, the wind blowing hard at north, and the sea running high; the sky was as clear as it is the finest night in *July* at *Naples*.

Tuesday the 4th, the wind came about fairer, which helped us on considerably. Being near land at night, we kept but one sail abroad, sounding continually. At last, finding twelve fathom for a great while, we came to an anchor, staying for day to draw nearer the land we saw.

Wednesday the 5th, in the morning, we thought we were between *Damam* and *Bazaim*, and the tide being against us, waited till it turn'd, which was about noon. Drawing near the land, the water began to look whiter, by reason of the rivers that run into it. We made some little way, and anchor'd again because the wind was contrary: Those brutal *Moors* being such unskilful sailors, that they knew not how to advance a

step, unless the wind was very fair. But it was my own fault that I lay so long at sea, because I would not follow the advice of father *Cbiaranton*, a *French Jesuit*; for had I gone aboard the *English* ship, I had been long before ashore taking my ease.

We weigh'd anchor at midnight, but dropt it again on *Thursday* the 6th, before day, for the aforesaid reason; so that when I expected to have kept a merry twelfth-tide ashore, after a hard lent at sea, because my provisions fell short, I was forc'd, against inclination, to continue my abstinence. We set sail some time after, but within a few hours anchor'd again, because the tide would not permit us to make way but at certain hours.

I went again ashore in the boat to know what coast it was, the danger at *Mangalar* not having yet had the good effect to make me more cautious, none of the sailors being able to give a good account what part of the *Portuguese* dominions we were upon. Being hindered by the flats from coming any nearer than within half a mile of the shoar, two seamen swam thither to get some intelligence. One of these who return'd, the other not daring to swim back, brought an account that we were near the village of *Nevegon*, two days journey for a foot-traveller from *Damam* towards *Bazaim*. Returning aboard with this relation, we weigh'd upon the flood, and dropt anchor again upon the ebb, about *Bazaim*.

This current or tide alters twice in twenty four hours. It runs for six hours from break of day towards *Bazaim*, or the south; then it runs till about evening to the north, towards *Damam*; then it turns again towards *Bazaim*, and holds till midnight; after which it turns to the north, and holds till break of day. 'Tis true, these turns are not at the same hours all the year about, tho' the running one way or the other always continues the same time.

Friday the 7th, we hoisted sail about noon, with an indifferent wind, and anchor'd again in the evening. After midnight we advanc'd again, and *Saturday* the 8th, at sun-rising, at length came to an anchor off *Damam*. Tho' we spread our sails again after noon, they were soon furl'd through the ignorance of the pilot, for he rather lost than gain'd ground. *Sunday* the 9th we weigh'd four hours before day, and dropt anchor again at sun-rising, the wind continuing still at north. Four hours before night we set forward again with an indifferent

GEMELLI

GENEVE
1695.

different gale, which drove us on a good way by night, when we anchor'd.

Monday the 10th, we came to an anchor near *Damam*, after a voyage of 1200 miles, or 400 leagues; which we run twice over through the ignorance of the pilot. I went immediately ashore in the boat with the captain. Here I had the good fortune to meet father *Francis* and father *Constantine*, the fa-

ctor of *Baffora* being already gone for *Bazaim*; and embracing one another interchangeably, congratulating our happy arrival in *India*, after our parting at *Bander-Congo*, they carry'd me to their monastery of *St. Augustin*, where the father prior very courteously receiv'd, and made much of me, appointing several servants to attend me, that I might the better recover my self after my fatigues at sea.

*A Voyage round the World by Dr. John
Francis Gemelli Careri. Part III.*

Containing the most Remarkable Things he saw in
INDOSTAN.

BOOK I.

CHAP. I.

The Description of Damam, a City belonging to the Portuguese in Indostan.

NEVER was traveller better pleased, after enduring many hardships, for a considerable time in far distant countries, in being safely restor'd to his native soil, enjoying the company of dearest friends, and relating what he had seen; than I was at my landing in *Indostan*, which made me forget the toils of my troublesome voyage. If it be extraordinary delightful to feed the ears with the relation of what precious things nature has bestow'd on that wealthy country, for the ease of humane life; you may judge how great a satisfaction it was to to me, to be upon the spot where I might actually see and be acquainted with them. Being therefore lodg'd in the monastery of the *Augustinians* in *Damam*, and having a little rested me after my voyage, on *Monday* the 11th of *January* 1695, I apply'd my self to landing of my equipage. The *Portuguese* factor was so civil, that as at *Bander-Congo* my portmanteau's had not been search'd for the sake of the commissioner; so neither were they open'd at *Damam*, through his courtesy. He obligingly told me, he could with I had brought the value of 100000 crowns; for in regard I was a stranger, he would not have taken any custom of me; for had I been a *Portuguese*, I must have paid 10 per Cent. (which to say the truth, would have been considerable) to the *Gentiles*, who farm'd the customs. When I acquainted father *Francis* with this generosity of the factors, he told me, that notwithstanding his being a religious man, having brought two bales of carpets, for the service of their church, the custom-house officers had stopp'd them for their duties. I apply'd my self to the factor, to have them restor'd to him, re-

VOL. IV.

presenting father *Francis's* great worth, and how much he was esteem'd at *Ispahan* by all the great one's; so that at length, thro' my intercession, he recover'd his bales.

The city *Damam* is seated on the left side of the river of that name, in 20 deg. lat. Tho' but ill peopled, it is beautiful enough, and built after the *Italian* manner. Three broad streets divide it in length, and four across them; all so regularly built, that the corners of the houses (which are for the most part trench'd about) do not jut out an inch one beyond another; 'tis true, most of them have only a ground floor, very few having any rooms above, and they are generally til'd. Instead of glass, their windows are made of oyster-shells curiously wrought, and transparent. Every house has its garden or orchard with fruit-trees.

The air of *Damam* is very good, being north of *Goa*; and tho' its summer and winter be at the same time as it is at *Goa* (for whilst I stay'd it was summer in those parts, and the winter is from *May* till the end of *September*, with continual rain and storms) yet during that time I call'd summer, there is some sort of coolness in the morning, which is not at *Goa*.

It has four modern and well-built bastions; but 'tis somewhat irregular, and ill provided with cannon. The compass is about two miles, without any ditch on the east and south sides, but with a low work, or intrenchment breast high. On the other sides the ditch is fill'd by an arm of the river, towards which there are two gates, and before the first a draw-bridge. All the walls are back'd with ramparts.

The government is in a captain, or commandant, and it is kept by a good

Damam
city.

Air;

Fortifica-
tion.

Garrison. The factor before mentioned, has the charge of the king's revenue. It is inhabited by *Portuguese*, *Mestizos*, who are born of white fathers and black mothers, *Pagans* and *Mahometans*; but these two last are not allow'd the free exercise of their religion. There are several good monasteries, as those of the *Jesuits*, the *Recolets*, the *Augustinians*, and the parish-church; but none of them has above three altars opposite to the door. The monasteries are convenient enough for the religious men. That of *St. Augustin*, where I resided, had an excellent square cloister, with twelve good stone columns, besides the four great pillars at the angles. Above in the dormitory there are twenty eight smaller columns.

On Damam. All that has been here mentioned belongs to new *Damam*; for the old is on the right of the aforesaid river, consisting of poor low houses, or rather cottages with mud-walls, and cover'd with palm-tree leaves. Here most of the *Moors* and *Gentiles* live, having their shops of several trades along the ill-constru'd streets.

The port. Between the old city and the new, is the harbour made by the river *Damam*; but no vessels, either great or small, can come in but at flood, during six hours of the day, as was said in the foregoing book, as it is at *Offend* in *Flanders*, and *Calis* in *Picardy*. The stream is so rapid at ebb that no oars can stem it, but they must needs come to an anchor (unless the wind sets in very hard) and stay till the next flood. This is to be understood of vessels of small burden; for great ones can neither go in or out but twice a month, that is, when the moon is new and at the full, because of the spring tides, which there they call great tides.

The entrance into this harbour is defended by a small castle seated on the side of old *Damam*. It is longish, and has three bastions well enough furnish'd with cannon. On the north side of the city is a small suburb, consisting of cottages cover'd with palm-tree leaves, and inhabited by christian blacks; and at a small distance from it, a village of *Gentiles*, with a *Bazar*.

In the year 1535, *Martin Alfonso de Sousa* took and destroy'd *Damam* in three days. In 1559, *Don Constantine*, son to the duke of *Braganza*, vice-roy of *India*, retok it from *Asid Bostia Abyssino*, who had revolted from his sovereign, and made it of considerable strength. The *Great Mogul* has attempted to reduce it several times; and particularly fifty years ago

Aurenge-Zeb-Alanguir, afterwards king, laid siege to it with an army of eighty thousand men; but the *Portuguese* defended it so bravely, making a terrible slaughter of the enemy with their continual sallies at night, that he was forc'd, after lying three months before it, to march off with the loss of half his army. The occasion of it was, that the *Mogul* resolving to make the last effort to take it, and having to this purpose plac'd two hundred elephants in the front, with long sharp lwards in their trunks; the beasts frighted with the fire of the *Portuguese* muskets, ran disorderly upon the *Mahometan* army, cutting in pieces abundance of men, with the same weapons they were arm'd to destroy the christians. The barbarians being but in a bad condition by their own contrivance; the *Portuguese* retiring into the town, began in scorn to throw cockle-shells, which the *Mahometans* abhor, into the enemies camp, with an engine they call *Papagayo*, made of plankboard strengthned with canes, and carried up into the air by the wind and guided by a rope.

The *Portuguese* live very great in *India*, both as to their tables, cloathing, and number of *Cafres*, or slaves to serve them; having some of these to carry them in *Palancbines* on their shoulders, and others great umbrelloes of palm-tree leaves. The *Palancbine* is like a wooden bier painted and gelt, seven spans long, and four in breadth, with two well-wrought risings at both ends. On it they lay a *Persian* carpet, and over that a piece of *Russian* leather, that it may not heat their backs, and two silk pillows, on which they lie along. There are ropes, or iron rings fastned to the ends, through which they run a bamboa, or thick *Indian* cane, to lay on the shoulders of the blacks, two before and two behind, all in a row or file; very few being carry'd by two. The person in the *Palancbine* is cover'd with an umbrello of eight spans diameter, carry'd by a slave, or else fastned to the bamboa that crosses the *Palancbine*, and may be turn'd to that side the sun is on. In rainy weather they use another sort of carriage call'd *Andorra*, with a covering made of palm-tree leaves, sloping like the ridge of a house, fix'd upon the bamboa; there are two small windows or doors on the sides, that may be open'd, to see who goes along the street. The *Andorra* differs from the *Palancbine* in nothing, but the bomboa; because the latter has a crooked one, that he who is carry'd may

may sit up; and that of the *Andora* is strait, so that he must lie along as if he were in bed. This would be a convenient way of travelling on those soft pillows for an effeminate *European*, who should find fault with the jousting of the *Napoleonic* sedans, and would desire to travel in safety and sleep. They are generally us'd there by women, religious men, and all other persons; a religious man of any note, never being seen abroad in *India*, but in an *Andora* or *Palancbine*, attended by many slaves, there being but few converts. Besides, the charge is very inconsiderable, for they that have no slaves, pay four *Indians* but twelve *coffins* of *Naples* a month for carrying them.

Coaches.

When they go out of town, or travel some days journey, they use a sort of coach drawn by oxen, guided by a cord run through their nostrils. These coaches are square like a chair, and can hold but two; the top of it is commonly cover'd with silk; three of the sides open, and the back clos'd with canes interwoven one within another.

Provisions.

They have no good flesh to eat in *Damam*; because the beef and pork is ill tasted: They seldom kill sheep or goats; and every body cannot go to the price of fowls. Fish is also scarce, and none of the best; besides they have no oil of olives to dress it, but instead thereof make use of that of cocoa-nuts. The bread is extraordinary good, even that they make of rice. Thus a stranger at *Damam*, who is not entertain'd by some body, has but an ill time of it, if he expects for his money to furnish himself in the market; because the gentry have all their provisions in their houses, and the meaner sort makes a shift with rice, and *Sura*, that is, palm-tree wine, scarce ever tasting bread all the year about.

Fruits and herbs.

There is not any one sort of our *European* fruits, but all *Indian*, as cocoanuts, *Manjandas*, *Giambos*, *Undis*, *Ananajus*, *Alas*, *Anonas*, and others we shall describe in their proper place, and give the cuts of them. As for herbs there are many of the *European*, and of the country; among which the roots of that call'd *Cassuras*, being like white tartuffs, or pignuts; of the bigness and taste of a chestnut, are excellent.

Beasts.

Damam is also very famous for all sorts of game; for besides all the *European* creatures of wild boars, wolves, foxes, and hares; in the mountains there are those they call *Bacareos*, in-shape like bucks, and in taste like swine; *Zambares*, whose bodies are like oxen,

and their horns and feet like those of *Gazelles*, which are like goats; *Divers* like foxes; *Roses*, with the body like a cow, so call'd from a rose they have on the breast; the male of this species is call'd *Mern*, and has horns half a span long, and the body and tail like a horse; wolves like stags with hairy horns; *European* stags; black wild cats with wings like those of the bats, with which they skip and fly from one tree to another, tho' they be far distant; wild horses and cows. There are three sorts of tygers, call'd *Bibo*, *Cito*, and the royal, each differing from the other in bigness of body, and variety of spots. It being their property to be continually in search of wild boars, these taught to defend themselves by nature, tumble in the mire, and dry themselves in the sun so often, till the mud is crust'd hard on them. Being thus arm'd, instead of being made a prey, they often gore the tygers with their sharp tusks; for they working with their claws on the hard mud, are a long time pulling it off, and by that means give the boars time to kill them.

The *Portuguese* have two ways of killing tygers, one is lying conceal'd in a ditch, near the water where they come to drink; the other going in a cart drawn gently through the wood by oxen, and thence shooting them. But they use all their endeavours to hit them on the fore-head, for if the tyger falls not the first shot, it grows so enrag'd with the hurt, that it certainly tears the hunter in pieces.

Besides four-footed beasts, there is great plenty in the woods of peacocks, partridges of two sorts, ducks, pigeons, turtle-doves, swallows, rooks, and other sorts known in *Europe*. They for pastime keep a sort in cages about as big as a thrush, call'd *Martinbos* of the city, and of the country. The first are black and white; the latter of an ash colour, with a red breast.

A man in *India* must be very regular in eating, or he will fall into some incurable distemper; or at least such as Diseases, must be cur'd after the country fashion with fire; experience having shewn that *European* medicines are of no use there. The disease they call *Mordazin* is a complication of fever, vomiting, weakness in the limbs, and head-ach. It always proceeds from too much eating, and is cur'd by burning both the heels with a red hot spit, till the patient feels the heat of the fire. That they call *Bombaraki*, and *Naricut*, swells and causes a violent pain in the belly, and to cure it, fire is also

GEMELLI 1695. also apply'd to the swelling, so that those who have the good fortune to recover, carry the signs of the fire afterwards on their belly. For this reason, the physicians that go out of *Portuga* into those parts, must at first keep company with the *Indian* surgeons to be fit to practice; otherwise if they go about to cure those distempers, so far different from ours after the *European* manner, they may chance to kill more than they cure. For fear of these diseases, on flesh-days, they only eat flesh at dinner, and generally fish at night.

Habit.

The habit of the *Portuguese* that have settled their aboad in *India*, is very odd; for under their coats or vests they wear a sort of breeches, call'd *Candales*, the like whereof I never saw in any part of *Europe*; for when they are ty'd they leave something like the tops of boots on the leg. Others under a short doublet, wear wide silk breeches; and some have them hang down to their ankles, so that they serve for hose.

The *Gentils* wear a long silk garment, gather'd about the waste like a petticoat. It is ty'd with ribbands before upon the breast, and under the left arm like the *Persian* *Cabayas*, and with a girdle about the middle; under it

they have long breeches down to their heels. On their shoulders hangs a piece of silk or woollen, which they wrap about their head when it is cold, the turbant being but very small. Others go naked, only covering their privities with a clout.

The women have no other garment but a long piece of stuff, wherewith they cover all their body, except their legs and part of their belly. Some add a little sort of smock with half-sleeves; adorning their bare arms with bracelets, and strings of glass and latton; their ears with large silver pendants, and their ankles with rings of the same metal.

Wednesday the 12th, I went to visit the king's factor, being much oblig'd to him for his civility. The same day I went with father *Constantine* to old *Damam* for pastime. *Thursday* the 13th, we went to take the air in a garden of the *Augustinians*, as well the religious men, as their guests and others, in five of the country coaches, father *Francis* treated us generously. Coming home I saw them on the shore building a vessel they call *Gala-vetta*, which was all pinn'd with wood, and caul'd with cotton.

CH A P. II.

The Author's short Voyage to Suratte, and Return to Damam.

HAVING a curiosity to see *Suratte*, and it being easie to go thither; because the convoy was ready to sail for *Cambaya* and other parts, I went on *Friday* the 14th, to give a visit to the commodore of the galliots that were to convoy the trading vessels, and desir'd him to give me my passage aboard his, which was built frigot-fashion and carry'd twenty guns. He civilly granted it, so courteous is the *Portuguese* Nation, and therefore having return'd thanks I went home to make ready. *Saturday* the 15th, after dinner, leaving my luggage with father *Francis* to avoid all trouble of that severe custom-house, I embark'd with my man aboard the commodore's galliot, and the great stream carrying us out of the harbour presently after noon, we sail'd with a fair wind which continu'd all night.

Sunday the 16th, about break of day we came in sight of the bay of *Suratte*, that city being but sixty miles from *Damam*, and entering it with a fair wind, came to an anchor at *Suali*, twelve miles from the city. I immediately went a shore with the commodore's nephew, where the custom-house officers search'd

our bags narrowly for pearls, or zee-chines. Then I went to see the director of the *French* company, who kept me with him.

Suratte is seated in twenty degrees of *Suratte's* latitude, and a hundred and five of longitude, at the mouth of the bay of *Cambaya* and kingdom of *Guzaratte*. It is not large, enclos'd by a weak wall, built after it was plunder'd by *Savagi*, or *Kacagi*. The castle is no better, having four towers but no ramparts, but either coming from sea or land it must be pass'd by to come at the city. The governor of it only commands the garrison-soldiers; the city being govern'd by a *Nabab*, who receives the king's taxes throughout the whole province. The private houses are built with mud mixt with cows-dung, and small brushwood broke; there are not above a dozen good ones belonging to *French*, *English*, *Dutch* and *Mahometan* merchants. Nevertheless *Suratte* is the prime mart of *India*, all nations in the world trading thither, no ship sailing the *Indian* ocean, but what puts in there to buy, sell, or load; for in the port of *Suratte*,

in the port of
Suratte,

Suratte, there is a trade not only for all sorts of spice, and among them for ginger, but of very rich gold and silk stuffs, of very fine cottens and other commodities brought thither from remote parts. There are such rich merchants, that they can load any great ship out of one of their ware-houses. I may say without enlarging, that all the rich silks, and gold-stuffs, curiously wrought with birds and flowers; all the brocades, velvets, taffetas, and other sorts made in *Amadabat*, are convey'd to *Suratte*, which is but four days journey from it. I say those of *Amadabat*, which is the greatest city in *India*, and nothing inferior to *Venice* for this trade; tho' its houses are low and made of mud and *Bamboo*; and the streets narrow, crooked, and full of dirt. But I forgot the fine muslins of *Cambaya*, and the curiosities made in the most valuable agate that is brought into *Europe*.

Amadabat
city.

Cambaya
city.

Cambaya, the metropolis of that kingdom, was a large and rich city, whilst the *Portuguese* were possess'd of it, *Barosse* and *Suratte*; for this brave nation govern'd it well enough, the gate being still standing that people made for its security; but after they abandon'd it and retir'd to the sea, it lost much of its splendor and magnificence; for the vessels anchor twelve miles from it, and cannot come up to the city but with the flood; which is so violent and swift, that a horse can scarce outrun it. For this reason the ships often do not go up, because they must do it against wind, to check the violence of the tide that drives so impetuously.

Barosse
city.

Barosse above mention'd is famous for its excellent white and stain'd calicoes, as also for ginger, and the best market for its commodities is at *Suratte*, ten miles distant from it. Its port is the river, which falls into the sea fifteen miles lower, up which small barks can go with the tide.

I purposely omit to mention particularly so many countries, which like rivers to the sea, convey all their wealth to *Suratte*, because of the good vent they find for it there; this being a matter well known to *Europeans*. But there would be a much greater resort, where its port better, and that the vessels when they have run six miles up the river, were not forc'd to lie at *Suati*, ten miles from the city; whence and whither commodities are convey'd in small boats.

Monday the 17th, I saw the church of the *Capucins* which is decently adorn'd, and their house convenient, those good men having built it after the manner of *Europe*.

VOL. IV.

Tuesday the 18th, I went to see the tree *GEMELLI* of the *Gentiles*, we call *Banians*, under ¹⁶⁵⁵ which they have the *Pagods* of their idols. ^{Banians} and meet to perform their ceremonies ^{tree and} It is of the same bigness and sort as ^{Pagods} that describ'd at *Banter-Congo*; but the *Pagods* differ, for under this I found four, one call'd of *Mamaniva*, which has a mighty front; two others of *Rio-Ram*, and the fourth a retiring place for *Factirs* that do penance; whereas under the tree at *Bander-Congo* there is but one.

Under this tree, and in the neighbour-^{Factirs}ing parts, there are many men who or peni-^{tents} have enjoyn'd themselves and do perform such dreadful penances, that they will seem fabulous to the reader, and impossible to be gone through without the assistance of the devil. You may see one hanging by a rope ty'd under his arms and to the tree, only his feet touching the ground, and the rest of his body being bow'd, and this for many years, without changing place or posture day or night. Others have their arms lifted up in the air, so that in process of time there grows such a stiffness or hardness in the joints, that they cannot bring them down again. Some sit with their hands lifted up without ever moving them. Others stand upon one foot, and others lie along with their arms under their heads for a pillow. In short, they are in such postures, that sometimes a man can scarce believe his eyes, but fancies it is an illusion. Thus they continue naked all seasons of the year, with vast long hair, and nails grown out, expos'd to the rain, and burning rays of the sun, and to be stung by flies, whom they cannot drive away. Other *Factirs* who take that employment, supply their necessities of eating and drinking. These penitents are not ashamed to go quite naked, as they came out of their mothers wombs. The women go devoutly to kiss those parts modestly forbids us to name, and tho' they take them in their hands they feel not the least motion of sensuality, but they roul their eyes in a most dreadful manner without taking notice of them, as I saw one on *Wednesday* the 19th, beset by some silly *Pagan* women, who paid their respects to him with great humility.

Thursday the 20th, a young *French* man ^{An hospi-} conducted me to see an hospital of the ^{tal for} *Gentiles*, where abundance of irrational ^{birds and} creatures were kept. This they do be- ^{beasts} cause they believe the transmigration of souls, and therefore imagining those of their fore-fathers may be in the vilest, and filthiest living creatures, they pro-

C c c vide

GENELLI vide them with food. Thus the wild monkeys come to eat what is provided for them. Besides the prodigious number of birds and beasts maintain'd there, particular care is taken of the lame and sick. But that which most amaz'd me, tho' I went thither to that purpose, was to see a poor wretch naked, bound hands and feet, to feed the bugs or punaises, fetch'd out of their stinking holes to that purpose. The best of it is, that any man should voluntarily expose himself to be so devour'd, for a small reward given him, according to the hours he will continue under it.

A foolish
piece of
knavery.

Friday the 21st, going home, after walking about a-while, I saw abundance of people got together before a *Pagan* merchant's shop, and in the midst of them a juggling fellow with a hen in one hand and a knife in the other. Inquiring into the meaning of it, they told me, that man was a rogue, who when he had a mind to get money, carry'd that hen through the streets where the *Gentiles* liv'd, threatening to kill it, that they might give him mo-

ney to save its life, each of them believing the soul of some of his kindred might be in that hen. In short, I saw him receive some money, and go on still threatening the same.

Saturday the 22d, all the vessels from *Diu*, *Cambaya*, *Barofce* and other places, being come together to sail for *Goa* and other dominions of *Portugal*, and the galiots being ready to convoy them, I again went aboard the same that brought me. Sailing out of the mouth of the river with a fair wind, we got into the open sea, and after lying by two hours for the small vessels to go a head of us, we held on our course gently all night.

Sunday the 23d, at break of day, we found our selves many miles from *Damam* and too late to hear mass. The galiots came to an anchor after noon without the mouth of the river, some small barks going up it. I found father *Francis* expected me with impatience, who receiv'd me with expressions of great affection.

Monday the 24th, I took leave of friends that had been kind to me, there being an opportunity to imbark for *Bazaim*.

CHAP. III.

The Author's short Voyage to Bazaim, and Description of that City.

HAVING long since resolv'd to see *Goa*, on *Thursday* the 25th, I caus'd my baggage to be carry'd down to the shore by *Boes*, so they call porters in *India*, and thence into a vessel at *Diu* that carry'd oars, lying without the river, as the fathers *Francis* and *Constantine* had done. Having with them taken leave with thanks of the prior and religious of the monastery, we went down to the shore, and thence in a boat to the *Navillo*, which was a long boat of the king's, with six oars and a square sail in the middle, having one falconet aboard, and seventeen *Portuguese* and *Canarine* soldiers. At ebb, which fell out when the moon was vertical, we set forwards with the help of a small gale, and of the tide that set towards *Bazaim*; for from the time the moon first appears above the horizon still she comes to the mid-heaven, the flood runs towards *Suratte*; and when the moon goes down, towards *Bazaim*.

Trapor
town.

Wednesday the 26th, at break of day we were off the town and fort of *Trapor*, a place well inhabited, with monasteries of *Dominicans* and *Recolets*. Ten miles from this the *Portuguese* have another impregnable castle call'd *Afferim*; for besides its being seated on the top of the hill, where there is no other higher

ground to command it, a crooked path cut out of the mountain, along which two men cannot go abreast, leads up to it, and is defended by several guards, who may withstand an army, only rolling down the stones plac'd there to that purpose.

The wind continuing fair, we sail'd by *Maim*, the fort and village of *Maim*, and several other towers and dwellings, and then by the little island *De la Vaca*, or of the cow, three miles in compass, and not far distant from *Bazaim*. Much time being lost waiting for the barks, and *Parancos* that came under convoy and were mere slugs, we could not reach *Bazaim* after seventy miles sail till midnight. We came to an anchor before the channel form'd by the small island and the continent, for fear of running a ground in the dark, and *Thursday* the 27th, went in with the flood.

There being no houses of entertainment in the city, we were receiv'd by father *Felicianus* of the nativity, born at *Macao* in the kingdom of *China*, and prior of the monastery of the *Augustinians*, who treated us all very courteously and like a true *Portuguese*.

Bazaim, a city in the kingdom of *Camba-Bazaim* is seated in 19 deg. of latitude, and 104 of longitude. *Nuno de Acuna* in the year 1535 took it for king *John* of *Portugal*,

gal, from *Badar* king of *Cambaya*, who, terrify'd by the valour of the *Portuguese* nation, surrendered it to them with the neighbouring islands; whilst *Martin Al-Maff. Hist. fono de Sousa*, undauntedly attack'd and took *Damam* and its fortress, cutting in pieces all the *Turkish* garrison, and afterwards levelling the castle with the ground in three days. The compass of *Bazaim* is three miles, and has eight bastions, not all quite finish'd. On them I saw some pieces of cannon, with the arms of *Philip IV.* of happy memory, king of *Spain*. On the north side the walls are rampard, and the other fortifications are not yet finish'd; on the south side, towards the channel, there is only a single wall, that place being less expos'd to the danger of enemies, and sufficiently defended by the ebb and flood. One third of the city, towards the north, is unpeopled, by reason of the plague which some years rages in it. The streets are wide and strait, and the great square or market has good buildings about it. There are two principal gates, one on the east and the other the west, and a small one towards the channel or streight. The harbour is on the east side, form'd as was said, by the island and continent.

The government is in a captain, as they call him, or governor, and the administration of justice in a *Vedor*, and the *Desembargador*, who is a gown-man, and judge of appeals from all the *Feedors* of the northern coast; along which in every city there are factors and treasurers for the revenue of the crown of *Portugal*. The *Portuguese* general resides at *Bazaim*, with sovereign authority over the captain of that and all the other northern places, whence he is call'd general of the north.

Friday the 28th, I walk'd about the city with the fathers, but saw nothing so extraordinary, as I did on *Saturday* the 29th, which was a *Pagan* born in *India*, who had an infant sticking fast to his navel, with all his limbs perfect except the head, which was in the man's belly, and made its excrements apart like every other perfect creature. Whether the man or infant was struck, they both felt the pain.

Sunday the 30th, mafs was sung at the *Augustinians* with musick, which being in *India* was not disagreeable, and much gentry was there. The heat was greater than at *Damam*; so that as well women as men, went about the streets naked; the men covering their privities with a clout, and the women their bodies and thighs with a piece of linen. The people of fashion, at that time, wear silk and very thin muslins,

having long breeches down to their *GEMELLI* heels, so that they need no stockings. ^{1695.} Instead of shoes they wear sandals like the friars.

All the *Gentiles* bore their noses to put *The Gentry* rings through, as they do to the buffa-^{tile}. tiles. Every beggar, much more those that are well to pass, rubs his teeth every morning betimes with a stick, and spends two hours at that work, according to the custom of the country. They use no quilts because of the heat, but lay blankets and sheets on the bed, made of cords, without boards, as is us'd by the *Persians* of *Lar* and *Bander-Congo*.

Monday the last of the month, I went with father *Peter* of the *Martyrs* to the village of *Madrapur*, to see some vagabond *Moors*, who vaulted and performed feats of activity like our tumblers and rope-dancers. The most wonderful ^{A won-} thing was, to see a man who turn'd ^{derful} round upon a cane, held up by another on his girdle; and what most amaz'd me was, that he who supported the cane went on without putting his hands to guide it, and he that was on the top of it did not help himself with his hands neither, and yet the cane or bambao was thirty spans high. At last, after giving two skips in the air, he lighted on a very high beam, fix'd to that purpose; I know not how he could do all this without some supernatural assistance.

Tuesday the 1st of *February*, a messenger from the *Nabab* or governor of *Suratte* came, in a *Palanchine* with thirty soldiers, to treat about some business with the governor, and deliver'd him two letters.

Wednesday the 2d, I went in an *Andora* ^{The coun-} of the monastery to see the *Cassabo*, which ^{try house} is the only diversion at *Bazaim*; no-^{of Ba-} thing appearing for fifteen miles but de-^{zaim.} lightful gardens, planted with several sorts of the country fruit-trees, as palm, fig, mangas, and others, and abundance of sugar-canes. The soil is cultivated by *Christian*, *Mabometan*, and *Pagan* peasants, inhabiting the villages thereabouts. They keep the gardens always green and fruitful, by watering them with certain engines; so that the gentry, allur'd by the cool and delightful walks, all have their pleasure-houses at *Cassabo*, to go thither in the hottest weather to take the air, and get away from the contagious and pestilential disease call'd *Carazzo*, that uses to infect all the cities of the northern coast. It is exactly like a bubo, and so violent, that it not only takes away all means of preparing for a good end, but in a few hours depopulates whole cities.

GEMELLI
1695. as witness *Suratte, Damam, Bazaim, Tana,* and other places, which often suffer under this calamity.

In this territory of *Cassabo* I saw the sugar-canes press'd between two great wooden roulers, turn'd about by oxen, whence they came out thoroughly squeeze'd. Then the juice is boil'd in cauldrons, and being set out to cool at night in earthen vessels it hardens into white sugar.

Thursday the 3d, I went to visit the image of our lady *De los Remedios*, standing in a parish-church belonging to the *Dominicans*, on the road to *Cassabo*. About five years since this church was burnt by *Kacagi*, a *Gentile*, subject to the *Great Mogul*, who with a great multitude of out-laws, and four thousand soldiers, went about like a rover, plundering and burning villages. Thence I went to see another miraculous image of our *Lady de Merce*, in a small church founded and serv'd by an *Augustinian*, who did the office of curate.

Jesuits. *Friday* the 4th, I saw the church of the *Jesuits*, in *India* call'd *Paulistas*. It is richly gilt, not only the three chappels, but the walls and arch; but the workmen knew not how to make that rich metal shew itself to the best advantage. The dormitory and cloister are the best in the city. In the garden, besides the *Indian*, there are some sort of *European*-fruit; and among the rest figs and grapes, which the father rector told me came to maturity twice a year, that is, in *December* and *March*.

Dominicans. *Saturday* the 5th, I visited the monastery of the *Dominicans*, with the famous dormitory. The church was large and had but three altars, as we said was us'd in *India*, opposite to the great gate, and all well adorn'd.

Franciscans. *Sunday* the 6th, I heard mass in the church of the *Misericordia*, which is the parish of the city; and continuing to visit churches, came on *Monday* the 7th to that of the *Franciscans*. Both church and monastery are built after the manner of *Europe*, the church having many chappels, contrary to the custom of *India*.

Hospitalers. *Tuesday* the 8th, I heard mass in the parish of our lady *de la Vida*, where there are three very good altars well adorn'd. The monastery of the fathers, hospitalers, or *St. John de Dios*, where I was on *Monday* the 9th, is so poor, that it can maintain but three friars.

Thursday the 10th, understanding there

was a wedding of people of quality at the church of our lady *de la Vida*, I went to see the ceremony. I observ'd the bridegroom did not give his bride the right hand, and thinking it an extravagant custom, as being only us'd by crown'd heads, I ask'd the reason of it of some *Portuguese*; who told me the same was practis'd in *Portugal*, and this that the gentleman might have his right hand at liberty, to put to his sword in defence of the lady. The bride was richly clad, after the *French* fashion; but some trumpets went along, sounding such a doleful tone, as little differ'd from that they use in conducting criminals to execution. I return'd to the monastery in the *Andora*; and here it is to be observ'd, that the manner of saluting those they meet, when they are carry'd in this sort of conveyency, in *Italy* would be taken for an affront, and laugh'd at; for in token of respect they shut to the little door of the *Andora* upon them. This in *Naples* would certainly produce a duel, and in *India* is done out of respect even to the vice-roy himself.

Friday the 11th, I heard mass in the parish-church of our lady *da Se*, where there are several altars, and two chappels.

There are no doctors of the civil law throughout the *Portuguese* dominions in *India*, and those few *Canarins*, who follow this employment, through their ignorance prove bad advocates, or counsellors, and solicitors, and sometimes plead both for plaintiff and defendant. Besides, for the most part, causes are decided by ignorant captains or governors without the approbation of an assessor. This happens for want of an university and colleges to teach the law; and because the *Portuguese* doctors will not go so far from their country, by reason of the little profit they should make in *India*. Father *Felicianus* the prior, understanding that I was a doctor of the civil law, on *Saturday* the 12th, propos'd a match to me with a portion of 20000 pieces of eight, and with a promise that I should be advocate to the monasteries, and to some families of note, which would yield about 600 pieces of eight a year. Having no inclination to live in those hot countries, I answer'd, that tho' he had offer'd me 100000 pieces of eight portion, I should never be induc'd to quit *Europe* for ever.

CHAP. IV.

The Description of the Pagod in the Island of Salzete, by the Portuguese call'd the Canarin.

THE Pagod or temple of the Canarin, whereof I intended to give an exact and true account, is one of the greatest wonders in Asia; as well because it is look'd upon as the work of Alexander the Great, as for its extraordinary and incomparable workmanship, which certainly could be undertaken by none but Alexander. What I most admire is, that it is almost unknown to Europeans; for tho' I have made much enquiry, I do not find that any Italian, or other European traveller has writ of it; and it is very strange to me that so ingenious a man as our Peter de la Valle should omit to see both this Pagod, and the palace of Darius, with the antiquities of Celmunar, that were but a few leagues out of his way, since he travell'd for his pleasure, and made nothing of spending thousands of crowns to satisfy his curiosity. Tho' a poor man, I spar'd no cost or labour, that I might see all, and inform the publick. As for Tavernier, it is no wonder he minded not to see these things, because his principal end was trade, and buying of jewels, and therefore he only went to those places where his business lay, and he could make most profit; and tho' he made several voyages to India, he minded not to see antiquities, tho' he pass'd close by them.

Gormandel village.

I had a mind to go to Tana, and pass over from thence to the Pagod; but the fathers visitor and prior dissuaded me, saying, it was better going by Deins. Accordingly Sunday the 13th, hiring a boat, I went over to the village of Gormandel, in the island of Salzete. The houses are scatter'd on both sides of the mountains, on the top whereof is the palace of the lord of the village. I went thence upon the streight to the village of Deins, belonging to the nuns of St. Monica at Goa, six miles distant from Bazaim: Father Edward, an Augustinian, procurator to those nuns, receiv'd me into his house, on account of a letter of recommendation I had from the father visitor.

Being hot and dry, father Edward brought out two citron peels preserv'd; and I, without considering, eat one, and drank a great glass of water; but he afterwards offering me the other, I call'd to mind, I had swallow'd down some hundreds of pistires, which cover'd the said

VOL. IV.

peels, and perhaps dislodg'd the souls of ^{1695.} so many dead idolaters residing in those little bodies. I therefore refus'd the other, with thanks, desiring him to keep that sweet-meat, which was as old as the village, to treat some other guest; because I would not upon any account, be guilty again of such a slaughter of ants. After this poor refreshment I went to a church the village of Monoposser, a mile distant, in a rock, to see a church under ground, formerly a Pagod cut in the rock, on which stands the college and monastery of the Franciscans. It is a hundred spans long, and in breadth thirty. The side-walls, as has been said, are of the natural rock, and only the front is made by art. Close by is another Pagod cut in the rock, formerly serving for their idolatrous worship.

The church and monastery are like all the rest in India. Five religious men live there, to whom the king of Portugal allows 200 Murais of rice, all which they give to the poor, except only as much as serves for their own sustenance. One of these fathers does the office of a curate, in the village of Cassi, two miles distant, and has a good dwelling there. On the mountain near the said college is another hermitage, with a chappel.

Returning to Deins, father Edward told me, that tho' he had us'd all his endeavours, he could not find men to carry me in an Andora, for his people were fled, and there were no others at Monoposser; by which, perceiving that the father was an exception of the general civility of the Portuguese, I was forc'd to take up with an ill house.

Monday the 14th, the owner, who was a Pagan, brought me the horse very late, because none of them goes out of his house, till he has perform'd his idolatrous ceremonies, and thinking to take some little meat before I set out, good sparing father Edward told me the bread was not come yet; and I answering I would send to buy some, he reply'd it was not yet bak'd; and I might dine in a village half way. Desiring him further to appoint some peasant to shew me the Pagod, because the Gentile knew not the way well, he would neither send a country-man, nor one of his servants; whereupon I set out in danger of losing my

Ddd

way

GEMELLI way for want of a guide, travelling on
1695. a mountain full of monkeys, tygers,
lyons, and other wild beasts and venomous creatures. Coming to the village, where I design'd to eat, I found nothing but a little rice half boil'd in fair water; the place consisting of only four cottages in the thickest of the wood; so that I went on fasting. By the way I met strange birds. Some were green, and as big as a thrush, and sang very well; others bigger, black as velvet, and with vast long tails; others red and green; some black and green; as big as a turtle-dove, and many more never seen in *Europe*; there were also an innumerable company of parrots, and monkeys, and apes, with very long tails, leaping from tree to tree.

After riding eight miles through the thick wood, we knew not where the *Pagod* was, or what way to take to find it. It pleas'd providence, we happened to meet with some naked *Pagan* women, carrying loads of wood, who put us into the road. Being come to the foot of the rock, I was worse puzzled for want of some body to hold my horse, the Idolater being to guide me thorough the labyrinth of so many *Pagod*s. At last I found a peasant wandering about the mountain, and giving him the horse to hold, I climb'd the bare craggy rock with the idolater, at the top whereof, on the east side, the great *Pagod* is hewn out, with other small ones by it.

The wonderful *Pagod*.

The first piece of workmanship that appears, consists of two large columns, two spans high, the third part of them from the bottom upwards is square, the middle part octangular, and the top round. Their diameter is six spans; they are fifteen spans distant from one another, and each of them eight from the rock, which is cut after the same manner. These columns support a stone architrave forty four spans long, four in thickness and eight in breadth; cut like the rest out of the same rock. These three portico's lead into a sort of hall or passage-room four spans long, cut in the same rock. At the end of it are three doors, one fifteen spans high, and eight in breadth, which is the middlemost, and two others four spans square on the sides, which are the way into a lower place. Over these doors is a cornish four spans broad, of the same stone; over which, thirty spans above the ground, there are other such doors, or windows cut in the rock. At the same height, there are little grots, or dens,

six spans high, of which the middlemost is the biggest. Thirty four spans above the ground, in the same place, is such another grot. It is no easy matter to conceive what the use of all this was.

Advancing ten paces towards the right, I saw a sort of grot, open on two sides, twenty four spans in length, and fifteen in breadth, over which was a round cupola fifteen spans high, and ten wide, with a square cornish, like that about the grot. Here there is an idol cut in the rock, in half-relief, which seems to hold something in its hand, but what it is does not appear. The cap it has on, is like that of the doge of *Venice*. By it stand two statues in a submissive posture, as if they were servants. They have conical, or sugar-loaf caps on. Over their heads are two small figures, like the angels we paint in the air; below two little statues, holding their hands on a staff, and two children by their sides, with their hands put together, as if they pray'd; on their backs is something like a piece of wood. Close by is another round cupola all of one stone, and shaped like the other, but the top of it is broke. Both this and the other are suppos'd to have been sepulchres of the ancient *Gentiles*; but there is no ground to make this out, no opening appearing to put in the bodies or ashes; but on the contrary it is visible they are not hollow within, but only cut without, in the shape of cupola's. About this second, there are four great figures carv'd in half-relief, holding in the left-hand something like a garment, and the same sort of caps on their heads, with small figures at their feet, and two above. Opposite to them, there are three little ones sitting, and six other large ones, and three of a midling size standing, all cut in the rock after the same manner: But that in the middle, which seems to be the idol, in its left hold a tree with fruit on it. On the other side there are sixteen figures, all sitting with both hands on their breasts, and the same caps; one of them seems to be superior to the rest, because there are two figures standing by its side, and two children above.

At a small distance northward is a little grot eight spans square, and in it, as it were a bed of the same stone, four spans broad, and eight long. On the other frontispiece is a statue sitting on its legs, after the manner of the east, with the hands together on the breast; and another standing with the branch of fruit.

fruit-tree in its hand, and above a wing'd infant.

Beyond the grot, and on the same front, which runs sixty spans within the rock, there are two statues sitting after the same manner, their hands plac'd the same way, with conical caps on their heads, and two like servants standing by them.

On the same side is the famous *Pagod* of the *Canarin*. The entrance to it is through an opening forty spans long, in a wall of the same stone, fifty spans long, and eight spans thick, on which there are three statues. On the right-hand before you go into the *Pagod*, is a round grot, above fifty spans about, in which, round the wall, there are many statues sitting, and some standing, and one on the left, is bigger than the rest. In the middle rises a round cupola, cut out of the same rock, like a pillar of the same stone, with several characters carv'd about it, which no man can ever explain. Going into the first porch of the *Pagod*, which is fifty spans square, there are on the sides two columns sixty spans high, with their capitals, and six spans diameter. On that upon the right hand coming in, there are two lions, with a shield by them; on the other upon the left two statues. Beyond these columns, at the entrance of a grot, on the left, there are two great statues standing, and looking at one another. Still further in are two vast big statues on the left, and one on the right of the door, all standing, with several little statues by them, only within the space of that porch; for going into the adjoining grot, which is twenty four spans square, there is nothing worth observing. On the right hand, where the lions are, there are no statues, but two large vessels upon convenient pedestals.

Hence there are three equal doors thirty spans high, and eight broad, but that in the middle even with the floor, those on the sides five spans above it, into another plain place. Here there are four columns twelve spans high, standing on the rock itself, between the five windows that give light to the *Pagod*. On the right side of the door there are some unknown letters worn with age, as is all the rest of the work. In this place, on the sides, besides several small figures, there are two vast statues of giants standing, above twenty five spans high; shewing their right hands open, and holding a garment in the left, on their heads the same caps, and

in their ears pendants after the *Indian* GEMELLI 1695. fashion.

At the entrance of the great gate of the *Pagod*, which is fifteen spans high, and ten in breadth, there are on the right four statues standing, one of which is a woman holding a flower in her hand; and twelve other less, some sitting and some standing, with their hands on their breasts, and something in them. On the left are four other statues, two whereof are women, with large rings about their ankles of the same stone, and sixteen little statues on their sides, some sitting, some standing, and some with their hands on their breasts, as was said before. Over the said door there are other two great ones, and as many opposite to them, with three little ones standing. On the left hand within, is another inscription in the same character: over the arch of this door is a window forty spans wide, which is the width of the *Pagod*, with a stone like an architrave in the middle, supported on the inside by two octangular pillars.

The *Pagod* is arch'd, forty spans in breadth, and one hundred in length, and rounded at the end; besides the four columns at the entrance, there are thirty more within, which divide it into three isles; seventeen of them have capitals, and figures of elephants on them, the rest are octangular and plain. The space between the columns and the rock, that is, the breadth of the side-isses is six spans. At the end of the *Pagod*, there is a sort of round cupola, thirty spans high, and sixteen of my paces about, cut in the same rock, but not hollow within. I believe it serv'd for some use, which we being ignorant of the antient customs of those times, cannot guess at. I know not what judgment *Portuguese* authors make of it, because their books are scarce at *Naples*; but they, it is certain, are well acquainted with it, the vice-roys themselves sometimes coming from *Goa* to see it; yet it is most likely they could never discover the truth.

All that has been hitherto describ'd, is cut in the very rock, without any addition to the statues, or any thing that may be parted. But on the floor of the *Pagod* there are several hew'd stones, which perhaps serv'd for steps to some structure.

Coming out of the *Pagod*, and ascending fifteen steps, all cut in the rock, I found two cisterns of rain-water, good to drink; and as many steps above that,

GAMBELLI
1695. that, a grot sixteen spans square, and a great one further on with much water standing in it. Mounting twenty paces higher, I found another grot twenty spans square, which led to another of the same dimensions, and that into one of twelve. In the first was a rising window with steps to it cut in the rock, with two columns near a small cistern.

At a small distance from these grotts is another *Pagod*, with a handsome plain place before it, and little walls about to sit down, and a cistern in the middle. Five doors cut in the rock lead into the first arch; and between them are four octangular pillars; all but the middle door are two spans above the ground. On the sides of this arch, whose length is the breadth of the *Pagod*, that is, eight spans, there are on the left several statues sitting, like those abovementioned, and others on the right standing. All about the frontispiece there are many sitting and standing, no way different from the rest already describ'd. Then there are three doors to the *Pagod*, that in the middle twelve spans high, and six in breadth, the two on the sides ten spans high, and four broad. The *Pagod* is sixty spans square, no way proportionable, being but twelve spans high. On both the sides, and over the entrance, there are above four hundred figures great and small, carv'd, some sitting, some standing, like those before spoke of; but two on the right bigger than the rest are standing, as is that in the middle of the frontispiece, which is of the biggest idol; and another on the left in the same posture; but all worn with age, which destroys every thing. On both sides there are two grotts fourteen spans square, with a low wall within two spans above the ground.

Going up ten steps further northward is a grott, and within that another less. On the right is another like it, with another little one within it, in which is a low wall like those before-mention'd. The great one is about twenty spans in length, and ten in breadth; the other ten square, and all of them with small cisterns. On the right side is another of the same bigness, with two small pillars before it, two little grotts, and three cisterns, one on the right, and two on the left; and another adjoining to it, with another within it, and a cistern of the same dimensions of the other. It is likely these were the dwellings of the priests of the *Pagod*, who there led a penitential life, as it were in a *Pagan Thebaida*.

Descending from that great height, fifteen steps cut in the rock, there is a little *Pagod*, with a porch before it thirty foot square, which leads into it through three doors, between which there are two square pilasters. On the left hand there are four statues; two sitting, and two less in the middle standing. On the right hand a little open grott, and another *Pagod*, with a cistern before it, the way into which is first, through a door ten spans in height, and six in breadth, into a room twenty spans square; which has on the right another very dark room twelve spans square, which makes the *Pagod* somewhat dark. In the midst whereof is a round cupola of one solid piece, fifteen spans high, which is the height of the *Pagod*. Descending fifty upright steps, there is a plain space cut in the rock, which is not very hard, and eight octangular columns twelve spans high, which leave nine intervals to ascend five steps that lead into an arch. In this place on the left side, which is ten spans, is a great idol sitting bare-headed; two other great statues standing, and some small ones; on the right side two other statues sitting, and two standing, besides many little ones about them. Then the way into the *Pagod* is through three doors, twelve spans in height, and six in breadth, with two windows over them. The *Pagod* is a hundred spans in length, fifty in breadth, and ten in height. About it runs an arch eight spans broad, with ten square columns. Here are four rooms or grotts, twelve foot square; besides seven in the front, and left side of the *Pagod*, where the cistern is; all which I suppos'd to be rooms for the priests of the temple. In the niche of it, which is ten foot square, is a great idol sitting, with two statues standing, and another sitting on the left, by which also there are two statues standing, and several small figures in half-relief about it. Ascending ten spans over against it is a little grott, supported by two small columns, ten spans high. There is a door ten spans high, and four in breadth out of it, into a room or grott sixteen spans square, and thence into another of twelve, where there is a large idol sitting, holding his hands on his breast.

Then descending twenty steps there is a plain space, whence four steps on the left lead up into an arch, where there are four pilasters twelve spans high, the distances between which are the way into three little rooms cut in the rock. Twenty steps lower there are other grotts

cut in the rock, with small cisterns, but for what use cannot be imagin'd, unless we suppose all these cavities were dwellings of the idolaters. It is only reported, That this wonderful work was made with a vast expence, by *Alexander the Great*, who was of the same religion.

Descending from the high rock, I mounted a horseback, with a good stomach, having fasted that day against my will, and made haste away to satisfy hunger. By the way I saw abundance of monkeys, and apes, and being about to kill one, the pagan pray'd me not to hurt them. Near the road were two palm-trees, rising out of the trunk of one great tree five spans, and spreading abroad their fruitful branches.

Near the village of *Canarin*, which gives its name to the *Pagod* here describ'd, is a rock a hundred paces about, with several grotts and cisterns under it, which might formerly be dwellings; the antient *Gentiles* affecting to have their habitations in rocks, to save the expence of materials in building. On the east side, before the largest grott, is a great idol sitting, with his hands a-cross, on his legs.

Returning to *Deins*, I met father *Edward* of *St. Antony* walking. He, instead of getting me something to eat, began to discourse after an odd manner; inquiring concerning particulars of the *Pagod*; but I left him to prate by himself, telling him it was not time to talk upon an empty belly. Alighting, and going up to my chamber, the first thing I said to the servant of the house, was to ask him, Whether there was any thing to eat. He told me there was none; and bidding him go fetch me a little bread at least, he set before me a small loaf, with the same citron peels cover'd with pismires, these vermin leaving nothing untouch'd in *India*; for which reason the *Indians*, to save some preserves, set them under a table, whose feet are in wooden bowls full of water, to keep them off. I made but two mouth-fuls of the bread; yet had not the courage to do so by the sweetmeat, which I fancy was made when first preserving was invented; and therefore I bid the servant keep that rarity from the pismires, against his master had some other stanger to entertain. The worst of it was, the wretched village afforded nothing for money to satisfy hunger, and therefore being spent with weariness and fasting, I lay down on the bed, expecting supper. Father *Edward*, in the mean while, having

Vol. IV.

walk'd about a long time, without thinking of me; at length, two hours and a half after it was night, came to the dark room. I hearing a noise between sleeping and waking, and not seeing who it was, ask'd, Who was there? and he very soberly answer'd, Truly, Sir, I did not think you were here (tho' we talk'd together when I came into the village) and being told I had eaten nothing but a little bread, he order'd the cloth to be laid. This word made me hope I should have something good to recover my faint spirits; when I saw two plates of small fry'd fishes appear, and that which had the least was set before me, the other with the larger before the father. I was twice about changing plates with him, but modesty prevail'd, and I arm'd my self with patience. After supper father *Edward* kept me up till mid-night, with a thousand idle tales, not satisfy'd that he had spent three hours in a needless chat with the peasants; and I having given him the hearing against my will, at last fell asleep without making any answer. When I awak'd, finding he was gone, I stripp'd apace, and went to bed, quite spent with hunger and weariness, wishing for the next day, that I might fly from that wretched place.

The island *Salzete*, in which the afore-said *Pagod* is seated, is about seventy miles in compass, twenty in length, and fifteen in breadth. Being very low, it is cut by several channels running in from the sea; but there are high mountains in it cover'd with trees. The soil is very fruitful, and produces abundance of sugar-canes, rice, and fruit; such as *Mangos*, *Cocos*, *Tranfolins*, *Giaccharas*, *Tamarinds*, *Ananas*, *Papas*, and other sorts, which shall be describ'd elsewhere. There are in it several villages of poor wretched *Gentiles*, *Moors*, and *Christians*, living in houses built with wattles crufted over with mud, and cover'd with straw, or palm-tree leaves. They go naked, both men and women covering their privities with a clout, and their breasts with another, or else with a short jerkin that does not reach below the navel, leaving the arms, thighs, and legs bare. On their arms they wear bracelets of silver and glass, and thick silver rings about the legs. The peasants are worse than vassals to the lords of the villages; for they are bound to till the land, or to farm as much as may put them in a condition to pay the landlord; thus like slaves they fly from one village to another, and their landlords bring them

Ecc back

GEMELLI
1695.

GAMILLI back by force. They generally pay for their land, four, six, or twelve *Morais* of rice, so call'd when the husk is off, and *Vate* when it is on, which is the way they usually deliver it. A *Morais* is twenty five *Paras*, and the *Para* twenty four pounds *Spanish*; measures the *Portuguese* use for provisions, as they do the *Covado*, for long measure. If the peasants take the land to till in the place of their abode, they pay no other duty to king or landlord (tho' some exact some days of personal service;) but those that hold in fee, pay an imposition according to what they are worth, every four months, to the king's factors or treasurers, residing in all the northern cities. These villages are given in fee to soldiers who have serv'd long; or to other persons that have well deserv'd of the crown, for three lives, after which they generally endeavour to renew; but to the church they are given for ever.

Bombaim. Besides so many villages, there are in this island several places of consequence; and among the rest the city and fortrefs of *Bombaim*, which is several miles about. It is parted from *Salzete* by a channel, which at low water is forlabbable. This island was given by the king of *Portugal*, in dowry to queen *Catherine* of *England*, and accordingly that king has been possess'd of it, ever since the year 1662. There are also in *Salzete* the forts of *Bandora*, and *Versava* with their villages; as also *Tana*, about which there are five small forts garrison'd and furnish'd with cannon. The country, tho' open, is excellent good for *India*, and has three monasteries of *Dominicans*, *Augustinians*, and *Recolets*. It is famous for calicoes, no place in the *Portuguese* dominions exceeding it in this particular, even for table-service. Eight years since one brother kill'd another at *Tana*, about the possession of a village. The *Jesuits* are possess'd of the best part of this island of *Salzete*, having almost all the point that looks towards the east, and the channel of *Bazaim*; and it is reported for a certain truth, that they have more revenues in *India*, than the king of *Portugal*.

From *Bazaim* to *Tana*, and from *Tana* to *Bombaim* runs a channel of salt water, in some places half a mile over, in others more or less; and because near *Goadel*, it runs through the midst of a rock, the *Portuguese* generally say, That *Alexander the Great*, coming, as some will have it, several times to *Bazaim*, caus'd the rock to be cut through to give a passage to the water; and that it was he who had the neighbour-

ing *Pagod* of the elephant cut out of the solid rock.

Tuesday the 15th, as soon as ever day began to appear I set out. Coming to *Gormandel*, I found no boat to carry me over to *Bazaim*, and going further, I saw a boat setting out; therefore running down the shore, I made signs to the *Indians* and *Gentiles* in it to come back, and take me aboard, which they refusing, rather than be left to endure more hardship on the shore, I made use of the *Portuguese* authority, making as if I would fire at them with my gun, which they perceiving, came about to take me up. I went over to *Bazaim*, and being ask'd by the father's visitor, and prior how father *Edward* had treated me, I answer'd their recommendation had but an ill effect; and they desiring to hear all particulars, I took out my pocket book, and read to them all that has been here said concerning father *Edward's* ill usage. The fathers laugh'd heartily, but were inwardly much displeas'd, that his extravagant behaviour should blemish the reputation of the *Portuguese* civility.

Wednesday the 16th, the count de *Villa Verde*, viceroy of *India*, sailing by with four great ships, and ten small ones towards *Diu*, visiting the northern coast, the city salut'd him with all its cannon. He answer'd with seven guns, and the city again fir'd round. By the way he had gain'd a victory over the *Arabs* of *Mascat*, after this manner. These barbarians discovering the *Portuguese* ships, stranded three of their vessels in the bay and river of *Zangbifara*, being in the territory of *Savagi*, and carrying off in the night what was most valuable in two of them, fortify'd the third, planting cannon on the shore to defend it. The *Portuguese* could not attack them on the same day, because it was late; but the next morning, being the 25th of *January*, fell on, and whilst the fire set to them by the *Arabs* themselves burn'd the other two vessels, they run in with eight long-boats full of men, because the great ships could not come up, and after a long fight, and much blood spilt in the attack of the third vessel, and *Arabs* on the shore, they boarded, and made themselves masters of her, cutting in pieces some hundred of barbarians. They took in her fourteen thousand *Roupies*, and thirty pieces of cannon. Only four *Portuguese* were kill'd in the action, and twenty wounded; and so great a number of the enemy, that the river and shore were all dy'd with their blood.

A barbarous murder.

The return of some small vessels that went to carry refreshments to the viceroy, brought us certain intelligence of the murder of *Antony Macbado de Brito*, admiral of the *Portuguese* fleet, which happened on the 30th of *December*, 1694, after he had behav'd himself with unparalleled bravery against his enemies. His sharp tongue had gain'd him the ill will of almost all the gentry of *Goa*, and along the coast, but more particularly of the family of *Melo*, which was powerful in kindred, and great by birth. His affronts becoming insupportable, they conspir'd to the number of fifty to murder him, and having agreed on the time, place, and manner of executing their design, they made several loop-holes in the houses of the quarter and parish of *St. Peter*, that they might shoot him with more safety. The general, or rather admiral persuading himself, that gentlemen could not harbour thoughts of taking an ungenerous revenge, tho' warn'd to be upon his guard, because there were treacherous practices against him, would never admit any soldiers to attend him, and particularly two captains that were willing to share in his dangers. Thus being carry'd in a *Palancbine* alone, only with one black that carry'd his umbrella, a shot was made at him from a house, which giving him a slight wound, he leap'd out of the *Palancbine*, and taking the snuff he held betwixt his fingers, said, *Who is it you aim at? Tristan de Melo* at these words, coming out of his house, answer'd, *At you*, and fir'd a blunderbuss upon him. He with an undaunted courage fended it with his cloak, and bowing his body; then drawing his sword, and falling on his enemy, he struck him five times, but to no purpose, because he had on a coat of mail; whereupon he cleft his head, and with a back stroak cut him over the face, which made him fall. Then taking him by the hair, he set his feet on him, and was going to run his sword into his breast; but *Tristan* begging his life, he generously granted it; saying he would not imbrow his hands in such base blood. In the mean while, out came *Tristan's* son, and a *Mulatto* (so they call those that are got between blacks and whites) and firing two blunderbuss's, lodg'd several bullets in the admiral's breast, breaking in pieces the cross he wore as a badge of knighthood, but still he stood, and defended himself; when a slave came up, and run him into the side with a javelin. Nor did he go unpunish'd, for the ge-

neral with a back stroak ripp'd open ^{GEMELLI 1695.} his belly, whereof he dy'd at night. *Macbado* being ready to expire, drew near to the *Palancbine*, and setting his peruke to rights the best he could, laid himself in it. The murderers fearing he might yet live, one of them who was a priest, came with a blunderbuss in his hand to make an end of him; but seeing him ready to breath out his soul, ask'd whether he would make his confession. The admiral call'd him *Jew*, and bid him go about his business. Afterwards a *Dominican* coming to him, he gave signs of repentance, and grasping his hands, dy'd with these words, *The Blood of Christ save me*. They found in his breast about thirty bullets; whereupon people admiring his valour, said, he must needs have more vital spirits than other mortals, since there must go so much to the killing of him. The soldiers of the fleet, who were most of them aboard, hearing so many shot, and afterwards that their admiral was kill'd, ran to that place, and had taken just revenge upon *Tristan de Melo*, who was carrying by two blacks to the archbishops, had not a judge stopp'd them to gain time for *Tristan* to escape, cry'd out to them in the king's name to stand. This happened, because the admiral's ill tongue, as was said, had gain'd him many enemies. However, the judge was imprison'd some time after. *Macbado* was generally lamented, and particularly by me, who having travell'd with him, in 1689, from *Madrid* to *Genoa*, and receiv'd many civilities from him, expected still greater in *India*. He was the terror of the *Moors* and *Arabs*, and kept in awe several thousands of vagabond soldiers, who having rebell'd in the *Mogul's* dominions, threatned to plunder the *Portuguese* dominions. He gain'd many victories over the fleet of the *Arabs* of *Masate*, and the most considerable of them was in the bay of *Suratte*, in *April* 1694, when with only three ships he fought fourteen *Arabs* a whole day; and not so satisfy'd cast anchor at night, to renew the battle the next day; but found the *Arabs* had stole away, with the loss of some hundreds of men, and several of their ships disabled. Several boats full of *French*, *English* and *Dutch*, went out to sea to see this fight, because it happened opposite to *Damam*.

Thursday the 17th, we went with father *Francis*, to divert us out of town; and on *Friday* the 18th, I saw a good procession in *Bazaim*, and heard a sermon in our church.

number of men like an out-law, he seiz'd some places belonging to the king of *Vijapur*, and fortifying themselves in them among the mountains, at length gather'd a mighty army, then making war on the *Mogul*, the *Portuguese*, and other princes his neighbours, he usurp'd all he now stands possess'd of. They say he was born in *Tana*, a subject of the king of *Portugal*, and kept shop there. But *Ramrao* pretends he is descended from *Rajapours*, and endeavours daily to enlarge his dominions, along the coast of *Udrin*, and *Candrin*, as far as the bay of *Galas*, besides what he has up the land. His subjects are robbers both by sea and land, that being the pay he allows them, and make it dangerous sailing along that coast, so that it is not to be done without a good convoy; for being to pass by their forts, they run out in small boats well man'd, and rob friends and foes, because, as has been said, their king gives them leave. Nor is the voyage safe on account of the *Malabars*.

These are pyrates of several nations, as *Moors*, *Gentiles*, *Jews*, and *Christians*, and fall upon all they meet with a great number of boats full of men. Their large country reaches from mount *Delbi*, (bordering on the kingdom of *Canara*, ever govern'd by a queen, and never by a man) to *Madraſſapatan*, a considerable city and fort. They live under several monarchs, among which, the most powerful is the emperor *Zamori*, and the king's of *Tanor*, *Porca*, and others. These people take poor passengers, and lest they should have swallow'd their gold, tho' they have no need of it, give them a potion, which makes them digest all they have in their

bodies, which done, they search the stinking excrements to find the precious metal. I was very much afraid of the *Malabar* receipt, having never taken any purge, and therefore thought best to expect the convoy.

About sun-set, the north-west wind freshned, and brought us in sight of *Dabul*. This city is seated six miles from the sea, after the same manner as *Cboul*, and eight miles from it; both in the kingdom of *Decan*. The *Portuguese* took it under their general *Almeida*, from *Mogul* *Hidalcán*, who reign'd at *Goa*, in the year 1508, burning the city, and putting the *Turkish* garrison to the sword. Now it is subject to *Savagi*.

Friday the 25th, the same wind continuing, we came in sight of the fort of *Vijapur*, in which river the vice-roy burnt the three *Arab* vessels before-mentioned. Then we pass'd by *Lamburna*, and the fort of *Maliandi*, belonging to *Savagi*, and after midnight the *Mosque-mados*, which are three rocks, thirty six miles from *Goa*.

The wind freshning all night, on Saturday the 26th, at break of day, we came to an anchor in our port, having sail'd 280 miles from *Cboul*. Having put my baggage into a boat call'd a *Ballon*, to carry it up the channel to *Goa*, I met two *Ballons* of the custom-house coming to visit that I was in; but having been fore-warn'd to write a superscription upon one of my parcels for father *Salvador Galli*, a *Milanese* *Theatin*, and superior of the monastery of *Goa*, they went away. Being come to the city, I caus'd my equipage to be carry'd to the monastery, where I was courteously receiv'd by the said father.

CHAP. VI.

The Description of the City of Goa, and its delightful Channel.

Goa city. **G**OA is seated in the latitude of fifteen degrees, and twenty minutes, and 104 of longitude, in an island nine leagues about in the river *Mandova*, which six miles below it falls into the sea. It stretches two miles in length along the channel upon an uneven ground; being but half a mile broad. It is under the torrid zone, which the antients thought uninhabitable, by reason of the excessive heat of the sun; but providence, which has dispos'd all things in the best manner, has qualify'd it with continual rains, which fall so plentifully from *June* till *September*, or *October*,

VOL. IV.

that the great floods dam up the harbour, and obstruct navigation; besides the sky's being darkned whole weeks with the thick clouds. When the rains cease at sun-rising, the heat is intolerable; and therefore it is most violent in *April* and *May*, when the sun is in the *Zenith*, and the rains are not yet begun.

Alonso de Albuquerque took *Goa* from *Hidalcán*, without bloodshed, in the year 1508, a *Dominican* father setting up the standard of our holy faith. *Hidalcán* afterwards re-took the city, but in 1510, *Albuquerque* recover'd it again,

FFF with

GEMELLI 1695. with the slaughter of 7000 barbarians, and built a fort there, as he did at *Malaca*, which was lost in 1641. Then considering the goodness of the country, and commodious situation of the place, he constituted it the metropolis of the *Portuguese* empire in *India*. To establish his master king *Emanuel* in the possession, by gaining the love of the subjects, he moderated the tribute they paid to *Hidalcan*; and to breed up soldiers for the wars, he contriv'd that the *Indian* maids should be baptiz'd, and marry'd to the *Portuguese*; that the *Indians* might be united to his nation by affinity, and there might be no need of bringing fresh supplies still out of *Portugal*, to the depopulating of the kingdom. *Goa*, the center of all the *Portuguese* conquests, grew in wealth and renown, being become the key of all the trade of the east, and the chief mart of *India*. This plainly appears by the compass of its walls, which extend full four leagues, with good bastions and redoubts; which from the church of the *Madre de Deus*, or the mother of God, run along for twelve miles to the powder-house, passing by the castles of *St. Blaise*, and *St. James*; a work of a vast expence; as are the others next the channel, which divides the dominion of the *Mogul*, from that of *Portugal*, beginning at fort *St. Thomas*, and ending three miles off, at that of *St. Christoph*. It may be objected that these last fortifications, were rais'd to defend the borders, as is true, but the first walls were made to no other purpose but to defend, and inclose the city, as the marquis *de Villa Verde*, the vice-roy inform'd me, when I enquir'd into it, thinking that city did not stand in need of such large walls. But it is certain the city is not now what it was formerly; for the great losses the *Portuguese* sustain'd, whilst their forces were employ'd in war at home, made their trade decline, and impair'd the wealth and grandeur of the city to such a degree, that it was reduc'd to a miserable condition.

Inhabitants of Goa.

The houses are the best in *India*, but at present it does not contain above 20000 inhabitants of several nations, habits and religions. There are fewest of the *Portuguese*, who go over with employments, and then marry and settle there; because the *Indian* women, by reason of the ill qualities of those born in *India*, chuse rather to marry a poor *Portuguese* soldier, than a rich country man of their own, tho' born of *Portuguese* parents. The *Mestizos* are more

numerous; and these are so call'd that are born of *Portuguese* men and *Brachman* women, whom they marry'd after reducing *Goa*; and tho' the *Canarin* women were black, yet marrying whites, their race by degrees became lighter colour'd. About the fourth part of the people are *Mulattas*, that is born of whites and blacks.

The *Canarines* are as black as *Ethiopianians*, but have long hair, and good faces. Many of them, both in *Goa*, and the islands, are priests, lawyers, attorneys, scriveners, and solicitors, and very diligent in the service of their masters. They are descended from several generations of *Gentiles*, and according to their nobility, or meanness, they continue their customs. Most of them are the off-spring of *Brachmans*, *Baniens*, and *Charados*, and these have good clear understandings, being apt to learn all sciences, sharp-witted, ingenious, and ready, and therefore every body endeavours to have some of them for their servants. On the contrary, those that are of low extraction, as the *Longottis*, are the very reverse of the others. All *Asia* does not afford greater thieves and ruffians, or more faithless ill christians than they are. They go naked, covering only their privities with a clout, which they call *Langoti*, and passing betwixt their thighs, is ty'd behind with a cord hanging down from the waste. These till the land, fish, row, carry *Andoras*, and follow such mean employments; but, as was said, they are so addicted to thieving, and do it so dexterously, that it is almost impossible to escape them. Were it for the love of God they led so miserable a life, they would be accounted living saints. They sleep naked day and night on the bare ground; they feed on a little rice swimming in the dish; never tasting bread as long as they live, unless they be extremely sick. All this proceeds from their laziness, for no sooner have they got as much rice as will keep them a week, but they give over work, living idly as long as that lasts.

The *Portuguese* tell us, That these *Canarines*, when they were first discover'd, went to advise with their idols, that is, the devil, to know what they were to do with the new people that had subdu'd them, and receiv'd for an answer, that they were not able to deal with them by open force, and therefore pretending not to understand the impertinent *Portuguese*, they should give them water when they ask'd for bread, and rice when they demanded wine. Experience soon shew'd how frivolous the

advice

Blacks.

advice was; for the *Portuguese* readily found the way to cure them of their stupidity, taking a bamboa, which is a very hard cane in *India*, and beating them so severely, that afterwards they flew at every beck. And whilst I was at *Goa*, I perceiv'd the aforesaid cane perform'd wonders; for being beaten, they understood a man's thoughts and serv'd readily, but to give them fair words was time lost. Beating is so agreeable to these wretches, that it makes up a part of their amorous delight; for when they marry, the couple lies down upon their hard bed, and the kindred and friends come and thrash them, shewing them so much of this brutal kindness, that they are unfit for any business for some time.

Most of the citizens and merchants of *Goa* are *Idolaters* and *Mabometans*, who live in a quarter of the town apart, and without any publick use of their religion. We shall speak of them both at large hereafter. There are also abundance of *Cafres* and blacks; for there are *Portuguese* that keep thirty, or forty, and the least six or twelve; to carry their umbrella, and *Andora*, and other mean employments; nor are they at any other charge to keep them, but a dish of rice at noon, and another at night; for they have no other garments but what they brought out of their mothers womb. These slaves are carry'd to sell at *Goa*, and all along the *Portuguese* towns, by the company's ships belonging to *Lisbon* and *India*, who buy them at *Monbaza*, *Mozambique*, *Zofala*, and other parts along the coast of *Africk*; for those nations being at war among themselves, take slaves on both sides, whom they afterwards sell to the *Portuguese*. There are others whom their parents out of meer want sell, for only a *Zaccbine*; and others who in despair, barbarously sell themselves. There would be abundance of this last sort, did not they foolishly conceit, that at *Goa* they make powder of them. They being very cheap, that is, fifteen or twenty crowns of *Naples* a head, it is no wonder there should be such numbers of them, and that the very vintners keep them to sell their wine; besides the *Canarines* they have for other uses. As to their religion they are idolaters, but are easily induc'd to embrace the catholic faith, there being no need of many persuasions, for they presently yield, and readily consent to be baptiz'd. On the contrary, those of the coast of *Africk*, opposite to *Spain*, are perverse. There are some of them, who besides

eating one another, when it thunders, shoot arrows towards heaven, bristfully challenging God to fight with them.

But those blacks we speak of, tho' of an ill aspect, have some of them such a noble and genteel disposition, that it were a blessing that every *European* gentleman were like them. *Don Francisco de Taverne*, earl of *Alvor*, who was afterwards vice-roy of *India*, being governor of *Angola*, the son of a neighbouring king came once to visit him, and understanding that the *Portuguese* were precise in matter of compliments, and that he should be receiv'd standing, as was accordingly done, he took along with him two slaves well instructed what they were to do. Being come into the governors room, and seeing no chair brought him, he caus'd his two slaves to squat down and fate upon them. The *Portuguese* admir'd the *Cafres* ingenuity, and presently order'd chairs to be brought. After the visit, the two slaves stay'd in the count's house; and their master being told of it by the count's servants, that he might call them away, he answer'd, he did not use to carry away the chairs he sat on.

In the same kingdom of *Angola*, two brothers of the king *de las Pedras* being made prisoners by the *Portuguese*, were sent to *Lisbon*, where in a visit they made to the marquis of *Marialva*, seeing no chairs were brought them; they drew them themselves and fate down, telling the marquis, that he was a marquis, and they princes.

As their princes and gentry are endued with generous and noble thoughts, so the commonalty are courageous, and cunning, for they with poor weapons overcome elephants, and the fiercest lyons. To kill the first of these they make a narrow path, along which they by means of several contrivances drive the beast, and then dextrously wound it with a javelin from off a tree. When it has bled to death and falls, all the inhabitants of the neighbouring village, resort to the place, and live there in tents till they have eat up all the flesh. Others finding the elephant lying on the ground, get upon him, and stab him with a long dagger, holding fast upon him until he is dead, which cannot be done without much courage. They kill the lyons for sport; for when they see one astray in the woods, one of them advances with two small cudgels in his hand, and clapping one of them into the lyon's paw, plays with the other:

GEMELLI

elephants
and lyons.

GEMELLI
1695.

other: In the mean while the next black to him very dexterously takes the beast by the testicles, and then they beat him to death. So when they would have a Lyon quit a cow he has seiz'd, they draw near, and saluting him after the same manner as is us'd in *Africk*, to persons of the greatest note; that is, lying down on their side, holding up one foot, and at the same time making a noise with hands and mouth. This was generally told me by the *Portuguese*; the reader may believe what he pleases; for I do not assert those things for truths, which I have not seen. Since we are speaking of these blacks, it is to be observ'd that in *Africk* there are some call'd *Nudoy Macua*, who are so fierce and inhuman, that they eat the flesh of the enemies they take, or kill in battle. They go quite naked, except their privities; and curl their thick hair, winding it about small sticks, which makes them look like devils. They lie in the open fields on trees, being us'd to this dangerous bed, for fear of the wild-beasts that country is full of. No part of the world is richer in gold; for in some kingdoms it is found upon the surface of the earth, so that there is no need of digging for it, and therefore instead of iron they use golden nails.

The port
of Goa.

To return, after so long a digression, to *Goa*, its port is compar'd by *Tavernier*, to the best in our continent, such as *Constantinople* and *Toulon*. And to say the truth, besides what nature made it, the *Portuguese* have taken much pains to compleat, and fortify it by means of many castles and towers furnish'd with good cannon; for at the entrance on the left upon the point of the island of *Bardes*, is a good fort call'd *Aguada*, with strong works, and guns levell'd with the water; on the top of the hill, near the channel, is a long wall, all planted with cannon; and opposite to it the castle call'd *Nossa Senhora do Cabo*, or our lady of the cape, built in the island of *Goa*. Two miles within the channel, above the island of *Bardes*, is another castle call'd *dos Reyes*, or of the kings, well fortify'd and with cannon level with the water. Here the new vice-roys take possession at their first arrival. Near this fort is a monastery of *Franciscans*. Opposite to it, and within common shot, is the fort of *Gaspar Dias*; but two miles distant from that of the king's. Beyond these castles the channel grows narrower, sometimes to one, sometimes to two miles, and its banks set out with

the best fruit and trees *India* afford, yield the finest prospect imaginable. Besides, there are delicate country houses call'd *Quintas*, and abundance of dwellings of the country people. The delightful scene holds for eight miles up to *Goa*.

Half way up on the right side is a palace call'd *Passo de Daugi*, where formerly the vice-roys resided; at present it serves to quarter the garrison-soldiers. There begins a thick wall two miles in length, for a foot-path when the country is overflow'd; and there a great deal of salt is gather'd: Opposite to this wall, or dike, is a hill, on which the *Jesuits* have their noviceship. The vice-roy has his palace call'd *la Palmeira*, on the same channel, and so has the arch-bishop. Here begins the city, and so far ships can come up after lightning some part of their load.

This channel that makes so noble a port, runs many miles up the country, dividing it into several fruitful islands and peninsulas, which do not only plentifully supply the city with necessaries, but delight the palate with rich fruit, afford a curious prospect, and yield much profit to the gentry, to whom for the most part they belong. In short, this channel for pleasure is no way inferior to our *Possipo*, as well on account of those advantages here mentioned, as for the many boats there are on it to take the air.

Adjoining to this port is that of *Murmugon* form'd by the other channel that runs between the island of *Goa* and peninsula's of *Salzete*; to give a safe retreat to the ships that come from *Portugal* and other parts, when they are shut out of the port, by the sands the river *Mandua* brings down, when swollen by the first rains of *June*, the passage not being open till *October*. This port of *Murmugon* is defended by the castle of the same name, seated in the island of *Salzete*, with a good garrison and cannon.

These two channels which meet at *St. Laurence* make the length from east to west of the island of *Goa*, which is twenty seven miles in compass and contains thirty villages. Entering the port on the right hand is the peninsula of *Salzete*, which is sixty miles about, and twenty in length, containing fifty thousand souls in fifty villages, where the *Jesuits* administer the sacraments. On the left is the other peninsula of *Bardes*, in which are the forts of *Aguada*, and *Reyes*. It is fifteen miles long, and about forty five in compass with twenty

eight villages, govern'd in spirituals by the clergy.

Saturday the 26th, going to the custom-house to find the commander of the *Mancuca*, and tell him that his men had stolen a coat, and a silver case for the table out of my portmanteau; I saw father *Francis's* man carry'd away prisoner, for having spoke saucily to the officer of the customs on account of his master's goods. He was discharg'd upon my request; and the customer very civilly told me, that if I had any baggage I might take it away without fearing; a piece of courtesy not us'd towards strangers in our custom-houses.

Cathedral. After dinner I went to see the cathedral. It is very large, arch'd, divided into three isles by twelve columns, and all curiously adorn'd with figures, as are the chappels. The arch-bishop's seat is in the choir, but rais'd a great height above the ground. The palace is magnificent and spacious, with curious galleries and noble apartments, for what *India* affords; but the archbishop for the convenience of the cool air, lives in that we said was upon the channel, near the powder-house. A few paces from the cathedral is the little church of the *Misericordia*.

Recolets. *Sunday* the 27th, I went two miles from the city to see the monastery of the *Recolets*, call'd *A Madre de Deos*, or the mother of God. The dormitories are large and tightly, and their gardens furnish'd with several sorts of *European* and *Indian* fruit. The church, tho' small, is beautiful, with three handsome altars; one in the middle rail'd in, and two on the sides. In the garden where *St. Jerome's* hermitage stands, there is a fish-pond well stor'd.

The great wall. Near this monastery, at the place call'd *Daugi*, begins the wall built by the *Portuguese*, when the city was in a flourishing condition, along the channel, to secure it from being invaded by enemies. It is about four miles along, reaching to *St. Blas's*, *St. James's* fort, and *St. Laurence*, with towers at convenient distances furnish'd with cannon.

Dominick. Returning home I went into the church and monastery of *St. Dominick*. The first has three isles, made by six columns on a side. The arches are gilt, especially that of the choir, where gold glitters in every part. The high altar and chappel are well adorn'd. The convent is magnificent, for the long arches of the dormitories, cloister, and other spacious places, necessary for a great number of fathers. The gardens are also pleasant and curious.

Vol. IV.

After dinner I saw the monastery of *St. Augustin*, seated on a high ground, ^{1695.} that commands the city. A large ascent of steps leads up to the front of the church, where there are two high towers with great bells. The church has but one isle set off with good images. As well the altars of eight side-chappels, as the high altars, and only on each hand of it, are all richly gilt. The stately choir is above, over the great gate. The monastery has a good cloister with vast great dormitories, and an infinite number of cells. Add to all this the beauty of the gardens, always green, and beautify'd with the best trees *India* produces. Near this monastery is the college for novices, with a decent church and dwellings.

The little church of the *Theatins* is *Theatins*, built after the model of *St. Andrew della Vella* in *Rome*. Four columns support the cupola, which is adorn'd with images, as are the arches. Both the high altar and beautiful chappels on the sides are gilt. The choir is over the three doors coming in. The monastery also small, and has a garden.

Monday the 28th, father *Salvador* gave *Sago* root, me a taste of the root *Sago*, boil'd with cocoa-nut, milk, and sugar. Though when dress'd it looks like glew, yet it is very nourishing and well-tasted. It comes from *Malacca* and the island of *Borneo*, bruise'd small like millet, and white.

Tuesday the 1st of *March*, the vice-roy ^{Barefoot} return'd from visiting the northern coast. Two vessels arriv'd from *China*, ^{Franciscans.} having spent a long time in their voyage, for fear of the *Arabs*. I went to the barefoot *Franciscans*, which is one of the best churches in *Goa*: for tho' small, it looks like one entire mass of gold, there is so much of this metal about the high altar, and sepulcher for *Maundy Thursday*, and in the eight chappels on the side. The roof is curiously adorn'd with fretwork.

The *Jesuits* college, call'd *St. Rock*, *Jesuits* has a small church with six little chap- ^{college.} pels; but the house is large and capable of seventy fathers, who live in it, there being but twenty five at the profels'd house.

St. Monica of the *Augustinian* nuns, is *Augusti-* an arch'd church, with three gilt altars, ^{nian nuns.} Here is a miraculous crucifix. Sister *Mary* of *Jesus* dy'd in this monastery, with the reputation of sanctity: she having the signs of our saviour's wounds found upon her, and on her head, as it were the goring of thorns; whereof the archbishop took authentick information.

G g g

After

1695. **St. Paul Jesuits.** After dinner I went to *St. Paul*, the first church founded by the *Jesuits* in *India*, whence they took the name of *Paulistas*. Afterwards they left it on account of the ill air, and because it was out of the city, so that only two fathers reside there at present; having formerly been a college, the dormitories still standing are magnificent. In the garden there are two *Jagua*, and some *Mango-trees* caused to be planted by *S. Francis Xavierius*. There is also a chapel built in memory of the ecstasy or rapture the saint had in that place. In this church, tho' formerly magnificent, there is at present only the high altar, with two small ones on the sides. Here the catechumens are instructed; for whose sustenance the king allows four hundred pieces of eight a year.

In *India* all christians wear their beads about their necks, like religious men. The *Jesuits*, instead of a priest's cap, wear a long round one, broad at the top.

Miraculous cross. The *Miraculous Cross*, is a church built on the hill, on the place where a wooden cross being formerly fix'd on a stone-foot; it is reported that seventy four years since, the crucifix was found with its back miraculously turn'd towards *Goa*, which city from that time, has very much declin'd.

St. Thomas Dominicans. Wednesday the 2d of *March*, I went to the church of *St. Thomas* of the *Dominicans*.

Goa, a good fabrick on the bank of the channel. It has seven altars; the monastery is large, and beautiful, inhabited by twenty five fathers.

St. Bonaventure of the Observants of St. Francis. is a small distance from it, has a little church, and indifferent dormitories. It was the first built at *Goa* in honour of *St. Francis*, by *Edward de Merjes*.

The hospital of *Goa* is small, and ill govern'd, tho' the king allows it four hundred pieces of eight a year. For this reason, and through the pestilential air of the country there die thousands of sick persons in it, and particularly of wretched *Portuguese* soldiers.

Thursday the 3d, I went in an *Andora*, to our lady of the pillar, seated on a hill six miles from the city. This is the school of the *Recolets*. The church tho' small is beautiful, and has three gilt altars. Returning home, one of the *Bues* or porters that carry'd me in the *Andora* being got drunk, I was forc'd to make the peasants I met by the way, carry me; they obeying readily upon sight of a cudgel.

It is to be observ'd, that all the monasteries in *Goa*, and throughout all the *Portuguese* dominions in *India*, have some allowance from the king, more or less, according to the number of the religious.

CHAP. VII.

Of the Antient and Modern Dominion of the Portuguese in India.

Discovery of India Portuguese Asia. *Vasco de Gama*, a *Portuguese* gentleman, whose statue is over one of the gates of *Goa*, was the first that perform'd this tedious voyage; and king *Emanuel* of *Portugal* had the good fortune to see that accomplish'd which his predecessors had in vain attempted for seventy five years before. *Gama* had the title of general, or admiral of four ships, three whereof were well fitted for war, and the fourth loaded with provisions; and being furnish'd with all necessaries for so long a voyage, he sail'd from *Lisbon* on the 9th of *July* 1497; a season, as afterwards was found by experience, most improper to go to *India*; for want of those general winds that forward ships on their way thither. After some dangerous storms, he touch'd at the island of *St. James*, the biggest of the ten of *Cabo Verde*, where having taken what he wanted, he continu'd his voyage to the *Cape of Good*

Hope, which he found very stormy, as *Bartolomeu Dias* had call'd it, as well by reason of its being in thirty four degrees and a half of south latitude, as because the two oceans here break one upon another. Nevertheless king *John*, under whom *Dias* discover'd it, would not have it call'd the *Stormy Cape*, for fear of discouraging the sailors for the time to come; but on the contrary gave it the name of the *Cape of Good Hope*. There, a worse storm than that of the sea, was rais'd on board the ship by the sailors, against *Gama*, for they daunted with the present danger, and fearing greater, if they went further, conspired together to throw him over-board, and return home. *Gama* having intelligence of it, clapt the chief of the conspirators in irons, and sitting down himself at the helm, play'd both the parts of the captain and pilot, till he had weather'd the *Cape*, and brought them

them all out of that danger. Then steering north east, still coasting along *Africk*, this eastern *Columbus* came at last to the island of *Mozambique*, and then boldly crossing a gulph of 2500 miles, on the 18th of May 1498, came to an anchor in a port thirty miles from *Calicut*, a city in the kingdom of *Malabar*, after ten months sail from *Lisbon*. The Portuguese continu'd this same way to *India* for several years after, still going on to the discovery of more remote countries, as far as *China* and *Japan*; and to the southward opened a way to the infinite number of islands in that great archipelago. Their discoveries were follow'd by conquests, with an incredible increase as well of souls brought to the faith, as of glory and dominions added to the crown of *Portugal*. Having by repeated voyages, settled the means of getting the necessary supplies out of *Europe*, the Portuguese began to subdue the kingdoms of *Decan*, *Cambaya*, and *Guzaratte*, taking the forts of *Diu*, *Cambaya*, *Suratte*, *Damam*, *Tra-por*, *Maim*, *Bazaim*, *Tana*, *Cbaul*, *Dabul*, and other places for two hundred miles along the coast; as also the islands of *Goa*, *Salzete*, *Bardes*, *Andegiva*, and others; the small city of *St. Thomas*, the kingdoms of *Cocbin* and *Calicut*, and the island of *Ceylon*.

Portuguese conquests.

Mozambique.

Further on towards *China*, they made themselves masters of the important place of *Malaco*, of the *Molucco* islands, and the islands of *Timor*, and *Solor*, building the colony of *Macao* with the consent of the emperor of *China*. The dominion also extended on the coast of *Africk* over *Angola* and *Mozambique*. This last is an island three miles in compass, and a mile in length, where only the *Jesuits* have a garden of palm-trees. The fort is seated on the mouth of the channel, which runs between the said little island, and the continent. The castle has four good bastions, with seventy four choice pieces of cannon. The governor is honour'd with the title of general of the river of *Senna*, where he has his lieutenant, which employment is worth to him several hundred thousand crowns; there are but a few houses about the fort, the inhabitants keeping their effects on the neighbouring continent. But notwithstanding the narrowness of the place there are monasteries of *Jesuits*, *Dominicans*, of *St. John de Dios*, besides the chief church and that of the *Misericordia*. The merchandize brought to this port by the ships of the company, are bought at a sett price by the royal factory; which afterwards

sends them to *Chilimani*, the mouth of *GEMELLI* the river of *Senna*, running three hundred miles along the coast in galliots and small vessels, because of the flats. From *Chilimani*, the goods are sent up the river against the stream in *Almandies* or little boats, which are ten days going up, and but five coming down. It is very difficult going up for those that are not well acquainted with the shallows, and windings of the river. *Cafres*, or blacks, resort to this port from provinces and kingdoms three or four months journey distant, to buy or take up goods upon trust for so much gold; which they never fail to bring punctually the next year, unless death prevent them. This trade yields above *Cent. per Cent.* so that the Portuguese may be said to have another *India* in *Africk*.

Senna is a little town on the right hand of the river, inhabited by fifty Portuguese families, who make it populous enough by the great number of blacks they keep. These till the ground, and dig in the mines, and by that means maintain their masters instead of being kept by them. The *Dominicans* and other missionaries, when they return from this place, carry away gold in ingots and plates, so great is the plenty of it, especially a months journey up the country, where they say the beasts shoes are set on with gold nails, as was said elsewhere.

On the same coast, fifteen days journey from *Mozambique*, the Portuguese have the fort of *Zofala*, the first place they discover'd in this part of *Africk*, as also the small island and fort of *Mombaza*.

In *Arabia Felix* the Portuguese once had the important place of *Mascat*, and its dependances; the kingdom of *Ormuz*, the islands of *Recca*, *Kescimi*, and others in the *Persian* gulph; where they made the island of *Babarem* tributary, as also the considerable city of *Bassora*, which still pays five thousand five hundred crowns and a horse yearly tribute to the king of *Portugal*; besides two *Zecbines* a day for the subsistence of the Portuguese factor; but whensoever their fleet does not appear powerful in the gulph, the *Mahometans* refuse to pay.

They also made themselves masters in the kingdom of *Canara* of the forts of *Onor*, *Brazalor*, and *Cambolin*; in the country of the *Naires*, of the castles of *Cananor*, *Caranpanor*, *Palefor*, and *Coilon*; and of the fort of *Manar* on the island of that name.

In

GEMELLI
1695.
Ceylon. In the island of *Ceylon*, of seven provinces (or *Carolae*, as the *Indians* call them) three were brought under the *Portuguese* dominion; with the rich country of the cinnamon, and the forts of *Calaturre*, *Columbo*, *Cilau*, *Jafanapatan*, *Tribil*, *Mall*, and *Battical*; and this by the last will of the king of *Acota*, who was sovereign thereof. The *Dutch*, with the assistance of the neighbouring kings, afterwards made themselves masters, if not of all, at least of a considerable part of the said three provinces.

Negapatan The *Portuguese* further subdu'd the city and fort of *Negapatan* in the kingdom of *Madure*; *Tambulin* in the kingdom of *Bengala*, and *Macassar* in the kingdom of that name. So that being become formidable to all the princes of *Asia*, they had made all the country about tributary; and being sovereigns of that vast ocean, by means of their mighty fleets, no ship of any nation whatsoever could sail those seas without their leave and pass; seizing the ships and goods, and imprisoning the men for presuming to sail without their protection. This authority the *Portuguese*, tho' weak, still exercise over all ships of *Moors* and *Gentiles*; for the *Europeans* are got above it. These conquests gain'd at the expence of many lives, and with the effusion of much blood, scarce lasted an age and a half; for the *Dutch* falling into the *India* trade, instead of extending their conquests among so many islands and kingdoms of *Mabometian* and *Pagan*, they only robb'd the *Portuguese* of what they had gain'd with so much valour; making this ungrateful return to a nation, which with so many dangers and sufferings, taught and secur'd to them that tedious voyage.

Brazil.

Another cause of the decay of the *Portuguese* power in *India*, was their conquest of *Brazil*; for finding there more profit, they slighted *India*, and neglected to send thither sufficient supplies to preserve what they had, much less to make new conquests. This is so certain, that the king of *Portugal* was several times in the mind absolutely to abandon it, which had certainly been done, had not the missionaries made him sensible, that if he did so, all the christians of those countries would again fall into idolatry and *Mabometanism*.

Present dominions of Portugal in India. If we look upon what remains to the *Portuguese* at present in *India*, it is very inconsiderable, and instead of being profitable, scarce pays its own charge. At *Goa* they have the small island of that name, with those of *Salzete*, *Bardes*, *Angediva*, and others. On the nor-

thern coast the fortresses of *Damam*, *Bazaim*, and *Cbaul*; in the kingdom of *Guzaratte* the city of *Diu*. Near *China* the islands of *Timor* (abounding in *Sandal*) and *Solor*; and the colony of *Macao*, subject to the emperor of *China*. In *Africk*, *Angola*, *Senna*, *Zofala*, *Mozambique* and *Mombaza*; many in number, but of no great value. Those that envy the honour of the *Portuguese*, ascribe their losses to their want of zeal for religion, and their not persisting long in the propagation of it; for they say that the *Portuguese* entering *India* with the crucifix in one hand and the sword in the other, finding much gold, they laid aside the crucifix to fill their pockets; and not being able to hold them up with one hand, they were grown so heavy, they dropp'd their sword too. Being found in this posture by those that came after, they were easily overcome. This is an excellent contrivance of ill tongues; but the chief cause of their ruin was, their having made so many conquests so far divided from one another; and next the war at home, which obstructed the relieving of *India*.

All that remains under the *Portuguese* Government, ^{ment.} dominion from the *Cape of Good Hope* in *Africk*, to the city of *Macao* in *China*, is govern'd by a vice-roy, with the title of captain-general, who resides at *Goa*, as the metropolis of *India*. There are six, and sometimes eight *Dejembargadores*, or judges that attend the government, as a sovereign court or council, ^{Council of} who wear a gown down to their heels over a cassock of the same length, the gown with wide sleeves down half way their arms. They wear *Golillas* and huge periwigs after the *French* fashion. The chief court these gown-men sit in is call'd a *Relacaon*, which administers justice in civil and criminal cases; having power over all ministers, and tries all appeals brought from any parts of the dominions. The vice-roy sits as chief of this court under a canopy; the gown-men sit on benches plac'd on the plain floor. The council da *Facenda*, is like the court of *Exchequer*, where one of the gown-men sits as the vice-roy's deputy.

There is the *Matricula-General*, the *Procurador-Mor-dos-Contos*, and the committee of the new company of traders. These have put in several sums to carry on the trade of *Mozambique*, *Mombaca*, *Macao*, and other parts of the *Portuguese* dominions; and have the privilege that none should trade but they, because they pay the salaries of the governmentors.

vernours. The vice-roy and arch-bishop put in many thousand *Pardaos* into this company, to encourage others to do the like; but it can scarce last long, because the stock is but small. The profit is to be divided every three years.

Inquisition. The *Inquisition* is much respected and dreaded by the christians at *Goa*, and about it; as is the arch-bishop, or primate.

The vice-roy goes by water in a *Balloon*, or barge row'd by twenty two *Canarines*, with trumpets before him, and sits on a velvet seat, with several of his domesticks about him. When he lands he is carry'd in a sedan by four men. He has a guard of ten horse, and several of the gentry and officers attend him in *Palancbines*.

Tho' the *Portuguese* dominions be small, yet the king appoints several generals, who have very little advantage besides the honour. One of them is call'd of the gulph of *Ormuz*, and commands four ships; another of the north, who is like a general over all those towns, and resides at *Bazaim*; another of *Salzete*, who commands in that island; one of *China*, who commands only in the town of *Macao*; one in the islands of *Timor* and *Solor*; and lastly one of *Goa*, who has the care of the channels, that no person may come in or pass by from the *Mogul's* country. And this because it is a difficult matter to secure the pas-

sage between so many small islands; for besides those of *Goa*, *Bardes*, and *Salzete*, there are, that of *Charon*, where are two villages, the noviciate of the *Jesuits*, and a parish of seculars; *Divar* or *Narva*, with three villages, where the seculars have the cure of souls; *Capon*, belonging to the nuns of St. *Monica*; *Combargiva* and *Juvari* belonging to the *Jesuits*; St. *Stephen*, where there is a fort, village and parish of seculars; the small island of *Emanuel Lobo de Silveira*, with a few houses on it; that of *Emanuel Motto*, which is the stews of *Goa*, being inhabited by *Pagan* dancing-whores; and lastly, the small island of *Dongarin* belonging to the *Augustinians*. These for the most part abound in palm or cocoa-trees, under which the *Canarines* and *Gentiles* build cottages to live in; so that every palm-tree grove looks like a little village. They say the breath of man makes the palm-tree more fruitful.

Not only the vice-roy but all the officers civil and military, and church-men have sufficient allowance from the king to maintain them handiome. The vice-roy's salary is thirty thousand *pardaos*, which are the third part of a piece of eight. The arch-bishop twelve thousand; the officers of the *inquisition*, canons, monasteries, and parishes a competency; but all the tithes belong to the king.

CHAP. VIII.

Of the Fruit and Flowers of Indostan.

IT must not be thought strange that, being to speak of the fruit and flowers of so vast a country as *Indostan*, I should bring it in immediately after *Goa*; because all those sorts, which are found in the several parts of that tract, being to be had about *Goa*, and even some that are not elsewhere; it is proper we should give an account of them before we leave that city. I will endeavour to explain their *Portuguese* names the best I can, and add the cuts of them, that they may appear the plainer to the reader.

To begin then by the *Palmera de Cocos*, or cocoa-tree, the first place being due to that plant which is most beneficial to man: It is to be conceiv'd that this tree fits out and loads a ship for sea, without borrowing any thing elsewhere. Of the leaves, which some of the people on that coast use instead of paper, they generally make sails; of the wood, the vessel: The fruit, which is well

known in *Europe*, yields meat and drink, and a good commodity; besides, its outward case or rind steep'd in water, is spun to make all necessary cordage for a vessel; tho' there are some sorts of it which they eat like other fruit. This first rind, when ripe, is yellow; the shell which is hard, makes dishes to drink chocolate, and for other uses. Within it is a white pulp or nut sticking round the shell about half an inch thick, which tastes like an almond. In the midst of it is a clear water very good to drink. Of this same fruit they make several sorts of sweet-meats, and oil, both to burn and eat for want of olives. Cutting a branch of it and putting the end into a vessel, the moisture that should feed the nut runs into it and is call'd *Nira*, and *Sura*. The *Nira* is white and sweet, just of the taste of the liquor made of the grapes, by putting water to them after they have been

H h h press'd,

Cocoa-tree.

GENELLS
1695.

GENELLI
1695.

press'd, and is taken before the sun rises. The *Sura* is the same liquor turn'd fower, and is taken after the sun is up and has heated the air. It must be put to the fire before it is drank, or else its coldness would give the gripes. It is so nourishing, that the *Indians* live upon it several days without any other sustenance.

This *Sura* distill'd makes wine, and when it decays, vinegar; but the distilling being several times repeated, it becomes a strong water: Boil'd, it turns to sugar, and they use it as leaven to their bread. Pressing the pith of the tree they draw milk out of it, as we do from almonds, to boil rice, and for several other uses. This fruit keeps the year about. Thus the cocoa-trees yield the best revenue in *India*, because the country does not produce much rice, cotton, or corn. They grow strait to sixty spans in height, of an equal thickness from the bottom to the top. The *Indians* use them for timber to build their houses, and the leaves to cover them, or to burn.

Palm-tree.

The palm, or date-tree in *India* bears no fruit, but they draw *Nira*, or *Sura* from them. There are several other sorts of them that yield little fruit. One they call *Palmeira de Tranfolin*, whose fruit is ripe in *May*. This is smaller than the cocoa, the outside rind to make ropes black; and full within of the same substance as the other cocoas. Every *Tranfolin* bears three little cocoa-nuts in a triangle; the pulp whereof press'd yields a cold white water. This grows as high as the cocoa-tree, but is thicker of leaves, which grow like a broom, and produces fruit but once a year, whereas the other does four times. This tree also affords *Nira* and *Sura*, both of them naturally excessive cold.

Palma de Bugios.

The *Palma de Cocoa de Bugios*, or the monkey cocoa-tree, has boughs like large disciplines. Of the fruit they make curious beads, because the *Patens* have a natural work on them, than which nothing more curious could be made by art. There are other palm-trees in *India* that do not bear, and the *Indians* run up and down them by the help of a rope ty'd about the tree, and the man so nimbly, that none can believe that has not seen it.

Areca-tree.

The *Arequeira*, or *Areca*-tree is like the palm, but slenderer and not so high. It bears a sort of fruit necessary for chewing with the *Betle*, like a nutmeg, and enclosed in a case or rind, like that of the cocoa-nut, and on a bough as thick of them as that which produces dates. This fruit is gather'd four or five times a year.

The *Figueira*, or fig-tree is a plant as soft as a bulrush, as thick as a man's thigh, and between fifteen and twenty spans high, with leaves above a quarter broad. It is generally believ'd there, that *Adam* and *Eve* cover'd what should not be seen with them in paradise, they being not only big enough to cover what should be hid, but to make a small cloak for their nakedness. The *Indians* use them for dishes, and have new ones every meal; others for paper to write on. It bears fruit but once, for when it has produced sixty, seventy, and sometimes a hundred figs on a branch, they cut down the plant and a young sprout grows out again. But there are two sorts of them. Those that are a span long, and about the thickness and shape of an egg, are call'd *Figos de assur*, or roasting figs; and these are as sweet as a wild fig, and very nourishing, being eaten roasted with cinnamon and sugar. The pulp or flesh within is white and red, with some small tender black seeds, which are also eaten. They are gather'd green, and ripen and turn yellow in the house, like winter melons. The other sort is call'd *Figos de Orta*, or garden-figs; these are sweeter, better tasted, and eaten raw, but not so large as the others, tho' they have the same seeds. As for their nature, these are cold, and the others hot; both of them ripen at any time of the year.

See Cut Number I.

The *Manguera* or *Mango*-tree is as *Mango* high as a good pear-tree, but has larger tree. and softer leaves. The *Mango* it bears is weighty and flat, and hangs downwards by a long stalk. Without they are green, and the pulp within the shell is white and yellow. There are several sorts of them and variously tasted.

Some are call'd *Mangas Carreiras* and *Mallaias*, others of *Nicolas Alfonso*, others *Safas*, and others by other names, all of them exceeding any *European* fruit in delicate taste. They are ripe in *May*, *June* and *July*, tho' there are some in *January* and *February*. They are of a very hot nature, and are gather'd from the tree like all other *Indian* fruits, green, coming afterwards to their maturity and perfection in three days keeping in the house.

The *Carambolcira*, or *Carambola*-tree, *Carambola* is as big as a plum-tree, and bears such a leaf. The fruit call'd *Carambola*, when ripe, is white within and yellow without, shap'd exactly like a lemon, with four or five kernels, and it has a

four taste like a lemon. The Portuguese preserve them because they are cooling. The tree blossoms and bears several times a year.

Anoneira, or *Anona*-tree is very large, and produces the fruit call'd *Anona* in *March* and *April*. It is as big as a pear, red and yellow without, whitish within, and full of a soft, sweet, and pleasant substance, which is eaten with a spoon; but it has some hard black kernels. I do not know how to describe it better; because it is nothing like any sort of fruit in *Europe*.

Aleira, or *Ale*-tree is as big as an apple-tree, but with small leaves. Its fruit call'd *Ale* is like that of the pine-tree, green without, and within white and soft with black seeds, so that it is eaten with a spoon. It is sweeter than the *Anona*, smelling both of amber and rose-water. It ripens in *November* and *December*.

Cajuyera, or *Cajus*-tree is not very tall, but thick of boughs and leaves. The fruit is like an apple red and yellow without. It is singular in this, that all other fruit having the stone within, this has it at the top rais'd like a green chrest; smelling to which, a Spanish preacher and missionary told me, did much help the memory; and that he by that means soon made himself master of the longest sermon. I never had experience of it, nor will I vouch for what he said. What I can safely attest is, that breaking the stone, the kernel within it roasted, tastes like an almond, and raw like a new nut. This fruit ripens between *February* and *May*. Cutting it in quarters, steeping it in cold water, and then chewing it, there comes from it a cool juice, good for all obstructions in the breast.

Jambolera, or *Jambolon*-tree grows wild, and has the leaves like a lemon-tree; but the fruit is so delicious, that an *Indian* woman coming to *Lisbon*, loath'd all the best fruit in *Europe*, remembering her lov'd *Jambolon*. They hang on the boughs like cherries, or olives, and have the red colour of the one and the shape and stone like the other. The *Indians* eat it with salt, but I tasting them in the garden of the *Theatins* where I was entertain'd, did not think them so pleasant to the palate of *Europeans*; because they taste somewhat like a service apple, and to eat many of them makes the belly swell extremely. Their season is generally in *April* and *May*.

See Cut Number II. Page 211.

The *Jangomeira*, or *Jangoma*-tree is ^{Gmelin 1695.} very large, all prickly, and with small leaves. The *Jangomas* the Portuguese call *Adam's* fruit, being of the shape of a walnut, purple without and red within, and has two stones. The taste of it is a mixture of sour, sweet, and bitterish like a medlar. They are in season *November*, *December*, and *January*.

The *Brindeira*, or *Brindon*-tree is as tall as a pear-tree, but has smaller leaves. The *Brindones* or fruit it bears in *February*, *March*, and *April*, are a sort of fruit like our golden pippins; but their rind is harder, tho' the pulp or flesh of it is red, viscous and sharpish, which they chew and suck the juice, and has three soft kernels within it. The Portuguese make sauce of the rind.

The *Carandeira*, or *Caranda*-tree is ^{Caranda tree.} low and thorny, with leaves like an orange-tree. The fruit of it call'd *Caranda*, is no other than wild grapes of *Indostan*; reddish without and white within, with seeds. It is ripe in *April*, and *May*.

The *Jambos* of *Malaca* are tall trees with long slender leaves. The fruit of it call'd also *Jambos*, are as big as small apples and of the same taste, but smell like rose-water. The outward rind is yellowish, within of a cinnamon colour, and there are two stones loose from the pulp. They begin to ripen in *January*, and hold to the end of *April*.

The *Papayera* is a plant that does not ^{Papaya tree.} grow above twenty spans high, and the body of it is under a span diameter, but so soft that it is easily cut with a knife. The leaf is broad like that of a *Pompon*. The *Papayas* it produces, hang like clusters of grapes about the top of the trunk, where they ripen and grow bigger, one after another. In the Portuguese dominions in *India* they call these the *Jesuists* melons, because they taste like melons, and those fathers like them so well, that they have them every day at dinner. They are shap'd like them at *Berengena* (a fruit well known in *Spain*, but not in *England*) but twice, or three times as big. As to colour, they are green and yellow without, and yellowish within, with little black seeds or stones in them, like elder-berries. This fruit grows all the year about.

The *Jaquera*, or *Jaqua*-tree is as big ^{Jaqua tree.} as a laurel with green and yellow leaves. The fruit it produces is the biggest in the world, or at least that ever I saw; for no man can carry above one of them; and some of them are four spans long, and a span and a half diameter. It being impossible for the boughs

GENELEE 1963. boughs to bear such a weight, nature has providently order'd it should grow out at the foot of the tree; and in the island of *Ceylon* and at *Malaca*, under ground upon the root; and they know when it is ripe by the smell that comes from it. The rind is yellow and green, but prickly, and with some stiff points like those about the collars of mastiffs. Within it there are many yellow separations like those in an orange, with each of them a kernel in it, like an acorn; which roasted, tastes like a chestnut. This fruit is gather'd from *May* till *September*.

Jambo-tree. The white *Jambovera*, or *Jambo-tree* of *India* is as high as a laurel. The leaf is small, the blossom like the orange-flower, and the fruit like a pear, white and red without, and white within (with a stone) of the smell and taste of a cherry. They are ripe in *January*, *February*, and *March*; and two or three times from the same plant.

Pear-tree. The *Pereira* or *Pear-tree* is no large tree, but thick, and has small leaves. The fruit without is green and yellow, like a pear; within it is white and soft, with tender seeds, and tastes like an over-ripe pear. It makes excellent conserve, or preserve, and lasts all the year.

Cinnamon-tree. The *Cinnamon-tree*, tho' it bears no fruit is precious for its bark; which being taken off grows on the tree again, to yield the owner more profit. The best grows in the island of *Ceylon*; for that of *Manila* and other places is wild, and has not so fragrant a smell.

Torangja-tree. The *Torangja* is a tree brought from *Africk*, small and prickly. Its fruit is like a large round lemon, with a thick yellowish rind, and red within, of the taste of an orange. 'Tis in season in *October* and *November*.

Bilimbin-tree. The *Bilimbeira* is as big as a plum-tree, with thin leaves, and bears *Bilimbies* all the year. The colour of it is greenish; its shape like a long pompon; the taste sharp, and good to make sauce, or preserve. They are all eaten, because they have no stone.

See Cut Number III. Page 211.

Amcale-tree. The *Amcaleira* or *Amcale-tree* is as big as a pear-tree. The fruit of it by the *Portuguese* call'd *Amcale*, grows out of the thick part of the branches. Its shape is like a golden pippin, with streaks like a melon on the outside; the flesh within is white, and has a stone. They make good sweet-meats of it, the natural taste being a pleasant tartness. They are ripe in *February*, *March*, and *April*.

The *Ananamzeira* is a plant like our *Ananas*, house-leek, producing *Ananas*, which the *Spaniards* call *Pinas*, one, two, three, or more according to the bigness of the plant. This fruit is round and prickly, a span long, and above a span diameter, rising like a very great artichock. The pulp within which smells like musk, is hard, yellow, and partly whitish. Its taste between sweet and sower, but very pleasant, especially if peel'd and put into sugar and water. Some gather it before it is ripe, and make it very sweet with sugar; and from *India* they send great quantities into *Spain*, where it is much valu'd. It is wholesome, but so hot, that if a knife be left sticking in it a day, it loses its temper and is spoil'd. The season of ripening is from *April* till *July*.

See Cut Number IV. Page 211.

The *Mogareira* is a plant which from *Magasin*, *February*, till the end of *May*, bears a most beautiful white flower call'd *Mogarin*. Its smell, tho' like it, is much more fragrant than that of the *Jasmin*; besides this difference, that the *Jasmin* has but six leaves, and the *Mogarin* above fifty. Father *Salvador Galli* told me that several plants were sent to *Lisbon* in earthen pots, for some *Portuguese* lords; and particularly for the duke of *Tuscany*, who had a great mind to them; but that it was not known whether they arriv'd there fresh, being to cut the equinoctial line twice. The flower very well deserves to be in any royal garden, and the more because it is found no where but in *Indostan*.

The *Ajafreira* is bigger than a plum-tree, and in *India* produces *Safron*. The flower has a yellow bottom and six white leaves, and serves the *Portuguese* as ours does in *Europe*, to season their meat, but is not so good. There is this singular in this tree, that the flowers come out in the night, and almost all the year about.

The *Pimenteira* is but a low plant which grows against any tree or wall, and bears the pepper in clusters like grapes. When ripe it is red, but the *Indians* burn and make it black, that it may not serve for seed elsewhere. It comes in *March*, *April*, and *May*.

The *Beteleira* is a tender plant like *Bend-ivy*, which runs up a stick. Its leaf is the delight of the *Asiatics*; for men and women, from the prince to the peasant, delight in nothing more than chewing it all day in company; and no visit begins or ends without this herb.

herb. Before it, they always chew the *Areca* above describ'd, that the coolness of this, as they say, may temper the heat of the other; and they lay a little dissolv'd lime on the *Betel*-leaf, to colour and soften its biting taste. It spends not so well in any part of *Asia* as in the *Philippine* islands, where the *Areca* is soft and easy to chew, and the *Betel* extraordinary good. The *Spaniards* make a composition of both herbs with lime, which they call *Buyo*, and carry it in curious little boxes, to chew it every moment abroad and at home. The *Betel* makes the lips so fine, red, and beautiful, that if the *Italian* ladies could, they would purchase it for the weight in gold.

Puna-tree. The trees and flowers hitherto describ'd are the best in *Indostan*; but there are many more not to be despis'd. One of them they call *Puna*, so tall and strait that it may serve for masts for ships. It produces a red fruit, in which there are twelve or more seeds, as big as acorns, and of the taste of pine-apple-kernels. But they eat them boil'd, that they may not cause the head-ach.

Indian-apples. There are also *Indian-apples* as big as a walnut, with a stone as a plum, and ill tasted. The tree is small and has very little leaves.

Tamarinds. The tamarinds of *Indostan* are extraordinary good, and there is plenty of them about the fields. The tree is large and bears the fruit with a cod, like our beans.

Undi-tree. The *Scararagam*-tree bears fruit of a greenish colour, and as big as a wall-nut. They are call'd *Undis*, and are of a pleasant taste.

Chiampin flowers. The *Chiampin* of *Cbina* is an odoriferous

white flower, which preserv'd, contrary to the nature of other flowers, grows hard, and is sweet and pleasant in the mouth. This tree is like a little plant-tree. There is another sort of *Chiampins* with two leaves strait, white, and long, and as many red winding about below, and this grows not on a tree, but on a low plant on the ground.

The *Omlam*-tree bears a sort of fruit like a ruddy-almond, and a long flower, beautiful and fragrant enough.

Quagadam-cberozia is an odd sort of a great yellow flower, with long green and prickly leaves.

The *Majerica* is a flower of small esteem, green, and growing out of a little herb.

The *Padolim* is a green plant, producing a slightly flower, and a long fruit, like an *European* cucumber.

The *Pachaa* is also a green flower, coming from a low plant.

The *Tindolim* is a plant bearing a red flower, and a fruit of the same colour of the shape of a small lemon.

The *Inbama Cona* is a fruit white within, growing under ground like potatoes, but much bigger, weighing many pounds. Boil'd, it is better than potatoes.

There are many more sorts of fruit, besides those here mention'd, as well of the country, as brought from other parts; as the *Batatas*, the *Inbame*, which boil'd or roasted, taste like chestnuts, pomegranates, lemons, and some few grapes; and as for garden-ware, *Berengenas* (before-mentioned) pompions, beets, radishes, coleworts, melons of all sorts, cucumbers, and many more brought out of *Persia* and *Europe*.

The Author's Journey to Galgala.

GEMELLI
1695.

HAVING resolv'd with my self, ever since my first setting out, to see the court and camp of the Great Mogul, who is one of the greatest princes in Asia, without regarding danger or expence; tho' friends several times endeavour'd to dissuade me, by representing the many hazards and hardships I must meet with in travelling over rugged mountains, and among Pagans and Mahometan princes; yet I held my first purpose, and resolv'd to venture upon it whatsoever happened. In order to it, I hir'd a Begarine, or Cagarine of St. Stephen, a village near Goa, to carry my provision for some days, and utensils for dressing of meat; being sure to find nothing by the way; and because he spoke not the language of the Moguls, I took a boy of Golconda; who, besides his mother-tongue, had learn'd Portuguese, to be my interpreter there. This done, I committed my baggage to father Hippolito Visconti, a Milanese, and regular clergyman of the Theatins; desiring him, during my absence, to change my money into pieces of eight, to serve me, when I came back, in my voyage to China; carrying along with me no more than was just necessary for my journey, as I was advis'd by father Galli, who told me it would be all taken from me on the mountains by the custom-house officers; and that when his money was gone, they had taken from him the very Andora.

Friday the 4th, the porter and interpreter came to tell me all was ready, I set out, leaving my own servant in the monastery, that I might have the less to care for. I found the pass of Daugi, where I was to take boat for Ponda, was stopp'd by order of the arch-bishop; who governing during the vice-roy's absence, had

directed that no person should be suffer'd to pass into the infidel's country, without his particular leave. Therefore leaving the porter and interpreter to look to my things, I went in a boat to speak to that prelate at his little country-house; where he presently gave me a pass under his own hand. Then taking another boat about noon, I coasted along the city-wall on the channel, passing, at the end of four miles, by the fort of St. Blaise, on which there are eight pieces of cannon; and two miles further, by the castle of St. James, where are twelve guns. Here shewing the governour my pass, he gave me leave to cross the channel into the Mogul's country.

We stay'd a long while in a cottage belonging to the guards, there being neither man nor beast to be found, to carry the baggage of an Armenian, and a Moor that had join'd me. At last, seeing night drew on, we forced some Gentiles of the village of Arcolna to carry them. There being nothing to be bought in this place, the Armenian and the Moor made shift with a little rice half boil'd, and so little of it that the grains swam on the water, which afterwards served them for drink. I pass'd the night under some cocoa-trees without sleep, because of the great noise of drums and cries of the idolaters, who celebrated the feast of Siminga, at the full moon.

Saturday the 5th, before we set out, the Armenian and Moor fill'd their bellies with Cacbiari; which is a composition of rice, kidney-beans, and lentils, pounded and boil'd together, as was said, at the end of our second part. For want of beasts to carry my luggage to Ponda, which was twelve miles off, I took

took three *Gentiles*, and was forc'd against my will to make use of a cudgel upon them, because they will never do good service either for fair words, or money, but run away as soon as they can; and on the other side, when thrash'd, they will load themselves like asses.

The sun was so hot, that at very short distances we were oblig'd to rest, and refresh us with melons, and fruit of the country. At *Mardol* it took us up much time to eat a *Jacca*, which was so large, that a man could scarce carry it. The idolaters would eat none of it, for they will not taste any thing that is cut by us, tho' starving for hunger; and I was told some of them had been so obstinate, as to continue five days without eating on this account.

A *Pagod*.

In this village of *Mardol*, there is a famous *Pagod*. The way into the court is over a cover'd bridge of three arches, up to which there are two staircases. On the right of this court is an octangular structure, consisting of seven rounds of small columns, with handsome capitols, and little windows in the intervals, one of which serves for a door. They say this was built to put lights in on the festivals of their idols, as was the other place, like it, on the left, not yet finish'd. About the porch, and before the arches of the aforesaid bridge, there are several shops; but all is gone to ruin since the *Mogul* has taken that country from the king of *Vijapur*, on account of the wars with *Savagi*. The *Pagod* is at the further end of the court. The first room is like a little hall, longer than it is broad, the roof supported by six small wooden columns on each side, curiously carv'd with figures on them, about them there are low branches to sit down. Within it is another room, like the first, but less; and further on upon the right is a little room curiously painted, with several figures, which have on their heads, some of them pyramidal caps, and others a crown like that the pope wears. There is also a figure with four hands, two whereof hold a staff, one a looking-glass, and the other rests on its side; by it stand women with five vessels on their heads, one upon another. There are besides several monsters, beasts and birds, as flying horses, cocks, peacocks, and others. The *Pagod* stands opposite to the door, in a little dark round room, at the foot of a small tower, where there is a carv'd stone cover'd like a tomb. There is a winding way on the out-side up to the top of the tower, and to the chambers of

the idolatrous priests. On one side of the second room I mention'd, before a little door, stood the bier they use to carry their idol in procession. On the same side is another *Pagod* shut up, with a cistern before it, cover'd with a cupola, and has a small room in the middle. Behind the aforesaid *Pagod*, is one of those trees they call of the *Banians*, and under it the bath, or pool, with large stone-steps about it for the *Gentiles* to go down, and wash them of their uncleanness.

Setting forward again, after travelling a long time over mountains and plains, I came late, and very weary to *Ponda*. There I found a small camp of the *Mogul's* forces; and among them *Francis de Miranda*, born in the island of *Salazete*, who receiv'd me very civilly. He had serv'd there as a soldier of fortune sixteen years, with the pay of seventy five *Roupies* of silver a month, which are worth forty five crowns of *Naples*. Those troops were come that same day from *Bichiolin*, with the *Divan*, or receiver of the king's revenue of *Ponda*, and above 700 villages, who has 7000 *Roupies* a month, and 1000 horse under him, whose pay is a *Roupie* a day, he was to take possession of the government of the lower fort of *Ponda*, and of the office of *Suba*, of that territory, which among us is like a major-general; and this because the true governour had sent some of his soldiers to *Bichiolin*, to commit acts of hostility against the *Divan*, so that there had been men kill'd and wounded on both sides. *Ecb-lascampiani-Suba* refusing to obey, unless he were first paid what was due to his soldiers, and the more, because the *Divan* had no commission from the king, but only a letter of advice from his solicitor, therefore the two parties contended, and threaten'd one another. The *Divan* now said he would drive him out of his fort with the cannon from the upper; when on Sunday the 6th, about sun-setting, there was heard a confus'd noise of drums and trumpets, such, that I taking it for a warlike sound, laid hold of my gun, but it was for the coming of a messenger sent by the king, who brought the *Divan* a vest, and commission for both employments.

Seven hundred horse and foot stood at their arms before the *Divan's* tent, and two companies of sixteen *Gentiles*, each danc'd confusedly to the sound of drums, fifes, and trumpets. It being then a sort of carnival those people observe every year for five days, they went about like mad-men, in red vests, and

little

GENELLI
1695.

little turbants of the same colour call'd *Chiras*, throwing red dust on all they met to die them; as we use among us to do with black dust.

The ceremony of receiving a commission and vest from the Mogul.

The *Divan*, who was a grey-headed old man about sixty five years of age, mounted a horseback, with a pair of kettle-drums a horseback before him; and follow'd by a *Palancbine*, another pair of kettle-drums on a camel, and a medley of horse and foot naked, who went in a disorderly manner, like so many goats. They had several colours, some of calico, with a trident on them, and some of silk, with *Persian* characters and flames in the middle, all carry'd by foot-soldiers. The *Divan* being come to a tent, erected for that purpose near a *Mosque*, two musket-shot from his own, he alighted, and after passing some compliments with the king's messenger, and persons of note that were with him, put on the *Chira* himself on his head, whilst the messenger held the fast to him. Then the latter took a vest, or garment of green silk, with gold stripes, and put it on the *Divan*, and then two sashes about his neck, his scimitar hanging by his side. The *Divan* laid his hand on the ground five times, and as often on his head, in thanksgiving to the king who had honour'd him with that present. Then sitting down, his friends and retinue came to congratulate with him, and some to present him with *Roupies*, which he gave to the messenger, but they were very few. They call this present *Nazar*, that is, a goodly sight; and the custom is deriv'd from the coronation of kings, when the noble-men present a great deal of gold coin; and some pieces weighing above three hundred ounces, to rejoice the *Mogul* that day, who sits on a throne studded with jewels of an excessive value. When the solemnity was over, the *Divan* mounted a horseback, and alighted again by the pool near the *Mosque*; where sitting on a carpet with pillows at his back, he diverted himself with the singing, and musick of the mask'd *Gentiles*. I was told this honour cost him 20000 *Roupies* (each of them worth six *Carlines* of *Naples*) which he sent the secretary, who had pass'd the commission in the king's name; for he never writes to his subjects. For all this the *Suba* would not deliver up his post, but keeping possession of the lower fort, said it was all counterfeit.

Ponda city.

The city *Ponda* is made up of cottages, and mud-houses seated in the midst of many mountains. The fort,

which is also of earth, and govern'd by the *Suba*, has a garrison of about 400 horse and foot, and seven small pieces of cannon. There was formerly another fort on a higher ground; but *Don Francis de Tavora*, vice-roy of *Goa*, besieging it twelve years before this time, with a body of 10000 men, in a short time made a large breach in it. *Savagi*, to whom it belong'd, coming to the relief of it with 12000 horse, oblig'd the vice-roy to raise his siege, and draw off. Then he went over to the island of *Salzele*, *St. Stephen*, and others near *Goa*; and having plunder'd and burn'd several places, carry'd many hundreds of the natives captives into his own country; and making them carry the stones of the fort that had been demolish'd, to the top of a hill two miles from *Ponda* southward, built the small fort now standing, calling it *Mardangar*, that is, the fort of valiant men. This castle is held for the king, by a garrison of 300 men, under a *Kildar*, or *Castellan*, who has 200 *Roupies* a month; pay, assign'd him out of certain villages. It being a place held upon oath, he may not upon any account go out of the gate.

The lower fort, and country depending on it, taken from *Savagi* by the *Great Mogul*, is govern'd, as was said, by a *Suba*, or general of the field, who receives the revenue of above 700 villages, being therefore oblig'd to maintain a certain number of soldiers; so that he drains the poor country people, making a few cottages sometimes pay thousands of *Roupies*.

Monday the 7th, I saw the dismal spectacle of a wretched *Pagan* woman, the kindred of her dead husband had obtain'd at the price of great presents from the *Suba*, to be burn'd with the dead body, according to their wicked and unmerciful custom. In the afternoon the woman came out well clad, and adorn'd with jewels, as if she had gone to be marry'd, with musick playing, and singing. She was attended by the kindred of both sexes, friends, and *Brachman*-priests. Being come to the place appointed, she went about undaunted, taking leave of them all; after which she was laid all along, with her head on a block, in a cottage twelve spans square, made of small wood wet with oil, but bound to a stake, that she might not run away with the fright of the fire. lying in this posture, chewing *Beitel*, she ask'd of the standers by, whether they had any business by her to the other world; and having received several gifts,

and letters from those ignorant people, to carry to their dead friends, she wrapp'd them up in a cloth. This done, the *Brachman*, who had been encouraging of her, came out of the hut, and caus'd it to be fir'd; the friends pouring vessels of oil on her, that she might be the sooner reduc'd to ashes, and out of pain. *Francis di Miranda* told me, that as soon as the fire was out, the *Brackmans* would go gather all the melted gold, silver, and copper. This barbarous action was perform'd a mile from *Ponda*.

A pannick
feat.

When I return'd to my tent, the camp had a false alarm, on account of one *Moor's* cutting off another's nose. Some *Gentiles* fled upon the mountains, and so did *Miranda*, leaving all he had behind, and I endeavouring to persuade him to stay, he answer'd, he must do as the rest did. Taking my gun, powder and ball, I stood under a tree to defend my self. *Miranda's* cook in the mean while laugh'd at his master's cowardice, saying, *What a brave Soldier the Mogul has, to allow him two Roupies and a half a Day: If he flies now no Body pursues, what will be do when he sees an Enemy?* Here I saw them drink the juice of an herb they call *Banghe*, which, mix'd with water, stupifies like *Opium*. To this purpose they keep it in glass-bottles of a violet colour, made on the mountains of *Gates*, in the *Mogul's* territories, and in *China*.

There being no other conveniency of carriage all the way I was to go, but on oxen, I bought a horse at *Ponda* for sixty *Roupies*. Having got a pass from the *Bachei*, that I might not be stopp'd by the guards on the frontiers; and leaving my gun to be sent to *Goa*, that I might not be made prisoner by *Savagi's* men, I set out on *Tuesday* the 8th, and travelling eight miles came to *Chiampon*, a village of a few mud houses, with a fort of the same fort. Here I caus'd some meat to be dress'd, but my porter going about to take a fig-leaf to make use of instead of a dish, after the manner of *India*, the heathen woman to whom the fig-tree belong'd, and the rest of the people, who came to her assistance, made such a noise, that we were forc'd to depart. We travel'd through woods, as we had done before, and at last getting out of them, cross'd over an arm of the sea in a small boat, and enter'd the territory of a *Pagan* prince call'd *Sonde-Kirani-karaja*, lord of some villages among the mountains, but tributary and sub-

VOL. IV.

ject to the *Great Mogul*, being oblig'd to serve him in his wars. At the end of two *Coffes* (each *Coffe* is two *Italian* miles) we lay at the village of *Kakore*, consisting of a few cottages under the arch of a *Pagod*. At the upper end of it, under a small cupola, was a thing like a chamber-pot of copper, on a stone pedestal, with a rizer like a man's face of the same metal nail'd to it. Perhaps it might be an urn containing the ashes of some hero of theirs. In the midst of the little cupola hung a small bell, and without, many small lights.

At night, troops of monkeys came leaping from one tree to another; and some of them with their young ones so close hugg'd under their belly, that tho' we threw many stones at them, we could not fetch down one; nor did they fly any further than from one tree to another. The inhabitants of these villages being for the most part *Gentiles* (for in *India* there is scarce a *Mahometan* among fifty men) they feed them and take care they shall not be kill'd; so that being grown tame they walk familiarly in the villages and even in the houses. There are such incredible stories told of these creatures, that it is no wonder some blind philosophers should allow beasts some sort of understanding. All the *Cafres* and blacks along the coast of *Mozambique* in *Africk*, are of this opinion, saying they do not speak, because they will not work.

In the kingdom of *Canarà* a baboon taking a kindness to a woman, did so infest her father's house, breaking all he found in it; that not knowing what to do, they at last permitted him to have carnal copulation with her, and ever after to have free access to her. A *Portuguese* happened to pass by that way, and lie at night in the *Pagan's* house, where seeing a great baboon come in, and make such a disturbance, he inquir'd into the meaning of it. The young woman's father answer'd with a sigh, this creature has taken away my daughter's honour, and makes all this noise when he does not find her at home. The *Portuguese* reply'd, why do you not kill it? The peasant said he was a *Gentile*, and that the queen being of the same religion would punish him severely should he do it. The *Portuguese* without making more words of it, waited till the beast came in, and shot it, and the idolater being afraid to be punish'd, he carry'd it himself out of the cottage and bury'd it. The *Portuguese* was requir'd for this kindness with a great quantity of rice, as

K k k he

General he himself told me fifteen years after it happened.

1695.
Another.

Father *Causin* writes that a ship being cast away on the *Cape of Good Hope*, soon after *India* was discover'd by the *Portuguese*, a woman holding fast by a plank, was drove by the sea upon an island. There a baboon had to do with her, and maintain'd her for a long time in a cave with what he found abroad, so that after some years he had two young ones by her. A ship afterwards happening to touch there, the wretched woman by signs call'd for help and was deliver'd; but the baboon returning and finding she was far from the shore was so enrag'd, that it took the two young monsters and kill'd them in her sight.

A third.

It is well known that a woman in *Brazil* having had to do with a baboon, and conceiving, she was deliver'd in due season of a child with all the limbs of a man, but hairy, and tho' dumb it did all it was commanded. The *Dominicans* and *Jesuits* had hot disputes about this creature whether it ought to be baptiz'd or not, and at last they concluded in the negative, because begot by an irrational fire; and that had the father been a man, and the dam a baboon it might have been baptiz'd.

A fourth.

D. *Antoney Macbado de Brito*, admiral of the *Portuguese* fleet in *India* told me, that one of these creatures continually troubling him, and breaking all it found in the kitchen, he once to be even with it, order'd a cocoa-nut to be put upon the fire, which sort of fruit the monkeys are most greedy of, and hid himself to see how that beast would take it without burning his paws. The cunning creature coming at the usual hour and finding its beloved food on the fire, look'd about, and seeing a cat by the chimney, held her head in his mouth, and made use of her paws to take off the cocoa-nut, and then cooling it in water, eat it, the *Portuguese* laughing to see the cat mewling about all day with the pain it had been put to.

How they take monkeys.

The monkeys being so greedy of cocoa-nuts has taught the *Indians* how to catch them. They make a hole in the shell, into which the monkey runs its paw, and not being able to fetch it out full of the nut, rather than quit the hold it suffers itself to be taken by those that lie in wait for them. Nor is that true which is reported, that if one of them be kill'd in the field the rest will fall upon him that kill'd it; for when I made one fall, the rest fled.

Wednesday the 9th, I set out through

thick woods, and travelling eight *Coffes* came to the foot of the mountain of *Balagati*, where I found the guards and other custom-house-officers so fond of other men's goods, that they took twelve *Roupies* for two strings of pearls. Having climb'd the mountain for eight miles among dreadful thick woods, I came to the second guard and custom-house, where they took a *Roupie* without examining further. There being no dwelling to be found, I lay all night in the thickest part of the wood (wherein *India* differs from *Persia*, which is bare of trees) after travelling twelve *Coffes*, that is twenty four *Indian* miles.

Thursday the 10th, the *Bojata* set out three hours before day, and I went along with it for the more safety. This *Bojata* was a caravan of above three hundred oxen loaded with provisions for the camp at *Galgala*. The woods we pass'd through abounded in fruit, quite different from any in *Europe*. There were some not unpleasant; and among the rest one sort they call *Gulara*, which tastes like an *European* wild fig, and grows and ripens without any blossom at the body of the tree. That day I saw some wild hens, which I had never seen before, with a crest and feathers that inclin'd to black. At first I thought they had been tame, but was afterwards undeceiv'd, there being never a house for many miles about. Having travell'd fourteen *Coffes*, we came two hours before sun set to the village of *Bombnali*, belonging to the same prince *Kirani*; where, tho' there was a guard call'd *Chiaruci*, they took nothing of me; perhaps because the chief of it was not so barbarous as the rest.

The road I travell'd on Friday the 11th, was through more open woods in which there were iron mines. Having gone eight *Coffes* we came to the village of *Chiamkan*, where there was a market and custom-house kept by the *Gentiles*, who search'd my luggage. I lay four *Coffes* further at *Sambrani*. In this place resides the aforementioned prince *Sonde-Kirani-karaja* in a fort made of earth, encompass'd with walls seven spans high. The village is nothing better than the rest of that territory, but it has a good market or *Bazar*. The prince makes three *Leccbes* of *Roupies*, that is, one hundred and eighty thousand *Neapolitan* crowns a year of this only village; by which the reader may judge how cruelly the *Idolaters* and *Mahometans* oppress the people with heavy taxes.

Setting

Setting out late on *Saturday* the 12th, after four miles travel we came into the *Mogul's* territories. Having pass'd the prince *Kiranis* last guards on the road, I rested till noon near the fort of the town of *Alcal*; but being ready to set forwards was inform'd, the road I was to go was infested with robbers, and therefore I resolv'd to stay for the *Bojata*. At this place there was a *Pagod*, and in it an idol with a human body, but the face of a monkey, and a vast long tail winding about to the top of its head, with a little bell hanging at the end of it. One hand was on its side, and the other lifted up as it were to strike. They call it the animating monkey, because according to the fabulous traditions of those people, he once fought with much bravery. When I perceiv'd no body took notice of me, I us'd to break all the idols that came in my way; especially those the peasants, that conducted the *Bojata*, carry'd hanging about their necks, wrapp'd up in a cloth, which were of stone, ill shap'd, and weighing two pounds.

Sunday the 13th, I set out four hours before day with the caravan of oxen, and at the end of six *Cosses* came to *Kancre* a village consisting of a few houses, where I din'd. Then I went five long *Cosses* further and lay at the village of *Etebi*, which tho' made up of cottages has excellent land for tillage and sport; the stags and other game feeding about tamely.

Monday the 14th, setting out early with another *Bojata*, at the end of five *Cosses* all the way a fertile soil, I stopp'd at *Tikli* a small town defended by a fort of earth, and after dinner proceeded to the little village of *Onor*.

Tuesday the 15th, I travell'd five *Cosses* through a country full of green and delightful trees to *Maudapur*, a city made up of mud houses and enclos'd with a low wall; but has a good fort of lime and stone on a hill. After dinner I went two *Cosses* further to *Betchè* a wall'd town, where I lay.

It is far different travelling through the *Mogul's* country, than thro' *Persia* or *Turky*, for there are no beasts for carriage to be found, nor caravanseras at convenient distances, nor provisions; and what is worse there is no safety from thieves. He therefore that has not a horse of his own must mount upon an ox, and besides that inconveniency, must carry along with him his provision and utensils to dress it; rice, pulse and meal being only to be found in great

towns inhabited by the *Mogul's*: At *Gemelli* 1695. night the clear sky will be all a man's covering, or else a tree. Add to all this the great danger of life and goods, by reason of the excursions *Savag's* soldiers make quite as far as the camp at *Galgala*. Besides, the *Moguls* themselves are such crafty thieves, that they reckon a traveller's money and cloaths their own; and they will keep along with him many days till his security gives them an opportunity to rob him at their ease. Sometimes one of them will pretend to be a traveller that is going the same way, and bears a stranger company, that he may rob him with more safety; for when he lies down to sleep the other artificially lets down a noose from the top of a tree, and drawing him up a little way, slips down to dive into his purse. Had not very powerful motives press'd me forwards to see the court of so great a king, I should not easily have expos'd my self to so many dangers and hardships. 'Tis true, that excepting only this of *Vijapor*, which is continually haras'd with wars, the other kingdoms subject to the *Great Mogul* are not so inconvenient for travelling; especially about *Surratte*, and *Amadabat*, where necessities for life are to be had.

Wednesday the 16th, having travell'd three *Cosses* I pass'd through a village call'd *Kodelki*, where at a dear rate I tast'd ripe grapes of *Europe*; and three *Cosses* further came to *Edour*, the biggest city I saw in that short journey. Within the first enclosure it has a stone fort ill built, and a *Bazar*; in the second a fort with a garrison and houses about it made of mud and straw. All the merchants that come from the southern parts to sell their goods use to stay here, and afterwards go over to the camp at *Galgala* like retailers. When I pass'd that way, this city was actually infested with the plague.

After dinner I went five *Cosses* further to the town of *Muddol*, seated on the left hand of a river, a matter of great consideration on a road where I sometimes drank water muddy'd by the cattle. There is a mud fort, as are the walls of the town, nor do the cottages of the natives deserve better fortifications. As I was getting off my horse I fell so violently upon my side that I could not breath for a quarter of an hour, and was in some danger of death; I was ill of it many days after, tho' I blooded, and us'd other remedies.

CHAP. II.

The Author's arrival at Galgala, where the Great Mogul was Incamp'd.

HEMELLI
1695.

Thursday the 17th, after riding five *Coffes*, I pass'd through a wall'd town call'd *Matar*, and two *Coffes* further to the village of *Galgala* where the *Mogul's* camp was. Cropping the river *Kiscina* I came into the quarters of the *Mabometans* call'd *Lajcari*, and some christian soldiers of *Agra* entertain'd me.

Friday the 18th, I went to the christian gunner's quarter to hear mass, and found a convenient chappel of mud-walls, served by two *Canarine*-priests, maintain'd by the catholicks. After mass, *Francis Borgia*, by extraction a *Venetian*, but born at *Debli*, invited me to his house. He being captain of the christians, an hour after, caus'd two *Mabometans* that had made themselves drunk, to be cruelly beaten before me, bound to a stake. When they were set loose, they return'd him thanks for chastizing them, laying their hands on the ground first, and then on their heads, after the country fashion.

That same day the king put the question to the *Casi*, or judge of the law, whether it was more for God's service to go fight his enemies to spread the *Mabometan* sect, or else to go over to *Visapor* to keep the *Ramazan*, or their lent. The *Casi* requir'd time to answer, which pleas'd the *Mogul*, who was a great dissembler and hypocrite, and never did as he said.

The king's
quarters.

Saturday the 19th, I went to *Gulalbar* (so they call the king's quarters) and found the king was then giving audience, but there was such a multitude and confusion that I could not have a good sight of him. The king's and princes tents took up three miles in compass, and were defended every way with palisadoes, ditches, and five hundred falconets. There were three gates into them, one for the *Aram* or women, and two for the king and his court.

The Mo-
gul's camp

I was told, the forces in this camp amounted to 60000 horse, and 1000000 of foot, for whose baggage there were 50000 camels, and 3000 elephants; but that the sutlers, merchants, and artificers were much more numerous, the whole camp being a moving city containing 5000000 of souls, and abounding not only in provisions, but in all things that could be desir'd. There were 250 *Bazars* or markets, every *Omrah*, or general having one to serve his men.

In short the whole camp was thirty miles about.

These *Omrahs* are oblig'd to maintain a certain number of horse and foot at their own expence; but the *Mogul* assigns them the revenues of countries and provinces, whilst they continue in that post. Some of them make a million and a half a year of these *Giaghers*, or fees; others less, according to the number of soldiers they are to maintain. But the princes of the blood have the best, some of which are worth a million and a half of *Roupies* a month. They are not only oblig'd to serve in war, but to attend the king at all times, tho' he only goes abroad to divert him. To this purpose they all keep spies at court, for upon every failure a *Gari* is taken from them, which is 3900 *Roupies*, or less, proportionably to every man's pay.

Tho' these generals are in so fair a way to heap wealth; yet when they are found faulty, as keeping a smaller number of soldiers than is their *quota*, they are punished by pecuniary mulcts. And tho' they should combine with the commissaries that mulster them, it would avail but little: Because when they die the exchequer is their heir, and only a bare subsistence is allow'd the wife, and for the children, they say the king will bestow more riches on them, than he did on their father, whensoever their faithful services shall deserve it. These generals command every one his own troops, without being subordinate to another; only obeying a lieutenant of the king's, when he is not there in person, call'd *Gium-Detol-Molk*, who receives the king's orders, to communicate them to the generals. Hence it is, that they being lazy and undisciplin'd, go upon service when they please, and there is no great danger. Many *Frenchmen* belonging to the army, told me it was a pleasure and diversion to serve the *Mogul*, because they that will not fight, or do not keep their guards, are subject to no other penalty but losing that days pay, that they are convicted of having transgress'd; and that they themselves did not value honour much in the service of a barbarous king, who has no hospital for the wounded men. On the other side, there being no prince in the world that pays his soldiers better; a stranger that goes into his service soon

grows rich, especially an *European* or *Persian*; but once in, it is a very hard matter to get a discharge to go home to enjoy what is got, any other way than making an escape. The country not affording so many horses as are requisite for so great an army, they bring them out of *Persia*, and *Arabia*, some at 1000, or 2000 *Roupies* purchase, and the lowest at 400. And because no barley grows in *Indostan*, they give them four pounds of boil'd lentils a day, and in winter they add half a pound of butter, and as much sugar, four ounces of pepper, and some dry straw. *With the Author's leave, he seems here to impose upon the Reader, or he himself impos'd upon worse than Tavernier was with the Crabs.*

Horses.

Elephants.

It is also a vast expence to maintain so great a number of elephants; for every one of them eats at least a hundred and forty pounds of corn every day, besides leaves, green canes, sugar, and pepper, so that the king allows seven *Roupies* a day for every one. He has 3000 throughout his empire, and three general elephants. Each of these has half a million of *Roupies* allowance a month, which are spent in keeping 500 other elephants that are under him, and 200 men that look to them. At this time there were but 500 belonging to the king in the field; besides those belonging to the princes and *Omrabs*, who keep some 400, some 200, and others more or less.

Mogul's son.

Sunday the 20th, going to the tents of the king's eldest son, whose name was *Scialam*. I found about 2000 soldiers horse and foot drawn up, expecting the prince, who came from his father's quarters. Waiting, I saw his son come out and mount a horseback to go meet his father; as soon as he saw him, he alighted in token of respect. *Scialam* was sixty five years of age, tall, and full-body'd, with a thick long beard, which began to be grey. Having such a title to the crown, many thousands of the soldiers are of his faction; who being imprison'd, continu'd resolute, refusing to receive any other pay, notwithstanding he reliev'd them but meanly.

The king's quarters.

Monday the 21st, by the means of a christian of *Agra*, and an eunuch his friend, I had the fortune to be admitted to a private audience of the king. In the first court of the king's quarters, which had two doors, in a large tent I saw kettle-drums, trumpets eight spans long, and other instruments, which use to sound at certain hours of the day and night, according as occasion requires; and that day made their noise

VOL. IV.

before noon. There was also a gold ball between two gilt hands, hanging by a chain; the king's ensign, which is carry'd on the elephants, when they march. I pass'd on into the second court, and then into the royal tents, and king's apartments, adorn'd with silks and cloth of gold. Finding the king in one of these rooms, sitting after the country manner, on rich carpets, and pillars embroider'd with gold. Having made my obeisance after the *Mogul* fashion, I drew near, the same christian being my interpreter. He ask'd me of what kingdom of *Europe* I was, how long I had been come thence, where I had been, and what I came to his camp for, whether I would serve him, and whither I design'd to go? I answered accordingly, that I was a *Neapolitan*, and came thence two years before; during which time I had seen *Aegypt*, the *Grand Seignior's* dominions, and the *Persian* monarchy, that I was now come into his camp, only out of curiosity to see the greatest monarch in *Asia*, as his majesty was, and the grandeur of his court and army; that I should have reckon'd it a great honour to serve him, did not affairs of the greatest importance call me home, after seeing the empire of *China*. He then ask'd me concerning the war betwixt the *Turk* and *European* princes in *Hungary*, and having answer'd to the best of my knowledge, he dismiss'd me, the time of the publick audience drawing near. I return'd into the second court, enclos'd with painted calicoes, ten spans high all about. Here on the side next the king's apartment, the tent to give audience in, was supported by two great poles, being cover'd on the outsidcs with ordinary red stuff, and with finer within, and small taffeta curtains. Under this tent was a square place, rais'd four spans above the ground, enclos'd with silver banisters, two spans high, and cover'd with fine carpets. Six spans further in the middle was another place rais'd a span higher, at the angles whereof there were four poles cover'd with silver, reaching to the top of the tent. Here stood the throne, which was also square, of gilt wood, three spans above the rest; to get up to it there was a little silver footstool. On it there were three pillows of brocade, two to serve on the sides, and one at the back. Soon after the king came leaning on a staff forked at the top, several *Omrabs* and abundance of courtiers going before him. He had on a white vest ty'd under the right arm,

L11 accor-

GENELLI
1695.

GEMELLI according to the fashion of the *Mabometans*, to distinguish them from the *Gentiles*, who tie it under the left. The *Cira* or turban of the same white stuff, was tied with a gold web, on which an emerald of a vast bigness, appear'd amidst four little ones. He had a silk fish, which cover'd the *Catari* or *Indian* dagger hanging on the left. His shoes were after the *Moorish* fashion, and his legs naked without hose. Two servants put away the flies, with long white horse-tails; another at the same time keeping off the sun, with a green umbrella. He was of a low stature, with a large nose, slender, and stooping with age. The whiteness of his round beard, was more visible on his olive-colour'd skin. When he was seated they gave him his scimiter and buckler, which he laid down on his left side within the throne. Then he made a sign with his hand for those that had business to draw near; who being come up, two secretaries standing, took their petitions, which they deliver'd to the king, telling him the contents. I admir'd to see him indorse them with his own hand, without spectacles, and by his chearful smiling countenance seem to be pleas'd with the employment.

The Mogul gives audience.

Review of the elephants.

In the mean while the elephants were review'd, that the king might see what condition they were in, and whether the *Omrabs* they were committed to, managed them well. When the *Cornaccia* (that is he who rides them) had uncover'd the elephant's crupper, for the king to view it, he made him turn his head towards the throne, and striking him on it three times, made him do his submission as often, by lifting up and lowering down his trunk. Then came *Scialam's* son and grandson, who having twice made their obeisance to the king, each time putting their hand to the ground, on their head, and on their breast, fate down on the first floor of the throne on the left. Then *Azam-Scia* the king's son coming in, and making the same submissions, he fate down on the second step, which we said was rais'd

above the other. These princes wore silk vests with flowers of several colours, *Cira's* adorn'd with precious stones, gold collars, jewels, rich sashes, scimiters, and bucklers hanging by their sides. Those that were not of the blood-royal, made three obeisances.

On the right hand, without the tent, stood a hundred musketeers and more mace-bearers, who had clubs on their shoulders with silver globes at the ends. These were clad in cloth of several colours. There were also several porters with staves in their hands, that no person might go in without being introduc'd.

On the left of the tent were the royal ensigns held up on spears by nine persons, clad in vests of crimson velvet, all adorn'd with gold, and with wide sleeves, and sharp collars hanging down behind. He that stood in the middle held a sun; the two on his sides two gilt hands; next them stood two others, each holding two horses tails dy'd red. The other four had the spears cover'd, so that there was no seeing what they held. Without the enclosure of the royal tents, several companies and troops of horse and foot stood at their arms; and elephants with vast standards, and kettle-drums on them, which were beaten all the time. When the audience was over, the king withdrew in the same order he came out; so did the princes; some getting into *Palancines*, and others mounting stately horses, cover'd with gold and precious stones. The *Omrabs*, who had stood all the while, return'd also to their tents, follow'd by many elephants, some with seats on them, and some with colours flying, and attended by two troops of horse, and two companies of foot. The *Cattual*, who is like a provost-marshal against thieves, rode with a great trumpet of green copper, eight spans long, carry'd before him by a *Moor* a-foot. That foolish trumpet made me laugh; because it made a noise much like that our swineherds make, to call together their swine at night.

CHAP. III.

The Artifices, and cruel Practices of the Mogul now reigning, to possess himself of the Empire.

EXperience has long since made it notorious enough, that the succession of this great monarchy rather depends on force than right; and that, (if it so happen, that the sons expect their father's death) they at last deter-

min the title of birth-right by the event of a battle; but this *Mogul* we have spoken of, added fraud to force, by which he destroy'd not only his brothers, but his father.

*S. Agge-
kin, Fa-
ther to
Aurenge
Zeb.*

When *Scia-geban* had reign'd forty years, more like a father than a king, being at the age of seventy years, fitter for any thing than love; he became desperately amorous of a *Moorish* young woman. His unruly passion prevailing, he gave himself up to entirely to her, beyond what became his age, that being reduc'd to extreme weakness, and despairing of his recovery, he shut himself up for three months in the *Aram*, without shewing himself to the people, according to custom. He had six children; four of them sons call'd, *Dara*, or *Darius*; the second *Sugiab*, that is, valiant prince; the third *Aurenge Zeb*, that is, ornament of the throne, and the last *Morad Baksee*. The two daughters were *Begum Sabeb*, that is, supream princess; and *Rausenora Begum*, that is, lightsome princess, or light of princesses. They take these names, because there being no titles of earldoms, dukedoms, or the like, as is us'd in *Europe*; they cannot like our princes take the name of those lands, for they all belong to the king, who gives all those that serve him assignments at pleasure, or pay in ready-money. For the same reason the *Omrabs* names are such as these that follow, *Tbunderer*, *Breaker of Troops*, *Faithful Lord*, the *Wise*, the *Perfect*, and the like.

*He de-
scribes his

du G. Mo-
gol. Tom.
1. p. 20.*

Scia-geban seeing his sons marry'd, grown powerful, aspiring to the crown, and consequently enemies to one another, and in such a condition that it was impossible to shut them up in the inaccessible fortresses of *Govallor*, according to the antient custom, after much thinking, for fear they should kill one another before his face, he resolv'd to remove them from court. He sent *Sultan Sugiab* into the kingdom of *Bengala*; *Aurenge Zeb* into that of *Decan*; *Morad Baksee* into *Guzaratte*, and to *Dara* he gave *Cabul* and *Multan*. The three first went away well pleas'd, and acted like sovereigns in their governments; keeping to themselves all the revenues, and maintaining armies under colour of awing the subjects, and bordering princes. *Dara*, being the eldest, and design'd for empire, remain'd at court, where the father feeding him with hopes of the crown, permitted all orders to pass through his hands, and allow'd him a throne below his own among the *Omrabs*; for having offer'd to resign up the government to him, *Dara* refus'd it out of respect.

*They arm
against
him.*

The report being spread abroad, upon *Sciab-geban's* shutting himself up, that he was dead, his sons immediat-

ly arm'd to contend for their father's *GENELLI*
kingdom. The cunning fox *Aurenge* 1695.
Zeb, whilst things were in this confu-
sion, that he might the better surprize
his brother, gave out, that he had no
pretensions to the crown, but had cho-
sen to become a *Fachir*, or poor, to serve
God in peace. At the same time he
writ to his brother *Morad Baksee* ac-
quainting him, that he had always been
his real friend, and had no pretensions
to the crown himself, being a profess'd
Fachir; but that *Dara* being unfit to
reign, and a *Kafar* or idolater; and
Sultan Sujab a *Refesist*, or heretick, an
enemy of his fore-fathers religion, and
unworthy of the crown, he thought
none but *Morad* deserv'd it, to whom
all the *Omrabs* being acquainted with
his valour, would willingly submit. As
for himself, provided he would give him
his word, that when he came to the
throne, he would leave him in peace
to pray to God in some corner of the
kingdom the rest of his days, he would
not only endeavour to assist him with
his advice, but would join his forces
with him to destroy his brother; in
token whereof he sent him 100000 *Rou-
pies*; advising him to come with all ex-
pedition to make himself master of the
fort of *Suratte*, where the treasure was.
Morad Baksee, who was neither power-
ful nor rich, freely accepted his offer
and money, and began immediately to
act like a king, promising great rewards
to those that would side with him; so
that he rais'd a powerful army in a short
time. Then giving the command of
three thousand men to *Scia-Abai*, a va-
liant eunuch, he sent him to besiege the
castle of *Suratte*.

Dara would have reliev'd it, but for-
bore it to attend his father in his sickness,
and curb *Sultan Sugiab*, who after sub-
duing the kingdom of *Bengala*, where
he was governour, was advanc'd with a
powerful army into the kingdom of *La-
bor*. He sent his eldest son *Soliman Sec-
cur* against him with considerable forces;
who routed his uncle, and drove him
back into *Bengala*, and leaving good
garrisons on the frontiers, he went back
to his father *Dara*.

On the other side, *Aurenge Zeb* sent
his son *Sultra Mahmud*, son-in-law to
the king of *Golconda*, to *Emir Gemla*,
who lay by order of *Sciab-geban*, at
the siege of *Kaliana*, to desire him to
meet him at *Daulet-Abad*, where he
would communicate a matter of great
moment to him. The *Emir*, who was
well acquainted with *Aurenge Zeb's* ar-
tifices, excus'd himself, saying, his fa-
ther

GENELEE
1695.

ther was not yet dead ; and that all his family was left at *Agra*, in the hands of *Dara*, as hostages for his fidelity ; for which reason he could not assist him without the ruin of what he held most dear. Having receiv'd this answer, *Aurenge Zeb* was no way discourag'd, but sent *Sultan Mazum*, his second son to the *Emir* ; who manag'd things so well, that he perswaded him to go with him to *Dolet Abad*, with the flower of his army, he having made himself master of *Kaliana*. *Aurenge Zeb* receiv'd him with extraordinary demonstrations of affection and honour ; calling him *Baba*, and *Babagi*, that is, father, and lord and father ; and after giving him an hundred embraces, taking him aside he told him, it was not reasonable that his family being in *Dara's* hands, he should venture to do any thing for him publicly ; but that on the other hand there was no difficulty but might be overcome. I will therefore propose a method to you, said he, which will not appear strange to you, when you think on the safety of your wife and children ; which is, that you permit me to imprison you, which all the world will think is in earnest, believing you are no man that will take it in jest, and in the mean while I will make use of part of your troops, of your cannon, and some of your money, which you have so often offer'd me, and will try my fortune. The *Emir*, either because he was a sworn friend to *Aurenge Zeb*, or on account of the great promises he had made him at other times ; or else by reason he saw *Sultan Mazum* well arm'd standing by him, and *Sultan Mahmud* looking upon him with a stern countenance ; submitted to all his will, suffering himself to be confin'd to a room. The news being spread abroad, his men ran to arms to rescue him, and being very numerous would have done it, had not *Aurenge Zeb* appeas'd them with fair words, promises, and gifts ; so that not only the *Emir's* troops, but most of *Sciab-geban's* seeing things in confusion, sided with him. Having therefore possess'd himself of the *Emir's* tents, camels, and baggage, he march'd to take *Suratte* ; but hearing within a few days that the governor had already surrendered it to *Morad Baksee*, he sent to congratulate with him, and tell him what had happened with *Emir Gemla* ; what forces and money he had ; and what secret intelligence at court ; desiring him, that since he was to go from *Brampur* to *Agra*, he should endeavour to meet, and confer with him by the way.

This fell out to his mind, the two armies joining with much satisfaction. *Aurenge Zeb* made *Morad Baksee* fresh promises, protesting over again that he did not aspire to the crown ; but only come to help raise him to the throne, in opposition to *Dara*, their common enemy. They both mov'd towards *Brampur*, where coming to a battle with the army of *Sciab-geban*, and *Dara*, *Dara's* forces de-
located, which came to hinder them passing the river *Ogene* ; the generals *Kajem* and *Cham*, and *Geffon-jenghe* were overthrown by the valour of *Morad*, with the slaughter of eight thousand *Ragipu's*.

Morad Baksee flush'd with the success ^{Himself routed.} of the battle, coveted nothing but fighting ; using all possible means to overtake the enemy ; whilst *Aurenge Zeb* grown vain, encourag'd his soldiers, giving out he had thirty thousand *Moguls* of his party among *Dara's* forces. Having taken some rest, they fought the second battle at *Samongber*, where *Morad Baksee*, tho' wounded by the general *Ram-jenghe-rulle*, fighting courageously, kill'd him. Whilst the event of the battle was still dubious, the traitor *Calil-ullab-kan*, who commanded thirty thousand *Moguls*, with whom he might have routed the enemy, did not only go over to *Aurenge Zeb*, but falsely perswaded *Dara* to come down from his elephant, and get a horse-back, and this to the end that the soldiers not seeing him, might suppose he was kill'd, and so dismay 'em. It fell out as he design'd, for being all seiz'd with fear, they fled to escape *Aurenge Zeb*. Thus *Dara* on a sudden lost the victory he had almost gain'd, and was overthrown ; and seeing himself forsaken, was forc'd to fly to save his life. So that it may be said, that *Aurenge Zeb*, by continuing steadfast on his elephant, secur'd to himself the crown of *Indostan* ; and *Dara* was thrown out of the throne by coming down from his. A diversion fortune often takes, to make the greatest victories depend on the most contemptible accidents. The unhappy *Dara* returning to *Agra* in despair, durst not appear before his father, who, when he took his leave, had said to him, *Be sure Dara never to come into my sight unless victorious*. Nevertheless the good old man did not omit to send to comfort him, and assure him of his affection.

Four days after, *Aurenge Zeb*, and *Aurengi Morad Baksee* came to a garden a small ^{Zeb came to Agra.} league from the fort of *Agra* ; and thence sent an ingenious and trusty eunuch to pay their respects to *Sciab-geban* ; and to tell him they were very much

much troubled at all that had happened, being compell'd to it by *Dara's* ambition; but were most ready to obey his commands. *Sciab-geban*, tho' he well knew how eager his son was to reign, and that there was no trusting to his fair words; yet shew'd a good countenance to the eunuch, designing to intrap *Aurenge Zeb*, without coming to open force, as was then proper to have done. But he, who was thorough skill'd in all frauds, took his father in the same snare; for putting off the visit from day to day, which had been agreed upon between them by the eunuch, spent the mean time in gaining the affections of the *Omrabs* underhand. When he thought things were ripe, he sent his eldest son *Sultan Mahmud* to the fort on pretence to speak to *Sciab-geban* from him. This bold young prince coming to the gate, fell with his men that lay in readiness upon the guards, and putting them to flight, went resolutely in, and made himself master of the walls. *Sciab-geban* perceiving he was fallen into the snare he had laid for his son, try'd to bribe *Sultan Mahmud* with the offer of the crown, but he, without being mov'd, carry'd the keys of the fort to his father, who made the same governor *Ekbarkan*, governor of it. He presently shut up the old king with his daughter *Pegun Sabeh*, and all the women; so that he could neither speak nor write to any body, much less go out of his apartment. As soon as this was done, all the *Omrabs* were oblig'd to make their court to *Aurenge Zeb*, and *Morad Baksee*, and to declare for the first of them. He being now well establish'd, took what he thought fit out of the king's treasure; and leaving his uncle *Scia-best-kan* governor of the city, went away with *Morad Baksee* in pursuit of *Dara*.

The day they were to set out of *Agra*, *Morad Baksee's* friends, and particularly his eunuch *Scia-Abas*, told him, that since he was king, and *Aurenge Zeb* himself gave him the title of majesty; he should send him against *Dara*, and stay himself with his troops about *Agra* and *Debli*. But he had so much confidence in his brother's promises, and in the mutual oath of fidelity they had taken to one another upon the *Alcoran*, that despising all good counsel, he set out towards *Debli*, with *Aurenge Zeb*. At *Maturas*, four days march from *Agra*, his friends again endeavour'd to convince him, that his brother had ill designs in his head; and advis'd him to forbear visiting him, tho'

VOL. IV.

it were but that day, upon pretence of *Gemelli* indisposition; but he continuing incredulous, and in a manner infatuated with his sweet words, did not only go, but staid to sup with him. The false wretch *Scias Morad Baksee* shew'd him all manner of kindness, even to the wiping off his sweat with his handkerchief, always talking to him as king, and giving him the title of majesty; but as soon as he saw him overcome by the fumes of *Sciras*, and *Cabul-wine*, he arose from table, and encouraging his brother to carry on the debauch with *Mircan*, and other officers there present, went away, as if he had gone to take his rest. *Morad Baksee*, who lov'd drinking, making himself drunker than he was, at length fell asleep; which was what *Aurenge Zeb* expected, in order to take away his scimiter, and *Gemder* or dagger. Then returning into the room, he began to upbraid him in these words, *What a Shame, what a disgrace is this! for a King as you are to be so debauch'd, as to make himself thus Drunk? What will the World say of you, and of me? Let this base Man, this Drunkard be bound Hands and Feet, and shut up, to digest his Wine.* This was immediately executed, and *Morad Baksee's* commanders being offended at his imprisonment, *Aurenge Zeb* pacify'd them with gifts and promises, and took them all into his pay. His unfortunate brother was shut up in an *Ambri*, which is a little wooden house they set on an elephant to carry women, and so convey'd to *Debli*, to the little fort of *Salemgerber*, seated in the middle of the river.

Having secur'd *Morad Baksee*, he pursu'd *Dara*; leaving *Sultan Mahmud*, and *Emir Gemla* to destroy *Sultan Sujab*. But *Mahmud* aspiring to those things he ought not yet to have aim'd at, and being naturally proud, fell at variance with *Emir Gemla*, about commanding in chief, which he pretended to belong to him alone; and now and then let slip some words of contempt and threatening against him, and such as did not become a dutiful son. Then fearing that his father on account of his ill behaviour had given orders to the *Emir* to secure him; he with-drew with a few followers to *Sultan Sujab*, making him great promises, and swearing to be faithful; but he fearing some contrivance of *Aurenge Zeb*, and the *Emir's* eldest son, caus'd all his actions to be observ'd; so that *Mahmud* in a few months return'd to the *Emir's* camp. Others say it was a project of *Aurenge Zeb's* to send him to his uncle, to ruin them both,

M m m or

1965. GEMELLI or at least a specious pretence to make sure of him; because afterwards, besides the threatening letters he writ to recal him to *Debli*, he caus'd him to be arrested upon the river *Ganges*, and sent close shut up in an *Ambri* to *Gavaleor*.

Aurenge Zeb having perform'd this work, sent to warn his other son *Sultan Mazum* to continue in his duty, unless he would be serv'd in the same manner; because it was a nice point to reign, and kings ought to be jealous of their own shadows. Then going to *Debli*, he began to act as king; and whilst the *Emir* press'd *Sugiah*, who made a brave opposition, securing the passage of the river *Ganges*, he contriv'd to get *Dara* into his power by fraud, forcing him to quit *Guzaratte*. He made the *Raja Gessen Sangbe* write a letter to tell him, he would speak with him about a matter of great moment on the way to *Agra*. *Dara*, who had gather'd an indifferant army, unadvisedly came out of *Amed-Abad*, and hasten'd to *Amire*, eight days journey from *Agra*. Here, two late discovering *Gessen Sengbe's* treachery, and seeing no possibility of returning so soon to *Amed-Abad*, which was thirty four days journey distant, in summer, with scarcity of water, and through the hands of several *Raja's*, friends to *Jessam*; he at last resolv'd, tho' he knew himself to be inferior in forces, to fight him. In this battle *Dara* was betray'd, not only by *Scia-Navazekan*, but by all his officers, who fir'd his cannon without ball, so that he was forced to fly to save his life, and to cross all the countries of *Raja's* there are from *Amire* to *Amed-Abad*; without tents, or baggage, in the hottest season, and with only two thousand soldiers, who were most of them stripp'd by the *Kullis*, peasants of the country, who are the greatest thieves in *India*. Being come with so much difficulty within a day's journey of *Amed-Abad*, the governour, who was corrupted by *Aurenge Zeb*, sent him word to come no nearer, for he would find the gates shut. *Dara* much concern'd at this news, and not knowing what to resolve on, he bethought him of a powerful *Patan*, call'd *Gion-Kan*, whose life he had twice sav'd, when *Scia-geban* had commanded him to be cast to the elephants for rebellion. Him he purpos'd to repair to, notwithstanding his son *Sapece-Kub*, and his wife's dissuasions. Coming thither he was at first courteously receiv'd; but the next morning the false and ungrateful *Patan* fell upon him with many arm'd

men, and killing some soldiers that came to his assistance, bound him, his wife and son, seizing all their jewels, and money. Then letting him on an elephant, with an executioner behind, who was to kill him if he attempted to escape, he conducted him to the camp at *Tatabakar*, where he deliver'd him up to the general *Mirbaba*, who caus'd him to be carry'd in the same manner to *Agra*, and thence to *Debli*. When he was come to the gate of that city, *Aurenge Zeb*, and his council differ'd in opinions, whether they should carry him through the city, or not, in order to send him to *Gavaleor*, and at last it was resolv'd to fet him scurvily clad, with his wife and son, on a pitiful elephant, and so carry him through the city, with the infamous *Patan* by him. In the mean while *Aurenge Zeb* was inform'd, that all the city was incens'd against him, on account of his many cruelties; and mis-doubting the first, he summon'd his council, to determine whether it was better to send him to prison, or put him to death. Many were of the first opinion; but *Dara's* old enemies, especially *Nakim Daud*, a physician, flattering the tyrant's inclination, cry'd out aloud, it was convenient for the safety of the kingdom, that he should die, and the more, because he was no *Musliman*, but a *Kaiser*, or idolater. *Aurenge Zeb* readily comply'd, immediately ordering that *Sapece-Kub* should be carry'd prisoner to *Gavaleor*, and *Dara* put to death by the hands of a slave, call'd *Nazar*. He going in to execute the barbarous command, *Dara*, who was himself dressing some lentils for fear of poison, foreseeing what was coming upon him, cry'd out to his son, see he comes to kill me. Then taking a kitchen knife, he would have defended himself; but the executioner fell on, and throwing him down, cut off his head, which was carry'd to the fort to *Aurenge Zeb*, and he ordering it to be put into a dish, wash'd it with his own hands, to be sure it was his brothers, and when he found it was, began to lament, saying, *Oh unhappy Man; take it out of my sight, and let it be bury'd in the Tomb of Humagon*. At night he caus'd his daughters to be put into the seraglio, and afterwards sent her to *Scia-geban*, and *Begum Sa-His* *beb*, who desir'd it; and *Sapece-Kub* was secur'd, carry'd to *Gavaleor*. *Gion-Kan* was rewarded for his treachery; but was kill'd in a wood as he return'd home, to prove that men love the treason, but hate the traitor.

and tho' S

There was none left of *Dara's* family, but *Soliman Seekub*, who was not easily to be drawn from *Serenagber*, had the *Raja* kept his word; but the underhand practices of the *Raja Gessen Sengber*, the promises and threats of *Aurenge Zeb*, the death of *Dara*, and the neighbouring *Raja's*, made him break his faith. *Soliman* understanding he was betray'd, fled over desert mountains, towards the great *Tibet*, but the *Raja's* son overtook and stopp'd him, wounding him with a stone; after which he was convey'd to *Debli*, where he was shut up in *Selengber*, with *Morad Baksee*, not without tears of all the *Omrabs*.

Aurenge Zeb perceiving there were poems handed about in commendation of *Morad Baksee's* valour, it rais'd such a jealousy in him, that he presently contriv'd his death. *Morad*, at the beginning of the war had kill'd one *Sajed*, a very wealthy man at *Amed-Abad*, only to seize upon what he had. The tyrant made his sons appear in a full assembly, and demand that prince's head, in revenge for their father's death. Not one of the *Omrabs* oppos'd it, as well because *Sajed* was of *Mabomet's* family, as to comply with the will of *Aurenge Zeb*, whose invention they knew that was. Accordingly they were permitted without any manner of process, to have *Morad's* head cut off; which was immediately perform'd at *Govaleor*.

There is now none left to oppose *Aurenge Zeb*, but only *Sultan Sujab*, who tho' he held out some time in *Bengala*, yet was at last forc'd to submit to his brother's power and good fortune; for the *Emir Gemla* pursuing him with his forces into the islands the *Ganges* makes near its mouth, forc'd him to fly to *Dake*, the last city of *Bengala* on the sea side. Here, having no ships to commit himself to the ocean, and not knowing which way to escape, he sent his eldest son *Sultan Banché* to the king of *Aracam* or *Mog*, a heathen prince, to pray him to give him protection for the present in his country, and in the proper season a vessel to carry him to *Moka*, he having a mind to go to *Mecca*. The king of *Aracam* presently sent a number of galleasses or half galleys with *Sultan Banché*, and a civil answer as to the rest. *Sujab* went aboard with his women, and being brought to that king, was well receiv'd; but when the season came he perform'd not his word of furnishing him a ship to go to *Mecca*; but appearing every day more cold to him, began to complain that *Sujab* did not visit him, and tho' *Sultan Banché* often made his

court with great presents, yet it avail'd nothing. Then asking one of *Sultan Sujab's* daughters in marriage, and finding she was not immediately granted him, the barbarian was so enrag'd, that he oblig'd the poor fugitive prince to act a desperate part. He thought with three hundred soldiers he brought from *Bengala*, and the assistance of the *Mabometans* of the country whom he had corrupted, to break into the palace, kill all he found, and make himself king of *Aracam*; but the day before he was to put this in execution, the design was discover'd, and he oblig'd to fly towards *Pegu* to save his life, tho' it was impossible to come thither by reason of the vast mountains and forests he was to pass through. That same day he was overtaken by the king's men, and tho' he defended himself with much bravery, killing a great number, yet so many fell upon him, that at last he was forc'd to submit to his fate. *Sultan Banché* who was not gone so far, made his defence too, but being hurt with stones, and encompass'd on all sides, was taken, with two little brothers, a sister and his mother. As for *Sultan Sujab* himself, there are different accounts; some say he was wounded on the mountains, only four of his men being left about him, and that an eunuch having dress'd the wound on his head, he fled across the woods; others will have it that he was found among the dead, but not perfectly known; others that he was afterwards seen at *Mafipatan*; others near *Suratte*; and others in fine, that he was fled towards *Persia*; so that by reason of these different accounts, *Aurenge Zeb* one day in jest said that *Sujab* was turn'd pilgrim. The most receiv'd opinion is, that he dy'd in the fray, if he was not kill'd by robbers, or wild beasts, of which those forests are full. After this disaster all his family was imprison'd, and the king took his eldest daughter to wife; but another conspiracy of *Sultan Banché* being afterwards discover'd, he was so irrag'd that he caus'd them all to be put to death, even to her that was his wife and with child. The men were put to the sword, and the women starv'd to death.

The unnatural war being thus at an *Exact* juncture, after it had lasted through the ambition of rule, among the four brothers from the year 1655 till 1660, *Aurenge Zeb* remain'd peaceable possessor of that vast empire; for after so much blood shed, and so many enormities committed, it was easie to cause himself to be declar'd king with the consent of all the great ones. The greatest obstacle he found

GEMELLI was, the grand *Cadi* who was to put him in possession, and pleaded, that according to the law of *Mabomet* and that of nature, no man could be declar'd king, whilst his father was yet living, much less *Aurence Zeb*, who had put to death his eldest brother *Dara*, to whom the crown belong'd after the death of his father *Scia-geban*. To overcome this difficulty he assembled the doctors of the law, and told them, that as for his father he was unfit to rule, by reason of his age; and for his brother *Dara's* death he had caus'd him to be executed for contemning the law, by drinking wine, and favouring infidels. Adding threats to these reasons he made the *Mabometan* casuists agree, that he deserv'd the crown and ought to be declar'd king. The *Cadi* still opposing him, he was depos'd and another put in his place, who for the kindness receiv'd, consented to all that was requir'd of him.

Aurence Zeb accordingly coming to the *Mosque* on the 20th of *October* 1660, seated himself on the richest throne that ever was seen in the world, being the same that was begun by *Tamerlane* and finish'd by *Scia-geban*, receiving there the homage of all the great men, as is the custom of the country. Afterwards there was great rejoicing at *Jehanabat* and throughout all the kingdom.

His penance.

Aurence Zeb considering the heinousness of the crimes he had committed for the compassing of his ends; voluntarily impos'd on himself a rigorous abstinence, not to eat for the future any wheaten-bread, fish, or flesh; and to live upon barley-bread, rice, herbs, sweet-meats and such things; nor to drink any sort of liquor but water.

Is reproved by the King of *Persia*.

Ambassadors from the prime princes of *Asia* and *Africk* came to his court to congratulate his accession to the crown; but he was much offended at the letter sent him by the king of *Persia*, upbraiding him with the murder of *Dara*, and imprisonment of *Scia-geban*, as being actions unworthy a *Mussulman*, and the son and brother of a *Mussulman*; and reflecting on him for the title he had assum'd of *Alem-Guire*, that is, lord of the world, concluded challenging him in these words, *Since you are Alem-Guire, I send you a Sword and Horses that we may meet.*

Scia-geban dies *Tax*. l. 2. p. 252.

Scia-geban dy'd in the fort of *Agra* about the end of the year 1666, and *Aurence Zeb*, who had long with'd to be deliver'd from that continual reproach of his tyranny, went thither immediately to secure all his father's jewels. He receiv'd his sister *Begum Sabe* into

favour, because she having an influence over her father, being his wife and daughter, had preserv'd to him so many jewels of incredible value, when *Scia-geban* offend'd that he had sent for them whilst he was living, to adorn the throne he had usurp'd, was about to reduce them to powder in a mortar. Besides she had given him much gold, and set out the *Mosque* he went into before his entering the fort, with rich carpets. She was afterwards carry'd in honourable manner to *Jehanabat*, and there dy'd, with suspicion of being poison'd.

If we now look back into the life of *Scia-geban*, we shall find that he was punish'd by the hand of God as he had deserv'd, for the wrong he had done his nephew *Bulaki*, usurping the crown from him.

Gebangbir, king of *India*, son of *Ac-Singh* ^{an ulap-er.} *bar*, and grandson of *Humagion*, after having reign'd twenty three years peaceably, was disturb'd by the ambition of his sons, who thought that life lasted too long, which obstructed their getting into power. The eldest rais'd a mighty army about *Labar* to possess his father's throne before it was his due; the king to punish his presumption march'd against him with numerous forces, and defeating his troops, brought him away prisoner with those great men that had espous'd his cause. But being of a merciful disposition, and unwilling to imbrue his hands in the blood of his son, whom he could not but love, he was satisfy'd with holding a red hot iron to his eyes, and keeping him in that condition about him; designing to raise his son *Sultan Bulaki* to the throne. But *Sultan Curom*, who afterwards took the name of *Scia-geban*, believing that he as second son to *Geban Gbir*, ought to be prefer'd in right before his nephew; resolv'd to leave no means unattempted to cast him down and raise himself, without expecting his father's death. He conceal'd his wicked design under the cloak of a counterfeit obedience, till he gain'd his father's good will; and when he thought himself well grounded in his favour, desir'd he would give him leave to carry his blind brother into the kingdom of *Dacan*, where he was governor; saying, he should by this means take out of his sight a displeasing object, and his brother would live more peaceably. The king not diving into *Curom's* design, consented to it; but he having got the poor prince into his hands, contriv'd to make him away in such manner, that no man could imagine he had been so cruel as to poison him. VOL. IV.

chang'd his name into that of *Sciab-geban*, that is, king of the world, and raising a numerous army, set forward to make war on his father, who was justly provok'd, and the more for his son's death. *Jebanguir* went out in person with a great strength, against the wicked and ambitious *Curum*; but age and grief, to see himself so much wrong'd, ended his days by the way, and made it easie for the other to compass his designs. However *Jebanguir* before his death recommended his grandson *Sultan Bulaki* to *Ajuf-Kan*, generalissimo of his army, and prime minister of state, and to all the great officers, commanding them when he was dead, to acknowledge none for their true and lawful sovereign but *Bulaki*; and declaring *Sultan Curum* a rebel, and incapable of succeeding in the throne. Besides he made them swear, and particularly *Ajuf-Kan*, that they would never consent that *Bulaki* should be put to death; which he afterwards faithfully perform'd, but not to settle him on the throne, having design'd that for *Scia-geban* his son-in-law. The death of *Jebanguir* being known, all the great men acknowledg'd the young *Sultan Bulaki* for their king. Two of his cousins, soon perceiving the wicked design of *Ajuf-Kan*, were the cause of their own deaths, and his losing the crown, by discovering the secret to him; because he being unskill'd in the mystery of reigning, ask'd the question of *Ajuf-Kan* himself, who having sworn he would ever be faithful to his king, privately contriv'd the death of the two princes. Then considering that the king having notice of the conspiracy, it was dangerous to defer the execution of it, and finding himself powerful in the number of his followers, he gave out that *Scia-geban* was dead, and his body would be carry'd to be bury'd at *Agra*, with the bones of *Jebanguir*, as he had desir'd before his death. He himself brought the news to *Bulaki*, persuading him

when it was to be done, to go two leagues out of *Agra* to meet the body, that honour being due to a prince of the blood, tho' an enemy. *Scia-geban* came himself in disguise, and when he was in sight of the army near *Agra*, was laid on a bier, and carry'd as if he were dead. All the principal conspirators came with *Ajuf* into the tent, where he was laid, as it were to do honour to the dead prince, and when they saw the young king was come out of *Agra*, uncovering the bier, they made *Scia-geban* stand up in the presence of all the army, and declaring him king with a loud voice, they, and all the rest by their example, swore fealty to him. *Bulaki* receiving this dismal news by the way, being in a consternation, had no hopes of safety but in flying; which was easy to be done, because his enemies thought not proper to pursue him. He wandered about *India* a long time, becoming a *Facbir*; but at last tir'd with that painful employment, he retir'd into *Persia*, where he was nobly receiv'd and entertain'd by *Scia-Sofi*. *Scia-geban* being left without any rival, yet fearing the factions there might be for the lawful king, by degrees, put to death all those that were well-affected to his nephew, making the first years of his reign famous for cruelty. Thus his being in his life-time depriv'd of his kingdom by his son, is to be look'd upon as a just judgment of God, which the longer it is defer'd the heavier it falls.

These are the methods of securing the throne of *Indostan*, not found out by any ill custom of that people, but proceeding from the want of good laws, concerning the title of birth-right. Therefore every prince of the blood thinks he has a sufficient claim to the crown, and exposing himself to the cruel necessity of overcoming to reign, sometimes involves an infinite number of lives in his own ruin, that another may be the more securely establish'd.

CHAP. IV.

The Genealogy of the Great Moguls, and other Things the Author observ'd at that Court.

THE vast empire of the *Mogul*, which in the *Indian* language signifies *White*, contains all the country between the rivers *Indus* and *Ganges*. It borders on the east with the kingdoms of *Aracan*, *Tipa*, and *Assen*; on the west with *Persia*, and the *Ubeck Tartars*; on the south of it is the great *Indian* oce-

an, and some countries held by the *Portuguese*, and other petty kings; and on the north it reaches to mount *Caucasus*, and the country of *Zagotay*; on the north east of it is the kingdom of *Butan*, whence the musk is brought. So that the length of it from *Bengala* to *Candahor* is no less than six months journey,

GENELLI and its breadth from north to south at 1695. least four.

The first that laid the foundation of this mighty monarchy was *Tamerlane*, otherwise called *Teymour*; who by his wonderful conquests from *India* to *Poland*, far surpass'd the renown of all former commanders. He had one leg shorter than the other, and was therefore call'd the lame; and here we may take notice of his sharp saying to this effect, to *Bajazeth* emperor of the *Turks*, whom he overthrew and took prisoner. Causing him to be brought into his presence the same day, and looking him steadily in the face, he fell a laughing; whereat *Bajazeth* offended said, *Do not laugh at my ill fortune Tamerlane; know that it is God who bestows kingdoms and empires, and that all that has befallen me to day may happen to you to morrow.* *Tamerlane* without the least concern answer'd, *I know very well Bajazeth, that it is God who bestows kingdoms and empires. I do not laugh at your misfortune, but because, considering your countenance, I perceive that these kingdoms and empires are very inconsiderable things with God; since he bestows them on such ugly fellows as we are; you a squinting clown, and I a lame wretch.* *Tamerlane* was not of mean extraction, as some imagine, but of the race of *Scia-guis Cham*, king of *Tartary*. He was born at *Samarcand*, a country of *Zagatay*, or of the *Usbeck-Tartars*, where he was afterwards bury'd.

Tamerlan's
Successors

Mirumxa his son succeeded him in the throne; his successor was his son *Mabomet*; and *Mabomet* *Mirza Sultan Abuid* his son, who was kill'd by the *Persians* in the year 1469. *Mirza Sultan Hamet* son to him, ascended the throne next, and dy'd in 1495. The next was *Hamet's* son, call'd *Sultan Babir*, which signifies brave prince, who in 1500 was dethron'd by *Kay-bek Cham* an *Usbeck*, but recover'd the kingdom again, after wandering a long time about *India*, and was the first *Mogul* that became so very powerful. He dy'd in 1532.

Therrenot
V. N. des
Indies. 1.
t. c. 3.

His son *Homagion*, that is, the fortunate, succeeded him, who conquer'd the best and wealthiest kingdoms in *India*. *Kirkan* his general rebell'd and forc'd him to fly to the king of *Persia*; by whom being assist'd with 12000 men under the command of *Beuran-Cham*, he defeated the rebel, and recover'd his kingdom; then dy'd in 1552.

After his death, his son *Gelaladin* commonly call'd *Akbar*, ascended the throne. He reign'd 54 years, and dy'd in 1605, since the birth of *Christ*, and 1014 of the *Mabometan Epoch*, leaving the king-

dom to his son *Sultan Selim*, call'd by another name *Yehan-guir-pashia*, that is, conquering emperor of the world; at his death he left four sons, *Sultan Kofru*, *Sultan Kurom*, *Sultan Perwiz*, and *Scia Daniel*.

Sultan Kurom succeeded his father *Yehan-guir*, by means of the ill practices above-mentioned, and was acknowledged for their sovereign by the great men of the kingdom in the fort of *Agra*, by the name of *Sultan Sciabedin Mubammed*; but he would be call'd *Scia-geban*. Next to him came *Aurence Zeb* ascending the throne of *Indostan*, through such cruel practices. He took the name of *Aurence-Zeb-Alem-Gbire*, that is, Lord of the world, believing he possess'd three parts of it. For this reason he carry'd as his peculiar ensign a golden globe, and had it in his seal; and always tore off one corner of the paper he wrote on, to express that the fourth part of the world was not his. He added to his empire the kingdoms of *Vijapur* and *Golconda*, the kings whereof he kept prisoners in my time, part of the territory of *Savagi*, and of other petty principalities in *Indostan*.

Aurence Zeb labour'd to gain the reputation of being a strict observer of the *Mabometan* law, and a lover of justice. He had so distributed his time, that he could scarce ever be said to be idle. Some days in the week he bath'd before break of day; then having pray'd he eat something: after that, having spent two hours with his secretaries, he gave publick audience before noon, and then pray'd again. This done he din'd, and soon after gave audience again, when followed the third and fourth time of praying. Next he was employ'd in the affairs of his family till two hours after it was dark. Then he supp'd, and slept only two hours, after which he took the *Alcoran* and read till break of day. This was told me by several eunuchs belonging to the court, who knowing their prince was skill'd in negromancy, believ'd he was assist'd by the devil in that painful course of life; else he could not have gone through so much fatigue in his decrepit old age. This might serve as an example to some princes of *Europe*, who are so refer'd, that they give audience but twice a week, and then will not stay a moment to hear their subjects grievances; as if it were not their duty to listen to them with patience. And it is certain the *Mogul* did not feed on such dainties as they do, but on herbs and pulse; fasting every day at those years, tho' made

His
change of
life.

His con-
tinuity.

made of flesh and blood like the Europeans.

His change of life.

After *Aurenge Zeb* had prescrib'd himself this sort of life, he ceas'd to be bloody as before, and on the contrary became so mild, that the governours and *Omrabs* did not pay him the duty they ought; knowing his mercy would never suffer him to punish them. Thus the poor were oppress'd by the great ones, without knowing who to have recourse to; because the king, when advis'd to be less merciful towards those that transgress'd his commands, answer'd, *That he was no God, that his ministers might not contradict him; and that if they misbehav'd themselves, Heaven would punish them.* A government far different from that of *Turky*, and *Persia*, where the stain of disobedience is wash'd away with blood. Those that saw but into the outside, said, *Aurenge Zeb* was a great *Mabometan* saint, who after his death must be put into the martyrlogy of their false sect. But I am of opinion he conniv'd at the failings of his ministers, and *Omrabs*, that they might love the present government, under which they were suffer'd to act as they pleas'd, and consequently there might be no way for any of his sons to usurp the throne.

His continency.

On the other side, to speak the truth, he did not give himself up in his youth to sensual pleasures, as his predecessors had done; tho' according to their barbarous custom, he kept several hundred women in the *Aram*, for ostentation. To this purpose they tell us, that he having pitch'd upon a woman in the *Aram* to lie with him that night, she dress'd herself the best she could to receive that honour. The king coming at the appointed hour into her chamber, instead of going to bed, fell a reading the *Alcoran* all night. The eunuch coming in the morning to tell him the bath was ready, as us'd by the *Mabometans* after they have had to do with women; the woman who had been disappointed cry'd out, there was no need of a bath, because the king had not broke wind; to signify he had been at prayers, which if interrupted by wind, the *Mabometans* are to bath. The king hearing her, went away ashamed, the lady telling him that was no room to pray in; and he never after look'd her in the face. The kings of *Indostan* are at a vast charge in maintaining so many women; for they have many thousands and thousands of *Roupies* a year out of the treasury; some of the best belov'd even to a million and half, which they spend in maintaining a-bundance of elephants, horses and servants.

Besides *Aurenge Zeb's* abstinence, after so many horrid crimes committed, ^{1695.} his table was not maintained out of the revenue of the crown; he said that food was not good, which cost the sweat of the subjects, but that every man ought to work for his living. For this reason he work'd caps, and presented them to the governours of his kingdoms and provinces; who in return for the honour done them, sent him a present of several thousands of *Roupies*. When I was there, his decrepit age rendering him unable to work, he had reserv'd the revenues of four towns for his table. His expence was but small, for a vest of his did not cost above eight *Roupies*, and the fish and *Cira* or cap, less.

He work'd for his bread.

The *Great Mogul's* usual place of residence is at *Agra*, and sometimes at *Dehli*, and *Lahor*, in which cities the king is always guarded by an *Omrab*, with a body of 20000 horse, who incamp about those cities, and this guard is reliev'd every eight days. But when *Aurenge Zeb*, who kept always in the field, was to decamp from any place where he lay with his army, a tent was carry'd before by 120 elephants, 1400 camels, and 400 small carts, to be set up where he was to go, and several thousands of horse and foot went with 70 elephants, to secure the ground to incamp on. Eight other elephants carry'd eight chairs, more like biers, wrought with gold and silver, or gilt wood, and clos'd with cristal. There were three others carry'd by eight men each, in one of which the king went, when he did not mount an elephant, especially if it rain'd, or the way was dusty. All the great men attended him afoot; but when they went out of town, and the journey was long, he us'd to command them to mount a horseback.

Aurenge Zeb got several children. His eldest son (as we said elsewhere) was ^{dren.} *Mabmud*, who following the example of his predecessors, in aiming at the crown before his father his death, proceeded so openly, towards taking away his life, that he thought good to prevent him; and accordingly caus'd him to be poison'd one day, when he went a hunting; and mistrusting he was not really dead, when he was brought to the palace, he cruelly caus'd a red hot iron to be run in from the sole of his foot to his knee.

His child.

Scialam the 2d son, by the death of ^{The 2d.} *Mabmud*, had the right of eldest, and with it, entertain'd the same thoughts the other had done, of destroying his father. To this purpose he once caus'd

a great

GEMELLI 1695. a great trench to be dug near *Aurenge Zeb's* tent, that he might fall into it, as he pass'd by; but he being told of it by an eunuch, escap'd death; and put the wicked *Scialam* into a dark prison, where he continu'd six years, tho' sixty years of age, till a few days before I came into the camp.

The 3d. *Azam-scia*, third son of *Aurenge Zeb*, play'd his part in plotting against his father, with the king of *Vijapor* his kinsman, before he was taken, and lost his kingdom; so natural is it to this race to hate their father. He is now about 55 years of age.

The 4th. The 4th son is call'd *Akbar*, now 45 years of age, more ambitious than all the rest; for being sent by his father in the year 1680, with an army of 30000 men to make war on the *Raja Lionte*, who borders on the kingdom of *Asmire*, belonging to the *Mogul*; instead of subduing him, he suffered himself to be persuaded by that idolater, and by his own ambition, to turn his arms against his own father. Having thus join'd his forces with those of *Raja* against *Aurenge Zeb*, who could never have believ'd it, and making a body of 70000 horse, and a competent number of foot, most of them *Ragipurs*, he came into *Asmire* where his father was. Here whilst he rested his army, much fatigu'd with the long march, the crafty old man having no sufficient force to oppose him, had recourse to stratagem. He therefore sent a confidant of his into the enemies camp, with a letter directed to his son; in which he commended his extraordinary wife conduct in drawing the idolaters to that place, to be all cut off, as had been agreed; and that he would advance the next day and put it in execution. The eunuch had orders to behave himself so, that the enemy growing jealous, might secure him, and intercepting the letter, rely no more on *Akbar*. It fell out accordingly; and tho' he swore upon the *Alcoran*, that it was an invention of his father's to distract them, the chiefs of the *Gentiles* would never believe him. These jealousies kept them so long employ'd, that *Aurenge Zeb*, as he had expected, gain'd time to call his second son to his defence with a powerful army, who being come up, he defeated the *Raja* and *Akbar*. He putting himself, with 4000 horse, under the protection of *Samba*, a *Pagan Roicolet*, *Aurenge Zeb* made war so furiously on the said *Samba*, that he at last took him prisoner, and caused his head to be cut off, for having utter'd some indecent expressions in his

presence. This man's ruin was caus'd by drunkenness; for as he was drinking in his tent with his women-dancers, being told by the advanced guards that the *Mogul's* army was advancing, instead of going to arms, he caus'd their heads to be cut off; saying, they would not dare to come where he was; the same he did by a second centinel. His son, whose head was not full so of wine, sav'd himself with 1000 horse, leaving his father behind, who was carry'd away prisoner, and not long after to his grave.

Akbar escaping this storm, went to *Goa*, where the *Portuguese* furnish'd him with ships to go over to *Ormus*. There he was nobly receiv'd by the *Cham*, and afterwards by order of *Scia-Selem*, then king of *Persia*, attended by many troops of soldiers to the court of *Isfahan*; where he was courteously entertain'd, and had an allowance to maintain him suitable to his quality; as I observ'd in the second part. The old man fearing his son's valour, us'd several arts to draw him out of *Persia*, but with small hopes of success, because *Akbar* was not so weak as to be ensnar'd by his father. Whilst I was at *Isfahan*, some eunuchs told me, they were sent by a certain *Omrab*, who govern'd on the borders of *Candabor*, with a present of several thousand *Roupies* to this prince, which he would not accept, and therefore they were going back with the money. They offer'd to carry me into *India* by land, but I refus'd their kindness. I was afterwards inform'd by others, that this was a contrivance of *Aurenge Zeb*, who had order'd the *Omrabs*, of whom *Akbar* had desir'd to borrow some thousand *Roupies*, to make him a present of them, and to endeavour by fair means to draw him into *India*; which *Akbar* understanding by means of his sister, he refus'd the present. *Aurenge Zeb* took many towns from *Savagi* for having assisted this prince; and continuing the war, had besieg'd him in his court of *Gingi*. The city is seated between seven mountains, each of which has a fort on the top, and can be reliev'd by ways unknown to the *Moguls*, so that they lay before them to no purpose with 30000 horse, and as many foot. I have not heard since I left the country, what was the event of the siege, which had then lasted seven years.

Aurenge Zeb's youngest son is *Sikandar*, now about thirty years of age, and infected like the rest, with the contagious distemper of ambition. Therefore the

old man, tho' after subduing the kings of *Kijapor*, and *Golconda*, he had no enemies left, but *Savagi*, who is inconsiderable in regard of him; yet fearing, with much reason, the perverse inclination of his sons, he had continued in arms in the field for fifteen years; and particularly four years at *Galgala*, after defeating *Akbar*. He said his father *Scia-Geban* had not so much discretion; for he might have learnt by many years experience, that the kings

of *Indostan*, when they grow old, must keep at the head of powerful armies, to defend themselves against their sons. Yet I am of opinion, that notwithstanding all his precautions, he will come to no better an end than his predecessors. All I have hitherto said, concerning the intestine wars between the *Moguls*, was told me and affirm'd by several soldiers in the camp, who had been eye-witnesses, and some gather'd out of creditable authors.

CHAP. V.

Of the Government of the Great Mogul.

Four Secretaries
of State.

FOR the better management of publick affairs, and due administration of justice, the king keeps four secretaries of state, who are to acquaint him with all that happens in the empire, and to receive his orders. The first of them is call'd *Bagici*, and has the charge of warlike affairs, and looks that the soldiers be paid, punish'd, and rewarded, as also that the *Omrabs* keep their full complement of men. The second is call'd *Adelet*, who takes care that justice be administred, both in civil and criminal cases, giving the king an account what ministers behave themselves well, and what ill. The third they call *Divan*, and to him it belongs to divide the *Jagors* or fiefs among the *Omrabs*, *Subas*, and other commanders; and to see they do not oppress the inhabitants of the places committed to them with too heavy impositions. The fourth is known by the name of *Cansamon*; who is a treasurer-general, that causes all the revenues of the empire to be brought into the treasury, and every week, lays before the king what every province is worth, and what it yields, and what money remains in the king's coffers.

Distribution
of the
taxes.

There are particular days appointed for these secretaries to inform the king, because a private audience would not suffice for such multiplicity of business. *Monday* therefore is laid aside for the affairs of *Labor*, *Debli*, and *Agra*; *Tuesday* for *Cabul*; *Wednesday* for the king-

VOL. IV.

doms of *Bengala* and *Patna*; *Thursday* for that of *Guzaratte*; *Saturday* for that of *Brampour*; and *Sunday* for *Decan*; no business being done on *Friday*, because it is the *Mahometan* festival.

Aurenge Zeb, notwithstanding his continual application to these private audiences with his ministers, yet never fail'd of the publick, except on *Fridays*, for the good of the subjects; and this sometimes he did in three several places, one called *Divanxas*, the other *Gofalxana*, and the third *Adelet*.

The *Great Mogul* is so absolute, that there being no written laws, his will in all things is a law, and the last decision of all causes, both civil and criminal. He makes a tyrannical use of this absolute power; for being lord of all the land, the princes themselves have no certain place of aboad, the king altering it at pleasure; and the same with the poor peasants who have sometimes the land they have cultivated taken from them, and that which is untill'd given them in lieu of it; besides that they are oblig'd every year to give the king three parts of the crop. He never admits any body into his presence, empty handed; and sometimes refuses admittance to draw a greater present. For this reason the *Omrabs* and *Nababs* appointed to govern the provinces, oppress the people in the most miserable manner imaginable.

CHAP. VI.

Of the Revenues and Wealth of the Great Mogul.

GEMELLI
1695.
Mogul's
great re-
venue.

AN infinite quantity of *Roupies* are continually flowing into the Great Mogul's exchequer; for besides the usual taxes and excessive imposts, the subjects must pay for their land, which is all his. Besides when a general, or any other person who has receiv'd the king's pay, dies, all his goods fall to the king, without leaving the children so much as a maintenance; a custom *Aurence Zeb* condemn'd, when he spoke of his father, and yet all employments both civil and military, are sold. For this reason no family can continue long, great; but sometimes the son of an *Omrah* goes a begging. Add to all this, that tho' in so vast an empire, there be some barren lands, yet there are some kingdoms wonderful fruitful, as is that of *Bengala*, which exceeds *Egypt*, not only in plenty of rice, corn, sugar, and all other necessaries for the support of humane life; but in the richest commodities, as silk, cotton, indigo, and the like. Besides, the country is so populous, that the handicrafts, tho' naturally given to sloath, are forc'd, either by necessity or choice, to apply themselves to work on carpets, brocades, embroidery, cloth of gold and silver, and all sorts of manufactures in silk and cotton, generally worn there; besides those transported every year, by an infinite number of ships, not only into other parts of *Asia*, but into *Africa* and *Europe*.

Gold and
silver cen-
ters in this
empire.

That the reader may form some idea of the wealth of this empire, he is to observe, that all the gold and silver, which circulates throughout the world, at last centers here. It is well known that as much of it as comes out of *America*, after running through several kingdoms of *Europe*, goes partly into *Turky*, for several sorts of commodities; and part into *Persia*, by the way of *Smirna* for silk. Now the *Turks* not being able to abstain from coffee, which comes

from *Hyeman*, and *Arabia Felix*; nor *Persia*, *Arabia*, and the *Turks* themselves to go without the commodities of *India*, send vast quantities of money to *Mocha* on the *Red Sea*, near *Babel Mandel*; to *Bassora* at the bottom of the *Persian* gulph; and to *Bander Abassi* and *Comevon*, which is afterwards sent over in ships to *Indostan*. Besides the *Indian*, *Dutch*, *English*, and *Portuguese* ships that every year carry the commodities of *Indostan*, to *Pegu*, *Tanasserri*, *Siam*, *Ceylon*, *Acem*, *Macassar*, the *Maldiva* islands, *Mozambique* and other places, must of necessity convey much gold and silver thither, from those countries. All that the *Dutch* fetch from the mines in *Japan*, sooner or later, goes to *Indostan*; and the goods carry'd hence into *Europe*, whether to *France*, *England*, or *Portugal*, are all purchas'd for ready-money, which remains there.

I was told, that the *Mogul* receives from only his hereditary countries, eighty *Carores* of *Roupies* a year (every *Carore* is ten millions) they could give me no certain account what the conquer'd kingdoms yield.

There is an author, not well acquainted with this affair, who reduces this monarch's revenue to thirty three millions. Another on the other side makes it infinite, and that alone which he says is kept in the treasury, seems fabulous. But they that will judge of it, by his expenses, must consider that the *Mogul* has dispers'd throughout his empire 300000 horse, and 400000 foot, who have all great pay. At court the daily expence is 50000 *Roupies*, to maintain the elephants, horses, dogs, hawks, tigers, and deer; as also some hundreds of black and white eunuchs to look to the royal palaces, musicians, and dancers. I am therefore of opinion, that next to the emperor of *China*, no monarch in the world is equal to the Great *Mogul* in strength and riches.

CHAP. VII.

Of the Weapons, and Forces of the Great Mogul.

Weapons
us'd by the
Mogul.

THE arms offensive of the *Moguls* are broad heavy swords, bow'd like scimitars; and those made in the country, being apt to break, the *English* furnish them with such as are made in *Europe*, ill-shap'd daggers, which they always wear hanging to their girdle; bows and arrows, javelins, pistols, muskets; and pikes twelve foot long, for the foot; but most of the soldiers have bows and arrows. They have also cannon in their cities, and armies.

Arms de-
fensive.

Their arms defensive, are a round buckler two foot diameter, made of black hides of wild buffalos; with many nails with large heads to ward off arrows or swords; coats of mail, breast-plates, head-pieces, and covering for their arms down to their wrists.

Soldiers
how
paid.

As for the soldiers pay, the *Mogul* manages it after a different manner than all other princes in the world; for he pays them not himself, but gives the *Omrabs Jaghirs*, that is, tenures of lands to maintain a certain number, as was said elsewhere, and this even to the princes of the blood.

Degrees
of Om-
rabs.

The *Omrabs* are divided into *Hazaris*, *Cubzaris*, *Panges*, *Heebets*, *Deb-Hazaris*, and *Duazdebazaris*, of which last sort the king's eldest son was. Their pay is proportionable to the number of horse they keep; besides which, the king allows them a pension for their own use. But they always cheat the soldiers of part of their pay, and by that means grow vastly rich; especially if they happen to have a good *Jaghir*. Some are oblig'd to keep five hundred horse, and have about five thousand *Neapolitan* crowns revenue a month. 'Tis true they spend all they get in presents they are forc'd to make the king every year, upon certain festivals, every man according to his condition; and in keeping so many women, servants, camels, and horses of great value.

Their
number,
and duty.

The number of *Omrabs* throughout the empire is not settled, but they are generally under forty. They are prefer'd to the greatest governments, and chief posts at court, and in the army; and therefore are, as they themselves say, the pillars of the empire. They appear abroad with noble equipages; some on elephants, others a horseback, or on *Palancines*, attended by a considerable number of horse, and by the guards

of their palaces; as also by abundance of servants, some of whom go before to clear the way, others drive away the flies, or keep off the dust with peacocks tails, others carry water to drink, and other things. All that reside at court, are oblig'd to go twice a day to pay their respects to the king; that is, at ten in the morning, and about sun set, in the place where he administers justice; or else they lose part of their pay. They are also to mount the guard once a week for twenty four hours; and that day the king sends them their meat, which they receive with much respect, doing the *Taslim* three times, that is, an obeisance after their manner towards the royal apartment, laying their right hand on the ground, and then on their head. They are also oblig'd to attend the king at all times, as was said above.

The *Manjebdars* are gentlemen, or horse, who have very honourable pay, and is call'd *Manjeb*, but less than the *Omrabs*. They are much respected in the camp, because they may easily rise to the degree of *Omrabs*, and own no superiour but the king. They differ from the others in this particular, that they are not oblig'd to maintain above four or five horse. As for their pay they have one hundred and fifty *Roupies* a month, and sometimes seven hundred, but instead of having them in ready money, they are forc'd to take the old furniture of the king's house, at excessive rates. There is no fix'd number of them, but they are more than the *Omrabs*; there being two, or three hundred of them very often at court, besides those in the provinces, and armies.

The third degree is of the *Rowzinders*, *Rowzindars*, who are also horse, but paid by the day, as their name imports. Their pay is not inferior to that of the *Manjebdars*, but the post is not so honourable. The number of them is very great, and many of them are clerks and under clerks.

The light horse are subject to the *Omrabs*, and those are counted the best, who have two horses branded with their *Omrab's* mark on the leg. Their pay is not fix'd, and depends on the generosity of the *Omrab*, but they stand the *Mogul* in at least twenty five *Roupies* a month, considering the revenues he assigns for their maintenance.

The

GEMELLI 1695.
The foot.
 The foot and musketers are in a miserable condition, some of them having twenty, some fifteen, and others ten *Roupies* a month. They carry their rest ty'd to the musket, which they make but ill use of, for fear of burning their great beard. The artillery is divided into two sorts, the heavy cannon, and the light, as they call it. The heavy consists of between sixty and seventy guns, without reckoning three hundred field-pieces, fix'd on camels, as pederons are on our backs. The other, fifty or sixty small bras guns, which are the 2d sort, are on carriages, with little red banners, each drawn by two horses; a third being led by, to rest sometimes the one, and sometimes the other. Tho' the heavy cannon cannot always follow the king, who sometimes goes out of the road, to hunt, or take some other diversion, the light always does; and when he is near the place appointed to incamp, it is hir'd, that the army may know he is arriv'd. All this artillery, especially the heavy, is under the direction of *Franks*, or christian gunners, who have extraordinary pay; especially the *Portuguese*, *English*, *Dutch*, *Germans*, and *French*, who go from *Goa*, or run away from aboard ships. Some of them formerly had two hundred *Roupies* a month; but now the *Moguls* have learnt somewhat of the art they have less. There is a general of the artillery whose pay is a million a year, out of which he is to keep two hundred men.

Rajapuri. Besides the *Mogul* soldiers, there are the strangers, hir'd of the *Rajas*, who serve the *Mogul* for very great pay, bringing with them a certain number of *Rajapurs*, and doing the same duty as the *Omrabs* do; but with this difference, that they will not keep guard in forts, but in their own tents, that they may not be

shut up twenty four hours. The *Mogul* keeps them in his pay, as also the *Patens*, because they are men of courage; and there are *Rajas* that can raise twenty thousand horse upon occasion; as also to sow discord and jealousies among them, by favouring one more than another, and by that means be the safer from their contrivances, and from the others who are not in his pay.

The soldiers of the country differ neither in offices nor discipline from that already mention'd, but that they never follow the king; but every kingdom keeps its own to be the frontiers against strangers, as the *Persians*, *Ogans*, *Balucis* and others.

All soldiers whatsoever receive their pay duly every two months from the king's treasurer, except those that are paid by the *Omrabs*, as was said before. Nor is there any danger their pay should be kept from them; for all people here, living either by their industry, or by serving the king (for want of private revenues) if they were not well paid, they must either starve, or mutiny. And to say the truth, the greatest wonder in that country is to see so many thousands live on the king's pay. It is not so in *Europe*, for sometimes soldiers have something of their own; or when they want pay, live upon others.

The number of troops they said the *Mogul* kept when I was there amounted to 300000 horse and 400000 foot. Part of these were in the camp at *Galgala*; 60000 horse and foot at the siege of *Gingi*. The third camp was of 7000 horse and 10000 foot; the fourth of 12000 horse, commanded at *Pernala* by *Azam-Scia's* son the king's grandson, and the rest were distributed about the frontiers and in garrisons.

C H A P. VIII.

The Manners, Habit, Marriages, and Funerals of the Moguls.

The Mogul's birth-day.
 There are two principal festivals kept in the court of the *Great Mogul*, the one call'd *Barfagant*, the other *Tol*. The first is on the king's birth-day, or those of the princes of the blood, because *Bars* in the country language signifies year, and *Gant* a knot, and those people every year make a knot in a cord, they either wear about them or keep at home, to know their age. This solemnity is kept with great pomp, all the great ones coming to with the king many happy years with presents of money and jewels. *Sciab geban* was

mightily pleas'd they should present him with gold vessels set with jewels, to hold sweet waters, which he plac'd in the chamber that serv'd for his leud practices. It was set out with looking glasses adorn'd with precious stones, and all the roof sparkling with diamonds. That day the *Mogul* sits on the famous throne begun by *Tamerlane* and finish'd by *Sciab-geban*. It is all over set with diamonds, emeralds, rubies, pearls and sapphires; especially the pearls on the twelve little pillars, which close the three sides, are beyond all that can be imagin'd.

gin'd. Then the roof of it and all other parts is so orderly enrich'd with jewels of inestimable value, all found within the empire, that some make the value of it to rise to fifty millions, but in reality it is not to be valu'd.

Taver. Voy.
des Indes.
2. c. 8.

The fifth
val call'd
T.

The second festival is that of *Tol*, which in that language signifies weight. Some suppose it to be so call'd because the king weighs himself in a pair of scales, to see whether he is grown fatter; but having ask'd the question in the camp of several credible persons, and particularly of christians born at *Agra* and *Dehli*, who had serv'd there many years, they told me it was a meer romance; for not only *Aurence Zeb*, but none of his predecessors ever weigh'd themselves. 'Tis true this festival is kept in the king's house; but they weigh money, jewels, and other things of value presented by the great men and favourites, which are afterwards distributed among the poor with great solemnity. It is done some days after the *Barfagant*, either sooner, or later, as the king thinks fit.

Descripti-
on of the
Festivals.

The *Indians* are well shap'd, it being rare to find any of them crooked, and for stature like the *Europeans*. They have black hair, but not curl'd, and their skin is of an olive-colour; and they do not love white, saying it is the colour of leprosie. They wash often, anointing themselves after it with rich oils and ointments. They live in low houses, with trees about them, so that their cities at a distance look like woods. There are no inns for travellers among them as was said at first; but in the cities and great towns they have some places call'd *Sarays*, where strangers may have houseroom. They use carts to travel in (which are shut when there are women in them) drawn by oxen, and asses when the journey is short. The great men, and those that are well to pass are carry'd upon elephants, or in *Palanquines*. There is none of them but endeavours the best he can to go to *Mecca*, to become a *Hagi* or saint. They delight very much in hunting, and make use of dogs and tame leopards. They take water-fowl after this manner. They go into the water up to the chin, covering their faces with birds of the same sort they would take, artificially made; then the bird coming near his likeness they draw him down by the legs and stifle him. The *Chinese* and *Mexicans* do the same, as shall be said in its place. Being excellent archers they shoot birds flying, with arrows.

Vol. IV.

The *Mahometans* of *Indostan*, tho' barbarous in other respects, are not so deceitful, so proud, or such enemies to christians, as the *Turks*; and a christian may therefore keep them company with safety. The *Pagans* are still more just to travellers. As for courage, neither *Mahometans* nor *Gentiles* have much of it. The best of them are the *Baluccis* borderers on *Persia*, the *Patans* of the kingdom of *Bengala*, and the *Rasbootis* very great thieves.

The languages spoken at court are the *Arabian* and the *Persian*. As for sciences they can make no progress in them for want of books; for they have none but some small manuscript works of *Aristotle* and *Avicenna* in *Arabick*. They hold astrology in great account, inasmuch that the king undertakes nothing without the advice of his astrologers. In physick they have but small skill, and cure several diseases by fasting. They also delight in musick, for which they have several sorts of Instruments.

They spend all they have in luxury, keeping a vast number of servants, but above all of concubines. These being many, every one of them strives to be lov'd above the rest, using all manner of allurements, perfumes and sweet ointments. Sometimes, to heighten their masters lusts, they give him compositions of pearl, gold, opium and amber; or else much wine, that he may require company in bed. Then some drive away the flies, others rub his hands and feet, others dance, others play on musick, and others do other things; and hence it is that for the most part they take the lawful wives place; who sitting near her husband modestly, winks at this affront, till she has an opportunity to revenge herself. These women are committed to the custody of eunuchs, but it is delivering up the sheep to the wolves; so lascivious are the women: And yet they are excusable, because the husbands, tho' they be peasants, lie apart from their wives, and only call them when they have occasion.

The great men have noble structures, with several courts, and the tops of the houses flat, to take the air, and fountains with carpets about them to sit and receive visits from their friends. Inferiors salute laying their hand on their head, but equals only bow their body. In their discourse they are modest and civil; not using so many actions with their hands, nor talking so loud as some *Europeans* do. The table is spread on the ground without napkins or table-

Upp cloth;

Their dis-
position.

Language
and learn-
ing.

GEMELLI cloth; nor do they drink till they have done eating. Their greatest delight is to chew *Belle* all day.

Habit.

The vests both of men and women are narrow towards the waist, and hang down half way the leg; under them they wear long breeches down to their ankles, so that they serve for stockings. The foot remains bare, with a sort of flat shoes, like our slippers; which are easily slipped off when they go into rooms, to keep them clean, they being cover'd with carpets. They wrap a very fine piece of muslin or calico about their head, and never uncover it to do reverence to superiors, but bow their body, putting their right hand on the ground and then on the head, as if they said they submitted themselves to be trampled on by them. They generally wear the vest and turban of cotton, but the sash is of silk and gold.

Women.

The *Mabometan* women do not appear in publick, except only the vulgar sort, and the leud ones. They cover their heads, but the hair hangs down behind in several tresses. Many of them bore their noses to wear a gold ring set with stones.

Marriages.

The *Mabometan* Indians marry very young, but the idolaters at all ages. These last may not have several wives at once like the *Mabometans*; but when the first is dead may take another, provided she be a maid, and of the same race, or tribe. The ceremony is thus, If they be persons of quality they make the cavalcade at night with lights, abundance of people go before making a displeasing concert with several instruments, as pipes, kettle-drums, drums as long as a barrel, and copper-plates, which they beat. Then follow abundance of children a horseback, next to whom comes the bridegroom, well clad and mounted, with several *Banians* about him, with their vests and *Civas* dy'd in *Zafran*, and other persons carrying umbrellas, and banners; and having taken a round about the city goes to the bride's house. Here a *Brachman* having said some prayers over them both, puts a cloth between the husband and wife, and orders the husband with his bare foot to touch the wives, and then the wife the husbands, which done the marriage is concluded. When the woman is carry'd home, the goods go before, being for the most part stuffs of several colours, and a cradle for the child that is to be got; all this with the noise of several instruments. Rich people make a hut before their houses, cover'd both inside and outside with stuffs and carpets, to entertain their guests un-

der shelter. Sometimes they treat them for eight days together.

All the women are fruitful, which is caus'd by the air and provisions, and are to easily deliver'd, that some of them go wash in the river the same day. They bring up their children naked till seven years of age, nor do they take much care to teach them to go, but let them tumble about the ground as much as they will, as soon as they are born.

In *Malabar* the women (even those that are of quality and kings sisters) have the liberty to choose a man to lye with them. When a *Naire* or *Gentile* is in a ladies chamber, he leaves his staff or his sword at the door, that others who would go in may see the place is taken up; and no man has the boldness to disturb him. Thus there being no possibility of knowing who is the father of the child that is born into the world, the succession is order'd after another manner; that is, when one dies his sister's children inherit, because there can be no doubt made of the kindred.

When a man or woman has committed such a crime as to be expell'd their tribe; as if a woman had lain with a *Mabometan*, the mult live for a certain time only upon corn found in the cows dung, if she will be receiv'd again.

As to the manner of burying, the most usual is to wash the body first in a river, or pool; then burn it in a neighbouring *Pagod*, and throw the ashes into the same water. In some places they leave them by the river side. The manner of carrying them is also different, according to the fashions of each country. In some the body well clad, and sitting, is carry'd with drums beating, and a long train of kindred and friends; and after being wash'd, is encompass'd with wood. The wife who has been that while near the body singing, and expressing a desire to die, is afterwards bound by a *Brachman* near the dead body and burnt with it; the friends pouring oil on them that they might consume the faster.

In other places the bodies are carry'd cover'd on a bier to the river side; and after they have been wash'd they are put into a hut full of sweet wood, if the dead person has left money to defray the charge; then the woman that is to be burnt, takes leave of her kindred and friends, showing a contempt of death, and sits down in the hut, bearing up her husband on her knees. Then recommending herself to the prayers of the *Brachmans*, desires them to set fire speedily. A barbarous inhumanity! And yet

yet they make a scruple of killing flies and pismires.

In other places they fill wide deep trenches with combustible matter, where laying the husband's body, the *Brachmans* cast in the woman, after they have sung and danc'd. Sometimes there are maiden slaves, that throw themselves in after their master to show the love they bear him, then the ashes are cast into the river.

There are other places where they bury the husband's bodies with the legs across; they put the woman into the same grave, and when they have cover'd them up to the neck, the *Brachmans* come and strangle her. Those wretched women that refuse to be burnt, are to shave their heads, and remain widows all their lives; are despis'd by their family and tribe, because they have fear'd death, and can never recover their reputation, whatsoever good actions they do, unless some young woman of singular beauty should happen to get a second husband. Yet there are some that transgress the laws of widowhood; and because their kindred expel them, they have recourse to the *Mahometans* or christians, forsaking their own religion. In short, the

Gentiles make the widows honour consist in being burnt with the bodies of their husbands, and if they be ask'd the reason, they can alledge none but antient custom.

Since the *Mahometans* are become sovereigns of *India*, they do not easily consent to this inhumanity, which the *Brachmans* would have held up for their own interest; for as was said above, they who alone may touch the ashes, carry off all the gold and silver the wretched woman had about her. The *Great Mogul* and other princes have commanded the governors of their towns to hinder the practice of this abuse, but they do not so strictly observe it, provided they have considerable presents made them, and thus the difficulty they find in getting the leave, saves many women the dishonour.

The mourning us'd by the *Gentiles* is Mourn- shaving their beard and head, when any kindred within the third degree die. The women break their glass and ivory bracelets they wear on their arms, as they also do at their king's death. Having before spoke of the *Mahometan* ceremonies it is needless to repeat it in this place.

CHAP. IX.

Of the Climate, Fruit, Flowers, Minerals, Beasts and Coin, of Indostan.

HENTS and seasons. *Generally* throughout all *Indostan* the heat is excessive, except near the mountains. We *Europeans* fare ill there because of the seasons differing from ours; because their winter begins in *June* and ends in *September*; tho' there falls less rain at *Goa*. Before, and after winter, there are dreadful storms and hurricanes, three months from the north and three from the south, so that there is no sailing about *India* but six months in the year.

Clear air. Between *Suratte* and *Agra* the metropolis of the *Mogul's* dominions, it only rains at one certain time of the year, that is, during those three months the sun is about the tropick of *Cancer*; the other nine months the sky is so clear, that there is scarce a cloud to be seen above the *Horizon*.

Product. Having spoke of the fruit when I was at *Goa*, there is no need of adding any more. *Indostan* abounds in rice, excellent wheat, and all sorts of grain, vast flocks and herds of cattle, butter and cheese. There being no grapes, the wine is brought out of *Arabia* and *Persia*; or is made in the country of *Rajfins*, which being also brought from

abroad, they steep and boil in water. The common drink of the country is distill'd *Sura*, but not very wholsome.

The flowers are very fragrant, and much better colour'd than any in *Europe*, and herbs. There are many simples, which they carry into *Europe* for physickal uses, which I do not describe, because I will not treat of what others have given an account of.

As for metals the *Mogul's* country affords none but copper, iron, and lead, but the want of others is abundantly made amends for by the rich mines of diamonds and other precious stones. The Diamond is that in the kingdom of *Golconda*, seven days journey east of *Agra*, which the natives call *Gani*, and the *Persians* *Cular*. It is in a plain five miles in compass, between a village and some mountains, which produce nothing at all. They say it was discover'd one hundred and forty years since, after this manner. A peasant sowing in that plain, found such a rich diamond, that tho' he did not understand those things, yet he would carry it to a merchant of *Golconda* who delighted in them. The news was immediately spread about the city, and every one

GISELLI
1695.

Gambeli
1695. one that had money digging in that place, there were stones found from twelve to forty carats; and particularly that great diamond of some hundred carats, which *Emir Gemla*, the king of *Golconda's* general gave *Aurange Zeb* when he came into his service. Afterwards the king took the mine to himself, and now the merchants buy it of him by spans.

How the
diamonds
are found.

The manner of digging the stones is this. First they enclose a spot of ground much bigger than that they buy to dig, with a little wall two spans high; then they dig the ground mark'd out by the king's officers twelve or fourteen spans down to the water, below which there is no hopes of any diamonds, and carry the earth into the aforesaid enclosure in great baskets. When it is all together they fill the place full of water, and leave it so till it is all mud. Then they add more water, and opening the holes, which are at every step in the wall, the mud runs out, and the gravel remains; which is again cover'd with water, if it be not clean. When dry they put it into baskets for the sand to drop through, and then putting it into the same place they beat it with long staves. Then they take it up again and sifting it, they spread it and pick out the diamonds in the presence of the buyer, and of the officers, who take those that are above a certain weight for the king.

Diamonds
in Borneo.

There are diamond-mines at a place call'd *Raolconda*, in the province of *Carnafica*, in the kingdom of *Vijapour*, but they do not work at them. The king of *Succadan* in the island of *Borneo* has some better, but there are few of them, and they are found in the sand of the river *Succadan*.

Other
diamonds.

Besides the birds and beasts *Europe* affords, *India* has others peculiar to it; as for instance the *Gazellers*, of which we have spoke in the two precedent volumes; they have horns a span and a half long, and twisted or spiral. To take them they make use of the tame leopard, or of the male *Gazelle*, thus. They tie him with a rope wound about under his belly; and when they see a flock of *Gazelles* let him go among them. The male that is in the flock, being jealous, comes out to attack him, and his horns being spiral or winding does so intangle himself, that not being able to retire when he would, the hunters have time to take him.

Other
beasts.

There are also wild cows and other wild beasts we spoke of when we gave

an account of the game at *Damam*, camels, dromedaries, rhinocero's, as tall as a large ox, and elephants. There are several ways of taking these; sometimes they dig trenches and cover them, into which when they fall they cannot get out. In other places they carry a female into the woods, just at the time when she is in her lust; at her cries the wild male comes, and couples with her contrary to other beasts, belly to belly, in the narrow place where she was leit. When the male would be gone, he finds the way stopp'd up, and the hunters at a distance, throw over him great and small ropes; so that his trunk and legs being secur'd, they can come near without danger. However they lead him away between two tame elephants, and beat him if he makes a noise. Afterwards he grows tame among the rest of his kind; and then he that has them in charge, teaches him to salute friends with his trunk, to threaten, or strike whom he pleases, and to kill a man condemn'd to that sort of death, with an iron fix'd at the end of a pole, and then the manager fits upon his neck. It is of it self a very tractable creature, when it is not enrag'd or in lust; for then he that rules it is in danger. They quiet him with artificial fire-works, or directing him into a river, where, tho' so large, he swims extraordinary well. The she-elephants carry their young twelve months; they live one hundred years; and carry about three thousand two hundred pounds weight *Spanish*. Those of *Ceylon* tho' smaller, are the most valu'd of any in *India*, because they have more courage, and as the *Indians* imagine, are respected by the others. But those of *Golconda*, *Cochinchina*, *Siam*, and the island *Sumatra* are stronger, and more surefooted on the mountains. It is dear keeping of them; for besides the flesh, they eat paste made of meal with sugar-canes, and other things, they give them *Aquavite* to drink.

There are also stags, lions, tygers, and leopards, which they hunt with good dogs, and several creatures not to be found in *Europe*, of which mention was made among the game of *Damam*.

I must not omit here to give an account of the musk wild-goat found in the country of *Azmer*. Its snout is like a goat, the hair like a stag, and its teeth like a dog. Under the belly it has a little bladder, as big as an egg, full of a thick congeal'd blood, which being cut off, is ty'd up in skin, that the scent may not evaporate. After which the

the beast lives but a short time. They are also taken on the cold mountains of the kingdom of *Butan*, in the latitude of 56 and 60 degrees, but the greatest quantity and the best comes out of the country of the *Tartars* bordering on *China*, where they make a great trade of it. The scent is so strong, that having bought a little at *Peking*, it was smelt at a great distance, as if my portmanteau had been full of it, which caus'd some dispute with the customers. They so adulterate it, mixing it with other blood, that when it comes into *Europe*, it is not a quarter musk.

Foul.

As for foul, there are all in *India* that *Europe* affords, and many peculiar to the country. In the woods there are abundance of peacocks, several sorts of parrots and green pigeons. There are most beautiful birds, to be kept in cages, both sightly for their feathers, and pleasant for singing sweetly. I saw some half as big as wheat-ears, all spotted like a tyger. Besides the wild hens, there is a sort of tame ones, whose skin and bones are very black, but they are well tasted.

Coin.

The money coin'd in *Indostan* is, *Roupies*, half *Roupies*, and quarter *Roupies* of silver; as also *Roupies* of gold, worth

Vol. IV.

thirteen silver *Roupies* and a quarter, ^{GRANELLI} or six pieces of eight, ^{1695.} *Spanish* money, half *Roupies*, and quarters. On both sorts there are *Persian* characters with the name of the city where it is coin'd, and the king's name on the reverse. There are also copper pieces, call'd *Pesies*, fifty four whereof make a *Roupie* of silver. The *Rajas*, or pagan petty kings, in their dominions coin gold pieces call'd *Pagods*, because they have a little *Pagod* stamp'd on them, and these are worth a zecchine of *Venice*. Both the gold and silver, are much finer than the gold of the *Spanish* pistoles, and silver of their pieces of eight. Foreign coin is also current in the *Mogul's* country; as zecchines, by which there is much got, pieces of eight, *Abassis* of *Persia*, and other sorts; but more particularly in the ports, and places of trade.

They reckon by *Leckes*, each worth one hundred thousand *Roupies*; *Crous* or *Crorores*, which are one hundred *Leckes*; and *Arbs*, that are ten *Crous*. The *Batman*, and *Min*, are weights of fifty five pounds. Another smaller weight is call'd *Goer* or *Keer*, but they sometimes change according to the prince's will.

A Voyage round the World by Dr. John Francis Gemelli Careri. Part III.

Containing the most Remarkable Things he saw in
INDOSTAN.

BOOK III.

CHAP. I.

Of the several Religions in Indostan.

GEMELLI
1695.

THis vast empire, besides the natives, is inhabited by *Persians, Tartars, Abyssinians, Armenians, Jews, Christians, Mahometans*, and others; but the most universal religions are the *Mahometan*, and the *Pagan*; for the first is profess'd by the *Mogul*, and the other by the ancient lords and people of the country. Having discours'd fully of the *Mahometan* in the first volume, and these emperors being of the *Turkish* sect, it only remains to give a short account in this chapter of the *Pagan*. All the *Gentiles* in *India* hold the transmigration of souls, like the *Pythagoreans*, by which means, in their opinion, the souls after death receive the reward or punishment of their good or evil actions, being put into good or bad creatures. And therefore they pay singular honour to the cow, by the advice of *Ramak* their legislator, as being creatures that, besides the good they do to men, shall receive the souls of good men. By reason of this same opinion, they take special care of all other creatures; not only forbearing to eat them, but using all means to prevent others killing them; and as was said before, in some cities they have hospitals, where they are at a vast expence in looking after sick creatures.

Tho' they all profess one religion, yet they are divided into eighty four sects, or tribes; each of which has its particular rites and ceremonies; and some peculiar profession or trade, which their children never leave, without they would be for ever reputed infamous; as I was told by a *Brachman*, I sent for on purpose to be inform'd in what relates to them.

The first and principal tribe is that of the *Brachmans*, who are professors of learning, and priests of their religion,

which is divided into ten several sects. The first five feed on herbs, and grain, without ever eating any thing that has life; and are call'd, the first *Maratas*, the second *Telanga*, the third *Canara*, the fourth *Drovaras*, and the fifth *Guzaratti*; the four first eat in one another's houses, but not in those of the *Guzarattes*. The other five sects eat of all living creatures, except fish; and are call'd *Gauri*, *Canogia*, *Triatori*, which are the *Brachmans* of *Goa*, *Gagavali*, and *Pongaput*, none of which eat in the house of another.

In these ten sects, or orders of *Brachmans*, no man may marry out of his own tribe. In the cross line, in which only they may take wives, the prohibition reaches to the seventh degree of consanguinity, or affinity; but the daughter of a brother may marry the son of a sister, that is, her cousin; yet not the contrary, that is, the son of the brother with the daughter of the sister, that the same blood may not come into the family. The *Guzarattis* are not subject to this law.

All these ten tribes of *Brachmans* converse with one another; but if one comes that is not wash'd, he may not touch any body, lest he defile them; it being a precept among them to wash their body morning, noon and night. Their widows do not marry again, and if they will burn themselves with their husbands body, they gain much reputation; such as will not, are look'd upon as cowardly, and infamous.

The second tribe is that of the *Rajapours*, or princes descended from warlike men. These only eat in the house of their own tribe, or in those of the *Brachmans*, in which all the others

may eat, each according to its quality. The wives of *Rajapours* cannot avoid being burn'd with their husbands, if they have no male issue; and if they refuse, are carry'd by force. Tho' other tribes are allow'd but one wife; the *Rajapours*, as being free princes may have as many as they please. Some of these *Rajapours* border on the lands of *Goa*, for besides *Savagi*, there is *Chiotia*, near *Damam*; and *Grafia*, not far from *Suratte*, both robbers, living among mountains, like beasts. The king of *Portugal* allows *Chiotia* thirty thousand *Mamudis*, which make five thousand five hundred ducats of *Naples*, and the *Mogul* gives the other a like sum out of the neighbourhood of *Suratte*, that they may not rob, but defend travellers against thieves. The king *Penti*, near *Bazaim*, might more properly be call'd king of the woods, he living in them, like an out-law. There is some difference of sects among the *Rajapours*; but they all agree in eating fish, except beef, and tame swine.

The third tribe of *Banians* is divided into twenty sects, none of which marries into the other. They eat nothing that has life, but only herbs and pulse. Almost all these are merchants; and being bred up to it from their infancy, they are much greater cheats than the *Armenians* and *Jews*.

There are two tribes of *Paravous*, the one call'd *Paicara*, the other— [Here the Author wants the Name of the Second] These eat all sorts of flesh, but beef; one of them neither eats with, nor marries into the other; and their wives when the husband dies may marry again.

There are also two tribes of *Sutars*, or timber-men; the one call'd *Concanas*, the other *Guzarattis*. The first eat all sorts of flesh, except beef; the others only fish. They do not marry out of their own tribe, nor do they eat with one another, and the widows marry.

The *Canfars*, or brafiers, are also divided into *Concanas*, and *Guzarattis*, differing even in their trade in some measure, and eat all flesh, except beef. But they do not intermix in marriages, or eat together, and the widows marry again.

The *Gaulis*, who sell milk, and are herdsmen, are another tribe, that eats every thing but beef, and tame swines flesh. Their widows marry again.

The *Malis*, or sellers of flowers, are another tribe, that eat all things with the same exception as the last, and their widows marry again without any dishonour.

The *Sonars*, or goldsmiths, are divided into *Concanas*, and *Guzarattis*, and observe the same as the brafiers.

There is another tribe of *Valuoris*, or gardeners, who eat all flesh, but beef and pork. They neither eat with, nor marry into another tribe; their widows marry again.

The *Columbines*, or peasants make up another tribe. They eat flesh with the same exception, and are divided into *Chodris*, *Matares*, *Pateis*, *Routas*, *Naicbis*, *Morias*, *Gorels*, who go a horseback when they are to be marry'd, and *Doblas*, great wizards, inhabiting the woods, where they eat rats, lizards, snakes, moles, and all sorts of vermin, tho' never so stinking. Their women go naked, only covering their privities with a leaf. These, and other tribes of labouring people do not intermix in marriages, but may eat together, and the women marry again.

The *Batala's* are also country people, who wear a line like the *Brachmans*, being one made up of three, which seems to signify the unity of God in three persons. They eat nothing that has life, but herbs; nor do they marry into other tribes. The widows do not marry again.

The *Bandarines*, who prune the palm, or cocoa-trees, and draw the *Sura* from it, are divided into *Rautis*, *Chodris*, *Sbiadas*, *Kitas*, *Cbaradas*, and other sorts which do not marry into one another; but eat together, and of all sorts of flesh, except beef, and tame swine. The widows marry again.

The *Doblis*, or walwers of linnen, are divided into *Concana's*, and *Guzarattis*. They eat together, but marry each in their own tribe, and eat any flesh but beef and pork. The widows marry again.

The fisher-men are divided into many races, or tribes, call'd *Coles*, *Mavis*, *Purubias*, *Vaitis*, and *Birmassis*. They eat in one another's houses, of all flesh with the usual exception, and the widows marry again.

The *Sotrias* make two distinct tribes, the one call'd *Salunkis*, the other *Coles*. They neither eat nor marry together. They eat flesh like the rest, and their widows marry again. When the elder brother dies, the younger takes his wife; but if the younger dies, the elder does not so.

Those that carry salt, are call'd *Chabaranas*, and make several tribes. They take wives out of any of them, eat flesh as above, and their widows have the liberty to marry again.

The *Bangafalis*, or salt merchants eat all living creatures except beef, twines-flesh, crabs, lobsters, crevisses, and all shell-fish. They do not marry

1695. have second husbands.

Gantias. The tribe of *Gantias*, who are all traders; eat nothing but fish. Neither marry into, nor eat with another tribe; so that for want of another, a poor man sometimes gets a wife with fifty thousand crowns.

Babrias. In *Suratte* there are *Babrias*, *Catis*, and *Rajapours*, who eat only fish, and wild-flesh. They eat together, but do not marry out of their tribes. Their wives do not marry again, but burn themselves, if they will.

Farajis. The *Farajis*, make sandals like those of the *Recolets*. Eat any sort of flesh, tho' rotten, eat together, and intermix in marriages, without any prohibition; but their tribe being reputed very vile, they are not allow'd to enter the houses of other *Gentiles*, or touch them; and must keep at a great distance.

In the country of the *Naines* of cape *Comori*, they are call'd *Polias*, and as they go along the streets, if they will not venture to be beaten, must cry *Po, Po*, that the other *Gentiles* may take care their very shadow does not touch them, which would defile them, and they would be forc'd to wash.

This custom makes the *Jesuits* that are missionaries there lead a very uneasy life; for being oblig'd to imitate the ways of that tribe, the better to ingratiate themselves with those barbarians, they are forc'd to wash themselves as many times a day as the others do; to feed upon raw herbs; and when two fathers meet in the street, one acting the *Naines*, and the other the *Polias*, they keep at a distance from one another, that they may not be suspected. There is no doubt they convert very many; but abundance of them not being us'd to that hardship, fall into dangerous distempers.

Of all the tribes here mention'd, only the *Brachmans* and *Banians* are so precise about killing of all creatures; that even those that are venomous may bite them without receiving any harm from them; but the others in this case kill them.

Ram a deity.

These *Gentiles* are so blinded with profound superstition, that they do not think it inconsistent to make their gods be born of men, and assign them women; believing they love the same

The *Jogis* are people of all tribes, *Jogis*, who have impos'd on themselves a most painful sort of penitent life. Besides being continually naked, some of them hold up their arms in the air, without ever letting them down; others hold them behind, till in time they cannot move them. Some hang themselves up with ropes; others close their mouths with padlocks, so that they must be fed with liquids; others run an iron-rod through their prepuce, and hang a little bell to it; which, when the silly barren women hear, they run to see, and touch him, hoping by that means to become fruitful.

The *Gentiles* pay so great a respect to these penitents, that they think themselves happy, who can prostitute daughters, sisters, or kind-women to their lewdness, which they believe lawful in them; and for this reason there are so many thousands of vagabond *Fakirs* throughout *India*. When the *Fakirs* meet with *Beragbis* (which is another sort of penitents, differently habited, with their hair and beard shav'd) they fight desperately. They never marry, and eat in the houses of all sects, except the *Polias*. They go into the kitchen, and take what they will, tho' the master be not at home. They come together like swine by beat of a tabor, or at the blowing of a horn, and march in companies with banners, lances, and other weapons, which, when they rest, they lay down by their master. They boast they are descended from *Revanche-Ram*, who wandered about the world poor and naked; and these vagabonds for imitating him, are look'd upon as saints, and live a loose life, with the privilege of committing any crime their brutality suggests.

Now considering so great a number of sects, and such variety of manners, which makes it impracticable for them to be unanimous in government, it is not to be thought strange that so small a number of *Mahometans* should subdue such a multitude of *Gentiles*; since divisions and discord have ever been the most efficient causes in the world to overthrow the greatest monarchies.

CHAP. II.

Of the Opinions and Superstitions of the Idolaters.

These men delight in. They esteem *Ram* a mighty deity, on account of the wonders he wrought whilst living, by means of a monkey, which crossing the sea at one leap, burnt *Rbevan's* palace, and

and leap'd back again, to which pur-
pose they tell a long and tedious fable.
Among the goddesses they count *Ma-
lachi*, who they say never refus'd any
body that ask'd it, the use of her body;
as if she had perform'd some extraordi-
nary pittance; and so a man call'd *Cun-
funs*, because whilst he liv'd he enjoy'd
sixteen thousand women.

Some of them believe there are *Eli-
sian* fields, and that in order to come
thither, a river is to be pass'd, like the
Styx of the antients, where they are
to receive new bodies. Others are of
opinion the world will end very soon,
after which they shall live again, and
go into a new country. They all believe
there is but one God, who has a thou-
sand arms, and a thousand eyes, and as
many feet; not knowing any better way
how to explain the thoughts of his om-
nipotency. They say they have four books
sent them by God, above six thousand
years since, through the hands of their
prophet *Ram*; two of which books are
shut, and two open; but that they can
only be read by those of their religion.
Besides, that there are seven heavens, in
the highest of which God sits; and that
he does not take notice of the particu-
lar actions of men, because they are
not worthy to be the object of his di-
vine thoughts. They also say there is
a place where he may be seen, as it were
through a far distant cloud. As for evil
spirits they believe they are so chain'd up,
that they can do them no harm.

They talk of a man call'd *Adam*, who
was the first and common father, and
they say that his wife, having yielded to
the temptation of eating of the forbid-
den fruit, made her husband eat too;
but that as the mouthful he took was
going down, the hand of God stopp'd
its passing further, and thence comes the
knot men have in their throat, which
they therefore call *Adam's* apple.

The priesthood among them is here-
ditary, as it was formerly among the
Jews; for, as was said before, when a
Brachman marries, he must take the
daughter of another *Brachman*. They
are distinguishable from all other *Gen-
tiles*, by a string or rope made of three
threads of new cotton, which they wear
hanging about their neck, and wound
about the left arm. It is put upon boys
of nine, or ten years of age with great
solemnity, but never upon girls. This
string or line is to signify the unity of
God in three persons, which they call
Brama, *Vishu*, and *Mayessu*. They will
never eat a bit without they have it on;
and some of them have been known to

fast several days, because their rope
broke before they could get another
of the priests.

When any one is to be expell'd the
tribe of the *Brachmans*, *Banians*, or *Ban-
gasclines*, for some heinous crime, they
take away his line thus. All that are of
the tribe in that place meet before the
Boto, or priest, and accuse the criminal
of such a crime. He replies, and if his
defence be not good, the *Boto* takes away
his line, wipes off the *Tilla*, or colour on
his forehead. Then all the company falls
to chewing of *Betele*, eating of cocoa-
nuts, and smoking tobacco, without
giving the criminal any; only out of
pity they throw him down on the ground
a leaf of tobacco.

If he desires to be again admitted into
the tribe, he must go from house to
house, begging pardon and absolution
of those that voted, making them sen-
sible of his resignation, and soothing
the *Boto* with the present of a cow.
This done, he gives all the tribe a
treat, who receive him again, and the
priest gives him the line and *Tilla*.

All the sects of *Gentiles* on this side
Ganges, are very scrupulous as to eating
with christians, and *Mabometans*, or ma-
king use of the same utensils. But those
beyond *Malaca* make no difficulty of it.

They are so silly, or ignorant as to
conceive a woman may conceive by strength
of imagination; and that tho' they are
many thousand miles distant, and that
for several years, yet their wives ima-
gining they lie with them, may become
with child, and therefore when they hear
of their being brought to bed, they
make great rejoicing.

To this purpose, father *Galli*, prefect
of the *Theatins* of Goa, told me a plea-
sant story. *D. Francis de Tavora*, earl
of *Alvor*, arriving from Portugal, to be
vice-roy of India; news was brought
that his wife, whom he left big with
child, was deliver'd of a son. Among
the rest a *Pagan* merchant went to con-
gratulate him, and thinking to make the
vice-roy a great complement said, *I
wish your Excellency Joy, and hope you
will have News every year of the Birth of
a Son*. This would have put him in a
passion, had not some told him that the
idolaters held that preposterous opinion.
The women are happy, that can take
their liberty, and make their silly hus-
bands believe they conceiv'd by thinking
on them.

When an idolater is dying, his kin-
dred place a cow near the bed, and
shake her tail till the pisses; if it rea-
ches the dying man's face, it is look'd
upon

Gentiles upon as a good token of his future state; otherwise, but particularly if the beast does not piss, the obsequies are perform'd in a very melancholy manner. Besides, they put the cow's tail into the dying man's hand, thinking his soul may go into her body. In short, they believe every man may be sav'd in his religion, and his sect, so he exactly observe God's commandments, and the light of reason; which judgment, tho' false, some divines would follow, were it not condemn'd by the church.

Trial of theft.

The trial upon suspicion of theft among them, is by making the party swim over a river that is full of crocodils, and if he gets over safe, he is reputed not guilty. The *Naires* call this the passage of crocodils.

Naires sorcerers.

These *Naires* are great wizards, nor do they ever expose themselves to any heats of arms, without first consulting the devil. To this purpose they let their hair fly, and draw some blood out of their forehead with a knife; then dancing to the musick of a drum, they call him aloud, and he comes to advise them whether they had best engage their enemy. But when the enemy repents he gave the challenge, and makes a sign to beg peace, they easily grant it.

Women in common.

Their women are in common. When any of them is with her, he leaves his sword and buckler at the door, that every body may know the place is taken up; and therefore there being no certainty whose the children are, they alter the

manner of inheritance, as was said before. But if the women are found to have to do with men of another sect, they become slaves to their queen of *Canara*. When a brother marries, his wife is common to the rest.

By a privilege granted them by their queen, they accompany travellers through those parts that are infested with robbers, and if they happen to presume to rob any man, they all meet, and pursue the felons till they utterly extirpate them. Thus one boy with a rod in his hand makes it safe travelling 't rough-out all *Canara*, tho' it be through woods, and over mountains; and a traveller for a small matter may have one from one village to another.

The superstition of all the *Gentiles* in *India*, makes them murderers of their own children; for it is their custom when the infant will not suck, to carry it into the field; and there they leave it from morning till night, in a cloath ty'd up on high by the four corners, that the crows may peck its eyes out, and this is the reason why there are so many blind in *Bengala*. Where there are monkeys, the danger is not so great, because they being enemies to the crows throw all their eggs down from the trees, and hinder their multiplying. At night the infant is carry'd home, and if he will not suck is expos'd a second, and third time in the field, and at last hated as if it were some snake, or adder, and cast into the river.

CHAP. III.

Of several Pagods of the Gentiles.

Variety of idols. IN all the temples or *Pagods* of these idolaters, which for the most part are round, there are figures of devils, serpents, monkeys, and several monsters hideous to behold. In the villages, where there are not carvers to cut them, they take a stone shap'd like a cylinder, or small pillar, colour'd black, and placing it on a column, adore it instead of an idol, offering to it sacrifice of *Betele*, *Arecca*, and other things; as I observ'd in travelling over dismal mountains, where the country people had made choice, some of a stone, others of a tree, and some of an herb for their idol.

First great place of pilgrimage.

The chief *Pagods*, to which they go in pilgrimage are four; *Giagane*, *Benarus*, *Matara* and *Tripeti*. That of *Giagane*, is upon one of the mouths of the river *Ganges*, where the great *Brach-*

man or high-priest resides. There they adore the great idol *Kesara*, adorn'd with many jewels. Its revenues maintain all that vast multitude of pilgrims that resort thither, on account of the conveniency of the river *Ganges*, walking in whose water they think cleanses them from sin more than any other.

The *Pagod* of *Benarus* is built on the bank of *Ganges*, in the city of the same name, and there is a stair-case from the door of it down to that river, to wash or drink. The vagabond *Fakirs* carry on their backs vessels full of this water stopp'd and seal'd by the great *Brachman*, to prevent all frauds, for several hundreds of miles, to be well paid for it by rich people and merchants: they present it to. At weddings they spend the value of five hundred crowns of it, or more, it being the custom to give

a glass or two of it about after dinner; which they drink with as great a gusto, as we should do some rich muscadine, or hippocras. The idol is call'd *Bainmadu*, held in much honour by the *Gentiles*, that as soon as the *Pagod* is open'd, the *Brachmans* fall flat on their faces; and some with vast great fans go to drive the flies from about the idol. A *Brachman* marks the forehead of all the pilgrims with a yellow liquor. No women may go into it, but only those of one certain tribe. There is another *Pagod* near it call'd *Riscurdas*, from the name of the idol adorn'd there.

Third pil-
grimage. The *Pagod* of *Matura* is thirty five miles from *Agra*, on the road to *Debli*.

Within it is a place hemm'd in with marble bannisters, with the idol *Ram* in the middle, and two others by him; and both within and without abundance of monsters, some with four arms, and some with four legs; and others with a man's head, and a long tail. They carry this idol upon solemn festivals on a bier, to visit the other gods, or the river.

Fourth pil-
grimage. The fourth *Pagod*, is that of *Tripeti*, in the province of *Canatica*, on the coast of *Cormandel*, and cape *Comori*; it is remarkable for the many buildings and pools about it.

In the kingdom of *Bijnaga*, there is a *Pagod* with three hundred marble pillars in it. A *Portuguese* gentleman, who had liv'd forty years in *India*, and was an eye-witness to it, told me, they formerly laid out ten thousand *Roupies* there every year, in making a cart with eighteen wheels, on which, when the festival of the idol was kept, the *Brachmans* mounted with two hundred impudent women-dancers, skipping in honour of the idol. The cart was drawn by five hundred men, and some idolaters, believing that death the direct road to heaven, threw themselves under the wheels, and were crush'd to pieces. Besides, that when the king of *Golconda* possess'd himself of that country, under the conduct of the general *Emir Gemla*, he found in that temple an infinite number of gold vessels, and three diamonds of an inestimable value; one of which the said *Emir Gemla* presented to the *Great Mogul*; and that this general advancing into the country of the *Naiche* of *Tanjaur*, a *Gentile*, and taking the city of that name, thousands of women threw themselves into wells on account of religion.

He told me further, that near the island of *Ceylon*, there is another small island call'd *Ramanacor*, with a *Pagod* of

the same name; at the entrance where-
of is a trough of black stone, and in it a statue of metal, with the eyes made of rubies; and that the *Gentiles* break over it cocoa-nuts full of water; and lay figs there, to eat them afterwards, as if they were sanctify'd, and drink that water, as holy. Within the further part of this *Pagod*, is another which they open once a year; and there they adore a brazen idol call'd *Lingon*, which is a very leud figure, the parts of man and woman appearing join'd together. Some *Gentiles* wear it hanging about their necks, out of devotion, as the god of nature.

All the *Gentiles* are oblig'd to go once in their life, at least, in pilgrimage, to one of the four principal *Pagods*; but the rich go several times, carry the idols of their places of abode in procession, attended by hundreds of people, and *Brachmans*; who, with long fans made of peacock's feathers, drive away the flies from the idol laying on the bier.

Three days before an eclipse happens, the *Brachmans* having notice of it, break all the earthen vessels, to use new ones afterwards; and run all of them to the river to boil rice, and other things, and throw it in for the fishes, and crocodils; when they find the fortunate hour is come, by their magical books, and several figures they make on the ground with the noise of drums, and latten plates they beat, they cast themselves into the river to wash whilst the eclipse lasts; the *Brachmans* attend the richest persons with clean cloths to dry them, and then make them sit down on a piece of structure six spans square, daub'd all about with liquid cows dung, that the pissmires may not run upon it in danger of being burnt, whilst they dress the rice, and other pulse. They cover several figures made with powder'd lime, on that square with the same dung, and then lay on two or three small sticks of wood to burn several blades of grain, with a great deal of butter; and from the manner of the flame to judge what plenty of rice, and other corn that year will afford.

The chief *Divalis*, or festivals are two, when the moon decreases in *October*, and when she increases in *March*. All those heathen forcerers work wonders by the help of the devil, but particularly their jugglers and tumblers, who, without all doubt, deceive the eye. They plant the stone of any fruit, and within two hours the tree grows up,

GEMELLI up, blossoms, and bears ripe fruit. Others lay the eggs under the hen, and hatch them at the same time; which can be nothing but meer illusion. But I never saw it.

Pagan  
kings.

The princes of Asia that are idolaters, are the kings of Cochinchina, Tun-

kin, Aracan, Pegu, Siam, China, and several Chams in great Tartary; in the islands the king of Japan, and Ceylon, and some royalests of the Malucco islands; as also all the Rajas in the Mogul's empire, but of several sects, some less superstitious than others.

#### CHAP. IV.

The Author continues the Account of what he saw in the Camp of Galgala.

HAVING desir'd a christian captain of Agra, to let me know when an opportunity offer'd of seeing the king of Vijapur, he sent on Tuesday the 22d of March, to appoint me to be at his tent in the morning, that we might go together to the king's quarters to satisfy my curiosity. I went accordingly, and he being ready, we both set out. Being come to the king's tents, we waited for him to pass by, to go pay his respects to the Great Mogul. In short, within an hour I saw the unhappy king, whose name was Sikandar, come with a handsome retinue. He was a sprightly youth twenty nine years of age, of a good stature, and olive colour'd complexion. Aurenge Zeb depriv'd him of his liberty and kingdom, as he did him of Golconda, in the year 1685, upon pretence that he had given Savagi passage through his country, which he could not have hindred, if he would.

Original  
of the king  
of Vijapur's  
misfortunes.

The true original of the king of Vijapur's misfortunes was, that the queen being left a widow, and without children, Savagi, who was offended at the king's deceas'd, for having caus'd his father Nair Savagi, then captain of the guards, to die in a goal, took the field with a small army of scoundrels; and soon made himself master of the fortresses of Rajapur, Rafigar, Crapaton, Dabul, and part of Malabar. Some think that raising the fortifications of Rafigar, he there found a great treasure, which enabled him to continue the war. The queen finding her self in that condition, thought it convenient during the minority of Sikandar, whom she had adopted for her son, and bred up in the doctrine of Hali, before the king's death, to make a peace, tho' dishonourable; leaving to Savagi, the country he had conquer'd, yet to hold of her, and to pay half the revenue as tribute.

At the same time Pamniach, who was tributary to the same crown, took up arms to shake off that yoke; relying on the natural strength of his country, lying between twenty seven in accessible

mountains, call'd *Settais-pale*, among which there are villages, and lands till'd by Gentiles of the vile tribe of Faras. Aurenge Zeb seeing the forces of the kingdom, amounting to thirty thousand horse, and as many foot, employ'd against these rebels, he laid hold of the opportunity, and besieg'd the city and castle of Vijapur; which he took after a vigorous defence of three years, made by Sidi Mansut, a black, who govern'd during the king's minority, and carry'd away Sikandar prisoner, to whom he afterwards allow'd a million of Roupies a year, to maintain him decently.

Tanajia, king of Golconda, who, in my time was sixty years of age, had the same misfortune. His general Emir Gemla being disgusted, invited Aurenge Zeb to invade the kingdom through his means. The ambitious Mogul hasten'd thither, but notwithstanding his intelligence with the traitor, could not compass his design; and was forc'd to return to his country with dishonour. He afterwards again attempted the fortress of Golconda, but the besieg'd making a resolute defence, and an army of seventy thousand horse, and as many foot, keeping Aurenge-Zeb's army in the field within bounds; both sides thought fit to conclude a peace on this condition, that Mahmud, son to Aurenge-Zeb, should take the king of Golconda's daughter to wife, and receive the kingdom as a portion, after the father's death.

When the war with Akbar was concluded, Scialam was sent with a powerful army, to attack Golconda a-new; but he either thinking the conquest difficult, or overcome by Tanajia's promises, to give him his daughter in marriage, and assist him to secure his father's throne; so manag'd affairs, that he obtain'd his father's consent to settle peace, and tho' afterwards he receiv'd never so many repeated commands, could never be prevail'd on to return to the siege, but casting his scimiter at his feet, told him, he was a Mussulman, and could not break the peace he had promis'd to keep.

VOL. IV

*Scialam* thus refusing, *Aurenge Zeb* march'd in person, after he had conquer'd the kingdom of *Vijapor*, with a mighty army to besiege *Golconda*. At his first coming, he secur'd the pass on the river, and *Bagnagor*, where the palace was, and then without staying to fortify it, by the advice of the *Franks* he had in his service, who gave me this relation, he went on to besiege the fortress, whither the king was retir'd. This being built with vast great stones, and encompass'd with a deep ditch, held out a siege of nine months, tho' batter'd by many pieces of cannon, and particularly by three pieces of such a prodigious bigness, that each of them was drawn by five hundred elephants, and two hundred oxen, if we may believe what the soldiers told me; for they could make but a small breach in a fort that was not enclos'd with walls, but with a rock. At length, want of provisions, and distempers that rag'd in the place, besides the presents and promises *Aurenge-Zeb* made, did not only prevail with the defendants to desert to him by degrees, letting themselves down from the wall with ropes in the night, but corrupted the governor, who surrendered the fortress against the king's will; he offering to pay a tribute of three millions, and seven hundred thousand *Roupies*, which *Aurenge-Zeb* refus'd, entering the place victorious in the year 1686. *Azamscia* carry'd away the king prisoner, who having a collar of inestimable value on, presented it to him; but his father *Aurenge-Zeb* perceiving he carry'd him on an ele-

phant, cry'd out to him, because he had not bound his hands behind him. The son answer'd, that he was a king, and he ought to be satisfy'd with depriving him of his kingdom and liberty. Having shut him up in the fort of *Dolei-Abad*, the *Mogul* allow'd him a wretched maintenance of twenty *Roupies* a day; but a son being born to him in prison, which he never had whilst on his throne, in pitty to the infant born at such an unfortunate time, he rais'd his allowance to five hundred *Roupies* a day.

*Pannaich*, who had with considerable forces assist'd the *Mogul* in conquering the kingdom, was rewarded with death, upon very slight jealousies; which enraging his son, he refus'd to pay the tribute, and retir'd among inaccessible mountains; but a few years after, the greater power prevailing, he submitted to pay tribute, and receive a governor appointed by the *Mogul* into his dominions.

*Wednesday* the 23d, I din'd with the captain of *Agra*, who treated me very handsomly, after the country manner. *Thursday* the 24th, I was conducted to a neighbouring *Pagod*, to see a penitent, who held up his arms, the joints being hardned, or knit together, so that he had no use of them. *Friday* the 25th, I look'd out for some company to go back with me to *Goa*, because the *Begarian* of *St. Stephen* and my interpreter were both fled; but could find none. I spent my time in vain on *Saturday*, also seeking for company.

## CHAP. V.

*The Author's return to Goa, the same Way he came.*

THE season was now so far advanc'd, that to spend any more time at *Calgala*, would have made me slip the opportunity of going over to *Cbina*; therefore bearing patiently with my *Indian's* running away, I made the best of it, and resolv'd to venture all alone thro' a country invested with robbers and enemies to christianity. Having heard mass on *Sunday* the 27th, I mounted but very melancholy; and believing when I came at night to *Edoar*, I should find the caravan of oxen for *Bardes*, or some christian of *Goa*, was disappointed of both. Setting out thence on *Monday* the 28th, I came before noon to the village of *Rodelki*; where desiring a *Gentile* by signs to make me a cake of bread, the knave instead of wheaten flower made it of *Ma-*

*chini*, which is a black seed, that makes a man giddy, and so ill-tasted, that a dog would not eat it. Whilst it was hot, necessity made me eat that bread of sorrow; but could not swallow it cold, tho' I had none for three days. At night I lay near the *Pagod* of *Mandapour*.

*Tuesday* the 29th, meeting the caravan of oxen beyond *Onor*, I travel'd with it till sun-set; but being necessitated to alight, and the caravan going on, I lost sight of it, the night growing dark. Then being left alone in the open field, without any thing to eat, or place to take shelter, and in much dread of robbers, I laid me down among the bushes.

*Wednesday* the 30th, when day appear'd, I went on alone, without any knowledge of the road, but what the

S f f track

GEMELLI  
1695.

track of the oxen shew'd, and came betimes to *Beligon*. This city tho' made up of mud-houses thatch'd, is very populous, because of its trade. It has a large *Bazar* and a good fort, considering it belongs to *Moors*, all built of stone, and encompass'd with a deep ditch full of water; but it has little canon in proportion to its bigness, and garrison. Here I expected to have found the caravan of oxen belonging to *St. Stephens*, or at least to hear some news of it; but no body understanding me, I was disappointed. *Thursday* the last of the month, a *Mogul* conceiving what I could not express, conducted me to *Sciapour*, a mile from *Beligon*, where I found the caravan ready to start for *Bardes*: The *Canarines* going to it, who were subjects to *Portugal*, shew'd me a great deal of kindness; and finding I was spent with three days want, plentifully provided me with fowl and rice; but could get no bread, because the natives do not eat any. The worst of it was, I must set out with them immediately, and tho' a *Canarin* help'd to hold me a horseback, because of my weakness, yet it went very hard with me. That night we lay in a wood near the village of *Jambot*, belonging to a *Say* or prince of the same name; the *Mogul* permitting some lords to possess these barren countries for a yearly tribute.

*Friday* the 1st of *April*, after a few hours riding we pass'd by some cottages, where were the officers of the custom-house and guards of the roads, who are worse than thieves. That night we lay on the mountain, near some little huts of the country people; of whom I could not buy a chicken, or any thing else to support me.

*Saturday* the 2d, we went down the steep and tedious mountain of *Balagati*, and travell'd all day through *Savagi's* country. The guards, who like *Banditti* lay skulking about the woods, stop'd me, and by signs ask'd, whether I could shoot out of a musket, or understood the art of gunnery; and answering by signs that I did not, they at last let me go, fearing the *Portuguese* should stop their people at *Gua*, because I pass'd for a *Portuguese*. Having travel'd a few miles further, we lay in the field, and had an ill night of it, near a lake.

*Sunday* the 3d, being *Easter-day*, after several hours travelling, we pass'd by the *Mogul's* guards and custom-house. There I was again detain'd; not because they had any need of gunners or soldiers, but to make me pay toll like a beast; at length some idolaters telling

them, the *Portuguese*, who were but a mulker shot from thence would do the same, they let me go.

I went away to *Tivi*, and thence to fort *St. Michael*, where the castellan and his wife perceiving I was sick, would not suffer me to go any further; but by all means would have me be their guest; sending away immediately to *Pumburpa*, a farm of the *Theatins* for a *Ballon*, or *Andora* to carry me to *Goa*.

As the *Ballon* or boat was coming, an unmannerly *Portuguese* soldier carry'd it away by force, and there being no *Andora* to be had, returning thanks to the captain and his wife, for the favour they had shew'd me, I desir'd them to order a soldier to bear me company to the aforesaid farm. They were much displeas'd at the *Portuguese* rudeness, and caus'd his captain to punish him, and perceiving I would stay no longer with them, sent a soldier of the castle to convey me; who brought me to *Pumburpa* on *Monday* the 4th at sun-setting. Here I was very lovingly receiv'd by the factor, who gave me a good supper, and after it an easy bed to rest me.

*Tuesday* the 5th, I cross'd the canal in a *Ballon* or boat, and return'd to *Goa* to the aforesaid monastery of fathers in a very ill condition. The father *Presest* seeing me so sick, told me that had happened because I would not take his advice; I answer'd *Hæu patior te- lis vulnera scilicet meos*. Both he and father *Hippolitus* endeavour'd to recover me with good souls, to which the best sauce was their kindness; and thus I recover'd my sitting spirits. Weakness oblig'd me on *Wednesday* the 6th to hire four *Boes*, or porters to carry me in an *Andora*, to see what remain'd worth observing in *Goa*. They were all four satisfy'd with fifteen pardaos, which are worth six crowns of *Naples* a month.

*Thursday* the 7th, I went to visit the S. Francis body of *S. Francis Xavierius*, at the church of *Bon-Jesu*, or good Jesus, being the profess'd house of the *Jesuits*. The church is indifferent large and arch'd, but has nothing of good architecture, being more like a great hall than a church. It has an high altar, with two on the sides, all well gilt; and on the left a chappel, where the precious body of *S. Francis* lies. It was in a crystal coffin, within another of silver, on a pedestal of stone; but they expected a noble tomb of porphyry stone from *Florence*, order'd to be made by the great duke. Since, with the pope's leave, the saints arm was cut off, the rest of the body has decay'd, as if he

had refented it; and therefore the *Jesuits* for nine years past, do not shew it to any but the vice-roy, and some other persons of quality. Being told as much at my first coming to *Goa*, I so far prevail'd, as to have the vice-roy use his power with the provincial; and he not knowing how to refuse him, would at least defer the favour till that morning; shewing me the holy body, with the church shut, cloath'd in its habit, which is chang'd every year.

Friday the 8th, I went to see the church of the *Italian Carmelites*, on a pleasant hill. Tho' small, it is very beautiful, and arch'd, as are all the churches in *India*, with six chappels, and an high altar, well gilt. The monastery is handsome and well contriv'd, with excellent cloisters and cells, and a delicious garden, in which there are *Chinese* palm-trees which yield a pleasing shade, with their low and thick leaves. There are also two cinnamon trees, like that of *Ceylon*. At present it is decay'd from what it was, before the *Italian* fathers were confin'd by the king's order, because only one *Portuguese* father cannot take so much pains. The first had been again receiv'd into favour, but four of them dy'd at sea, coming from *Portugal*.

Saturday the 9th, there being some apprehension of the coming of *Arabian* ships, all the religious men and priests went down arm'd by order of the archbishop to the fort of *Aguada*, to make good that pass among the soldiers.

Sunday the 10th, I went to pay my respects to the vice-roy, who receiv'd me very courteously, and discours'd with me in *French* about two hours, about news from *Europe* and *Asia*, and when I took my leave made me very civil offers.

Monday the 11th, the commodore, a small vessel, and a fireship sail'd out of the harbour for the gulph of *Persia*, to assist the king of *Persia* against the *Iman* of *Masfate*, who, with five ships had burnt the *Portuguese* factory, and several houses; robb'd the custom-house, and carry'd away four pieces of cannon there were in the fort, with the arms of *Spain* on them, brought thither from *Ormus*. The king of *Persia* had then ninety thousand men ready to send into *Arabia Felix*, against the *Iman*.

There are three palaces at *Goa*, for the use of the vice-roy. The chief of them, call'd the fort, near the church of the *Theatins*, and *Vasco de Gama's* gate, has the prospect of the channel, and consists of excellent apartments, and a royal chappel. In the hall of

Vice-roy's  
palaces.

it are the pictures of all the vice-roys and governours of *India*, and in another all the ships and vessels that ever came out of *Portugal*, since the first discovery of those countries. In the same are kept the courts of judicature, or exchequer, and others, and they coin money, such as *Pardaos* of silver, and *St. Thomases*, and *Pardaos* of gold. The small money is made of a metal brought from *China*, which is neither copper, nor latten, nor lead, nor pewter; but a substance differing from them all, not known in *Europe*, and call'd *Tulunaga*, which they say has some mixture of silver. The *Chinese* use it to make great guns, mixing it with brass. Of this, as was said, they make a very low sort of coin at *Goa*, call'd *Bazaruccos*, three hundred and seventy five whereof make a *Pardao*, whose value is four *Carlines* of *Naples*; and yet any small matter, or frigate, may be bought for one of these.

The vice-roys do not live in the aforesaid palace, because of the ill air, but in that call'd *Powder-house*, or the powder-house, two miles from it, at the entrance of the city, as was said elsewhere. Being at first design'd to make powder in, it was not fit to entertain a vice-roy; but has been enlarg'd by degrees. The third is the fort of *Pangi*, near the fort of *Gaspar Diaz*. The vice-roys have not liv'd in it for many years past, and at present the garrison soldiers are quarter'd in it.

Tuesday the 12th, news was brought of the loss of a ship of the *Portuguese* fleet, which had run upon some rocks in the port of *Varfava*. My *Armenian* servant being indispos'd, I purg'd him with the excellent *Rhubarb* I bought in *Persia*, where the best in the world grows, and he was soon well.

Wednesday the 13th, I went with the fathers to divert me at the farm of *Pum-burpa*, and Thursday the 14th, enjoy'd the good company of some friends that came thither from *Goa*. Friday the 15th, we went a walking in the noviciate of the fathers of the society, opposite to the said county house. Walking there on Saturday the 16th, I pity'd so many poor christians and idolaters, who live in wretched cottages under the cocoa-trees, to make them fruitful, man's breath helping them to bear; without hopes of ever removing with their family from the place where they are born, because if they go to another place, their matters bring them back by force, worse than if they were slaves. Sunday the 17th, after dinner, we went to see a farm of the

Augusti-

GEMELLI  
1695.

GENELLI 1695. Augustinians close by, where an ingenious father had built a good house, and furnish'd it handsomely.

Monday the 18th, we went a fishing on the channel, which does not only abound in all other sorts, but several kinds of shell-fish, and particularly oysters, so large that the very fish of some of them weighs half a pound; but they are not so well tasted as ours. The Portuguese use the shells in their windows instead of glass, making them thin, and transparent. Tuesday the 19th, after dinner, we return'd to Goa.

Our lady of the cape.

Wednesday the 20th, two vessels from Macao, loaded with Chinese commodities arriv'd in the port; and Thursday the 21st, I went aboard one of them, call'd the *Pumburpa*, to see several rarities it brought. Friday the 22d, I went in an *Andora*, to visit our lady *del Cabo*, or of the cape, standing on the point of the island of Goa, where the Franciscans have a good church and monastery. Here night overtaking me, I was forc'd to lie in the monastery, and return'd to Goa, on Saturday the 23d.

Sunday the 24th, I heard mass at the Augustinians, to visit my friend and fellow-traveller for several months, father Francis of St. Joseph. Monday the 25th, I went over to divert my self to a little country house, seated on the island of *Bardes*, where on Tuesday the 26th, I saw the convoy of several vessels return from *Canara*, with a good stock of rice, because the islands of Goa do not produce enough. Wednesday the 27th, I took the air in a boat upon the channel.

Thursday the 28th, was the procession of *Corpus Christi*, which is made here with much solemnity in April, because of the storms, and great rains in June. Before it went a soldier a horse-back in bright armour; then follow'd an image of St. George in wood, about which some persons in masks danc'd; and after them six cannons, with six silver maces, and lastly, six gentlemen carry'd the canopy.

Friday the 29th, I went to see a lion brought the vice-roy from *Mozambique*, who was about to send it as a present to the emperor of China. And still continuing to divert my self after my late sufferings, on Saturday, the last of the month I saw the powder-house, where they were then actually making powder.

Sunday the first of May, I went to the cathedral to hear some indifferent musick, on account of the festival of St. Philip and Jacob; and Monday the 2d, din'd with father Francis, being invited by him, because the time of my departure drew near. On Tuesday the 3d, fa-

ther Hippolitus Visconti took care to change what money I had into pieces of eight, because there is a great deal lost by carrying gold into China; and a Portuguese merchant well skill'd in that trade, made a small purchase of diamonds for me, they being cheap at Goa. Wednesday the 4th, I went with father Salvador Galli, father Visconti, and the general Salzette, to speak to Jerom Vasconcellos, captain of the vessel call'd *The Holy Refary*, bound for China. For their sakes he undertook to carry me; but refusing to find me provisions for my money, I was forc'd on Thursday the 5th, to lay in a stock for so long a voyage. Friday the 6th, I went to the church of the miraculous cross, to beg of God a good voyage, and Saturday the 7th, diverted my self on the channel. Sunday the 8th, some friends din'd with me, and Monday the 9th, I din'd with father Francis, and after drinking to my good voyage, we took leave of one another with much concern. Tuesday the 10th, I went to the powder-house to pay my respects to the vice-roy, and desire him to give me a letter of recommendation to the general of China. He granted it very civilly, offering to do me any other kindness.

My Armenian servant refusing to go to China, on Wednesday the 11th, I bought a *Cafre*, or black slave for eighteen pieces of eight, and there being a necessity to get a license to ship him off, because we were to touch at Malacca, where the Dutch hereticks command, I went on Thursday the 12th, to the inquisitors to have it pass'd. They made a great difficulty of granting it, and dispensing with the prohibition they themselves had been authors of; alledging that some *Cafres*, who had been shipp'd at other times, being taken, had turn'd *Mabometans*. Friday the 13th, I took leave of my friends, the vessel being already fallen down to the mouth of the channel, in order to sail very speedily; and Saturday the 14th, having return'd thanks, and bid adieu to the father Theatins, I went aboard with my goods. There speaking to the captain, to order my equipage and provisions to be taken aboard, he order'd it to be deliver'd to the master's mate, for him to dispose of it as the pilot should direct, he having undertaken to keep me by the way, I putting my provision to his. This done, I return'd to the farm of *Pumburpa*, to have the satisfaction of lying ashore one night longer.

Sunday the 15th, I went over to the island *Cbaron*, where the noviciate of the Jesuits is, to hear mass. Meeting there with

with for bound fel, they house. three al has curio

with some Italian fathers, who were bound for China, aboard the same vessel, they very civilly shew'd me all the house. The church is small, and has three altars well gilt; but the sacrifice has curious chests of drawers about it

made of Indian wood, varnish'd, with the apostles painted on it. The house is small, and the cells for thirty novices very little. I din'd in the farm of the Augustinians, and lay that night in that of the Theatins.

GEMELLI  
1695.

## CHAP. VI.

*The Author's Voyage to Malacca.*

Monday the 16th, the vessel being under sail, I went aboard. Towards evening came aboard father Emanuel Ferreira a Portuguese, missionary to Tunchin, who wore a reverend long beard; father Joseph Condoni, a Sicilian, going to his mission of Cocchinechina, which fathers had been summon'd to Rome, by his holiness pope Innocent the 11th, because they had refus'd to obey the French bishops and vicars apostolick in those kingdoms, to the great scandal of the christians, who saw the church-men excommunicate one another, and eight other Jesuits of several nations, who were going to China; besides ten others who went in the vessel of the merchants of Goa, call'd Pumburpa, which carry'd the lion above-mention'd.

The fathers of the society are in such esteem and reputation in India, that at night the vice-roy came to visit those that were aboard the two ships, and stay'd till mid-night in these two visits. Laying hold of this opportunity, he himself recommended me to the captain, telling him, I was a curious gentleman, that travell'd only to see the world, and therefore he should use me well. His recommendation had but little effect, because the captain, who was bred in China, had quite forgot the Portuguese civility, which in all places I found they practis'd more towards me, than towards their own country-men; nor did he value another man's merit, or qualifications. As soon as the vice-roy was gone they weigh'd anchor, and the vessels were tow'd by several Paraos, which are long boats with sixty oars, and Ballons, which are smaller; the city pilots being aboard, to carry the vessels beyond the flat, which is before the fort of Gaspar Diaz, near which we lay all Tuesday, because the wind blew hard.

Wednesday the 18th, the same wind continuing, and the city pilots having no hopes it would fall, weigh'd anchor two hours before day, and began to have the ships tow'd again by the Ballons and Paraos. But the wind rising, to avoid

the rock, they both run upon the sand. There being danger that the ship might split at the flood, it being then ebb, every one endeavour'd to carry off his goods, especially money, and to get it ashore; and it would go hard with the city pilots, if once the vessels were stranded, and they did not fly. I put my baggage aboard a coaster, and leaving my slave with my provisions, went to Goa for a new licence from the inquisition, to put the black aboard the coaster, in case the ships that were stranded should be rendered unfit to perform their voyage; which I got with some difficulty for the reasons above alledg'd.

Whilst I was still at Goa, the vice-roy gathering abundance of Paraos and Ballons, went in person to get off the vessels with the flood; which being done, they came up again to take in as much water as they had thrown over board to lighten themselves. The honest pilot, and master's mate of our ship had also thrown over the passengers provision and fruit, but not their own; which afterwards they did eat till they were ready to crack. Taking leave again of the fathers Galli and Visconti, I return'd aboard with my baggage, but was not told they had thrown overboard three great baskets of wine full of Mangos, for had I known it, I would have provided other fruit.

We got not out on Thursday the 19th, through the fault of the city pilots; but about break of day, on Friday the 20th, the wind blowing fair at N. W. our vessel call'd the Rosary, the Pumburpa, and four coasters put out to sea. The Jesuits, as they were the first that went off, so would they be the last to return aboard. The same fair wind continu'd Saturday the 21st, and Sunday the 22d.

Monday the 23d, the pilots by observation found we were in the latitude of Cocbin. We had great rains, and stormy winds every day and night, but they did not last above an hour. They call these tempests Sumatras, from the island of that name. Holding on our course south on Tuesday the 24th, the

T t t pilots

GENEVE 1693. pilots judg'd we were in the latitude of cape *Comori*; which is like that of *Good Hope*. It is to be observ'd, that in this place they find a most unaccountable work of nature; which is, that at the same time it is winter at *Goa*, and all along that coast, it is summer upon all the opposite coast, as far as the kingdom of *Golconda*, and thus in a few hours they go from winter to summer; which is experimentally known to be true every day, by the natives of *Madure*, *Tiar*, *Tanjaur*, *Ginge*, *Madrajapatan*, the people of the *Naiques*, and other *Pagan* princes.

*Wednesday* the 25th, making an observation, we found our selves in the latitude of cape *Galli* in the island of *Ceylon*, which was joyful news to all aboard, as being then sure they should continue their voyage; for had the south wind started up before we reach'd that place, we could have gone no further, but must have run away to northward, as happen'd to two ships of *China*, which let out in the year 1693, and put in to refit after the storm, the one at *Damam*, and the other at *Bombaim*. On the contrary, being once in the latitude of cape *Galli*, no wind could put us by our voyage. We were here, according to the pilot's computation, six hundred miles from *Goa*.

C. v  
island.

The island of *Ceylon* besides its rich cinnamon, which is carry'd all the world over, has the best elephants, as was said above, and a mountain that produces rock crystal, of which at *Goa* they make buttons, beads, and other things.

B. v  
kingdom.

*Thursday* the 26th, we found our selves in the latitude of 6 degrees opposite to the bay of *Bengala*; and all the mouths of the river *Ganges* running into it, whilst at the same time the natural current of the water is from south to north, that sea is very rough. This made the ship often lie athwart the waves, and kept us all continually watching for fear. This kingdom of *Bengala* is accounted the most fruitful the *Mogul* has, by reason of its rivers. It has a great trade for silk, callico, and other stuffs. Finding our selves in this latitude we stood to the eastward, and on *Friday* the 27th, were off the *Maldiva* islands. *Saturday* the 28th, the same fair wind continu'd, but with the same rolling. *Sunday* the 29th, the wind held on, and a sailer dying was thrown over board. *Monday* the 30th, we were becalm'd, but *Tuesday* the last of the month the wind came up again, blew harder on *Wednesday* the 1st of *June*, and held fair on *Thursday* the 2d.

*Friday* the 3d, we were in sight of the island of *Nicobar*, the wind blowing fresher. This island pays a tribute of a certain number of human bodies to the island of *Andemaoon*, to be eaten by the natives of it. These brutes rather than men, use, when they have wounded an enemy, to run greedily to suck the blood that runs. The *Dutch* are witnesses of this cruelty of theirs; for they going with five ships to subdue them, and landing eight hundred men, tho' they were well intrench'd to defend themselves against those wild people; yet they were most of them kill'd, very few having the good fortune to fly to their ships.

*Sieur Francis Continbo*, general of *Salzette*, told me, that the chief motive the *Dutch* had to attempt the conquest of that island, was a report spread abroad, that there was a well in that island, whose water converted iron into gold, and was the true philosophers stone. The ground of this rumour was, an *English* ship putting into that island after a dreadful storm, where they observ'd that a little water which an islander carry'd, being spilt upon an anchor, that part of it which was wet with it, turn'd into gold; and asking him where he had that water, he told them out of a well in the island, after which they kill'd him, I can neither affirm nor deny that there is such a well; but only declare this story was told me by father *Emanuel Ferreira*, and by *Continbo* a knight of the order of *Christ*, before father *Galli* at *Goa*, who had also heard of it before. No man in *Europe* or *Asia* can give any more certain account of it, because those people have no commerce with any nation in the world.

*Saturday* the 4th, the fair wind continuing, we came off the point of *Achem*, where the *Malay* sea begins, so call'd from the *Malayes* inhabiting those islands. *Achem* is on the easternmost point of the island *Sumatra*; a country not govern'd by a king, as *Tavernier* thinks, but always by a queen; the males being excluded that inheritance, by the laws of the kingdom. There are other kings and princes in this island, part *Mahometans* and part *Gentiles*; whose subjects are near as barbarous as the people of *Andemaoon*, particularly the inhabitants of a mountain call'd *Bata*, that is, rock, not far from *Achem*, who cruelly play for one another's lives. When the game is done, the winner binds the loser, and stays all day for some body to buy him, when if none comes he kills and eats him; as *Continbo* told me, who had been up the said island of the kingdom of *Achem*.

The natives firmly believe that if a dying man eats a roasted cuckoo, he secures his passage to heaven; so that it is a good trade to carry those birds into the island, which is very fruitful and rich. In it is found much gold dust (which makes some suppose it to be the *Aurea Obergonejus* of the antients) tin, iron, camphire, sulphur, white sandal and pepper. The *Dutch* every year buy fifty thousand *Picos* of pepper, every *Pico* is one hundred and thirty pounds *Spanish*, which they sell to the *Moors*; who like it better than any other, because being smaller, they put it into their *Pilau* whole. The air of the country is bad, especially for strangers.

*Sunday* the 5th, the wind fail'd us near this island, as it always uses to do; so that as much time is spent, by reason of the continual calm between that place and *Malaca*, which are but two hundred and fifty miles asunder, as in one thousand five hundred there are from *Goa* thither, as the pilots say. Besides, the calm and the current is contrary, and rather put ships backward than forward, for which reason we perceiving there was too much water to anchor, were forc'd to draw to shore, for here we always run close under it to drop our anchor, that we might not lose way when the contrary current met us.

*Monday* the 6th, the calm continu'd, and I lost the pilot's table, for he would not find me any longer; and what most vex'd me was, that of thirty souls I brought from *Goa*, I had eaten but seven, and all the rest were flown; a misfortune travellers are expos'd to. The wind freshning on *Tuesday* the 7th, we sail'd almost due south, and leaving behind the island called *dos Degradados*, or of banish'd men, where the governours of *Achem* confine criminals, we came opposite to that call'd *da Rainba*, or the queens; recovering fifty miles the current had carry'd us back. But *Wednesday* the 8th, we were not only becalm'd, but not being able to anchor, the stream carry'd the ship six miles back.

*Thursday* the 9th, we drew towards the aforesaid island with little wind, and came to an anchor late in eighteen fathom water, a mile from land. *Friday* the 10th, we weigh'd and dropt anchor three several times for want of wind, as was also done by the ship *Pumburpa* and an *English*-man. *Saturday* the 11th, the wind blew fresh betimes, and carry'd us forward. We call'd to some *Malayes* belonging to the island, who were fishing, but they would not come; and two that gave ear to us kept at a great

distance for fear. Having given them some biscuit and vessels to fetch water, they were never seen more. These inhabitants of the island live worse than beasts; and their low cottages cannot possibly be seen, because of the thick green trees about them, as is usual all along this coast we had hitherto run. I was told there were none but cottages at *Achem*, and that only the queen's palace, she being then an old woman, is of timber, with a poor mud fort.

Eighty miles beyond *Serra da Rainba* or the queen's mountain, the current is not always contrary, but runs six hours one way and six the other. The heat here is excessive, because the storms call'd *Sumatras* and the rains, which never fail in the bay, are here rare and more gentle. The wind ceasing on *Sunday* the 12th, the boat was sent ashore for wood and water, but found none of the latter.

*Monday* the 13th, we advanc'd as far as the point of *Targiapour*, where a good river falls into the sea, a place grateful to sailors, because from thence forward the current is not so rapid. *Tuesday* the 14th, we made but little way, first with the land and then with the sea breeze; but we were worse afterwards, for the wind wholly ceas'd on *Wednesday* 15th. *Thursday* the 16th it blew very faintly; and *Friday* the 17th there was none at all.

*Saturday* the 18th, we made some way *Poleveira* in sight of the island *Poleveira*, but the wind failing, could not reach it till *Sunday* the 19th, when we lay off it. The compass of it is two miles, and it has abundance of trees and a good brook; but no inhabitants. The next night we were well wash'd by a great shower of rain; for at this island the *Sumatras* begin again and hold to *Malaca*, never failing either by day or night.

*Monday* the 20th, the contrary wind hindered us making much way, but what we gain'd in sight of the two small islands the *Portuguese* call *as duas Irmaas*, or the two sisters, because they are near together. *Tuesday* the 21st, we lay off the island *Aru*, beset with many rocks, and *Wednesday* the 22d, crossing the strait drew near the continent; so that on *Thursday* 23d, we were opposite to mount *Pulporjar*. *Friday* the 24th, we sail'd along the coast, which is thick cover'd with trees, and subject to a petty king that lives in the woods like a beast. *Saturday* the 25th, we met several *Chinese* vessels call'd *Somas*, loaded with rice and bound for *Achem*. They carry'd four sails made of mat, two of them on the sides from the main-mast, like the wings of a bird when

GENELLI when it flies, extended by two great poles, another at the foremast, and the fourth at the beak. The shape of the vessel is very odd, for the head is as wide as the stern. Towards evening we were near cape *Racalo*.

Sunday the 26th, when we were in

sight of *Malaca*, the wind started up contrary, and hindred us entering the port, so that we were forc'd to cast anchor; but on Monday the 27th, we anchor'd on the shore of the city. Soon after I went ashore with the captain, and took a lodging in an inn.

## CHAP. VII.

## An Account of what is worth observing at Malaca.

Malaca  
city.  
Maff. Hist.  
Ind. l. 5. p.  
117. & 118.

**M**alaca is seated on the southernmost part of the antient *Cerberonesus*, in 2 degrees, and 20 minutes latitude, and therefore the days and nights, are always equal. The Portuguese under the command of their general *Albuquerque* took it from the king of *Ikor*, but not without the expence of much blood; but in the year 1640, it was taken from them by the Dutch, after they had defended it bravely for six months. The antients thought *Malaca* was an island by reason of the many channels running across its land; but the exactness of the moderns, has discover'd this error. The houses are of timber, and for the most part the walls and roofs cover'd with mats, but there are such abundance of palm and other trees all about, that at a distance, it looks more like a wood than a city. It is inhabited on both sides of the river by Portuguese *Cbrijlians*, *Gentiles* of several parts, *Moors*, and *Chinefes*, for which reason, when the governor puts out any order, it is writ in those four languages, besides Dutch. It contains about five thousand souls, most of them Portuguese catholicks, better instructed in matters of faith, than any in *Europe*; there being children ten, or twelve years old, that answer to questions concerning religion, as solidly as a divine could do; and this because of the continual passing of missionaries of the society through this place to *China*, *Tunbin*, *Cocbinchina* and other parts. But the Dutch forbidding them the exercise of the catholick religion, they are forced to have it in the woods, with much danger; and to bear patiently with the excessive taxes laid on them, more than the *Jews* and *Mabometans*. Yet there is no danger they should become protestants, but on the contrary some Dutch have been known to abjure, through the means of their wives. It was no small comfort to me, to see such good christians among *Infidels* and *Calvinists*. But their heavy sufferings make them wish for a change of government, and to be under some catholick prince.

Tuesday the 28th, I went into the fort. The fort, on the right hand, entering the channel. It is about a mile in compass. There are six small towers furnish'd with sufficient cannon, and a ditch towards the sea and channel. The two gates are one towards the river, and the other towards the south cape. The governor of the city commands in it, and has under him a garrison of one hundred and eighty soldiers. In the midst of it is a rising ground, on which stood the church and monastery of the *Jesuits*, when it was possess'd by the Portuguese; but the Dutch pull'd down the dormitories, leaving only the church for their own use, and a tower adjoining to it, to put up their colours. Within the same fort was the church of the *Misericordia*; but that having been batter'd by the cannon, serves now for a Magazine.

The climate is temperate, as has been said, and the soil fruitful, because it never misses any day being water'd by a shower of rain. It produces almost all the sorts of fruit found at *Goa*; but the cocoa-nut, is three times as big. When gather'd green they call it *Lagna*, and the water of it serves to drink; but when full ripe, it has a pulp, like an apple, tender, and well tasted; which is not found in the cocoa-nuts of *Goa*.

The *Durion* of *Malaca* is also very famous, and strangers when once us'd to its smell, are so fond of it, that they cannot be without it. The tree is very tall, and the fruit grows out of the thick part of the branches, like the *Jacca*. It is almost round, and resembling the fruit of the pine-tree. When ripe it is yellow, with some points standing out about it; and the pulp within soft, and white, and divided into six parts, with as many stones, which when dry, are eaten like other kernels. It smells like a rotten onion, but has an excellent taste; so that when the nose is once us'd to the first, the palate is well pleas'd with the second.

The *Mangustan*, a wild fruit, is very good, round, and as big as an apple, with

with six streaks on the top like a star. When ripe it is yellow without, with white divisions within, like cloves of garlick: But soft and sweet. The rind powder'd and drank in water, stops the bloody flux.

*Jamboa.*

The *Jamboa* is a fruit, as big as a large melon, and has the rind, shape, and colour of an *Adam's apple*; but the quarters of it are like those of an orange, and of the same taste. There are white, yellow, and red, according to the several sorts of trees; which is like the *Taranja* describ'd among the fruit of *Goa*.

*Affampaja.*

The *Affampaja* is an acid fruit, growing at the foot of the Indian canes, good to pickle, as big as a walnut, of an earthy colour without, and white within, with a stone in the middle.

*Romania.*

The *Romania* is as big as a green walnut, cool, and good to make the same sort of sauce.

*Sagu.*

The *Sagu*, so highly valu'd by the *Portuguese*, is the root of a tree, that grows on the coast, and the *Malayes* carry to sell at *Malaca*, whence by reason of its goodness, it is transported to *India*, *China*, and other places still further distant. It is rarely well tasted made into a sweet-meat; it is also good in broth, and its clouded seeds dissolv'd, thicken like glew.

*Bacciam.*

The *Bacciam* is a wild fruit, like a *Mango*, and sharp to make sauce.

*Hib.*

There are also several sorts of herbs differing from ours, and among the rest the *Gnama* and *Celada*, which taste like boil'd fellyery.

The port of *Malaca*.

The city *Malaca* gives laws to all ships that pass the streight, obliging them to pay anchorage, whether they put into the port or not. *Spanish* and *Portuguese* ships pay one hundred pieces of eight each, others less. The *Dutch* are so hard upon these two nations, because they say they paid as much, when the *Portuguese* were masters of it. The *English* are not only free from this burden, but much honour'd; for two ships of theirs saluting with eighteen guns, the fort answer'd with nineteen, whereas our two vessels saluting with seven, they return'd no answer; tho' the *Punburpa*, put out the arms of *Portugal*. The port of *Malaca* is very safe, and has a great trade from east and west; and therefore the *Bazars* of the city are furnish'd with the best rarities of *Japan*, *China*, *Bengala*, the

VOL. IV.

coast of *Coromandel*, *Persia*, and other kingdoms.

I saw such beautiful parrots there, that a painter could not draw any thing so fine: Some of them had all the body and wings red, and the legs green. Others, call'd *Noros*, the body red, the head black, or dark blue, and the wings and legs of a light blue. Others were of an ash colour, with green wings. And others white, with a yellow tuff, call'd *Cacatus*; and these are taken in the islands of *Ternate*, *Ambon*, *Macassar*, and *Java*; but they are less than those of *America*.

*Wednesday* the 29th, they shew'd me a *Casuares*, black bird they call *Casuares*, twice as big as a *Turkey* cock, with bones in the wings, like whalebone, and the beak and feet like an ostrich. Its eggs are white and green, and is taken in the island of *Java*.

*Thursday* the 30th, I eat a rare fish, *Balanca*; call'd *Balanca*. Underneath it is like a crab, at top like a tortoise, and has the head arm'd with a sword; boil'd, it tastes just like a crab; the male and female are always found coupl'd. Tho' there are such rarities at *Malaca*, it is dear living there, a piece of eight a day being little enough.

The dominion of the *Dutch*, reaches but three miles round the city; because the natives being a wild people living like beasts, they will not easily submit to bear the *Holland* yoke. They are call'd *Menancavos*, very great thieves, *Mabometans* as to religion, and such mortal enemies to the *Dutch*, that they do not only refuse to have any commerce with them, but cut them in pieces, whenever it is in their power. And this is the reason, why the plains of *Malaca*, abounding in *India* canes, they cannot be cut without much precaution, for fear of those barbarians. Their king call'd *Pagarivoyon*, has his residence at *Nani*, a village made with mats ill put together, in the thickest of the wood. No better account can be had of their country for want of commerce with them.

Along the same coast, lives another sort of half men, call'd *Salitter*, *Mabometans*, as well as the others, in boats and moveable houses. They are both fisher-men and pirates along the coast; a robust sort of men, govern'd by a chieft they call *Palimajatti*, like *Banditti*.

## CHAP. VIII.

*The Description of the dangerous Streight of Sincapura, and of the People Inhabiting about it.*

GENELLI  
1695.

I Might easily have gone to *Manila*, aboard the vessel call'd *Polaco*, which came into the port; but I voluntarily let slip that fair opportunity, being desirous to see *China*. In order to it, going all again aboard the *Portuguese* vessels on *Friday* the 1st of *July*; as we were ready to sail, our voyage was retarded by some words that pass'd between the pilot and master's mate. The first of them went away aboard the *Pumburpa*, and all the day, and part of the night being spent in sending and proving, the captain would have me draw up a form of protestation, to be notify'd to the pilot. He could not be prevail'd upon to return to the ship, so that we were forc'd to sail with another, after mid-night.

Fermoso  
river.

*Saturday* the 2d, in the morning we anchor'd, the wind being contrary; which lasting all *Sunday* the 3d, we made little or no way. *Monday* the 4th, we run up on a bowling, and found our selves at night opposite to a great mountain, over the river *Fermoso*. This is a deep river, whose source is many and many miles up the country. On its banks grow abundance of excellent *Indian* canes, which the inhabitants of *Malaca* cut to trade. Some of them are thick, without any knot, to serve for walking staves, and others slender, and eighteen spans long, which cut are put to many uses, as to make bed-steads, outward doors, chairs, stools, baskets, ropes, pack-thread, and sewing-thread; for when split thin, the threads bow every way without breaking, and are proper to sew with.

*Tuesday* the 5th, we lay at anchor, and made but little way on *Wednesday* the 6th, because the wind was contrary. *Thursday* the 7th, the same cause made us lose, rather than gain ground; and it had been worse on *Friday* the 8th, had we not dropt anchor again after weighing. *Saturday* the 9th, we were quite becalm'd. *Sunday* the 10th, the wind coming up pretty fair, we left the island *Pulpisson*, and two other small rocks a-stern. The first is so call'd, because shap'd like a fig, for in the *Malaye* language *Pul* signifies an island, and *Pisson* a fig.

*Monday* the 11th, we pass'd by the island *Pulcariman*, which, tho' large, is not inhabited any more than the rest.

Then we came to an anchor at the mouth of the streight, before sun-set, both because the wind was contrary, and because we founded all the way; for tho' the good pilots of *Macao* sail that way twice a year, yet they never remember any thing of it. On the left, going from *Malaca*, the mouth is four or five fathom deep, and fix or seven on the right.

There are abundance of other islands <sup>Many islands.</sup> between *Sumatra*, and cape *Ikor*, which are not set down in the maps; tho' some of them are so large that they are call'd kingdoms. Some of them belong to the king's of *Jambi*, and *Palumbon*, islands adjoining to *Sumatra*, on the coast opposite to *Malaca*, where the *Dutch* have a factory, and some to the king of *Rioo*, on the right of the streight of *Sincapura*; all three kings *Mabometans* as to their religion, and *Malayes* by descent.

This multitude of islands makes abundance of streights, all dangerous to pass; <sup>the streights</sup> but particularly that of *Sincapura*, where we were, which yet is most frequented by the natives, to go to, and return speedily from *Siam*, *Cochinchina*, *Tunbin*, *Manila*, *China*, *Japan*, and other kingdoms of *Asia*. The other call'd *del Governador*, or the governours, is so deep, that very often there is no anchoring in it; but being much wider than the other, the *European* ships, that is *French*, *English*, *Dutch*, and others, use it very much. The other streights are call'd of *Carvon*, *Durion*, *Javon*, and *Ikor*; besides many more, which take name from the islands that form them. That of *Ikor* is only passable betwixt the continent, and the islands, where a long channel ends, which leads to the metropolis of the same name, consisting of cottages, and thence to the sea of the *Contracosta*, or opposite coast. The *Dutch* have a factory at that court to trade for pepper.

*Tuesday* the 12th, we enter'd the mouth <sup>Sincapura</sup> of the streight of *Sincapura* betimes, which is a quarter of a league over at first; but further in wider, tho' enclos'd by so many islands, that they are a meer labyrinth to ships; which those who have not seen it before, think they shall never get out of, seeing land on all sides. The second mouth is but half so wide as the first, but only a mile in length,

length, and all the distance between the two mouths is eight miles. This narrow passage is rendered the more dangerous by the violent setting of the water backwards and forwards at ebb and flood. In other respects the eye is delighted with a beautiful green of so many islands adorn'd with tall and thick trees, which are never left naked like ours in Europe in winter.

*Salittes, Malayes.*

The Malayes, call'd *Salittes*, live along this channel, in portable and floating houses. They dwell on the water in boats cover'd with mats, with canes interwoven in the middle to lie on; nor are they disturb'd either at their brutal solitude, the ill air, or the dreadfulnefs of the neighbouring woods. They are ingenious at fishing, which they live on, either angling, or striking the least fishes through with spears made with bamboo. Some of them came to our ships side, with their women and children in their floating-houses to get vessels, iron, knives, tobacco, and other trifles, in exchange for fish; they having no knowledge of money. They are not satisfy'd if they had the value of a hundred pieces of eight in exchange, they are so mistrustful, false, and wicked; but upon any slight occasion strike their spear in any man's body, or else a small knife call'd *Crisi*, they wear by their side. They are subject to the king of *Ikor*, who therefore has a custom-house for fish in the midst of the channel. We came to an anchor near it by reason of the calm.

*The coast of Ikor.*

*Wednesday* the 13th, we got out of the strait, leaving behind us on the right the cottages cover'd with mats, set up on poles; and keeping along the coast of *Ikor*, where I said the other mouth of the channel of that name was; the wind came up contrary, which oblig'd us to cast anchor near that barbarous country.

The kingdom of *Ikor*, as I said abounds in pepper, a sort of white copper the Portuguese call *Calein*, Indian canes, rice, *Arecca*, cocoa-nuts, and other things, which keep up its trade with other nations; particularly with the Dutch, who therefore use all their endeavours to hinder others from resorting thither, allowing no vessels to pass by *Malacca*, without the governor's leave. The inhabitants of *Ikor*, and the *Salittes* wear a garment to their waste; and from thence down, both men and women cover themselves with a linnen cloth. The women wear their hair dishevel'd without breadding; but the men shave their heads, and beards, only keep-

ing long whiskers. Instead of a turbant, they tie a small linnen rag, like a fillet, about their foreheads.

*Thursday* the 14th, the wind being contrary, we anchor'd off cape *Romania*. *Friday* the 15th, we sail'd along the coast of *Romania*; leaving a long row of islands on the right, that sea being all over full of them. About evening we pass'd by *Pedra Branca*, or the white rock, so call'd by the Portuguese, being a small white rock rising a little above the water, and so plac'd in the middle of the channel, with two others adjoining to it, that it has split many Ships that were unacquainted with it.

The Portuguese told me, That a coun-tryman of theirs being to go that way in a ship of his own, laden with much gold, and other rich commodities; he was continually asking of the pilot, when they should be past it; and thinking every hour an age till he was out of that danger, repeated the question so often, that the pilot grown weary of him, said they were already beyond it. Then he, distracted with joy, broke out into these execrable words, *That God could not now make him poor*. But he went not unpunish'd, for the ship soon struck upon the white rock; and having lost all, he only sav'd his life to be the more miserable.

*Saturday* the 16th, holding on our course with a brisk gale, we got out from amidst so many islands, which stretching out towards the south, along the strait of *Banca*, which is the way to *Batavia*, left us a clear and open sea, our course being eastward. The wind freshning, carry'd us away from cape *Ikor*, towards the island *Borneo*, which is under the equinoctial. The aforesaid cape *Ikor* is the end of a long coast reaching to *Bengala*, which afterwards turns away, and forms the *Contracosta*, or opposite coast, as far as the kingdom of *Siam*, where there are several other dominions, and among the rest that of the *Patanes*, ever govern'd by a woman, like those of *Acchem*, and *Canara*. This country abounds in camphir, pepper, ivory, *Cagulaca*, a sweet wood to burn, cocoa-nuts, *Arecca*, white and stain'd calicoes, and birds-nests, and has a vast Trade with the neighbouring kingdom of *Bengala*, by way of the *Isthmus*. The queen is a *Mabometan*, and tributary to the king of *Siam*. We sail'd on merrily towards the island of *Pul-lao*, much wish'd for by us; when at night we were surpriz'd in a great *Sumatra*, or tempest from the north; which drove us so violently towards the south,

GEMELLI  
1695.

GENELLI south, that on Sunday the 17th, at break  
1695. of day, we were in sight of the island  
of Borneo, and of those call'd Siantones,

which lie off it, and are inhabited by  
Malayes.

## CHAP. IX.

*Of the Island Borneo, being an Abstract of the Account given of it to the  
King of Portugal, by Father Antony Ventimiglia; and of the Mission in-  
stituted there.*

Borneo  
island.

THE island of Borneo, being the largest in the world, containing rarities of inestimable value, and almost unknown to Europeans, because all possess'd by Mahometan kings and princes, who do not suffer strangers to go up the country, to trade with the idolatrous natives, who are tyrannically oppress'd by them, that they may secure to themselves the wealth of the island, in exchange for poor baubles those wretches stand in need of; for these reasons the reader will not think it amiss that I should interrupt the relation of my travels, with a short abstract of the account given of this place to the king of Portugal, by father Antony Ventimiglia, a Theatin of the city of Palermo, the first missionary that ever had the fortune to pierce into the heart of that island; not translating it word for word from the Portuguese, which would make it too tedious. The Portuguese original, which I have by me, deserves entire credit; for there is no doubt to be made, but that so zealous a religious man as he was, writ no more than what he saw.

The citizens of Macao frequenting the port of Manjar-Massen, in the island of Borneo, the king of that name several times declar'd to some captains, and particularly to Emanuel de Araujo Garces, that he should be well pleas'd the city of Macao would settle a factory in that port, for the security of trade; and that besides forwarding and assisting them in all that lay in his power, he would allow a church to be built for the free exercise of the christian religion. These Offers wrought no effect upon the people of Macao, as being perfectly well acquainted with the changeable temper of those Mahometans; but Andrew Coelho Vieira, general of the city, having acquainted Don Roderick de Acoffa, governor of Goa, with the matter; he consulted with three knowing persons, whether the settlement of such a factory was for the service of God, and their king; and understanding it would be very advantageous, tho' the townsmen of Macao sent a messenger of theirs to obstruct the performing of it, yet in the year

1689, he gave the necessary orders for settling the factory in the name of that city; enjoining Joseph Pinheiro, a rich citizen of Macao, who was then at Goa, to take that affair upon him. He accepted of it to please the governor, tho' he had always endeavour'd to obstruct it.

Before this was resolv'd on, Luis Francis Coutinho was come to Goa, and knowing how zealously the fathers Theatins desir'd to be employ'd in some mission, to which no other Order had any right of elder claim, that they might the better sow the seed of the word of God on their own ground, and gather the harvest of propagating the holy gospel, and converting the poor sheep that were stray'd from the flock of Christ; he acquainted them with the willingness the king of Manjar-Massen express'd to allow the christians a church, and how little inclination the city of Macao had to settle the factory, and that no mission had ever been in that island. Those fathers thought Luis Francis an angel sent from heaven, hearing him propose a method for the compassing of their design; and therefore without hesitation, with the approbation of others, they resolv'd to take upon them the charge of that mission; and the more, because to take off the impediment proceeding from the poverty of their order, which may neither have any possessions, nor beg, Luis Francis readily offer'd to be at the expence of sending over father Antony Ventimiglia, who earnestly press'd to go thither.

The good man being furnish'd with all necessities for his own use, at the expence of Luis Francis, his benefactor and companion; and by divine providence with what was necessary for the exercise of his mission, he set out from Goa on the 5th of May 1687, to the great grief of the people who lost to worthy a person. He arriv'd at Malacca on the 12th of June; where he landed, rather to exercise the godly function of converting some renegadoes, and feed those people with the word of God, than to seek any ease to his own

distemper. He went aboard on the 20th, with so fair a wind, that he was ashore again on the 13th of July at Macao, with *Coutinbo*. There he continu'd six months, five of them in a hermitage of *Augustinians*, call'd, *Our Lady of the Rock*, seated on a hill; and the rest of the time in their monastery; employing himself all the while in hearing confessions, and other pious acts. He found an opportunity to sail for *Borneo* on the 11th of January 1688, and had so good a voyage, that he arriv'd at *Manjar-Massen* on the 2d of February. They ran up the river, and anchor'd in the port on the 5th. During this time they were inform'd of the slaughter made by the *Mabometans* aboard a vessel of *Siam*, under some false allegations; and in another of the coast of *Coromandel*, on pretence that they had hurt some of the natives in a fray of their own contrivance. Several Christians, and particularly *Portuguese*, were kill'd. This news no way daunted, or cool'd the zeal of father *Ventimiglia*; but placing his confidence in God, made no doubt of overcoming all difficulties.

Whilst he was devoutly employ'd in the ceremonies of the holy week, a *Moor*, who was captain of two galleys seeing so much wax spent, sent him some gold dust, which he would not accept of. The good father was inflamed with the desire of applying himself to the conversion of the *Gentiles*; and seeing himself idle, and confin'd in that port, he earnestly entreated captain *Emanuel Araujo Garces*, with whom he came from *Macao*, that according to his promise he would endeavour to bring him to the speech of some of the *Pagan Beajuses*, not far distant from thence. The other fed him with hopes. But heaven, which never fails to prosper good wishes, brought four of those *Beajuses* to them, out of curiosity to see their ship. They desir'd a cannon might be fir'd, which being done to please them, they went away frighted at it. This short visit the more inflamed the desire of father *Antony*, so that he pined for grief, seeing no hopes of making some acquaintance, and staying among them; because the *Mabometans* being against their growing familiar with strangers, endeavour'd to dispatch christian ships with speed, and sometimes with insolvency. At last a sailor one day brought him two *Beajuses*, who were going up the river; and he, the more to allure, treated them very affectionately; gave them some devout things,

Vol. IV.

and perceiving that as they took their leave, one of them seem'd to have a mind to a pair of shoes, and the other to a cap belonging to two of those that stood by, he prevail'd with those persons to give them those things. The *Gentiles* went away so well pleas'd, that coming into their own country, they made others have a mind to obtain some of those gifts, and see the good religious man; and accordingly on the 3d of May two others came, but in company with a *Moorish* spy, who prevented the acquainting them with the end they were sent for. After some time they were dismiss'd, with each a pair of beads about his neck. Others came afterwards; and father *Ventimiglia* taught and us'd them to honour the cross.

On the 27th of March, all the merchants aboard the ship, having dispatch'd their business with no small profit; and bought so much pepper, and other spice, that tho' the ship was one of the biggest that sail'd those seas, they were fain to leave some ashore, they set sail, carrying away father *Antony* against his will, he having more mind to stay there; notwithstanding the captain, and other persons of note, representing to him the perfidiousness of those barbarous *Mabometans*, and promis'd to bring him back the next year to his beloved *Beajuse*. They arriv'd safe at *Macao* on the 27th of June. There, tho' several religious men offer'd the father to entertain him in their monasteries; yet he chose to go lie at night in the solitude of his hermitage; employing himself all day in the city, in hearing confessions, and sowing the seed of the word of God.

The season of the year to sail for *Manjar-Massen* being come, tho' he did not like this interrupted method, yet he set out on the 8th of January 1689, carrying along with him a *Chinese*, who had been a slave to *Coutinbo*, and a *Beajuse* whom the *Moors* the year before had sold to *Frutuoso Gomez*, they being both discharg'd by their masters for this purpose. He had a good voyage, and arriv'd in that port on the 30th, at such time as the *Beajuses* were at war with the *Moors*; which tho' it troubled, did not make him desist from his enterprize. On the 25th of February, he hir'd a *Lentine*, that is, a small but convenient vessel to live in, and have the better convenience of conferring with the *Beajuses* by the way of the river, without the disturbance there was aboard the ship. and the hindrance he met with the year before from the *Moors* at land; and he succeed-

X x x

ed

GEMELLI 1695. ed so well, that there began presently to resort to him some of the *Beajufes* from the neighbouring villages subject to the *Mabometan* king; if it had been for nothing else, at least to see their countryman *Laurence*. Many of them came on the 10th of *March*, when he had begun a nine-days devotion aboard the vessel, in honour of *St. Joseph*, adorning the cabin decently with hangings and lights. The next day came a venerable old man, with his daughter, grand-daughter, and an antient matron to visit the religious man, who had converted his boat into a handsome house and chappel, and receiv'd them very affectionately, acquainting them with the design that brought him a second time into such remote and strange parts, which was to show them the way of salvation, by instructing them in our holy faith. They were pleas'd with the father's words, and assur'd him he should be honourably receiv'd by them all. From that time forward more of the *Beajufes* began to resort to the vessel, and to call the good man their *Tatum*, that is, grand father; a name among them of great honour; conversing with him very familiarly and lovingly, and bringing their wives and daughters, tho' they were very jealous, to kiss his hand and habit in a very modest and courteous manner. At these visits they always presented him with some fowl, a basket of rice, some pieces of sweet wood, or a mat of those they work most curiously; or else herbs, sweet roots, wood, or other things, and he refusing to take it, they left it before his cabin, so that afterwards he receiv'd it, rather than displease them; provided it was not gold, precious stones, or any thing of value. The nine-days devotion so happily begun, ended with a general joy and applause, and what is most to be admir'd, even of the *Moors* themselves; for a cross twenty spans high was put into a boat, and being carry'd about the river with many lights, as it return'd to the *Lentine* or vessel where the father resided, was saluted by all the cannon of two vessels of *Macao*. This was follow'd by a visit from an *Anga*, who was chief or governour of a village, with all his family; which he made with so much civility and respect, that the father thought fit to repay it the next day, attended by thirteen *Portuguese* belonging to the ship. The governour and all his people receiv'd him in a very solemn manner, with drums beating and other musick of the country, and dancing, as if it had been one of their kings. The old *Anga* pro-

strated himself on the ground to kiss his habit, and all the rest, men, women, and children, great and small follow'd his example. The good man receiv'd them in his arms to gain their affection, and make way to their conversion, to which they seem'd well dispos'd. In short, the *Anga* desir'd to be baptiz'd immediately; protesting he would follow him dead or alive, so powerfully the divine grace wrought upon his heart. He added, that he believ'd that all the rest of the *Beajufes* would give him the respect which was due; and that the more to convince him, he would go in person to acquaint the *Tomangun* and *Damon*, two sovereign princes in the heart of the island, one of whom was his son-in-law. It was agreed he should come the next day to the *Lentine*, that matters might be resolv'd on with the advice of captain *Emanuel d'Arango Garces*. The *Anga* being tir'd with the rejoicing after his *Tatum* went away, could not be as good as his word on the 24th, but fail'd not to come on the 25th, attended as before. Father *Antony* gave him a good dinner, and some small curiosities of *Cbina*; and it was resolv'd he should send by means of the same *Anga* some present to *Tomangun* and *Damon*, and because he could not perform the journey without leave of the *Moorish* king, as being his subject, the aforesaid captain *Emanuel* being so much in the king's favour, undertook to obtain it. The king liv'd in a village at a considerable distance on the river, and things fell out so that the captain could not go thither for several days following to get his leave; so that the *Anga* was weary of expecting, desir'd father *Antony* to send him the present for the princes, and he would go without the *Moorish* king's leave, which oblig'd the father to go visit him the next day, and deliver him the present, consisting in things of small value, as flowers, dishes, rings, glass-bracelets, and the like, in two little boxes; to which he added an embroider'd picture of our blessed lady, and another of *St. Gaetan*; hoping they would touch the hearts of those infidels, to bring them into the true way of salvation. The *Anga* coming to the princes, deliver'd the presents, and telling them the cause of his coming, was receiv'd with such joy, that they presently fitted out a hundred gallies and *Paraos* there were in their rivers, and among the rest one fourteen fathom long to bring their beloved *Tatum*. This little fleet being come to the mouth of the river where their dominions ended, stopp'd

stopp'd the *Beajufes* they did not kiss him sent to the river who the *Anga* who the came to his disgra of his brother tell him go to his carry him good fat Not long ther *Ventur* mon, com kets of I and full of eagle- which are cause of them. H much edic ral things coming to look'd up God; for small fleet the river, was sent b the faith. Things mour ran that the selves amo of gold an of their obstructed *Moorish* king to, that he tum the be clusion. E order'd it, night a son of *Damon*, came to the *Emanuel d'Arango* stand, that a month w selves, yet fail'd, that to the infidel he was gon board their then agreeo nestly desir gagement v arm; and of being fur

stopp'd there because of the war between the *Beajufes* and the *Moors*; and thence they dispatch'd the *Anga* with the *Moorish* king's embassador, who had been sent to conclude a peace with those princes, to obtain leave to come into the river where the *Lentine* was. Whilst the *Anga* was thus employ'd, *Damon*, who thought every hour an age till he came to father *Antony*, sent a kinsman of his disguis'd to visit him, in a little *Parao* of one oar; and a few days after sent his brother with twelve of his guard, to tell him if he thought fit, they would go to him in spight of the *Moor*, and carry him into their country; which the good father did not think convenient. Not long after this the *Anga* came to father *Ventimiglia* with a present from *Damon*, consisting of two curious little baskets of *India* cane and straw interwoven, and full of sweet herbs and roots, bits of eagle-wood and other sweet woods, which are only given to great men, because of the esteem those people make of them. He also told him the princes were much edify'd at his contempt of temporal things, and the zeal he shew'd in coming to their country. And that they look'd upon it as a special providence of God; for as they came down with their small fleet, they saw a fiery globe on the river, by which they understood, he was sent by God to enlighten them with the faith.

Things being in this posture, a rumour ran among the *Moors* of *Manjar*, that the christians had insinuated themselves among the *Beajufes* with presents of gold and silver, to possess themselves of their country, which not a little obstructed their coming in; which the *Moorish* king was then ready to consent to, that he might by means of the *Tatum* the better bring the peace to a conclusion. But the divine providence so order'd it, that on the 4th of *June* at night a son of *Tomangun*, and another of *Damon*, attended by their uncles came to the *Lentine*, and calling captain *Emanuel d' Araujo*, gave him to understand, that tho' they had waited above a month with much trouble to themselves, yet they would stay till his ship sail'd, that he might not be left expos'd to the infolency of the *Moors*, and when he was gone would take their *Tatum* aboard their galleys, wherein both of them agreeing, one of the princes earnestly desir'd a knife, to ratify his engagement with blood drawn from his arm; and soon after departed for fear of being surpris'd by the enemy.

At this time came a cousin of the *Sindum*, the most powerful prince among the *Beajufes*, living in the upper part of the island, about business of his own, who tho' he had pass'd through the dominions of *Tomangun* and *Damon*, knew nothing of what was doing. Being inform'd of what had happened when he came into the *Anga's* territories, he went directly to the ship and thence to the *Lentine* to see father *Ventimiglia*. He there complain'd of the princes, who had not acquainted his kinsman the *Sindum*, and therefore he was not come with a present from him, as knowing nothing of his being there; but that nevertheless the *Sindum* being at peace with the king of *Manjar*, he would without any impediment from the *Moors*, carry away the *Tatum* in his *Parao*, or in any other that was in the river to his own country, or into that of the other princes, provided he would promise after some stay there, to repair to the *Sindum*; who, as soon as he heard of him, would certainly come to visit him; and lastly desir'd the father not to depart without him.

On the 10th came six other *Beajufes* upon hearing the fame spread abroad of the *Tatum*, from fifteen days journey distance. They also earnestly intreated him, that he would please to go comfort them in their country, after he had been with the aforesaid princes, and were never satisfy'd for four hours together with kissing his hands, and laying them to their faces. The present they brought was two cocoa-nuts, two small bags of rice, a little oil, three little bunches of sweet herbs; a great hollow *Bamboo* cane full of a thing like butter, which they gather from a tree, and a little wax; for which a return was made them in small curiosities of *China*.

But the enemy of mankind being ever ready to disturb those that employ themselves in the service of God, for the good of their neighbours; the good man suffer'd much before he got into those countries; because all the people belonging to *Macao*, and particularly *Emanuel d' Araujo*, endeavour'd to dissuade him from that enterprize, alledging, that all those frequent visits and caresses of the *Beajufes*, were counterfeit, and only design'd to bring him to an untimely end; and that they could not leave a person in such danger, that might gain souls for heaven elsewhere. The pious man understanding by these words, and perceiving by other tokens, that they intended to obstruct his entering the country, as they had done the year before, he spoke to the

GENEVA  
1695.

the captain with some resentment, laying the loss of those souls to his charge. It was no wonder he should be so much concern'd at the opposition made by the Portuguese, since in a letter of his he delivers himself to this effect. *That he would certainly have for the present deferr'd enjoying the glory of Heaven, that he might serve in that Vineyard of our Lord till the end of the World, without any other Reward, than fulfilling his holy Will.* Therefore he look'd upon every small accident as a great obstacle to his entrance, which was of such consequence for spreading the faith in that large and unpolish'd country; being resolv'd to die rather than quit his enterprize.

On the 25th of June the ship got without the flat to a place, where it was in a readiness to sail for Macao; and he having said mass, all that were present weeping, the captain Emanuel d' Araujo went away to his ship with five Portuguese, and father Antony taking leave of them departed to his mission with four servants, which were the Chinese that had been slave to Luis Francis, Laurence the Beajus, a sailor born in Bengala, and another who offer'd to bear him company. There were also with him two Beajuses related to Damon and Tomangun, who coming with four others sent by those princes to the captain, to invite him to be present when they intended to ratify the peace and friendship already establish'd with their blood; stay'd behind to attend the father. His departure was the more remarkable for carrying along with him a curious cross of incorruptible wood, on the foot whereof the arms of Portugal were carv'd in half relieve, with these words about them, *Lusitanorum Virtus, & Gloria.* To signify the zeal and great actions of the Portuguese nation for the exaltation of the holy cross, and propagating the gospel; to fulfill the divine oracle deliver'd in the plain of Ouzique to king Alphonso Enriquez.

Leaving the ship they took their way towards the river of the Beajuses, and coming to the mouth of it on the 26th, found there twenty three Paraos with eight hundred men aboard ready to receive them; among whom was he that had the cap given him, who had always extoll'd the courtesy of the Portuguese. Some of them went into the small boat to convey it up to that in which Damon and Tomangun were, who both afterwards went over into that where father Antony was, to cast themselves at his feet. Tomangun signaliz'd himself in this action; for without stirring an inch from him, he

exhorted two youths his sons, and all his followers to imitate him, because they did this to their true lord. Damon being seated between the servant of God and Tomangun, acquainted the company, that the apostolick religious man was come from remote countries, to teach them the true and holy law, without which they could not be sav'd; and that his profession being remote from all that was temporal, he coveted nothing but to put their souls in the way to heaven. Tomangun and all the rest answer'd with an unanimous voice full of joy, that they desir'd nothing more, and did promise to keep and secure him with all possible respect and honour; and would before have ratify'd their engagement with the blood of their arms, had not the father hindered them. Then he deliver'd them the holy cross, which they all worship'd, to be erected in the church, they promis'd to build out of hand in their dominions; declaring they would for the future put themselves under the protection of the crown of Portugal. After spending some time in such like conversation, they all went into Damon's Parao, seating the father on a place rais'd above the rest; to which he condescended the better to gain their affections and their souls to heaven.

This was the beginning of the new mission in Borneo, to settle which father Antony apply'd himself with such zeal, that in six months time he baptiz'd 1800 of the Beajuses; and Luis Francis Coutinho, who having spent forty days in their river, pierc'd into the upper part of the island, declar'd that he found the children of those Beajuses, as well instructed in the catholick religion, as if they had been born in christendom.

Now as for what concerns the island of Borneo, 240 miles distant from Malacca, it is cut across by the equinoctial line, and is 1650 Italian miles in compass. The borders, or rather the coast all about, is inhabited by Moors call'd Malayes, who having lorded it for many years, are fully settled there with kings of their own; but further up the country Paganism, call'd Beajus, prevails; and tho' India had been 200 years discover'd, the preaching of the gospel had not reach'd them till this time, they being generally look'd upon as barbarous, wild, and unfit for conversation.

The Moors are govern'd by several Their kings, the chief of which are those of Manjar or Manjar-Massen; of Succadan, in one of whose rivers there are excellent diamonds found; of Borneo, and others. The Beajuses have no kings, but only

only princes and other chiefs. Those that are subjects to the king of *Manjar*, or border upon him, pay a tribute.

Ports.

There are several ports in the island, but the most frequented is that of *Manjar-Massen*, for its spice, but especially by the inhabitants of *Macao*. It is form'd by a large river of fresh water, three miles over, and fourteen fathom deep at the mouth. Three days journey up it, there are three little islands; the biggest of them is two miles long, and the *Portuguese* have thoughts of building a fort on it, to settle a factory there. The other two are smaller and nearer to the land; and consequently not so fit for that purpose.

Product.

All the country is fruitful, and abounds in rice, which is better than any other in *Asia*, and the fruit, besides its great plenty, differs in colour, taste and bigness from ours in *Europe*. There is also great store of cassia, wax, camphire (the best in the world) black and white pepper, call'd *Natian*, gum and several good dyes. It also produces many sorts of sweet herbs, roots of black wood, and another root that smells like eagle-wood, and *Calumbacch*. There are vast woods for building of ships, where they also make much pitch and rosin for several uses. Metals are slighted, because they know not how to run them; but they gather much gold-dust among the sand of several rivers in the island. There are abundance of birds-nests, well known to those that have read and so highly valu'd by the *Chinese*, and others, that they give three hundred pieces of eight a *Pico* for them, which *Pico* is about an hundred weight; being perswaded they contribute much to the generative virtue, and are a provocative, as being naturally hot. These are nothing but nests built by the swallows, which in *India* are of an ash colour, in the clefts of steep rocks; whence they are pull'd down with long poles by men in boats. It is like a very fine paste; some think it is made of the flaver of these birds; others believe it is a sort of clay; I have as much of it as may serve curious persons to exercise their talent on. For this same reason the sensual *Chinese* give forty pieces of eight a *Pico*, for the skins of sharks found in those seas about the island. This is the reason that the *Macarines* at their great entertainments swallow much gold in a few mouthfuls; because they eat nothing but the little finews, as they do of venison.

Birds and fish.

It exceeds all other countries, in variety of most beautiful birds; and as for beasts, there are very strange ones not at all known in *Europe*. Among the

rest there is one so strange that it must not be pass'd by in silence. It is call'd a *Beypus* or wild man; because it much resembles man in weeping, and other exterior actions that express some passions. That which I saw was as big as a monkey, and not being able to bear its great belly on its legs, dragg'd its hinder quarters on the ground. When it removes it t. its mate along, to lye upon, as a man would do. The apes in this island, are of several colours, some red, some black, and others white, call'd *Oncas*, which are most valu'd. They have a black list, which from the top of the head turns down under their snout, and makes a graceful ring. Father *Salvador Galli* told me he had sent one for a present to the great duke of *Tuscany*, who expected it with impatience; but that it dy'd by the way. There is another creature in the island, that has a fir much like a cat. The *Beajufes* take the richest *Bezoar* stones in the world from the *Bezoar* stones. They wound them slightly with darts shot out of trunks, in some part that they may not die of it; then they growing sick with the hurt, those stones breed in their bowels, where they are found, when they kill them.

The *Beajufes* are generally very superstitious; being much addicted to auguries. They do not adore idols, but their sacrifices of sweet-wood and perfumes, are offer'd to one only God, who they believe rewards the just in heaven, and punishes the wicked in hell. They marry but one wife; and look upon any breach of conjugal faith, either in the man or woman, as so heinous an offence, that every one contrives the death of the party transgressing, either by themselves or their friends; and therefore the women are very modest and reserv'd; especially the maidens, who are not seen by their husbands till the wedding-day, when the women receive their portion. They are enemies to fraud and theft, and grateful for benefits receiv'd. Among themselves they live lovingly and friendly; and therefore when every man has gather'd what he sow'd for his own use, the rest on the mountains and vallies is in common, without any distinction of particular right. They are also well inclin'd in their pleasures, and seek honour in hunting; at which sport they endeavour to get some sharp horns, to polish and wear them as an ornament at their girdle. This girdle is no other but a long slip of linnen, which turns between their thighs to cover their privities, and one end of it hangs down before, and

Y y the

Vol. IV.

GEMELLI 1695. the other behind. The peasants make a fort of cloths of the barks of trees, which being afterwards wash'd and beaten, are as soft, as cotton; and those trees being within the dominions of the *Malaye Moors*, they expose themselves for the bark to their tyranny and insolence.

Habits. Some of them go naked, and others wear a small doublet made of the same bark; which they dye of any colour. On their heads, to keep off the heat of the sun or rain, they wear a cap of palm-tree leaves, shap'd above like a sugar-loaf, long, and with flaps hanging down.

Weapons. The weapons they use are knives, made like the *Cangjars* of the *Moors*, and *Zampittes*, that is, trunks about six spans long, out of which they shoot little wooden darts, with an iron head at the one end, and cartouch, or hollow paper at the other, blowing into which they shoot it out with a vast force; and sometimes, the point being poison'd the wound, is mortal. They also shoot birds with pellets through them.

The *Beajuses*, as to their persons, are of a dark complexion, well-countenanc'd and strong.

The *Moors* in the island. The *Malaye Moors*, who live, as was said, along the coast of that island, and oppress some of those wretched people, are faithless, inconstant, covetous, treacherous, and great thieves. Besides their swords, they have some few fire-arms to make use of at sea. They also go naked; only some of them are cover'd with a piece of cloth wrapp'd about their waste, and hanging down like a half-petticoat. Their heads are wound about in a folded hankerchief, but when it rains, they add to it a cap made of palm-tree leaves.

Houses. Their houses are in boats call'd *Paraos*, as are those of the *Beajuses*, on the aforesaid river of *Manjar-Massen*; or rais'd upon five pieces of timber on its banks, that they may be safe against floods. But the king of *Manjar* lives several days journey up the country, in a miserable condition, because his kingdom has been long divided among several branches of the royal family, to give them a sufficient maintenance.

Factory destroy'd. The factory we spoke of at first had an unhappy end; for being settled there upon the conditions propos'd by the *Moors*, particularly that the city *Macao* should always have a fund there of forty thousand pieces of eight (only for them to rob:) Two years after, when there were four ships in the port, the infidels resolv'd to secure them, and plunder the factory. A great number of them assembling to this purpose, went aboard

the ships, some pretending business, and others only to see. Being friendly admitted, when they thought it a proper time to execute their design, they all drew their *Crisps*, or poison'd knives, and every one endeavour'd to murder the sailor he was treacherously talking with, so that they kill'd most of those that were in three ships, as also two captains, two pilots, and a master's mate. But the fourth ship, which belong'd to captain *Emanuel Araujo de Gares*, (aboard which was a prince, and brother of the king's,) seeing the slaughter aboard the others, prevented the *Moors*; and killing all that were aboard, with its cannon, oblig'd the others to quit the ships they had made themselves masters of. The *Moors* that were not kill'd swam ashore, for many of them perish'd, the fray being bloody on both sides. There were not men enough left aboard the aforesaid three vessels to sail them, but *Emanuel d' Araujo* divided his men among them, providing them the best he could to return to *Macao*. Next, the *Moors* went to plunder the factory, which had been the end they at first design'd, whence the factor, who was sick, flying, was the cause of his own death. From that time the citizens of *Macao* would not trade any more at *Manjar*, seeing there is no truth, or honesty in those *Moors*.

The *Dutch* had no better success with *Da* their factory they settled there thirty five *da* years since, fearing, that if others bought *da* the pepper of that island, they should not be able to sell that of the company at their own rate. The *Moors* murder'd the chief men of their factory with one of those poison'd darts we said they shot out of trunks; and he that commanded, instead of the dead man, demanding satisfaction some days after; they answer'd, that the murderer had withdrawn himself into a country-house not far distant, with abundance of his kindred; and they were not strong enough to deliver him up, and therefore they thought it convenient they should all go with their joint forces to attack him. The *Dutch* suffering themselves to be taken in the snare, went, and were all butcher'd; upon which news, two ships of their nation, that were in the port, fled with all possible speed.

Father *Antony Ventimiglia* in his letters demanded companions should be sent him to cultivate that mighty vineyard of our lord, and that the king of *Portugal* would grant him power to honour some princes, and great men among the *Beajuses*, with the title of *Don*, the more to oblige, and allure

allure them, because they shew'd themselves to be lovers of honour; but it pleas'd Almighty God, to reward his labours with the Glory of Heaven, in the height of his zeal; there being intelligence that he dy'd in the year 1691, which has been confirm'd by some of the Church Stuff, and some books belonging to him,

found at Manjar. Father Gregory Raucos, Genelli 1695. a Theatin, I found at Goa, further told me, his body had wrought miracles, and therefore the *Reajuses* kept it very honourably in a cottage, whither a leper once resorting among the rest, they put him to death.

## CHAP. X.

*The Author gives an Account of what happened to him, till his Arrival on the Coast of Cochinchina.*

TO return to the place where we left off, I must inform the reader, that the storm on the 17th, would not suffer us to draw near the island of *Pullaor*, as the pilot would have done; but the wind falling a little on Monday the 18th, we drew near, and that was all, for we were altogether becalm'd in sight of it. This always flourishing and green island, which is but five miles in compass, produces more plenty than any other of its bigness of cocoa-nuts, whose trees grow amidst the rocks, *Arecas*, figs, *Gambayas*, *Ananas*, and other sorts of fruit, which the natives exchange for earthen ware. The mats made here, are so very fine and curious, that they are sold for fifteen, or twenty pieces of eight each, to make presents to the *Cbineses*, who put a great value on them. It is subject to the king of *Ikor*, from whose dominions on the continent it is but sixty miles distant. Near *Pullaor* there are two rocks, which produce good fruit, and six miles from it a desert island call'd *Pulimon*.

Tuesday the 19th, the wind came fair with a *Sumatra*, or storm of rain, which lasted an hour, as usual. Steering our course towards *Pulocondor*, three hundred and sixty miles distant, we sail'd through a better sea than we had done during the whole voyage, as being clear of rocks and flats, and we were not so much toss'd, so that tho' the vessel ran swift we were at our ease.

Tho' we were so near the line in the dog-days, we felt no great heat, but to me it felt more like spring; and tho' I had not provisions, and other necessities as I could wish, yet God be prais'd I enjoy'd perfect health; notwithstanding some sailors were fallen sick, as were father *Procana* of *Turin*, and a brother of *Tunchin*; however, the society does not suffer their religious to want.

The fair wind continu'd all Wednesday the 20th, carrying us a-cross the gulph of *Siam*, into which falls the great river that leads up to that court, after running

one hundred and twenty miles all the way, inhabited on both sides; all the houses which are of wood being rais'd upon strong timbers, or canes; that the inhabitants, when the floods swell two fadoms high in *August*, *September*, and *October*, may go out at their windows into boats, and gather the rice that floats on the water.

Thursday the 21st, in the morning, the wind came about to the east, but at noon as it was before. Friday the 22d, we came in sight of *Pulocondor*, an island belonging to the king of *Cochinchina*, but not inhabited; some *Cochinchinese* repairing thither at certain times of the year to cut wood, and gather the product of the island, as *Indian* wheat, figs, and oranges. It is eight miles long, and proportionably broad. It was abandon'd because of the continual *Sumatras*, or storms of rain, no day ever elapsing without a very violent one, as we found by experience. All the vessels bound for *Manila*, use to make this island.

Saturday the 23d, at sun-rising, we were off the five hills, the Portuguese call *Cinco Chagas*, or the five wounds, which are before the mouth of the river of the king of *Camboya*, up which, two hundred and forty miles, is the metropolis of that kingdom, call'd *Pontay-pret*. Ships go up to it, because the river at the mouth has three fadom water, and seven near the city. The Portuguese call this mouth *Caranguajo*, or crab; and the other two near it, the one of *Malaca*, and the other of *Pantiemas*, at which the barks of *Siam* pass. The king of *Camboya* is tributary to him of *Siam*, and uses to change his court, when he takes possession of his crown, out of a vain superstition not to live where his predecessor dy'd, which he may easily do, because the metropolis is worse than other places, all made up of ill-contriv'd cottages, cover'd with mats, or at best with boards. At present the kingdom is divided between two brothers, one of whom keeps in the mountains, the other in the aforesaid city. They make

GEMELLI war upon one another, the one supported by the king of *Siam*, the other by him of *Cochinchina*.

The inhabitants of the kingdoms of *Camboja*, *Siam*, and *Pegu*, shave all their head, leaving some on the crown like that of the mendicant lay-brothers. They pull up their beards by the root with nippers, that they may not grow again quickly. Their colour is like an olive, and they are hard to be remov'd from their tenets; for father *Candoni* told me, that in four years he liv'd at *Camboja*, he baptiz'd none but a miller, who was marry'd to a christian woman of *Cochinchina*.

*Champa*.

At sun-set we were on the coast of *Champa*, the king whereof, we were told, had shaken off the yoke of subjection to him of *Cochinchina*, and made war upon him.

The same day we pass'd by the *Faral-bao de Tigre*, so call'd by the *Portuguese*, because several ships of theirs have been lost there, and among the rest that of *Matheus de Brito*, who, saving his life by swimming, left this for a rule to other pilots to pass between the said rock, and the continent, but not to come where there are but ten foot water; and when they draw near the *Faralbao*, in the open sea, not to come to fourteen fathom, but to keep on between sixteen, and nineteen, because he was wreck'd between ten, and fourteen fathom, where the rock under water lies.

Sunday the 24th, we sail'd with a fair wind along the same coast of the kingdom of *Champa*, and in sight, and south of the bay and port of that name; whither several nations resort to buy elephants teeth, eagle-wood, and other commodities. At the mouth of it is a rock, between which, and a high mountain the ships must pass. In the *Malay* language they call that mountain *Panderon*, that is, king, and *Pulssin*; the *Portuguese* give it the name of *Rabo de Alacrao*, where begins the dangerous channel that must be pass'd going to, and coming from *China*. From this mountain, till sixty miles beyond *Pulcalan*, there is a continual row of flats three

hundred miles in length, where several ships are cast away every year; for which reason pilots must be upon their guard to avoid them, and keep always in sixteen fathom water. The worst of it is, that if any misfortune happens, the *Cochinchinese* galleys seize not only the goods, but even the very vessels, that only lose or spring a mast; and therefore many of them scour the coast all the year, to gather wrecks, nor is there any hope of escaping them when there is a calm, because they are well provided, and the *Cochinchinese* brave men with fire-arms.

All this country of *Malaca*, *Camboja*, *Siam*, *Champa*, *Cochinchina*, and *Tunquin*, abounds in elephants, of which the *Siamites* particularly make a great trade, carrying them by land to the opposite coast, and port of *Tenazarim*, belonging to the king of *Siam*, near the gulph of *Bengala*; where merchants buy, to transport them by sea into the dominions of *Mabometan* princes.

At sun-set the wind blew so hard, that it might be call'd a storm; and continuing so all night, set us very forward. Monday the 25th, we sail'd with a fair wind along the coast of *Cochinchina*; but in the afternoon we had the usual storm of rain, with such a stiff gale, that had not the current been against us, we had made much way. Nevertheless, about sun-set we happily pass'd the true *Varela* (so call'd to distinguish it from the false one, lying further in on the side of a mountain, on which another rock rises a fathom, and is call'd the *Pagod*) for the high wind soon abating, the sea was not very rough.

Tuesday the 26th, the same wind continu'd, and we held on our course, still near the aforesaid coast, the weather as fresh as spring. However, most of the *Cafres*, or blacks were fallen sick; which they attributed to the difference between this climate, and theirs, the first being like that of *Europe*.

Wednesday the 27th, we were quite becalm'd.

## CHAP. XI.

### An Account of the Kingdoms of Tunquin, and Cochinchina.

I Believe the reader will not be displeas'd, if after a tedious relation of a voyage, I divert him a little with some account of the kingdoms of *Tunquin*, and *Cochinchina*, off which we now

lay becalm'd; and the more, because I receiv'd it from good hands, that is, from father *Emanuel Ferreira*, who liv'd there twenty years, and from two *Tunquinese* he carry'd with him, clad in the habit

habit of the society; as also from father *Joseph Condani*, of the same society, who liv'd twelve years in *Cochinchina*.

*Tunquin.*

The kingdom of *Tunquin* is tributary to *China*; but the tribute which formerly was considerable, ever since the year 1667, has been reduc'd to a small acknowledgment of a few horses every year.

The kingdom of *Cochinchina* was once united to that of *Tunquin*, and came to be parted as follows. The *Bua*, or emperor of *Tunquin* (call'd *Aramu*) in the country language, is so far from conversing with his subjects (who may not look him in the face upon pain of death) that he does not talk with the prime minister, who governs in his stead; for he acquaints him with all that occurs by the mouth of the eunuchs, and receives his orders the same way; under pretence that it does not become so great an emperor, as he is, to meddle with matters of government, but to take his pleasure in the *Aram*, amidst his concubines, and leave the cares of the crown to others. A governour about three hundred years since, perceiving this custom, made him an easy way to possess himself of the empire, it being no hard matter to bring the soldiery, and great men, who receiv'd all from him, to his side; so contriv'd his business, that leaving the *Bua* the bare name and shadow of a king, he usurp'd all the rest. From thence forward *Tunquin* had two sorts of kings; the lawful call'd *Bua*; and the usurpers call'd *Cbiras*, or governours; who allow the *Bua* a competent maintenance, and sometimes refuse it; as happened some years since, when the *Bua* demean'd himself so much as to give a visit to the chief of the *Dutch* factory residing at *Tunquin*.

Foreign ambassadors deliver their credentials to none but the *Bua*, as he of *Holland* did, not long since. When the *Bua* has a son born, there is great rejoicing throughout all the country, which is not done for the other's children.

One of the *Cbiras* dying (above an age ago) he left a son under age, heir of the kingdom, under the tuition of his son-in-law; but he aspiring to the crown, laid such plots against the life of the king, that his wife, to deliver her brother out of his hands, caus'd a confidant of hers to carry him into *Cochinchina*, attended by part of the nobility. With their assistance he possess'd himself of *Cochinchina*, killing the governour at an entertainment, and afterwards reduc'd a considerable part of the kingdom of *Champa* under his dominion,

VOL. IV.

making the rest tributary; but now <sup>GEMELLI 1695.</sup> that kingdom has shaken off the yoke, and refuses to pay the tribute.

The tutor having usurp'd the kingdom of *Tunquin*, there began such a bloody war between the two kinemen, that it still lasts between their sons, and with such fury, that neither men, nor letters, are permitted to pass out of one kingdom into the other, and tho' they are unequal in strength (the king of *Cochinchina* bringing but fifty thousand men into the field, and he of *Tunquin* one hundred thousand) yet the *Cochinchineses* being the better soldiers, and defended by a ridge of mountains that part the two kingdoms, they make their party good with the *Tunquin*es. They both own that shadow of an emperor, call'd the *Bua*, for their lawful sovereign; receiving embassies in his name, and giving out commissions subscrib'd, in the reign of *Bua*, &c.

The *Cbiras*, or governour of *Tunquin*, following the custom of his ancestors, governs his kingdom, like the *Bua*, by a prime minister, who, without speaking to him, receives his orders from the eunuchs, giving audience but very rarely, or suffering himself to be seen by the people. But this reserv'dness at present does not so much proceed from pride, or gravity, as for fear of the continual disorders of the kingdom. For this same reason he does not allow his subjects to build high houses, that they may not offend him, but they must all be low, except his palace; and every man upon pain of death, must get out of the way when the king passes, going to divert him either on an elephant, or in his *Palancbine*.

Now let the reader consider what credit is to be given to *Tavernier*, when he tells us, his brother was very familiar with the king of *Tunquin*, and that he gives publick audience to his people every day. The *Dutch* can testify in this particular, who receiving daily wrongs from the ministers and eunuchs, who take more than is due for the customs; yet could never speak to the king, and make their complaints, so that at last they were forced to make use of a trunk, by means whereof a *Dutch*-man conveying himself near the king's apartment, told him all the matter in the *Tunquin*ese language. They succeeded as they desir'd, for the king gave order to redress their grievances; directing, that for all the commodities the *Dutch* import, they should pay nothing, but only make a present of *European* cloath, salt-peter, and a few other things; and that their goods be

Z z z

not

GEMELLI not search'd in the custom-house. Where-  
upon father *Ferreira* told me, that it be-  
ing very difficult to import beads, images  
of saints, and other things of devotion  
out of *Europe*; he brought them in con-  
sign'd to the *Dutch* factory. The king  
of *Cocincina* is not so reserv'd, but is  
seen by, and converses with his people,  
and much more with strangers.

Customs  
and man-  
ners.

The king of *Tunquin*, and his sub-  
jects act in all respects contrary to the  
*European* princes, and their people; for  
when the princes of *Europe* go by wa-  
ter, they sit in the stern, whereas the  
king of *Tunquin* sits in the head of the  
boat, saying, the king must be the first  
that goes ashore. He keeps fifty boats  
curiously gilt, with sixty men to row  
in each, all of them youths, about one  
age, who all dip their oars at once,  
being guided, or directed by a man's  
hand, like a master of a choir. The  
king keeps with his head towards the  
chamber door, whereas *Europeans* lay  
their feet that way. The *Tunquineses*  
write from the top of the paper to the  
bottom, and from the right to the left,  
just contrary to us. They also write  
their name at the top of the letter, as  
was once us'd by the *Romans*, saying,  
*J. N. send you Greeting, &c.* Among  
christians, thieves are hang'd, but in *Tun-  
quin* beheaded, tho' of mean birth; and  
on the contrary, persons of quality are  
strangled with a rope, drawn by twelve  
men, six on a side; after which they  
burn the feet of the party executed, to  
see whether he his dead or alive. As  
in *Europe* we print, joining of letters,  
so in *Tunquin*, *Cocincina*, and *Cbina*,  
the manuscript is pasted on a very smooth  
board, and then with a sharp pointed  
pen-knife they cut the letters just as they  
are written, and so they go through the  
whole composition, which they can af-  
terwards print as often as they will with-  
out any trouble. When their kindred  
die, the *Tunquineses*, and their neighbour-  
ing kingdoms mourn in white, as we  
do in black, which last colour they wear  
for state, as the noblest.

When the kings of *Tunquin* and *Co-  
cincina* marry, they cause the noblest  
and most beautiful maids to be brought  
from all parts of their kingdom, and  
having made their choice, send back the  
rest. The first of these two, generally  
keeps three hundred concubines.

Habit.

The habit us'd in those kingdoms is  
a long garment or vest. On the head a  
tall round black cap; but that of the  
soldiers and peasants, falls down a little  
on the back. They let their hair grow  
long, like *Europeans*, and so their beard.

The women wear the same sort of gar-  
ment down to their feet, their hair loose,  
and their face bare. They are beauti-  
ful, tho' of a dark complexion, and  
great lovers of strangers.

As to religion, they are idolaters; <sup>Religion.</sup>  
but easily converted, and when convert-  
ed steady in the faith, and this both  
*Tunquineses*, and *Cocincineses*. And fa-  
ther *Ferreira* assur'd me, that when, by  
reason he was persecuted for some years  
by the king, he was forc'd to wander a-  
bout in disguise, the poor country people  
would sometimes travel a months jour-  
ney from one province to another, to  
confess and hear mass. These idolaters  
are not so precise, as those of *Indostan*;  
but eat all sorts of flesh, even to cats  
and dogs.

The kingdom of *Tunquin* is plain, <sup>Defin.</sup>  
like *Lombardy*, and very fruitful. It <sup>tion.</sup>  
is divided into eight provinces, which  
are *Sudong*, which in the country lan-  
guage signifies eastern province; *Sunan*,  
or the southern; *Subak*, or the nor-  
thern; *Sutag*, or the western; *Ngbean*  
*Bocin*, half of which belongs to the  
king of *Cocincina*, the river *Songen*  
dividing their limits. The seventh *Su-  
anquam*; and the eighth *Taynguien*.

The metropolis where the king re-  
sides, call'd *Keclio*, is four days jour-  
ney from the sea, with a river running  
up to it. There are in it, none but  
low houses made of *Bambao*, whereof  
there is great plenty in their fields. Fa-  
ther *Ferreira* told me this *Bambao*, every  
fifty years produces a seed, of which  
the peasants make bread. The city is  
large and populous; there being streets  
three miles long in it, and markets. The  
kingdom is inhabited by an infinite num-  
ber of people; which is the occasion of  
so many commotions, for there is scarce  
a year, but some great man is put to  
death, who has headed a mutiny; to-  
wards which the reservedness of the  
prince, contributes very much. The  
kings of *Bau*, a country abounding in  
musk, and of *Lau*, which produces  
store of elephants, are tributary to this  
king.

*Cocincina* in the country language, <sup>Cocin-</sup>  
call'd *Tlaon-Kuang*, is divided into five <sup>china de-</sup>  
provinces, viz. *Moydin*, *Dincat*, *Kegue*, <sup>trib'd.</sup>  
*Tlenquan*, and *Fumoy*. The king resides  
in the city of *Champelo*, one days jour-  
ney from the sea, in the province of  
*Kegue* or *Keboe*, which in that language,  
signifies a flower. It is large and popu-  
lous, as is all the kingdom, tho'  
mountainous. Both this and that of  
*Tunquin* are water'd by many rivers,  
which make them abound in rice and  
sugar.

sugar. Besides in *Tunquin* there is abundance of silk; and in *Cochinchina* musk, pepper, gold, and cinnamon, and great store of birds-nests. But these which are taken in summer, belong to the queen, for her privy-purse, and therefore the subjects are forbid trading in them, as also in *Calambuch*, which is kept for the king. This sweet wood is found in bits

in the heart of a tree, when rotten.

Both kingdoms produce abundance of melons, cocoa-nuts, atas, figs, ananas, jacas, and other sorts of *Indian* fruit. They also gather from a tree, or rather a shrub in *Cochinchina*, a large leaf, call'd *Tea* or *Cha*, which they lay fattens, and therefore soldiers are there forbid the use of it.

GEMELLI

Fruit.

## CHAP. XII.

*The Author continues his Voyage to Macao.*

Pulcatan  
island.

**T**uesday the 28th, before break of day we were near the island of *Pulcatan*, 360 miles from *Pulcandor*, where they cross the gulph of *Aynan* to discover the islands of *Macao*, equally distant. *Pulcatan* is a small island three miles about, inhabited by *Cochinchineses*, and sometimes govern'd by a *Mandarine*; it is near the continent, and to the mountain call'd the *Horse's Saddle*.

Having sail'd fifty miles to get over the flats which we said ended beyond *Pulcatan*, and then as many more, we directed our course to the northward. The mouth of the river that runs up to *Champelo*, the court of *Cochinchina*, call'd by the *Chinezes*, *Sayfo*, is a little beyond the aforesaid island. There is another more to the northward for lesser ships, and call'd *Toran*.

**Friday** the 29th, the fair wind continuing, carry'd us on a great way smoothly, though the sea was rough. But here we were very much afraid of those winds they call *Tifones*, or Hurricanes, which blowing furiously on all sides, sometimes carry away the masts, and what is worse, the men, if they do not keep under deck. The first remedy in these cases is to cut down the mast, and let her run, trusting in God; for the mischief is irresistible, and in a moment sinks ships, or else drives them on the coast of *Cochinchina*.

**Saturday** the 30th, the same wind continuing till noon, afterwards came fairer, and set us very forward; and so it did on *Sunday* the last day of the month; so that on *Monday* the first of *August*, we were off the island *Aynan*, belonging to the province of *Canton*; at the furthest point whereof begins the shore of the river of *Tunquin*, call'd *Bassa*, from seven neighbouring villages.

**Tuesday** the 2d, we came near the island of *St. John*, vulgarly call'd *Sanchan*, so famous for the glorious *St. Francis Xavierius* ending his days there, when

he hop'd to enter *China*; the grott where the faint liv'd and dy'd, being to be seen at a dista ce. It is sixty miles from *Macao*, about ten miles in length, and proportionably broad, is fruitful, and has plenty of good water.

**Wednesday** the 3d, tho' the wind was not very fair, yet it carry'd us on into a labyrinth of islands, some call'd *dos Veados*, *Meru Montagna*, *dos Ladroas*, *Lantau*, *Lemi*, *Campacaw*, *Atravafeia*, and others. This is most remarkable, that they are all water'd by excellent rivers, and springs, which keep them always green; and abound in deer, *Baccharias*, and other wild beasts, which the citizens of *Macao* often go over to kill.

We could make no way because of the wind, and therefore lay tacking all the night. Those islands afforded a curious prospect, being lighted by so many fisher-boats plying about them. These people always live in their floating-houses, with their wives and children; feeding on the fish they take, and selling them both fresh and dry'd to those that will carry them to *Canton*; they themselves never going from the water, but only removing from one island to another, according to the seasons, which make fish more plentiful in one place than another. Constant practice has made them very expert at their trade; having, besides their nets, invented several particular instruments, perhaps altogether unknown to *Europeans*. By the warmth or coolness of the water, and other signs and tokens, they foresee the *Tifones*, or hurricanes, a day or more before they happen; and retiring with their boats into very close creeks, and drawing them ashore, expect the end of the storm with all their Family.

**Thursday** the 4th, the feast of *St. Dominick*, being near *Macao*, before noon, several people came from the city in boats,

Hurricane.

Sanchan  
island.

GEMELLI 1695. boats, every one to see his friend, and among the rest father *Philip Fiesia*, procurator of *Japan*, who came in a *Lorja*, or large bark to bring refreshments to father *Ferreira*, and the other nine fathers. I had my share, and eat excellent figs, like ours in *Europe*, and good *Ananai*, my stomach not failing me. Going into the bark with those fathers, I got to the city *Macao*, on the so long wish'd for land of *China*. I left my money in some vessels full of salt flesh, and fish, to save paying the duty of four in the hundred to the ship, and two to the city, since for the vice-roy's sake, I had not paid for my own, nor my servant's

passage. The ship *Bumburpa* arriv'd three days before us, and set ashore ten *Jesuits* it had aboard. I was courteously entertain'd in the monastery of *St. Augustin*, by father *Joseph* of the *Conception*, born at *Madrid*, and prior of that place. He gave me a plentiful supper at night, with variety of sweetmeats. Here it will be convenient, that whilst I rest me after my voyage, which was no less than 3000 miles; the reader, who has hitherto born with my unpolish'd discourse, take some little respite, that he may in the next volume be the more attentive to the wonders of the renowned empire of *China*.

*A Voyage round the World by Dr. John Francis Gemelli Careri. Part IV.*

Containing the most Remarkable Things he saw in  
CHINA.

BOOK I.

CHAP. I.

*Of the first Foundation of the City of Macao, and its Forts.*

**I** Am now at length come to enter upon the vast empire of *China*, and could wish my stile and language were suitable to the greatness of the subject, that I might give the curious reader such a draught and description as it deserves; but that being above my capacity, he must be forced to take up, and be satisfy'd with my unpolish'd way of delivery. Therefore to begin at one of the ports of this empire, that is, *Macao*, which was the first place I came to, it is to be observ'd, That *Macao* in the *Chinese* language signifies a port, and is otherwise call'd *Amagao*, a name given it from an idol so call'd, which was ador'd in that place. It is seated in 141 degrees of longitude, and 22 of latitude, on the point of an island call'd *Haiheu*, in the province of *Canton*. The shape of it is like an arm, encompass'd on all sides by the sea, except where it joins to the shoulder. The ground it stands on is uneven, being hill, vale, and plain; the houses are well built, after the manner of *Europe*; the churches very fine for that country, especially that of the *Jesuits* college, which has a noble front adorn'd with beautiful pillars. In this church is preserv'd that most precious relick of *St. Francis Xavierius*, being the bone of the arm from the shoulder to the elbow. Next the churches of the *Augustins*, of *St. Francis*, *St. Lawrence*, the *Misericordia*, and the nuns are decently built, and adorn'd. The streets of the city are all pav'd, because there is no want of stone. There are in it 5000 souls of *Portuguese*, or better, and above 15000 *Chinese*.

It is above 110 years since this place was founded by the *Portuguese*, for they

coming from *Malaca* and *India*, to trade with the *Chinese*, and being overtaken by the bad weather, some ships miserably perish'd, for want of a secure harbour in the islands about *Macao*, which made them ask some place of safety to winter in, till the season would allow them to return home, and the *Chinese*, for their own advantage, gave them this spot of rocky land, then inhabited by robbers, that they might expel them, as they did. At first they were permitted to build thatch'd houses, but afterwards having brib'd the *Mandarines*, they not only erected substantial structures, but made forts. One of these is at the mouth of the harbour, call'd the fort of the bar, whose wall upwards terminates at the rock, call'd, *A Penha*, which is an hermitage of the fathers, of the order of *St. Augustin* on the hill. The other being the biggest, is call'd the fort of the mountain, because seated on the very top of a hill. There is also another high fort, call'd *Nossa Senhora da Guia*, or, *Our Lady of Guidance*.

*Philip Ferrarius* was much mistaken, when in his geographical dictionary he said, That this city had belong'd to the king of *Portugal*, and that in the year 1668 it was taken by the emperor of *China*, and made subject to his dominion; for from its first foundation it never suffer'd any revolution, being a colony of *Portuguese*, by antient grant of the emperor, to whom they pay not only a yearly tribute, but custom for goods, and a duty upon every vessel proportionable to its bulk, tho' it be not loaded after the same manner as those of the *Moors*, and *English* do; nor can any boat go in or out, without leave

Aaaa from

GEMELLI

Its forts.

Subject to  
*China*.

GEMELLI  
1695. from the *Chinese*, who guard the mouth  
of the harbour.

This little rocky enclosure of three miles has not provisions to subsist a day, but all is brought to it from the towns of the *Chinese*, who have shut up the *Portuguese*, as it were in a prison, having secur'd that narrow neck of land which lies between the main sea, and the little arm of it next the continent with a wall and gate, which they lock up when they please, and starve the inhabitants as often as they will; tho' the country of *China* is so plentiful, that the value of a piece of eight in bread (which is the best in the world) will keep a man half a year.

Pays great  
imposts:  
ens.

The *Chinese* allow the *Portuguese* the government of the city of *Macao*, as far as relates to the administration of justice; and for this privilege they pay a yearly imposition of 600 *Tayes*, each of which is worth fifteen *Carlines* of *Naples*, which is about a noble, sterling: Besides the customs receiv'd by a *Mandarine*, whom they call *Upu*, and the duty, as was said before, upon every vessel proportionable to its bulk, the least of which pays no less than 1000 *Tayes*, that is, so many nobles. The city chooses a judge, or supreme magistrate, who has the management of civil and criminal affairs, in all cases where no *Chinese* is concern'd. The political government is in a captain-general, appointed by the king of *Portugal*, and the spiritual in a bishop. All these officers and commanders are maintain'd by the city, which allows the captain-general a piece of eight a day, and 3000 every three years; 500 to the bishop, 150 to the captains, and proportionably to the soldiers; which charge is defray'd by a duty of ten *per Cent.* upon *Portuguese* goods, and two in the hundred upon money. Tho' the king of *Portugal* has the naming of the captain-general for this small place, yet he does not allow him a farthing pay.

Besides these burdens this poor city lies under, all the *Mandarines* that come from *Canton*, are to be lodg'd and entertain'd, and this is no small expence. The *Upu*, as soon as he came, order'd a cow to be slaughter'd immediately, for him to eat a little, and ease his indisposition, forasmuch as the *Chinese* look upon it as dainty and savoury meat.

All the income and revenue of the city and inhabitants of *Macao*, depends upon the uncertainty of the tea, for all persons whatsoever there, apply themselves to trade; and the gentry deal in their money, putting it out to use, or

sending merchandize, or gold ingots to be chang'd into pieces of eight at *Goa*. Tho' at *Macao* they have not ground to sow a handful of pease, yet God provides for them, in such manner that they live in plenty enough, all necessities being brought them from the adjacent parts, and they make so much of themselves, that their tables are never without sweet-meats, excellently made by the women; and I may truly say, I never fed so well any where as at *Macao*, the women there knowing how to cover a table for a king, and to please any nice appetite.

When the trade of *Japan* flourish'd, this city was so rich, that it could have pay'd the streets with silver; but after the slaughter of so many christians, the trade of *Nagasaki* was quite lost to the *Portuguese*, it being death for any of them to be seen in that port. Thus for want of that trade, the inhabitants of *Macao* are fallen into that poverty they now labour under, having but five ships left of their own to maintain all the city, and these do not bring home returns of 300 *per Cent.* as *Japan* afforded, but a very inconsiderable profit, and this will still be lessen'd by the setting up of the *New East-India Company*, which prohibits its resort to several ports, and some of its commodities.

On *Tuesday* the 6th of *September* 1695, there began to fall a violent rain, without a boisterous wind blowing at the same time. On *Sunday* the 7th, the wind threaten'd a hurricane, being very violent at night, but God be prais'd went no further. In the months of *June*, *July*, *August*, and *September*, they are much afraid of whirl-winds, and one happened three years before I was there, which rolling in the region of the air, carry'd the tiles off the houses, and lifted up stones that four men could not remove, overturning many houses, and ruining the dormitory of the monastery of *St. Augustin*. But they are now liable to this scourge every year. The Rain continu'd after the same manner all *Monday* the 8th, the stormy wind never abating. On *Tuesday* the 9th, I went to see a play acted after the *Chinese* manner, it was represented at the cost of some of the neighbours for their diversion in the middle of a small square. There was a large stage to contain thirty persons, men and women actors, and tho' I understood it not, because they spoke the *Mandarine*, or court-language, yet I perceiv'd by the manner of it, that they acted with life and skill. It was partly recited, and partly sung, the musick

musick of several instruments of wood and brass harmoniously answering the voice of him that sung. They were all well enough clad, their garments adorn'd with gold, which they chang'd often. This play lasted ten hours, ending by

candle-light. When an act is done, <sup>GEMELLI 1695.</sup> the players sit down to eat, and very often the audience does the same. On *Wednesday* the 10th, the same company acted another play in the house of the *Uru*, or customer.

## CHAP. II.

*A fruitless Voyage made by the Portuguese, and Natives of Macao to Japan, to Re settle themselves in the trade lost in the last Persecution of the Christians.*

Christians  
excluded  
Japan.

THE inhabitants of *Macao* have endeavour'd several times to recover their trade with the *Japoneſe*; but always ineffectually, the latter obdutely persisting rather to lose several thousand crowns due to them from the others, than to receive them again into their friendship, having sworn by their Gods never to admit more christians into their country, and if any come, to butcher them without mercy. That the christians might have no opportunity of getting in under the name of other nations, they were advis'd by the *Dutch*, who will have all the profit to themselves, to lay a crucifix on the ground at the landing-place, to discover whether any christian comes under a disguise, because any such will refuse, or at least make a difficulty to trample on the crucifix to enter *Nangasacke*, the port of *Japan*. Thus the *Dutch* settled themselves in the trade, excluding all other periwading the *Japoneſe* that they were no christians, making no scruple for their interest to trample the Holy Image of Christ, which the *English* refus'd to do. This is so certainly true, that I my self in *China* saw and spoke with a *Chinese*, who told me he had trampled on it, and becoming a christian at *Nanking*, confess'd this impious action.

Attempt  
to be re-  
solv'd.

The city of *Macao* made its last effort a few years since, some of its inhabitants undauntedly exposing themselves to die, or by dint of benefits to gain the hardened hearts of the *Japoneſe*, being periwaded, that God by an accident had again given an opportunity of erecting the standard of the cross in that mighty empire, which was thus. In *February* 1685, the weather being very stormy, a *Japoneſe* bark that was trading among the islands loaded with tobacco, was wreck'd in the neighbourhood of *Macao*, none of twelve *Japoneſe* that were in her, being drown'd. The city caus'd them to be reliev'd, and the bark and goods that were sav'd

to be sold for their benefit; then having consulted together, they thought this an excellent opportunity to attempt the recovery of their trade in that island, of which same opinion the fathers of the society were.

To this intent the city and *Jesuits* hir'd a ship, and putting the *Japoneſe* aboard, set sail on the 13th of *June* of the aforesaid year for *Nangasacke*, and got into that port on the 2d of *July* at night. Immediately a *Mandarine* came aboard the vessel, which was call'd *St. Paul*, with an interpreter, and four scribes, or notaries, one of whom was sent by the general, the second by the chief civil magistrate, the third by the city, and the fourth by the prime man in religious matters, every one to write a-part what questions the interpreter put in *Portuguese*, and what they answer'd, that there might be no mistake. The interpreter knelt down before the *Mandarine*. I believe the most severe and crafty judge, could never put more ensnaring questions to draw the criminal to confess a crime, than this *Mandarine* did to the *Portuguese*, to make them own the knowledge of the antient prohibition to christians, upon pain of death not to come into the empire of *Japan*, and in case they did, to be indispensably subject to suffer the penalty. But they knowing the *Mandarine's* design could not be entrapp'd by him, but answer'd discreetly to all his interrogatories, still denying any knowledge of such prohibition. In short, the *Portuguese* were examin'd about the time the bark was cast away; in what quarter of *Macao* the twelve *Japoneſe* liv'd; whether they there, or aboard, convers'd with the christians; what it was the city of *Macao* desir'd of them; whether there were any antient men aboard the vessel, who could remember what had happen'd between the christians and *Japoneſe*; and much more too long to insert, several hours being taken up in these questions by the *Mandarine*, and notaries,

GENELEE 1695  
 notaries, who all writ severally to report it to their superiors. At length, having taken the number of men, and dimensions of the vessel, the *Mandarine* went off with all those he brought with him.

*Japoneſe*, their ſub-  
 miſſion.  
 The vulgar ſort of *Japoneſe* are worſe than ſlaves to the nobility, and *Mandarines*, for they dare not ſpeak to them, but on their knees, hanging down their heads, lifting up their hands together to their forehead, and ſtretching them out towards the *Mandarine*, by way of reſpect, which the interpreter did every time the captain of the veſſel answer'd. And if a *Mandarine* goes aboard a veſſel, in which there are a thouſand people, there will not one word be heard, all things being done by ſigns, and the pilot commands by a fan he holds in his hand, waving it to the right or left to direct the ſteerman.

The next day the *Mandarine* ſet out in a *Palanquine*, carry'd on men's ſhoulders, for *Amiaco*, to acquaint the emperor with the arrival of the *Portugueſe* veſſel, and in the mean while reſreſhments were ſent aboard from the city with much civility, bidding them aſk for all they had occaſion for, and they ſhould be ſupply'd; and tho' the *Portugueſe* did not declare their wants, yet the *Japoneſe* ſent them all that was neceſſary.

The veſſel was beſet, and guarded day and night by ten *Funes*, which are barks of the country mann'd with ſoldiers, who watch'd that none of the *Portugueſe* might ſet foot aſhore, as alſo that nothing might be thrown into the ſea, inſomuch that one day a duck flying away, ſeveral *Funes* purſu'd it for ſome hours, and having taken, carry'd it to the governour, who ſent it back, charging them to take care that no creature eſcap'd, requiring that the filth of the veſſel ſhould be thrown over-board in the preſence of the ſoldiers.

The day after the arrival of the *Portugueſe*, the *Dutch* came aboard in a ſmall boat, thinking it had been a ſhip of theirs, and perceiving they were *Portugueſe*, and underſtanding the cauſe of their coming, they return'd, ſaying, in that country it was neceſſary to ſpeak the truth.

*Dutch* factory.  
 The factory at *Nangafacke* enjoys not that liberty the *Dutch* have in their trade in other parts, nor has it that authority in this port as elſewhere; for as ſoon as the ſhips come to an anchor, a *Mandarine* comes aboard to tell the men, and carry the ſails and rudder aſhore. When a man dies, a *Mandarine* muſt view the body before it is bury'd. It happened ſix years before this time, that two ſailors were once miſſing, who had gone aſhore, and it was judg'd they

were two fathers of the ſociety, who took this courſe to make their way into that kingdom; but it coſt much money to conceal their eſcape, the *Mandarine* being brib'd, and two hillocks ſhow'd him as if they had been graves; ſo that at preſent the *Dutch* admit no ſtrangers aboard the ſhips bound for *Japan*, but only natives of *Holland*, who can prove they are of that country, and give an account of their father and mother. Nor have the *Dutch* any communication with the city, but live in their factory, which is ſeated on a rock, enclos'd with a wall, to which there are two Gates; one towards the port to ſhip their goods, and this, when the ſhips are gone, has five ſeals put upon it, not to be open'd upon pain of death. The other answers to the city, and is continually guarded, no trade being allow'd with the *Japoneſe*, but only once a year, when they give a paſs to the perſon appointed to go to *Amiaco*, to viſit the emperor from the company.

The *Mandarine* return'd from court thirty five days after his departure thither, having ſtay'd ſo long by reaſon of its diſtance of one hundred and twenty miles from *Nangafacke*. He, and the notaries with the interpreters, went aboard the *Portugueſe* veſſel, and concealing his journey to *Amiaco*, told the captain, that the emperor and his council were not inform'd of their coming, but that having acquainted the ſecretary of ſtate with it, he had taken that affair upon him, becauſe the king could not be ſpoken to; and therefore they might go their way, enjoining them never more to return to thoſe iſlands upon any account whatſoever, ſo far as at preſent, they pardon'd and gave them their lives in return for the kindneſs they had ſhewn their country-men, whom they carry'd to *Nangafacke*; but it was never known, whether they put them to death or not. Then the *Portugueſe* captain aſk'd, in caſe any other *Japoneſe* bark were caſt away upon their land, what they were to do, to which queſtion no answer was given.

Afterwards they read the emperor's order, which they had receiv'd by letter from the ſecretary, and every time the emperor was nam'd, the *Mandarines* kneel'd down. At laſt, having assign'd the time when they were to be gone, they bid them give an account what provisions they wanted, further adviſing them in caſe they ſhould be forced back by ſtreſs of weather, to come to *Nangafacke*, and bidding them have a care of going to any other port, becauſe they would be in much danger. the *Mandarines* were gone, the vessel was tow'd by several *Funes*, or barks, about a cannon shot out of the harbour of the city, where it stay'd six weeks for a wind, and when the weather was fit, on the day prefix'd, the *Japoneſe* brought them the provisions and water they had ask'd for, taſting it before them to take away any ſuſpicion. Then they reſtor'd them the pictures, beads and croſſes, taken from them when firſt they came to *Nangajacbe*, which they kept lock'd up in a box, becauſe of the great averſion thoſe people have for the croſs, and other chriſtian devotions. They had ask'd them at their firſt coming, why they bore the croſs in their colours? to which the *Portugueſe* answer'd, It was the enſign of their kings. Thus the veſſel return'd to *Macao*, without any return, after all their expence.

Befides this account of the matter of fact already given, the maſter, mate, and ſeveral ſeamen, who went that voyage, and whom I diſcours'd aboard the veſſel call'd the *Reſary*, told me it was very difficult getting into the channel of *Nangajacbe*, by reaſon of the flats, rocks, and iſlands that lie in it; beſides, it is neceſſary to come to an anchor four times, by reaſon of the tide, which ſometimes is for, and ſometimes

againſt them. It is ſcur'd by five GENELEE 1695 guards in as many ſeveral poſts upon the channel, and two garrisons at the mouth of the bay, who, as ſoon as they diſcover any ſhip, preſently ſend notice of it to the city, which preſerves it ſelf without walls or cannon, only by its vigilance. The houſes of the city are of timber, the ſtreets are barricado'd at night, and watch'd by captains, who are to give an account of all that happens. *Nangajacbe* looks towards the weſt, and is above a mile in compaſs. Theſe men alſo told me, that the *Japoneſe* ſhave from the forehead to the crown of the head, leaving the reſt of the hair ſhort, and that when they go aboard they are bare-headed, only the *Mandarines* wearing a very fine ſtraw-hood. They ſhave the upper and under lip; their garment is ſhort, at leaſt that I have ſeen ſome *Japoneſe* wear, bound cloſe about them with a girdle, in which they ſtick their two ſcimiters, one long, and the other ſhort. The women are clad after the ſame manner, and wear their hair looſe; they have no handkerchiefs to bi w their noſes, but uſe paper, which ſerves but once. The country about *Nangajacbe* is mountainous, but fruitful to ſuch a degree, that it bears moſt *European* fruits.

## CHAP. III.

*The Author's Journey to Canton, with a Deſcription of that City, and others in the Way to it.*

**B**Eing reſolv'd to go over to *Canton*, I went on *Thursday* the 11th, to ſpeak to the *Portugueſe* general, to get me a paſs from the *Upu*, that I might not be troubled on the road, which he promiſ'd to do. *Friday* the 12th, I laid out for a *Chineſe*, to be my interpreter on the road, and ſoon found one for a ſmall conſideration. On *Saturday* the 13th, I went with the city ſolicitor to take my leave of the *Upu*, but we came at a time when he was diſpatching the letters for the emperor, which were writ by the city and *Mandarines*, upon account of ſending him a lion. The ſolemnity was perform'd after this manner. The *Upu* coming out in publick, ſate down in a chair, with a deſk before him, cover'd with ſilk, clad in a long garment, to which was faſtned a great collar, or rather hood that hung down, and cover'd his back, and made two wings. Abundance of inſtruments and conſu'd voices reſounded for the

more grandeur, beſides the firing of three chambers, thirty foot-foldiers ſtanding in a rank, with ſeveral enſigns in their hands, and very long umbrelloes. The *Upu* kneel'd facing a table, on which was a bag with the emperor's letters, bowing down his forehead to the ground three times, which he repeated as often, riſing up every time upon his feet. The ceremony ended, thoſe that held the inſtruments and umbrelloes running out of the way, that the letters might be deliver'd in due form upon the firing of three other chambers. The expreſs having receiv'd them, immediately mounted a horſeback, and began to gallop, all *Mandarines* being oblig'd, within their juſtification, to furniſh him with good horſes, without detaining, or ſtaying him. After this, the *Mandarine* ſate down, and cauſ'd the gates to be open'd, which were ſhut before, and ſoon after withdrew, for which reaſon I could not then take leave of him.

GEMELLI  
1698.  
Way from  
Macao to  
Oanfon.

On Sunday the 14th, I went again clad after the *Chinese* fashion, and took leave of him, after he had given me a pass to all the custom-houses on the road, because I carry'd goods of bulk, and a slave. Monday the 15th, having taken a boat that had a good cabin in the stern, I caus'd my bed to be made in it, and went aboard in the evening. All the night they row'd with the *Eylan*, or *Lie*, which is a particular sort of oar us'd by the *Chinese*, longer than the others, and placed at the stern, or at the side, supported by a pin, or bound with a rope. Several persons row with it dexterously, without taking it out of the water, as other nations do, but moving it from side to side, which puts the vessel forwards, and one such oar does more work than four others. Where there are shoals, they shove the boats forward with poles. At mid-night we came to an anchor. Tuesday the 16th, early we sail'd, holding on our way through a channel left by the adjacent islands. It is true, there is another wider channel more to sea, us'd by great ships, for by land there is no going beyond *Oanfon*. Having pass'd by so many islands that they seem'd quite to block up the way, we enter'd a river of fresh water, which stagnated in several places among the islands, and was at least half a mile over. We arriv'd at *Oanfon*, or *Anfon*, as the *Portuguese* pronounce it, before night. The islands, and country about them are pleasant enough, by reason of the greenness of the fields and meadows, which might feed mighty flocks, not unlike *Apulia*, in *Italy*, but we saw none there. Along the canal we met several custom-house officers in boats, who put me to no trouble about my equipage, or my slave, nor did they search our vessel, and I gave them in all a piece of eight.

Oanfon  
city.

*Oanfon* is more like a great village than a city, having no wall, and its low houses are for the most part of timber, and thatch'd. The city is seated in the plain along the river, because the *Chinese* do not build on the high grounds, for fear of hurricanes. It reaches above two miles in length. The market-places, or squares in it are large, with rich shops, where are sold cloths, silks, calicoes, drugs, or spices, garments, provisions, and other things. It is defended by a vast structure, along the side, and on the top of the hill, being two miles and a half in compass, which they call the fort, tho' there were in it but five small guns to

be fir'd upon publick rejoycings, and but a small garrison. And indeed, all the use of it is for the natives to retire thither upon any invasion, there being centinels continually on high towers, to give notice who approaches. The city is govern'd by a *Quansa*, or *Mandarine*, as the *Portuguese* call him, who guards the channel with nine vessels well mann'd. There are often barks ready here to go over to *Canton*, because those who come by sea and land from *Macao*, want shipping; but it was my misfortune then to find none, and I afterwards went all alone in a great vessel bound for *Seloam*, which was half-way. Going aboard it about sun-setting, the wind was so favourable, that at mid-night we came to an anchor near that place. All the way was along a still channel amidst green fields of rice, but it is small: than ours, red, and courle.

Wednesday the 17th, I walk'd about to see *Seloam*, and found it a greater wood inhabited, there being such a multitude of trees. The houses of stone, or brick, but low, after their manner. The compass of the town was above three miles; besides, there are such numbers of boats, that they almost made another town. A *Mandarine* governs here. On the opposite side of the channel was another city call'd *Santa*, much greater, and better built, under another *Mandarine*. This second boat cost but six *Carlines* of *Naples*, that is, 21. 8d, which I mention to shew how cheap travelling is in *China*.

Thursday the 18th, I hir'd another vessel, better than the former two, for it had cabbins and galleries on the sides, cover'd with all conveniences. We set out at noon for *Canton*. Several *Chinese* went along with me, whom I found very observant and courtous to me; and there was a cook aboard to serve the passengers, who dress'd meat after the *Chinese* fashion. Tho' the current of the water was against us, yet the wind being fair we made way, always amidst pleasant fields and towns, beautiful towers every where appearing upon high mountains. In these rivers and channels there is taken abundance of fish, prawns, and the like, but particularly a vast quantity of oysters, of whose shells they make gla'ss for the windows. The river we sail'd upon parted into several branches on the right and left, its waters affording those people an easy communication with one another, sometimes spreading abroad, and sometimes contracting it self to make the way the more difficult. setting we left *Lauzan* on the right, and on the left *Ciaum*, *Potatum*, and other stately places to be seen every two miles, in each of which we saw eight, twelve, or fifteen high towers, according to the bigness of the town, but all of them large, strong, and with loop-holes, providently built by the *Chinese*, in case of any attack from an enemy, that the townsmen retiring with their goods, may defend themselves, upon notice given them by those that are there upon guard, which is only in those places where there is no sort to retire to.

Friday the 10th, we put into the port of *Canton*, just at sun-rising, having lain all night at anchor near that city. Here the fresh channel and the salt, on which we sail'd, meet, and form that peninsula on the point of which *Macao* stands, being about 150 miles distant from *Canton*, for the way is not strait, we having made a semicircle because of the winding of the river. I went in a small boat to the custom-house, which was kept in a very great bark, with many cabbins in it for the conveniency of the officers, who seeing the *Upu's* pass, discharge'd me, paying only five small pieces duty, without opening my goods. For the boat I paid about six *royals Spanish*, [if he means *royals plate* it is three shillings, if *royals brass*, but two.] I went to the monastery of the *Spanish* fathers, of the order of St. Francis, residing upon the mission in *Canton*, and in the suburb, where they have two churches well adorn'd, maintain'd by the charitable allowance of the king of *Spain*. They receiv'd me very courteously, not without some jealousy, because my coming was an unusual thing. For the better understanding hereof, it is to be observ'd, That the city of *Macao*, by reason of its poverty, having been long without a bishop, the see apostolick has thought proper to appoint vicars apostolick in *China*, *Tuncbin*, and *Cochinchina*, to whom all the missionaries and catholics are subject. Some priests of the college of St. Germain, in *Paris*, being pitch'd upon to this purpose, the *Spanish Franciscans*, *Augustinians* and *Dominicans* maintain'd in *China*, by the charity of the king of *Spain*, took the oath of obedience to the aforesaid priests. Now about four years since, the presence of a bishop being thought absolutely necessary, the city of *Macao* writ to the king of *Portugal*, intreating him to intercede with the pope, that the city might have a bishop again, offering to allow him a suitable maintenance. The

bishop accordingly came to *Macao*, and pretending that *Canton*, and other places in *China* were within his diocese, would have the aforesaid fathers to be subject to him, and not to the vicars apostolick, whom he suppos'd to be recall'd by his coming. But these fathers having taken an oath to obey the vicars, they say they cannot be subject to the bishop, without he shews the others are recall'd. Upon this account there are every day summons and monitories sent them, which do not only distract those good religious men in the service of God, and the duty of their mission, but lessen the brotherly affection they ought to have for one another, for they are all divided into factions, those already mention'd for the vicars, and the *Jesuits* on the other side for the bishop; variances well known at the court of *Rome*, where the remedy is to be apply'd to prevent the scandal that may be given to the christian *Chinese*. I coming thither during those troubles, they all positively concluded, I was sent by his holiness to enquire privately into those affairs, some making me a barefoot *Carmelite* friar, and some a secular priest; and tho' I did all I could to undeceive the *Franciscan* fathers, telling them the truth, viz. That I was a *Neapolitan*, and travell'd only for my own private curiosity; that his holiness had not allow'd me a farthing for my voyage, and that the least I desir'd to enquire into, was the business of their missions; yet this could not remove the strong imagination settled in them, and they answer'd, That since there was first a passage open'd into *China*, no *Italian* lay-man, much less a *Neapolitan* had ever set his foot there. At length, I bid them search my goods, for I would freely give them the keys to satisfy them I had no such instructions: but all was in vain. At the same time the *Jesuits*, as well as the *Franciscans* consulted about my coming.

*Canton*, or *Kanceou*, as the *Chinese* Government call it, is the metropolis of the province of *Kuantun*, seated in the latitude of 23 degrees and 5 minutes. Being too big to be govern'd by one governor, it was divided into two by a wall from east to west, the old call'd *Kreuchin*, and the new *Sinbin*, dividing also the suburbs belonging to it. Two governors, as has been said, administer justice in this place, and are call'd *Chike-nes*, having under them lesser *Mandarines*, captains, officers, notaries, and other ministers. One *Cifu*, or regent over the political government is superior to

GENELLI to these governours, and has two assistants in the execution of his office, call'd

1695.

*Uful* and *Sanfu*, one of the right, the other of the left hand. The vice-roy call'd *Fuyuen*, who governs the province, is above them all. Formerly a certain family had this employment, with the title of petty kings, or royetelets, but it is ten years since the present emperor suppress'd that dignity, upon suspicion of treason, causing the last of them to have his head cut off. Over this vice-roy is a *Tjuntio*, or vicar-general of two provinces, who resides in one of the two principal cities, or where he pleases; at present in *Cbia-ozunfu*. This man in the political government is superior to the vice-roy, and absolute in military affairs, for he alone gives orders to the soldiery, which the vice-roys have no authority to do. There is a *Ganchiafu* in the province for criminal matters, who punishes all crimes; and for the receiving the emperor's taxes, there is a treasurer call'd *Pujsinfu*. For military affairs, there are two generals subordinate to the *Tjuntio*, one of them commands the *Tartar* troops, and is call'd *Cbiancium*, whose authority is equal to the vice-roys, for within the city the *Chinese* kettle-drum, which is a brass drum, is beaten before him, and has thirteen strokes given following, as is practis'd with the vice-roy; the authority and dignity of ministers being known in *China* by the number of strokes. The other general commands the forces of the country for the guard of the city, but is subordinate to the vice-roy, and call'd *Titu*. The generals have colonels or *Zumpins*, majors or *Futians*, captains or *Secupes*, and ensigns or *Pazuns* under their command. There are in the city other courts, and in each of them six clerks of the six great councils of the imperial court, every one to dispatch the affairs belonging to that council he is of; of them we shall speak in its place.

Description  
of  
Canton.

These cities and their suburbs are so populous that there is some trouble in going along in a chair. The fathers missionaries say this city and its suburbs, contain four millions of souls, and the province as many more; which to Europeans will sound like a fable, because they are not us'd to hear of such numbers. They may believe what they please but I write what I heard from fathers, who deserve credit, and had no interest in this matter. The houses are low, either of stone, or brick, without any windows to the street, and almost all alike, for the *Chinese* build all after the

same model, and so the cities resemble one another. There are four principal gates to the cities, facing east, west, north, and south, the suburbs taking their names from them. If the city be large, there are more gates, but these four must not be omitted. The streets are very long and strait, the shops rich in silks, drugs, and other commodities of the country, especially in the new city, for in the old, where the vice-roy resides with the soldiery, and courts afore said, there is not much; in other points, the city and suburbs are one continu'd Bazar or fair, there is such a multitude of shops.

The vice-roys and other ministers palaces are big enough, and all upon a floor, with their tribunals, and therefore are nothing beautiful, because they are courts within courts, with the apartments and rooms about them, and receiving all their light from them. In the old city is one noble street, having many stone-arches curiously wrought. They have no cannon regularly dispos'd on the walls of the town, but only a few small pieces to fire upon festivals.

Sunday the 21st, all the *Chinese* christians came to our church, and I was much edify'd to see their extraordinary modesty. Tuesday the 23d, I went to the old city to pay the visit to the father commissary of St. Francis. There I found a good church and monastery, built twenty years before by the little king (we said before the emperor caus'd to be put to death) who having a great esteem for the fathers, did not only build their church and monastery, but facilitated the buying of a house which was fallen to the emperor, and which the fathers got in the suburb, at an easy rate, to found another church and monastery, where I then liv'd. Wednesday the 24th, I went to pay the visit to father *Turcotti*, superior of the *Jesuits*, who being a *Milanese*, went over at the expence of the crown of Spain, by the way of Mexico to Manila, and sent thence to the mission of Ternate. There he was made prisoner with the garrison by the Dutch, who carry'd him to Batavia, where having recover'd his liberty, he went over to Macao under the protection of the crown of Portugal. There he was employ'd in the mission of Canton. Both his church and monastery were poor, and in a mean condition. The Spanish fathers of the order of St. Augustin, two years before this, bought houses to build their church, which they had not yet begun, no more than the French fathers of the society, residing

Floating  
city.

siding in *Peking*, whose house is near to the others.

Near *Canton* appears another floating city in boats upon the canal, for in every one of them whole families live with their beasts, and birds, each of them being as long as a galley, cover'd with boards or canes, or else with fig-leaves, with eleven or twelve several rooms in length, to which there is a communication through a boarded gallery, which runs along both sides of them.

In *China* a gentleman cannot go a step a-foot, but must be carry'd in a chair, to avoid falling into the contempt of the *Chinese*; but the chair is to be had at a reasonable rate, and better than those in *Naples*. They use no straps to carry them, but have a piece of wood nail'd across the two poles, which they lay on their shoulders bare, so that it can do no hurt by cutting the flesh. The *Chinese* will carry a chair six miles for a carline of *Naples* money, which is not full six pence.

Being resolv'd to go on to *Peking*, I spoke to the superior of the monastery where I lay, to provide me a faithful servant. He being subordinate to the fathers of the society, privately acquainted father *Turcotti* with it, to know his will, and he being an honest *Lombard* bid him let me go; whereas had he been a *Portuguese*, he had certainly obstructed my journey. Yet this my resolution did not a little increase the jea-

lousy of the missionaries, and confirm <sup>GENELLI 1695.</sup> them in the opinion that I was sent by the pope to enquire privately into the divisions in *China*, seeing I was going on to the court. I am of opinion this jealousy facilitated my journey, which otherwise is full of difficulties, because the *Portuguese* fathers will have no *European* go to the court without their consent. After the aforesaid precaution, the father-superior procur'd me a christian *Chinese* guide, or conductor, who was ripe in years, and hir'd himself for a *Tayes* per month (which is fifteen carlines of *Naples* coin, or a noble sterling) giving him four pieces of eight earnest to provide for his family. Three days after he came to acquaint me, that he was known and had relations at the court, and therefore could not cook for me, and perform other mean services, and therefore it would be requisite I should take another, and he would be steward, and provide conveniences for travelling. I submitted to this imposition, because of his trustiness, the fathers being sureties for him, and took a christian servant eighteen years of age, to dress meat, and do other mean offices, after the rate of a piece of eight a month, and made him buy all necessaries for my journey, even to lamps. I deliver'd my baggage to the father-superior, leaving my slave in the monastery.

CHAP. IV.

*The Author's Voyage to Nanyanfu.*

HAVING made provision of victual, I went aboard with my two *Chinese* servants on *Friday* the 26th, late, in the post-bark, or packet-boat, sent out every three days by the vice-roy, to give the emperor an account of all that happens in the province, which only he and the two prime ministers can do. For three pieces of eight, I had a good convenient cabin in that bark. It set not out that night, waiting to be dispatch'd, which being done, we presently set sail on *Saturday*, about nine in the morning. We went out of the great canal of *Canion*, into another less, full of boats, always in sight of villages and country-houses, amidst green fields. Three hours before sun-setting, we came to the city of *Fusian*, where the custom-house officer, who was in a boat, only look'd upon the master of our vessel's pass. The city is two miles in

length on both sides the banks, well built, but low. The other city (I give it this name because of its greatness, whereas in reality it is a village) is on the water, made of boats, the multitude whereof is so great, that it almost shuts up the passage of the canal. Every town on the land has another to answer it on the water, the poor people liking to live in floating-houses on the canals, which cross all the country. *Fusian* is a great trading city, full of rich shops, and the best webs the *Spaniards* carry over into *New Spain*, are made here. It has above a thousand looms for silks, in each of which four pieces are made at once. There is no court of justice in this place but it is subject in all things to *Canton*, for which subordination, it may be call'd a village, but such a one as contains a million of souls, as all the fathers mis-

C c c c ners

VOL. IV.

GEMELLI 1695. *ners* unanimously inform'd me. Here night coming on, the watermen put an end to their labour, taking their rest on the guard of *Xuantin*.

*Sunday* the 28th, we set out again three hours before day, always in sight of good villages and till'd grounds, for the *Chinese* are so industrious, that they do not only till the plain, but the mountains, cutting them out in ascents to sow them. Before noon we pass'd by the town of *Suetan*, seated in a wood of fruit-trees; after which we pass'd by another call'd *Sinan*, above a mile in length, both sides of the shore being inhabited, and no fewer living in boats upon the water. We stopp'd at the guard of *Su-rytan*. Five men row'd all this way. It is very pleasant travelling, both the green banks appearing as a man lies in his bed.

Sale tra-  
veling

*Monday* the 29th, before day, we held on our voyage, meeting at every four miles the guards of the canal, who have a great boat mann'd with fire-locks, and a small gun at the head to pursue robbers; the emperor maintaining an infinite number of soldiers to secure all the roads in the empire, keeping guards at competent distances. Besides, it is very hard for a robber to escape; for if he goes into his own country, he will be apprehended, and if he would abscond elsewhere it is not practicable, because the inhabitants of that quarter where he would settle, would not admit him, without ten families to be bound for him, and they will not do it, unless a man be well known. At night we lay in the town of *Zin-juenxyen*, the walls whereof are a mile in compass. It is populous, has good streets, and shops, and a suburb on the right-hand shore of a considerable length abounding in all things.

*Tuesday* the 30th, the boat was tow'd along with a rope, as is usual, because the wind and stream were contrary. Afternoon we entred between vast high mountains, which open'd to give way to the canal. They were very pleasant, green and full of rivulets, but the water is not good. On the left hand we left a great *Pagod* with many houses about it, among the green trees, and serv'd by *Bowzes*. Having a mind to eat some fish (which is not sold here, but exchange'd by weight for rice) my *Chinese* servants set it on to boil with a hen, thinking to dress me a dainty dish, but I threw it into the canal. Having pass'd the narrow of the mountains, we lay at night upon the guard of *Xaycheu*. Here the *Chinese* drum was beaten all night, which the centinel did, to show his watchfulness.

*Wednesday* the 13th, we went on thorough places little inhabited, and spent the night in the middle of the river.

*Thursday* the first of *September*, the canal making its way thorough the midst of mountains we were shaded by them, and came at noon to *Intexyen*, a small wall'd town with a great suburb. I Accom-  
went into a *Pagod*, where there were of a Pag-  
great idols sitting with whiskers, and long beards, in royal robes, and with *Chinese* caps on their heads, which are high, the one half standing up above the head. At the feet of them was a statue somewhat less, sitting after the same manner, but with another sort of cap, and on the sides of this stood two, as if they had been pages. Without the *Pagod* was a statue standing, which had a devil's face, holding a lance, and in its left hand another with a casket in its hand resembling an offering. Further out were two horses saddled, each of them with a groom holding him by the cheek. There was also a great drum hung, and a brass bell like ours, which is rung at mid-night, and usual times of prayer. We stay'd that night at the guard and town of *Vanfucan*.

*Friday* the 2d, as we pass'd by a *Pagod* cut out of the middle of a high rock, the blind watermen burnt some papers, and set up lights. The river was winding, and the boat drawn with a rope made of small canes, so that we advanced but little. Besides, the men spent their time in cooking their meat, taking it by turns; for they are such gluttons, that they devour their meat twice, first raw, and then half dress'd; for one turns and winds it in his hands, another cuts it; one washes, and another looks as if he would swallow it. Their first meal is at break of day, and so they continue every hour, nor have they any other God but their belly. *Saturday* the 3d, we lay at night near the guard *Pattu*. The heat was troublesome, which the watermen increas'd, setting up lights every night before a little idol, which was within my cabin, for which reason I soon put them out. *Sunday* the 4th, before night-fall, we came to *Sciau-cheufu*, a city encompass'd by a weak wall, four miles in compass, and enclos'd three parts of it by the river. It has good houses, and shops after the *Chinese* fashion. *Monday* the 5th, after firing some chambers, the *Mandarine* of the city came along the shore to take the air. Before him went two men with brass drums, who gave nine strokes following, two blue colours, two white,

white, two maces with dragons heads at the ends of them, being the imperial arms, two executioners with staves in their hands, four mace-bearers, four other officers with red and black hats without brims, and with two plumes hanging, who made a noise to give notice to the people. Then came the *Mandarine* in a chair carry'd by four men, with three umbrells on his sides. Ten servants with scimitars follow'd him, with the points forwards instead of the hilts. That night we lay near the houses of *Tanfu*, or guard of *Uyan-tan*. Tuesday the 6th, we continu'd in the midst of the river, having made but little way, because the current was rapid and against us.

Wednesday the 7th, after night-fall, we came to *Cbianken*, a small village, which was as far as the first boat went. Here we took another less, because of the current, and for want of water; tho' here two rivers meet. This boat had seven hundred *Siens*, or *Cbiappas*, which make a piece of eight. We set out immediately, striking into the river on the right, and lay at night among a great number of boats. Thursday the 8th, we continu'd our voyage with more expedition, coming at sun-set to *Tancoyen*; where, because the river cannot water the fields, the industrious *Cbinese* drew it up by force in a bucket, two men working at the rope; or else turning a wheel with their feet, about which,

and another, is one end of a chain of <sup>GENELEE</sup> squar'd boards, which passing through a long wooden trough, one end of which is in the river, raises the water through it, and is convey'd in a channel along the field. A curious invention, which none but the wonderful wit of the *Cbinese*, could have found out. That night we lay near the small place call'd *Tauriyen*.

Friday the 9th, I came after noon to *Nanyanfu*, the last city of the province of *Canton*, on that side. I went to the church of the *Spanish* fathers missionaries, where though I found not the father, who was gone to the villages of his mission, I was courteously receiv'd by the servants, who treated me in the best manner they could. *Nanyanfu* is <sup>1695.</sup> *Nanyanfu* on the right side of the river, in 25 degrees of latitude, and 142 of longitude. It stretches a mile and a half in length, and is but a quarter of a mile in breadth. Having taken a chair for coolness, I was carry'd about it, and found nothing to please the eyes, because, besides that their houses are low, there are many decay'd and gone to ruin, there being large gardens within the city. There are abundance of shops of goods and provisions, this place being an unavoidable thorough-fare for all commodities carry'd out of the south to the north, or from the north to the south.

## CHAP. V.

*The Way that must of necessity be gone by Land, to take boat again, and the Description of the great Canal of China.*

MY servants caus'd three chairs to be brought betimes on Saturday the 10th to the convent, one for me, and two for themselves. They are very light, being made of cane, even to the poles, because they are to be carry'd over a craggy mountain. It is incredible how nimbly those chair-men travel'd, without resting any more than three times all the journey of thirty miles, trotting five miles an hour, without the ease of straps, instead of which they have a hard piece of wood across, lying on their necks, which cuts their flesh, but some of them use a leather collar to save themselves. The way was like a continual fair, there was such abundance of goods carry'd along it, by an infinite number of porters, and so many chairs. For in *Cbina*, all merchandise being carry'd upon rivers, and there

being no communication between those on *Nanyanfu* and *Nanganfu*, of which is the greatest trade of the empire, it is carry'd thirty miles by land, the men serving instead of beasts, carrying good burdens; and I may truly affirm in this journey I met above thirty thousand. To feed such a number of people, the road is a continual row of villages and inns, where those porters dine, for the value of a grain of *Naples* money, which is the smallest coin. The country where tillable is a perfect field of rice, which ripens at all times, the land never lying fallow. I din'd at noon in one of those inns, and afterwards rested in another, because of the heat. Tho' the mountain for two miles ascending, and as far descending, was very steep, yet I went it in a chair, because the men that carry'd me were strong, and I somewhat in.

GENELLI 1695. indispos'd. One *Vicen*, whilst he was Mandarin of *Nanganfu*, made the way through this mountain, but with the assistance of him of *Nanyanfu*, who in like manner cut the unpassable mountain on his side. In return for which good act the *Chinese* erected a *Pagod* in honour of these two *Mandarines* in the mid-way, with their statues, adoring them as idols. Being come off the mountain and having travel'd two miles from it, I came to *Nanganfu* three hours before night, and lodg'd in the house of the *Spanish Franciscans*, and tho' the father was not there, being gone abroad into the liberties of his mission, yet the servants complimented me with great respect and submission. No mission in *China* is better than this, maintain'd here by the charity of our *Spanish* monarch, who after being at the expence of one thousand pieces of eight for sending a missionary into *China*, punctually supplies him with one hundred and forty more *per annum*, allowing the reform'd *Franciscans* for twenty fathers, tho' they have but twelve there. The same he does with the *Spanish Dominicans* and *Augustinians*, who also go thither by the way of *Manila*. The money they save at the years end, they employ in building new churches, and adorning old; for the finest in *Canton*, *Nanyanfu*, and *Nanganfu* are those of the *Spanish* fathers, who keep them very decently. Tho' the *Jesuits* in *Peking*, *Cancbeus*, and other cities, have revenues of houses and lands, yet they live very sparingly, when they are not punctually reliev'd from *Portugal*, they themselves having told me, that the year before this we speak of, there were only twenty five *Tayes* a missionary distributed, which is thirty one pieces of eight, which cannot suffice to maintain four or five servants, for those that have no revenues. Yet those of *Peking* fare well.

*Nanganfu*  
city.

The great  
canal.

Having taken a chair, I went about the city, which is the first in the province of *Kiamfy*, the mountain dividing the two provinces. It is seated on the right hand of the river, being a mile in length, besides the suburbs; there are many villages on the other side. The houses are of stone, brick, and timber, low, and ill built, streets narrow, and the shops not very rich, tho' here is a great trade by land and water, for it were necessary the river should flow with gold, to make that infinite number of inhabitants easy.

The great canal of *China*, which makes that vast empire navigable from one end to the other, for the vast length of about one thousand eight hundred miles, always along rivers and canals

(tho' I travel'd one days journey from *Nanyanfu* to *Nanganfu*) was made by the command of the *Tartar* prince *Xicu*, or *Cublay*. For the western *Tartars* having about four hundred years since conquer'd *China*, they fix'd the seat of their empire at *Peking*, that they might be more at hand to govern their dominions of the western *Tartary*, which begins at the province of *Peking*, and stretches out as far as the *Mogul's* country, and to *Persia* on the *Caspian* sea; and because the northern provinces could not furnish the necessary provisions for the support of that mighty court, it being at the same time very uncertain to bring them by the sea, out of the south, by reason of calms and storms, he employ'd an infinite number of people, who with an immense charge, and wonderful industry, cut a canal across several provinces three thousand five hundred *Chinese* furlongs in length, which make three hundred and thirty *Italian* miles. This canal, as well to break the current of the water, as to make it the deeper, has in several places seventy two sluices. They have strong wooden gates which are shut at night, and open'd in the day, for boats to pass. The passage through them is generally easy, but there are some few difficult and dangerous, especially that they call *Tien-Ficha*, that is, *The Queen or Lady of Heaven*, to express its extraordinary height. When the boats go against the stream, and are come to the foot of this sluice, they are tow'd with several ropes by four, or five hundred men, fastening strong cables to stone pillars, in case the ropes should not answer. Being thus secur'd they all begin gently to draw the boat by beat of drum, and then make all the haste they can, whilst she is in the violent part of the current, to bring her at one pull out of danger, and into the standing water. They go down with much precaution, but more danger; fastening cords to the stern of the boat, which they let run gently, whilst others with long poles, shod with iron, keep them from dashing against the banks. This canal begins at the city *Tan-cheu*, eight miles from *Peking*, where there is a river whose stream is follow'd till it falls into another river near the sea, which they run up for some days. Next they come into a canal made by art, and after sailing seventy miles, there is a *Pagod*, call'd *Fuen-xieu-miao*, that is, *the temple of the Spirit*, which divides the waters; because here the waters make no opposition, but they run along it only with the help of oars. This water comes from a lake eastwards through a canal,

cut by the *Chinese*, through a mountain, stopping the natural course of the river, and conveying it to artificially to this *Pagoda*, that when it comes over against it, one half runs north, and the other half south. The canal in some places runs within the city, and in others along the walls. It crosses part of the province of *Peking*, all that of *Xantung*, and after entering that of *Nanking* falls into this rapid river, which the *Chinese* call, *the yellow River*; on which there is not two days fail, and then they enter into an-

other river, up which they run a mile, at the end whereof is a canal, made by the *Chinese*, on the south side of this last river, which runs towards the city *Hoain-gan*. From hence it runs through several cities, till coming to the town of *Tamcheu*, not far from thence, it falls into the great river *Kian*, half a days journey from the city *Nanking*. This was certainly a greater and more wonderful work, than all those antient ones we are told of the *Romans*, *Persians*, *Assyrians*, or other former monarchies.

## CHAP. VI.

*The Voyage to Nanchianfu, the Metropolis of the Province of Kianfi.*

*Sunday* the 11th, I found my self so weak, by reason of a loolness, that I could not fet out, tho' the boat was ready. *Monday* the 12th, I went aboard, and the boat immediately let out with the stream, amidst vast high mountains, the city of *Nanganfu* being at the foot of, and all round beset by them. At sun set we rested at the village of *Sz-main*. *Tuesday* the 13th, getting out of the confinement of the mountains, we met many boats, which were some hindrance to us, because of the narrowness of the channel, so that we could make but little way. Yet we came at night to lie at the town of *Sinbin*, whose wall is above half a mile in compass, with a little suburb on one side. *Wednesday* the 14th, three hours before night, we pass'd by *Nan-can-xien*, seated on the left hand of the river. It is a mile long, with suburbs on the opposite bank; in *Europe* it would be accounted a city, but the *Chinese* call'd it a borough, tho' encompass'd with a wall. There are good shops, and it is populous. As we were passing, a *Mandarine* went in to a fine boat, cover'd, and painted, with the musick of pipes and drums, and firing of some small guns. At night we lay by at *Tanfu*, or guard of *Sintan*. *Thursday* the 15th, we pass'd the night at *Xuancheu*, where fell the first rain, since I came into *China*. *Friday* the 16th, we came in early to the city *Canchenfu*, where, as in all other cities of this empire, there are very antient towers, on the hills and mountains, which the *Chinese* call *Pauta*. They are about one hundred and fifty spans, or about one hundred and twelve foot high; some more. They end at top in a long stone cut in knots, and are hexagons, or octogons. That of this city had nine stories, or cornishes, and six windows to

every one to look out on all sides. The *Chinese* vary in opinion as to the intent of building them; some saying they were for watch towers, placing centinels in them, in time of need, to give notice to the citizens of the approach of an enemy. Others affirm, every city built them to make their observations in sooth-saying; but I am of opinion the main design of the builders, was to beautify the cities, they being for the most part about the gates, and in sight of those that go in. I thought to have fet out soon, but the ill custom of *China*, made me stay a day, for the custom-house officer to search the boat, who uses to search but once a day, two hours after sun-rising, so that the boats which come in later, must stay till the next day. I went to see the church of the *French Jesuits*, which is small but well adorn'd, and the house convenient for one religious man attended by eight servants. I found not the superior at home, he being gone to some sick christians. The city is seated on the plain of the great hill, is beautiful, and has good rich shops. About it is a wall, and opposite to it suburbs on the further bank. The houses are very good after the country fashion, the streets well pav'd and strait. I plainly perceiv'd what a folly I was guilty of in wandering through strange countries, with two *Chinese* servants, whom I neither knew nor understood; yet having resolv'd to go round the world, I was oblig'd to go on without apprehending any danger or misfortune that might happen, there being no other way of travelling, if a man has the curiosity to see and observe things himself. I would have chang'd my principal servant in this place, because he was somewhat bold; but was told I must bear with him, by reason I might

GEMELLI light of another; that might prove a  
1695. thief and worse.

*~ Saturday* the 17th, after the discharge of three chambers, the two *Mandarines* of the custom-house came to clear the boats. They sat as it were in judgment under a barach, or shed on the river, where there were three boats well cover'd, with two great, and ten small colours, at each of which hung horse-tails, and mains dy'd red. Having done their duty, they gave us leave to depart. We set out two hours before noon. Our way was along a rocky river, where the boat was in danger, but the banks were well inhabited. At night we came to the guard, or village of *Jeuchin*. *~ Sunday* the 18th, continuing our voyage along the same river still rocky, three hours before night we left on the right shore *Guangankien*, a city encompass'd with a wall near a mile about, and almost square. It was late when we came to *Pecianzun*, a town on the right hand shore; another call'd *Sciaucben*, being on the opposite bank. It was hard to reckon the miles we went, because the boat went slow, and there was but one or two oars us'd, one at the stern, and another on the side, which play'd in the water without ever being taken out of it. This the *Portuguese* call *Lio Lio*, and the *Chinese* in that province *Jauuu*. Besides, the river had many windings, so that we had double the way to go. The *Chinese* measure it by *Lij*, each of which is two hundred and sixty paces, thirteen of them making a *Spanish* league.

*Monday* the 19th, about noon I saw on the left hand shore the town of *Tayxoxien*, enclos'd by a good wall a mile in length, with two towers on the sides, and another two miles off. We lay at the guard of the village of *Tunchinpa*. *Tuesday* the 20th, early we pass'd by a great village call'd *Cbianciatu*, on the right hand side of the river, opposite to which was another call'd *Pesbiata*. After which I saw many more, particularly *Junfu*. After noon we came to *Kignanfu*, where father *Gregory Ibanez* of *Valencia*, and missionary of the *Franciscans* sending his chair for me, I went to his house, where I rested that day and night, all the *Chinese* christians coming to see me. This house had been bought four years before, nor was there any church built as yet, but mats was laid in a little chappel. This city is on the left of the river, and large, being a league long, including the fourth suburb. About it is a good wall, and the streets and shops are good. Father *Ibanez* told me, that the *Cbixen*, or *Mandarine* of

justice had put out an order, forbidding the worship of idols, and had but a few days before bastinado'd five *Bonzes*, and made another kneel a whole day in the sun, for not having obtain'd rain of their idols, as they had boasted they could.

Setting out late on *Wednesday* the 21st, *Kichien*, we left a good wall'd town on the right hand side of the river, it is call'd *Kjicbiuxien*, because another river falls into that we were upon. That night we lay at the guard of *Zunbianian*. *Thursday* the 22d, we left the town of *Sbiakianxien* on the left, where a long wall begins in the south, and rising up a high mountain, runs along several mountains bare of trees, and winding on the other side, goes down against the north, being above four miles in length, and all to no purpose, there being no habitation on those mountains. Yet I judg'd that great structure might be made to shut up the cattle on the mountain in time of war. Upon the river is an infinite number of boats, which serve for all sorts of carriage, the building and hire of them being both cheap; for they are made of planks, rudely put together, being wide below, and cover'd with canes carefully split, of which they also make sails, cordage, and mats, *Cbina* abounding in them, and there being abundance of timber fastned together, drawn along this river. Every man here is employ'd to get his living either on the land or water, and they apply themselves to it so industriously, that the very *Europeans* admire the variety of their workmanship, and their inventions for fishing, for besides all ours, which they use, they have others peculiar to themselves; as for instance, the making small woods of little trees in the middle of the river, thus drawing the fish to the shade, to enclose them in walls of canes, and so catch them. They also catch abundance of birds, which they call *Lugzu*, and are sea-crows; these diving under water take small, and great fish, putting out their eyes with their beaks; but they can only swallow the smallest, because the ingenious *Chinese*, tie a string about their necks, which will not allow them to open to swallow the larger, and so they take them. This is a very pleasant way of fishing, and much us'd in *Cbina*; every fisher-man keeping several birds for this purpose without any charge. Others employ themselves in the same river near the city, in sifting the sand to take up silver brads, or iron, for it is not above ten years since the coin call'd *Zien*, or *Cola*, *Cbiappe*, was brought up, it being the custom

custom that it the dut Canton dredged eight, is not c and fifth vince no day we Three blew so to take town of the river cause th that are the year Frida further of *Kim* country or mant inward keep off During wants at especially he did n willing, hy signs to my n ous serv nious way tools or tions req ling to c brought me, for by any is dress'd no butter, or *Satura* olives, b burn in l very poor

BEing relos as the fat when they is no com by water niency fur was forced coit me do duty the w is not acc bigness of

custom before to cut bits of silver, so that it was often lost about the house in the dust, and thrown into the river. In *Canton* they gave one thousand one hundred and forty *Chiapp*, for a piece of eight, but in the province of *Kiangsi*, it is not chang'd for above seven hundred and fifty, the brass money of one province not being current in another. That day we ran between shores well inhabited. Three hours before sun set, the wind blew so hard at north, that it oblig'd us to take up on the opposite shore to the town of *Sincanben* on the right side of the river, which happens very often, because that wind which is contrary to those that are bound northward, blows half the year. At night a great rain fell.

*Friday* the 23<sup>d</sup>, being able to go no further for the rain, we lay at the guard of *Kinbioetan*. In such weather the country people here use half cloaks, or mantles, and garments made of the inward rind of trees with hoods, which keep off the rain and cold pretty well. During this troublesome voyage my servants attended me very affectionately, especially the young man, who, tho' he did not understand me, yet being willing, endeavour'd to apprehend things by signs; and in truth he did all things to my mind, for the *Chinese* are curious servants, and have particular ingenious way. They can do that with few tools or utensils, for which other nations require many. Had he been willing to come into *Europe*, I would have brought him with all my heart to serve me, for I was never so well waited on by any *European*. All meat in *China* is dress'd with hogs-lard, for they use no butter, nor oil, tho' it be on *Friday* or *Saturday*; because there is no oil of olives, but of rape, or other seeds to burn in lamps, or in cookery by some very poor body. The wind abating, we

continu'd our voyage on *Saturday* the 24<sup>th</sup>, through a country well peopled, and having pass'd by the towns of *Xo-pu*, *Juntay*, and *Chianshiny*, lay in that of *Janxu-ben*. *Sunday* the 25<sup>th</sup>, early we pass'd by the town of *Funchien*, and stay'd at night in that of *Senni*.

*Monday* 26<sup>th</sup>, before sun-rising we came to *Nanchianfu*, the metropolis of

the province of *Kiangsi*. Having taken a chair, I went to the *Jesuits* church, where I found not the superior, he being gone some days before to *Canton*. Yet I lay in the house till all things were provided to go on. The church is small, and the house convenient. This city and province is govern'd by a viceroy, and several courts. It is very large, but in the upper part there are fields and gardens, for want of inhabitants; and yet it is troublesome going along the streets because of the throng. The shops are rich, after the *Chinese* fashion, the streets strait, and pav'd, but it is in vain to look for stately structures here, or in other parts of *China*; for as the cities here are all built by one model, so all the houses are flat, low, and made of brick, and mud, there being very few of stone. They have no windows to the street, but receive light from the court, about which all the rooms are built. On the river there is another city in the boats of watermen to travel about, and of other men that live by that calling. The *Mandarines* have stately boats, with the stern as high as a ship, and with several rooms in them, curiously painted and gilt, as wide below as above, to take their pleasure upon the river. In those boats there are many poles with red horse-tails hanging at them, and drums and pipes; by the number of which things is known the quality of him that is within.

## CHAP. VI.

*A continuation of the Voyage to Nanking.*

BEING weary of going by water, I resolv'd to hire mules to *Peking*, as the fathers of the society use to do, when they come to this place, for there is no coming hither any other way but by water; but I could not find convenience further than to *Nanking*, so that I was forced to take another boat, which cost me dear, because of the extravagant duty the water-men pay at *Fuchien*, which is not according to the goods, but the bigness of the boat, tho' it be empty;

so that the passengers pay for all, the water-men making their account before they bargain, to make sure of a good voyage. They would not take under seven *Leans* and a half, which makes ten peices of eight and an half for six days journey; tho' I had not paid so much for above a months travel from *Canton* to *Nanchianfu*, where I had three several boats, and the chairs. *Tuesday* the 27<sup>th</sup>, I went to lie aboard for coolness, and set out *Wednesday* the 28<sup>th</sup> before day, lying

at

GEMELLI at night at a country-house call'd *Cheutu*.

1695. *Thursday* the 29th, we advanced scarce a mile, by reason of the north wind. *Friday* the last day of the month, the same wind continuing, we made four miles, with much difficulty, and lay at the guard of *Sanchou*.

*Vien town* The wind ceasing, we set out betimes on *Saturday* the first of *October*, and came to the town of *Vien*, which is on the left of the river, and most of the houses are built of timber and canes. Here all the porcellane is shipp'd off for the kingdom, and for exportation, the finest of all *China*, being that of the city of *Joachou*, in the province of *Kiangsi*, which is brought to be shipp'd here. But it must be observ'd, That the clay is brought from another place to *Joachou*, after it has been there bury'd almost an age in subterraneous wells, because of the air and water of that place; for where the clay is dug, the work proves not so fine. The colouring we see in the said porcellane is not superficial, but after being laid on, is cover'd with the same transparent matter. The wind rising again before noon, we went away to *Kinki*, a small village on the left of the river, where it spreads a great breadth, leaving many pools about it. *Sunday* the 2d, setting out betimes, we went upon a spacious lake made by the river, where after some hours, we left the city *Nan-*

*Nantangfu* *tanfu* on the left hand. It is seated at the foot of the mountains, and tho' not very large is enclos'd with a wall. The north wind blowing again at noon, we went ashore at the guard and village of *Sichan*. The voyage to *Nanking* is troublesome in this season, for the boats do not make above eight miles a day. *Monday* the 3d, having oblig'd the watermen to set out by force, the contrary wind oblig'd me to turn back with twenty other boats. In the mean while the *Chinese* went about gathering round pebbles in the sand, to make use of in shooting, instead of shot.

*Fuchou, or Xuchou.* *Tuesday* the 4th, we set out betimes, and pass'd by the village of *Tacutan*; a little beyond which place on a rock, in the middle of the river is a high pyramid, with a pagod by it. After noon we came to *Fuchou*, or *Xuchou*, as others call it, where we were forced to stay, to have the boat search'd by the *Mandarine*, or customer. This town is on the right of the river, in shape like an arm, shut up by the river and mountains for two miles. It abounds in all things, has good shops, and streets well pav'd, and is enclos'd by a wall, not only towards the river and mountains;

but on the outside a wall runs encompassing the top of the mountain, and taking in some miles of craggy ground between the two ends of the town. This is the first place in the province of *Nanking*. *Wednesday* the 5th, after a flourish of musick, and firing three guns, appear'd the attendance of the customers, *Mandarines*, with several tablets, on which were *Chinese* characters, carry'd by their officers and servants, with flags, maces, and chains dragging along the ground, and with umbrells, and other ensigns of the country. Above sixty men carry'd them by two and two, the *Chinese* drum beating now and then. In the midst of this company came the first *Mandarine*, carry'd in an open chair by eight men, and at the end of the procession came another of greater account in a cover'd chair, carry'd by other eight men. As they pass'd, the country people held in their hands flaming sticks of sweet compositions, such as they burn in the pagods of the idols call'd *Xian*, and kneeling, bow'd with their foreheads down to the ground, in token of respect. To say the truth, the *Chinese* in grandeur, and civility, exceed all other nations, every one maintaining his dignity with much expence. Most of these men here mention'd are fix'd in those employments, continuing in the custom-house, tho' the *Mandarines* be chang'd, because they are paid by the king. These two *Mandarines* sat them down in a high gallery on the brink of the river. The first was at the end of the table, and the other at the side. There were about forty boats to be visit'd, which passing, one by one under the gallery, were there view'd by the custom-house boat, and the officers in it gave the master's name to those above, and the *Mandarine* tax'd it by eye according to its bulk, without any further inquiry. Those inferior officers of the custom-house had a little cloth before their stomach, hanging about the neck, and ty'd to the side, on which were four *Chinese* characters. The master of my boat, to the end he might be tax'd low, took down all the coverings, leaving only the bare body of the boat, and covering the boards that made the cabin with canes. The customer here pays 100000 *Leans*, that is 125000 pieces of eight for only a ten-months farm. The river being very deep before this town, there is a great fishery manag'd by several cunning contrivances. There are nets stretch'd out upon four crooked staves, which they sink, and draw up by a post fastned in the ground.

VOL. I

In the midst of it is a well, that the fish once in may not get out, and being large, takes a great deal, for the fisherman sleeps in a cottage close by, to lose no time. With another sort of nets they take a kind of fish that weighs above 200 pounds; the *Chinese* call it *Xuanyu*; it is much fatter than our tunny-fish, but hard: the market is always well stor'd with this and other forts.

Having got our dispatch from the customer, my boat alone, because it was empty, set out a little before noon. We turn'd it up with the same north wind, because it was not there so full against us, and the river was wide enough, because at *Xubeu*, the great river *Kian* meets it, after having water'd the province of *Szechuen*, and running near *Nanking*, loses itself in the sea. We were benighted at *Xuanmatan*, a small place seated in a bending of the river, where there is a number of fishermen, who sit turning a wheel, with which they lower, and hoist a net, which they call *Panyu*; from which they afterwards draw the fish with great ease with a cord, making it fall into the well, where they find it alive at night. This is a troublesome journey to an *European*, who is not us'd to eat the *Chinese* rice half boil'd, which among those people serves both for bread and meat; for they do not make bread of corn, but only sugar-cakes and *Vermicelli*, which is the reason corn is so cheap, that you may buy as much for three *Carlines* of the money of *Naples*, which is less than eighteen pence, as will serve a man a month. I caus'd biscuits to be made to serve upon my voyage, but sometimes I wanted, and was forced to get my servants to make me cakes, because the rice stew'd dry, as is us'd there, without any seasoning, did not agree with my stomach.

*Thursday* the 6th, we pass'd by the town of *Xien*, seated at the foot of high mountains, on the right of the river. The wall of this place also runs along the tops of the mountains, as has been said of the others; which wall having enclos'd it for a vast distance, ends near the river. A mile further, in the midst of the river is a high and craggy rock, on which stands a *Pagod* call'd *Seucushien*; to which all the boats that pass by burn perfumes, and frankincense, and some colour'd papers. At night we took up our quarters in the town of *Tun-lyu*.

VOL. IV.

*xien*, on the right of the river, which, *Genelli* tho' open, has a wall hard by it two miles in compass, and is a place to retire to, there being loop-holes about it to make a defence. *Friday* the 7th, continuing our way by reason of the width of the river, we came soon after noon to *Xan-kinfu*, a city on the left of the river, a mile in length, and half a mile in breadth. Its suburb is two miles in length, and has good houses, and not far from it is another little suburb after the manner of a village. Whatsoever is sold about the streets, is known by the noise or sound made, without the seller's troubling himself to cry it: the same other handicrafts do, every one of them founding a several instrument. For instance, the barbers carry about a whole shop on a pole, hanging the pan with the fire, and the basin at one end, and at the other a stool to sit down, and the other necessities, and are known by playing on a pair of tongs. So other trades in their several ways. All the rest of the day we stay'd at *Nankinsu*, because of the lake of *Kiangsi*, which the boats must go over in good weather. *Saturday* the 8th, we came to the village of *Seucbiakem*. *Sunday* the 9th, proceeding along between banks well peopled, we left the town of *Tukien* on the right, which is large enough, and has a good harbour made by a bay in the river. We came late to *Usushien*, a great city, on the right of the river, with a good harbour, where the custom-house officers search'd our boat narrowly; after which we went a few miles, and lay at night under one of the banks of the river. *Monday* the 10th, the same wind continuing boisterous, we were oblig'd to stay at the town of *Zaijibi*. Setting out early on *Tuesday* the 11th, we arriv'd four hours before night in the great suburb of *Nanking*. Here the custom-house officers search'd our boat, but not over strictly. Having taken a chair, I went in it some miles to the house of *Monsieur d'Argoli*, a *Venetian*, bishop of *Nanking*, by whom I was courteously receiv'd. This prelate is appointed by the congregation de *Propaganda Fide*, with two other reform'd *Franiscans*, which were father *Francis* of *Lionessa*, a province of *Abruzzo*, and father *Basil*, a *Venetian*, who very charitably serv'd the christians.

## CHAP. VIII.

## The Description of the Imperial City of Nanking.

GENELLI  
1695.  
NANKING.

**K**iamin, or Nanking, which in the Chinese language signifies the southern court, lies in 32 degrees and 53 minutes of north latitude, seated for the most part in a plain. In the time of *Min-kion* it was the imperial court, as *Peking* is at present under the *Zinbiau Tartar*. *Min* and *Cbin* is much the same as *Valois* and *Bourbon* in France, and *Cbiau* signifies empire, or the time of such a reigning family, the Chinese placing the genitive case first; contrary to our way of speaking in Europe, for the Chinese use to distinguish their reigns by several royal families by the names of *Hia-que*, *Xam-que*, *Ken-que*, &c. Father *Luis Lécomje* makes *Nanking* to be forty eight miles in compass, the walls of it in his opinion looking more like the borders of a province than the boundaries of a city; yet, by what I could conceive upon observation, it cannot be above thirty six Italian miles about, tho' *Monsignor d'Argols* made it forty. The walls that encompass it have but a few bastions, and not above eight spans or two yards thick. Within this circumference there are fields and gardens. The suburbs about the city are not much less than it, including under the name of *Nanking*, besides the aforesaid suburbs, another floating city upon boats in the canals. Having ask'd the aforesaid prelate concerning the number of inhabitants of that vast city, he answer'd, That several *Manderines* had told him there had been eight millions of doors or houses counted, in order to pay the taxes, and allowing but four souls to every house, they would as that prelate said, make thirty two millions of souls; which I thought incredible, and therefore believing it false, tho' it came from the mouth of an apostolick missionary of the reform'd order of St. Francis, and bishop of that same city, when I came afterwards to *Peking*, I had a mind to hear the opinions of the fathers of that court, and telling them the vast number of people that prelate had spoke of, Father *Ossono* a Portuguese answer'd, I ought not to look upon it as a fable, because a French father of the society passing through *Nanking* some few years before, and being astonish'd at that infinite multitude of people, said, That the city and suburbs contain'd more inhabitants than all the kingdom of France. I deliver what was told me by

Vast number of inhabitants.

persons of good credit, but will not oblige my self to answer for so many millions: Let the reader believe what he pleases, for I did not count them, but I have the books concerning the empire of *Cbina*, wherein every city of it is counted, so that he who understands the language may easily find out the truth; for if father *Bartoli* will have that empire to contain three hundred millions of people, those must be upon the Chinese ground, and not in the air; and in short the villages cannot make up this number; nor is there any city in *Cbina* like *Nanking*, for *Peking* is much less. It is here to be observ'd, in order to the empire being so populous, that the maxims of the Chinese differ from those of the Europeans; for there, he that does not marry is look'd upon as an inconsiderable base man, because he does not raise his father's seed and family, but suffers it to be lost; so that if a man has ten sons, they all marry, and take as many wives as they can keep, some having no less than an hundred, including concubines. In *Cbina* there are scarce any whores tolerated, lest they corrupt youth, but any they find is severely punish'd, which makes all men marry. The Chinese go not out of their own country, to people others; so vagabonds are counted infamous, who omit to propagate their families, and pay a duty to their deceas'd progenitors, to whom they owe their being. The air and climate of *Cbina* is excellent for generation, and the women very fruitful, for I never saw any of a convenient age but had a couple of children by her, one in her belly, and another in her arms; all the Chinese women using their endeavours to be fruitful, to be as much in the esteem of the mother-in-law and husband as the rest, for the barren are not admitted to table, but wait on them like servants.

All the inhabitants of *Nanking* are not Chinese, for there are many *Moors* come out of *Great Tartary* (father *Philip Grimaldi* assuring me there are two millions of them throughout all *Cbina*) who observe it as a maxim, not to marry their daughters out of their own race, so that they multiply in all parts of the empire like locusts. The royal palace is within the citadel, which is on the east side of the city, kept by a *Tartar* garrison, which suffers none to go into it; besides there

is nothing worth seeing left in the palace. The streets of this imperial city are wide enough and well pav'd; the canals many and deep, the houses low and neat, the shops rich and well furnish'd with all sorts of silks, and other things of value. In short, this is as it were the center of the empire, where are to be found all rarities and curiosities of the other provinces. There the most famous doctors and *Mandarines* when out of employment, come to settle. Here are the best book-seller's shops and choicest books in them, the finest press, the most curious workmen, the politest languages; in short, no city is so convenient and worthy to be the seat of empire, were not the presence of the emperors necessary on the frontiers to oppose their enemies. This is the city for silks, the best being made here that are sent throughout the empire and abroad, and the emperor himself is furnish'd with all he wants for his numerous court from *Nanking*. In the country there are vast fields of white mulberry trees; and tho' they be small, their leaves are large, on which the worms feed, which come to life in the spring, and in forty days finish their silk, all which is carry'd to be wrought at *Nanking*, by an infinite number of curious workmen, who live upon this trade. There is also a great deal wrought in the province of *Cheking*, but not so good as that of *Nanking*. Besides the artificial silk, the natural and wild is gather'd in those two provinces of *Nanking* and *Cheking*, which is made on the trees by some worms, and there the balls found, tho' no body has look'd after them; but this wild silk is not so valuable or fine as that which is improv'd by art. I brought over silks of both sorts to shew to curious persons. This vast quantity of silk draws a mighty trade, and a vast number of merchants from very remote countries, who carry it away in stuffs, not only to sell, but to exchange for musk and gold, particularly in the kingdom of *Lamoa*, where this metal is most plentiful; for tho' the *Chinese* have gold mines, they dare not dig under ground for it, and only gather some few grains in the rivers, making trenches on the banks, where sometimes they find a little brought down by the floods from the mountains.

Great  
part

The city by reason of its greatness is under two governors, to whom are subordinate hundreds of *Mandarines*, for the administration of justice, besides others who have no dependence on them, but only on the emperor. At *Nanking* resides a *Suntu*, who is in the nature of

a vicar-general over two vice-roys, and as many provinces; but these have not the power and prerogative of our vice-roys; for they cannot put any body to death without the sentence be confirm'd from court, tho' they do it indirectly, by ballinadoin till criminals die of it. Nor is it in them to send a governor or *Mandarine* to any little city in their province, which belongs only to the emperor and his courts; and they can only send a deputy, till such time as the proprietor comes from court. To prevent as much as possible all extortion, corruption, and favour, the near relations of great ministers are not allow'd to converse with those under their charge; and therefore the *Suntu* at this time kept a nephew lock'd up in a room like an anchorer, without being suffer'd to go abroad, and giving him his meat in at a wheel; it being forbid by the fundamental laws of the kingdom, for any man to have a command in his own country, or to have any holom friends in the province where he is in power.

I lay at home all *Wednesday* the 12th, *from 11 am* being much tir'd after my journey. As far as their religious poverty will allow, the house and church of those fathers missionaries are decently adorn'd. They pass to their apartments through five little galleries or courts adorn'd in the middle with pleasant rows of flowers, for the ingenious *Chinese* plant several flowers along the crannies between the bricks that make the flooring, which grow up as high as a man, making fine flowery hedges on both sides. They grow up in forty days, and last four months. The flowers are peculiar to that country, and found no where else. One sort of them is call'd *Kiquon*, which has several shapes, colours, and strange forms, but very beautiful, some being of a cane colour, some like a dry rose, others yellow, but soft as any finest silk. Among those crannies there grows an herb, which tho' it produce no flower, is very pleasant to behold, the leaves of it being in streaks, and painted by nature with a lively yellow, red and green. The tulips growing about those courts are bigger than ours in *Europe*. Tuberoses are plentiful enough and very sweet, being mix'd with the other flowers in all the allies; so that the eyes and smell are sufficiently entertain'd all the way to the apartment of the bishop and religious men. The church is small, but beautiful. They have servants for conveniency, but not for extravagancy. The garden is pleasant enough and well stor'd with plants, herbs, and

and trees, for it has vines, peach, apple, pomegranate, chestnut, and abundance of black and white fig-trees very well tasted, of which I eat a great quantity, having been depriv'd of them two years; for in *China* there are neither grapes nor figs, except only in the houses of the fathers missionaries, the *Chinese* making little account of them, because their other fruits are more delicious to them. In the same garden is an excellent fish-pond, where the fish live upon herba thrown in to them. The *Jesuits* have a good church at *Nanking*, where at that time was a *Sichian* father, and a *Chinese*.

A vast bell.

*Thursday* the 13th, taking a chair in the morning, I went to see two wonderful bells. One was in the *Chien-leu* fallen to the ground by its vast weight, its height eleven foot, its diameter seven including the thickness, the outward circumference twenty two foot, which contracted gradually to half the height, where it again extended. The thickness of the metal was six inches and a half. The weight including that of the clapper, as I was told, and believe to be true, fifty thousand pounds, which is double that of the famous bell of *Erfurt*, which father *Kircher* calls the biggest bell in the world. They told me it was very antient, and accounted such three hundred years before, and that falling down, there was never care taken to replace it.

A structure on arches.

Near to the aforesaid *Chien-leu* is a square structure upon three great arches, on which stands a hall with six doors to it. Within it is a black stone with an inscription (they call it *Culeu* and it was supported by a large beast) in honour of the emperor then reigning, erected by the city in an acknowledgment for the favours of him receiv'd at two times he pass'd through it, eight hundred thousand men going out to meet him.

Place of mathematicians, where observations.

Next I went to see the place of the mathematicians, where they made their observations, when the emperor's residence was at *Nanking*, before *Yonlo* remov'd it to *Peking*. This stands on a high hill in the nature of a gallery, or terrace upon pillars. It is open on all sides, and there are about it banisters and seats of marble to discover all the city from that height; the *Chinese* call it *Quansimay*. There I saw another Inscription in honour of the emperor, erected the second time he went thither, which was within a great hall newly built after the fashion of that country. It was carv'd on a black stone, with hieroglyphicks, not cut into the stone, as is usual among us, but rais'd above

the superficies of it, which among them is common in all their stones. They told me the emperor had given them those characters with his own hand to be carv'd there.

On this hill stood a *Pagod* call'd *Cuni*. A *Pagodian*, with two other little *Pagods* on the side of the court, and several very deform'd idols. I went into the great one, where I saw one with a face of several colours like a merry-andrew, which they call'd *Checcoali*. At his back, behind the altar, was another idol, call'd *Tauzu*, all gilt, setting with a club in his hand, a crown on his head, and with a beard and whiskers. There were two other idols very ugly and hideous to behold.

Upon another hill adjoining is a temple of religious men; by them call'd *Xoschian*, by us *Bonzes*. They have a good garden and grove. Going into a small chappel here, I saw an idol call'd *Quan-lau-ge* sitting, and with long whiskers. The *Chinese* recount fabulous stories of this and the rest. There are besides, two *Coleffus*'s standing, one with a sword in his hand, the other with an axe, their bodies stain'd all over of several colours. These they call *Kin-kan*, and most of the *Pagods* have such monsters in them. Having gone a great way up the mountain by stone steps, the *Bonzes* came to meet and offer me *Clia*, or the herb *Tea*, which I refus'd. Then they led me to the *Pagod*, at the entrance whereof was a statue in the habit of a *Mandarine*, whom I judg'd to be some remarkable man worship'd there by those blind people for his rare qualities. Then going to another *Pagod* I saw a naked idol of a gold colour, who they said was *Quoija*, behind whom was another sitting of the same colour, cover'd with a garment of white silk, it had long whiskers, and was call'd *Queinjen*. In the same *Pagod* there is a pyramid, with several lanterns to be lighted upon festivals. They show'd me a very large brass bell hanging, which was rung by hand with a wooden hammer cover'd with a cloth. Returning the same way I came, I went to see another bell which lay down in a garden upon its side half bury'd. Measuring the height I found it sixteen spans or twelve foot, without including the ring, and a span thick. They say it weighs eighty thousand *Chinese Catis* (a *Cati* is twenty ounces of *Europe*) and that when these bells were rung, they could be heard many miles off.

*Friday* the 14th, I was carry'd in a chair some miles about within the city, and then went out at the gate of *Nanking*.

*men*, the *Chinese*, as has been said, make four principal gates to all their cities, calling that which looks towards the east *Tun*, that on the west *Si*, that on the south *Nan*, and that on the north *Pe*; the gates are of iron, and strong, and there are four at every entrance, one within another, the structures about them being a mulket-shot in breadth. Next, I went over the canal and arm of the river on a good bridge, to go into the suburb to the tower and temple of *Paungben-su. Pau*, in the *Chinese* language signifies gratitude, or reward, *Ngben* a benefit, and *Su* a temple; because a great *Chinese* lord having assisted the *Tartar* emperor to enter, and possess himself of the kingdom, and afterwards quitting the world, and turning *Bonze*, the emperor *Yunlo*, above three hundred years since, built that tower and temple to him as an acknowledgment. Here are two gates to go in at, to a great court, opposite to which is the first *Pagod*, with as many doors to it, ascending some steps. Within it is the statue of a woman standing, and on her sides four *Colossus's* call'd *Kinkan*, with arms in their hands, painted of several colours hideous to behold. On the upper part, or high altar, was an idol sitting with his foot on his knee, and all his body of a gold colour; behind whom was another idol of the same colour sitting too. Going on to the second court, and to the third, I saw about them the apartments of the *Bonzes*, that serve the *Pagod*, who are about a thousand, and live on their revenues. On the left side of the second court, or cloister, is another *Pagod*, to which there is an ascent of a few steps. In it I saw the statues of two wounded women, back to back, the innermost standing somewhat higher, of a gold colour, with several little idols at their feet, and about the *Pagod*. On the right hand, fifteen steps led up to three *Pagods*, in which were many idols and monsters, with silk curtains before them. Going on further, at the end of the court is the greater *Pagod*, all cover'd with purcellane of several colours. They go up to it through a large and spacious hall, above which is a porch, which has five gates into the temple. Here are niches twelve spans, or three yards above the pavement; on the front of the high altar at a distance from the wall, are the idols of three women of gold colour sitting, with several inscriptions before them, and vessels of brass of a great value. About the wall is a great number of idols a-foot and a-horseback. Behind which front is another female

idol standing, and on one side of her a drum, which three men could not sound, and on the other side a great brass bell, which is struck with a wooden hammer. In the first court a play was acted by good comedians, several thousands of people resorting to see it, who all stood. There I staid a little, and then went on to see the tower, after obtaining leave of the *Bonze*, by paying a few *Chiappas*, a very inconsiderable value. It was all of purcellane both within and without, yellow, green, blue, and of other colours, with the figures of many several idols. It is an octagon, and about forty foot about, has nine stories, or apartments, divided on the outside by as many cornishes curiously wrought, and the top was cover'd with brass, and a gilt globe on it. Every story has four large windows answering the four quarters of the world. I went up two pair of winding stairs to the first story, and proceeding from thence to the uppermost, counted one hundred and eighty three steps of a considerable height, besides five steps more, that are without the gate, and there was above the height of those steps to the top of the tower from the place where I was, so that I guess'd it to be at least two hundred foot high. There were nine stories, as has been said; and in the midst of each of them was a work like a pilaster to set several idols about it. At the foot of the tower the wall of it was twelve foot thick, and eight and a half above. The structure is certainly artificial and strong, and the most stately in all the east; all the carv'd work being gilt, so that it looks like marble, or any other carv'd stone, the *Chinese* being wonderful ingenious at shaping their bricks in all sorts of figures, by reason of the fineness of the well-temper'd clay. From the top of this tower (which the *Chinese* call of purcellane) is a prospect of all the city, and the famous structure for mathematical observations, tho' it is a league distant. As I was going out of the tower, I saw the *Bonzes* going in procession on their devotion. One went before with a sort of cope on his shoulders, next came another with a black cap on his head flat on the sides, and a *Chinese* crown in his hand. The *Bonzes* follow'd by two and two, ringing a little bell with a hammer, or a wooden instrument, and singing in a low tone. They went into the lower part of the tower, and fetching two rounds about it, ador'd the idols that were in it. Next, they went into the third court, and into the *Pagod*, which is in the midst of their

GENELLI 1695. furthest apartments, where the chief idol is like a *Bacchus*, who sits, as if he laugh'd. There are other *Pagods* and idols in that place, which are not here set down for fear of cloying the reader.

Emperor's tomb. After dinner, I went to see the tomb of the first emperor of the family of *Mincian*. It is without the city on a mountain, guarded by eunuchs, who there lead a religious life. It consists of a great hall handsomely cover'd, with a place like a tribune or gallery in it, where that emperor's picture is kept lock'd up. The tomb is in a grott dug in the mountain, and the entrance kept shut. *Monsieur d'Argoli*, the bishop told me, that if I stay'd in *Nanking* till a burying-day, which the astrologers pitch upon as fortunate for that function, I should see several thousand tombs carry'd; for the *Chinese* do not only make them in their life-time of strong wood, and half a span thick, measuring themselves in them to see whether they can lie at ease, but after they are dead, the bodies are kept some time in the house shut up in those tombs, till the astrologers appoint the day for burying them. Some delaying this mournful office, for want of means, it being perform'd with great pomp and cost.

Human Jung told. He that goes along the streets in *Nanking*, ought to keep his nose well stopp'd, for he'll often meet with porters carrying tubs full of ordure to manure their orchards; for being in want of the dung of beasts, they are fain to make use of man's, which the gardeners pay for either in greens, vinegar, or money; giving a better price for that which is come of flesh, than that of fish, which they know by tasting it with their tongue. Nothing is more frequent on the river than boats loaded with that filth, and if a man has the misfortune to be catch'd Among those boats, he's almost stilt'd. Along the roads there are convenient places whitened, with seats, and cover'd, to invite passengers to alight and ease

themselves, there being a great earthen vessel under it, that nothing may be lost. Tho' the *Chinese* use this method to manure their land, which is offensive to the nose, yet their streets are not so dirty as ours in *Europe*, by the continual passing of so many beasts; for there are no swine to be seen about the streets of the city, or in the fields, tho' the *Chinese* devour a vast number, five or six thousand being slaughter'd every day in *Nanking*, besides the cows the *Moors* eat, and the goats the soldiers eat. Private persons furnish this mighty shambles, for there is no poor body but what breeds swine in his house, or boat, which he sells when the time comes to pay the *Tsien-lean*, or tribute to the emperor, or upon any other exigency; the flesh of them being so good, that it is given to the sick. During all this time, *Monsieur d'Argoli*, and the two fathers his companions, endeavour'd to persuade me not to go to *Peking*, because the *Portuguese Jesuits* would have no *European* look into the state of that court, and if I went thither, they would certainly do me some ill office. I answer'd, I went not to pry into the affairs of their missions, but only out of curiosity to see that great court, and therefore I fear'd nothing, for I would go take up my abode in the convent of those fathers. At length, perceiving they could not alter my resolution, they took care to provide what was necessary for my voyage. I might have gone on by water within half a days journey of *Peking*, but it is a great way about, wherefore all people travelling from *Nanking* by land, I resolv'd to do the same. I sent my servant to the other side of the river *Kian*, to hire the horses we had need of for our journey to the court; who, with the assistance of a christian *Chinese* that went with him, agreed for five *Leans*, and two *Ziens*, which is seven pieces of eight and a half, each, and having given earnest, return'd.

## C H A P. IX.

## The Journey by Land, to the Imperial City of Peking.

HAVING return'd the bishop, and the fathers his companions, thanks for their kind entertainment, I set out on *Saturday* the 15th, after dinner. It was my good fortune to have the company of a christian *Chinese* doctor, who had taken his degree to be a *Mandarine*, who wanted nothing but money, without which no employments are given in *Chi-*

na. His father was a priest. We went together out at the gate I came in at, call'd *Simuen*, or west gate, which is not inferior to that we have describ'd, having three iron gates, and a structure of sixty paces to them. Without it we took boat, and passing under the bridge, which consists of many arches, went on along the channel about the walls of the

the city. Then we chang'd boat, where a scurvy accident happened to me, which had like to have stopp'd my journey; which was my servant's forgetting, tho' told of it, a boulder of boards cover'd with skins after the *Chinese* manner, and shutting like a trunk-portmanteau, call'd *Fufibeu*, in which I had laid up an hundred pieces of eight; the *Chinese* using those things to lay their heads on to sleep, and keep their writings. I be-thought my self of the misf of it, when we were gone an hundred paces in the second boat; but the watermen of the first were so honest, that they row'd after us, calling us to take it. Being over the *Kian*, which is the greatest river in *China*, and is in that place two miles broad, and considerably deep, we came to the city of *Pukeu*, seated on the left of the river, two hours before night, having travell'd twelve miles. The wall of this place is ten miles in compass, enclosing hills, mountains, and plains, not inhabited, for the city has but few houses, the people liking better to live in the suburbs which are very long. We lay in that of *Tien-chya*, on the bank of the river, where I spent the night merrily with the *Chinese* doctor, drinking wine made of rice, but so hot that it scalded my lips; it being the custom of *China* to eat meat cold, and drink liquor hot. The doctor's over-civility was very troublesome; for if the two ivory sticks were taken up to eat, a great many ceremonies must be first perform'd. If we met, if we gave, or receiv'd any thing, in going in or out, in drinking, and all other actions, tho' never so natural, still the *Chinese* ceremonial must be observ'd; using the word *Zin*, which among them is the touchstone of all civility; for if any person neglects making use of it, he is counted rude and unmannerly. The doctor at night did so much importune me, to make my two servants sit down at table, that I condescended to it, rather than disoblige him; but I was afterwards sensible of my error, for they growing bolder with me on the road, serv'd me ill, as shall be told in its place.

*Sunday* the 16th, before mounting on horseback we eat something, and then going out of the suburbs, expected there the company; and because the mule-tiers, or fellows that let the mules and horses stay'd a-while, a *Tartar* soldier struck one of them over the face with his whip, so that he made the blood gush out. We travell'd all day without drawing bit, over hills, mountains, and plains well inhabited, but the houses

were all small but one. At night we lay in the town of *Tanficau*. By the way we met a crowd of passengers, and caravans of mules and asses, going to, and coming from the court, and little carts with one wheel drawn by two men, upon each of which they lay three or four bales, which two mules could not carry so long a journey. *Monday* the 17th, setting forwards again with the aforesaid *Tartar* soldiers, we pass'd thorough the town of *Suij-ken* betimes. This place is enclos'd by a wall of several miles, and a moat. Then going up a mountain, we found on it a *Pagoda* of *Bonzes*. Thence going down a long descent, we came to dine at the town of *Tachiautou*, and having travell'd fifteen miles further, lay at night in the town of *Taa-shianpu*.

*Tuesday* the 18th, we travel'd thirty miles over the plains, din'd at *Qula-lempu*, and lay at *Xuannipou*. The hire of the mules is cheap, and the expence at inns is very small, for eight *Fuen*, which make thirteen grains and a half of *Naples*-money will serve any man night and morning. They that will have rice-wine, pay for it a-part, and it is drank in the morning hot boil'd with rice, so eating and drinking altogether. It is troublesome at first to an *European* to use himself to such diet, and *Chinese* fare, which has no substance in it, but consists altogether in porrage and herbs. For they eat the very malworts which we use in medicines, and the worst of it is, they will have them half raw and cold, the cook knowing when they are ready by the smell. Yet they think all well dress'd, for they leave fowls for herbs, as my two servants would do, when we could buy a good fowl upon the road, for three grains of *Naples*-money. But to me, that *Chinese* food was not at all grateful, and I paid my host for it, tho' I eat none, laying in my provision of gammons of bacon, fowls, ducks, and the like, upon flesh-days. *Wednesday* the 19th, we continu'd our journey over the plains, where one of the *Tartars* left us about half way, the other staying with me and the *Chinese* doctor, who both were very courteous to me. We din'd at *Linxy-xien*, a large town, enclos'd with a wall, and water'd by a navigable river, which makes many pools about it, for the *Chinese*, like ducks, love to live in water, or near it. There is a bridge of boats over the river, and a good suburb on the other side. That day we met a *Mandarine* in a chair with thirteen litters, in which were his women. The *Chinese* litters are more convenient than those of *Europe*, each carry'd

GENELLI carry'd three women at their ease. They are carry'd by mules, and asses. Having travell'd thirty two miles, we lay at the little town of *Yuan-gian*.

*Thursday* the 20th, having pass'd the river over a stone-bridge, and travell'd a few miles in a plain country, we din'd in the town of *Cucben*, which is well peopled by reason of a river that runs by and maintains its trade. Here there is always a great number of hawks, carrying backwards and forwards, for the *Chinese* are as great sportsmen, as the *Persians*. Having travel'd thirty five miles, we lay at *Xuan-chian*, where our beds were of cane, as they were all the road, every man carrying his own quilt with him. *Friday* the 21st, travelling the same sort of plain and cultivated land, we came to dinner to the town of *Nanfu-chau*; where the *Tartar*, who was continually beating the muletiers, struck one of them over the face so unmercifully, that the other, for fear, fled to my apartment, covering himself with straw under the bed. I offer'd him fowl to eat, but he would not have it, being of a sect that eats no flesh. Thus the *Tartar* stopp'd our going any further, staying there the rest of the day, after travelling only twenty miles. About this town is a wall three miles in compass, water'd all round by the river, yet the place is but ill peopl'd, except the suburb, which is well inhabited. *Saturday* the 22d, setting out late, we rested not at noon, but having travel'd twenty five miles, lay at the little town of *Senfun*. *Sunday* the 27th, mounting before day, after fifteen miles travel we din'd at *Taufkian*, a small town, and having travell'd the same number of miles, came to *Sucben*, the boundary of the province of *Nanking*, on that side. The town is large, having a great and rapid river that runs close by it, called *Xuanxo*, or the yellow River, because it always runs troubled and muddy. The suburbs which are along the banks, are much bigger and more populous than the town. The river is to be pass'd in a boat, but by reason of its being so rapid, they are forced to run up a great way, the stream driving the boat, two mulet-riots down, before it can come to the other side. As I was coming out of the boat I met father *Sifaro*, a *Milanese*, elect bishop of *Nanking*, who was going from *Nanchuanfu* to *Macao* in a litter, with only four of his servants, to be consecrated by that bishop. For want of barley, the *Chinese* feed their beasts with black kidney-beans boil'd, the country abounding in them, and white ones, and those creatures live on them, as well as any other provender.

*Monday* the 24th, we set out four hours before day, passing early over a large river on a stone-bridge, and having travell'd twenty miles, din'd at *Nuzan*; going out from which place, I saw many country-men, who carrying a net like a pavillion, fastned to four crooked staves upon their backs, went about the fields catching of quails, which as they fly about are catch'd, the net being carry'd low. Then we pass'd the river in a boat at *Uncbiankyai*, where the other *Tartar* left us to get before us to *Peking*. The *Chinese* here are hardly to endure cold, and tho' it be very sharp in the morning, they set out early to get into their inn three hours before night; so that mounting on *Tuesday* the 25th, two hours before day, we din'd at *Linbien*, and having travell'd thirty five miles, lay at *Sci-axotien*. By way of refreshment, the host here usually has a pan of hot water ready, in which sometimes he has boil'd kidney-beans, and other pulse, for passengers to wash them and drink of, when they have no *Tea*, or are not able to buy it, whereas in the hottest weather, and dog-days, they never drink, or wash in cold water, admiring at the *Europeans* who use it. No rice grows in these parts, because of the coldness of the climate, (which I had felt for some time, tho' I wore a furr garment, breeches quilted with cotton, and furr hole with the hair inwards) which defect they supply with wheat, making bread mix'd with onions chop'd very small, which they bake in the steam, placing sticks across a kettle that is boiling, to lay the loaf on, which remains as meer dough as it was at first, and lies as hard as a stone on the stomach. Other hosts give their guests thin cakes of dough boil'd, to eat. To make some amends for the want of rice, they use their *Taufu*, which is boil'd, a mess of kidney-beans, which with him is a dainty, for this wretched sauce they use to dip their meat in. They make it of white kidney-beans pounded, and made into a paste, the north abounding in them; they also make it of wheat, and other ingredients.

*Wednesday* the 26th, we eat a bit sometimes at *Kiay-xoy*, and about evening went out through the small town of *Zu-sien*, which has a wall about it. In the suburb is a large square structure, and within it several *Pagods* with *Bouzes*. The idols are of so many monstrous shapes, that it would be tedious to relate the fables they tell of them. There is a good garden with tall trees. At night we came to the town of *Tuntan-tien*, having travell'd thirty days. I count by

*Tsching  
city.*

by miles, and not by *Li*s, as the *Chinese* do, to observe the better method; for in some provinces those are of two hundred and sixty paces, and in others more, or less. *Thursday* the 27th, early, we pass'd thorough the city *Tschingfu*, of the province of *Xantung*. It is seated in a plain like all the rest, for the *Chinese* do not build on hills. The walls extend four miles square, and there is a noble stone-bridge. We din'd in the small town of *Cauxio*, and lay, after thirty miles travel, in the suburb of the town of *Uen-shian-shien*. The town is not well peopled within the walls which are three miles about, there being gardens and fields within them. *Friday* the 28th, we rested in the suburb of the town of *Tun-pin-kieu*, and passing through, found it a mile and a half in length, and a mile in breadth, but there are many fields and ruin'd houses in it; the rest are of brick, and thatch'd. The walls are of earth. Having rode thirty miles, we lay that night at *Kicuxien*, a small town. *Saturday* the 29th, about break of day, we went thorough the town of *Tungosbia*, encompass'd with a long mud wall, but ill peopled. Then we cross'd the river *Tungo* in a boat, the bridge being broke, and din'd at *Tun-chien*. That night we took up at *Sbinxien*, having rode thirty four miles. There being no mountains all this way, to bury the dead on, the *Chinese* plant square spots of *Cyprus* or other trees in the plain, and place the tomb in the midst, covering them with heaps of earth. At night there is a centinel in the inn, continually striking two pieces of wood one against another for a sign, which makes travellers not sleep very sound. *Sunday* the 30th, we din'd in the town of *Sintien*; and then passing thorough that of *Cautanceu*, which has a mud wall, and is thinly inhabited, we came at night to *Tau-chiaen*, after a journey of thirty miles. *Monday* the 31st, betimes, we pass'd thorough the town of *Gbinxiana*, enclosed with a large wall, and ill inhabited. Before noon we din'd in the town of *Cushipo*. Next we came to that call'd *Fatbio*, which by reason of the convenience of the river, is well peopled within a wall three miles in compass, and better in its suburbs, where there are good handsome open places, and shops stor'd with all sorts of commodities of the country, and provisions. We there cross'd the river in a boat, which is seldom paid for, the watermen being kept by the city. At this river begins the province of *Peking*. After a journey of thirty four miles, we lodg'd at night in the town of *Lianbi-mian*. In this journey I found asses, who when they

VOL. IV.

have gone their stage, will not stir a step further, tho' you beat them to death; just as those of *Salerno* in *Naples*.

*Tuesday* the 1st of *November*, an hour after sun-rising, we pass'd thorough the town of *Kincbeu*, encompass'd with a mud wall, in which there is nothing handsome but a tower, there being besides only a few cottages, and as few inhabitants. We din'd at *Leocbimian*; then we saw the town of *Fuchenkie*, which like the last, has mud walls and houses, and is worse than *Kincbieu*. Having travel'd thirty three miles, we lay at night in *Fuchbian*, where over the gate was a little chapple dedicated to the idol, that is protector of the city, which the *Chinese* use in all their other towns. *Wednesday* the 2d, early in the morning, we pass'd a stone-bridge laid over the river of the town of *Sbiale-cheva*. Next we saw the town of *Sbiengbena*, with a mud wall, badly inhabited. After that, the bridge being down, we pass'd over the rapid river of *Tangaxia* in a boat, and din'd in that of *Sbiankelin*. Then we set forwards for the city of *Xekienfu*, which has but a few houses in two streets; all the rest being fields and ruins. It makes a square of four miles about; but only the north side is brick, the rest being earth thrown up. Going out of that city, I met a procession of idolaters. First went several flags, carry'd by men and women, on which there were painted dragons, panthers, and basilisks. Two kettle-drums were beaten by two boys, and then a trumpet was sounded in a doleful tone, by a man. Two other men carry'd a monitor sitting in a chair, and then came a great bier, carry'd by several people, within and about which there were abundance of little idols of chalk, some sitting, some standing, in frightful figures. But in the middle sat two, which seem'd to be the prime idols. A master of music went before, with a paper in his hand, as it were to set the tune, or keep time to the multitude that follow'd the bier. All the country-men that it knelt to, paid it respect, but the nobility and better sort, make no account of those things, and enter the *Pagods*, as they would a stable, having little faith in a future state. The Inns here ought to be the best, as being near the court, and yet they are the worst, for eight days journey round about it, because the *Chinese* refusing to increase the allowance for a nights entertainment, supper and altogether, being forty *Zieus*, that is, thirteen grains of *Naples*-money, bating one third, the hosts give them herbs, and porrage, because

Gggg here

GEMELLI here provisions are dear; and tho' a man  
1695. would pay more for better chear, it is  
not to be had, for the reason aforesaid, but he must provide abroad. After travelling thirty two miles, we came at night to *Reshilipu*.

Thursday the 3d, we din'd in the town of *Gyncheyuxien*, and then pass'd through that of *Maubin*, enclos'd in part with a mud wall, and ill inhabited. About it are lakes and morasses. Having travell'd above eight miles among them to lodge at night in the suburb of the town of *Xiunxien*, before I got in, I met with a funeral, the body carry'd in a coffin on a bier by several bearers, with several banners, or flags of painted paper, and sounding instruments before it. The town is two miles in compass, but is thin of inhabitants. The suburb is good, and a river runs thorough it. The country-women of the province of *Peking*, have a singular sort of head-dress different from all others; for they wind their hair twisted together, or made into wreaths about the pole of their heads, which they cover with a cap made of black silk, or of cotton, running a bodkin through to hold it fast. Others make a great knot of it on the top of their heads, and cover it with a thing made like a dish, of silk and gold; to which some add, a binding or fillet three fingers broad of silk and gold about the head, like a forehead-cloth. The sharp *Chinese* suffer nothing to be lost, for the countrymen, before day, walk up and down the road with two baskets on a staff, one before, and the other behind them, gathering the dung of beasts to manure their ground. Others with rakes made of crooked sticks, gather the straws and leaves for the fire, because wood is there

very dear. Our days journey was thirty two miles. Friday the 4th, we went along the river of *Xiunxien*, to dine at the town of *Pecuxo*, which is well inhabited, because of the conveniency of the said river. At night we came to the suburb of the town of *Sankinxien*. The walls of it, which are of brick, are two miles in compass, the place well inhabited, as are the suburbs, which are provided with all necessaries. Our whole days journey was thirty miles. Saturday the 5th, we saw the town of *Chiocben*, which, tho' encompass'd by a mud wall, is populous, as are the suburbs. After passing over a long wooden bridge, and two others of stone, we came to dine at the town of *Liolihoa*. Afterwards we set out for the town of *Lean-xien-xie*, which has good brick walls, a mile in length, and went thence to that of *Cbian-sin-gbien*, after travelling thirty two miles. This last days journey but one, was troublesome, by reason of the multitude of carts, camels, and asses going to, and coming from *Peking*, insomuch that it was hard to get by them. Here there are guards upon the road at every mile or two, who throw up a little heap of earth in the road, and upon it a cottage of mud, where they watch at night for the security of travellers. Sunday the 6th, after coasting along under most uncouth mountains for twenty miles together, I arriv'd at *Peking*, having spent two months and eleven days in the journey from the day I set out of *Canton*, and having travell'd 2150 *Lijs* by land from *Nanking* to *Peking*, and 3250 by water from *Canton* to *Nanking*, the *Chinese* counting from *Canton* to *Peking* 5400 of those *Lijs*, each of which is 260 paces.

## CHAP. X.

## The Description of the City of Peking, and of the Imperial Palace.

Arrival at Peking. I Went to alight at the house of the *Jesuits*, which is in the *Tartar* city, to make my self known to father *Philip Grimaldi*, provincial, and the emperor's president for the mathematicks, that by his means I might see what was most remarkable at court. He receiv'd me very courteously, expressing a concern that he could not entertain me in the monastery till he had acquainted the emperor, who would be inform'd of all *Europeans* that came into *Peking*, saying, That if any were conceal'd, and the emperor should after come to know of it,

he would be highly displeas'd, because he imagin'd that all *Europeans* were persons capable of doing him great service. Besides, that there being at that time, two of his pages in the house, who learn'd musick of father *Pereira*, after the *European* manner, it would be hard to conceal my coming from him, because those pages were spies, who told the emperor all they saw, and therefore they had liv'd under much restraint for two years those lads had been in the house. Father *Grimaldi*, and all the *Portuguese* fathers could not but admire at my coming

Excess.

ing to court, saying, they admir'd who had advis'd me to come to *Peking*, whether no *European* may come without being sent for by the emperor. I answer'd, That the same liberty I took to go to the courts of the *Grand Signior*, the king of *Perfia*, and the *Mogul*, brought me to that of *Peking*, those monarchs being no less powerful or jealous than the emperor of *China*. Father *Grimaldi* answer'd, the politicks of that kingdom differ'd from those of others, and after a long debate, not only with father *Grimaldi*, but with the fathers *Peireira*, *Ossorio*, and *Antony Thomas*, I took my leave, telling them I did not desire to see forts, or any thing else that might raise a jealousy in the *Chinese*; they waited upon me out of doors, causing their servants to wait upon me to my lodging, which was taken for me in the *Chinese* city.

*Xuntien*, or *Peking* is in the latitude of 40 degrees, and 144 of longitude, seated in a spacious plain, and divided into two cities, the one call'd the *Tartar*, the other the *Chinese*. The first is square, every side being three *Italian* miles in length, with nine gates. This city is inhabited by *Tartars*, and their forces divided into eight brigades; and by the emperor's servants and attendants about his person, or belonging to his courts and councils, all officers civil and military being there. The *Chinese* city (built since the other, to contain the multitude of inhabitants,) is of the same bigness, as the *Tartar* city, being four leagues in compass, but its form is not like the other, because the north and south sides are shorter than the east and west, so that it is narrowest from south to north, which side joyns to the *Tartar* city, from which it is divided only by a wall. It has seven gates, which together with the nine of the old city, make in all sixteen gates *Peking* has, each of which has its suburb running out in length, and it is seven *Spanish* leagues, or twenty one miles in compass. The suburbs are well inhabited, especially that which runs towards the west, through which all that comes by land passes.

The great streets run from north to south, and the rest from east to west; they are all strait, long, wide, and well-proportion'd. The little streets lie east and west, and divide all the great streets into equal portions, or quarters. All of them have their particular names, as *The King's Kindred Street*, *The White Tower-Street*, *The Lions*, *The Dry-Fish*, *The Aquatic-Street*, and so the rest. There is

a book sold there containing the names and situation of all the streets, which is bought by all servants who attend *Mandarines* to their visits, and the courts, and who carry presents, letters, messages, or orders to several parts of the city, and empire, and they are very numerous in all parts; whence came the proverb so much in use among the *Chinese*, that the provinces furnish *Peking* with *Mandarines*, and *Peking* in exchange supplies them with lackeys and courriers, or letter-carriers; and indeed it is rare to see a *Mandarine* that is a native of *Peking*. The finet of all the streets is that they call *Skian-gan-kiai*, that is, the street of perpetual rest; it lies east and west, the north side of it being the palace wall, and the south several palaces of great men and courts. It is above one hundred and thirty foot wide, and so famous, that the learned Men in their writings make use of its name to signify the city, taking a part for the whole, and it is the same thing to say a man is in the street of eternal rest, or to say he is in *Peking*. The houses are low, and tho' the great men have large and stately palaces, they are shut up backwards, and nothing appears outwards, but a great gate, with houses on both sides inhabited by the servants, tradesmen, or mechanicks. Yet this *Chinese* way of building is beneficial to the publick, because every thing is sold at the door, whether to eat, for conveniency, or pleasure; whereas in *Europe* a great part of the city is taken up with noblemens houses, which obliges those that are to buy any thing to go a great way for it. Besides, in *China* all things to eat are carry'd about the streets to sell.

The multitude of people here is so great, that I dare not name it, nor can I tell how to make the reader conceive it (I use the very words of father *Gabriel Magalbaens*) for all the streets both of the old and new city, are full of people, as well the little ones as the great, as well those at the ends of the town as those in the middle, and there is so great a throng in all parts, as cannot be parallel'd but by the fairs and processions in *Europe*. If we will give credit to father *Grimaldi*, a religious man adorn'd with all manner of goodness and virtue, who, for his great merit, holds the first place in the emperor's esteem, I will then declare, that asking him concerning the number of the inhabitants of *Peking*, to satisfy my curiosity, he answer'd me, that both the cities, with the sixteen suburbs, and dwellings in boats, made the number of sixteen millions. Let the reader

Streets.

GENELLI der believe what he pleases, for I do not  
 1695: design to make this good; but I can safely  
 affirm, this worthy father is not a man  
 that would lie, and that he knows this  
 matter better than any other, because he  
 has liv'd thirty years at that court, and  
 knows both the *Tartar* and *Chinese* lan-  
 guages, and their customs to perfection,  
 as much as the natives, and discourses  
 every day familiarly with the emperor.  
 Besides, if we will believe father *Bartoli*,  
 who will have it that there are three hun-  
 dred millions of souls in that kingdom  
 (adding an hundred millions to the com-  
 putation of the other fathers of his socie-  
 ty) it must follow of necessity, that the  
 great cities must make up that incredible  
 number, because the small places, tho'  
 never so many, cannot possibly contain a  
 considerable part of that multitude, there  
 being several cities thin enough of peo-  
 ple, and many places uninhabited, as we  
 see in *Europe*.

The emperor's palace is seated in the  
 midst of that great city fronting the  
 south, as is the custom of that coun-  
 try, where it is rare to see any city,  
 palace, or house of a considerable per-  
 son but what faces the south. It is en-  
 clos'd by a double wall, one within an-  
 other, and square. That without is  
 sixteen spans, or twelve foot high, and  
 is of brick; its length from the north  
 to the south gate, is two *Italian* miles,  
 its breadth, a mile, and its circumfe-  
 rence six. This wall has four gates,  
 one in the middle of every wall, and  
 each of these is compos'd of three seve-  
 ral gates, whereof the middlemost is  
 always shut, and never open'd but for  
 the emperor, the others are for all peo-  
 ple that go in and out of the palace,  
 and stand open from morning till night,  
 except those on the south side, which  
 stand half shut. These are guarded by  
 twenty *Tartars* each, with a comman-  
 der, and twelve eunuchs; there being  
 three thousand soldiers appointed to  
 guard the gates of the palace and city,  
 who keep guard in their turns, and keep  
 out *Bonzes*, blind, lame, and maim'd  
 people, and all that have any singular  
 deformity in their bodies. This first en-  
 closure is call'd *Xuan-chin*, that is, *The*  
*Imperial Wall*. The inner wall, which  
 immediately encloses the palace, is much  
 higher and thicker, made of large bricks  
 all equal, and adorn'd with handsome  
 battlements. It is an *Italian* mile and a  
 half in length from north to south, and  
 a quarter and a half in breadth, that is,  
 four miles and a half about. It has four  
 great arch'd gates. Those on the north  
 and south sides are treble, as are all those

of the first wall, but those on the other  
 two sides are single. Over these gates,  
 and the four angles of the wall, are  
 eight towers, or rather eight halls of  
 an extraordinary bigness, and a beautiful  
 structure, set off with a red varnish strew'd  
 with flowers of gold, and they are co-  
 ver'd with yellow tiles. Forty *Tartars*  
 with two officers guard the entrance of  
 each of these gates, suffering none to go  
 in, but the *Mandarines* of the courts,  
 who live within the palace, and the offi-  
 cers of the king's house-hold; stopping  
 all others, who cannot shew them a little  
 table of wood, or ivory, on which his  
 name, and the place he is to serve are  
 set down, with the *Mandarine's* seal, to  
 whom he belongs.

This second way is encompass'd by a  
 deep and broad ditch, all lin'd with  
 freestone, full of good large fish. To  
 every gate there is a draw-bridge over  
 the ditch, except that on the south.  
 Within the great square between the  
 two walls, there are distinct palaces,  
 round and square, built for several uses,  
 and purposes, being large and con-  
 venient. Within the same space on the  
 east side, at the foot of the first wall,  
 runs a river, with several strong bridges  
 over it, all of marble, except the mid-  
 dle arch, where is a wooden draw-bridge,  
 all the other bridges in the palace be-  
 ing built after the same manner. On  
 the west side, where there is a larger  
 space, is a pond well stor'd with fish,  
 above an *Italian* mile in length, over  
 the narrowest part whereof is a fair  
 bridge, at each end whereof is a trium-  
 phal arch of a beautiful and excellent  
 structure. The remaining space on the  
 east and west, which is not taken up with  
 those several palaces, nor the pond, is  
 divided into wide streets, inhabited by  
 servants, officers, and work-men belong-  
 ing to the imperial palace.

In the time of the *Chinese* kings there  
 were ten thousand eunuchs, but he that  
 now reigns has supply'd their place with  
*Tartars* and *Chinese* of the province of  
*Leaotung*, who out of a particular favour  
 are look'd upon as *Tartars*. Thus much  
 for what concerns the outward part of  
 the palace, we must now speak of what  
 is within.

In the first place it is to be observ'd, <sup>Manner of the Chinese houses.</sup>  
 that the houses in *Peking* are not like  
 ours, high, and with several stories; but  
 the several apartments of a palace are  
 one within another, with several courts,  
 all upon a floor, and to all of them there  
 is but one door from the street, so that  
 as we for our dwelling take up much of  
 the air, so do they more of the earth.

 VOL. IV

For instance, the first gate of a palace to the street, and facing the fourth, has within the court, several little avenues on both sides, which lead into another court, through another gate, opposite to that which is to the street, where is the second apartment, which runs on to the third, and that is larger, ending in a large hall to entertain strangers. Next is the fourth apartment where the master of the house resides, and behind that another court, and fifth apartment, where the jewels and best moveables are kept. Further on still is a garden, and at the end of it the sixth and last apartment, with a small door in the middle of it. On the east and west sides of these courts are the inferior lodgings. The servants with their women and children live in that which is next to the first gate; the other courts are for the better sort of officers, and offices. This is the manner of the houses of the *Mandarines*, and other wealthy people; but those of great lords of the first rank, take up more ground, and have larger apartments, and loftier, answerable to their dignity; all these things being regulated by the laws of the kingdom, which it is a crime to infringe.

Imperial  
apartment.

The imperial apartments within this inner enclosure, call'd *Chiau*, some will have it to be twenty, assigning them their particular names, and situation; others say they are twelve, answerable to the signs of the *Zodiac*; and there are those that believe them to be nine, with as many courts; every one writing by hear-say, and not by what he has seen; for it is impossible for any *European* to see them all, especially that of the women; those only being allow'd to be seen, which the jealousy of the eastern nations has made free for such as receive audience. I could describe them by what another hath deliver'd, but I reter the curious reader to him, not to tire him with transcribing the same relation. I shall only say, that all these courts and apartments are upon a line, with great halls of a gothic structure, wherein the timber-work is beautiful enough to behold, a great number of pieces of wrought-work advancing one above another in the nature of cornices, which looks very handsome above the rim of the roof. The sides of the courts are clos'd either by small lodgings, or galleries. But when a man

VOL. IV.

comes to the emperor's apartments, the arches sustain'd on massy pillars, the steps of white marble to go up to the high rooms; the roofs shining with gilt tiles; the ornaments of carving, varnishing, gilding, and painting; the pavements, which are almost all of marble, or porcellane; and above all, the great number of various and stately lodgings, which compose the structure, are altogether certainly beautiful, and admirable, and look like the palace of a great prince. The *French* fathers told me, that no less than two millions of pieces of eight would re-build a hall that had been burn'd. 'Tis true, the architecture and ornaments are not very regular, and here is not the symmetry and beauty of the *European* palaces.

It is hard to know the number of concubines there are in this palace for the emperor's pleasure, because it is very great, and not fix'd; besides that they are never seen. They are chosen maids of good birth by the *Mandarines* of the provinces; and being once in the palace have no more communication with their parents. Their necessary and continual solitude (for most of them are not known by the prince) the pains they take to make themselves known, and the jealousy reigning among them, make them very miserable. Three of those that have the good luck to please the prince, are chosen to bear the title of queens, and live after a different manner from the rest, each of them having a several apartment, and a numerous court. They want for nothing that may please them. Their equipage, cloaths, and attendance are very magnificent.

Yet they have no share in the government, the *Chinese* laughing when they hear that princesses among us inherit crowns, and saying *Europe* is the kingdom of the women. These are accounted wives, so that all their sons are legitimate, only with this difference, that those of the first are preferable to the others, as to the succession to the empire.

Within the inner palace there is a park enclos'd with a wall, where wild beasts are kept for the emperor's diversion. In it there are five little hills, indifferent high, made of the earth taken out to make the ditch and pond. That in the middle is highest, and these are the only hills in the city of *Peking*.

A Voy-

A Voyage round the World by Dr. John Francis Gemelli Careri. Part IV.

Containing the most Remarkable Things he saw in
CHINA.

BOOK II.

CHAP. I.

The Presenting of the new Kalendar; the Audience given the Author by the Emperor of China; and Ceremonies us'd by the Mandarin's upon publick Occasions.

GEMELLI
1695.

A Servant of father Grimaldi (whom the Chinese call *Mil-lavije*) came to acquaint me that his master expected me, and going immediately, I found him clad in a rich garment lin'd with fables, given him by the emperor. He told me that morning was a proper time to go with him into the palace, because he was to present the emperor the new kalendar for the year 1696, which he had compos'd in the Chinese, the Tartar, the eastern, and western language. Having thank'd him for remembering me, and for the present he made me of an almanack, I mounted a horseback, and follow'd him. Having pass'd the first enclosure, in which is the house of the French Jesuits, we entered the inner palace through a great gate guarded by soldiers, and crossing a great court, on the sides whereof were lanes of soldiers well clad in good order, we went up to the first hall, on one of the sides, upon twenty steps of white marble, and into it through the side-door, because only the emperor goes up the steps, and in at the middle-door, which are larger and more stately.

Apartment of
the palace.

This room was very large, so that besides the walls, it was supported within by some wooden pillars, well painted and gilt, as was the ceiling. The walls were of brick and white plaister, the outward roof was of porcellane of several colours. This led to the second court through three other front-gates, and two on the sides, where on both hands there were houses, very beautiful to behold. Then was there an ascent to another hall like the first, and from that through other courts to the third and

fourth, this last exceeding the others in structure and cost. Before we came into the court of this fourth hall, father Grimaldi carrying the almanack handsomely put up in a casket cover'd with silk, attended by several Mandarin's, and persons of quality, a person sent by the emperor to receive it, came to meet him, and having taken it with great respect and civility, carry'd it in to his master.

Father Grimaldi taking leave of the Mandarin's that had bore him company, told me, that to the end the fathers might not suffer by my coming, it was convenient the emperor should see me, that so when he came afterwards to know it by means of the two pages, he might not be displeas'd; as had happen'd before, on account that he was not told of a father of the society, who came sick to Peking to be cur'd. Therefore he bid me wait, and he would introduce me to his majesty, teaching me in the mean while the ceremonies I was to perform. In fine, after an hours stay, a servant came to bid us advance; so we pass'd through four long courts, hemm'd in with apartments, and lodgings of several structures, surpassing the last square hall, built upon the gates of communication. The gates through which we pass'd, out of one court into another, were of a wonderful bigness, wide, high, and well proportion'd, made of white marble, whereof time had worn away the smoothness and beauty. One of these courts was divided by a small stream of water, over which are little bridges of white marble. In short the beauty of this palace consists in a multitude of buildings, courts, and gardens, orderly placed, where,

where, to say the truth, every thing is worth observing and wonderful. The emperor's throne was in the midst of a great court. It ascended square, the first basis being of an extraordinary bigness, and all hemm'd in with bannisters of white and very fine marble. Above the first landing-place or plain, which had such another row of bannisters about it, was a second in the same manner, but somewhat less in compass, and so it grew less to the fifth ascent or plain, where was an admirable open room or gallery cover'd with gilt tiles, and supported by strong wooden pillars varnish'd. In this place was the emperor's throne. Those five orders of bannisters look'd mighty beautiful to my eye, especially at that time when the sun shining on them, they reflected its rays all about.

The emperor was within that beautiful chamber or gallery, sitting after the Tartar manner, on a *Soffa*, or floor rais'd above the rest of the room three foot, and cover'd with a large carpet, which reach'd over all the pavement. He had by him books, ink, and pencils after the Chinese manner, to write. His garment was of gold colour silk, embroider'd with dragons, two whereof very large were on his breast richly wrought. On his right and left, were ranks of eunuchs well clad, and without any weapons, their feet close together, and their arms hanging. When we came to the door, we ran hastily to the end of the room that was opposite to the emperor, and standing both together, continu'd on our feet a moment, holding our arms right down by our sides. At last kneeling, and lifting up our hands, join'd to our heads, so that our arms and elbows were of an equal height, we bow'd three times down to the ground, then rising, we set our selves in the same posture, as at first, and perform'd the same ceremony, a second, and a third time, till we were order'd to advance, and kneel down before the emperor: By means of father Grimaldi, he ask'd me concerning the wars then carry'd on in Europe, and I answer'd to the best of my knowledge. Then he ask'd me whether I was a physician, or understood surgery; and understanding that was not my profession, ask'd a third time, whether I had studied mathematics, or understood them. To which I answer'd in the negative, tho' in my younger years I had got some little smattering in them. For I had been forewarn'd by the fathers, that if I own'd I understood any of those arts, or sciences, he would keep me in his service, and I had no mind to stay there. At

length he gave us our conge, and we retir'd without any ceremony.

He was in the 43d year of his age, and the 35th of his reign; he is call'd *Cam-Hi*, that is, *The Peaceable*. His stature is proportionable, his countenance comely, his eyes sparkling, and somewhat larger than generally his countrymen have them; somewhat hawk-nos'd, and a little round at the point; he has some marks of the small pox, yet they do not at all lessen the beauty of his countenance.

Tuesday the 8th, I went in a chair, which is dear in Peking, to see the city towards the east quarter, and found every where very beautiful publick places, and rich shops. I went into the *Tartar* city, through the gate call'd *Zien Muen*, which is in the midst of the wall that parts the two cities; the same *Marcus Polus* speaks of, and which looks towards the king's apartments, and the great gate leading to them. And as the great gate of the imperial apartments is never open'd, but when the emperor goes out, so neither is this which answers to it in the city wall open'd, but only the other three are for the service of the publick. There is a most beautiful row of bannisters before the gate of the imperial palace, which encloses a spacious porch.

The cold is very sharp in Peking, and tho' I be not very tender, yet I could not go out till it was late, when the sun had gather'd strength; for tho' it be in 40 degrees wanting five minutes of latitude, it is excessive cold; father Grimaldi assuring me that it is not colder in Poland, in the latitude of 50 degrees, he having had experience of both places. This sharpness in Peking proceeds from the nearness of the high mountains, which divide the great Tartary, from China; yet the hardest weather is not at the time when I was there, but in January, the winter beginning in November, and continuing till the middle of March without any rain at all. During which time, by means of the great frost, there are brought out of the eastern Tartary, infinite number of pheasants, partridges, deer, wild boars, and other beasts, with abundance of sturgeon, all so frozen, that the beasts will keep two or three months, and the pheasants thirty days, and they are so plentiful at that time, a buck, or a boar may be bought for a piece of eight, and a pheasant for a half-royal, and a partridge for two grains of Naples-money. From March till the beginning of June is a perfect spring at Peking with little rain, but in June and July, till the 10th of August, the rains are plentiful.

The emperor's throne.

How he sits.

Grimaldi's description of the emperor.

GEMELLI 1695 Description of the emperor.

GEMELLI
1695.

plentiful. This rain is necessary to wash the streets of all the mighty filth that gathers in them, for grave perions are not allow'd to ease themselves in publick places. By reason of this great cold, all the women wear coits and caps on their heads, whether they go in chairs or on horseback; and they have reason to do so, for I could scarce endure the weather, tho' I wore several furs. The worst thing here is the want of wood; and therefore they burn a sort of mineral, dug out of the neighbouring mountains, like the *Englifs* sea-coal, which are noisome to warm ones self by, and therefore they only use them in the kitchen to dress victuals, choosing rather to be without fire in their chambers, and num'd with cold.

My arrival at *Peking*, gave the *Jesuits* the same jealousy, persuading themselves like those of *Canton*, that I was sent by the pope, to enquire underhand into all that had happened in *China*, on account of the contest between them and the vicars-apostolick; and this the more, because I was come to court without the emperor's leave, and without their knowledge.

Wednesday the 9th, I went in a chair to the *French Jesuits*, who live within the 1st enclosure of the imperial palace. As I came in at the great gate, I saw a multitude of porters, hanging blew cloth to close in the little allies opposite to the long court, and broad way that leads to the inner-wall, causing it to be well swept and clear'd. Asking why they did so, I was told, that it being the birth-day of the empress, dowager to the father of him now reigning, all the ladies of the city came to compliment her, and therefore all the paths that led to the court were enclos'd, that they might not be seen, and the way was adorn'd as is usual when the emperor goes abroad. In short, having been merry with the *French* fathers, as I return'd, I saw a number of fine calashes, cover'd with damask, and other stuffs of silk and gold, in which the ladies came. The fathers told me the ceremony was perform'd after this manner. The empress aforesaid, sat on a high throne, and the emperor went first with all her sons to begin the ceremony, bowing down his head, as he knelt nine times to the ground. Next came his wives, and concubines to do the same; next the princes, and princesses of the blood, and the great ladies, and *Mandarines* of the court. This day the empress invites the emperor to dinner, and all that are there; the emperor eating on a table by himself on his throne. This I deli-

ver upon hearsay, because it is not to be seen.

All the princes and *Mandarines*, who are at court, are oblig'd to perform the same ceremony on the 1st, 15th, and 25th day of every moon; about five thousand of them meeting in the lodgings, chambers, and halls, which are on the sides of the court, before the fourth gate. They are all richly clad, but after several manners according to their quality, known by the several beasts and birds embroder'd on their garments. About break of day, the emperor sets out from the eleventh apartment, where he usually resides, and is brought in a chair by twelve eunuchs into the hall, where he seats himself on a rich throne rais'd in the middle of it. Then an eunuch kneels before the door, and says *Falui*; that is, let the heaven discharge its thunder; and presently the bell rings, and the kettledrums, and great drum of the palace are beaten, and trumpets and other instruments sounded, all the gates being open'd at the same time, except those in the middle. Whilst the noise continues, they all range themselves on both sides; that is, those of the blood-royal, and the learned *Mandarines* on the east side; and the lords who are not of the blood-royal, and *Mandarines* of the army, on the west side. Then going on in this order, two and two, they pass through the lesser gates, which are on the sides of the greater; then going up the steps, every one takes his post according to his quality, before the great hall in places assign'd to every one of the nine orders of *Mandarines*, which are writ upon small pillars. Being thus orderly rang'd on the two sides of the court, facing one another, the noise of the instruments ceases, and all is very hush; the *Cotais* or censors carefully attending, that the function may be duly perform'd and every man do his duty. Then the master of the ceremonies, who kneels in the middle of the stairs of the great hall, speaks to the emperor to this effect. Most high and powerful prince, our sovereign lord, all the princes of the blood, and great lords, all the learned and military *Mandarines* are here now ready to pay the duty they owe you. Then, standing up, he goes to the east side, and lifting up his voice again, says to them, *Pai-pai*, that is, order your selves; and immediately every one settles his garment, and composes his person. Then he again says, *Shew-xin*, that is, turn your selves, and they turn towards the imperial hall. Then he bids them kneel down, and says *Ken-*

ten, that is, touch the ground with your heads; and so they continue, till he says, *Kilai*, that is rise. Next he says, *Ye*, that is, bow your arms, joining the hands, and lifting them above the head, then lower them to the knee. Which done, he says, as you were at first, for the monosyllable *Ye* alone, signifies this sort of obeisance. Having perform'd this ceremony three times, they all kneel, and then he cries *Keu-teu*, touch the ground with your heads. *Tjai-keu-teu*, touch it a second time; *Yeu-keu-teu*, touch the third time. They, the two first times they do it, say in a low voice *Van-fui*, that is, ten thousand years; but the third time they say *Van-fui, Van-fui*, ten thousand years, ten thousand thousands of years; for ten thousand years is the emperor's name.

This ceremony being perform'd, the master of the ceremonies says again, *Kilai*, rise; *Sbievexsin*, turn your selves, and they turn to one another. At last he says to them, *Quiepan*, place your selves in order, and they return to their places in rank and file. Then he kneels again, and with the same respect says, *Sbiaospi*, that is, most powerful lord, the ceremonies of this submission due to you are perform'd. Then all the instruments found again, and the king comes down from his throne, and returns to his apartment. The great men and *Mandarines* withdraw; and at the middle-gate, take off the garments of ceremony they had put on when they came to the palace, which differ from their ordinary apparel, and are much richer; but must not be yellow, which by the *Cbinese* is counted the king of colours, because like the colour of gold, which is the king of metals; and therefore they say that only belongs to the emperor, who appears in that habit in publick, with abundance of dragons embroider'd on it. Sometimes the emperor excuses the *Mandarines* who are busy about the important affairs of the kingdom from this troublesome ceremony.

Thursday the 10th, I went in a chair

to view another part of the city, where I saw something curious, for there was publick mourning and rejoycing along one and the same street; a wedding, and a funeral happening to pass by at the same time. The funeral was thus. First went the colours and banners of silk, and colour'd-paper, the statues of the dead, horses, and monsters carry'd by several people in good order. Others beat a brass drum, and the *Bonzes* brass plates, bells, and other instruments, after whom was carry'd the corps in a coffin on a bier cover'd with white cloth. The male kindred went before the corps weeping, the women follow'd in very small calashes, all clad in white, that being the colour for mourning in *China*, and the neighbouring kingdoms of *Cochinchina* and *Tunkin*. But this is when any one dies in the city, that the obsequies being perform'd there, he is carry'd to be bury'd; but if he dies out of it, of whatever degree or quality he be, it is not allow'd to bring him into the city, they looking upon it as a very bad omen.

The manner of the wedding is almost like that of the funeral, as to the instruments that sound. Several persons go before on foot and on horseback with colours, and banners, according to the bridegroom's quality. Then comes the bride in a close chair or calash adorn'd with fringes, or laces and silk embroidery in great state, but she cannot be seen.

I went out at the gate of the *Cbinese* city, and went a league about the wall, to see whether it differ'd from the walls of the other cities of *China*, and found it to be of the same sort, being in a great measure made of brick, with a wet ditch about it forty foot wide, the wall it self twenty foot thick, and rampard after the manner of our strong places in *Europe*. The curtains are defended by large square towers about a bow-shot distant from one another; but the towers of the new city are set thinner, and the walls are weaker, and not so high.

CHAP. II.

A short Journey to see the great Wall of China, and a Description of it.

Being so near to that so famous wall, I had the curiosity to see it, and therefore went upon Friday 11th, to the *French* fathers to provide for my journey. They told me it would be dangerous to go where the passage was guarded, because the guards would be jealous

of a foreigner; but that I might go to that part next the mountains where there were no soldiers. They were so kind as to find one to bear me company the next day, and so I return'd home. On Saturday 12th, I set out on horseback betimes, and travell'd that day 35 miles,

GEMELLI lying at night in a country-house. *Sunday* the 13th, having travell'd twenty miles of mountain-way, we came to the foot of the mountain, along which the wall runs, and there being no going to it on horse-back, I was forced to alight, and go four miles on foot with much trouble, being guided by the fellow that hir'd the horses, my servant staying with them.

Chinese wall.

The wall in some places is fifteen foot high, in others twenty; but in the vallies it is much higher and thicker, for six horses may easily go a-breast on it. The structure is all of large burnt bricks, and few stones, and at certain distances there are strong square towers, about two bow-shot from one another, which continue all the length of the wall to the sea. Where the passes of the country are easiest, and most expos'd, there are several works standing thick together, as ravelins, and bastions, to secure them. This wonderful wall begins in the province of *Kiamfi*, and runs to the east sea, and above half a league into it, because of its shallowness; so that it is judg'd to be four hundred and five *Spanish* leagues in length, taken in a straight line, and five hundred as the building winds along valleys and mountains. There are abundance of little doors and stairs for the multitude of soldiers that guard the towers, for the safety of the kingdom, to go up to them.

Almost all *China* being parted from *Tartary* by the mountains, which run between them, the great wall is rais'd less on the mountains, and more in the valleys, as need requires; yet not so as to be every where upon a level, as some would make us believe; it being impossible to raise it to that height in the deep valleys, as to equal the highest

mountains. So that when that wall is said to be prodigiously high, the meaning is no other, but that it is built upon very high places; for of it self it is not so high as the walls of their cities, nor is it of an equal breadth in all parts. Almost all the structure, as has been said, is of brick, so well built, that it does not only last, but looks new, after several ages, as if it were new, except only some few ruins, which the *Tartars* do not mind to repair. It is above eighteen hundred years since the emperor *Xiboam-ti* caus'd it to be built against the incursions of the *Tartars*. This was one of the greatest, and most extravagant works that ever was undertaken. In prudence the *Chinese* should have secur'd the most dangerous passes: But what I thought most ridiculous, was to see the wall run up to the top of a vast high and steep mountain, where the birds would hardly build, much less the *Tartar* horse climb, to break into the country. And if they conceited those people could make their way climbing the cliffs and rocks, it was certainly a great folly to believe their fury could be stop'd by so low a wall. I was astonish'd to consider they should have such excellent workmen, to draw up so many materials for building, and make use of them; which could not be done without a vast charge and labour, and in a considerable space of time. It is reported, That under the *Chinese* emperors, this wall was guarded by a million of soldiers; at present the emperor being sovereign of a great part of *Tartary*, he only keeps good garrisons on the weakest passes. *Monday* the 14th, I return'd the same way I came, and was at *Peking* on *Tuesday* the 15th, before night.

CHAP. III.

How the Emperor of China appears in Publick.

The emperor's country house.

ON *Wednesday* the 16th, I was in father *Pereira's* apartment, when order was brought him from the palace, to go fix the clock of the country-house, because the emperor was to go thither very soon, where he diverts himself half the year. It is call'd, *Sbian-Sciun-Yuen*; *Yuen*, signifying a garden; *Sciun*, always; and *Sbian*, spring; that is, The garden where there is continual spring. It consists of fine little houses, separated from one another, like those of our *Carthusians*, with gardens and fountains after the *Chinese* manner. *Thursday* the 17th, the *French* fathers told me the emperor

would go the next day to his country-house, and I might see the manner of it from their house, or any place near it, and accordingly on *Friday* the 18th, I was conducted by a servant of theirs to see that majestic procession, which began an hour after sun-rising.

First march'd about 2000 soldiers and the servants, after whom follow'd about twenty women in close calashes. Next came the king attended by the princes of the blood, and *Mandarines*. He was on horseback, plainly clad in a garment of gold colour, embroider'd with dragons all over, but more particularly on the

the breast, where were two very large ones. On his *Mau*, or *Tartar*-cap was a rich jewel.

Sometimes the emperor goes abroad in a chair carry'd by thirty two men, who contrive it so ingeniously, that all equally bear a part of the burden: Besides four others, who support the chair on every side. I thought this publick appearance very stately; and believe it will be acceptable to the reader, to describe in this place, a more solemn manner of going abroad of the emperor of *China*, when he goes to sacrifice, or perform some other publick function, attended by several thousands, and therefore the draught of it is here inserted.

1. First go 24 men with great drums in two files, twelve and twelve.
2. 24 Trumpets, twelve on a side. These are made of a wood they call *Utum-xu*, which is of great value in *China*. They are above three foot long, and almost a span diameter, at the mouth shap'd like a bell. They are adorn'd with rims of gold, and suit with the noise of the drums.
3. 24 Staves, twelve on each side, about eight spans, or two yards long, curiously wrought with red varnish, and adorn'd with leaves of gold.
4. 100 Halberds, fifty on a side, the iron of them like a crescent.
5. 100 Maces of gilt wood, fifty on each side, as long as a spear.
6. Two royal lances, call'd *Cassi*, cover'd with red varnish, and gilt at the ends.
7. 400 Great lanthorns curiously wrought, and richly adorn'd.
8. 400 Torches well wrought, and made of a sort of wood, which keeps long lighted, and shines bright.
9. Twenty lances adorn'd below the spear, some with silk fringes of several colours, and others with the tails of panthers, and other beasts.
10. 24 Colours, on which the signs of the zodiack are painted, which the *Chi-*

nese divide into twenty four parts, as *GEMELLI* we do into twelve. 1095.

11. 56 Colours, on which are the fifty six constellations, to which the *Chinese* reduce all the stars.
12. 200 Great fans upon long staves, gilt and painted with several figures, as dragons, birds, the sun, &c.
13. 24 Umbrells richly adorn'd, twelve on each side.
14. Eight sorts of utensils the emperor commonly makes use of, as the towel, gold basin and ewer, and others.
15. 500 Gentlemen belonging to the emperor, richly clad.
16. Ten horses as white as snow, with the bridles and saddles adorn'd with gold, pearls and precious stones.
17. 1000 Men, 500 on each side, call'd *Hao-gue*, that is, foot soldiers, clad in red, embroider'd with flowers, and stars of gold and silver, and caps adorn'd with long feathers.
18. Eight standards of eight several colours, as yellow, blue, white, &c. denoting the eight generals of the empire, one being call'd general of the yellow standard, another of the blue, &c. and every one of them commands 100000 men.
19. The emperor carry'd in an open chair, as was said before, by thirty two men, and supported by four others on the sides.
20. The princes of the blood, petty kings, and a great number of lords, richly clad, in file according their quality.
21. Servants to the aforesaid petty kings and princes of the blood.
22. The 2000 learned and military *Mandarines* richly clad.
23. A great coach drawn by 8 horses.
24. Two stately chariots, each drawn by two great elephants.
25. *Tartar* soldiers.

See Cut Number I. Page 307.

CHAP. IV.

The Religions in the Empire of China.

Religion
of the *Tar-*
tars.

There are several religions profess'd in the empire of *China*, according to the variety of people in it. To begin with the emperor, he being a *Tartar*, follows the idolatry of his nation, which as in the main it agrees with the religion of the *Chinese* and *Japanese*, yet they all differ in sects, wherein the *Tartars* do not agree among themselves,

much less with the *Chinese* and *Cochinese*, as neither they do among themselves. This difference arises from the several idols, which every one takes for his tutelar god. The *Tartars* of great *Tartary* adore a deity, they call *Natagai*, whom they esteem the god of the earth, and they have so great a veneration for him, that no man is without his image

GENELLI in his house; and being persuaded that
1695. *Natagai* had a wife, they place her on
his left, with little idols before them,
as if they were their children. They
pay adoration, and make obeisance to
them, especially when they are going to
dinner or supper, anointing the mouths
of the images with the fat of the meat
that is dress'd, and lay some of their
dinner or supper at the door, believing
they feed on it.

The great
priest or
Lama.

There is a much more impious, and
ridiculous adoration paid by the *Tartars*
to a living man, whom they call *Lama*,
that is, great-priest, or priest of priests;
because from him, as the source, they re-
ceive all the grounds of their religion,
or idolatry, and therefore they give him
the name of eternal father. This man
is ador'd as a deity, not only by the
inhabitants of the place, but by all the
kings of *Tartary*, who own a subjection
to him in matters of religion, and there-
fore not only they, but their people go
in pilgrimage with considerable gifts to
adore him, as a true and living god.
He, as a great favour, shews himself in
a dark place of his palace, adorn'd with
gold and silver, and lighted by several
hanging lamps; sitting upon a cushion
of cloth of gold, on a place rais'd from
the ground, and cover'd with fine car-
pets. Then they all prostrate themselves
flat on the ground, and humbly kiss his
foot. Hence he is call'd father of fa-
thers, high priest, priest of priests, and
eternal father; for the priests who are
the only persons that attend and wait
upon him on all occasions, make the
simple strangers believe wonders of his
sanctity. And that he may be thought
immortal when he dies, they seek out
throughout all the kingdom for one ve-
ry like him, and having found one, place
him on the throne, and by that means
make all the kingdom hold it as an ar-
ticle of faith (they being all ignorant of
the imposture,) that the eternal father rose
again out of hell after seven hundred
years, and has liv'd ever since, and will
live to eternity; which is so deeply im-
printed in the minds of those barbarous
people, that no man among them makes
the least doubt of it, and they adore him
so blindly, that he thinks himself com-
pletely happy, who has the fortune to
get the least bit of his excrement, which
is bought at a great rate; believing, that
wearing it about their necks in a gold
box, as the great lords use to do, it is
a sure defence against all evils, and an
antidote against all diseases; and there
are those who out of devotion put some
of it into their meat. This living deity

is of such great authority throughout all
Tartary, that no king is crown'd till he
has sent ambassadors, with rich presents,
to obtain the great *Lama's* blessing, for
a happy and prosperous government.
His residence is in the kingdom of *Barantola*,
or *Lassa*, where he assumes the
regal dignity, tho' he takes nothing upon
him of the government, contenting him-
self with the honour, living quietly and
peaceably, and leaving the care of the
kingdom to another, whom they call *De-
wa*, or *Dena*; which is the reason they
say there are two kings in *Barantola*.

In *Peking* there is a great temple with
in the palace of these religious *Lama's*.
It is call'd *Lamatiem*, that is, the tem-
ple of *Lama*; and was built by the fa-
ther of the emperor now reigning, out
of policy, and to please his mother,
the daughter of a petty king of the
western *Tartars*, who was much affect-
ed to the *Lama's*. On a hill like a fu-
gar-loaf made by hand, of great stones
carry'd from the sea, is a round tower
of twelve stories handsomely built, and
of a wonderful height; about which,
on the top, are many small bells, which
being shaken by the wind, ring night and
day. The temple is large, built in the
middle of the hill on the south side. The
dwellings and cells of the *Lama's* are on
the east and west. The idol on the altar
is like a naked rustick man, like the
god *Priapus* of the antients, nor is it
ador'd by any but the *Lama's* and
western *Tartars*; the eastern *Tartars* and
Chinese abhorring it. I saw several *La-
ma's* in *Peking*, and their habit is singu-
lar, for they wear a yellow miter, a white
gown tuck'd up backwards, a red girdle,
and a tunick of a gold colour, and a
purse hanging from their waste; so that
their garment is much like that the apo-
stles are painted in.

The principal idol they adore in that
kingdom of *Lassa*, or *Barantola*, is *Me-
nipe* made of nine human heads in the
form of a cone; before which they of-
fer sacrifice, and place meat to gain the
favour of the idol. They use beads,
letting one drop every time they say,
Menipe, save us. The malice and deceit
of the devil has caus'd a horrid and ex-
ecrable custom to be us'd in that king-
dom of *Barantola*, and that of *Ti ngui*.
They chuse a lusty lad, or boy, whom
they empower at certain times of the
year to kill, with weapons he has given
him to that purpose, whomsoever he
meets, of any sect, or condition what-
soever. To those that are so slain they
afterwards pay eternal honours, esteem-
ing them most happy, as being sacri-
ficial

field to their goddess *Menipe*; The boy arm'd with a bow and arrows, and scimitar, and stuck round with banners, at a certain time appointed by the devil, to whom he is devoted, goes out of doors, like one distracted, and running about the streets and publick places, kills whom he meets, and no opposition must be made against him. In the language of the country they call him *Buib*, that is, killer.

The *Mabometan* religion has also made so great a progress in *China*, being brought in by the *Tartars* of the greater *Tartary*, who come to settle there, that father *Grimaldi* told me there were two millions of people that profess'd it. These came in through the eastern *Tartary*, being call'd in by the *Chinese*, to expel the western *Tartars* call'd *Elu-b*, who in former ages reign'd in *China*.

The religion of the *Chinese* may be reduced to three principal sects. One of the *Literati*, or learned; the second of *Lanzu*, and the third that of the commonalty. That of the learned is ordain'd, and directed to two principal ends, the one the publick good of the kingdom, the advancement whereof is its whole aim. The other the particular prosperity of every man of them, to be procur'd or purchas'd by the merit of virtuous actions according to the dictates of reason, improv'd and made perfect by moral philosophy, wherein they take so much pains to advance themselves. And because to honour those that deserve well (whether it be a depth of nature, as to fathers, or other superiors, or to those who merit it by virtue) is very beneficial to the publick; the hopes of reward being a great encouragement to take pains; and for as much as this is very beneficial to private persons, children being taught the love and respect they owe to their parents, whom they so often see offer up at the tombs of their predecessors, tears, presents, the prayers of *Bonzes*, and whatever else is proper to honour the dust, and comfort the spirit: Therefore all these ceremonies of theirs are political actions for the good of the living, to give them good instructions, and not regarding the dead, as if they could be beneficial to them. So that these ceremonies are not neglected by them, tho' they do not believe the immortality of the soul; because, besides the publick damage that would ensue, if people were us'd to live at all their liberty, without the check or fear of another life, they would in a great measure hurt themselves, teaching their own

children not to use those expressions of *GENELLI* respect and love to them, which they should see them deny their parents. 1695.

Yet it is true, that the wiser sort thinking it intolerable on the one hand, to believe that men and beasts are equal as to length of life, say that there should be brutes that live longer, some an age, and perhaps some more; and on the other side not thinking that immortality is the natural property of the soul, but a reward of merit; they have hereupon found out a new sort of philosophy, very like that of the ancient *Stoicks*, which is, that virtue is a quality that partakes somewhat of the divine being, able to remove all that is corruptible out of the soul where it resides, and consequently the mortal part, and to subtilize it to such a degree, that it may no longer be in a condition to suffer from that water to which it is united, but not incorporated; and that thus when parted from the body, it is united to God, and like a graft set upon a tree, has the same immortal life with him. On the contrary, say they, vice, by its natural malignity and infection, so corrupts and loads the soul, intangling it with the flesh, that it lives by the flesh, and with the flesh, dies and corrupts. In short, these *Literati* or learned *Chinese* are mere atheists, and believe there is neither reward, nor punishment in the other world; and that the soul freed from the prison of the body, returns to nothing, from which it came, after the same manner as the wind. And therefore they make it their business to have the enjoyment of this world, with so many wives (which they approve of as necessary for peopling the kingdom) with having the management of the government, and with riches, which they endeavour to gather by unlawful means: To speak the truth, it is rather an university of *Literati*, or learned men, call'd *Tuckiao*, than a pagan religion; for as much as they have no temples, nor priests, nor idols, nor sacrifices, nor sacred rites.

The proper temple of the learned is that of *Confucius*, prince of the *Chinese* philosophers, which temple, by a publick ordinance of the kingdom, is built in every city, in some place above that where the schools are, with extraordinary charge. There his dictates are written, or else his name on a great board in golden letters, with several statues of his disciples by him, whom the *Chinese* worship as inferior deities. Here all the *Mandarines*, doctors, and batchelors, meet every new and full moon to worship, and do homage to their master

GEMELLI
1695:
The second sect.

Confucius with humble genuflexions; after the same manner as the *Agyptians* on the first day of the month *Tsobt* celebrated the solemnity of their god, *Mercury*.

The second sect is call'd *Lawzu*, or of *Li-lao-kun*, introduced by a philosopher of that name, who liv'd in the time of *Confucius*. They feign he was in his mothers womb eighty years, before he was born; for which reason he is call'd *Lawzu*, that is, *Old Philosopher*. He teaches, that the sovereign God is corporeal, and governs the other deities, as a king does his subjects, wherein these seem to agree with the *Stoicks*. He promises mighty effects of chymistry (whence some judge him to have been the inventor of it) persuading his followers, that by means of a certain drink, men may become immortal. His disciples also attribute to him art-magick, and this hellish art in a short time became the only science of persons of quality, every one applying himself to it, in hopes to avoid death; and the women either out of curiosity, or in hopes to prolong their lives, gave themselves up to all manner of extravagancies and impieties. Those who made this pernicious doctrine their peculiar profession were call'd *Tien-se*, that is, heavenly doctors; to whom the emperors gave houses to live in community, and built temples in several places, in honour of their master. The priests of this sect, particularly employ themselves in expelling the devils out of houses, by means of exorcisms, or fasting horrid monsters to the walls, drawn with ink, and this with such a hideous noise, that it makes the very devils remove. These naked fellows do also pretend to the power of procuring rain, or fair weather at pleasure, and of diverting private and publick calamities. This sect at present has but few followers, the other two being most universal.

The third sect, is that of the common sort, or of the *Bonzes*, who have idols, and deities represented in strange and monstrous figures; and among the rest those two so famous throughout all the east, viz. *Amida*, and *Sbiaca*. It is the principle of these, quite contrary to that of the learned, to take no care of the publick, and only mind themselves. They allow the soul's immortality after the death of the body, and that it is a reward or punishment according as every one has deserv'd. They commend a single life, and virginity, so far as to condemn matrimony at least by inference: And therefore, as there are no

people of a meaner condition than they, so there are none more beastly and abominable for all brutal filth; and so they mix with one another, worse than the most filthy animals.

They tell us this pernicious sect came out of *Indostan* after this manner, as is found in the histories of the learned *Chinese*. In the year sixty five, after the birth of *Christ*, the emperor *Mun-Ti*, the seventeenth of the fifth family call'd *Han*, reign'd in *China*. The shape of a holy hero appear'd to him in a dream, and being further persuaded by the words of *Confucius* that in the west there was a just man, not being able to go himself, he sent *Caicim*, and *Cukim* his ambassadors, to find the holy man, and the holy-law. These coming to an island, not far from the red-sea, and not having the courage to go any further, return'd with an idol and statue of a man call'd *Fee*, who had liv'd in *India* five hundred years before *Confucius*, and brought his accursed religion into *China*. They had been happy and deserv'd well of their country, if instead of that plague, they had brought the saving doctrine of *Christ*, which at that time was preach'd by *St. Thomas* the apostle in *India*.

The *Chinese* embracing this cursed doctrine, by degrees fell off from that of their ancestors, which was not altogether so impious, and at length in contemning all religion, are fallen into downright atheism. This master of idolatry left two sorts of doctrine, the one, That all things come from and return to nothing, which they call the interior doctrine, and its followers are atheists; the other exterior, adapted to deceive the ignorant multitude. The learned, as has been said, follow the first of these, placing all their happiness in this life, in the enjoyment of wealth, and many women, and ruling over the people; for they allow the soul to be mortal. And they are so fix'd in their way, that some *Spanish* missionaries of the order of *St. Francis* told me, that in a dispute, certain *Mandarines* were not ashamed to own, that they neither believ'd in God, nor the idols, but only in *Confucius*; but they believe, if they act justly, God will reward them in this world, and punish them if they do ill. If they ever build *Pagods*, or sacrifice to their idols, it is only out of self-interest to obtain their own ends; which if they fail of, they soon forsake the *Pagods*, and cast down the idols, punishing them as ungrateful, in not returning the favours bestow'd on them. They will have it, that this master of the two aforesaid

sects

sects was a petty king, whose name was *San-Kuang*, and his mothers *Mo-ge-su-gin*; who by the means of abundance of seeming miracles, drew the admiration of the people, and endeavour'd to be own'd as a God. He dy'd at twenty nine years of age; and having settled idolatry in his life-time, endeavour'd to promote atheism at his death, declaring that in all his discourses, he spoke enigmatically; that all things came out of nothing, and would return to nothing; and that there was the end of all our hopes.

In this sect of the *Bonzes* there seem to have been some mysteries and ceremonies of our holy faith intermix'd, which perhaps might be learnt from the preaching of the apostles *St. Thomas*, and *St. Bartholomew*, who spread it towards those parts. For they have one God in three persons, represented by an idol with three heads; a virgin, mother of a God, having her statue with a child in her arms; they allow of heaven and hell, and the enjoyment or pain suitable to the desert; they commend virginity, and profess it; they use fasting and penance; they observe voluntary poverty; they speak in praise of forsaking the world, and flying to deserts to live in contemplation; or living in community in monasteries; they pray by choirs, reciting something after the manner of the rosary; they wear priestly garments, and grant indulgences. Yet their religion is intermix'd with so many fables and lies, that it has scarce any resemblance left of christianity; for they allow the transmigration of souls; and believe that when any person dies, the soul continues three days in the country, that it may be try'd by the spirit *Tu-fun* (who is publicly expos'd and worship'd on the roads.) For this reason they repair to the *Bonzes* with money and presents, carrying them paper for the clerk, and money to bribe the idol, that he may be favourable in the trial. Thus deceiv'd by the *Bonzes*, they offer in the *Pagods* several parcels of red, silver, and gilt paper, burning most of it, as believing that which is gilt will turn to gold, and that which is silver'd into silver, to serve the dead in the other world. After the three days, they say the soul appears before the spirit of the city, whose name is *Chin-guan* (it being probable that the said soul has been in the city) who takes information of what he did in the city, within the space of five days, during which time the kindred of the party deceas'd follow the *Bonzes*, that by their prayers they may gain the judges fa-

vour, and have the soul favourably disposed. After these examinations, they say the soul goes to hell (whither, according to their opinion, good and bad must go) and there the cause is again heard over in ten several courts, called *Jeu-guan*, the soul staying several days at every one of them, that according to the good or evil, it appears to have done, the transmigration may be appointed either into the body of a man, or beast. I know not how they came at first by this notion of transmigration, or whether they had it from the *Egyptians*, the *Chaldeans*, or the *Druids*, who, as *Cæsar*, and *Lucan* will have it, invented it to inspire courage, and a contempt of death into mankind; from whom also *Pythagoras* is said to have learnt and brought it into *Italy*. Before transmigration, the *Chinese* will have it, that the soul which has been judg'd, must pass over the bridge of *Kin-inkian*, that is, of silver and gold; where guard being kept, money must be given them, as well as at the aforesaid courts, that they may not stop it; for if the soul falls over the bridge, it remains for ever in the river of flames, and if when pass'd over, it can find a flower they call *Lienxoa*, the fruit whereof is call'd *Larusa*, then it will become a person of wealth and plenty. By these fables, the *Bonzes* get money and the goods of the poor idolaters; and they are so obstinate in their opinion of transmigration, that they say, the *European* missionaries, like officers that raise forces, go to *China* to get men, and capture the *Chinese* to transmigrate them into *Europeans*, to people our countries.

From these three sects have sprung many others, in process of time, and an incredible number of idols, which are not only to be seen in their temples, but in all publick places, streets, ships, and houses; wherein they also imitate the *Egyptians*, who were infamous for their multiplicity of idols. There were counted to be four hundred and eighty of the most famous temples, most frequented for their wealth, structure, and the false miracles pretended to be wrought by their idols. In which, and the rest throughout the empire, there dwell three hundred and fifty thousand *Bonzes* that have patents; and if we would reckon those that have no patents from *Mandarines*, they will rise to a million; there being within the city of *Peking* only ten thousand six hundred sixty eight *Bonzes* who have no wives, and are call'd *Hoxam*, and five thousand twenty two married,

Gramp. 1695

Genettry'd, as father *Magallans* writes in his 1695. account of *Cbina*.

This multitude of idols proceeds from the erecting of statues to men, who for some memorable action of theirs, have deserv'd well of their country, and gain'd great reputation among the people for deserving Statues and *Pagods*; as also from their opinion that there are particular spirits in the woods, hills, rivers, and seas, to whom they erect and consecrate statues. Nevertheless, the chief idol they adore is call'd *Gian-boang*, of the family of *Cbiang*, who liv'd when *Cbina* was rul'd by the family of *Sung*, who gave it the title of *Gio-boang*, or rather king *Hoc-y-chuang* cannoniz'd it by this name. Before this idol were the other three famous ones, which are ador'd here, united, and call'd *Sin-Sing*, and by the learned *San-boang*. Besides which, there are five other kings, idols, mention'd in the history *Tung-kien*, and call'd *Xao-bao*, *Suon-bin*, *Tygioo*, *Tyxun*, and *Tyko*, by way of preference call'd *Uti*, that is, five kings.

The history *Su-ki-ay-ching* mentions three very ancient, but fabulous, the first call'd *Tieng-boang*; the second, *Ty-boang*; the third, *Giu-boang*; saying, the first had twelve brothers, and each of them liv'd eighteen thousand years. That the second had eighteen, who liv'd the same time; and that the third had nine, who all govern'd the empire, the successors of each of them continuing to the 150th generation.

The idol
protector
of cities.

The most universal idol is that they call *Chin-xuan*, the protector of towns and cities, every one of them having a *Pagod* with this idol, which is represented with horses bridled and saddled before the door, held by two servants for his use, and they say, whilst he liv'd, he travell'd a thousand miles a day.

Of the
idols.

The soldiers and martial men have *Kuangie* for their idol, as the *European* heathens had *Mars*.

Canton
pilgrimage

The famous pilgrimage of the *Chinese* is in the province of *Schantung*, in the city of *Tay-gan-chieu*, on the mountain call'd *Tay-shian*, renowned in *Cbina*, for being twelve miles in ascent. The *Pagod* is call'd *San Kiamiau*, and the idol *Tay-shian-niang*, or *Tien-sien-shing-mu*, which in the *Chinese* language signifies, *The Queen of Heaven of this Mountain, Mother of the Holy Spirit*. This was a religious woman, or *She-Bonze*, with whom a king of *Cbina* fell in love, as he travell'd that way, and taking her to himself, made her a queen whilst living, and a faint when dead, erecting the aforesaid temple to her honour, whither millions of *Chinese*

go every year in pilgrimage; some of whom, through the suggestion of the devil, persuade themselves, that after seeing to great a deity, there is nothing greater to be seen in this world; and therefore they cast themselves headlong down a rock some miles high. The *Pagod* is kept by a *Mandarine*, who makes all pay for admittance. In some of these *Pagods*, religious men and women live in community to serve them; of which there are two sorts, the one of the sect of *Foe*, and the other of that of *Tao*. The first of these live in celibacy; the others call'd *Tauzu* are marry'd, and live at home with their wives, like the *Greek* priests; they let a long tuft of hair grow, and winding it about their pole, cover it with a wooden dish, or oiler-shell, running a bodkin, or skewer through it, and the hair. In the daytime they attend at their monasteries in community, and at night in their own houses. Those who live single are call'd *Hoe-shiank* by the *Chinese*, as by us *Bonzes*. Their heads are all shav'd (which in that country is a token of contempt) their habit in colour and fashion is like that of the reform'd *Franciscans*, but with large sleeves, and a collar about the neck. The religious women are call'd *Nuxo-shiang*, or *Nyshium*, *Kuku-Shu*, or *Nicu*, according to the language of several provinces. They do not observe monastick enclosure, but walk about the towns where they please, and suffering others to go into their convents. I once at *Canton* went into one of them, where I was invited by those *She-Bonzes* to drink *Tea* or *Cbiau*, which made me judge, that religious life was not imbraced out of pure zeal, but out of a private end of enjoying their liberty, and give themselves to lewdness both within and without their monastery, like the *Bonzes*, who do the same, tho' they preach up celibacy. The *Mandarines* use all their endeavours to take them in the fact, and punish them with death; and therefore, by reason of the scandalous life they lead, as also because they stoop to all mechanical employments, they are scorn'd and disregarded by the *Chinese*; contrary to the *Japanese* and *Siamites*, who honour their priests and *Talapons*. The contempt is so great, that by the imperial laws they are banish'd the realm of *Cbina*, as strangers come out of *India*, and only tolerated by connivance. Both the men and women *Bonzes* profess an austere life, never eating flesh, or any thing that has life, but living upon herbs; but the *Tauzu-Bonzes*, eat every thing because they are marry'd. Both these

forts of religious persons are oblig'd to be at matins, upon hearing a bell rung at midnight by hand, with a wooden clapper. Tho' the *Mandarines* know these false religious to be infamous persons, and fit for any villany; yet they command them to pray for obtaining of rain of the idols, when there is a want of it in the country, and if it does not come accordingly, they cause them to be cruelly beaten, and to stand several days fast-

ing in the sun, with chains at their feet. GEMELLI 1696.

The *Cbinefe* burn in these *Pagods*, and in their own houses, ropes made of the bark of trees pounded, shap'd after several manners, some like a cone, or pyramid, which last a whole month before the idol, and serve them instead of a clock, because being of an equal thickness, they know the time of the day by the quantity that is consum'd.

CHAP. V.

The last Persecution of the Catholick Religion in China, and its happy Restauration.

Fall christi-
anity in
China.

IT appears by the very text of *Con-
fucius*, who acknowledges a supreme
and sovereign good, that the antient *Cbi-
nese* knew there was a God. But a stone,
or tomb found in the year 1625, in the
metropolis of *Siganfu*, or *Sangun*, of the
province of *Xenfi*, is a sufficient proof
that the catholick faith was introduc'd
and preach'd in that kingdom in the year 636,
by the successors of the apostles; for the
aforesaid stone was set up in 782, to give
a brief account of the catholick religion,
and of the privileges granted by the em-
perors in those times to the bishops and
priests, which are to be read on the same.
It was accidentally found in the aforesaid
city, as they were digging to lay the
foundations of the *Jesuits* church; there-
fore I refer such curious persons as de-
sire more fully, to know the interpre-
tation given by the learned, to the *Si-
riack*, and *Cbinefe* characters that were
cut in it, to the original kept in the Ro-
man college, of the society of *Jesús*, and
the copy in the archive of their profess'd
house.

Contra-
re-
sist'd, and
again lost.

The catholick religion being afterwards
wholly abolish'd by the persecution rais'd
by the *Bonzes*, with the death of many
christians; it arose again in the year
1256, upon the coming in of the *Great
Cham* of *Tartary*, who having with a
mighty army possess'd himself of all
the empire of *Cbina*, and being well in-
clin'd to catholicks, allow'd them the
free exercise of their religion. But the
Tartars being afterwards expell'd by the
Cbinefe, who recover'd their empire, the
christians leaving *Cbina*, follow'd the *Tar-
tars*, to prevent being subject to other
persecutions; so that the light of the gos-
pel was again extinct in that great em-
pire, the *Cbinefe* going on in the worship
of their idols.

St. Francis
Xavierius

After *St. Francis Xavierius* had in the
year 1542, spread the word of God thro'
VOL. II.

rough the remotest parts of the world
with very great advantage, and gain'd
souls to Christ in the islands of *Japan*,
he bent his thoughts upon the conver-
sion of *Cbina*; and as he was using his
endeavours to get admittance into that
empire, he dy'd of a fever in the island of
San-cheu, to enjoy the glory due to his
virtuous labours.

At length it pleas'd our lord, in the year 1610, to open a way to the work-
ing in this his vineyard, facilitating the ad-
mission of father *Matthew Riccio de Mace-
rata*, and father *Michael Rogerio* of the
society of *Jesús*. At first they met with
great contradictions and difficulties, be-
fore they could obtain of the *Cbinefe*
that they would suffer them to live a-
mong them; but father *Riccio* manag'd
things so dextrously, that in a short time
he gain'd great esteem among the princi-
pal men; for having been father *Chri-
stopher Clavio's* scholar, he was very skil-
ful in the mathematicks, to which the *Cbi-
nese* are much addicted, and by reason of
the rarity of several watches, and mathe-
matical instruments the fathers carry'd
along with them, they were honour'd as
men dropt down from heaven; so that
not only the vice-roy of *Canton* kept
them about him, but the learned came
from remote parts to admire their know-
ledge. Having thus gain'd the good will
not only of the great men, but of the
emperor himself, in a short time they
propagated the faith in many parts of
the empire, calling in fresh labourers to
that plentiful harvest.

The *Bonzes* growing envious to see
the gospel preach'd so successfully, rais'd
great persecutions against the missionaries,
which broke out in racks, imprisonments,
and banishments, wherein the *Cbinefe* new
christians bore a part. Afterwards the
judges were somewhat pleas'd, consider-
ing the great benefit they receiv'd from
1.111 the

GEMELLI the *Europeans*, as well in composing of
1696. their almanack, and the observations of
eclipses, and comets, as on account of
the good clocks and watches they brought
them. But this toleration lasted no longer
with them, than necessity prevail'd,
the covetousness of the *Mandarines* at fev-
eral times raising violent storms against
our missionaries.

At the intigitation of the court of rites
and ceremonies, when the emperor now
reigning was but seven years of age, and
his tutors govern'd by reason of his mi-
nority, an edict was publish'd, forbid-
ding the erecting any more churches to
the true God, or the preaching of his
holy law, or any other missionaries com-
ing into *China*, yet this was not put in
execution, because of the need the *Chi-
nese* had of the *Europeans*; so that by the
means of the fathers residing at *Peking*,
the gospel was preach'd throughout the
whole empire. And tho' the *Mandarines*,
for their own private ends, had at several
times, on pretence of that edict, rais'd
severe persecutions, yet the fathers were
still restor'd for the reasons aforesaid.

Last per-
secution.

But the last persecution, whereof I in-
tend to treat, and which was such as
might have utterly destroy'd the catholick
religion in *China*, happened in this man-
ner. In the year 1689, the emperor now
reigning set out from the court at *Pe-
king*, and taking a progress thorough the
provinces of *Chekiang*, *Nanking*, and *Sbian-
tung*, shew'd particular favour to the fa-
thers of the society. Father *Prosper In-
torceta*, a *Sicilian*, was then superior in
the province of *Chekiang*. He going out
to meet the emperor, who came attend-
ed by fifty thousand men, having pleas'd
the emperor, he was by him receiv'd in-
to his boat. It happened after this, that
the vice-roy of the province coming to
the emperor, was presently depriv'd of
his employment, an ill account having
been given of his behaviour; and another
put into his place. He suspected that ill
offices father *Intorceta* might have done
him, had been the cause of his disgrace;
which made him, and other great men
his friends, conceive a mortal hatred a-
gainst the said father, and wait an oppor-
tunity of taking revenge.

In 1691, the new vice-roy began to
spit his venom, beginning with the *Bon-
zes* of *Nanchou*, all whose temples he
caus'd to be shut up pursuant to the an-
cient edicts of the kingdom; and pro-
ceeding from them to the missionaries, he
examin'd them, to find whether they
were newly come, or any of the old ones
permitted to reside in the kingdom, ac-
cording to the edict of 1671, after the

persecution of 1664. Then having con-
sulted with the counsellors of *Chekiang*,
he ask'd father *Intorceta*, how it came to
pass, that he being design'd for the pro-
vince of *Kiangsi*, liv'd in that of *Chekiang*,
and how he had presum'd to open the
church there, after it had been shut up in
1664, and how he durst baptize *Sbinta-
Serg*, a *Chinese*, the christian religion be-
ing forbid, and the converting of *Chinese*
to it by the edict of 1668. Father *In-
torceta* answer'd these questions, but the vice-
roy's malice, being ground on revenge,
was not quell'd; for he shut up the said
father's church, burnt all the books, and
boards for printing (for the *Chinese* way
of printing is by carving on boards) and
banish'd father *Intorceta* the province of
Chekiang, ordering him to go live in the
city *Kien-Sbian*, of the province of *Ki-
angsi*, turn'd the great churches through-
out the whole province into idol tem-
ples, and the small into schools, and all
christians to return to their idolatry un-
der most severe penalties, to be inflict-
ed upon all *Chinese* that conceal'd them.
'Tis true, some counsellors were not con-
senting to this violent proceeding of the
vice-roy, which nevertheless he caus'd to
be put in execution. After this he pre-
sent'd a memorial to the emperor, re-
presenting that it was not convenient to
suffer the *Europeans* to range about the
kingdom, but that they ought to be
drawn all to one place, to make use of
them in the mathematicks.

Whilst this was transacting at *Cheki-
ang*, the fathers at *Peking* having notice
of it, presented a petition to the em-
peror, which prevented any surprizing re-
solution might be taken against them;
and afterwards having advis'd about this
affair with *Sbiaolao-je*, a *Tartar* page in
great favour with the emperor, and
protector of the christian religion, and
of the church at *Peking*, he undertook
to deliver the emperor another petition
in behalf of the fathers, representing
how unjustly the vice-roy of *Chekiang*
had rais'd a persecution. The emperor
answer'd, the fathers ought not to be
surpriz'd at being molested by the *Chi-
nese*, because very often even his own
Tartars were expos'd to it, tho' they
were always careful not to offend him;
whereas the christians relying on the
protection of the fathers, committed in-
solvency, despising the infidels, and their
religion, and living apart from them,
dealing only with those of their own
profession, which had produced such ha-
tred against them. Nevertheless the em-
peror having a tender affection for the
missioners, bid the page tell the fathers,

they should be of good courage, for he, who the year before had quell'd the persecution of *Sbiantung*, would after the same manner, without any noise, take off that of *Chekiang*. The fathers going to the palace to return thanks to the emperor, he ask'd them, whether they would proceed by the usual method of the courts. The fathers answer'd, they accepted of his majesty's favour, hoping he would not leave their cause to be decided by the court of rites and ceremonies, which his majesty well knew was averse to the catholick religion; they wholly reposing themselves on his majesty, and hoping in him for success, and that the edict of 1668, which forbids the exercise of the christian religion in *China*, should be recall'd.

The fathers by means of the same page, presented another petition, praying they might be allow'd the publick exercise of their religion, and offering to answer to any argument or question propos'd by their adversaries. Two days after, they receiv'd the emperor's answer, which was, That the petition was not in due form, to obtain what they desir'd. On the 5th of January 1692, *Sbiaolao-je* went to the fathers house, by the emperor's order, and taking them aside into a private chamber, inform'd them, that his majesty finding the petition unfit to answer their design, and pitying their sufferings, sent them a rough draught in the Tartar tongue, not quite perfect, to show them how it ought to be, yet so that they might add to, or take from it, at their pleasure. The fathers kneeling, touch'd the ground with their heads as the custom is, to express their gratitude for this favour and kindness. Then they went to the palace to return thanks, and extol the elegance of the copy, asking leave to present it the next day. He, to remove the difficulty that stood in the way of having the petition examin'd first by the court, order'd that the fathers *Pemeira* and *Antony Thomas* (as publick persons in the empire, and of the mathematical court) should present it in their name, which was done upon *Candlemas-day*. That same 2d day of February the fathers had notice, that their cause had been refer'd by the council of the *Kolao* (this is the supreme council of *Peking*, the counsellors being the emperor's assessors) to the court of rites and ceremonies, for them to give their opinion in it; but the resolution was put off, by reason of the nearness of the *Chinese* great festival.

About the beginning of March the courts were again open, and the court of rites made a very disadvantageous report under the petition presented, reviving all the edicts which forbid the *Chinese* the exercise of the christian religion, and allow'd it only to the *Europeans*. The fathers hearing of this ill success, went all to the palace, to beseech themselves with *Sbiaolao-je*; who dismiss'd them with a promise, that he would speak to the emperor, that another petition might be presented; the fathers offering to maintain the truth of their religion. On the 9th the emperor ask'd the page how the fathers did, and whether they knew what had been decreed in their cause. He answer'd they did, and were come very disconsolate to the palace to beg comfort from his goodness. The emperor hearing this, said to those about him, *I know not what prejudice these Chinese Counsellors have against the Europeans; this is now the third time, I have signify'd to them it is my Will, to favour them in what they ask concerning their Law. I thought the Petition presented me, a very means to make way for granting their Request; but these obstinate Men have put me by it; so that discoursing with the Kolao upon the Resolution of the Court of Rites and Ceremonies, I could not persuade them to have it amended, or moderated, so that I was forced to sign it.* The next day the emperor sent to the fathers, to bid them not be cast down, but to have patience, and not precipitate the business.

On the eleventh, the decree was notify'd to the fathers in form. On the 18th, the emperor call'd *Sosanolao-je* his father-in-law, a Tartar by nation, and grandfather to the prince that was sworn heir to the crown, and telling him what had happened in relation to the answer given to the petition, presented by the fathers, he very sharply like a Tartar answer'd, *That His Majesty ought not to permit such Injustice to be done; but in this Case, it would be fit to use his Prerogative; and to persuade him so to do, put him in mind of the Services done the Empire by the Europeans, without any Reward, and that now they were deny'd so just a Request, as the publishing of their Law, which was known to be good and agreeable to Reason.* And proceeding in his discourse, he added, *That would to God the whole Kingdom were Christians, for then they might spare the expence of so great a Number of Soldiers to secure it against Robbers and Rebels; for in above thirty Years your Majesty has*

Reign'd,

GEMELLI
1696.

Reign'd, it has never been hear'd that the Christians promoted any Rebellion in the Provinces where they live, and whilst I was Kolao, I was well acquainted with the Behaviour of these Men, and with that of the Xolcian or Bonzes. These Men are ready to serve your Majesty, without desiring any Honour or Riches for their Pains, but only the Liberty of Preaching their Religion. Your Majesty is very sensible how much Pains they have taken in reforming the Kalendar; the Benefit of the great Guns cast by their directions, and the advantage of the Peace settled with the Muscovites by their means. The emperor having heard all this discourse, answer'd, You are in the right, but the Sentence is past, how can it be recall'd? Sojanlao-je reply'd, Your Majesty may make use of your Prerogative, and not permit the Court of Rites and Ceremonies to do wrong. The emperor was surpriz'd at this answer; but soon after resolving what was to be done, said, I will send Orders to the Council, or Court, to recall the Judgment given against the Europeans, and to take this affair again more sedately into consideration; but it will be fit that you go to the Counsellors, and Kolao, and make them sensible of the Injustice of the Decree, urging the same reasons you have laid before me. That lord, a Tartar by birth, but a catholic in inclination, offer'd to do as he was order'd; and accordingly on the 19th, went to the council of the Kolao and the court of rites to acquaint them with all that has been here set down, persuading them so effectually, that they own'd, that the decree had pass'd out of a jealousy that many embracing the catholic religion, there would tumults and rebellions ensue in the kingdom. And this good lord's dexterity in this affair was well worth observing, for he, tho' no friend to the president of the court of rites, who was a Chinese Kolao, yet, to oblige him, in speaking, he gave him the title of *Loo-sieu-jang*, which signifies, lord-master, a title of great honour and respect among the Chinese; by which means he oblig'd the president to be for the fathers. Having acquainted the emperor with his proceedings, and that the counsellors were well dispos'd, he order'd that two Tartar Kolao should signify his pleasure, which was, that *Sojanlao-je* should be present when the matter was debated by the Chinese counsellors, that it might be in favour of the fathers. This alteration in the emperor's mind happening on the 19th of March, which is St. Joseph's day, this saint was therefore chosen protector of the Chi-

nese mission, and the confirmation of it desir'd from Rome.

In pursuance to the emperor's order, the matter was debated in the palace, in the presence of *Sojanlao-je*; whence he went with it, the same day to the council of the Kolao, who approv'd the proceedings, but did not infer the character the said lord had given of our religion, who not being able to persuade them to mention it in the decree, however, oblig'd them to give an account of the services done by the Europeans. The resolution being pass'd, they all subscrib'd it, and presented it to the emperor, the same day. On the 22d, the emperor sign'd the decree, wherein he granted his subjects liberty to become christians, abolishing the former prohibitions. The decree in English runs thus.

Ku-patai (a Name given him, because the Quality of the President of the Court of Rites had been taken from him) with due respect informs your Majesty. We the Counsellors of the Council of Rites assembled, and consulted upon Examination find, that the Europeans come from 9000 Leagues distance by Sea, out of Affection to your Majesties good Government, and at this time have the charge of the Matbenaticks; in time of War carefully made Marital Engines, and cast great Guns, and being sent to the Muscovites, faithfully commenced and concluded the Treaty. The Merit was great; the Europeans who live here in the several provinces, are not vicious, nor do they endeavour to disturb the Publick Peace, nor do they draw People after them with false Doctrine, or use fallacies to stir up Rebellion. If every one be allow'd to go to Worship in the Temples of the Bonzes, it seems unreasonable to deny the same Liberty to the Europeans, who do nothing contrary to the Laws. It is certainly necessary that the Churches in all places be preserv'd as they were before, and it is not fit to forbid any that will go in to them to pay their Worship, but that they be permitted to repair thither at Pleasure. We expect the day when your Majesty's Order shall come to us, that it may be publish'd in this Court and Province, we the Counsellors of Rites not daring to assume this Authority, but with all Respect represent it, and pray your Majesties Order.

The king approv'd of the resolution, and the fathers went to return him thanks. The decree was publish'd, and the viceroy with regret, by the emperor's order, made good their losses, open'd the churches, and restor'd all things to father Intorceta; who having again return'd thanks to the emperor, was allow'd as a favour

to go along with father *Antony Thomas*, who with the title of his majesties envoy, attended by two *Tartars*, was going to meet father *Philip Grimaldi*, now returning out of *Europe*. They went all four to *Macao*, to congratulate the father from the emperor; and the viceroy of *Canton* himself, by his majesties order, went with other *Mandarines* to perform the same function, according to the custom of the country, which is to touch the ground with the head nine times, praying for the emperor's health, with the ceremonies abovemention'd. The city of *Macao* perform'd the same towards father *Grimaldi*, so great is the respect paid to the favourites, and servants of the emperor of *China*, not only by the subjects, but by himself, who had sent messengers three times before to welcome the aforesaid father. Thus the very means that were to have been the ruin of the catholick religion, by God's permission, serv'd to establish it the stronger. After this happy success, all the fathers, who were confin'd in *Canton*, return'd to their churches, and the religion before privately profess'd in *China*, and as it were by stealth, by reason of the edicts forbidding it, is now as publicly preach'd as in *Europe*. Still churches are erecting throughout all the empire to the true God, tho' some oppos'd it; being now authoris'd by the aforesaid decree, which is to be seen in gold letters, over the door of every catholick church.

In *Peking* the *Jesuits* have three churches. One is within the first enclosure of the palace, belonging to the *French* fathers; where father *Fontane* is superior, assisted by the fathers *Gerbillion*, *Buet*, *Vidalon*, and a *German* father, whose name is *Kilian Stumps*, all greatly learned in the mathematicks, and well read in other sciences, being chosen by the society by the king of *France's* order, at the request of the king of *Siam*; whence (after his death) it is almost nine years since they pass'd through the city of *Nimpo* into *China*, and settled themselves at *Peking*, notwithstanding the vigorous opposition made against their fixing there, by the *Portuguese* fathers of the same society. However at present they are very much in the emperor's favour, who gave them a house within the aforesaid first enclosure, where now their lodgings and church are building.

The second church is in the east quarter of the *Tartar* city, and is call'd *Tu-tang*, where father *Sisaro* was superior, who went to be bishop at *Nanking*, father *Antony Thomas* of *Namur*, a good

mathematician being there at present, and with him father *Suarez*.

In the third church resided father *Grimaldi* superior and vice-provincial, with the fathers *Pereira*, *Rodriguez* and *Ossorio*. It stands in the same *Tartar* city on the west side, therefore call'd *Sit-tang*, near the gate *Sunchimuen*, and is the antientest and best of them all. It has three altars well adorn'd, and a good outward front with two turrets on the sides. The emperor allows for their maintenance such a quantity of rice, oil, sugar, spice, salt, wood, (which is scarce in *Peking*) and other things, that the *French* fathers told me it amounted to the value of a hundred *Leans*, or a hundred and twenty five pieces of eight for every father. This and the rent of some shops and houses, keeps the *Portuguese* fathers well enough, without standing in need of any supplies from their country. It is not so with the *French* fathers, who live very bare, tho' they have as much allow'd them from *France*, because it is dear living at court, and tho' the emperor several times he went to see them, ask'd whether they wanted any thing, yet they out of modesty answer'd in the negative. It is proper here to observe, that when the emperor goes to see the *Portuguese*, or *French* fathers, they must turn all their servants out of the house, and leave all the doors of the cupboards open, to show there is none hid within.

The life the *Jesuits* told me they lead there, is very hard and troublesome, for every day at sun-rising, the fathers *Grimaldi*, *Gerbillion* and *Fontane* are to go to the palace, either to teach the emperor, or to receive his orders, and if any one fails of going any morning, he is presently sent for, and there they stay till afternoon. The other fathers are employ'd in making mathematical instruments, mending clocks, or running up and down; so that father *Grimaldi* told me he would willingly change his life for that of a gally-slave, where he should at least have some hours to rest; and he further complain'd that the emperor will have the disposal of all things, and even remove the fathers from one place to another, meaning the *German*, whom he brought over, and the emperor had appointed him to live with the *French*. But he had sufficient cause to complain; for coming from the palace, on the 25th of *June*, he fell off from his mule, and his foot hanging in the stirrup, he was dragg'd two musket shot, with peril of his life, one of his eyes being almost beaten out, tho' afterwards

VOL. IV.

he recover'd, being cur'd by a surgeon sent him by the emperor. They do not only attend the emperor with so much assiduity, that in winter their very hair freezes to their faces, but the *Chinese* christians, for the good of their souls, keeping *Chinese* exorcists whom they maintain, at the gates of *Peking* to baptize children expos'd, which are thrown down before the gates of the city, and are in danger of death. Father *Ossorio* told me, there were about thirty thousand baptiz'd in a year, before they are carry'd to the hospital of *Miau*, or a *Pagod* assign'd for bringing of them up; and he added further, that there were above forty thousand expos'd every year, whereof many thrown into the common shore, are starv'd to death with cold.

Christians
in *China*.

There are about two hundred thousand christians throughout the empire of *China*, serv'd by missionaries of several orders, who to speak the truth are much oblig'd to the *Jesuits* in *Peking*, who in all persecutions have stood up against the malice of the *Mandarines* in defence of the fathers, who are spread about the kingdom looking after their churches. Nor could any other order maintain itself, as the reform'd *Franciscans* and missionaries of the clergy, own'd to me; because to please the emperor, it is requisite they should know how to do every thing, to compose their almanack in three languages, with the motions of the planets, and most considerable stars; to observe eclipses, and make all sorts of mathematical instruments, as also to mend clocks, and distill waters, because the *Chinese* love the *Europeans* for their own interest. And thus the mission is kept up, not only of the fathers of the society, but of sixteen *Spanish* reform'd *Franciscans*, of ten *Dominicans*, and of five *Spaniards* of the order of *St. Augustin*, who are maintain'd by the charity of the king of *Spain*. Thus the *French* clergy-men are tolerated, who live in community upon the revenues they have in *France*, distributing every little supply sent them among all the missions of *China*, *Cochinchina*, *Siam*, and *Tunking*. The worst provided are the *Portuguese* fathers, who live dispers'd about the empire to the number of forty; for having no revenue but the bishop of *Munster's* legacy, and the little that comes from *Portugal* divided among so many, it does not hold out to keep them, and they can expect no relief from the wretched christian *Chinese*; for the rich men, and *Mandarines* do not become christians, because they will not quit their many wives. Yet these fathers hold fast their

right of being patrons, or proprietors of the mission of *China*, the king of *Portugal* and the *Portuguese*, suffering no missionaries of other nations to go any other way into that empire, but through *Lisbon*, that they may there first swear fidelity to the king of *Portugal*, and yet they are not afterwards maintain'd by him in *China*. Nor can he send fathers enough out of his own kingdom, or much less maintain them, so that if the king of *Spain* does not take part in that mission, the *Portuguese* will make no great progress there, nor will they be able to hold out long.

The *Chinese* nation is so fond of itself, that it looks upon all others as barbarous, and unpolish'd. Yet the *European* missionaries begin to undeceive them by printing five hundred books of the law of God, which they have compos'd with less than an age; having translated the holy bible, and the works of *St. Thomas*. In *Peking* they have a good library of *European* and *Chinese* books, where I saw the map of the world, put into *Chinese* characters, but square, those people being of opinion that *China* lies in the middle, and the other kingdoms about it like islands.

For as much as the war between the *Muscovites* and *Chinese* was brought to an end, by the conduct of the fathers, it will be convenient before we conclude this chapter, to give a short account of that expedition. The emperor fell at variance, and broke with the *Muscovites* on account of the pearl fishery, of the city and lake of *Nepe-byu*; but then considering they might join with the *Tartar-Elutb*, to the damage of the kingdom he possess'd in the eastern *Tartary*; he dispatch'd one of his fathers-in-law, a *Tartar* petty king, with the fathers *Pereira* and *Gerbillon*, to conclude a peace with them. That *Tartar* petty king being come near to the frontiers of *Muscovy*, indiscreetly drew up the strength of his horse to strike a terror into those people, and then in a haughty manner said to them. My Emperor of his own Bounty allows you to Fish only in such a part of the Lake. The *Muscovites* answer'd these haughty words with scorn, saying, They gave the Emperor of *China* no thanks for it, because they had that already; and so in a passion turn'd away without hearing any more of the peace. The *Tartar* was sorry to see the treaty broke off, fearing he might be in danger at his return, well knowing how desirous the emperor was to entertain a good correspondence with the *Muscovites*, not for fear of them, who cannot

cannot raise above 10000 men, but only to prevent increasing the forces of the *Elutó Tartars* of the west, who are always at war with the emperor, infesting the imperial *Tartary* with continual incursions. And tho' the emperor of *China* has more numerous forces, yet the *Chinese* are not so good foldiers as the *Tartars*, who are enur'd to hardship, and cross several deserts in a weeks time, with only a sack of meal at their crupper, and feed on camels and horses; whereas the *Chinese* are so dainty, that they go to war with all conveniences; nor do they think of going beyond the frontiers, if the others do not come to them. Therefore the emperor, to prevent the burning of his country, which is remote from *Peking*, by 150000 horse, that *Tartar* king can bring into the field, endeavours to keep him quiet, by paying him a sum of money, and to hinder him by all means possible from growing more powerful; war being the principal revenue of those people, who have no other inheritance but their bow and arrows.

Father *Pereira* perceiving that petty king and ambassador, was much concerned at his ill management of that embassy, he offer'd to go to the *Moscovites* camp, to set the treaty on foot again. At first the *Tartar* refus'd, saying, *the Moscovites were a fierce people, and would murder him, and he should be answerable for him to the emperor, who had put him into his power.* On the contrary, says father *Pereira*, *they are rational and civil people, and I dare undertake to compose matters with them.* In conclusion he went, and when the *Tartar* was apprehensive of his death, he after two days return'd with the capitulations of peace, whereat the petty king was much surprized with joy. After that the *Moscovites* treated the *Tartar* generously, and he very sparingly return'd their entertainment.

The *Chinese* ambassador having aken his leave, return'd to *Peking*, crossing several deserts by the way, without finding town or city to rest in. 'Tis

true, that tract of the imperial *Tartary*, GEMELLI 1696. under the emperor of *China*, is of a vast extent; but it is so desert and woody, that as to worth, it may be accounted very little; only a few poor *Tartars* inhabiting in hovels, without houses, like the antient *Numidians*, or *Hamaxobites*, who being wholly employ'd in a pastoral life, had not so much as houses, but went about with their portable huts, settling wheresoever they thought fit. The present emperor of *Tartary*, in order to civilize, begins to make them build towns, and gather them into bodies, having forty petty kings and princes, who are tributary to him, among whom are the *Tartars*, call'd *Fautazes* and *Xalkas*, who can raise some seven, some twenty thousand horse, of the stragglers that live by plunder. The curiousest thing to be found in this uncouth tract of land (as the fathers *Grimaldi*, *Gerbillon*, and *Pereira* told me) are great bridges of a wonderful structure, which they lay over rivers for the emperor to pass over, often joining mountains with them.

When the *Chinese* ambassador came Moscovite to *Peking*, the emperor was well pleas'd ambassadors. with the agreement, which the *Tartar* own'd was owing to the fathers. Next came the ambassadors from the great duke of *Muscovy*, whom the emperor receiv'd sitting on a throne rais'd twenty steps above the ground, whither he afterwards made them ascend to drink; and tho' they at first refus'd to touch the ground with their heads, according to the custom of the country, at last they consented. They much admir'd to see a *Tartar* family in such majesty, declaring they could not find whence it came, tho' they had travell'd all that vast country (for the *Moscovites* come twenty days journey in their way to *Peking*, from *Moscow*, within their own dominions) in which is a considerable part of *Tartary*, which the emperor makes little account of, having rais'd himself from a homely tent to the stateliest palace in the world.

CHAP. VI.

Of the Antiquity of the Empire of China; of the Value the Chinese put upon their Empire; of the Number of Cities, and other Places; and of the Families and Souls it contains.

Founders
of the Chi-
nese mo-
narchy.

THE interpreters of the *Chinese* history deduce the original of that great monarchy from *Pobi*, who began his reign in the year 2952, before Christ.

He brought the savage and wandering men to live in society, whereas before they liv'd like beasts; and they having afterwards learn'd the art of tillage, and others

of

GEMELLI of Xinum, began to live more regularly in villages.

In the year 2697, before Christ reign'd, Hoamti, call'd the fair emperor, or rather yellow, because he took that colour, which is allow'd to none but the emperors. This emperor, with the assistance of Tanea, perfected the Chinese period, or cycle of sixty years, invented musick, and musical instruments, as also arms, nets, carts, ships, and carpenters work. By the invention of his queen Luy-su, he brought up the keeping of silk-worms, and of dying and weaving silk. He instituted six Kolaos, or prime ministers of the kingdom, and compos'd several books of physick.

Hoamti dying, Xao-Hao succeeded him in the year 2577, and began to build and enclose the city with walls; invented new musick, and brought up the custom of having carts drawn by oxen.

Xao-Hao dy'd 2517 years before Christ, and was succeeded by Kuen-Hio, grandson to Hoamti, who ordain'd that the only emperor on earth should offer sacrifice in solemn manner to the supreme emperor of heaven. He also invented the Kalendar, and order'd the year should begin with the next new moon to the beginning of spring, which in China answers to the fifth degree of *Aquarius*.

In 2457, before Christ, Kuen-Hio dy'd, and Tico his grandson succeeded him. This man had four wives, he appointed masters to teach the people, and found out vocal musick.

After these princes came those two celebrated emperors and legislators *Yo*, and *Xum*, from whom the civil rites, and political institutes are deriv'd. They reign'd a hundred and fifty years, which added to five hundred eighty seven, the other six before them liv'd, make seven hundred thirty five years.

The imperial families are descended from those two founders of the Chinese nation, and from the aforementioned six emperors, in whom the supreme dignity, and government of the Chinese monarchy continu'd till these latter times. In all they reckon twenty two of them, that is, nine great ones, and thirteen lesser, among whom is included this family of the eastern Tartars, which at this present rules the Tartar and Chinese empires. They may all be seen briefly put together in the following table.

A Numerical Table of the Twenty Two Imperial Families and Emperors, and the Years they Reign'd.

Families.	Emperors.	Years.	Imperial families.
1 <i>Hia</i>	17	458	
2 <i>Xam</i>	28	644	
3 <i>Ken</i>	35	873	
4 <i>Cbin</i>	3	43

13 <i>Tam</i>	20	289	
14 <i>Hew-leam</i>	2	16	
15 <i>Hew-tam</i>	4	13	
16 <i>Hew-cbin</i>	2	11	
17 <i>Hew-han</i>	2	4	
18 <i>Hew-ken</i>	3	9	
19 <i>Sum</i>	18	319	
20 <i>Yuen</i>	9	89	
21 <i>Mim</i>	21	276	
22 <i>Cbin</i>	2	53	

The three families *Hia*, *Xam*, and *Ken*, as they preceded the others as to time, so they surpass'd them in fame and esteem, for they behav'd themselves like true princes in integrity of manners, instituting just laws, affection to their people, and above all in an unviolated faith and sincerity; going beyond the others in number of emperors and years. Thus it appears, That the emperors, including the two first founders of the nation, were two hundred and thirty six, omitting those that liv'd but a very short time, or that for some other reason are not inserted into the table of emperors. Therefore I refer the reader to the chronicles of the Chinese monarchy, publish'd at large by father *Philip Couplet*, in his book, intitled, *Confucius Sinorum Philosophus*, where he will find not only the names of the aforesaid emperors, and the years they reign'd, but the most remarkable actions that happened in their time.

By the aforesaid table it appears, That the monarchy continu'd in the imperial families 3920 years, according to the most probable and general receiv'd opinion of the Chinese. To which if we add 737 years, they write the eight princes of the nation liv'd, they all make 4657 years, from which if we deduce the 255, that the first princes *Fobi* and *Xinum* reign'd (because they had not the imperial dignity) there will remain 4402, or according to the shortest computation

4053

4053, since this great monarchy began in *Yao*, and has continu'd ever since without any interruption. We cannot but own, there is no kingdom or state in the world, that can boast of so ancient a race of kings, so numerous, and so well continu'd. The monarchies of the *Assyrians*, the *Persians*, the *Greeks*, and the *Romans* are at an end after a much shorter duration; and this of *China* still stands, like a great river that never ceases running. This long continuance and antiquity, besides other excellencies of *China*, fill the *Chinese* with pride, looking upon their own empire as the greatest, and so every thing else that belongs to them, and despising other nations; which is the reason they make so little account of them. In their maps they describe *China* square, and very large, and represent the other kingdoms about it without any order, or geographical method, making them little, and inconsiderable with ridiculous and contemptible names. As for instance *Siao-gin-que*, or the realm where the inhabitants are all dwarfs. *Niu-gin-que*, where the inhabitants are women. *Kuen-sin-que*, the kingdom where the inhabitants have a hole in their belly. The kingdom where the inhabitants have a man's body, and dog's face. The kingdom where the inhabitants have such long arms that they hang down to the ground; and the like. In short, they call the *Tartars*, the *Japanese*, the people of *Corea* and *Tunking* by the name of the four barbarous nations. They say there are seventy two kingdoms out of *China* which they describe little, in the midst of the sea like nut-shells; and the inhabitants of them brutal, and monstrous, and of such ridiculous shapes, that they are more like monkeys, or wild beasts than men. The *Jesuits* in these latter times having made them acquainted with *Europe*, they have inserted it into their maps, and plac'd it in the midst of the sea, as if it were some small island. They divide the heaven into twenty eight constellations, and *China* into as many parts, to each of which they assign a constellation, giving it the same name; not leaving one for the other kingdoms. They give their own provinces lofty and stately titles, and call other countries by barbarous and despicable names.

They have so lofty a conceit of their own kingdom, that when they are convinced by the missionaries with demonstrative arguments, they answer with astonishment, *Kum-que-ki-vac*? *Hoon-jeu-tao*? which signifies: What is this we see? What is it we hear? Is it possible that without this great empire there

VOL. IV.

should be any rule or way to attain to virtue, and that there should be another faith, and another law? And it happens very often that the said fathers discouraging of learning, of religion, and the *European* sciences, they ask whether we have their books; and being told we have not, they reply with wonder and amazement. If you have not our books in *Europe*, nor our writings, as you own, what learning, or what letters can you have?

They have given several names to that great empire, for every time a new family got into the throne it gave it a new name. From the family before this, it took the name of *Tai-mim-que*, that is, The kingdom of great brightness. But the *Tartars*, who now govern, call it *Tai-cim-que*, or kingdom of great purity. But as there were formerly some reigns famous, either for their long continuance, or the virtue of the kings, or number of learned men, so their names have been preserved, and are still us'd in their books, as for instance, those of *Hiaque*, *Xamque*, *Keuque*, *Hanque*, &c. by which it appears that these names do import *China*, but were given rather to distinguish the several reigning families, than to express the realm it self. In the memorials presented to the king, and in their books it is generally call'd *Xamque*, that is, high and sovereign kingdom. The learned in their writings use the word *Kum-bo*, which signifies, flower in the middle; yet after all, the most antient and common name among the *Chinese*, is *Kum-que*, or middle kingdom, as believing *China* to be in the middle of the world, or else because the first king of *China* settled his court in the province of *Honan*, which was then the center of the kingdom; or else because they esteem it above all others, as appears by the hyperbolical name they give it of *Tien-bia*, or the kingdom that contains all there is under heaven. Thus when any one says, *Tien-bia-tui-pim*, that is, all under heaven is in peace, it is the same as if he said *China* is at peace.

As the *Chinese* have given names of contempt to other kingdoms, and nations, so others have repaid them in the same coin. For the western *Tartars* call the *Chinese*, *Harakitai*, or black barbarians, and give the same name to the kingdom. The *Muscovites* imitate the *Tartars* in this point, giving the *Chinese* the name of *Kitai*, as do the kingdoms of *Sbiabamalaba*, of *Tumet*, or *Tibet*, and that of *Ufangue*, but these corrupting the word *Kitai*, call it *Catai*, and the merchants

GEMELLI
1696.

Names of
China.

Names of
contempt
given Ch-

Nnn chants

¹⁵⁹⁶ **GENELLI** chants coming from *Indostan, Cataio*; by which it plainly appears that the kingdom of *Cataio*, of which father *Andrade* speaks in his account of *Tibet*, is no other but *China*, and that the words *Cataio* and *Harakilai* are the same. Nevertheless *Baudrand*, and others, will have *Catay*, or *Catbay* to be one of the kingdoms of the *Great Tartary*, by the ancients call'd *Seri*, and stretching out eastward, between the imperial *Tartary* on the north, *China* on the south, and *Turchestan* on the west; which by him is also call'd *Kara Catbai*, where are the *Scythians*, call'd *Alani*, in that *Scythia* within mount *Imaus*. But *China* may be call'd *Catbay* of the *Cataini Tartars*, who possess'd themselves of it with the *Niu-cani*. The eastern *Tartars* have given it no better title, calling it *Nica-corum*, that is, kingdom of barbarians, tho' now they are fix'd in, and are masters of it, they call it *Tulinpa-corum*, that is, middle kingdom.

^{Length of China.} This vast empire is seated at the furthest eastern part of *Asia*. The *Chinese* in their maps represent it square, pretending it has equal breadth and length, but according to the best account of the *Europeans*, it is rather oval. It reaches 23 degrees from north to south, that is, from the fort of *Cai-pim*, on the frontiers of the province of *Peking*, in 41 degrees of north latitude, to the southernmost point of the island of *Ainan*, in 18 degrees of latitude, south of the province of *Canton*. Thus the length of *China*, according to the *Chinese* books, is

5750 *Li*, or *Chinese* furlongs, at 250 to a degree.

402 *Spanish* or *Portuguese* leagues and a half, allowing 171 to a degree.

575 *French* leagues at 25 to a degree.

345 *German* leagues at 15 to a degree.

1280 *Italian* miles at 60 to a degree.

But if we would take the greatest length of *China*, it must be measur'd from the north-east point of the province of *Leao-tung*, call'd *Cai-Yuen*, to the last city of the province of *Yun-nan*, call'd *Chintien-kun-min-fu*, and then the greatest length of the empire will be

525 *Spanish* leagues.

750 *French* leagues.

450 *German* leagues.

1800 *Italian* miles.

8400 *Chinese* furlongs at the rate of four and a half to an *Italian* mile.

^{Its breadth.} Its breadth taken from the point of *Nimpo*, a sea-port town of the province of *Chequian*, to the uttermost part of the province of *Suebuen*, in a strait line east and west is

2973 *Spanish*, or *Portuguese* leagues.

426 *French* leagues.

255 *German* leagues.

1020 *Italian* miles.

4080 *Chinese* furlongs.

But taking the greatest breadth of *China* from *Tamcham*, the most eastern part of the province of *Leao-tung*, bordering on the kingdom of *Corea* to *Tumtim*, the westernmost point of the province of *Xenfi*, it is

350 *Spanish* leagues.

500 *French* leagues.

300 *German* leagues.

1200 *Italian* miles.

5400 *Chinese* furlongs.

This empire on the east is bounded by the eastern ocean, on the north by a long wall dividing it from *Tartary*; on the west by vast high mountains and sandy deserts, separating it from several kingdoms; and on the south by the ocean. It is divided into fifteen provinces, which for their extent, wealth, and fruitfulness, may better be call'd large kingdoms than provinces; to which must be added *Leao-tung*, a country not inferior to any province. This and eight of the provinces lie along the eastern and southern ocean; six others, four are enclos'd on all sides by the rest, two are separated by high mountains, from the other kingdoms of *Asia*, and one by the wall from *Tartary*, as is also *Peking* and *Leao-tung*, but these are reckoned before upon the sea, and so is *Yun-nan*, which on one side borders on the kingdom of *Tunquin*. These provinces are call'd *Peking*, *Nanking* now call'd *Kiam-nam*, *Xanfi*, *Xantung*, *Honan*, *Xenfi*, *Chiekian*, *Kiamfi*, *Huquam*, *Suebuen*, *Fokiam*, *Quantung*, *Quamfi*, *Yunnan*, *Quei-chieu*, and the country of *Leao-tung*, which might well deserve the name of a province, but the *Chinese* place it under the province of *Xantung*. The provinces that border on foreign nations, are *Peking*, *Xanfi*, *Xenfi*, *Suebuen*, *Yunnan*, and *Quamfi*. So that *Cluverius*, who assigns eighteen provinces to *China*, was misinform'd; for the kingdoms of *Tunquin* and *Cochinchina*, which he reckons as provinces of *China*, are no way subject to it, and tho' they were under it some few years, they have been a long time exempt from its jurisdiction. There are several islands depending on *China* at the great and little *Lieu-kieu-Taiwan*, which the *Portuguese* call *Formosa*; *Hainan*, *Hiamzan*, on which is seated the city *Amagao*, or *Macao*, upon its southernmost point, and abundance of other inhabited and desert islands. The kingdom of *Corea* is not an island near *China*,

as *Cluverius* imagins, but a vast promontory joining to the continent, and running out from north to south: Nor is *Xambai*, as father *Martin* made it in his atlas; but a citadel so large, and so well fortify'd, both by art and nature, that it may vie with the best in *Europe*. It is built upon the continent, near the sea, between the province of *Peking*, and the country of *Leaotung*.

wall'd places.

The wall'd places in this mighty empire, are to the number of 4402, and divided into two classes, the civil and military. To the civil class belong 2045 wall'd places, that is, 175 cities of the first rank, which the *Chinese* call *Fu*; 274 of the second rank, call'd *Cheu*; 1288 cities call'd *Hien*; 205 royal houses call'd *Ti*; and 103 guards, or royal mansions of the second rank call'd *Cham-chin*. Among the cities of the empire there are some comprehended lying in the provinces of *Yunnan*, *Quéichen*, *Quamsi*, and *Su-chuen*, which pay no tribute to the emperor, but are subject to particular absolute princes and lords of their own. Most of these cities are so hemm'd in by high mountains, and steep rocks, as if nature had study'd to fortify them; and yet within those mountains there are planes several days journey over, in which there are cities of the first and second rank, and many towns, and lesser places. The *Chinese* call these lords *Tulu*, or *Tuqu-n*, that is, *Mandarines* of countries, because believing there is no emperor in the world besides him of *China*, they imagine there are no other princes, or lords, but those whom their emperor creates. The subjects of these lords, with the *Chinese*, speak the *Chinese* language, but have another peculiar tongue to themselves. Their customs differ but little from those of the *Chinese*; and they are like them in shape and countenance, but only are braver. The *Chinese* fear them, for having, after several trials of their courage found them a vigorous opposition, they think fit not to disturb but to trade with them. So that there is no question to be made concerning the number of cities and towns, as to its being greater than what is mention'd by father *Martin*, because we here include those belonging to those petty princes, whose dominions, tho' not subject to the emperor, yet are in the midst of his empire, in the four abovemention'd provinces; as are also the cities and towns of the country of *Leaotung*, and the province of *Yunnan*, which the *Chinese*, who are above measure devoted to their formalities, do not mention in their general number, but in particular catalogues.

The *Chinese* have printed an *Itinera-GEMELLI* *rima*, or book of all the roads and ways by land and water from *Peking* to the remotest parts of the empire. The *Mandarines*, who go from court to their posts, and all travellers use it, to know the way they are to go; the distances of places, and the length of every days journey. In this book all the royal roads of the empire are divided into 1145 days, to every one of which there is a place where the *Mandarines* are lodg'd, and treated at the king's expence, when they go to take possession of their employ; but when they return from them they lose the privilege of being entertain'd at the emperor's cost. These 1145 places are call'd *Ti*, or *Chin*, or joining the two words *Ti-Chin*, that is, a place of entertainment, and guard, because there the *Mandarines* are expected with as much care and vigilancy, as if they were upon their guard against an army of enemies. Of these places there are 735 within the cities of the first and second rank, and in the towns, frontier places, and castles within the empire; 105 in those they call *Ti*; and 103 in the places call'd *Chin*. Both of them were formerly built, where there were no cities; and may be call'd towns of the second rank, being all of them wall'd, and each of them having a *Mandarine* to govern it; and there are of them larger, and more populous than some cities, and towns. The others to the number of 102, tho' not wall'd, are large and populous.

A day before the *Mandarine* sets out, there goes a messenger with a small tablet, which the *Chinese* call *Pai*, on which is writ that *Mandarine's* name, and office, and the impression of his seal under it. As soon as this is seen, the palace where he is to lodge is clean'd and made ready, and the preparations are greater or less according to the quality of the guest, and so the provisions, servants, horses, chairs, litters or boats, if he is to go by water, and all other things they may have occasion for. In these inns, or houses of entertainment, are receiv'd after the same manner in proportion to what they are, all other persons, as well *Chinese* as strangers, to whom the king grants this favour. Here also the king's messengers, or expresses are furnish'd with what they want to haste on in their journey; beating a furlong or two, before they come to the house, a basin call'd *Lo*, which they carry hanging at their back; upon the hearing of which sound the horse is presently saddled for him to change, so that he makes no stay.

The

GENELLI
1696.
Military
posts.

The military class contains 629 great fortresses of the first rank, as well on the frontiers to serve as keys, or a defence against the *Tartars*, as on the borders of provinces against robbers and rebels. The *Chinese* call them *Yuan*; and that of *Kam-bai* above-mentioned, is of this number. There are 567 of the second rank, call'd *Guei* in the language of the country. The place father *Martin* in his atlas calls *Tien-chim Guei*, signifying the fortresses of the country of heaven, is of this number, and by it a judgment may be made of the other fortresses of the second rank. There are 311 forts of the third rank call'd *Su*; 300 of the fourth, call'd *Cbin*, whose name and signification is the same as that of those of the fifth order of the civil class; and 150 of the fifth rank call'd *Pao*. There are 100 forts of the sixth rank call'd *Su*, and lastly 300 of the seventh rank call'd *Cbai*. These last are of several forts, some in the country, which serve as places of refuge to the peasants, when the *Tartars*, robbers, or rebels infect the country, as also when the emperor's army is upon its march. Others are upon steep mountains, to which they go up by steps cut in the rock, or by ladders of ropes, or wood to be taken away, and these have no wall about them, as not standing in need of any. Others are also upon mountains, but have a path-way to them, and these have a double or treble wall to defend the entrance. Now, reckoning all together, it appears there are 2357 military posts, which added to those of the civil class make 4402. Besides all this, there are within and without the great wall which parts *China* from *Tartary*, 3000 towers call'd *Cai*, every one of which has its proper name, and in these there are guards and centinels, who give the alarm, as soon as they discover an enemy, making a signal in the day with a flag they hoist up on the top of the tower, and at night with a great lighted torch. If these towers be added to the number of the military places, as the eighth rank of them, they will in all make 5357.

It is 150 years since a *Mandarine* of the supreme council of war, compos'd a book, which he dedicated to the emperor, and calls it *Kien-pien-tumke*, that is, a practical description of the nine frontiers, meaning the nine quarters, or districts into which he had divided the great wall, which encloses part of *China* for 405 *Spanish* leagues, according to the common computation, making 23 degrees and ten minutes from east

to west, from the city *Caiyenn* seated in the utmost part of the country of *Leao-tung*, to that of *Campo*, or *Can-cheu* in the very borders of the province of *Xenji*, which is to be understood in a strait line; for if we follow the windings of the mountains and the wall, it will certainly hold out to 500 *Spanish* leagues. In the same books all the mountainous places that are inaccessible are describ'd, and 129 other parts shews there must be 1327 great and small forts to hinder the *Tartars* passing. Had not the *Chinese* been careless, cowardly, covetous, and disloyal to their kings, the *Tartars* could never have pass'd the wall, nor get within the fortresses which were so conveniently dispos'd in proper places, and so strong either by art or nature; so that as appears by ancient histories, and by what has happened in our own times, the *Tartars* never enter'd *China*, but when either the treachery of the soldiers, or the avarice of the commanders made way for them, they receiving half the booty every time they let in the enemy; till at length those traitors have put the richest and most populous kingdom in the world into the hands of a small number of savages, and barbarians. In this same book is mention'd the great number of soldiers, who kept guard on this frontier, which were nine hundred two thousand and fifty four. The auxiliary troops resorting thither, when the *Tartars* attempted to break into the kingdom, were innumerable, and there were three hundred eighty nine thousand one hundred and sixty seven horses always in a readiness for them, according to the same author's computation, who reckons the charge the emperor is at yearly, for the pay of officers and soldiers, to amount to the sum of two millions and thirty four thousand *Leans*, at fifteen *Carlines* of *Naples* each, which is just a noble a *Lean*. By what has been said of the number of soldiers appointed to guard the wall and frontiers against the *Tartars*, it is easy to guess at the number of those kept on the confines of the several provinces, and in the cities, towns, and other wall'd places of the kingdom, there being no place without some garrison. They reckon seven hundred sixty seven thousand nine hundred and sixty, who in time of peace guard and attend during the day the *Mandarines*, ambassadors, and others who are lodg'd at the king's expence, and at night keep guard near their boats and quarters, and when they have gone one days journey they return, and others take

take their place. The horses the emperor maintains for his forces in the garrisons amount to five hundred sixty four thousand nine hundred, and as well these soldiers as horses, are always kept on foot: But where there is any war or rebellion, the forces that rendezvous from all the provinces are almost innumerable.

Number of people in China.

P. Comple.

P. 105.

The realm of *China*, according to the computation of a grave author, contains eleven millions five hundred and two thousand eight hundred and seventy two families, or houses; without including in this number, women, children, beggars, *Mandarines* in employment, soldiers, batchelors, licentates, doctors, *Mandarines* above age, all persons that live on the rivers, *Bonzes*, eunuchs, and all those that are of the blood-royal, because only those are poll'd who till the land, or pay taxes to the king. There are in the empire, according to the same author, fifty nine millions seven hundred eighty eight thousand three hundred and sixty four men. The number of all the inhabitants, or souls, without excluding any age, sex, or condition, if we will credit father *Daniel Bartoli*, makes three hundred millions, three times the number there is in all *Europe*. But because this

father allows more to the whole than it ^{GEMELLI 1696.} has, and takes from the parts and principal cities, diminishing their real number, there is no relying on his account, for his strange exaggeration will not suit with the multitude of small places. Having endeavour'd diligently to clear this point with the fathers of his society, I found not one that agreed with him, nor did any of the missionaries of other orders, who having liv'd there some twenty, and some thirty years, know more of it than father *Bartoli* could do by hear-say; because they are continually conversing with *Mandarines*, and great men, who thoroughly know this matter, as numbering the people to receive the imperial tax. The greatest difference I found in the accounts given me, during the time I stay'd in *China*, was of five millions, some telling me the whole empire contain'd an hundred ninety five millions, and others that they had found two hundred millions in the *Chinese* books, which difference may well happen in counting with two or three years interval. To make what has been here said the plainer, I think it will not ^{Pag. 105} be amiss to insert the particular, as it is found in father *Complet*, and is as follows.

P. 105.

There are also reckoned in the empire three thousand six hundred and thirty six men renowned, and illustrious, for their virtue, learning, valour, or other remarkable qualities. There are two hundred and eight virgins and widows, remarkable for their chastity, or other heroic acts, and celebrated in the *Chinese* books, and in their temples, and inscriptions.

VOL. IV.

There are one hundred eighty five *Mausoleums* famous for structure, and riches, for it is forbid in *China*, under severe penalties, to carry the dead into any city, but they may be remov'd from one province to another, keeping without the walls.

There are four hundred and eighty *Temples* idol temples of renown, and much resorted to, as well on account of their

O o o o majesty,

GEMELLI majesty, and wealth, as for the pretend-
 1696. ed miracles wrought at them. Within
 these and other temples of the empire,
 there live above three hundred and fifty
 thousand Bonzes.

Other Besides, throughout the kingdom are
 temples, erected by the *Chinese*, at several
 times, in memory of their ancestors, and
 remarkable for their beauty and structure.
 It is the custom among the *Chinese* to
 express much love to their parents af-
 ter their death; and to make it appear,
 they built stately halls with great charge,
 in which instead of statues, they place
 inscriptions, with the names of their an-
 cestors. Upon certain days in the year,
 the families they belong to, meet in these
 halls and prostrate themselves on the
 ground, in token of love and respect,
 offering incense to them, and making a
 splendid entertainment, in which there
 are several tables well cover'd, and fill'd
 with abundance of well-dress'd meat in
 great order.

Statues. The famous antient statues are to the
 number of two thousand ninety nine, be-

sides paintings, and other celebrated **Picture**
 works of that nature, one thousand one
 hundred fifty nine towers, triumphal ar-
 ches, and notable monuments, in honour
 of kings and men in vogue; two hun-
 dred seventy two libraries well adorn'd,
 and stor'd with books. The great ri-
 vers and fountains of note, for hot and
 medicinal waters are one thousand four
 hundred seventy two. There are also
 two thousand ninety nine mountains, ren-
 dered fruitful by their many springs, and
 singular for pasture, and the excellent
 minerals they produce, and no less for
 their great height. The schools, and **Schools**
 publick structures erected in honour of
Confucius, the great philosopher of that
 empire, are as many as the cities. It is
 no easy matter to reckon the vast num-
 ber of scholars, but the batchelors are
 above ninety thousand. Besides thirty
 palaces belonging to petty kings,
 there are others in all places, for the
 great officers of the kingdom, according
 to their dignity. And to conclude, **Br**
 there are in the empire two hundred
 thirty one famous bridges.

CHAP. VII.

*Of the notable Government of the Empire of China, the several degrees of
 Mandarinæ, and of six Supreme Courts, or Councils of the Learned, or Gown-
 Men, and six of the Soldiers, or Military Men.*

CHINA deserves great commendation
 for its excellent government. Of
 the three sects or religions follow'd there,
 that of the learned is the first and an-
 tiest, and its principal end, is the
 good government of the kingdom, upon
 which subject they have writ a great
 number of books, and comments upon
 them. *Confucius* in his time writ a treatise
 upon this matter, and call'd it *Chun-
 num*, that is, the *Golden Mean*, where he
 solidly teaches, that a good king is to
 have nine qualities, for the well-govern-
 ing of his subjects, which if he practises,
 he will make his reign immortal.

Degrees The *Mandarines* of the empire, are
 of *Mand* divided into nine classes, and every class
 into nine degrees. As for instance, they
 say, such a *Mandarine* is of the second
 degree, of the first or second class; or
 he is a *Mandarine* of the first degree, of
 the first, second, or third class. This dis-
 tinction signifies nothing but a meer title
 of honour the kings have bestow'd on
 them, without any regard to their em-
 ployments; for tho' the *Mandarines* be
 of a higher or inferior rank, according
 to the dignity of their offices, yet this is
 no general rule; for sometimes to reward

one man's merit, whose charge us'd to
 be executed by one of an inferior rank,
 the king honours him with the title of
Mandarine of the first, or second class;
 and on the contrary to punish another,
 whose post belongs to those of a superior
 class, he sometimes put him down to be
Mandarine of a lower rank. The know-
 ledge, distinction, and subordination of
 these orders are so perfect, the submission
 and veneration of the inferior to the su-
 perior, and the authority of the latter
 over the others, so great; and in short,
 the king's power over them all, is so ab-
 solute, that there is nothing to compare
 to it in our government, either civil, or
 ecclesiastical.

The *Mandarines* of the first class, are **First**
 counsellors of his majesties council of
 state, which is the greatest honour, and
 dignity, a learned man can rise to in
 the empire. They have several honou-
 rable titles, as *Nui-co*, *Kolao*, *Cai-fian*,
Suam-cum, *Siam-que*, and others, signi-
 fying assessors, assistants, and supreme
 counsellors to the king. There are in
 the royal-palace, several halls for them
 of a stately structure. When the king
 will do any of these counsellors a special
 honour,

honour, he gives him the name of one of those chambers; as for example that of *Chumki-tien*, signifying, the supreme chamber in the middle; this new title being immediately added to his name; and he is call'd such a counsellor or *Ko-loo*, supreme chamber in the middle. There is no certain number of these counsellors, but they are more, or fewer, at the emperor's pleasure, who chooses them as he thinks fit, among the *Mandarines* of other courts. There is always one call'd *Xen-fiam*, who is chief of them, and the king's favourite. This is the supreme council, or court in the whole kingdom, and kept in the palace on the left hand of the supreme chamber, where the emperor gives audience. Where it is to be observ'd, that the left hand among the *Chinese*, is the most honourable, as it was among the *Greeks* and other nations; which puts me in mind, that I have seen some ancient *Grecian* pictures, on which *St. Peter* was painted on the left, and *St. Paul* on the right, the first having the preference as head of the church. This court is call'd *Nui-yuen*, and is compos'd of three ranks of *Mandarines*; the first is that of the emperor's counsellors already mention'd, who have it in charge to peruse, examine and judge of all petitions presented to his majesty by the six great courts, of which we shall treat next, upon all the most important affairs of the kingdom. When they are come to a resolution, they present it to the emperor in writing, who either confirms or cancels it, as he thinks fit. Those of the 2d rank, or class, are as it were assessors, or assistants to the king's counsellors, chosen out of the second or third class of *Mandarines*, whence they often rise to be the king's counsellors. The title is *Tahio-fu*, that is, learned men of great knowledge. This title is also given to counsellors, on whom the emperor bestows others more lofty, as *Tai-en-tai*, that is, the princes great governour, or *Cai-tu-cai-fu*, great master to the prince, and the like. The third rank of this court, is call'd *Chum-xue*, that is, class, or school of *Mandarines*; these write, or cause to be writ, the business of the court, on whom the emperor bestows titles, according to the chambers they are employ'd in. They are generally of the fourth, fifth, or sixth class of *Mandarines*, and are much look'd upon, because they have charge of all suits, and writings, by reason they may give or take away, all a man has depending on the suit, by only a word of a double meaning, and some-

times by a single letter. Besides these, there is a vast number of clerks, solicitors, and supervisors.

Besides this sovereign court or council here mention'd, there are eleven other great courts, among which the emperor of *China*, divided all the affairs of his empire two thousand years before Christ; and these same continue still. Six of them belong to the learned *Mandarines*, or gown-men, call'd *Lo-pu*, and six to the military *Mandarines*, or swordsmen, call'd *U-fu*. The power of these courts was extraordinary great, and unlimited, inasmuch, that it might reasonably be fear'd, lest some one of them should make use of its authority, to stir up a rebellion; and therefore the wisdom of the *Chinese* emperors, has so regulated their business, that no one of them can determine any affair committed to it, without the concurrence of the others. Within the palace of every one of these six courts, there is always a chamber, or apartment appointed for a *Mandarine*, call'd *Coh*, that is, supervisor, or examiner, who in private and publick, examines all that is transacted, and if he finds any error, presently acquaints the emperor with it. This *Mandarine* is neither subject, nor superior to his court, but only a censor of their proceedings, as was us'd among the *Romans*. In *China* these men are call'd mad-dogs, because they are continually biting, by the ill offices they do.

The first presidents of these six courts, are of the first degree of the second class of *Mandarines*, and are call'd *Xam-xuo-li-pu-xam-xu*, that is, first president of the court of ceremonies, and so of the others. Each of these presidents has two assessors, the first of which is call'd *Tjo-xil-am*, that is, president of the left hand; and the other *Yeu-xi-lam*, that is, president of the right, and these are of the first degree, of the third class.

These six courts, are seated, according to their dignity, near the imperial palace on the east side, being great square structures, with three divisions of courts and apartments; for the convenience of so many as belong to them, the emperor daily providing their dinner, that they may not be oblig'd to go home to their houses, and may dispatch business with more expedition.

The method of proceedings in these courts is thus. When any man has a suit, he writes it down on a paper of such form and size, as is fix'd by custom, which he carries into the palace of the court, and there beats a drum, which is at the second gate, then kneeling and lift,

GEMELLI
1696.

lifting up the paper or petition with both hands as high as his head, it is taken from him by an officer, who conveys it to the *Mandarines* of the great chamber, and they to the president, or in his absence to his assessors, who having read it, approve or reject it, as they think fit. If rejected, they send it back to him that presented it, causing him often to be well beaten for having proposed an unreasonable thing. If they approve of it, the president sends it back to the inferior court, that they may examine the cause and report their opinions. When this court has examin'd and adjudg'd it, they send it back to the first president, who gives the sentence, adding to, taking from, or confirming the decision of his inferior court. If the matter be of high concern, he orders the said court to draw it up in a memorial, which having read with his assessors, he remits to the revisor *Mandarine* before mentioned, and he refers it to the supreme court of the counsellors of state, who examines the cause, and acquaints his majesty with it, who for the most part orders the court to examine it again. Then the counsellors of state send back the memorial to the revisor, who having seen the king's order, returns it to the first president. He causes it to be examin'd again, and when brought to him again returns it to the revisor; he to the counsellors of state, and they to the emperor, who then gives the final sentence. This decree returns the same way to the first president, who notifies it to the parties concern'd, and then the suit is ended. When the cause is any of those the courts of the provinces send up to court, it is directed seal'd to the king's inspector or revisor; who opens and reads it, and then sends it to the first president, who proceeds as has been said.

Did the *Mandarines* in trials and decisions of affairs, do their duty according to the laws and the king's design, *Cbina* would be the happiest country in the world, and the best govern'd; but as great observers as they are of outward formalities, they are inwardly no less malicious, hypocritical, and cruel. Their frauds and artifices are so numerous, it would take much time to recount them, there being scarce any *Mandarine* free from avarice and corruption; so that they do not consider the justice or injustice of the cause, but who gives most money, or the best presents; thinking of nothing but satisfying their vile covetousness, like so many ravenous wolves.

The first of these six courts is call'd *Tai-pu*; its business is to furnish all the kingdom with *Mandarines*, and to examine their merits and demerits, to present them to the king, that they may be prefer'd to better posts, or put back into meaner, as a reward or punishment. Within its palace there are four courts. The 1st is call'd *Yen-jwen-su*, that is, The court that judges of those that are qualified and learned enough to be *Mandarines*: The 2d, *Coo-cum-su*, which examines the good or bad government of *Mandarines*: The 3d, *Nien-sum-su*, which has the care of sealing all publick acts, to give the seals to all *Mandarines* according to their post, and to examine whether the seals of the dispatches they bring or send be true or counterfeit: The 4th *Kibian-su*, which has the charge of examining great lords, as petty kings of the blood-royal, dukes, and others, whom the *Chinese* call *Hun-chin*, that is, ancient vassals; who are honourable for their great services perform'd in war, when the family now reigning conquer'd the empire.

The 2d sovereign court is call'd *Hu-fu*, which signifies the king's great treasury or court of exchequer. It has the management of all the treasures, revenues, and taxes, as also of the expences. It pays out the pensions, and the quantities of rice, pieces of silk, and sums of money the emperor bestows on petty kings, great lords, and *Mandarines* of the empire. It keeps the rolls or multiers taken very exactly every year, of all the families, houses, of all the men, of the surveys of the land, of the duties it is to pay, and of all the customs. And it is here to be observ'd, that tho' in *Cbina* there are fifteen provinces, yet in the publick records, and their common way of speaking, they are call'd fourteen provinces, and one court, because, say the *Chinese*, the court resides, commands, and is not subject, and therefore is not to be reckon'd in the number of the other provinces. Hence it is, that among the supreme courts, there is never an inferior one for the affairs of the province of *Peking*; but the first president refers them, as he thinks fit, to one of the inferior courts appointed for the provinces. Thus the supreme court of exchequer, has within its palace on both sides, fourteen subaltern courts, which bear the names of the provinces they are appointed for. During the reign of the family before this now ruling, there were reckon'd thirteen provinces, and two courts, because the city of *Nanking* was a court, as well as that of *Peking*, and had the same six supreme courts, and

and all others, that are now in the court of *Peking*; but the *Tartars* took away its title of a court and all its tribunals, and have chang'd its very name, calling it the city of *Kiam-nim*, and the province *Kiam-nan*, names it had formerly.

31 Court. The 3d court is call'd *Lî-pu*, and has the inspection into ceremonies, rites, sciences, and arts. It has charge of the emperor's musick, of examining students, and giving them right to be admitted to the examination of the learned; of judging of the titles and honours the emperor will bestow on persons of merit; of the temples, and of the sacrifices the emperor offers to the sun, moon, heaven, earth, and to his ancestors. It orders the entertainments the emperor gives to his subject or strangers, and the receiving, presenting, and attending his guests, and ambassadors, and has full power over arts and mechanicks, and in fine over the three religions profess'd in the empire, whereof the 1st is that of the learned; the 2d of *Taoïsm*, or the marry'd *Bonzes*; and the 3d, of the single *Bonzes*. By this court the fathers *John Adams*, *Luis Buglio*, *Ferdinand Verbiest*, and *Gabriel Magalhães* were imprison'd, with nine chains on their feet. This court has four courts under it. The 1st is call'd *Tchi-fu*, that is, The court of matters of moment; as for instance, of the titles of petty kings, dukes, and great Mandarines: The 2d, *Su-chi-fu*, or the court that inspects the emperor's sacrifices, the temples, the mathematicks, and the three religions: The 3d, *Chu-ke-fu*, which receives and attends the king's guests, whether subjects or strangers: The 4th, *Chim-xen-su*, to take care of entertainments given by the emperor. Whilst the *Chinese* had the power in their hands, learned men were chosen to fill these courts; but at present there are *Tartars* appointed, who do every thing in this and the other courts, the *Chinese* ministers being like dumb statues; thus they suffer the punishment due to their pride at the hands of rude ignorant barbarians. Tho' the name of this court looks like that of the first, yet there is a great deal of difference according to the *Chinese* way of speaking, for the characters of the first syllable *Lî*, are not alike, and the pronunciation differs very much. The first is pronounced, raising the voice and sounding it shrill, as we mark it with an acute accent *Lî*, and on the contrary in the second the voice is let fall, as if it were mark'd with the flat accent *Lî*. So

VOL. IV.

that in the first, *Lî* signifies *Mandarine* Gemelli 1696. and *Pâ* court, and both together court of Mandarines. In the second, *Lî* signifies rites and ceremonies, and *Pâ* being added, court of ceremonies. This double meaning is not found among the *Tartars*, who call the first court *Hafan-Xurgan*, or court of Mandarines, *Xurgan* signifying a court, and *Hafan*, Mandarines; and the other *Toro-Xurgan*, or court of rites and ceremonies.

The 4th sovereign court is call'd *Pim*-4th Court *pu*, which has the direction of war and military affairs through the whole kingdom. It chuses and prefers all officers, distributes them in the army, frontiers, and garrisons, and all parts of *China*; raises and exercises soldiers; fills the magazines with arms offensive and defensive, ammunition and provisions, and with all things necessary for the defence of the empire. Within its palace there are four interior courts. The 1st is call'd *Fu-fven-fu*, which has the charge of chusing and giving posts to military Mandarines, and of exercising the troops. The 2d, *Che-fam-fu*, which has the care of distributing men and officers throughout the kingdom to pursue robbers, and suppress rebellions. The 3d, *Che-kia-fu*, which takes care of all the emperor's horses, as well those on the frontiers, and inconsiderable garrisons, as of the others that serve for posts; as also of the waggons and boats that serve to carry provisions and soldiers. The 4th, *Fu-cu-fu*, has charge of causing all sorts of arms offensive and defensive to be made, and keeping them ready in the magazines.

The 5th sovereign court is call'd *Him*-5th Court *fu*, which is the criminal court of all the empire; it has authority to punish all crimes according to the laws of the empire. Yet reason, law, and justice, are here sold, and he who gives most has the best cause; this nation suffering it self to be so led away by avarice, that it cannot be curb'd by so many severe punishments as the emperor inflicts on those that are convicted of corruption and bribery.

All the courts in *Peking* examine the Punish- offences of those that are subject to them ment of on account of their employments; but criminals, when the crime deserves a grievous punishment, as confiscation of goods, banishment, or death; then after acquainting the emperor with it, they send the process and criminal to this court, which gives the definitive sentence. In the palace of this court there are fourteen other subordinate to it, for the fourteen provinces of the empire, as was said of the fe-

Pppp

cond

DEMELLI
1696.

cond court. The practice of *China* differs much from ours, as to the diversity of punishments; for we behead noble persons, but there the greatest dishonour can be done a man, is to cut off his head. When the emperor will show a great lord or *Mandarine*, condemn'd to death, a special favour, he sends him a piece of delicate fine silk to be strangled with. It being therefore the custom in *China* to strangle the nobility, and behead the commonalty; when this happens, the kindred buy the head and body of the executioner for an hundred, and sometimes for a thousand pieces of eight, according to their wealth; looking upon it as a great disgrace that the body should remain unbury'd, because this punishment is attended with a prohibition of burying the body, yet the executioners run the hazard of it. Among other laws observ'd by this court, there is one enacted by the antient kings; which is, That when a criminal deserves any favour for some rare quality, or excellency in some art (as is also appointed by our civil law) the execution is respited till the end of the ensuing autumn; that he may enjoy some grace, or general pardon granted at the birth, or marriage of princes, or extraordinary alteration, or earthquake; all prisoners being discharg'd at such times; so that those who are repriev'd, are either set at liberty, or at least have their liberty and hopes for some months.

6th Court

The sixth sovereign court is call'd *Cang-pu*, or the court of publick works. It has the care of building and repairing the royal palaces, the king's tombs, the temples where they pray to their ancestors, and the others in which they worship heaven, earth, the sun and moon: It has also charge of repairing the palaces of all the courts in the kingdom, and those of all the great lords: It is to look after the towers, bridges, and all other necessary works to make the rivers navigable, and the roads fit to travel. In its palace there are four subaltern courts. The first call'd *Yu-xen-fu*, whose duty it is to examine and form the draughts of all works that are to be made. The second *Tu-em-fu*, to whom is committed the providing of arms for the fleets. The third *Tu-xui-fu*, takes care to make the rivers and lakes navigable, to level roads, and build and repair bridges. The fourth *Che-tien-fu*, looks to the king's houses and lands which is lett out, and receives the rents.

Judges
and officers
of the
court

By what has been said it appears, that the six sovereign courts have under them forty four inferior courts, which have all their palaces within the precincts of the

great one they depend on, with all necessary chambers and halls. Each of these forty four courts has a president and twelve counsellors, whereof four are of the first degree of the 5th class of *Mandarines*, four of the second degree of the same 5th class, and the other four of the 6th class. In the court of exchequer they are double the number, as also in that of criminal causes; every inferior court belonging to these having a president and twenty four counsellors. Besides these *Mandarines* in employment, there are others who are of no class, and yet are such only by name, and after some years service, the emperor puts them into the eighth or ninth class of *Mandarines*. All these courts have clerks, cryers, and other officers, whom they send into the provinces. They have tipstaves to employ in the palace, messengers to carry their orders, jailers, sergeants, catchpoles, and others, who baitinado offenders; cooks to dress the meat the emperor allows them every day, servants to wait at table, and a vast number of others, all kept by the emperor: The number here mention'd is to be understood, as it was in the time of the *Chinese* emperors, under the family before this now reigning, as authors deliver it; for now they are all double, as for instance, the court that had but twelve in all before, has now twelve *Chinese* and twelve *Tartars*. These are the six sovereign courts that govern all *China*, and are so famous in that empire; but because each of them of it self would have been too powerful, the wise emperors have so settled them and order'd their business, regulating all their proceedings, that none of them is absolute in the affairs it has cognizance of, but they all depend one upon another. As for instance, The first president of the 4th court, which is the court martial, might have rebell'd, had his authority been independant, because all the troops in the kingdom are under his direction; but he has no money, and after he has the emperor's order he must have recourse to the second court, which is that of the exchequer. The boats, waggons, tents, arms, and other necessaries for a war, depend on the sixth court, to which the fourth must have recourse; and lastly, the horses are at the disposal of another separate court, of which they must be ask'd.

The martial *Mandarines* make five courts, call'd *Ufu*, that is, five classes or companies. Their palace is on the right and west side of the emperor's. The first is call'd *Hui-fu* or rear. The second *Tso-fu* or left wing. The third

Yeu-fu, or right wing. The fourth *Chün-fu*, or the main body. The fifth *Chien-fu*, or the van. These five courts are govern'd by fifteen great lords, three in each of them, of whom one is president, and the others assessors. All the fifteen are of the first class of *Mandarines*, but the presidents are of the first degree of this class, and the assessors of the second: They have charge of all the officers and soldiers of the court. These five courts are subject to a sovereign court, call'd *Iün-chün-fu*, that is, court martial, the president whereof is always a great lord. His authority extends over the said five courts, and over all the officers and soldiers in the empire, but for fear, lest he should make ill use of so great a trust, a learned *Mandarine* is appointed his assessor with the title of supreme regent, and two royal inspectors, who have an eye upon all his actions. The number of *Mandarines* is so much increas'd, both for the better government, as also to reward subjects that deserv'd well in assisting the first king of the family before this now reigning, to make himself master of the empire. And certainly the predominant passion of the *Chinese* is the desire of rule, wherein they place all their glory and happiness; as may appear by an answer given by a *Mandarine* to father *Matthew Riccio di Macerata*. This father discour-

ing him concerning our holy faith and eternal bliss. *Peace, faith the Mandarine, leave these follies, your Glory and your Bliss be all your own, who are a Stranger for all my Glory and Happiness consists in this Girdle and Habit of a Mandarine; all the rest is nothing but Talk and Words, which the Wind carries away, and are things told but not seen; what we see is the benefit or advantage of Governing and Commanding others. Gold, Silver, Wives, and Concubines, as also a numerous Train, Goods, Feasting, Diversions, and all sorts of Happiness, Honour and Glory are the Consequences of being a Mandarine. This is the Happiness we covet, and which we enjoy in our great and mighty empire; and not yours, which is as unprofitable as it is Invisibile, and impossible to obtain. Thus spoke that wicked atheist.*

There are other *Mandarines* of none of the nine classes, call'd *Vi-jo-lieu*, that is, unsettled men. There are also others call'd *Vüpin*, that is, who find no class to fit them, because their merits are so great, that they lift them above all classes and degrees. These are the petty kings, dukes and marquesses, who govern in the five courts martial, esteeming the dignity of dukes and marquesses, which they have purchas'd by their great services above that of *Mandarines*.

CHAP. VIII.

Of several other Courts in Peking, of the fifteen Provinces, and Cities of the Empire of China.

THE first of these courts is call'd *Han-lin-üen*, that is, a garden or grove flourishing with learning and sciences. This court contains a great number of learned *Mandarines* of pregnant wits divided into five classes, and making five courts; being chosen by the emperor from among the new doctors that take their degree every three years at *Peking*, for all the licentiates of the kingdom call'd *Kün-gin*, that men illustrious in learning, are examin'd for thirteen days together with all possible rigor, out of which the degree of doctor is afterwards given to only three hundred sixty six, who have proved themselves the ablest men. The members of these five courts, are teachers and preceptors of the young prince, who is to succeed in the empire, whom they instruct in virtue and learning according to his age. They write all whatsoever happens at court or in the empire, which

deserves to be transmitted to posterity. They compose the general history of the kingdom and other books, and they are properly the kings men of learnings, whom he choseth to be *Kolao*s and counsellors; in short, this court is a royal seminary. Those of the first court are of the third rank of *Mandarines*, those of the second of the fourth, and all the other three of the fifth.

Having spoke of the examination of ^{Manner} licentiates, and the degree of doctors, it is ^{of taking} proper to describe the manner how they ^{Degrees.} arrive at the decree of batchelors, which is conferr'd in the cities, and to that of licentiate given only in the metropolitan cities of provinces, as that of doctor is only at *Peking*. As for the batchelor's degree, which the *Chinese* call *Siu-Zay*, there is a person appointed by the king in every province, who goes from one city to another to examine the students, of whom four or five

GEMELLI five thousand come to be examin'd in every city, according as they are more or less inhabited. They are thrice put

upon tryal by as many several examiners. The first is by four antient learned men, who reside in the colleges of *Confucius*: The second is by the magistrates of the city, and only of those who were thought worthy of it by the first examiners: The third by the *Tibio*, or king's examiner, of those few that have pass'd the second tryal. Thus, of the thousands that at first expos'd themselves to the hazard of so difficult an undertaking, only a few are at last admitted to the honour of batchelorship; and sometimes they do not rise to thirty, all the rest being rejected as unworthy and incapable. Yet this does not dismay those that are rejected, or put them by their studies; but being spur'd on by the honour done to those that receive the degree, they return to their studies with more earnestness, to appear again at the next examination.

Afterwards only the ablest of those that were graduated in the first examination of batchelors resort to the second for licentiates, or masters, because it is very severe. These are promoted only once in three years in the eighth moon, which usually happens in our *September*, and this no where but in the fifteen metropolitan cities of provinces, and such a certain number prefixt, there being about one hundred and fifty in the two principal cities of *Peking* and *Nanking*, and more or less in the others down to an hundred. The emperor chuses thirty able men to be examiners, of whom two go into every province for that purpose, and it is to be perform'd precisely on the ninth, twelfth, and fifteenth day of the eighth moon. These examiners call two others to their assistance, for they would not be able to go through so much alone. In the mean while the two examiners speak with no body, to prevent any jealousy or suspicion; and they stay till the ninth day in the morning to give all at once, on a sudden, the argument or theme they are to write upon. This examination is perform'd in a palace, about which there are small chambers with tables and chairs. When the batchelors go in, they are strictly search'd to see whether they have any writing about them, which if they had, they would certainly be bastonado'd, they being allow'd nothing but white paper, three pencils, and an ink-horn. Having their subject they are to treat of, they are shut into these little rooms, and guarded that they may not talk to one another. The theme given

them to try their wits the first day, is four sentences taken out of the vast number of them in *Confucius* his books, that is, out of three of the four counted most authentick among the *Chinese*; these are hung up at the four corners of the court, in vast black letters on white paper. Upon them every one is to frame a discourse, not exceeding five hundred characters, which are as many words. On the 12th day of the moon, three several points are propos'd, upon which judgment is to be given, to advise the king by way of memorial. The last day they desire three cases in civil and criminal affairs; either absolving, condemning, or compounding between the parties, as if they were giving judgment upon the bench. They labour at each of these examinations from break of day, till night; the dinner for those in the court being provided by the city, and very light, that it may not dull the wit. At night the compositors fold their compositions, and deliver them to people appointed to receive them, every one subscribing his name. These compositions are transcribed by clerks, and being afterwards compar'd with the originals, are deliver'd to the assessors to judge of the worth of them, without knowing the authors, to prevent all corruption. They pick out the best, double the number that is to be prefer'd, and the two examiners chuse one half out of them. These compositions being then compar'd with the originals, kept the mean while lock'd up, the owners names are publish'd, and they thus receive the degree of masters, with great rejoicing, at the end of the same eighth moon. And because the *Tartars* by reason of their ignorance could not easily pass through these examinations, that they may have the decree of licentiates to capacitate them to be *Mandarines*, the emperor has in their behalf brought up the title of *Kien-Sem*, which is bestow'd for money, confirming them for ever in the degree of batchelors, and in a capacity of being *Mandarines*.

The court call'd *Guercu-Kieu*, is the royal school of all the empire, which has care of all these batchelors and students, to whom the emperor has granted some privilege to make them equal to batchelors, as delivering the wine to the emperor when he sacrifices to heaven, the earth, the sun, moon, or any other well-deserving creature. These graduate students, are of six sorts, viz. *Cum-sem*, *Quon-sem*, *Nyen-sem*, *Cum-sem*, *Kien-sem*, *Cum-cu*, who are usually marry'd to women of the king's household, to whom the king grants this favour, as

Court of
visitors.

The *Mandarines* that belong to the court call'd *Tucha-yuen*, or visitors and censors of the court, and of all the empire. The president is equal in dignity to the president of the six sovereign courts; and accordingly is a *Mandarine* of the second class, and his first assessor of the third, and all the other *Mandarines*, whose dignity is very great, of the seventh class. It is their duty always to have a watchful eye over the court and all the empire, to cause the laws and good customs to be observ'd, and the *Mandarines* to observe justice; punishing their inferiors, and acquainting the emperor with the faults of their equals. Every three years they make a general visitation, sending fourteen visitors throughout the empire, one to every province. As soon as the visitor enters the province, he is superior to the vice-roy, and all the *Mandarines* great and small, and he tries or acts the censor over them with such rigor and authority, that the dread the *Mandarines* have of him, was the occasion of that common proverb in *China*, *Lao-xu*, *Kien-mao*, that is, *The mouse has seen the cat*, and this not without cause, for he can take away their employments, and ruin them. The visitation ended, the visitors return to court, with every one half a million given him by the *Mandarines*, which they share with the president and his assessors, and then give them and the emperor an account of their visitation. For the most part they accuse none but such *Mandarines*, whose injustice, and other crimes are so publick, that they cannot be conceal'd, or the poor one that could give them no money. This visitation is call'd *Tachai*, or the great and general visitation. The same court makes a second visitation call'd *Chun-chai*, or middle visitation, sending visitors to the nine quarters of the frontiers, on the side of the great wall that divides *China* and *Tartary*. If those that go the general visitation make a great advantage, or rather steal much; these out-do them amongst the distributors of salt. The third visitation is call'd *Siaochai*, or the little visitation, and is made every three months, sending visitors sometimes unknown, and in disguise, first to one province or city, and then to another, to receive private information against some *Mandarine* famous for his ill practices. Besides these visitations the court every three years sends a visitor call'd *Hio-guen* into every province, and another call'd

VOL. IV.

Ti-bio into every city, to examine the batchelors, and punish their infolencies committed against the people by abusing their privileges, and punish them severely. To conclude, this court, every time it thinks fit, sends a visitor call'd *Sbun-bo*, to make a visitation upon that famous canal we have spoke of elsewhere.

This court is kept in a vast palace, and has under it twenty five inferior courts, divided into five classes; and each of the five courts has five presidents, and abundance of assessors and inferior officers, who have particular names, as has been said of other courts, that take care of the welfare of the city. Particularly the two last classes have the charge of apprehending thieves, malefactors and vagabonds, and to remit them to the superior courts; to visit the streets and quarters; and to go the rounds, and keep watch at night. The captains of streets, or headbouroughs are subject to these two classes; for every twelve families have a chief over them, call'd *Paiten*, and over ten of these *Paitens*, is another officer they call *Tjum-Kia*, whose duty it is to acquaint the court with what is done within his ward contrary to law, or good manners, and to give an account of all strangers that come thither, and any thing else that is unusual. They are also to exhort the several families to virtue, and a good life.

The court *Ju-bio* is govern'd by two presidents, who have charge of the learned and martial batchelors, to exercise the first of these in discourses upon good government, and the others in military affairs.

The court call'd *Cotao*, or *Co-la*, is that of the inspectors before-mention'd, divided into six classes, as are the six sovereign courts from which they take their names. As for instance, the first is call'd *Lico*, or inspectors of the supreme court of *Mandarines*; or *Huo*, inspectors of the supreme court of the exchequer, and so the rest. Every class consists of several *Mandarines* of the seventh rank. They are appointed to tell the emperor what faults he commits in government; and they are so bold in this particular, that they often expose themselves to the hazard of banishment and death, to tell their prince the truth, either by way of memorial, or by word of mouth; of which there are many examples in the *Chinese* histories. And it has happen'd that kings have mended their faults, and generously rewarded those that reprov'd them. It is their duty to have a watchful eye over the miscarriages of the six supreme courts, and

Q q q q

to

GEMELLI

1696.

GEMELLI to give the emperor notice of them by memorial privately. The emperor makes use of these *Mandarines* in affairs of consequence, and chuses three out of them every year for visitors.

The court *Him-gin-fu* furnishes the emperor with ambassadors, and envoys to send into *Corla*, when he confirms that king in his title, or to carry a title to other deserving persons.

The court *Tai-li-fu*, that is, sovereign reason and justice, has the charge of examining doubtful and difficult cases; and of confirming or revoking sentences pronounced, especially in the criminal court, where goods, honour, or life lie at stake; for if any man be condemn'd to death, and this court find the motives of such judgment dubious, it remits the case to its *San-fa-fu*, which is, as it were its council of conscience, and this joining with the court of *Tai-li-fu*, and that of *Tu-che-yuen*, or supreme court of visitors, and the criminal court, they all together examine the matter over again, in the presence of the accuser and party accus'd, and often reverse the sentence.

The court *Tum-chim-fu* has the charge of publishing the emperor's orders at court, and throughout all the empire; as also of perusing all the memorials of the lained and military *Mandarines* before they are deliver'd to the emperor, which they stop, or send up, as they think fit; none being allow'd to present a memorial to the emperor, before it has been revis'd, and approv'd by this court; except those of the *Mandarines* of *Peking*, who present theirs immediately. The president of this court is of the third class.

The court *Tai-cham-fu*, is in a manner associated to the supreme court of rites and ceremonies. The president is of the third class, his assessors of the fourth, and the rest of the fifth and sixth. It has peculiar charge of the musick, of the sacrifices, and of the marry'd *Bonzes*, and other matters.

There is also another court associated to that of rites, and call'd *Quam-to-fu*, that is, royal inns, which has charge of providing the cattle, wine, and other things necessary for the emperor's sacrifices, and entertainments. The president is of the third class.

The *Mandarines* of the court call'd *Tai-po-fu*, are of the same classes as those of the last, and provide horses for the emperor, and for war, distributing them to the commanders, and in the fortresses. At present the *Tartars* bring them in, and the emperor buys seventy

thousand every year, and the great men and private persons double the number.

Kin-tien-kien is the court of the mathematicks. The president (who at this time is father *Philip Grimaldi* of the society of *Jesuit*) is of the fifth class, his two assessors of the sixth, and the rest of the seventh and eighth. They apply themselves to the study of astronomy, and astrology, and are to inform the emperor when there will be eclipses of the sun and moon, and their quality and duration. Whereof the emperor gives notice to all the courts of the provinces by means of the court of rites, that they may prepare to perform the necessary ceremonies; which consist in beating the drum, whilst the eclipse lasts, the *Mandarines* kneeling, with their eyes lifted up to heaven, and with awful fear. This court every year sets out the almanack, which is spread throughout the whole empire.

The court *Tai-yuen*, or rather college of physicians, is compos'd of those belonging to the emperor, empress, and princes; who prepare their own medicines. These *Mandarines* depend on the court of rites.

The court call'd *Hum-lu-fu*, consists of masters of the ceremonies at publick audiences, and is assitant to that of rites.

The court *Xam-len-yuen*, has charge of the gardens, and of the cattle kept for sacrifices and entertainments. It is subject to the court of rites.

The court *Xam-pao-fu*, has the keeping of the emperor's seal; which is square, a span over, made of a precious stone, as the letters on it denote, which are *Xam-pao*. Here the court of *Mandarines* come for the seals, to bestow their employments on the *Mandarines* of the court and provinces, the king's leave being first had.

The court *Kin-y-guei*, is the guard to the emperor's person. They guard, and attend him when he goes abroad, or gives audience. It consists of several hundreds of martial *Mandarines*, the sons of great lords, and is divided into four classes. These are never remov'd as other *Mandarines* are, but continue in their court, but often rise to be presidents and *Kolao*. These, tho' they are martial *Mandarines*, are independent of the *Pimpu*, that is, the supreme military court.

The two courts call'd *Xui-gue-fu*, which have the management of the customs of *Peking*, and take care to place waiters at all the gates of the city to receive the duties, which depend on the court of the exchequer.

male
diar.

The *Tu-pu* has two courts, which are to apprehend thieves and malefactors, and proceed against them; if they find them not guilty, they may discharge them; but if it finds them guilty, it must turn them over to the criminal court. It has also power to secure runaway slaves, to bastinado, and then restore them to their masters, first marking them with a hot iron on the left arm. Cut-purses are mark'd with such an iron on the left arm, for the first offence; for the 2d in the right, and for the 3d are sent up to the criminal court.

Gover-
nor's
court.

The court call'd *Fu-yn*, is that of the two governors of the city of *Peking*. These governors are superior to those of all the other cities in the empire. They are of this 3d class of *Mandarines*, and their assessors of the fourth. The first superintendent of all the scholars and learned men in *Peking*, who are not yet *Mandarines*. The second has the administration of justice, and takes account of all the families, and souls in the city, and prepares the place and necessaries to offer sacrifice. The *Chinese* call this governor *Fu-Mu*, that is, father and mother of the people.

Court
under
them.

There are two other courts call'd *Tai-bim-bien*, and *Vom-pin-bien*, which depend on that of the governors of the city, and have the same affairs in charge; because *Peking* is divided into two cities, according to the practice throughout the empire, where cities are reckoned as one, or two, according to their bigness. The presidents of these courts are of the 6th class.

Court of
the royal
family.

Tjum-gin-su is the court of the great men, who are lineally descended from the royal family. The president is one of those who have the quality of kings; and is of no class, being above them all. His two assessors are lords of the blood-royal, and above the classes; but all affairs are dispatch'd with the assistance of some of the *Mandarines* of the six sovereign courts. All their business is to distribute the money allow'd for the emperor's male-kindred, whether rich or poor, to the sixth degree of consanguinity; more or less, according to their dignity, and nearness of blood. Besides, they judge of all matters, civil or criminal, wherein those are concern'd; and execute the sentence, after acquainting the emperor. These relations of the emperor's have the privilege of painting their houses and moveables red. The family before this now in the throne, having reign'd two hundred seventy six years, was increas'd to such a number, that the allowance falling short, for

some who were remotely ally'd, they apply'd themselves to mechanick arts, and were become too insolent among the people; but at present there is no offspring of them left. The kindred of the *Tartar* emperor now reigning, are all lords of note, and live at court; but if their reign lasts long, they also must come to a mean condition, by reason of their numbers.

Hoam-chin is a court that has the like power over the king's kindred by female descent. These are of two sorts; the first, of those who descend of the emperor's daughters, marry to choice students, as was said above, call'd *Fu-ma*; but they are not accounted princes of the blood by the *Chinese*, nor the emperor's kindred, as having no right to the succession, tho' the male-line were quite extinct. This custom is observ'd even among the people; for in *China*, to marry a daughter, is the same thing, as for ever to exclude her the family, and fix her in the husband's, whose surname she takes. Therefore when the *Chinese* will express, that a maid is gone to the bridegroom's house, they do not make use of the verb *Kiu*, to go, but of the verb *Qui*, to return; thus they do not say, she is gone, but return'd home. So when the grandfather talks of his son's children, he calls them plain *Sun-cu*, my grandsons; but when he speaks of his daughters, he says, *Vai-sun-cu*, my grandsons abroad; because he accounts them of his son-in-law's family. So when they speak of a dead person, they do not say, such a one is dead, but such a one is return'd to the earth. Among the 2d sort of kindred of the emperors of the female line, are accounted the parents, brothers, uncles, and other relations of the empresses; the emperor's sons-in-law, and their parents, brothers, and uncles; of these two sorts the emperor chooses some of the most remarkable to compose their court. The difference between these and the princes of the blood, is, that these last are none of the nine classes, and the others are of the 1st and 2d, tho' they think themselves more honour'd by the title of *Hoam-chin*, and that of *Fu-ma*, signifying the king's kindred, than by that of *Mandarine*, tho' of the first class. This 2d sort of kindred, was also destroy'd by the *Tartars*.

Enough has been said of the courts of *Mandarines*, and the government of the court; it remains now to speak briefly of those of the provinces. Each province has a sovereign court, on which all the others depend. The president

vince.

GEMELLI has the title of *Tutan Kiun-muen, Fu-yuen, Sium-fu*, and other names, signifying

governours of provinces, or vice-roys, and is usually chosen out of the 1st, 2d, or 3d class, as the king pleases. It belongs to him to govern, both in peace and war, the people and soldiery, in civil and criminal affairs; and to give the emperor, and fix sovereign courts, an account of all things of note. To him are directed all orders from the emperor and his courts, and all the *Mandarines* of the province are oblig'd to have recourse to his court, in matters of weight. There are other vice-roys call'd *Tjum-to*, who have the government of two, three, or four provinces; as for instance, *Leam-quam Tjum-to*, vice-roy of the provinces of *Quam-tum* and *Quam-si*, (*Quam-tum* signifies a province towards the east, and *Quam-si* a province that stretches towards the west) and others, especially on the frontiers of *Tartary*. Besides the vice-roy, there is in every province a visitor, call'd *Ngan-tai*, or *Ngan-yuen*; and another officer of great note, call'd *Tjum-pim*, who commands all the troops in the province. This man is usually chosen out of the first class of martial *Mandarines*. All these supreme officers of the provinces, have many *Mandarines* under them, who assist in dispatch of business. Tho' every one of them generally has his palace within the metropolis, yet they do not always live there; but travel about all the province, according as necessity requires.

Courts of cities.

The particular courts of metropolitan cities, are these that follow. A court for civil causes, call'd *Pu-chimfu*; the president whereof is a *Mandarine* of the first degree of the 2d class, his two assessors of the second degree of the same class. This has two other courts not depending on it, but by way of assistants. That on the left is the most honourable, and is call'd *Tjan-chin*, in which there are two presidents of the 2d degree of the 3d class. That on the right is call'd *Tjan-y*, its presidents are equal, and of the 2d degree of the fourth class. In all these three courts there are many inferior *Mandarines*, call'd *Xeu-lin-quon*, who have it in charge to decide all controversies, and gather the revenues of the province. The criminal court is call'd *Ngan-chu-fu*; and its president, who is of the 3d class, has no assessors under him, but two benches of *Mandarines*. On the first call'd *Fo-fu*, are *Mandarines* of the 4th class; on the 2d call'd *Chien-fu*, of the 5th, both together are call'd *Tao-li*,

or *Tao Tjum*; and are for the most part visitors of all parts of their province. This court may punish criminals with confiscation of goods, and loss of life, according to the heinousness of their offences; and when there is no visitor in the province, it has an eye over all the other *Mandarines*, and acquaints the emperor with what happens. In a word, these two courts, the civil and criminal, act in the same affairs as the six sovereign courts at *Peking*, and are as it were their substitutes.

Every province is divided into territories, and each territory has a *Mandarine* call'd *Tao-li*, who is as it were a visitor, or inspector of all that is well or ill done within his district, and therefore he is taken from the court of inspectors, call'd *Co-tao*, whereof we have spoke above. It is his duty to cause the governors of cities and towns, to pay in the emperor's duties punctually.

All cities of the first rank, whether they are metropolitans or not, have a court, in which the governor of it and its territory presides, who is a *Mandarine* of the 4th class, and call'd *Cbisu*. He has three assessors; the first call'd *Tum-chi*, the 2d *Tum-puon*, and the 3d *Cheu-quon*; all of the 6th and 7th class. They are also call'd 2d, 3d, and 4th lord of the 2d, 3d, or 4th seat; or of the 2d, 3d, or 4th city, because the president is call'd first lord, first seat, and first city. Besides these there are four inferior *Mandarines*, call'd *Kim-lie*, *Cheu-fu*, *Chao-mo*, *Kim-kiao*, of the 7th, 8th, and 9th classes. Enough has been said of the duty of this court, when we spoke of the government of *Peking*. All the cities of the empire have such *Mandarines*; but when they are places of great trade, or have a large territory, and many villages depending of them, the number of *Mandarines* is double.

The cities of the 2d rank, call'd *Cheu*, are of two sorts, those of the first, are only subject to the metropolis, as if they were of the first rank, and have towns depending on them; those of the 2d are subject to the cities of the first rank, whether they have villages depending on them or not. The president of these cities call'd *Cbi-cheu*, is of the 2d degree of the 5th class, and has two assessors of the 2d degree of the 6th and 7th classes, the first of which is call'd *Cheu-tum*, and the 2d *Cheu-poon*; besides another *Mandarine* call'd *Limo*, of the 2d degree of the 9th class. These act in the same manner as the governors of cities of the first rank. The people call the governor *Ta-ye*, that is, great, or first

first lord, and the three others 2d, 3d, and 4th lords.

Every other city of the empire has a court, whose president is call'd *Chibien*, and is of the 1st degree of the 7th class. Under him he has three assessors, the 1st of them of the 8th class, and call'd *Hieu-chim*; the 2d of the 9th *Cbue-pui*, but the 3d *Tien-fu* of no class. Yet if this man behaves himself well during his three years employment, the governor of the inferior city acquaints him of the superior, and he the governor of the metropolis; who informs the two great courts of the same, and they the vice-roy. He writes to the sovereign court of *Mandarines*, they give notice to the counsellors of state, and lastly the counsellors of state speak to the emperor; who generally makes him a *Mandarine* of the 8th or 9th class. And thus must *Mandarines* rise to a higher dignity, but by the help of some present, proportionable to the benefit they may receive; and this is the cause why they afterwards sell justice.

A *Mandarine* when once he is mounting, must always be employ'd, that he may commit no gross error in his office; as at *Rome* the governments of the ecclesiastical state, are given in course, men rising from the inferior to the greater. But it is customary in *China* to write as many names of cities, as there are *Mandarines* that want employments, and then they draw them by way of lot; tho' it is well known, that he who is of intelligence with the court, so orders the tablets, that the name of the city he would have comes up. This artifice does not always succeed, and they tell us of a *Mandarine*, who drawing a mean lot instead of a great city, and therefore being enrag'd for the money he had given the register, stood up (for it is the custom to kneel at that time) and falling upon him, beat, and abus'd him sufficiently in the presence of above three hundred *Mandarines*. For which being both sent to prison, they wanted but little of being condemn'd to death, those contracts being forbid by the laws upon pain of death.

Besides those already mention'd, there is a court in all the cities of the empire, consisting of a president, and two or three assessors, who are call'd *Kiao-quon*, that is, judges of the learned, because it is their duty to take care of learning, and of the learned men; to see the batchelors commit no infolencies against the people; and from time to time to assemble the licentiates, doctors, and priviledg'd *Mandarines* to treat of matters of learn-

ing in a school. Besides these *Mandarines* dispers'd throughout the empire, there are particular courts in other provinces, as that for the distribution of salt, the superintendence of the emperor's revenue and others.

All the courts we have hitherto given an account of, consist of learned *Mandarines*, but those that belong to the martial men are more numerous, for besides that they are in all places where those of the gown-men are, there be others on the borders of provinces, in the sea-ports, and many more on the frontiers towards *Tartary*. There is a new catalogue printed every year with the names of the martial *Mandarines* employ'd in them, their titles, country, and the time when they took their degrees, and the like of the learned *Mandarines*.

The number of the learned *Mandarines* throughout the empire is 13647, and that of the martial 18520, in all 32167; which tho' most certainly true, may perhaps seem unlikely; but there is no less to be admired in the distribution of their employments, their distinction and subordination; so that it seems the legislators omitted nothing that was necessary, and foresaw all the inconveniences that might happen. No empire in the world would be better govern'd or more fortunate, were the conduct and integrity of the officers suitable to the goodness of the laws; but the inferior *Mandarines*, studying nothing so much, as how to cheat their superiors, these the sovereign courts, and all together the emperor, with extraordinary art and ingenuity, not to call it humility, and flattery; it is no wonder the prince should sometimes be impos'd upon with falshood, instead of truth; and the people be oppress'd by the tyranny of evil ministers, notwithstanding the wholesome laws.

All the *Mandarines* here mention'd, have their employments for three years, which being expir'd, they rise to others better, their ill behaviour being no hindrance, as has been said. No man has any power or authority, in the city or province where he was born, that justice may not be wrested out of favour, or affection; but this is allow'd in martial *Mandarines*, that they may fight with more resolution, in defence of their country. None of them has servants, or officers of his own; but when he comes to the place of his government, must receive those that are offer'd him and maintain'd by the publick, that they may have no confidants, through whose means to receive presents or sell justice.

R r r

If

Vol. IV.

GEMELLI 1696. If they take along with them their sons, brothers, or other relations; these are not to converse with the people, but to live recluses like *Cartusians*. The best of it is, that tho' there be so many good laws to prevent and punish the corruption of *Mandarines*, suspending any one that receives to the value of ten *Tayes*, displacing him for thirty, and taking his life for fifty, yet their knavery and avarice finds ways to receive money so privately, that it is a hard matter to convict them; besides that they conceal one another's faults.

When a *Mandarine's* father or mother dies, he must resign his employ, to mourn three years, and give the due honour to those from whom he had his being; sleeping for a long time upon a pile of straw by the tomb, eating for some months nothing but rice boiled in water, but water, wearing for the first year a garment of sackcloth, the second of some cloth not so coarse, and the third of a better sort; and all this time continuing the usual sacrifices; which dutiful cu-

stom the emperors themselves observe.

The several dignities and qualities of so many *Mandarines* are known by several signs. 1. By the inscriptions and titles written on tablets they cause to be carry'd before them. 2. By the number of attendants that go along with them, dragging staves along the ground, carrying banners and other things. Besides, by the number of men that carry them in their chair, for four are allow'd the inferior sort, and eight to the better; and lastly by the number of strokes on the *Chinese* drum which goes before the company, for they give five strokes on it for the meanest *Mandarines*, seven, nine, eleven, and as far as thirteen for the greatest. It is also to be observ'd, that amidst this prodigious number of *Mandarines* there never happens any contest, as is usual in *Europe*, on account of precedence. Because, if the emperor hears of any such thing, he certainly puts them out of their employments, as that they may decide their controversies as private men.

CHAP. IX.

Of the Chinese Characters, of their Ingenuity and Skill in the liberal Arts, and of their chief Books.

Chinese characters.

THO' the *Egyptians* boast of their being the first who transmitted their thoughts to posterity, by the means of characters and hieroglyphicks; yet it is certain the *Chinese* had them long before. All other nations have had a general way of writing, compos'd of an alphabet of about twenty four letters, which tho' differing in shape, have almost the same sound; but the *Chinese* make use of at least fifty four thousand four hundred and nine letters to express their meaning; and this with such a grace, vivacity and force, that they seem not to be characters, but voices and tongues that speak, or rather figures and images, which represent every thing to the life.

Two sorts of characters.

These letters are of two sorts, either simple, or compound of several simples; and because every one of them (contrary to what is with ours) is a sign and image, representing some particular thing when join'd to another; therefore they are not to be call'd letters but hieroglyphicks. Another thing wonderful in this tongue is, that the words are few, and all syllables, as *Pa, Pe, Pi, Po, Pu, Pam, Pem, Pim, Pom,*

The language.

Pum, and the like; so that taking away those monosyllables which they make no use of, as not being able on any account to pronounce them, as *Ba, Be, Bi, Bo, Bu, Ra, Re, Ri, Ro, Ru, Pom, Tom, Nom, Mom*, &c. Their words well consider'd in themselves, are not above three hundred and twenty, but consider'd with their different accents, they are enough to compose a most perfect language. For instance, the syllable *Po* pronounced several ways signifies eleven several things, being as occasion serves a noun, pronoun, substantive, adjective, adverb, and participle; and so when it is a verb it may be demonstrative, imperative, subjunctive, and infinitive; in numbers more or less with their persons; in time present, imperfect, preterperfect and future. The diverse pronunciation is in the diversity of the accent, which is either plain, strong, flat, sharp, or circumflex; as also from the aspiration, which is also mark'd down, as among the *Greeks*. All this may be understood by the eleven several ways the syllable *Po* may be mark'd and consider'd.

Pò, Pò, Pò, Pò, Pò, Pò, Pò, Pò, Pò, Pò, Pò,

GIMELLI
1696.

When this syllable is pronounced with the accent smooth and all of a piece, *Pò*, it signifies a *Glass*; with the flat *Pò* it signifies to *Boil*; with a sharp *Pò*, a *Sister of Corn or Rice*; the 4th with the circumflex open, *Wife*; the 5th with the circumflex clos'd with a point over it, to *Prepare*; the 6th with the circumflex charg'd and an aspiration, an *old Woman*; the 7th with the plain accent and an aspiration, to *Break*; the 8th with a flat accent and aspiration, signifies, *Bow'd*; the 9th with the acute, accent and aspiration, signifies, *Near*; the 10th with the open circumflex and aspiration, to *Water*; the 11th with a close circumflex, with a point over it and an aspiration, a *Slave*. By this example it may be easily conceiv'd how the *Chinese* language can be expressive, copious, and eloquent, with so small a number of monosyllables; for as we, by the different putting together of letters from such an infinite number of words; so they joyning, separating, and giving several accents to their monosyllables, express themselves as plainly and gracefully as any other language that is more in esteem. The same ease they have in explaining their thoughts in writing, by the variety of accents; they find in pronouncing of words several ways; like a musician who, by long practice, easily knows at first sight, and expresses the several notes he is to sound with the voice. Yet it is not true that the *Chinese* sing when they talk, as some have imagin'd; nor that they carry a tablet hanging about their neck, on which they write their meaning, when they perceive they are not understood; and that they cannot whisper, as some people fancy, thinking the tones and accents cannot be express'd without raising the voice.

The *Chinese* language, in the opinion of the missionaries, is the easiest of all those in the east; for if the memory be the most necessary faculty for learning of a language, that must be the easiest which has fewest words, for it is always easier to remember a few than a great many. Now the *Chinese* language is compos'd of only three hundred and twenty monosyllables, whereas the *Latin* and *Greek*, have an infinite number of words, of several tenses, moods and persons; and therefore the *Chinese* must be easier. Add to this, that it requires remembering nothing but the accents, which are as it were the form, distinguishing the significa-

tion of the words. The *Chinese* people therefore pronounce all things well and with ease, without knowing what tones or accents mean; only the learned being acquainted with them. There can be no doubt made hereof when we consider, that the fathers missionaries, who go into *China* with only two years application, preach, hear confessions, and write in that language as if it were natural to them; tho' they go into those parts well advanced in years; which is the reason they have writ and printed abundance of books, which are admir'd and valu'd by the *Chinese* themselves.

If those who are best and most ready at invention, have a more lofty wit than others, the *Chinese* are doubtless to be prefer'd before other nations, because they have been the first inventors of writing, of paper, of printing, of gun-powder, of fine porcellane, and of several other things. If they want several sciences it is for want of communication with other people; and yet they are consummate in moral philosophy, to which they apply themselves very earnestly; and by the sharpness of their wits easily come to understand the books writ by the missionaries, upon nice and difficult questions in mathematicks, philosophy and divinity.

What kingdom is there in the world so full of universities as *China*? There are certainly above ten thousand licentiates, whereof six or seven thousand meet every three years at *Peking*, where, after severe examination, three hundred sixty five are admitted to the degree of doctors. I believe there are not so many students in any kingdom, as there are batchelors in *China*, for they are counted above ninety thousand; nor that there is any country where the knowledge of letters is so universal and common; for especially in the southern provinces there is not a man rich or poor, citizen or peasant; but can at least write and read. In short, it is certain that no part, except *Europe*, has publish'd so many books.

The *Chinese* chronicles are as ancient as the flood, beginning but two hundred years after it; and have been continu'd to this time by several authors; by which it is easy to judge what a number of volumes they make. They have abundance of books of moral philosophy, which treat of nature, its properties, and accidents, several others of the mathematicks, and concerning the art of war; most ingenious

GENEAL 1696. nious and delightful romances, and books

of knight-errantry, like *Amadis, Orlando*, and *D. Quixote*; infinite volumes of history, and examples of the obedience of children towards their parents, and of the fidelity of subjects towards their king; of husbandry, of fine speeches, of delightful poems, of tragedies, of comedies, and upon infinite other subjects too tedious to relate. The most wonderful thing is to see with what ease they compose them, which is such, that there is scarce any doctor or licentiate but publishes one or two works. They

Physick.

also exert their wit in physick, whereof they have writ excellent treatises. True it is, they pretend to discover much by the pulse, as to know the distemper, and apply the proper remedies; but I cannot be persuaded it is so much as father

See Narcisse.

Daniel Bartoli magnifies it in his history of *Cbina*, Part 3. Pag. 62 & 63; where he says that the *Cbinese* physicians never ask the patient any questions of his present condition, nor how it has been with him since he fell sick, which they would look upon as betraying their ignorance; but taking the sick person aside, they feel his pulse with great attention for about half an hour; and by the diversity of its irregular motions, which they nicely discern, they discover, conceive and declare all that has happen'd to the patient till then day by day, and foretel what will befall him; wherein, as the father says, they far out-do our physicians of *Europe*. This indeed is a notable way of practising physick, and not human, but prophetick, and divine. In *Europe* there are schools where physick is taught, but in *Cbina* there is none; and if a son having learn'd it of his father, finds not his account in it, he leaves it, and takes to a more profitable trade, for the *Cbinese* are expert at every thing. What I can affirm for a certainty is, That these physicians, as much better than ours as they are, shun with all possible diligence the taking charge of the cure of *Mandarines*, and great lords; for if any one dies under their hands, the kindred beat him to death; and the experience they have of their skill makes them rather put themselves into the hands of an *European* surgeon, than of the best of them. As a proof hereof, I saw a surgeon of *Macao*, whilst I was at *Canton*, going up to court into the emperor's own service, having been employ'd by him before, and being gone then with his leave to see his wife; and if the *Cbinese* were such prophets, and *Esculapius's*, I do not think the emperor himself would seek after *Europeans*. Father

Bartoli adds, That their great cure is fasting, keeping the patient seven, fourteen, and even to twenty days without giving him the least morsel of sustenance, but as much water as he would drink, and two, three, or four times, the juice of pears. I fancy if father *Bartoli* had been so fasted but six days, he had not been able to publish so many choice works; and the *Cbinese* are flesh and blood as we are, and of a much tenderer constitution. It is also to be observ'd, that the *Cbinese* physicians at the same time play the apothecaries; and wherever they go, their servant carries their drugs after them. If they are not call'd a second time, they never return; for the patient is free to make use of any other without affronting them. They are paid for the medicine, not for the visit, and therefore to satisfy their covetous disposition they never omit to purge, tho' there be no occasion for it; applying stones, seeds, roots, herbs, leaves, bark, and other simples, whereof they get the knowledge in books, where they are drawn, and their virtues describ'd. In this particular they follow the aphorisms of an antient emperor of theirs, who was an excellent botanist, and physician, his name *Jenti*. Scarce any of them lets blood in the most scorching fevers. Such is the art of the wise physicians of *Cbina*; but the mad ones are much more numerous, and a thousand times more in request. These boast of a wonderful secret they have, to make old people young at any age whatsoever; others to make them immortal, and so they go about selling their antidote against death. It is not only the simple ignorant people that are catch'd in this foolish trap, but the wisest and most learn'd; who placing all their happiness in this world, purchase that precious liquor at a vast expence, which they hope will make them immortal, and tho' often deceiv'd, yet they never fail to be ensnar'd again, inasmuch, that to avoid death, they destroy themselves in the prime of their age.

Among the rest the *Cbinese* have five books, call'd *Ukim*, or the five writings, held in as great veneration among them, as the holy scripture is among us. The first of them is call'd *Xun-Xim*, The first that is, the chronicle of the five antient kings; the three last whereof were heads of three several families, that reign'd two thousand years, almost double the time of the nineteen following families, including that of the *Tartars* now reigning. The first of these emperors name was *Yao*, who according to their histories began his reign 4057 years ago, or

500 years after the flood, according to the chronology of the *Septuagint*. This prince and *Chinese* law-giver, perceiving that his son was not duly qualify'd to govern (for as the *Chinese* tell us, virtue was then regarded above any thing) he chose for his companion, a subject whose name was *Xun*, whom at his death he declar'd emperor, leaving him his two daughters for wives.

Xun, the second emperor, is highly commended in the aforelaid book for his virtue, and particularly for his obedience to his father, and love to his brother.

Tsu, the third emperor, having serv'd his predecessor *Xun* faithfully, was by him at his death declar'd his successor, not regarding his own son, who was not so fit to govern. This man during his predecessor's reign employ'd himself in draining the waters of the flood, which then cover'd part of the plains of *China*; which the *Chinese* call'd *Xun-Xui*, that is, great deluge of waters. The succeeding emperors, rul'd by right of inheritance, not of election, till the emperor *Kie*, a cruel man, and last of this first royal family.

The fourth emperor was *Chim-Tam*, sprung from the second family. He took up arms against the emperor *Kie*, and possess'd himself of the empire. In his time there was a dearth of seven years, during which time no snow, nor rain fell, the springs, and rivers were almost dry'd up, the earth became barren, and so of consequence there follow'd famine and plague. In this distress the emperor quitting his palace and royal robes, clad himself in skins, and prostrating himself on a hill call'd *Samlin*, offering up this prayer to heaven. *Lord, if thy People have offended thee, Punish them not, because they have done it without knowing what they did; rather Punish me, who bere offer my self up as a Victim, to atone all your Divine Justice shall think fit.* No sooner had he done speaking these words, but on a sudden the sky was cover'd with clouds, which pour'd down so much rain, as sufficed to water all the lands of the empire, and cause all sorts of fruit to grow in a short time. The line of that emperor *Chim-Tam* reign'd above six hundred years, till the emperor *Chen*, who was cruel like *Kie*. When the *Chinese* call a man a *Kie*, or a *Chen*, it is as if among us we should call him a *Nero*, or a *Domitian*.

The fifth emperor was *Vu-Vam*, who overthrew *Chen* in battle, and possess'd himself of the empire. He having a wife and virtuous brother, made him king of the kingdom of *Lu* (at present

contain'd within the province of *Xanung*) GEMELLI 1696. and dying, left him governor of the empire, during his son's minority. To him the *Chinese* assign the discovery or invention of the load-stone, or compass, two thousand seven hundred years since, which afterwards the emperor his nephew made known to the ambassadors of *Cochinchina*, who brought the tribute, that by the help of it they might return home the strait way, without being put to the trouble of fetching a compass as they did when they came. The history of these five emperors, look'd upon as holy men by the *Chinese*, especially the four first, and of their descendants, is the subject of the first book; which has as much reputation among them, as the book of kings in the bible among us. Its style is antient, but polite and elegant. There vice is run down, and virtue extoll'd; and the actions of the emperors and their subjects impartially related.

The second book is call'd *Li-ki*, that The 2d book is, the book of rites, or ritual, and contains most of the laws, customs, and ceremonies of the empire. The chief author of it was the emperor Vu-Vam's brother, before mention'd, whose name was Chen-cum; it also contains the works of several other authors, disciples to Confucius, and of other modern commentators.

The third book is call'd *Xi-Kim*, that The 3d is, book of verses, romances, and poems divided into five sorts, one to be sung in honour of famous men, with a sort of verses repeated at obsequies, sacrifices, and ceremonies perform'd by the Chinese, in honour of their ancestors. The second of romances, which were recited before the emperor and his ministers; invented to describe the customs of the people; the manner of the government, and all the affairs of the empire; as in the Greek plays the faults of private persons, and of the publick were remov'd. The third was call'd the way of simile, because all it contain'd was express'd by comparison, and similitudes. The fourth sort was call'd lofty, because in a more elevated style it gave information in several matters, to delight the understanding, and gain attention to what follow'd. The fifth is call'd, rejected poems, because Confucius having perus'd the book, rejected some he did not approve of.

The fourth book was compos'd by The 4th Confucius, and contains the history of the kingdom of Lu, his native country; for which reason the Chinese hold it in great esteem. He writ this history of two hun-

500 S f f f d r e d

GENEBLI dred years, in the nature of annals; where he represents to the life the actions of virtuous and wicked princes, according to the time and places where they happened; and therefore he calls it *Chun-chieu*, that is, spring and autumn.

The 5th
book of
morals.

The fifth book is call'd *Ts-kim*, and is accounted the antientest of them all; for the *Chinese* lay *Fo-bi* their first king was the author of it. The book very well deserves to be read and valu'd, for the excellent sentences and moral precepts it contains; and the *Chinese* have a peculiar veneration for it, believing it the most learned, the profoundest, and most mysterious in the world; for which reason, they think it impossible to understand it thoroughly, and therefore improper for strangers to see or touch it.

Epitome
of those
books.

They have one book more of equal authority with these others, which they call *Su-xu*, that is, the four books, as being above all others. These are an extract, or epitome of the other five; and thence the *Mandarines* take the sentences, which they give as a theme to the learned, who are examin'd in order to take the degrees of bachelors, licentiates, and doctors. It is divided into four parts; the first treats of the laws and the doctrine of the men renowned for wisdom and virtue. The second of the golden mean. The third contains a great number of moral sentences, well express'd, solid and profitable for all members of the state; which three parts are the works of *Confucius*, the first *Chinese* doctor, publish'd by his disciples. The fourth part which in bulk is equal to the other three, was writ by the philosopher *Mem-cu*, who was born an hundred years after *Confucius*; and is esteem'd by the *Chinese* as a doctor of the second rank. This is a very eloquent, and ingenious work, full of weighty moral sentences. All the missionaries in *China* study the letters and language in this volume; from which and the five abovemention'd are deriv'd, as from their source, so many books and comments of several antient and modern authors, that their number is almost infinite; which is a great argument of the extraordinary wit, industry, and eloquence of the *Chinese* nation, which from the meanest condition raises it self to the greatest dignities in the empire by dint of ingenuity and learning, try'd by severe and repeated examinations, so rigorously contriv'd, that there is no place left for favour, so that no man's affection can raise one that is undeserving, nor hatred depress, or cast down the worthy.

The wit of the *Chinese* is no less wonderful and sublime in mechanick arts, than it is in sciences; and the more, because what they know they owe to none but themselves, having always kept themselves at a distance from all other nations, as if they were in a separate world. This has happen'd, because by most antient laws they are forbid having any communication with strangers, or going abroad to travel, nor to admit foreigners among them; and for this reason there is no doubt they want the knowledge of several useful things, which is gain'd by the commerce of one nation with another. Yet it cannot be deny'd to be more honourable to be beholding to themselves alone for the invention of little less than all curious arts, which are to be found in any other polite nation. It plainly appears how sharp-witted the *Chinese* are, and how much they exceed the *Europeans* in ingenuity, in that the latter, as some authors will have it, learn'd of them the art of printing, of making paper, of using the load-stone, of casting cannon, and making powder for it. To return to their mechanicks, they are most excellent workmen at engraving on precious stones or crystal, or at cutting them in relief; and at other works of admirable curiosity. They also make watches, having found out the art by seeing ours; and most exact spectacles for all ages. As for the matter they make them of, they had an old invention to make a sort of glass of rice, tho' not so clear as ours, and more brittle. True it is, that a mean price being no way agreeable to curious workmanship; all the study of the *Chinese* is to make their work look fine, because the buyers are very sparing in their expences; but if the reward were suitable to the labour, they would do wonders. There are none like them for cleansing and whitening wax, as well the common bees-wax, as another sort peculiar to them, which is gather'd from certain worms upon the trees; and another which drips from the body, or is squeez'd from the fruit of certain plants, but this is not so fine as the others. The very butchers shew their dexterity; for when they kill hogs, they artificially force a great deal of water into all parts of the carcase through the veins of the feet, that they may weigh the more.

They weave excellent stuffs of paper, silk, and gold, plain, or wrought, like sarcenet, taffety, satin, and velvet; and in the figur'd, the birds, beasts, flowers, or what else they please is so artificial

artificial that it looks like embroidery, tho' it be but plain weaving. The worst is they have no good draughts, and their figures are all lame. They know not how to paint in oil, but only with a sort of varnish they have; nor can they shadow regularly, because they do not take a settled light, and according to it dispose their darker or brighter colours as they ought to do; nor can they tell how to temper and mix colours. But they work to a prodigy in carving, even upon the hardest stone, making most delicate works cut through, as flowers with all their perfect leaves distinct, and chains all of one piece of marble, with every link loose, wrought by dint of incredible patience, and other such like extravagancies. They also understand casting, even of statues like giants, where-with they chiefly adorn their temples; but tho' they are beautiful for the gold they are adorn'd with, they are very misshapen. There are twelve of these in the province of *Honan*, which still stand upright on their pedestals, after 1800 years since they were set up. They cast iron, and make many more uses of it than we do; and tho' the great guns they cast be rough, and irregular, yet they deserve commendation for having invented them, and powder; with which they make most admirable fire-works; and the quantity they consume after this manner is so great, that father *Matthew Ricci* judg'd what he saw spent in one of the two greatest cities at the feast of the new-year, would have serv'd to have maintain'd us in war three years; which feast being celebrated in all parts with equal joy and solemnity, we must own, that what he saw was but the least part of the vast quantity burnt throughout all the kingdom.

Artificer
there, and it
method;

As concerning the *Chinese* architecture, it is regular, and has certain rule and method; as appears by their ancient books of their excellent masters now extant, and much more in the structures to be seen; so great and beautiful that they may more than vie with those so much celebrated ancient *Roman* buildings; besides that the number is every where incomparably greater. As for arch'd bridges over royal rivers, and great arms of the sea, they are stupendious, either for the matter or workmanship. One of the great works of the *Chinese* is the towers, whether those that are design'd to eternize the memory of some men accounted hero's among them for their excellency in learning, or soldiery, or those that are only for ornament to the cities, royal-palaces, bridges, and

other publick structures; or those consecrated to some idol, as the two so much celebrated which are on the side of the temple of the idol *Fe*: They are certainly wonderful for the fineness of the marble they are made of; for the equal beauty and majesty art has conferr'd on them; and for their incredible height, each of them being an hundred twenty six pearches high. But those are stupendious beyond all that can be express'd, which are built by any city, upon a vain opinion, that they will preserve them from all disasters, and make them as happy as may be, so they be seated, and begun to be built in a fortunate place, and moment of time; according to the appointment of their diviners who profess this art.

The *Chinese* musical instruments wholly differ from ours as well in their shape, as the manner of playing on them. And not to speak of those made of stone, brass, and of skins extended after several manners; they have some of one only string, of three, and of seven, which are their lutes, and violins; and another most antient sort, partly like our harp; but their strings are not small guts, nor of metal, but of raw silk twitted. In their less noble sort of wind-musick it may be said they have some excellency; if there can be any excellency in a sort of musick, which has not variety of tones, nor keeps any rule of time, or notes; nor knows any rules of concord, and harmony, or the difference of treble, alt, tenor, base, and other varieties which compose the delight of musick. So that sometimes an hundred musicians are heard keeping the very same tone, and never parting from the same note. Among their musical instruments there is one made of a piece of wood, with nine thin plates of metal hanging to it, on which they play with a little hammer very pleasantly.

The art of navigation is one of the greatest honours of the *Chinese* nation. They invented the sea-needle, or compass (for in *China* in the iron mines is the best load-stone in the world) and by the help of it their kings conquer'd distant islands in that archipelago; as still appears by the memory there remaining of the *Chinese* domination.

They write like the *Hebrews* from the right hand to the left, and the lines do not go a-cross, but from the top of the leaf to the bottom. Their paper is extremely thin, and yet they write with the whole fist, after a manner, very unhandy to us, but easy to them that are us'd to it. The ink they use is not liquid,

GENEVE 1696.

W

GEMELLI
1696.

quid, but lamp-black made into a paste with gum-water, which they dry in cakes as long as a man's finger. When they would write they rub it on a hard stone, which is their ink-horn, with a few drops of water, more or less, as they have occasion, and then use it with a fine pencil.

Printing. They do not print like us but in stone or wood, as follows. The composition being writ out in excellent fair characters, which they value themselves upon, the paper which is extraordinary thin and transparent, is pasted on a board of pear-tree, or apple-tree, as smooth as possible may be; with the writing next the board, that when printed the letters may come right again. Then the characters are cut with a small tool or pen-knife, so that their lines may rise, and the wood about them be lower than they; as among us the cuts are made on wood for printing. Nor does this require great labour, or much time, but it is done much sooner than our printers can compose and correct. The price of cutting is so small, that volumes are printed for a small matter. After printing, the boards are return'd to the author, because they are his, and he pays the cutting of them.

It is also us'd sometimes to print with stone, but the method is quite contrary to the other, for the characters are cut in, and the superficies of the stone remains above them, and therefore the ink being laid upon the stone when it runs through the press, the paper remains black, and the characters white; but they must be pretty large, otherwise they would be confus'd. Thus the printing of *Cbina* is unlike to, and worse than ours; for their letters made of so many dashes, knots, and crooked lines cannot be express'd in so small a figure as ours, who have some so small, that a great work may be brought into a small volume. As for the paper, they outdo us in largeness of sheets, I having seen some as big as sheets for beds, and all throughout of an equal fineness; but they are not of equal whiteness; besides, that they are of so little substance, and so thin, that they are not printed on both sides, because the characters appear quite through. Some is made of silk; another sort of cotten steep'd, and reduc'd to a paste; another of the pith of certain canes, and of other trees, but they are not lasting.

CHAP. X.

Of the great Industry and Navigation of the Chinese.

Industry.

THE magnificence and great number of publick structures in *Cbina* is not only the effect of a vast expence, but of their extraordinary industry. Thus they perform all sorts of mechanick works with fewer instruments, and more ease than we do. They have an admirable invention to buy and sell, and find a way to live: And as throughout the whole empire there is not a foot of land that lies waste; so neither is there any man or woman, old or young, halt, lame, deaf or blind that has not some employment to get bread. Therefore it is become a general proverb, *Cbum-que-yu-y-vo*, that is, in the empire of *Cbina* there is nothing lost; and so it is, for tho' a thing seem never so vile and useless, it serves for something, and yields a profit. For instance, in the city of *Peking* there are above ten thousand families, who have no other trade to live on but selling of matches to light the fire, as many more that subsist upon gathering all sorts of rags in the streets and walks, and bits of paper, and the like, which they afterwards wash and sell to others, who make several uses of

them. Their inventions for carrying of burdens, are also remarkable, for they do not carry by strength of arm, or on their backs, as is us'd among us; but fasten the burden with cords, or hooks in two baskets, which they afterwards hang at the ends of a piece of wood made smooth and fit for the purpose, they lay over their backs like a pair of scales to ballance, and so carry with much ease. This is no other than as a common yoke us'd among us to carry buckets.

In every city of the empire there are two towers, the one call'd of the drum, and the other of the bell, which serve for the centinels to strike the hours in the night. The *Chinese* divide the night into five parts, either greater, or smaller, as they are longer, or shorter. At nightfall the centinel gives several strokes upon the drum, and the bell answers, after the same manner: Then during the first division, the one centinel strikes a single stroke on the drum, and the other answers with one on the bell; after about a minute they both strike again on the drum and bell, and so continue

till the second part of the night begins. Then they begin to give two strokes, and so hold on till the third part; so in the third they give three, in the fourth four, and in the fifth five. At break of day they redouble their strokes, as they did at night-fall. Thus whensoever a man wakes, in any part of the city, he hears the sign (provided the wind does not hinder) and knows what a clock it is. Within the king's palace in *Peking* there is a great drum in a tower, and in another a large bell of a pleasant and harmonious sound, and in those of the city a great bell and a drum fifteen cubits diameter. They have found out a method to measure the parts of the night which well agrees with their wonderful ingenuity. They make a sort of paste of the dust of a certain sort of wood (the learned and rich men of *Sindal*, eagle-wood, and others that are odoriferous) and of this paste they make sticks of several sorts, drawing them through a hole, that they may be of an equal thickness. They commonly make them, one, two, or three yards long, about the thickness of a goose quill, to burn in the *Pagods* before their idols, or to use like a match to convey fire from one thing to another. These sticks or ropes they coil, beginning at the center, and so form a spiral conical figure, like a fisherman's wheel, so that the last circle shall be one, two, or three spans diameter, and will last one, two, or three days, or more, according as it is in thickness. There are of them in the temples that last ten, twenty, and thirty days. This thing is hung up by the center, and is lighted at the lower end, whence the fire gently and insensibly runs round all the coil, on which there are generally five marks to distinguish the five parts of the night. This method of measuring time is so exact and true, that they scarce ever find any considerable mistake in it. The learned, travellers, and all others, who will rise at a certain hour to follow their business, hang a little weight at the mark that shews the hour, they have a mind to rise at, which when the fire comes thither, drops into a brass basin set under it, and so the noise of it falling awakes them, as our alarm-clocks do; but with this difference, that their invention is more easy, and one that will last twenty four hours does not cost above a grain of *Naples* coin, whereas our clocks are made of several wheels, and so dear, that only the rich can purchase them.

Navigation is universal throughout all the empire; for there is scarce any ci-

VOL. IV.

ty, or village, especially in the southern GEMELLI 1696. provinces) but enjoys the convenience of some river, lake, canal, or arm of the sea that is navigable; so that there are no fewer people on the water, than on the land. It is no less pleasant than wonderful to see wherever there is a city on the land, another of boats is on the water. When vessels set out early in the morning, or come in late at night, they pass for some hours among multitudes of boats on both sides of the rivers. Some of these ports are so much frequented, that it takes up half a day to get out a-crofs the boats; and therefore it may be said there are two empires in *China*, one on the land, the other on the water. These boats serve the owners instead of houses, who are born and bred, and die in them, and there they dress their meat, keep cats and dogs, and breed swine, hens, ducks, and geese.

There are several sorts of boats great Sorts of and small, for the Emperor, *Mandarin* boats. *rines*, merchants, and common sort. Among the emperor's boats, those they call *Co-chuen*, serve to carry *Mandarines* to, and from their employments. They are built like our caravels; but so lofty, and so curiously painted, especially the cabin where the *Mandarine* lies, that they look more like structures provided for some publick solemnity, than common boats. Those they call *Leam-Chuen*, that is, boats appointed to carry all sorts of provisions from the provinces to the court, are not so large, and to the number of 9999. The vanity of that nation made them not add one more to make up 10000, because this number is writ with only two *Chinese* letters, 2, and *Van*, which have nothing that is great and magnificent either in writing or speaking, and therefore do not deserve to be us'd to express so great a multitude of boats. The third sort of the emperor's boats is call'd *Lum-y-Chuen*, that is, boats that carry to court the emperor's garments, silks, and brocades. There are as many of these, as days in the year, or three hundred and sixty five, because the emperor calling himself the son of heaven, all things belonging to him generally take their names from heaven, the sun, the moon, the planets, and stars. Thus *Lum-y*, signifies, the dragon's garment, because the king's device consists of dragons with five claws, and therefore his cloaths and moveables must of necessity be adorn'd with dragon's embroidery'd, or painted. In fine, there are other light boats, call'd *Lam-Chuen*, which are long and slender, and serve the learn-

T t t t

ed,

GENEAL, or rich men that go to, or come from court. Within them is a fair chamber, or great cabin, a bed, a table, and chairs, to sleep, eat, study, write, and receive visits, as conveniently as if they were at home. The mariners or watermen keep in the head, and the owner of the boat with his wife and children in the stern, where he dresses meat for them that hire the boat. This last sort, and several others belong to private persons, and are almost innumerable.

Floats.

There is also an incredible number of floats of all sorts of wood, going up and down the rivers and canals of *Cbina*; which if they were all put together, would be enough to make another bridge like that of *Xerxes*. Sometimes they fill several hours, and now and then half a day among these floats, which are sometimes made of canes; because all sorts of wood sells well, and yields a good profit. They go to cut timber in the province of *Suckuen*, on the western frontiers of *Cbina*, whence they convey it to the bank of the river *Kian*, (by the *Chinese* call'd the son of the sea, as being the greatest in the empire) and joining them into floats, carry them to several provinces with little charge, and

sell them to good advantage. The length and breadth of these floats is more or less according to the merchant's ability; the longest are half a *Spanish* league, rising two or three foot above the water. They make them after this manner. They take as much timber as is requisite for their length and height, and boring it at both ends, run ropes made of canes through the holes, and to these they fasten other trees, letting the float run down the river, till it be of the length they design. Then four men stand upon the end with oars and poles, who steer, and make it go as they think fit, and others about the middle to forward and conduct it. Upon them they build wooden huts at equal distances, cover'd with mats or boards, which they sell all together, where they find chapmen. They lie in these huts, and keep their goods in them. After this manner a vast quantity of wood is convey'd to *Peking*, tho' above seven hundred *Portuguese* leagues distant from the mountains where it is cut. By what has been said it will be easy to judge whether any country in the world out-does the *Chinese* in numbers of seamen.

A Voyage round the World by Dr. John Francis Gemelli Careri. Part IV.

Containing the most Remarkable Things he saw in
CHINA.

BOOK III.

CHAP. I.

Of the Nobility, Empire, Civility, Politeness, and Ceremonies of the Chinese.

IF we apply the word nobility to the state, and it be taken in a general sense, as it denotes a grandeur and magnificence continu'd for many ages; it is most certain there never was in the world a more glorious empire than that of *China*; for it began 200 years after the flood, and has lasted till this day, for the space of about 4559 years. But if we mean only nobility of men, it must be own'd there is but little, for the following reason. All the great lords of *China*, who are like so many dukes, marquesses, and earls, continue in that state no longer than the reigning family, and all perish with it; because the family that rises instead of the other that falls, puts them all to death, as has been seen in our times. For this reason there was never any nobler family there than that of *Cheu*, which continu'd 875 years, and expir'd 2200 years since; no other since extending to 300 years. This is to be understood of nobility acquir'd by the sword; for that which is got by the gown, was never of any considerable duration. For tho' a man should rise to be *Xam-Xu*, which is the supreme dignity of the sovereign courts at *Peking*; or *Kolao*, that is, first minister, which is the highest pitch of honour and wealth that fortune can raise a *Chinese* to; yet his sons and grand-children will be extraordinary poor, and forced to be merchants, retailers, and meer scholars, as their predecessors were. In short, there is no family of gown-men, that has continu'd great as long as any of the reigning families.

Nevertheless that which is the common calamity of the learned men, is among the descendants of swords-men

an effect of their enemies cruelty, whose families would otherwise have continu'd great and noble as long as the empire it self. However there still flourishes a family, which has not only preserv'd its honour for above two and twenty ages, but is at present equally honour'd by the great men, and commonalty, so that it may truly be accounted the antientest family in the world. It is the family of the famous *Confucius*, who liv'd under the third imperial family, call'd *Cheu*, 551 years before the birth of Christ, which this year 1699, is 2250 years. The ancient kings gave the race of *Confucius* the title of *Que-Cum*, which is something like a duke, or a count; and they continue like sovereigns, free from all taxes in the province of *Xantung*, and city of *Kio-feu*, where he was born; without having been ever molested, tho' the empire and reigning families have been several times oppress'd. The *Chinese* give this philosopher the most honourable titles of *Cum-ju*, *Cum-su-ju*, and *Xim-gin*; the two first signify doctor, and master; the third, holy man. So that when they say the saint, or holy man, it is to be understood of *Confucius*; he being accounted among the *Chinese* a man of an extraordinary and heroic prudence. This nation has so great a veneration for this philosopher, that tho' it does not hold him as one of its gods (but rather looks upon it as an affront to have him reputed such), yet it honours him with more ceremonies than it does the very idols; giving him titles since his death, which he could never obtain whilst living; as, *Su-Vam*, that is, king without command, without scepter, and without a crown; and precious stone without any light, to express that he had all

GEMELLI
1696.

GENELLI the qualities belonging to a king, or emperor, but that heaven was not favourable to him.

Many volumes might be fill'd with the *Chinese* civilities and ceremonies. They have a book which contains above 3000; and it is wonderful to see how exactly they observe them. At weddings, funerals, visits, and entertainments, the master of the house, tho' he be a great lord, and of more eminent quality than any of the guests, yet gives the upper-hand to his elders, these give it to them that come from far off, and all of them to strangers. When an ambassador comes, from the day he is admitted as such, till he departs *China*, the emperor furnishes him with all necessaries; even to horses, litters, and boats. At court he lodges him in the royal house of entertainment, where every other day, he sends him from his own kitchen, a treat ready dress'd; for he glories much in entertaining strangers honourably.

No nation has so many honourable names and titles, as the *Chinese* give one another in their compliments. They have also a great number of names to distinguish the several degrees of kindred: for example, we have one we name grandfather and grandmother, to denote both the father and the mother's line, but they have four several titles. So we have no name but that of uncle, to signify both our father and mother's brothers, and the *Chinese* have names to distinguish every sort. They also outdo all other countries in their care of making a good appearance, for there is no man so poor, but is decently and neatly clad. At the new year they are all trim'd up, and in new cloaths, so that there is not one, tho' never so poor that can offend the eye. Their modesty is no less to be admir'd. The learned are always so compos'd, that they think it a sin to make the least motion, which is not agreeable to the rules of decency and civility. The women are so bashful, modest, and reserv'd, that these virtues seem to be born with them. They live in perpetual retiredness; never uncover their hands; and if they are oblig'd to give any thing to their brothers, or kindred, they hold it with their hand cover'd with the sleeve (which for this purpose is long and wide) and lay it on the table that the kinsman may take it up.

The *Chinese* reduce all their breeding to five heads; that is, the manner of behaviour between the king and his subjects; between the father and son, the husband and wife, the elder brother and the younger, and friend and friend. These rules make up a considerable part of their

morals, and are so tedious, that it is hard to decide, whether the *Chinese* ceremonies are to be reckon'd among their virtues, or vices; for on the one hand, they are certainly extraordinary courteous and mannerly; inasmuch that their country deserves the title they give it, of the genteel kingdom; but on the other hand it must be said, that ceremonies are like perfumes, which us'd with moderation are comfortable and beneficial, but in excess do harm and offend. They have such and so many ceremonies, that every indifferent action is attended with as many as would serve at a solemn sacrifice; whence it is, that what in it self is convenient, through the excessive use of it becomes inconvenient.

Their common manner of saluting one another when they meet, is to lift up the arms bow'd, with the hands join'd, from the breast towards the forehead, higher or lower, according to the degree of respect they are to pay; and whilst they do this, they often repeat the word *Zin*. If the person met, be of worth, this lifting and letting fall the arms, begins at least twenty paces from him, after which follows another greater act of respect, which they call *Zeg*, and is bowing the body profoundly, and standing with the feet together, and at the same time lower the hands join'd together, as at first, within the sleeves, bending the forehead as near as may be to the ground. Nor do they perform this facing one another, but side by side, and looking towards the north, if they are in the street and open air, and if in the house facing the front of the room, for they are usually so built, that the door may be to the south. This I believe they do out of the modesty they affect; and that it may not look as if the one receiv'd that halt adoration from the other; as if they ought to pay it out of civility, but not receive it as unworthy; but whatever the reason is, the matter of fact is as mention'd. If learned men who are in employments meet, as they go either a horseback, or in chairs, carry'd by four or more men, the inferior alights and begins to give, and receive the usual compliments. The *Chinese* never take off their caps, for it is look'd upon as indecent for a man to appear before any one bare-headed; and therefore with great reason the popes, to comply in some measure with their custom, have dispens'd with our priests, to celebrate mass, and administer the sacraments in *China*, with the head decently cover'd.

As for civility, the sheet is long, or terms, the visit (with the usual description, the conduct on to this paper be visited it is left and thus times when they hang which it the house his pleasure as to say, with visits, writing of most us'd their common the same reason that I admitted the place given is on the left receiving, a is a task always making. Nor is placing the particular, is, in not their legs and a great stranger lets the house, anger, and it they touch the serv'd that the worthiest person from the wall be very clean over again, as may be upon great sleeve, terously in like a hand. strangers, they perform that which the man as if he were ordinary an host the visitors is to sit first long and tedious length being quarter of an hour with the d Vol. IV.

As for visits among persons of quality, they make none, without sending a sheet of red paper, a span and a half long, on which they write in courteous terms, that they are going to make the visit (without which none would be admitted) without omitting any thing of the usual ceremonies, as well in the subscription, as at the top, according to the condition and quality of the person to be visited. A servant carries this paper before, and if the person to be visited is not, or will not be at home, it is left with any of his domesticks, and thus the visit is fully paid. Sometimes when they will not be at home, they hang a little tablet at the door, on which it is written, that the master of the house is withdrawn to study, or to his pleasure-house; which is as much as to say, that he will not be troubled with visits. This custom of fixing some writing over, or about the door, is most us'd by the learned, as one of their commendable customs, being at the same time a declaration of the person that lives there. When they have admitted the visit of a stranger or friend, the place given him in the northern provinces is on the right, in the southern on the left, and the giving, refusing, receiving, and presently returning of it, is a task which is not soon at an end, always making the bows above-mentioned. Nor is there any less trouble about placing the chairs (the *Chinese* in this particular, imitating the *Europeans*, that is, in not sitting on the ground with their legs across, as is us'd in *Persia*, and a great part of the east) for the stranger sets the chair for the master of the house, and the master for the stranger, and if they are already placed, yet they touch them at least, and it is observ'd that the chair, which is for the worthiest person, be at a certain distance from the wall. Then that they may be very clean, they seem to wipe them over again, and stroke off any dust that may be upon them, with the flap of the great sleeve, which is gather'd so dexterously in the fist, that it all looks like a hand. If there were an hundred strangers, they all, one after another, perform that same dusting or cleaning, which the master accepts so thankfully, as if he were confounded at so extraordinary an honour. Next begins among the visitors the compliment about who is to sit first, and who next, a thing long and tedious only to relate. At length being seated, within less than a quarter of an hour, the servants come in with the dishes of *Chia* or *Tea*; and

if the discourse holds any considerable time, the *Tea* is brought in a second, and a third time. The third signifies dismissing the company, so that he would be look'd upon, as unmannerly, who should not be gone when he had drank; and as well this, as any other thing they bring in, must be taken with both hands, for it would be counted incivility to use but one. Then there are so many ceremonies, repeated bows, and counterfeit grimaces, as if they were really in earnest, in conducting them back to the door; that the fortifying themselves before-hand with *Tea*, seems to be rather of necessity, than a meer act of civility. But the stress of the compliment lies in the master of the house's endeavouring to persuade the visitor, by arguments and prayers, to mount his horse before him; and in the visitor's protesting the world shall be turn'd toply turvy, before he will do such a thing; and in this he persists, and labours till he has got the better; for the master of the house at last, after many bows, which are all answer'd, hides himself behind the door, or under a great umbrella, and then he that has prevail'd, mounts his horse. But as soon as ever he is in the saddle, the other pops out, and in their language bids him *Adieu*; *Adieu*, replies the other, and often repeating it, they part; and not so satisfy'd, at a few paces distance, they send a servant to one another, with a most obliging compliment of thanks.

The sending of presents to one another among the *Chinese*, is as usual as visiting, and custom has prescrib'd laws in this particular. They write on a sheet of paper in a very genteel stile, all they send as a gift, and perhaps, as for the most part it happens, that they are things of a very small value; but generally many of them, and of several sorts. But very often, before the things are sent, the paper goes, and he to whom the present is made, marks down as many as he will receive, and if he who is to make the present has them not, he must buy them. Generally they must be six several things; and it is lawful to accept of all or none, or what every one pleases; but whatsoever is receiv'd, so much must be return'd, not in specie, but in value; so that it is rather exchanging than presenting. It is also the custom to send money, and sometimes the value of a *Naples* ducat, but with some elegant words in writing; for they are prodigal of their breeding, but sparing of every thing else.

GENELLI
1696.
Treats.

As concerning the ceremonies of entertainments: From the day the first invitation is made (which must be some days before, and be repeated three times, or else the invitation would be void and never accepted) till the day after the feast, when they interchangeably send one another thanks; there are so many, sometimes of several sorts, and sometimes the same repeated, that any one who is not us'd to them from his cradle, would think it less trouble to die for thirst, than undergo so many plagues to be made drunk at a *Chinese's* table. But they look upon all these as necessary things, and if any one were omitted they would not think themselves true *Chinese*, but barbarous people, and unworthy to be respected, as they conceive they ought to be, by all the nations in the world. To come to the point; they spend five or six hours of the night appointed for the feast in conversation and pastimes, with musick and plays: And this is so usual at entertainments, that there are companies of actors, who without being call'd, hearing where there is a great supper, come of their own accord to act their plays. Now if the entertainment is not among poor people, there are as many tables as guests, each a cubit broad and a cubit and a half long. The meat is brought in dishes of gold, silver, and purcellane. They use no table-cloths, but clean shining boards varnish'd over with several beautiful colours. Nor do they use napkins, knives, forks, nor spoons; nor do they use to wash their hands before or after meat; because being great lovers of cleanliness, they never touch any thing that is set before them at table with their hands or fingers; but to carry it to their mouth they provide two little sticks (of ivory, ebony, or some other precious wood) slender and about a span long or more; the one held fast between the little finger and the next to it of the right hand, and the other moving with the fore and middle fingers; and thus they eat so dexterously, that they take up a single grain of rice, contrary to our *Europeans*, who have a great deal of trouble before they can use themselves to it: And as for knives they have no need of them, for all is brought up cut into very small morsels. Dishes of fish and flesh always go together, that the variety may delight, being excellently season'd; and rather numerous and various than plentiful or sufficient, and therefore the plates, which are like little wooden dishes, or bowls, in which they bring

the meat, are small, but not those of fauces which are intermix'd to sharpen the appetite. After eating a few bits of that hash that is set before them, they lay down the little sticks, and the glass goes round; for, among the *Chinese*, it is not eating but drinking that makes the pleasure of the feast. But to the end they may hold out drinking six hours or longer, still in their senses, and discouraging of high matters, they provide little cups no bigger than a nutshell; besides they sip it so gradually, that they put it to their lips four or five times before they empty it; being accusom'd not to drink at a draught, but sipping. So whether it be winter or summer, they always drink their liquor very hot; and this is believ'd to be the reason why there, they know not so much as the names of some painful distempers that abound in *Europe*, and proceed from abundance of indigested humours, and weakness of stomach; as also of their enjoying health and strength till seventy eight or eighty, and sometimes a hundred years of age, to which many of them arrive. Their liquor is made of rice bruish'd in water, which being brought to such a strength (like beer or ale) is afterwards distill'd. Now tho' the glasses are so small, they drink so often (especially towards the latter end) that so many litters make such an excessive quantity, that very often their brains are disturb'd; and therefore the master of the house's women, are upon the watch to observe, how many of the guests tumble down the stairs, to make sport at them afterwards with their husband, who never thinks he has made a good entertainment unless somebody goes home drunk; otherwise he thinks, and is troubled that his liquor was not good. But in these feasts they have not that barbarous custom of making those drink that are not a dry, or filling the cup to a man who is so full that he is ready to run over, therefore it is usual to place screens before them that they may not see one another; but the pleasure of the feast, having nothing else to do, and the care of obliging their friend, are as powerful as laws to oblige them to drink till they are drunk; and the weak liquor they use is digested with a very little sleep.

I will conclude this chapter informing the reader, that one of the cardinal virtues (which among the *Chinese* are very many) is civility and decency in every action, and this, not regarding the worth and dignity of the person they honour, but rather to satisfy an ambition that reigns in them all, of appearing

ing the most courtly and civiliz'd persons in the world. For they use such lofty and high forms of discoursing even with the meanest people, either by birth or profession, as might very well satisfy a prince; as for instance, they give a mulctier the title of the great rod or wand; for it would be a great affront to call him by his right name. Thus every other profession has its proper noble sort of name; and if a man is not acquainted with his condition, whom he discourses, he uses general terms of honour, and calls him brother. There is

besides all this a particular vocabulary, ^{GENERAL} or dictionary, to teach how to name and lessen all things that belong to one self; and to magnify those that belong to another; and to speak otherwise would be look'd upon as a great fault, not in language, but in breeding, and downright barbarous. Even the clowns brought up in the woods, are more mannerly than those in other countries who are bred in cities; and the most courteous and mannerly people among us, in *China* would seem rude and savage.

CHAP. II.

Other Customs of the Chinese.

THE greatest beauty of the *Chinese* women, consists in having very little feet: and because this is a beauty that may be acquir'd by art, which cannot be in the lineaments of the face, they wrap up the feet of the girls newborn, and bind them so hard that they hinder their growth, and make them cripples, there being very few that do not feel it as long as they live. This is the design the ancient wise inventors of this custom had in prospect, viz. To make going uneasy to them; so that if modesty would not keep them at home, the pain of going should be a confinement to them. Tho' this be the chief beauty they boast of, yet do not they expose or show it; for modesty will not permit them to go in such short coats, that their feet, scarce half a span long, may be seen under them. Besides, they always live among themselves, and it may be said in perpetual confinement; remote, not only from the publick, but from their own family; conversing with none but their own sons, and those no longer than they are in the state of innocence, no other setting his foot among them. Their apartment separated from the rest of the house, and without windows to the street, hinders their appearing where they may be seen. They rarely go out of doors, and this the rich ones always do in a chair not a bit of it open, and little less than seal'd up in it, without any the least hole to peep out at. Of all the fifteen provinces, only that of *Tunan* follows another custom in this particular, conforming to the liberty us'd in *Tibet-Tuncbin*, and other adjacent countries. Their garb is very modest, not open-neck'd to show any of the breasts; and unless necessity requires it they never put their hands out

of their sleeves, which are wide, not even when they take any thing that is offer'd them. If it is a man that offers a thing, it would be undecent for a woman to take it out of his hand; but he must lay it on a table or seat, and she take it thence, still with her hand wrapt up and cover'd. Their features and complexion are not inferior to the *European* women, and tho' they have small eyes, lying deep in, and their nose after the same manner, yet they do not look amiss.

This their retired life is the cause ^{Marriages.} they marry, if we may so call it, blindfold; for the bride and bridegroom never see one another till the day she is brought to his house. The fathers make the match without ever seeing or showing the maid, and without asking their sons approbation; or their being allow'd to intermeddle or oppose it. Thus they are often contracted and promised in the cradle, being generally much of an age. The women's portion is no other but her person, and that enough if she is virtuous; but good or bad she carries not her husband a-crofs, and so will not ruin the house she comes from, and where she goes she carries nothing to be proud of, or to upbraid her husband with. On the contrary, the bridegroom some time before the wedding, lends the maid a certain quantity of money, as among indifferent people is usually agreed on, and among the great ones is according to their worth, and when it rises to about a thousand crowns it is counted very great. This is to furnish the bride with household-stuff, cloths, and female ornaments, all which are afterwards carry'd with the greatest state that may be before the bride. The day she is carry'd to her husband, a great attendance goes before

GEMELLI
1696.

fore her with kettle-drums, and pipes, and many lighted torches, tho' it be at noon-day. After all comes she, lock'd up in a chair carry'd by four men, and being come to the husband's house, is deliver'd to him in that manner. Then he opening the chair takes out the wife he has never seen before; which, if she does not please him, he cannot possibly reject. The poor buy a wife for three or four crowns, and it is allow'd them to sell her again, if they can find a chapman. He who is so very poor that he cannot buy a wife at so low a rate, seeks out for somebody to sell himself to for a slave, and in recompence receives a wife; with whom, and the children that are born to him, he remains at the disposal of his master. The same happens to a free woman if she marries a slave. For this reason, poor men generally take but one wife; whereas the rich, besides the chief wife, which is of equal quality to themselves, take as many others, or as few as they please. Sometimes they take one of these second wives to get issue, and when they have it, sell the mother again, as having taken her only for that end.

Widows.

The honour and respect they pay to widowhood is very commendable. To marry again, tho' a woman be left in her prime, and without children, is look'd upon as unbecoming; and there are few well-born, who prefer their own satisfaction before their honour; or the title of mothers before that of chaste women. They remain in the father-in-law's house, and there continue in widowhood, under a strict guard, till death.

Modest
condition
of women.

By the laws of the kingdom no man may marry a woman of his own family, tho' the kindred be never so remote. Only the first is counted the lawful wife, tho' they may have as many as they please and can keep. For this reason it is, that they being in the nature of slaves, on account of the price given for them, the husband can sell them again to whom he pleases. And if the woman should happen to be a christian, and therefore refuse to go to the new idolatrous purchaser; she will be compell'd by the magistrate with much beating. A Chinese will make no difficulty of selling his wife, or daughter to a catholic-European if he comes in his way, who may keep her always as a slave in his house, but may not carry her out of the kingdom; and if he will return home he must leave or sell her.

Marriage
when
void.

The Chinese marriage becomes firm and valid and cannot be made void, when

once the bride has accepted of the gold and silver bodkins, bracelets, and other things the bridegroom sends her suitable to her quality. From that time forward, tho' the husband should go out of the kingdom, she never marries again, but will expect him all her life time. It is also customary, when the parents of the bride and bridegroom are agree'd (and they have full authority over their children, whom they never emancipate) to give one another the name, day, hour, month, and year their children were born in, to advise with the astrologers, and when they are of opinion that the marriage may be contracted, they send the presents above-mention'd, and not otherwise.

In China, that son who does not marry, is look'd upon, as if he extinguish'd his father's seed, and were ungrateful to him that gave him his being. So a marry'd woman accounts her self unhappy till she has children; for till she has them, she may not sit at table with her mother-in-law, those who as yet have no issue serving her and the other fruitful one, standing. This is the reason why, to avoid being in such ill repute among other men, there is no man so miserably poor that does not buy him a wife; nor any woman that does not endeavour to be got with child. Yet if they bring two or three girls without a boy between, the mother herself kills and strangles them; saying, the devil is got into the house. This cruelty is most practis'd in the southern parts of China, where the men are forced to seek for wives abroad. Thus the empire of China comes to be more populous than any other that allows of polygamy, because the climate is good, and the women fruitful; it being rare to see any at age of procreation, without one child at her breast, and another by her side, or in her belly.

The magistrates are so intent upon endeavouring to promote the good people of the country; that the superior of the Franciscan missionaries in Canton, had like to make me die with laughing, when he told me a story of the petty king of that province, to this purpose. *There were several Women in Prison, being either the Wives, Daughters, or Kindred of Thieves who had been Executed or were fled. The petty King, that they might not be follow'd, marry'd them by Lot to the other Prisoners, after this manner. Having caus'd them all, young, old, hale and lame, to be brought to his Court, he made every one leave some particular Token upon the Ground, then turning them by, brought in the Women,*

ordering them to chuse every one a Husband, taking up one of those Tokens. This done, the Husbands appear'd, and making every one own his own Token: There appear'd a young Woman marry'd to an old or lame Man, and a blind or halt to a young One. The young Men or Women so ill match'd made a thousand Complaints, but the petty King, who was a pleasant Man, being ready to burst with laughing, upbraided them with their own Indiscretion in not making a good Choice; saying, they ought to thank themselves for their Misfortune, since the Choice was left to them.

The Tartars do not buy their wives, but receive portions, tho' very inconsiderable. When any one marries his daughter to her equal, the portion is not above eighty cows, eighty horses, eighty garments, and the like number of other things, according to the condition of the couple.

By all that has been hitherto said, the reader may perceive that the Chinese are very sharp-witted, and exceed the Europeans in ingenuity; yet nothing has been said of the cunning of the poor commonalty, taught them by nature to get their living. They are so crafty at cheating, that an hundred eyes would be too little for strangers, tho' never so watchful, to escape them; for they have wonderful flights of hand and other arts to deceive the sight. A thousand most pleasant inventions of theirs are told about. Among others, they carry small sharp tools in their nails which they wear very long, to cut purses. On the contrary, the merchants value themselves upon being just, and are really so, for their oath is inviolable; and they will hazard their head to keep their word; which the Europeans found to their no little astonishment when they first began to trade. And if those who ought to have given, would have follow'd their good example, and return'd honesty for honesty; then they would not have found them in proceeds of time, as they have done, more false and deceitful than themselves. To this purpose I can relate a true story told me by the Spanish fathers missionaries. The Dutch who came from Batavia to Trade in China, would have cheated the Chinese, giving them a great quantity of false Money; which, in a Bargain of some hundred thousand Crowns made in haste, could not all be view'd at leisure. They sign'd the Contract, and the Dutch returning the next Year to buy, they gave them an Oliver for their Rowland. For taking no notice of the Cheat put upon them, as the Ships were dispatching, they said they

Vol. IV.

had most admirable new-fashion Stuffs just come from Nanking. In short they show'd the Dutch the Stuffs, and agreeing for several thousand Pieces, when they came to deliver them, and the Dutch had view'd a great many, at last, to avoid the trouble of examining all, because they were to be gone speedily, they took the rest upon Content. The Chinese in a Moment chang'd the Bales for others made up of old Rags, and so the Dutch carrying them away instead of Stuffs, were put upon to more loss than what they got by the false Money. They endeavour'd to be reveng'd the ensuing years, but the Chinese would not admit them to trade. They did not behave themselves so with the Spaniards whilst I was in China; for a vessel coming from Manila to Macao, with one hundred and eighty thousand pieces of eight to buy silks, the Spaniards requiring to have them wrought after their fashion (which differs much from that of China) that they might carry them over to New-Spain, and finding none such ready, they distributed the money among several merchants, for every one of them to furnish so many chests of such work as they agreed upon; and in short, within the space of five months, the silks were wove, and deliver'd punctually according to the price and goodness that had been agreed; tho' among so many there might perhaps be one, that furnish'd the buyers with the quantity, but not the quality of the stuffs; which must not be thought any extraordinary matter, considering the shortness of the time, and the vast quantity, which could not have been got together in Italy, in five years.

As for the outward appearance of the Chinese, it shews them as much men of the parts, as any others whatsoever; not only for their noble garb, but for their gravity, and the modest comportment of their persons, the majesty of their looks, and for their stately and graceful mien. To turn the head lightly about, would look among them, as if a man's brain were light. Oaths or words that have any taste of immodesty, are never heard, but from the mouth of some base mean fellows, and that very rarely. To make love, or play the beau, are things so far from being us'd, that they have no words to express them; because a woman's face is never seen, neither at window, nor elsewhere; for it were almost the same thing to have a Chinese woman seen, as if she were half ravish'd.

Tho' China may be call'd the country of candidates, or men aspiring to preferments, there being no other like it in the world, where every man of the

GIBBELL
1696.

meanest condition, thinks he has an undoubted right to become greater than another, and if his learning deserve it, to rise to the highest dignities, above which there is none but the crown; yet they all know how to conceal their emulation, envy, rancour and mortal enmity, under the appearance of sincere affection; and tho' the hatred they bear one another be never so great, yet they never fail to pay one another the ceremony of bowing, kneeling, and bowing the forehead to the ground, according to the dignity and employment of the person; thinking they herein act the manly part, and show themselves easy and well bred. It is a receipt maxim among them, that to draw a sword against one another, is not the part of men; and that war is nothing but a wildness reduced to rules, which the savage beast have not. That humanity is the property of man, and therefore, they pretend there are none like them in the world, for living up to the rules of reason: they affect an easy meek behaviour to such a degree, that to be in a passion among them, is like laying aside humanity, and becoming a beast, or at least a barbarian. Hence it is, that among them there is no open profest enmity, much less any factions, riots, or bloody frays. Their fights are the only weapons they fight duels with; in which the worst thing that can be done (this is to be understood of mean persons) is to tear off ones enemies hair, for the disgrace is more resented, than the pain. The wisest and most honourable persons if they are struck, fly, and that way get the better; because the honour of the battle consists in a man's over-coming himself with virtue, not the adversary with force. So that running away, instead of being a disgrace to the *Chinese*, makes them at once triumph over themselves, and their enemies, who are overcome by the passion of anger, and therefore rather beasts than men. The truth of it is, the *Chinese* are men of courage, little effeminate, and mean-spirited, putting up all wrongs patiently.

Hardiness.

They are at the same time indefatigable, using themselves from their infancy to carry on their back a yoke with two equal weights to it; which they increase from time, to time, as they grow up; from which fatigue, even the poor country women are not exempt, who besides all other femal duties, dig, and do other drudgeries. In the boats they row, or row them along, like so many mares, and do all the service of a sea-man, with a child all the while ty'd to their back; and at night they have no other supper,

but a little boil'd rice, and a decoction of wild herbs, to drink instead of tea.

They have an artificial pot to dress their meat, in which the water goes about, and the fire stands in the middle: so that any thing is boil'd in a shorter time, with less trouble, and cost. Having no other materials to make glass of they make them of rice, as was said before, and of beautiful colours.

They have invented a table or board, call'd with a string of wooden counters, to add, subtract, multiply, and divide, and they are quicker at them, than the best accountant in *Europe*. To tell money, they have another board with an hundred holes, into which they presently clap as many pieces of money, and so they tell them in a moment, and see whether they are good. If they do not like one profession, at the years end, they take to another, being handy at every thing.

They are ingenious in playing at any game; as cards, chess, which they call *Ki*, dice, tables, a sport like fox and geese and the like; but what ruins them, is their *Meima*, at the new year, which is even or odd, guessing at little heaps of money, at which sport they ruin one another.

Some make an ill use of their ingenuity, to make a composition they call *Xi-am*; which being smok'd in a room, puts all the people in it beside themselves, and renders them immoveable, whilst they rob the house. Water is a powerful antidote against it.

The *Chinese* generally drink hot, and fear cold, just contrary to the *Europeans*; nor will any of them ever refresh their palates with cold water, tho' the weather be never so hot, or they drouthy with travelling; but wait patiently till they have it so hot, that it scalds their lips; so that they think it a madness when they see an *European* drink cold liquor. As for their meat, it grows so cold, that it has no relish, they sitting whole days chatting at table, for they are naturally very talkative. This is not us'd only by the poor people, but among the *Mandarines* and great ones; who tho' they furnish their tables with birds-nests, which cost three hundred pieces of eight a measure, the fins of sharks, the finews of stags, precious roots, and other things of great value, yet they prate so long that all grows cold. Besides, all their delight, and the best of the feast consists in drinking, as was said before, to promote which, of the servants appointed to attend each table, one comes every now and then, and kneels down, praying the guests to drink; then comes another, and intreats them to empty their

their dishes, sometimes one way and sometimes another; for if the guests do not go home drunk, he that treats is much troubled, as if his dinner had not been good and his liquor poor. Therefore to compass their design, after supper, they treat with a play, and after the play, they cover another table with sweetmeats, and then another with fruit, to entice the company to drink, and send them home in their servants arms. Those that are temperate, may pour the liquor on the ground, without being reputed uncivil, by way of pledge, there being a board before them for this purpose, that the others may not observe them. At the conclusion of the feast, they observe a custom, which perhaps no other nation will approve of, which is, that every one of the guests leaves eight or ten pieces of eight, more, or less, according to his quality who treats, in the hands of a servant; and tho' the master of the house (like physicians who hold out their hand at the same time they seem to refuse by words) pretends to be affronted at it, yet the custom is well known, and every one leaves as much as will pay for the play and liquor.

The *Mandarines* use themselves to eat such things as are naturally violently hot, not so much out of riotousness, as to provoke lust, and procure vigour, to please so many women, and get many children by them; and because we have mention'd some sorts of meat quite unknown in *Europe*, it will be proper to give some account of them. The birds-nests are taken on the coast of *Cochinchina*, the islands of *Borneo*, *Calamianes*, and others of the archipelago of *S. Lazaro*, where they are built upon inaccessible rocks, by certain birds like swallows, so artificially that they are eaten steep'd in warm water, to take out any feathers there may be in them. It is not known to this day, whether they are made of clay, or of what the bird fetches from its stomach; but they are of great nourishment, and taste like the *Italian Vermicelli*. The shark is a fish that feeds upon men's bodies, and is found all about the archipelago of *S. Lazaro*; the *Chinese* draw certain sinews out of their fins, which they eat. The root *Injon* is brought out of the province of *Leantung*, and is bought for its weight in gold, because it is excessive hot, and very nourishing, which makes them say, that if a man carries it in his mouth three days together without eating, he will feel no faintness. They also use abundance of spice, and essences for the end we have spoken of.

The laws of the empire are so severe to oblige parents to give their children

good education, that if it happens any of ^{GEMPLE 1696.} them commits a crime, and cannot be taken, the magistrate secures the father, and chastises him, for not teaching his son good manners. The government also takes care of the oeconomy of families, for the publick good; on which account they tell us a very notable passage. A *Mandarine* happened to go along a street, where a mother-in-law was crying out against and cursing her daughter-in-law, and her husband; inquiring into the cause, he gave the emperor an account of it, who order'd that the daughter-in-law, and her husband should be chastiz'd, his father should have his head cut off, and the *Mandarine* of the place be depriv'd of his command.

The *Chinese* smoke much tobacco, but ^{TABACCO} after another manner than is us'd among us. They cut it extraordinary small, and having dry'd it in an oven, they wet it with hot waters to make it strong, and therefore they that are not us'd to it cannot bear the smoke. Tho' they always carry their pipe, and a purse of tobacco by their side, yet they smoke but once an hour, and the women do so too, especially the *Tartars*.

The *Chinese* sit on high chairs, and use ^{Chairs, fans, and umbrells.} tables like ours in *Europe*. They do not value jewels, or other things that have their value only from opinion, but gold and silver which have an intrinsic value. In the city, and about it, they always carry fans, tho' it be winter; and in the country umbrells, tho' they have hoods to defend them against the sun.

They call people by the surname first, ^{Names and surnames.} and then by the name, contrary to the *Europeans*, who speak the proper name first, and then the surname. They do not take the names of their idols, but the sons are call'd by the parents, by the names of the first, second, third, fourth, &c. Others have their name from some accident happening before their birth, as the fortunate, the merry, the pleasing, &c. True it is, that whilst the *Chinese* reign'd, it was customary at fourteen years of age, to give names to the males, putting on their heads the country cap, and the females with the bodkins to bind their hair about, calling them till then, the first, second, &c. which was perform'd with as much solemnity as the wedding; but the *Tartar* now reigning, abolish'd that expensive custom.

The *Chinese* sell all things, even to Food, hens and chickens by weight, but cheap; selling a pound of twenty ounces for twenty *Zien*, which make three grains and a half of *Naples* money. They themselves consume but little, the poor

18

01

GEMELLI 1696. poor people filling their bellies with rice, and herbs dry'd in the sun, that they may lie long in the stomach.

Antiquities.

They have a great esteem for any antique pieces of any metal or shape whatsoever, not regarding the workmanship, so they be old; and therefore the rougher, and more consum'd they are by time, the more they are valu'd, and sold the dearer. They also highly prize antient manuscripts, that are in a fair hand, with the author's seal to them.

Duty to parents.

The names of father and mother in *China* are sacred; the children believing that all the blessings of this life, are the reward of loving their parents, and serving them with humility; nor does history furnish us with examples of any nation, that has so fully paid the filial duty, as the *Chinese* do. There are young labouring men, who for grief of their fathers death, fast all the days of their life, without ever eating fish or flesh, eggs, or any white meat, that this penance may avail their souls.

Superstition.

They are much addicted to superstitions, and auguries. They conclude no match, without consulting the astrologers; nor do they bury the dead without appointing a fortunate day, for which reason in great cities, ten, or twenty thousand coffins, with dead bodies, are carry'd out together to be bury'd in the mountains. All the gates of the courts of judicature, out of a superstitious custom, are made in the south wall. They look upon it as a very ill omen, to have churches erected to the true God, in the country or villages, as fearing some of the people should die upon it. And to say the truth, it looks as if God were resolv'd to try the steadiness of the *Chinese*; for it is actually observ'd, that after the building of some church, more people than ordinary die; as also the brothers, children, and other kindred of the *Chinese* that is newly converted; as the fathers missionaries themselves told me. For this reason sometimes, when the missionaries would erect a new church, the *Chinese* not being able to obstruct it legally, as long as the imperial permission holds, they raise a mutiny of the rabble to overthrow it, so that the missionaries are forc'd to have recourse to the magistrates. This happened to the *Spanish Franciscans*, whilst I was at *Canton*. They going about to build a church in a village, distant from the city, for the use of the christians; and having bought the ground and materials, the peasants mutiny'd, and assembling in a riotous manner, by beat of drum, went to hinder the work. The fathers were forc'd to

get a *Mandarine* to go thither, at the sight of whom, all those peasants fell on their knees along the road, beseeching him to have some regard for their lives, which would not be secure, if the *Europeans* settled in their village. At length the business was compos'd after this manner. The *Mandarine* order'd the work should go on; but that when the master-beam, or highest timber was to be set up, the *Bonzes* should have notice given them; that they might cover the idols, who, otherwise would be frighted to see so high a fabrick rais'd, and thus the peasants might not lose their *Fan-scivvy*, that is their fortune. This superstition extends even to the structures of the *Chinese* themselves, (tho' not look'd upon as altogether so fatal) none being permitted to build his house higher than his neighbours, for fear of taking away their *Fan-scivvy*. In the suburb of *Canton*, going into a *Pagoda*, I saw two live snakes before the idol, in a basin, to try those that were accus'd of theft; so great is their superstition. They were to be laid on the body of the person accus'd; if they bit him, he was reputed guilty; if not, innocent. They call this *Pagoda*, *San-kiai-mian*.

All officers and magistrates pursue robbers severely, to make the roads safe, and take care to extirpate vagabonds, punishing them severely. The blind, the lame, and such like, have employments found for them, according to their ability. The old and disabled are fed by the emperor, who keeps a hundred in every city, more or less according to its greatness. This produces not only peace and quietness, but plenty; because all men apply themselves to tillage, and there is not a foot lies waste throughout the empire. They use some artificial plows that can be drawn by one only buffalo; and they water the land as ingeniously, drawing water from the bottom of the river. Others get their living by fishing, not only with many and divers sorts of nets, hooks, and traps of boughs placed in the water, but with birds like our sea-crows; from whom they cannot escape, tho' they were hid under the sand. The bird eats only the smallest, because the cunning *Chinese* put a ring about its neck, that it may not swallow the great ones.

The birds they catch in nets, snares, and other inventions. The wild geese, as cunning as they are to save themselves, cannot escape; for the better to deceive them, they keep certain floating vessels upon the waters they resort to, and when the geese are after some days well us'd to them, so as not to be afraid, they make

But of the *Chinese*...

make two holes in them, and clapping them on their heads, go up to the neck in the water, so that those vessels may seem to be still floating, and thus drawing near to the geese, before accustom'd to see those things, draw them down by the legs, and having catch'd as many as they can carry, come out of the water.

The *Chinese* judges, to deter the people from committing crimes, use to put the body of the party kill'd or murder'd in a coffin, in the house of the murderer, till he compounds with the friends. This I saw practis'd upon *Emanuel de Arango*, at *Macao*, because a servant of his being a black of *Mangiar Massin*,

had kill'd a *Chinese*, who provok'd him ^{GENELLI} by striking him over the face with a ^{1696.} frog, which is a thing they hate. And tho' *Arango* had kill'd the black, and offer'd to pay a thousand *Tayes*, yet he could not prevail with the kindred to consent that the dead body should be taken out of his house. The *Chinese*, tho' idolaters, are not such bigots as those on this side *Ganges*; for they eat beef, swines-flesh, frogs, dogs, (which they are great lovers of, and there are shambles of them) and all sorts of living creatures. Nor do they make any scruple to converse, eat, and contract affinity with christians.

CHAP. III.

The Habit, Weapons, and Coin of the Chinese.

^{Hint of the Chinese} **B**Efore the *Tartars* rul'd, the *Chinese* wore their hair long, winding it about on their pole, as the women do with us (but without making it into tresses) making a large roll of it, through which they us'd to run large silver bodkins, as well to bear it up, as for ornament; so that there are still at *Malaca*, and other places, some of these *Chinese* who are call'd hairy. But since the *Tartars* govern, they have been all commanded to cut it off upon pain of death; and to go after the *Tartar* fashion with their heads shav'd, and only a tuft, as the *Mahometans* wear it; but still with this difference; and the *Chinese* wear it platted, or wreath'd, and sometimes hanging down to their heels. They also forbid their large garments with wide sleeves, to bring up the *Tartar* fashion; which the *Chinese* did, and do still heinously resent.

The *Tartar* habit now worn in *China*, is in summer, a *Maozu*, or cap in the shape of a cone curiously made of silk, or *Indian* canes, and cover'd with red horse-hair; within it is lin'd with taffety, and has a knot to bind it under the chin. In winter they wear it of the same shape, but of silk quilted with cotton, adorn'd about the edge with fine furs, and cover'd with shaggy silk instead of hair. It is generally crimson, and few wear it blew, or black: At the end, or point of it they fix a piece of amber, or glass made of rice.

When they lay mafs, and administer the sacraments, all our missionaries wear a black cap, with four square pieces hanging down from it to the ears, of equal length, and becoming, and behind two labels like those of a bishop's miter. This

Vol. IV.

fashion being brought up by the antient learned *Chinese*, the fathers of the society to distinguish themselves have added upon every square three arches like gates, made with a gold breed.

Their shirt is call'd *Kuaziu*, and is laced under the right arm on the sides, and under the throat. It reaches down half way the leg, with long narrow sleeves. Over it they wear wide breeches ^{Breeches} down to their heels, which they call *Ku-Ziu*, or *Zey*, ty'd with a silk ribband, at which hangs the purse of tobacco, the handkerchief, knife, and the little sticks to eat with in a sheath. But the nobility wear a silk girdle with gilt buckles, and jewels. The hose they generally wear are of silk, or cloth of silver, and call'd *Uvazi*. ^{Stockings.}

The nobility add to the shirt (which ^{Upper garment.} serves the mean sort for a vest) a long black garment, call'd *Paozu*, of a violet, or other colour (with narrow sleeves, which at the end have a little turning up like an ear) which when button'd from under the right arm down to the feet, is girt with a silken ribband call'd *Tay-zu*. Over this garment they wear the *Guaytao*, which is exactly like a bishop's rochet, but without the little hood, and with wide sleeves, and this is button'd upon the breast. The learned wear it long, ordinary people short, and the *Tartars* very short.

The learned, who are carry'd about ^{Baskins.} the cities in chairs, wear buskins of silk (instead of shoes) call'd *Xivezu*, of several colours. The common sort who walk a-foot have them of very soft leather, with the soles full of nails, to make them last the longer, and keep out the wet, for they use no heels. The shoes

Y y y worn

GEMELLI worn by trading and inferior people, 1696. are open without any binding, but close behind. They are made of silk, of all colours, with soles of stuff, and they are call'd *Illy*. Both the gentry and commonalty of both sexes, use the fan, or *Scezu* and umbrello, as well in summer as winter.

Women's
apparel.

The women wear the same garment, but button'd before the breast, and straiter about the neck for decency, with the other of the same cut as mention'd above. Their shoes differ from the men's, in that they are close, and with heels. But their head-dress is handsome, because their hair is generally long, and black, and they anoint it with several sorts of oil and gums, to order it as they please. On the forehead they make a roll or bunch with a small iron wound about with silk, which afterwards they cover with part of the loose hair, shining with the oil and gum. With part of the rest they make a roll behind on the pole, and what remains is divided into two locks, which fall gracefully upon the neck, like wings. In the northern countries they wind the hair behind the head without wreathing it, and then cover it with a thing like a little dish, curiously made of silk, and embroider'd. In *Peking* they add a black handkerchief wrapp'd round, because of the violent cold. The maidens, to distinguish them from marry'd women, cut off part of their hair about their forehead and neck, leaving as it were a fringe of it about two fingers long.

Features
of the
Chinese.

The complexion of the *Chinese* is white, like that of the *Europeans*, but they differ in features; because their eyes are generally small and sunk, and their nose tho' small somewhat flat, yet not disagreeable. Their beards are so thin, that some of them have not an hundred hairs, which grow on the bottom of the chin, and upon the lip; and if any happens to grow on the cheeks they pull it off with pincers, so that the beard is long, but very thin. This is the most certain sign to know an *European* among a thousand *Chinese*, and a *Chinese* among as many *Europeans*.

Women.

The women are generally fair, beautiful and more courageous than the men, who are of mean spirits. They value themselves much upon the smallness of their feet (as was said before) and the very old women are so proud, that in spite of wrinkles in their faces, they dress their heads with fine flowers; and punish themselves at that age to boast of small feet.

Weapons.

In war the *Chinese* carry bows and arrows, and a long scimitar, which they

wear the wrong way, with the point forwards, instead of the hilt, and when they would draw it they give a stroke upon the point, which brings the hilt forwards. Fire-arms are us'd but little, but muskets begin to be brought in play, by the emperor's order. In the southern provinces, by reason of their commerce with *Europeans*, they have some fire-locks seven spans long, which carry but a small bullet, and are rather for pleasure, than any use. They carry the scourer in the barrel, so that they cannot fire upon occasion; nor can they fire standing, but stretch'd out with their belly on the ground, so resting it upon a thing like a goat's horns, which serve to take aim by.

Tho' cannon had been long found out in *China*, yet it was not well cast, nor proportion'd; for which reason the *Tartar* emperor, at the beginning of his reign, designing to make use of it in his wars against the *Ulbis*, or western *Tartars*, caus'd it to be cast again and brought to perfection by the direction of father *Verbiest*, a *Flemming* of the society of *Jesus*; for which reason he has been ever since a friend to the *Jesuits*. This train is made use of in the field, as I observ'd at *Peking*, for on the walls of the cities there were only a few small fakers.

The *Chinese* soldiery consists of horse, divided under eight standards, each of an hundred thousand men. To every standard belongs a general, who is always a petty king, or great lord, and is call'd, general of the green standard, of the white, &c. as was said elsewhere. There is a much greater number in garrison along the great wall, but most of them are *Chinese* become *Tartars*, the imperial *Tartary* not being able to furnish so great a number of soldiers. Soldiery descends from father to son; for the emperor does not only allow them competent pay, according to their quality, but also rice for the whole family, the horse and provender for him, without sparing, because all comes from the provinces, which pay it as tribute. The petty kings had pay allow'd them to keep twelve thousand men, and maintain themselves with the due grandeur, besides others they keep at their own expences.

Tho' in *China* gold be cheap and very good; as well that which is taken out of rivers at the full moon, from the trenches made in the channels, as that which is brought in from the neighbouring countries; yet they make no money of it, but pass it by weight. The same happens with the silver brought in by strangers, especially that which comes from

from *America*. For this reason the emperor of *China* calls the king of *Spain*, the king of silver; because there being no good mine of it in his dominions, all they have there is brought in by the *Spaniards* in pieces of eight, and is here reduced into plates one quarter part finer. In this they pay the emperor's taxes, which the *Mandarines* are to gather of the subjects within their several districts. All this silver remains bury'd for ever in the emperor's treasury at *Peking*, and those of the rich men of the empire, for the *Chinese* stand in need of nothing from abroad. The way of receiving and paying is by cutting little bits of silver, and weighing them in a little scale call'd *Teng-ciu*. They count by *Leans*, or *Tayes*, as the *Portuguese* call them, which is worth fifteen *Carlines* of *Naples*, or a noble; by *Ciers* (or *Mas*

in *Portuguese*) which is the tenth part of GENEVE 1696. the *Tayes*; and by *Fuens*, or *Condorins* the tenth part of the *Mas*. The small brass coin is call'd *Zien* (or *Chappas*) of which fourteen make a *Fuen*. These *Chappas* have been brought up within these ten years last past; the *Chinese* being sensible of the loss there was in cutting a bit of silver to buy fruit, or any thing of small value. They have a small hole in the middle to string them. They give a thousand, or eleven hundred of them for a piece of eight, according as they are bigger or lesser in several provinces of the empire. They are made of *Tuntunaga*, a metal peculiar to *China*, like brads, with four *Chinese* characters on the one side, which compose the emperor's name, and two on the other, expressing the name of the city, or court, where they are coin'd.

CHAP. IV.

Funerals of the Chinese.

buried in the living
AMong the *Chinese*, the being well bury'd is a thing on which the happiness of the dead, and their posterity seem to depend. Hence it is, that not trusting ever to their own children, every man whilst living, and in health, provides himself with two things more particularly; that is, a coffin to be put into when dead; and a lucky place to lay it in. An old man would live in pain, and any other dies almost in despair, if he had not his coffin in the house; and the son would be much afflicted, if after his father's death he were to seek for the stuff to make it, for it being generally six or eight inches thick, and of such wood as if not incorruptible, is at least very lasting, it is therefore hard to be met with. Besides, it must not be narrow, so as only to hold the body; but large and stately, and all the out side of it varnish'd, carv'd, and adorn'd with gold, (if they are able) and they think it no extravagancy to spend some hundreds of crowns upon it, which in *Europe* would cost ten times as much, they that sell it persuading them the wood is brought from parts very remote, and that it is the most lasting in the world. The dearer it costs the more they value it, placing it in their bed-chamber that it may be always in sight.

As for the fortunate place, it is appointed by the cunning and superstitious fortune-tellers; for the most part on the bottom of mountains, or in places hemm'd in with cypress-trees,

if there are no mountains near, for no man may be bury'd within the city. When they have dug the grave under ground arch'd, and lin'd with plaister of *Paris*, that the rain water may not sink through they place about it statues of men in a mournful posture; of beasts of several kinds, and other lasting ornaments, besides the large stones, on which is carv'd in excellent language all that can be said in honour of the dead person. The coffins of great men are placed in large vaults, placing before them an altar of white marble, with a great marble, iron or latten candlestick, and about it other small ones of the same stuff.

As soon as the father is dead, the Ceremonies just after death. son in a raging manner tears down the curtains of the bed, and with them covers the body; then he falls down with his hair loose; and soon after sends his servants to the kindred and friends, giving them notice in writing that he has lost his father. And because the kindred and friends so notify'd, are bound to come to pay the usual ceremonies in honour of the dead man, the greatest room is put into mourning, that is, with mats, or white hempen-cloth, for that is the colour of the *Chinese* mourning. The body in the mean while being wrap'd up close in two or three pieces of extraordinary fine thin silk, as infants are swath'd, they then put on its richest garment proper for the season, with the mark of

of his degree, if he had any; then they put it into the great chest or coffin; and having cover'd the bottom with a layer of *Tinzaö*, and then of other sweet herbs over it, they cover the coffin and nail it down close; and that no ill scent may come through, they stop up all the chinks with pitch, the coffin being also all pitch'd within. Being thus clos'd they adorn it with stars of gold, and placing it at the upper end of the great hall, place on it the picture of the dead person done by the life, and near it a table with perfumes and lights. Then it is lawful for the kindred and friends that were invited, to come in and pay the usual honours to the party deceas'd, and an inscription over the door invites all that pass by to come in. The son in the mean while stands in most doleful manner by the coffin. He is habited in plain hempen cloth, and has a cap of the same on his head, his feet wrap'd in straw, coarse cotton cloths about his ears, and two rings of thick rope on his sides, the ends hanging down to the ground; and every part of this mournful equipage has its peculiar form, according to the unalterable practice observ'd. There is a printed ritual which I have by me, where all the formalities are mention'd, which are proper to every degree of kindred, with the several qualities of persons subjoin'd. As for the son, all the expressing of his sorrow is not comprehended in this doleful appearance. The first night he lies close by the coffin, nor does he for a long time after lie upon any other than a plain straw bed: All dainties are banish'd his table, and particularly all flesh. Instead of great rich chairs, he makes use of poor mean ones, and does other such like pennances, which after a month, begin by degrees to grow easier and easier.

The
friends ce-
remonies.

The ceremonies the persons invited are to perform in honour of the person deceas'd, are four profound bows, and as many genuflexions, and stooping till the forehead touches the ground, burning of candles, perfumes, and some gilt and silver paper. This is done, because they believe the soul in the other world will have as much real gold to pay its debts, and gain the favour of the guards that keep the doors of the prisons under ground; so that returning thence, she may come again into this world, and taking a new body be born again; and if good luck attends it, become a learned man, which in *China* is the highest pitch of humane felicity. The kindred and friends use to meet three

or four times together to pay this honour to the dead, after which the funeral does not follow presently, but is put off for some months, and even to three years; for so long, and never less, does the mourning last for a father, in acknowledgment for so many years he carry'd his son a child in his arms. In the mean while the body is kept in a room, plac'd in honourable manner. Till it is bury'd there passes not a day but the son visits, and bows to it, keeping some perfume before it, and offering it meat, which are afterwards given in charity to the priests of the idols, who are often call'd to pray over the body.

To conclude, when the body is to be bury'd, is a matter that must be strictly calculated, and judiciously found out by the masters of that science, who according to the rules of art, chuse out the most fortunate and happy day and hour heaven can point out. When that is fix'd, the son again makes a solemn invitation of as many as possible he can, to attend and honour his father and him; and then they repeat those four bowings, which the *Chinese* are never tir'd with, nor have enough of. Then they set out in procession. First goes a company of drums, pipes, and such like instruments; then follow the figures of elephants, and tygers, and the images of men and women famous in their history; then sightly pageants, as triumphal chariots, castles, pyramids and banners, then tablets, some with rich perfumes on them, others cover'd with meat. Next comes a gang of priests in their solemn vestments, reciting their prayers in a tone like singing. Then all the kindred and friends in silence and long mourning robes; lastly, the coffin on a bier carry'd by twenty, thirty, or more men. Behind it the sons looking ghastly and poor after their late pennance, as if they would fall down dead at every step. The whole funeral pomp is clos'd by the women carry'd in chairs, and tho' not seen, sufficiently heard, they howl so desperately. They go extremely slow for the more state, and a great way, because the burying places are remote from the cities. Being arriv'd at it, the ceremonies are all repeated; sweets, burnt paper, and lastly, the funeral pageants are burnt, and then the body is put into the grott or cave, which is clos'd up with a little wall. Afterwards they go now and then to burn gilt paper, horses and other creatures made of paper or silk, before the tomb: fondly believing the paper is converted into money, and the counterfeit beasts into live ones,

to serve the dead person; and therefore the friends present the son with money (as is us'd in weddings) to defray this expence.

Mourning.

As the sons are to wear mourning three years for a father's death, so are the wives for their husband; but if the wife dies the mourning is but for three months. No person of any condition whatsoever is exempt from this duty; in so much that when the parents of *Mandarines* die, they are oblig'd to quit their employments, as was said before.

Respect to the tomb.

This is the main cause why strangers are undervalu'd by the *Chinese*; as also for not propagating their father's race. For this reason upon disputes of religion, they have upbraided our missionaries with ingratitude to their predecessors, in forsaking their tombs, and omitting to perform the due acts of piety to them yearly, by going into such remote parts. In *China* it is not allow'd to go out of the empire, and the son is accounted infamous, and call'd *Puxyao*, who goes away and leaves his father's tomb. The fathers missionaries found a good answer to stop their mouths for ever; saying, *They went thither by Command to serve God; and that as the Tartars were not undutiful in leaving their Parents to come into China, so neither were they who came to propagate Religion.* This being spoken in the presence of a *Tartar Mandarin*, the fathers were applauded and said to be in the right. To the end the emperor's service might not be obstructed by his *Tartar* soldiers taking a fancy to stay by their parents tombs, he order'd the bodies to be burnt, and their ashes to be brought to *Peking*, that their ceremonies might be there perform'd.

Honours after the funeral.

From this respect children pay to their parents after death, proceeds another duty, which is of keeping a tablet in the house, on which are writ the names of the father, grand-father, and great grand-father, before which they burn several perfumes, and some of those ropes made of the barks of trees pounded, before-mention'd. When the father dies the great grand-father is taken away, the father succeeding in his place, and so from generation to generation. This custom the *Chinese* christians cannot be broke of, which has produced a hot contest between the fathers of the society of *Jesus*, who maintain this may be tolerated among catholics, as a mere act of civil worship to their ancestors; and the *French* missionaries of the clergy, the *Dominicans* and others, who say it is idolatry, and not to be al-

Vol. IV.

low'd to christians; a difference not yet decided by the holy congregation to which it has been refer'd.

Genelli 1696.

It is also the custom in *China* to erect Temples for the whole family; but this can only be done by some person of note, as a *Mandarin* of the family. Those that have such a *Pagod*, place the tablet with the dead man's name there, to pay him their veneration. The yearly sacrifice all persons are oblig'd to offer to their ancestors, is differently us'd, according to the quality of the persons; for the emperor sacrifices to seven of his predecessors, the petty kings to five, *Mandarines* to three, and private persons only to father and grand-father. The emperor uses to honour persons of quality at the death of their parents, writing two letters, which comprehend the virtues of the party deceas'd, and these are placed in the tomb; an honour he bestow'd at the death of the fathers *Adamus* and *Verbieß*, of the society of *Jesus*, and presidents of the court of mathematicks in *Peking*.

In these sacrifices they slaughter cows, swine, goats, fowl, and other things, which are eaten by the kindred and friends, on the same mountain where the tomb is. But if it be a family that has a *Pagod* of its own, the steward of the revenue belonging to it, is at all the charge. There are always people in the *Pagods*, casting lots after a superstitious manner, with certain sticks made for that purpose; and if the lot comes not up the first or second time to their mind, they endeavour to appease the idol with prayers, and sacrifices of meat ready dress'd, fowl, bread, wine and other things. At length they cast so long till they hit a lot to please them, and then thinking they are in favour with the idol, they burn, by way of thanksgiving, gilt paper, and go home well pleas'd, eating the aforesaid things merrily with their kindred and friends.

For the better understanding of this chapter, I have thought fit to insert the cut representing the funeral pomp of a poor *Chinese*, which I saw at *Canton*.

See Cut Number II. Pag. 361.

- A. Ensigns of mourning.
- B. Banners of silk, or paper of several colours.
- C. *Chinese* drums of two round brass plates.
- D. A censor to burn perfumes.
- E. Offerings of eatables, which are afterwards given in alms to the *Bonzes* that attend the dead body.

F. Chi-

GIBBELL
1696.

F. Chinese trumpets.

G. An instrument of nine little pieces of latten, which they play upon harmoniously with a little hammer.

H. Other instruments.

I. Several sorts of banners.

L. A tabernacle in which they carry the tablet, on which are written the names of the father, grand-father, and great grand-father.

M. Paper to be burnt upon the fond belief, that those which are gilt turn to gold, and the silver'd into silver, to serve the dead person in the other world.

N. The bier with the coffin in which is the dead body.

O. The dead persons nearest relations, clad in sackcloth, and girt with a

thick rope, with straw wrap'd about their feet, and coarse rags about their ears.

P. Country-women related to the dead person, who ought to be carry'd cover'd between curtains on men's shoulders, according to the custom; but are here represented uncover'd to shew their habit.

Q. Bonzes attending the dead body, playing on several instruments, and among the rest one like a little organ.

R. Friends clad in white, that is, in mourning.

S. The tomb on the mountain, whither the body is carry'd to be bury'd.

T. The antient Chinese habit.

U. Extravagant garment of the guardian of the house, who is painted on all the doors of the Chinese.

CHAP. V.

Of the great plenty of all Things, and Temperament of the Air in China.

Plenty of
gold and
silver.

Navigation and the plenty of all sorts of commodities found in a kingdom, are certainly the two sources of trade. *China* has these two in such a degree, that no kingdom can equal, much less exceed it. The quantity of gold is so great in all its provinces, that instead of being converted into coin, it is made a commodity. Hence came the proverb much us'd at *Macao*. *Silver is the Blood, and Gold is a Commodity.* As for silver, their avarice and industry in gathering of it, are as antient as the empire, and therefore the quantity the *Chinese* have gather'd must needs be prodigious; for all that once comes into the country can never go out again, the laws that prohibit it are so severe. It is rare in *Europe* to make presents of five hundred or one thousand crowns, but in *China* it is common to make them of one thousand, ten, twenty, thirty, and forty thousand, particularly at court many millions are spent in gifts. This happens because there is no presidentship of any city, but costs several thousand crowns, and sometimes twenty, or thirty thousand and other inferior employments proportionably. He that will be vice-roy of a province, must, before he is put in possession, pay thirty or forty thousand and sometimes sixty or seventy thousand; not that the emperor receives the money, or knows any thing of it; but because the governours of the empire, the *Kolaoi*, or counsellors of state, and the six sovereign courts in *Peking*, sell all employments under-hand. They who by these

Bribery.

means come to be vice-roys, or *Mandarines* of provinces, to reimburse themselves, receive presents from the presidents of their cities, these from presidents of towns and boroughs; and all of them grow rich upon the spoils of the poor people. Hence comes the common proverb in *China*, *That the King, without knowing any thing of it, exposes his People to as many Butchers, Murderers, Dogs, and hungry Wolves, as he creates new Mandarines to govern them.* There is certainly no vice-roy, or visitor of provinces, who after he has been three years in his employment, does not carry home six or seven hundred thousand, and sometimes a million of crowns. By this it appears, that tho' in regard of the natural inclination, and insatiable avarice of that nation, there be but little silver in *China*; yet considering its wealth in it self, there is no kingdom can cope with it.

There are in *China* abundance of copper, iron, and tin mines, and of all other metals; but most of the copper, and therefore they cast so many guns, such abundance of statues, and vessels of several sorts. There is no memory that ever paper money was us'd there, as *Marcus Polus* writ; but only several ages since, the emperor paid his soldiers half in money, and half in notes, call'd *Cbao*, which afterwards return'd to the emperor.

The silk and white wax of *China* are two things that deserve to be taken notice of. The first of them is the best in the world, and there is such plenty of it,

of *China* are
be taken no-
the best in
plenty of
it,

it, that the antients call'd *China* the king-
dom of silk. The moderns find this by
experience, because several nations of
Europe, *Asia* and *America*, carry thence
a vast quantity every year both wrought
and raw, in such a multitude of caravans
and ships that it is wonderful. Besides
it is an incredible quantity of plain silks
and others wrought with gold and silver,
that is consum'd within the country it
self. The emperor, petty kings, princes,
and great men, with all their servants
even to footmen; the *Mandarines*, eu-
nuchs, learned men, citizens, almost all
the women, and the fourth part of the
rest of mankind, wear silk upper and un-
der garments. In fine, the great plenty
may be conceiv'd by the three hundred
and seventy five boats, sent by only the
two provinces of *Nanking* and *Cheking*
every year to court loaded with all sorts
of wrought silk; besides the rich and costly
garments for the emperor, empress, the
princes their children, and all the court
ladies. To which must be added the
great quantity the provinces pay the em-
peror every year as well wrought as raw,
by way of tribute. This silk is of two
sorts, the natural, which is call'd *Kien*,
and the artificial. The natural is made
by worms in the fields and upon trees,
which they gather and spin, but it is not
so good. The artificial is made after the
same manner as in *Europe*; feeding the
worms with mulberry leaves for forty
days. The best is that of *Nanking* and
Cheking. I have of both sorts.

As for the wax it is the finest and
whitest that may be, tho' of bees; and
there is such plenty as serves the whole
empire. Several provinces produce it,
but that of *Huquam* exceeds all the
others, as well in quantity, as whiteness.
It is gather'd in the province of *Xan-
tung* upon little trees; but in that of
Huquam upon large ones, as big as those
of the *Indian Pagods*, or chestnut-trees
in *Europe*. The way nature has found
to produce it, to us appears strange
enough. There is in this province a
creature, or insect of the bigness of a
flea, so sharp at stinging, that it not on-
ly pierces the skins of men and beasts,
but the boughs and bodies of trees.
Those of the province of *Xantung* are
much valu'd; where the inhabitants ga-
ther their eggs from the trees, and carry
them to sell in the province of *Huquam*.
In the spring, there come from these eggs
certain worms, which about the begin-
ning of the summer they place at the
foot of the tree, whence they creep
up, spreading themselves wonderfully
over all the branches. Having placed

themselves there, they gnaw, pierce, and
bore to the very pith, and their nour-
ishment they convert into wax as white
as snow, which they drive out to the
mouth of the hole they have made,
where it remains congeal'd in drops by
the wind, and cold. Then the owners
of the trees gather it, and make it into
cakes as we do, which are sold all about
China.

The *Chinese* use some little wool, on-
ly in blankets for beds; for in their
cloaths, the commonalty wear cotton
quilted with the fume; and the nobility
in winter line theirs with several sorts
of furs of great value, which is also
us'd by the women, especially in the
northern provinces and court of *Peking*.
When the emperor appears in publick,
in the royal hall (which is done four
times a month) the four thousand *Man-
darines*, who come to pay their respects
to him, are all cover'd from head to
foot with costly fables. Generally all
the *Chinese* do not only line their boots,
and caps, but even their saddles, their
benches, chairs and tents.

The common sort that are able, cloath
themselves in lamb-skins, and the poorer
sort in sheep-skins, so that there is no
body in *Peking* in winter, but what then
is clad in skins, and some of them are
so rich that they cost two, three, or four
hundred crowns.

As for flesh, fish, fruit, and other Provi-
sions, it is enough to say they have
all those sorts we have in *Europe*, and
many more that we have not; and the
plenty appears by the small price they
bear. The *Chinese* language, as also
their writing being very *Laconick*; they
express almost all these things with six
letters, or syllables. The two first are
U-co, signifying the five principal sorts
of grain, that is, rice, wheat, oats,
millet, pease and beans; to which may
be added several sorts of pulse; as kid-
ney-beans, fitches, and tares. Two
others are *Lo-bio*, expressing six sorts of
flesh of tame cattle, which are the horse,
the ox, the hog (which is wonderful
good), the dog, the mule, and the goat.
The two last are *Pi-quo*, signifying an
hundred sorts of fruit; as pears (and
among the rest one particular sort call'd
Gogavar) apples, medlars, a sort of soft
apples, peaches, grapes, oranges, wal-
nuts, chestnuts, pomegranates, citrons,
lemmons, another sort of apples they
have in *Italy*, but the author says those
in *China* are not so good, pine-apples,
pistachoes, and others.

There are several sorts peculiar to
the country, as *Indian figs*, *Ananas*,
and

GEMELLI
1696.

GEMELLI
1696.
and others common to *Asia* elsewhere describ'd. One they call *Vinas*, is altogether peculiar to *China*; when ripe it is yellow as to colour, as to taste sweet and sower; but only the juice of it is swallow'd. There are also three other fruits of a most excellent taste. One call'd *Naichi*, or *Lichie* (by the *Portuguese* *Licbias*) shap'd like, and as big as a walnut, with a thin rind like the scale of a fish. Before it is ripe it is green, and when ripe draws towards a carnation, the taste delicious, and so much priz'd by the *Chinese*, that they keep it dry. The tree is as high as a pear-tree. The second (by the *Portuguese* call'd *Lungans*) is sweet and round like the *Lichia*, but of a greenish colour. The tree is very thick of leaves, and bears the fruit like bunches of grapes; but fresh gather'd and dry it is admirable pleasant. The third, call'd *Seyzu*, is a fruit in shape and colour like an orange, but with a thin smooth rind; its taste most luscious, and has little kernels within it like pistachoes. It is eaten green, and dry candy'd; but care must be taken not to eat any crabs after it, for that would cause most dangerous fluxes. The *Spaniards*, when they return from *Manila* to *New-Spain*, carry considerable quantities of them candy'd. The tree and its leaves are like our cherry-tree. They will all three be better conceiv'd by the figures here annex'd.

Tea, or
Chia.

The herb *Tea*, or *Chia*, being the most valu'd drink among the *Chinese*, as chocolate is among the *Spaniards*; because there is no visit where they do not use a great quantity of it, we will therefore say something of it. Tho' it has the name of an herb, yet the leaves are gather'd from little trees, which are not of equal value in every province, but that is best which grows in the province of *Cheking*, in the territory of the city *Hochiken*. In summer they bear a flower, that has a pretty scent, but the leaves must be carefully gather'd in winter. First they are a little heated in a caldron over a gentle fire; then they are laid upon a fine mat, and turn'd with the hands; then they are set over the fire again till they are thorough dry, and lastly they are put into wooden, or tin vessels, that they may not evaporate, and be preserv'd from moisture. When they would make use of it, they put it into a pot, and pour boiling water over it, which extends, and makes them green as they were at first, and the water takes a pleasant scent, and a taste that is not disagreeable, especially

when the leaves turn it green. There is such variety, and so many sorts of this herb, and the difference of its virtue, that there is some of it sold for about ten pence a pound, and some for ten shillings. One sort makes the water of a gold colour, another green; and as for the taste, some make it bitter. The best of it is very dear. The *Chinese* attribute it to this herb, that neither the gout, nor stone are known in their empire. They say, that taken after dinner, it prevents indigestion, and takes away all crudities from the stomach; it helps concoction, prevents drunkenness, hindering the fumes of wine to fly up to the head; takes away all the uneasiness of a surfeit, drying up, and expelling all superfluous humours; and helps studious persons that desire to watch. The plant and leaf may be seen in the cut.

There is also rhubarb in *China*, especially in the provinces of *Suebuen*, *Xenfy*, and in the country about *Socbuen*, a city not far distant from the great wall. This plant grows in moist places, and upon a sort of reddish ground. The leaves are generally two spans long, downy, and narrow at bottom. The stem rises a foot, and bears flowers like large violets, which press'd, yield a whitish juice, of a noisome unpleasant scent. The root is sometimes three foot long, and as thick as a man's arm; within it is yellow, with some reddish veins, from which flows a viscous juice, of a yellow, inclining to red. The time of gathering it is all winter till *May*, before the leaves bud out; because in summer it is light, and porous, and without that viscous juice, wherein its virtue consists. When gather'd they take away the beards, and cut it into bits, which they lay on a board, and turn three or four times a day, that they may not lose, but suck in their juice. Four or five days after they string them, to dry in the wind, in a place where they may not be expos'd to the sun, because experience has shewn, that makes them lose their virtue. This root when fresh is bitter in the highest degree. The *Chinese* call it *Tay-buam*, that is, yellow enough.

In *China*, the melons of all sorts are extraordinary good, as are the pumpkins, cucumbers, turnips, and radishes; there is no want of good coleworts, fennel, onions, garlicks, smallage, borage, and other herbs we have in *Europe*; but those that are peculiar to them are more plentiful and better. One is call'd *Lincbio*, which grows near the water

Game of
the court.

water, and produces a sort of fruit with two horns, tender enough, and tastes like an almond. An herb they call *Pez-zay*, is very savoury boiled. There are also *Potatoes*, and other nourishing roots.

As for flowers there are abundance, and very beautiful, especially *Tuberoses*. Of our sorts they have gilliflowers, roses, jasmín, and others. Those peculiar to the country are more for show than scent, and they set them between the rows of bricks in their courts, to make fine walks. They plant them in spring; in two months they grow a yard high, and last four or five months. They are of several sorts, but the best call'd *Ki-quon*, and *Laushiaz*. The first is like a velvet in several shapes and colours; the second is not properly a flower, but the last leaves on the top of the plant are so variously and beautifully colour'd, that they are valu'd beyond any flower.

All sorts of game is plentiful enough, especially about the court in the three winter-months; and accordingly in several markets design'd for this purpose, there are rows, two musket shots in length, of several sorts of four-footed and winged creatures standing upon their feet so hard frozen, that it preserves them from corruption. There are three species of bears; the first call'd by the Chinese *Gin-Hium*, that is, man-bear; the second *Keu-Hium*, dog-bear; and the third *Chu-Hium*, or hog-bear, because of some such resemblance in the head and paws. Bears feet well dress'd, are much valu'd in the Chinese feasts; and their fat is a great dainty among the *Tartars*, who eat it raw, mix'd with honey. There is also great plenty of all other sorts of wild beasts; as several species of deer, red and fallow, tygers, wild boars, elks, leopards, rabbits, wild cats, and rats, and others.

As for wild-fowl, there is a prodigious quantity of pheasants (as there is also in *Tartary*) they being sold for five grains of *Naples* money a-piece, partridges, quails, geese, cranes, and ducks. There are daws very remarkable for their feathers; for whereas all others are black, those in *China* have white breasts and necks. But they are not good to eat. In singing, the Chinese nightingale out-does ours in *Europe*, and the *Canary* birds; its note is so harmonious, sweet, and loud, and it runs such divisions, as if it had learnt to sing. It is three times as big as ours, but of the same colour; they call it *Sayu*. An other bird call'd *Saxxo* sings well enough. It has two white round spots under the eyes,

Vol. IV.

and all the rest of the body black. The *GEMELLI* *Martinbo*, as the Portuguese call him, is another bird to be kept in a cage, of which we have spoke in the third volume.

All that vast tract of land (as lies under so many degrees, we said in another place *Cbina* extended to) for the pleasantness of the soil, the plenty of fruit, and excellent improvement, looks like one continu'd garden. This falls out so because none of it lies under the torrid zone, except the extreme parts of the province of *Canton* and *Yuanji*, which reach beyond the tropick. The rest is all within the lower half of the temperate zone; yet so as in the provinces of *Peking* and *Sianji* they enjoy all those advantages the most northern countries abound in; for the winter lasts much longer than is usual in bare forty degrees of latitude. What by the extremity of the cold, and the nature of the water, from the middle of *November*, the ice is so thick and strong, on the rivers and lakes, that it bears horses and carts, and does not thaw till after *February*. Thus *Cbina* as far as may be advantageous to it, enjoys all the several climates, without the barbarity of the one extreme, or the too much luxury of the other. It is not all plain, nor all mountainous; but part one, part the other, in such proportion as is no less beautiful than profitable. For the most part there are most delightful small hills, every where till'd; there are *Appennines*, or vast mountains in every province; and groves of excellent trees, for the finest carving, and for the common use of building. Yet the best part of the mountains is till'd; for the Chinese being all intent upon tillage, level the steep parts, and make fields to sow; nor do they want for inventions and engines to convey the water up to the tops of mountains, or other places that want it with ease. These mountains are most delightful to behold at a distance, being all cut as it were in steps from the bottom to the top. As for plains, there are some so large, that to show their extent it is enough to say, there is one that reaches from *Nanking* to *Peking*, for several hundred miles, without one foot of land either barren by nature, or for want of improvement. The innumerable multitude of people forwards this work; to maintain whom, all the product of so vast a country so well improv'd is little enough. And it is so fruitful naturally, that there are two harvests in a year; and whilst they reap they sow again. Yet the land does not wear out,

A a a a but

but grows more fruitful, and yields plentiful crops; infomuch, that among the rest it is said of the province of *Sci-antung*. That one year's good harvest will keep it ten years, and longer. This makes it seem very strange to the *Chinese*, to hear that our land producing but once a year grows barren; and much more, that we must let it lie fallow a year to recover it self.

Whole-
some air.

Tho' *China* be water'd by abundance of rivers, and canals, and supply'd with many lakes and pools; yet the air is generally very healthy, and their seasons are as regular as in *Europe*. The northern provinces are extream cold, the southern hot, the others temperate. 'Tis true, that in the southern parts at some

times there blows such a pestilential wind, that it destroys very many; but they have a powerful antidote to secure themselves against it; which is, certain rings of *Tumbaga*, worn by the *Portuguese* of *Macao*; because that city is subject to those winds, as is *Manila*, and *Vera-cruz*, in *New-Spain*, and therefore the *Spaniards* value these rings, and buy them very dear. This *Tumbaga* is made of many metals run together, that is, gold the 16th part of an ounce, copper, *Tutunaga* found in *China*, the same quantity; and filings of steel, the sixth part, of the eighth part of an ounce. Great care must be taken in making the ring, because it is very apt to break.

CHAP. VI.

The Original of the Eastern Tartars, their Settlement in the Throne of China, and the Wars that ensu'd thereupon in the Empire.

The em-
peror's
pedigree.

THE original of these princes is so obscure, that whosoever has undertaken to give an account of it, has run into fables. They had their beginning in this age, from a small head of a hord, or captain of out-laws, or wandering *Tartars*, whose name was *Tien-mim*; on whom, as historians write, the emperor *Van-lie* bestow'd the government of the valley of *Moncheu*, and the adjacent parts, upon condition he should defend it against the eastern *Tartars*, who were divided into seven small principalities. *Tien-mim* dying, in the year 1628, his son *Tien-cum*, continu'd the war till his death, which was in 1634. *Cum-te* son to *Tien-cum*, being call'd in by the *Chinese* to their assistance, almost compleated the conquest of *China*; but dy'd in 1644 before he was settled in the possession. His son *Xun-chi*, at six years of age, was receiv'd as emperor at *Peking*, and dy'd in 1662, leaving for his successor, his son *Cam-bi*, who now reigns.

Tartary.

Before we give an account how these princes obtain'd the crown of *China*, it is to be observ'd, that *Tartary* (which contains all the north part of *Asia*) is by the *Chinese* divided into the eastern and western. The inhabitants of them both, for the most part, live wandering up and down with their cattle, and in tents; but the western are without all comparison the most powerful, possessing all the country lying between the furthest part of the province of *Peking*, and the frontiers of the *Mogul*, *Persia*, and *Muscovy*. The eastern *Tartary* reaches from the province of *Leaatung* east-

ward, beyond *Japan*, and contains the countries of *Niu-che*, west of *Corea*; *Niulban*, north of *Niu-che*; *Yupy*, east of *Niu-che*; the country of *Teso*, north east of *Japan*, and east of *Yupy*. These countries are poor, and ill peopled; there being in them, only two or three little cities, and all the rest wild, either woods, or mountains. Yet these *Tartars* are fear'd when they are united, because they are hardy, as being born in a sharp climate, and us'd to be always on horse-back, either for hunting, or war. They made themselves known by their incursions into *China*, above two hundred years before the birth of Christ, but in the twelfth century, they possess'd themselves of the provinces of *Leaatung*, *Peking*, *Xensi*, and *Xantung*. The predecessors of the *Tartar* prince now reigning in *China*, were so far from ever being masters of the eastern *Tartary*, that they were never lords of the country of *Niu-che*; for as has been said, there were seven several princes. And father *Adamus* writes, that *Tien-cum*, great grandfather to the emperor now reigning, when he entred *China*, had but eight thousand soldiers; which afterwards suddenly increas'd, the rest of the eastern *Tartars* running in to him, and an innumerable multitude of the western; being all allur'd, rather by the store of booty, than the fame of his victories.

Having promis'd thus much, it remains now to shew how the eastern *Tartars* possess'd themselves of the empire of *China*, which was thus. During the reign of the family *Mim*, the strength of

During the
the strength
of

of the empire being employ'd, upon se-
curing the frontiers next to *Tartary*;
eight captains of robbers, took the
field, and in a short time rais'd eight
armies. These contending among them-
selves for the sovereignty, reduc'd them-
selves to two, the one's name was *Li*,
the others *Cham*; who separating, *Cham*
took the way of the western provin-
ces of *Suebuen* and *Huquam*, and *Li* of
the northern. He having secur'd the
province of *Xenji*, laid siege to the
metropolis of the province of *Honan*;
and having rais'd it the first time with
loss, return'd to it the second, with a
greater power; and yet the besieg'd held
out bravely six months, being brought,
for want of provisions, to eat man's flesh.
At length the emperor's army came to
their relief, and cutting the banks of the
river, to drown the rebels, instead of
them drowned the city, and in it three
hundred thousand souls, at the latter end
of *October* 1642. In the mean time,
Li having possess'd himself of all this
province, and that of *Xenji*, first put to
death the governors of them, and then
dealt graciously with the people, easing
them so generously from taxes, that ma-
ny of the emperor's soldiers came to
serve under him. Then *Li* from a cap-
tain of robbers, took upon him the title
of emperor, and entering the province of
Peking, march'd directly to the court,
whither he had before sent several tra-
itors his confidents, to debauch the peo-
ple, and draw them to his party, and
was therefore sure of admittance; as well
on account of the considerable party he
had within, as because of the discord
between the ministers and eunuchs. In
Peking was a garrison of seventy thousand
men, and yet three days after *Li* came
before it, the rebels opening the gates,
he march'd in with three hundred thou-
sand men, and took his way directly
to the emperor's palace; who without
knowing any thing of what had hap-
pened, was mortifying himself with fast-
ing, among his *Bonzes*. Perceiving by
the sudden approach of the enemy, that
he was betray'd on all hands, he attempt-
ed with six hundred armed men to rush
out at the gates, and die honourably;
but being forsaken by them all, who
lik'd not the resolution of dying, he re-
turn'd to the palace, and retiring into
the garden, writ these words on the
hem of his garment. *My own Subjects*
have betray'd me; do with me as you think
fit, provided you do not hurt my People.
Then taking a dagger, he endeavour'd
to kill a daughter he had at woman's
estate, that she might not fall into the

Emperor
was
killed.

hands of the robbers; but she avoiding ^{GENELLI}
the blow, and being hurt in the arm, ^{1696.}
fell down in a swoon. At length the em-
peror throwing a scarf about his neck,
hang'd himself, at the age of thirty six,
and with him the empire, and all the fa-
mily to the number of eighty thousand,
all perish'd by degrees. The chief *Kolao*
following his example hang'd himself,
as did the empress and the faithful eu-
nuchs. The emperor's body being fought
after the next day, was found acciden-
tally; and being carry'd before the
usurper sitting on the throne, was con-
temptibly us'd. The emperor's eldest
son being fled, he caus'd the two youn-
ger to be beheaded, and having slain all
the ministers, abandon'd the city to the
fury and lust of his army.

Considering the miserable end of this <sup>Last Chi-
nese fami-
ly.</sup>
family, it seems to have made good the
saying in the book of wisdom, *In the
same that be Sins, in the same shall be be*
Punish'd. Because from the common sort
it rais'd itself to the throne, through the
industry of one of his fore-fathers, who
from a mean servant to the *Bonzes*, be-
coming a captain of robbers, put down
the family *Tuen* of the western *Tartars*,
which had rul'd eighty nine years, and
set up the family *Mim*, which continu'd
in the throne, during the reigns of twenty
one emperors, for the space of two hun-
dred seventy six years, till another cap-
tain of robbers utterly destroy'd it.

In the mean while *Li*, leaving a suffi- <sup>Bravery of
cient garrison in *Peking*, prepar'd to give a *Chinese*
battle to the general *Ufan-quey*, who had general.
the supreme command of the *Chinese* ar-
my, consisting of sixty thousand men;
and was employ'd in the province of *Le-
aoitung*, against the *Tartars*. He advan-
ced to attack the city, where finding
Ufan-quey, who defended it bravely, he
caus'd his father to be brought before
the wall, threatening to put him to a
most cruel death, if he did not surren-
der the city. *Ufan-quey* being on the
wall in that condition, knelt down and
begg'd his father's pardon, telling him,
He ow'd a greater Duty to his King and
Country than to him, and that it was bet-
ter to die, than to live subject to robbers.
The father commended his son's gene-
rous resolution; and willingly bowing
his neck was put to death.</sup>

Ufan-quey to revenge the emperor's <sup>Tartars
call'd in.</sup>
and his father's death, sent a solemn em-
bassy to the *Tartar Cum-te*, with confi-
derable presents, inviting him to march
with his army against the usurper; upon con-
dition concerted between them. He flew,
rather than march'd with sixty thousand
men into *China*, and soon caus'd the
siege

GEMELLI siege to be rais'd with loss to the besiegers. *Li* hereupon return'd to court; where not thinking himself safe, seizing the treasures, and firing the city, and palace, he fled with his army into the province of *Xenfi*, always pursu'd by the enemy.

Van-fuy
young
Tartar
emperor.

In the mean while, the Tartar king *Cum-te* dy'd, after having conquer'd the greatest part of *China*; leaving a son under age his heir, and the government of the empire to *Amavam* a petty king his brother. The *Chinese* were in hopes that the *Tartars* loaded with booty, would return home, but were soon undeceiv'd, for they coming to *Peking*, refus'd to go any further, saying the empire was due to their valour. Thus the infant but six years of age, yet wiser than could be expected at that age, entered the city in triumph, being receiv'd with the applause of the people, who placing him on the throne, saluted him emperor, crying, *Long live Vanfuy*, *Vanfuy* (that is ten and ten thousand years) which is the usual cry upon conferring the empire. *Xun-cbi* was the founder of this new imperial family, which in the *Tartar* and *Chinese* languages, is call'd *Tai-chim*, that is, of great purity, and began to reign in 1644.

Ufan-quey (who is thought to have slain the usurper *Li* in battle) perceiving too late, that to drive away the dog, he had brought the lion into the empire, receiv'd of the *Tartar*, the dignity of a petty king, and the title of *Pimfi*, that is, of pacifier of the west, and had the city of *Singan*, metropolis of the province of *Xenfi*, assign'd him for his residence.

Tartar
takes *Nan-*
king.

The *Tartar* having subdu'd the northern provinces, bent his thoughts and his power against the southern; laying siege to the metropolis of *Nanking*, where *Hu-quam*, nephew to *Van-lie*, had caus'd himself to be proclaim'd emperor. This unhappy man was taken, and carry'd to *Peking*, where he was strangled, together with *Cum-chim* the late emperor's eldest son. *Nanking* taken, the *Tartars* proceeded to the siege of the metropolis of *Ceking*; where *Lovam* a petty king had refus'd the title of emperor. He seeing the city attack'd by the *Tartar*, to prevent the slaughter of his people, kneeling on the wall, spoke these words to his enemies. *Do with me as you please; I offer my self a Sacrifice for my People.* Having spoke these words, he went out and deliver'd himself to the *Tartars*, which act of compassion, tho' it sav'd not his life, yet it sav'd the city and inhabitants. The suc-

cess was various in the provinces of *Fokien*, *Quantung*, and *Quamsi*; in the northern, they happily reduc'd the two *Chinese* generals, *Ho* and *Hiam*, by sowing discord among them.

In the western parts and province of *Suebuem*, another famous captain of robbers made most dismal havock. His name was *Cham-bien-chum*, by another name the *Nero* of *China*, and a devil incarnate. He after ruining the provinces of *Honan*, *Nanking*, and *Kiamsi* by his barbarity; bent all his rage against that of *Suebuem*. The first he slew, was the petty king of the precedent family, with many more; and very often for the sake of one that had offended him, he would butcher all the inhabitants of a street; for one soldier a body of two thousand, and for the mistake of one physician, an hundred or more of them. Of six hundred ministers he had under him, when their three years government was expir'd, he scarce sav'd twenty, all the rest being put to several sorts of deaths, upon light occasions. He slaughter'd five thousand eunuchs at once, because one among them, did not call him king, but by his own name *Cham-bien-chum*, and so for the fault of one *Bonze* twenty thousand of them. He call'd together all the students out of the neighbouring provinces to be examin'd, and they being come to the number of eighteen thousand into the city, he put them all to death, under pretence that they with their sophisticated notions stirr'd up the people to rebellion. He four times condemn'd the fathers *Buggio* and *Magalbaens* to death; but afterwards pardon'd them, being well inclin'd to the christian religion.

In the year 1646, being the 3d of the emperor *Xun-cbi*, being to set out for the province of *Xenfi*, against the *Tartars*, he caus'd all the inhabitants of the metropolis of *Cchim-tu* to be led without the walls bound, and he riding through the midst of them, as they knelt, begging mercy, stood doubtful what he was to do; and at last order'd them to be cut in pieces as rebels, and accordingly they were all butcher'd in his sight, to the number of six hundred thousand, of which number many infants were baptiz'd by the fathers of the society. This done, he order'd his soldiers that every one of them, following his example, should kill his wife, as being a hindrance to their martial profession. He of three hundred he had, kept only twenty maids to serve three queens, and according to his orders, all the women throughout the army, were put to death. At last having burnt that famous metropolis, he entered the

the province of *Xenfi*; but being there told the third time, that five scouts of the *Tartar* army appear'd; coming out into the field without his armour, to know the truth, a fatal arrow from the enemy, struck him through the heart. His army being then beaten and dispers'd, the people of *Sueben* receiv'd the *Tartars* joyfully as their deliverers.

Eleven provinces being almost subdu'd, there remain'd the four southernmost, which own'd the emperor *Yum-lie*. Three petty kings were sent from court with three armies, who soon laid siege to the metropolis of the province of *Quam-tung*, which having held out a year with considerable loss on both sides, was at last taken on the 24th of November 1650. The soldiers exercised their rage upon it for ten days, killing two hundred thousand citizens. Thence the *Tartar* army remov'd to the capital city of *Sbiakokin*, where the emperor *Yum-lie* not being able to resist with his small forces, fled to the province of *Quamfi*, and then to that of *Tunan*.

The following year dy'd *Amavam*, tutor and uncle to the emperor, a wife man, belov'd by the *Chinese*, and to whom his nephew ow'd the empire. His brother a petty king aspir'd at the protectorship, but all the great ones oppos'd him, alledging, *That Xun-chi was fourteen Years of Age, and marry'd to the Daughter of Tan-yu, King of the Western Tartary; for which reason he might govern himself.* The *Chinese* were so positive in this matter, that hanging on the ensigns of their employments at the palace gate, they declar'd they would receive them from no other hand but the emperor's, whereupon the petty king desisted.

Xun-chi who was excellently qualify'd, to gain the love of the *Chinese* shew'd himself familiarly to them, contrary to the custom of the antient emperors. He maintain'd the laws, statutes, and politicks of the *Chinese*, altering but very little. He kept up the six sovereign courts instituted above four thousand years before, but would have them be compos'd of half *Tartars* and half *Chinese*; suppressing the other six set up by the late family, in the city of *Nanking*. He united the sword and the pen, allowing *Chinese* philosophers to be governours of the city. This wise emperor being sensible, that the safety or ruin of the state depended upon the sincere and uncorrupt examination of the learned; and being inform'd that some had bought the examiners votes with gold, he put thirty six of them to death; and order'd those that had been examin'd to go

through it again, and those that were approv'd of again he pardon'd, allowing them their degree; those that were rejected and could not stand the test, he banish'd with their whole families into *Tartary*. The same sentence he pass'd upon other criminals, to people the deserts of that country, being satisfy'd their children and grand-children would there become *Tartars*.

In the year 1659, *Quefim* the admiral, A great son to *Nicholas*, who had continually in-pyrate. fested all the coast, committing rapine and slaughter, tho' the year before he lost five hundred ships in sight of *Nanking*, came now again with three thousand to besiege that place, possessing himself by the way of several cities and fortresses: *Lam*, a young *Chinese* being governour of the province. In a council of war, the *Tartar* general was of opinion that the city could not be defended, as long as they were not secure of the multitude of citizens, and that therefore they ought all to be put to the sword. *Lam* oppos'd that inhuman method, and said, *If there be no other way to provide for the Safety of the City, kill me first*; which expression mollify'd the hearts of those barbarians. The siege had scarce lasted twenty days before *Quefim's* birth-day came on, which all his army celebrated with feasting and sports. The *Tartars* laying hold of this opportunity, when the enemies army was bury'd in sleep and drunkenness, in the dead of the night attack'd it with such courage and conduct, that scarce three thousand of them escap'd to their ships, leaving all the booty to the victors. *Quefim* resolving to revenge that mighty slaughter, and the death of his father *Nicholas* and brethren, treacherously put to death by the *Tartars*, soon after fought their fleet, and after an obstinate fight defeated it, taking, sinking, and burning, a great part of it. Particularly he put to death four thousand *Tartars*, and having cut off their ears, noses and heads, threw the trunks ashore. The emperor not able to put up this affront, order'd all the rest that had been in the fleet to be put to death, because they ought to have conquer'd or dy'd for their country. In the year 1661. the same *Quefim* attack'd the city and castle of the island *Formosa*, then well garrison'd by the *Dutch* who had taken it from the *Spaniards* both by sea and land. After a siege of four months, the besieg'd oppress'd by famine, and disappointed of all relief, surrendred all the island to *Quefim*, who fixt there the seat of his empire. This conquest made him so

B b b b b haughty

VOL. IV.

GEMELLI 1696. haughty and bold, that he had the confidence to send father *Vittorio Riccio*, a Dominican missionary, his ambassador to the governor of *Manila*, to demand of him a yearly tribute, or else he would lay a bridge of boats from the island *Formosa* to *Manila* to subdue it. This struck such a terror into the governor and all the city, that holding a council to consider what answer to return, the archbishop was of opinion the blessed sacrament should be expos'd. This being devoutly performed, the father was sent back with a resolute answer; who no sooner arriv'd at the island *Formosa*, but he found the tyrant, through the just judgments of God, had dy'd with rage, having first gnaw'd off his fingers with his teeth, upon hearing of the league concluded against him between the *Tartars* and the *Dutch*; and that the governour had discover'd his conspiracy in the *Philippine* islands, and put to death several thousands of *Chinese*; as also that his son had committed incest with one of his wives.

To conclude the history of this famous family of pyrates, the reader must understand that it began in a captain of rovers, call'd *Cbin-chilum*, of the province of *Fokien*. This man first serv'd the *Portuguese* at *Macao*, by whom being baptiz'd, he had the name of *Nicholas* given him. From this beginning he grew up to be famous by contracting friendship with the *Spaniards* and *Dutch*, and put himself first under the emperor *Lum-ou*, and next under the *Tartar*, but both times deceitfully on both sides, so that being created a petty king, he was sent for to court upon false promises. His son *Quefim* succeeded him in the command of his navy; which the *Tartar* being jealous of, he oblig'd him by letters to call his son to him. *Nicholas* writ a letter, which he deliver'd to the emperor; and gave another, wherein he advis'd his son not to come to a barber his confident, who betray'd him, putting it into the emperor's hands. Hereupon *Nicholas* was put to death; and *Quefim*, tho' he had not suffer'd himself to be overcome by his father's letter, or the *Tartars* promises, yet came to the miserable end we have mention'd. *Quefim's* son continu'd the war against the emperor, who with the assistance of the *Dutch* who sent twenty five sail, drove him out of the maritime places of *Fokien* and all *China*. In 1683 he took from him the island *Formosa*, sending thither a powerful fleet, and corrupting the *Mandarines* and great men of the country. What kindred of his remain'd, the emperor caus'd to be convey'd to *Peking*, where I saw one of them, whose name

was *Cbin-chilum*, whom out of a jealous policy he honour'd with the title of a count.

Whilst the empire of *China* was thus consum'd with intestine wars, and labour'd under the fortunate successes of the *Tartar* arms; the unfortunate emperor *Yum-lie* withdrew into the kingdom of *Mien-que*, commonly call'd *Pegu*. The *Tartar* demanded him with threatening letters of that king, and having got him into his hands, immediately strangled him and all his family in the metropolis. His two queens being convey'd to *Peking*, were civilly treated, and it is believ'd they still continue in the catholick faith. It was in the year 1661 that the last of the late family of *Mim* were put to death.

This same year, for fortune is not always favourable, was fatal to the emperor *Xun-chi*. He fell in love with a most beautiful woman, and that he might enjoy her at his full liberty, sent for her husband, whom reproving for having behav'd himself ill in his office, he struck him over the face, and the poor man for grief dy'd within three days. Then he sent for the lady to court, and contrary to custom, made her second queen whilst the first was still living. The new wife was deliver'd of a son, for whose birth there was extraordinary rejoicing; but within three months the infant dy'd, and soon after his mother. The emperor was so concern'd at this loss, that growing outrageous, he would have killed himself with a poniard, had not the queen mother and the eunuchs prevented him; however he brought up an accursed practice, afterwards imitated by his successor, which was, that thirty men by a voluntary death, should appease the soul of his concubine, whom he thought he saw in a dreadful shape. He enjoyn'd all the great men and ministers of the empire, and all the commonalty to wear three months mourning for the empress, for so he call'd her after death. The funeral pomp was much greater than belong'd to her. The emperor himself, weeping like a child, put the ashes into a silver urn, as he had desir'd at her death. The urn was placed in a rich tomb, after the *Tartar* manner; and abundance of rich silks wrought with gold and silver, were burnt in the same fire. Two hundred thousand crowns were distributed among the poor; and two thousand *Bonzes* sang for several hours with loathsome superstition. The emperor in the mean while was so mad, that he perswaded the eunuchs and maidens to take upon them the

habit of *Bonzes*. He himself forgetting his dignity, cloathing himself like one of them, shav'd his head, and erected within the palace, three temples in honour of the idols he had before deip'd; besides going about the city to worship, sometimes one, and sometimes another. Father *Adamus* the Jesuit did not fail to wait on him, but his advice avail'd nothing, because the emperor being besides himself, after hearing of him, without making any answer, caus'd him to be dismiss'd with *Tea*, as has been said before to be the custom of visits. At length, finding his strength fail him, he caus'd four great men to be call'd, in whose presence he made a sort of confession of his sins; saying, *He had ill govern'd the Empire; that he had not paid the Respect he ought to his Father and Grandfather, most excellent Princes; that he had moreover slighted his mother's advice; that through covetousness of Gold he had defrauded the great Men of Pensions, and then spent it idly; that he had favour'd the Eunuchs too much; and that he had lov'd the late Empress so inordinately, that he had been troublesome to himself and his subjects in bemoaning her.* To conclude, he left his son but eight years of age under their tuition; and then having cloath'd himself, and compos'd his arms; saying, *I go*, about midnight he gave up the ghost in the 24th year of his age.

The *Bonzes* being all turn'd out of the palace, about noon the body was lock'd up, because he dy'd of the small pox, to be afterwards burnt when the hundred days were expir'd. After three days *Cam-bi*, then eight years of age, tho' he was the second son, was saluted emperor in pursuance of his father's will; it being a custom among the *Tartars* to fulfil the father's will, as dictated by heaven. At first the empire was peaceably govern'd by four great men. They caus'd the chief of the eunuchs to be beheaded, as the cause of all the mischief that had happened; four thousand of them were banish'd, and one thousand put to mean employments. It was order'd on account of the many pyrats, that the inhabitants of all the maritime cities of six provinces, should change their Habitations, and retire nine miles into the country; so that the gardens, castles, and cities, along the sea-coast, were actually level'd with the ground, and all trade by sea absolutely forbid. Many thousands hereupon were starv'd to death, who liv'd by fishing. In the year 1664 an edict was publish'd against the christian religion, as teaching wicked do-

ctrine and rebellion. Father *Adamus*, as GEMELLI 1696. head of it, was put into prison, with three of his companions, and declar'd guilty by several courts. All the European priests were summon'd to court, and the christian books condemn'd to the flames. In 1665, in a full council of all the great ministers, father *Adamus* was condemn'd to be hang'd, and then to be cut in pieces; but several shakes of an earthquake being on a sudden felt through the city, according to the custom of the *Chinese*, all were pardon'd but father *Adamus* aforesaid. However a month after, it being the king's birth day, he was discharg'd, and dy'd afterwards a natural death in *August* at *Canton*. In 1666, *Sony* the eldest of the four *Tartar* dy'd; whereupon *Cam-bi* solemnly took upon him the government of the empire.

Another storm disturb'd the empire *Ujan-quey* in 1673; for *Ujan-quey*, a most powerful petty king in the province of *Yunnan*, before spoken of, who indiscreetly brought the *Tartars* into *China*, being sent for by the emperor, refus'd to go, unless attended by eighty thousand men. Then dismissing the messengers, he shook off the *Tartar* yoke; and made the *Chinese* kalendar, which he sent to the neighbouring kings his allies, but he of *Tun-chin* refus'd, and sent it to the emperor. In the mean while *Ujan-quey* subdu'd the three provinces of *Yunnan*, *Suebuen*, *Quei-chen*, and almost half that of *Hu-quam*; for which reason the emperor beheaded his eldest son, and cut in pieces all the rebels, having discover'd their conspiracy.

Two years after, the petty kings of *Fokien* and *Quantung* rebell'd, for their fathers dying, they put on the *Chinese* cap: To which was added the new power of the petty king of the island *Formosa*, settled there after expelling the *Dutch*, as was said before. It must have gone hard with the *Tartar*, had all these been unanimous, and join'd their forces to fight for the liberty of their country; but the petty king seeing himself contain'd by him of *Fokien*, mov'd against him, and got the better in several encounters. In the mean while armies were sent from court under the command of *Tartar* petty kings. An uncle of the emperor's march'd to *Hu-quam*; one to *Cheking* and *Fokien*; and another to *Quantung* and *Quamfi*. The king of *Fokien* being worsted in several encounters, and not daring to trust his people any longer, shav'd his head, and deliver'd himself up to the *Tartar*, by whom he was receiv'd to mercy. The petty

GENELLI
1696.

petty king of *Quantung*, having a less title given him by *Usan-quey*, than belong'd to his dignity, fell off from him, and deliver'd himself and the province to the *Tartars*. The emperor overjoy'd at so much success on the 13th of July 1675, went to their house to visit the *Jesuits* of *Peking*, and there with the imperial pencil writ these two characters *Kim-tien*, that is, to adore heaven, which signifies the lord of heaven, and putting the imperial seal to it, gave it the fathers. The copies of these characters, set up by the three orders of religious men in their churches, are look'd upon as a tacit approbation of the christian religion.

Usan-quey
dies, his

emperor.

Usan-quey dy'd in the year 1679, and his son *Hum-boa* was proclaim'd emperor. The same year, on the 2d of September, about ten in the morning, a terrible earthquake shook all the city of *Peking*, and parts adjacent, overturning several palaces and temples, with the slaughter of near thirty thousand people; and being repeated, oblig'd the emperor and great men to live in tents.

Imperial
palace
burnt.

Petty king
of *Quan-
tung* his
punish-
ment.

In January 1680, the imperial palace was in a few hours burnt down, which damage amounted to two millions and a half of *Tayes*. The same year the petty king of the province of *Quantung*, tho' subject to the *Tartar*, being suspected, because he was of a turbulent spirit, and for holding correspondence with the *Spaniards* and *Dutch*, contrary to the imperial prohibition, besides that being supported by forty thousand soldiers, he was become powerful, and seem'd to design to destroy *Macao*; he was therefore order'd by the emperor, with a design to ruin him, to march with his forces against the rebels, in the province of *Quansi*; where a great part of his men deserting, he was forced to retire to his province. There he ended his days on the 9th of October, the same year; just at the time, when two messengers were come from the emperor to bring him, as an honour, a haltar to hang, or strangle himself with. Yet they omitted not to cut off the heads of a hundred and twelve of his faction, and among them three of his brothers. This prince deserv'd a better fortune, being very well inclin'd to the evangelical law, and favouring the missionaries, as has been said elsewhere. Whilst they consulted about confiscating his vast wealth, the *Tartar* thought fit to cause the coffin of this petty king's father, who was not yet bury'd, to be open'd, to see whether the body was clad after the *Chinese* man-

ner, but finding it in the *Tartar* habit, he left his goods to his brothers, among whom was the emperor's son-in-law. That same year the *Spanish* fathers of the order of *St. Augustin* entered *China*, by the way of the *Philippine* islands, and *Macao*.

The following year the petty king of *Fokien*, who had voluntarily surrendered himself to the *Tartars*, was at *Peking*, in the presence of all the people quarter'd, and his flesh thrown to the dogs, for the cruelty he had us'd towards several ministers he suspected, at the time when he rebell'd. His brothers, tho' innocent, had their heads cut off; and thus the *Tartar* without any opposition, made himself master of *Yun-nan*, the metropolis of the province. The emperor *Hum-boa* hanging himself of his own accord, prevented the enemies cruelty; who causing the bones of *Usan-quey* to be taken out of the grave, carry'd them to *Peking*, and part of them, for a terror to others, to be set up in several places; the rest reduced to ashes to be scatter'd in the wind. The year 1681, is counted the hundredth from the beginning of the mission of the fathers of the society in *China*.

At length, by the shedding of so much blood, and exercising of so many cruelties, the *Tartar* in the year 1682, remain'd peacefully possess'd of all the fifteen provinces of that vast empire; which, through intestine discord, had been by a handful of barbarous men taken from an innumerable, wise, and politick nation. Then *Cham-bi* resolving to see the country of his progenitors, and tombs of his ancestors, set out towards the eastern *Tartary*, on the 27th of March, with the prince whom he had declar'd his heir, three queens, some noblemen, and ministers belonging to the courts, and about seventy thousand soldiers. He also took along with him father *Ferdinand Verbiest*, a *Flemish Jesuit*. After this he went with a greater retinue into the western *Tartary* in the year 1683, being the 22d of his reign, carrying with him no less than seventy thousand horse, that stoath, and the delights of *China* might not debauch them, but they might be enur'd to hardships and warlike exercises, with frequent hunting, and killing of wild beasts. Thus, partly by this terrible demonstration of his power, and partly by his clemency, bounty, and bestowing of titles, he brought forty provinces in *Tartary* to pay him tribute. In this second expedition he took along with him father *Philip Grimaldi*.

CHAP. VII.

Noble Endowments of the Mind in Cam-hi, Emperor of China.

Cam-bi, the present emperor of *Cbina*, is of a pregnant and piercing wit, has an excellent memory, and a mind so unshaken, that no misfortune can move him. All his inclinations are noble, and worthy a mighty king; for he is a great lover of justice and virtue. He applies himself equally to learning, and gentleman-like exercises, to the attainment of the *Tartars*, who put a greater value upon his skill, than strength; for there is no great man that can bend the bow he makes use of, or manage it with such ease as he does; as well on the right as left; a horseback, or a foot; standing, or riding a full speed. He also manages fire-arms better than any *European*.

Martial exercises do not take from him an affection for musick, especially that of *Europe*, which pleases him in its instruments, grounds, and method; and had the great affairs of the empire allow'd him leisure to apply himself to learn to play, he would have been as successful in it, as in that of *China*. But the art of governing being the chief quality of a sovereign, he employs himself every morning at sun-rising, in giving audience to all the courts of *Peking*; the prime ministers whereof come to present him their memorials. When the matter is of consequence he refers it to the council of the *Kalaos*, who are properly the ministers of the empire, and having heard their resolution, he afterwards alone decrees as he thinks fit; the ordinances of none of the courts or ministers, or of the imperial council being of no force without his approbation. This is, because the government of *Cbina* is so absolute, that the emperor has the name of *Tienzu* given him, signifying, the son of heaven; and *Hoanti*, that is, sovereign monarch. This title would not misbecome him, were that true which father *Bartoli* writes, viz. that formerly the emperors of *China*, subdu'd and made tributary an hundred and fourteen kingdoms in *India*, extending their conquests over many great islands eastward, and southward in the archipelago, and as far as *Bengala*.

When *Cam-bi* goes out a hunting, or elsewhere, whosoever finds himself wrong'd by any *Mandarine*, waits for him on the way, and kneels down with his petition in his hand open, and he never fails to do speedy justice. He never had any fa-

vourite about him, but always govern'd alone; and therefore no man dares speak to him about any business that does not belong to him, or which he is not ask'd about. His custom is to inform himself several times in private by several people, when the affair deserves it; whilst the courts make publick search into the matter. Besides, he has an excellent memory to remember any thing that is past; so that it is very hard to impose upon him, but he will find it out.

Tho' the *Chinese* emperors in all ages depriv'd all foreign nations, not thinking them worthy to have any communication with them; yet *Cam-bi* treats the ambassadors of other princes generously, and with affection, throughout all his empire, furnishing them with all necessaries; as the *Portuguese*, *Muscovites* and *Dutch* can testify. In like manner, contrary to the custom of *Cbina*, he sent two embassies to the *Muscovites* to conclude a peace. This has certainly been brought about by the *Jesuits*, who by the many rarities they have presented him, have brought him to have some opinion of the kingdoms of *Europe*; 't much more by instructing him in our arts, and sciences, convincing him that there are learned and able men out of *Cbina*.

He has a watchful eye over his ministers for the impartial administration of justice; for after choosing them by the advice of his council, he punishes them severely if they do not perform their duty, and puts others in their places. His compassion for the calamities of his subjects is so great, that if there happens any dearth, he not only remits thirty or forty millions of taxes, but sometimes opens his granaries to relieve them.

He is attended by a vast multitude of courtiers and officers, who live upon him, wherein he far exceeds the best courts in *Europe*. As for his table he is serv'd in basons of gold and silver, according to the custom of the country; but even in this he gives a testimony of his modesty; for he abhors all extravagant expence in eating, (as in cloathing) strictly observing a fundamental law of the monarchy, which is, that the great ones and sovereigns be free from all luxury and sumptuousness. His apartments partake of the same modesty, for there is nothing in them answerable to the grandeur of such

GEMELLI 1696.

Love to strangers.

To his subjects.

His modesty.

GEMELLI such a prince, besides some painting, 1696.
gilding, and plain silk hangings.
His habit.

To particularize his royal garments it is to be observ'd, that in winter he wears plain silks lin'd with fables, or ermine; upon rainy days he sometimes puts on a woollen doublet; at other times in summer, he has a plain garment of stuff made of nettles, without any other garniture, besides a great pearl in his cap, as is the *Tartar* fashion. The chair he is carry'd in, either within or without the palace is only like a plain bier of varnish'd wood with some little latten plates, and wooden carv'd-work gilt. All the rich furniture of the horses he rides, consists of iron stirrups gilt, and reins of yellow silk. This modesty has not the least mixture of avarice; for when the publick is concern'd, he generously spends millions, scouring canals, building bridges, and bountifully relieving his distress'd subjects and soldiers.

Hunting.

He is such a lover of hunting, that he spends not only days but months in it every year, going once or twice into the mountains of *Tartary*. Thus he not only diverts himself, but prevents his soldiers using themselves to the *Chinese* course of life; being sensible that with a handful of hardy men he has subdu'd an infinite multitude of effeminate *Chinese*; and that it is absolutely impossible to maintain what he has got, if his men are debauch'd by the same vice. Therefore he himself (to give a good example to an infinite number of soldiers he takes with him a hunting) rides a whole day after a wild boar, always shooting, till he has tir'd six or seven horses. Sometimes he will go a great way a-foot, and holds on his sport, cover'd with dust and sweat, to the place design'd, without changing cloaths; exposing himself several hours to a violent hot sun, without making use of an umbrella. Amidst these fatigues he has nothing of dainty fare, and when reduced has nothing but beef, or mutton, whereof there is great plenty in *Tartary*. This makes his followers signalize themselves; perceiving their prince bears a great affection to those that imitate him, and hates those that love their own will.

Left the sons of the prime *Tartar* and *Chinese*, great men and *Mandarines* who serve under the *Tartar* colours, should give themselves up to sloath, and luxury, he puts them to the most painful and laborious employments. Some he appoints to look after his dogs, to hunt with them; others to his hawks and birds of prey, which they carry on their fist; others to get ready his meat, or *Tea*;

others to wait at table; others to make bows and arrows, and carry those that are for his use, and for the princes his sons; and lastly the most favour'd are in his guards with the *Mandarines*.

These virtues would suffice in other nations to make this prince be look'd upon as a hero; but among the *Chinese*, where employments and honours are bestow'd on account of learning, he would not be accounted a great emperor, if he had not signaliz'd himself in this particular, to suit with the genius of his people. Having apply'd himself to the *Chinese* literature, there are few books of theirs, which he has not read. He has a good part of *Confucius's* works by heart. He caus'd them to be translated into the *Tartar* tongue, writing the prefaces to them himself; as also the general history of *China*. He is skill'd in the poetry of both languages, and writes them both one as well as the other. As for the *European* sciences, father *Verbiest*, has taught him the use of the chief mathematical instruments; father *Pereira* the grounds of musick; and father *Gribillon*, *Euclid's* elements translated into the *Tartar* language. To this purpose these and other fathers were oblig'd to go every morning to the palace to teach him; he sending the horses out of his own stable in the morning early. Several months continual application made him familiar with all the necessary, and useful propositions of *Euclid*, and *Archimedes*, and their demonstrations. After learning the elements he would have father *Thomas* teach him arithmetick, and all that belongs to *Geometry*. He declares a great esteem for our *European* practice of physick; and the more, because he was cur'd of an indisposition by the *Jesuits* powder administr'd to him by father *Fontaney*. The same curiosity that mov'd him to study the *European* sciences, inclin'd him to be instructed in our religion, by the same fathers; and he conceiv'd so good an opinion of it, that he has often said, it will in time be the prevailing religion.

Tho' it be a custom among the *Tartars*, and they look upon it as a point of religion, to present their eldest daughter to the emperor, who may accept of her, and keep those he likes; yet *Cambis*, knowing this custom had made his predecessors too effeminate, is so far from any inordinate appetite, that being employ'd three or four months in hunting and fishing, he never carries any women along with him, and has sometimes refus'd very beautiful ones that have been offer'd him. He is sensible that a dis-

lute life dissolves the heart, and impairs health; and that rebellions are frequent, where he that should be at helm is shut up with a crowd of women, neglecting the affairs of state.

At some times of the year, besides the hunting season, he causes the soldiery to be employ'd in martial exercises; and generously rewards those that perform best, to encourage others to improve. Amidst his other excellent qualities, he has a most unparallel'd temper of mind in all affairs, so that he is never in a passion. When he was shewn the way how they found cannons and mortars in *Europe*, he had a great number cast for the use of his armies, and made some of his bombardiers learn to throw bombs. He is so great a lover of art, that it is now six years since within his own palace he erected an academy for painters, carvers, and watch-makers, rewarding the best masters. When I was there he had fourteen sons, and several daughters, all whom he edu-

cated under a strict discipline, obliging them to study all sciences, and practise all noble exercises; and tho' it be the custom to give the emperor's sons the title of kings, when they come to sixteen years of age, and to assign them a particular apartment, and suitable court; yet tho' his eldest son be twenty four years of age, he has not granted him this privilege; notwithstanding the court of princes, and the crown officers have mov'd him upon it several times. His second son is educated with a more particular care above the others; he having declar'd him *Hoang-tay-tse*, that is, heir apparent to the empire; because this is the first he had by the empress his first wife; the sons of that princess who has the title of empress, taking place always of the others. This second son is almost in his twenty fourth year, well qualify'd, virtuously inclin'd, and above all well affected to the catholick religion and the missionaries.

CHAP. VIII.

Of the great Wealth of the Emperor of China.

NO man of sense will doubt, but that the emperor of *China* is the richest monarch in the world; not only because of the extent of his empire, but because his subjects do not only blindly obey, but adore him. It is not without reason I say they adore him; because at present the emperors of *China* have the power of deifying whom they please, as formerly the *Roman* senate did. At the time when father *Mathea Riccus* entered *China*, he saw this impious act committed by the emperor *Van-Lie* then reigning. He had put to death a *Kolao*, whose name was *Cham-Kiu-Cham*, for some familiarity with his mother. The lady concern'd at the death of the *Kolao*, and fearing a like end, fell sick, and dy'd a few days after. Then the emperor to restore his mother's reputation by some extraordinary honour, solemnly declar'd her *Kieu-Lien-pusa*, that is, goddess of nine flowers; so that there are at present temples to be seen erected in honour of her, where she is ador'd under this title, as *Flora*, a strumpet, was honour'd by the *Romans*, as goddess of flowers. After the same manner a *Bonze* of those of the sect of *Tauju* (who marry, and do not shave their heads) above four hundred years since, insinuated himself so far into the emperor's favour by the means of chymistry and magick; that he, not

satisfy'd with having honour'd him more than as man whilst living, when he dy'd, would declare him God and Lord of heaven, the sun, the moon, and stars. By these two examples we may perceive how blindly the subjects obey, since they believe the emperor of a poor wretched man can make a most powerful God; and the learned are such great flatterers, that they not only approve hereof, but persuade the emperor to such actions so contrary to reason.

To give a small specimen of the emperor of *China's* immense treasures, will give a short account of his revenues taken out of a writer in great repute among the *Chinese*, whose books are call'd *U-bio-pien*.

In the first place there comes into the imperial treasury every year eighteen millions and six hundred thousand crowns in silver; wherein are not comprehended the duties paid out of all things bought and sold throughout the empire; nor the revenues of the crown lands, woods, and gardens, which are very many; nor the product of fines and confiscations, which sometimes amounts to several millions; nor to conclude, the revenues of estates real taken from rebels, such as seize the king's revenues, or being in employments, wrong private persons to the value of a thousand crowns; or who have

GEMELLI committed other heinous crimes.

1696.

There is also brought into the treasury, under the denomination of the queen's revenue one million eight hundred twenty three thousand nine hundred and sixty two crowns. And into the emperor's stores forty three millions three hundred twenty eight thousand, eight hundred and thirty four sacks of rice and corn.

Rice and corn.

2dly, One million three hundred and fifteen thousand nine hundred and thirty seven loads of salt of fifty eight pounds each.

3dly, Two hundred and fifty eight pounds of superfine vermillion.

4thly, Ninety four thousand seven hundred and thirty seven pounds of varnish.

5thly, Thirty eight thousand five hundred and fifty pounds of dry fruit, viz. grapes, figs, nuts, and chestnuts.

Into the emperor's wardrobe are brought, 1st, six hundred fifty five thousand four hundred and thirty two pounds of several silk stuffs, of various colours, besides the imperial garments brought by the boats, as has been said.

2dly, Four hundred seventy six thousand two hundred and seventy pieces of slight silks, which the Chinese wear in summer.

3dly, Two hundred seventy two thousand nine hundred and three pounds of raw silk.

4thly, Three hundred ninety six thousand four hundred and eighty pieces of cotton cloth.

5thly, Four hundred sixty four thousand two hundred and seventeen pounds of cotton.

6thly, Fifty six thousand two hundred and eighty pieces of hempen cloth.

7thly, Twenty one thousand four hundred and seventy sacks of beans, to feed the emperor's horses instead of oats.

Lastly, Two million five hundred ninety eight thousand five hundred and eighty three trusses of straw of fifteen pounds each.

These two last particulars were so un-

der the Chinese emperors, but at present three times the quantity, because of the vast number of horses the Tartar emperor keeps.

Besides all these things related by father Magalbaens, there are brought to court oxen, sheep, swine, geese, ducks, pullets, and all other sorts of tame creatures; and abundance of all sorts of fish, and game. All sorts of herbs and fruit, as green in the midst of summer as in spring, so industrious is this nation in preserving their gardens. There is also carry'd in butter, oil, vinegar, and all sorts of spice; wines from all parts; several sorts of meal, bread, and biscuits; and therefore it is impossible to know the quantities of all things that are daily brought to the court.

Hitherto I have transcrib'd what the fathers Magalbaens and Couplet relate; but I will in fewer words make the reader comprehend the vast wealth of this monarch. His subjects (abating an hundred millions of the three hundred father Bartoli allows) are two hundred millions, according to the common computation.

Now the emperor's duty for every head above sixteen years of age, and under sixty, by way of pole-tax a *Tayes*, which as has been often said, is fifteen *Carlines* of *Naples*, or a noble *English*. Now deducting the women, and all persons tax-free, it will be easy to compute from how many millions he receives this pole. Add to this his chief rents; for all the land in *China* is held in fee of him, and consequently there is not a foot of land but yields him an income. Therefore considering the vast extent of the empire, it will be easy to conceive, without being a great arithmetician, how many millions come into the emperor's treasury; to which, adding the customs, and all that has been mention'd before, any man may be convinced, that as there is no monarch in the world, that equals him in the number of subjects and soldiers, so there is none to compare with him for wealth.

A Voyage round the World by Dr. John Francis Gemelli Careri. Part IV.

Containing the most Remarkable Things he saw in
CHINA.

BOOK IV.

CHAP. I.

The Author's Return to Nanchianfu by Land.

*Inter-
Gemelli.*

THE cold at Peking being too sharp for me, I resolv'd to leave that place, and take up my journal where I left off.

On Saturday the 19th of November, I went to father Grimaldi, to desire him to get me three mules for my journey; which his servant hir'd for five *Leans*, and two *Ziens* of fine silver of *China* each, which amounts to seven pieces of eight and a half; a low rate for a month and four days journey. The same father shew'd me abundance of optick glasses to magnify and multiply objects; geometrical instruments to measure, and arithmetical to cast accounts without the help of a pen, all invented by himself for the emperor, who was a great lover of such things. He told me he was making an engine to throw water a great height in case of fires. He had liv'd thirty years in *China*, and being belov'd by the emperor, had the honour to go with him four times into *Tartary*. He had travell'd many parts of the world, from *Europe* into *China*, and thence back into *Europe*, with several misfortunes. He was a while a slave among the *Malais*, the ship he was in being cast away in the governours streight; in the *Portuguese Indies* he was long besieged by the savages, in danger of losing his life or his liberty; and therefore no man in the world could give a better account of the empires of *China* and *Tartary*, and of all *Asia*; and the more, because he spoke the *Chinese* and *Tartar* languages

Vol. V.

I desir'd him to oblige the publick, in printing some account of what he had seen; but he answer'd, that having read, the last time he was in *Europe*, so many false stories concerning *China*, he had forbore printing, as he design'd, to avoid giving so many authors the lie; and particularly the *Dutch*, who had printed their solemn embassy to the great *Cham* of *Tartary* (to which he himself had been interpreter to the emperor at Peking) in which there were more lies than lines, in what does not relate to the description of cities. That this had happened, because they had brought with them for their interpreters, some *Chinese* of the southern provinces, who had never seen the court, and were little skill'd in the *Portuguese* tongue; wherefore when questions were ask'd them, either they knew nothing of the matter, or if they did, could not explain themselves, and thus the *Dutch* writ at random, putting what sense they would upon the confused speech of their interpreters.

GEMELLI

1696.

False ac-
counts of
China.

Sunday the 20th, I view'd the new ci- Temple of
ty, and then went to the old of the emperors
Tartars, to see the temple call'd *Ti-vam-
miao*, or the Temple of all the past Kings.
This is a large sumptuous palace, with
several apartments and courts. The last
great room, or hall is as fine, large,
and well adorn'd, as that of the royal
palace. There are to be seen in it state-
ly thrones, the statues of all the empe-
rors, good and bad, that have reign'd

D d d d d for

GEMELLI for four thousand five hundred and forty years, from the first call'd *Fo-bi*, to the last, whose name was *Xun-chi*, father to him now reigning. This temple is seated in one of the finest streets in the city; in which on both sides, being the ways into the temple, two triumphal arches are to be seen, with each three noble gates, worthy to be observ'd. All persons that go through this street, of what quality soever they be, when they come to the arches, alight, out of respect, and walk afoot, till they are pass'd all the front of the temple. Here the emperor every year, performs an infinite number of ceremonies in honour of his predecessors; which would be too tedious to particularize.

Monday the 21st, I went to take leave of the fathers of the society, and particularly of father *Grimaldi*, who shew'd me several curiosities, and among them a girdle the emperor had given him. It was yellow, which is the imperial colour, with a sheath made of a very fine fish-skin, hanging to it, in which were the two little sticks and other utensils, the *Chinese* use at table. This is a great gift in *China*, for he who receives it, is respected not only by the common sort, but by all the ministers, and great ones; and every man, at the sight of that colour, is to kneel, and touch the ground with his forehead, till he that has it on covers it, as the same father *Grimaldi*, when he was coming into *Europe*, did at *Canton*, with a *Mandarine*. This man had demanded a watch of father *Xaime*, or *James Tarin* of *Valencia*, a *Franciscan* missionary; and the poor religious man having none, he was so offended, that he durst presume to set up a declaration in his city, where the father was head of the mission, to make known, that the catholick religion was false, and taught a wrong way to eternal salvation. The *Chinese* christians were disturb'd at this proceeding, and acquainting the father with it, he, in his zeal, went to the place, and instead of blotting, tore the *Mandarine's* declaration. This put him into a great rage (their orders being highly respected in *China*) and thereupon he persecuted father *Tarin*, till he oblig'd him to retire to *Canton*. Father *Grimaldi* in the mean while pass'd that way, and by the said *Mandarine's* coming to pay his respects to him, as to one so much esteem'd by the emperor, he receiv'd him, with the end of his yellow girdle in his hand, and reproving him for his unwarrantable proceeding, in the little respect he

Honour
of the yellow
girdle.

shew'd his brethren, and daring to condemn the catholick religion, when the emperor honour'd christians with that gift. The poor *Mandarine* in the mean while gave his forehead to many strokes on the ground that at last the missionaries themselves intreated father *Grimaldi*, not to mortify him any more. Therefore bidding him rise, he charg'd him for the future, to use his brothers well, or the emperor should be acquainted with his misbehaviour, to punish him severely. None but the emperor, and princes of the blood of the male-line, and some others, to whom it is given as a special mark of favour, can wear yellow, and the girdle of that colour, for the princes of the female line have it red. Father *Grimaldi* gave me a pass to the same effect, as *Monsignor Sisare* had one, when he went to *Macao* to be consecrated bishop of *Nanking*; expressing in it, that I going to *Fokien* to fetch books for the emperor's service, none should presume to molest me, on account of the arms, and a black I carry'd, but should be aiding to me upon occasion. The father told me, that tho' I had been no way disturb'd by the governors of cities, in coming to court; yet they might put me to some inconvenience in my return, and therefore I had need of his pass, which was well known, and honour'd by all the ministers of the empire. I have the said pass by me still, in the *Chinese* tongue, it having sav'd me from any molestation on the road. The lion I mention'd in the third volume, was sent from *Goa*, had not yet reach'd the court; but the same father told me, he had notice of its being shipp'd at *Macao*, on the 10th of *September*, and that he expected it with impatience, to present it in his own name to the emperor. Being to depart the next day, I took my leave of the fathers, thanking them for all their favours. Father *Grimaldi* gave me an almanack he had, made for the year 1696, in the *Chinese*, and *Tartar* languages; and father *Ossorio* a *Portuguese*, gave me four other books in the *Tartar* tongue, and provision of sweetmeats.

Having agreed with the muletier, and given him all the hire of the three mules (for in *China*, either by land or water, they will be paid before hand) I expected him on *Tuesday* the 22d till noon and then set forward, attended by father *Grimaldi's* servant, till without the gate, I pass'd through the town of *Lapuxau* (which in coming, I left on the right hand, having mis'd the way) about two

musket-shot in length, and one and a half in breadth, but has a good wall, and two strong gates plated with iron. Close by it we cross'd the river (which we had forded as we came) on a stately stone bridge, half a mile long, and adorned every two paces with handsome little stone lions on both sides. At night we lay in *Lean-xien-xie*, having travel'd seventy *Ly*. Our supper and beds were very bad; but the first of those evils, I remov'd with an excellent pheasant, bought at *Peking*, for less than six pence. Here I found a *Tartar* attended by a footman and page, and several servants, going the same road, so that afterwards we travel'd together.

On *Wednesday* the 23d, near the town of *Tantien*, I saw a handsome *Pagoda*, call'd *Xien-gben-fu*. It is enclos'd with high walls, in compass about a quarter of a mile, and has monasteries of many *Xobian*, or *Bonzes*. In the first *Miau*, or *Pagoda*, was an idol sitting after the eastern manner, all gilt, with abundance of little idols in the niches, about the wall. In the second, were three women sitting on a lion, and two dragons, all gold colour. Here I found the table cover'd; for the *Bonzes* dine betimes. In the third, was an idol like a *Briareus* (sitting as the first did) for besides the usual hands and feet, he had twenty hands on each side, and two feet held up in the air; and five heads, one above another. There were several courts with apartments for the *Bonzes*, and fine trees. We went to dine at the town of *Lixao*, and at night having travel'd one hundred and thirteen *Ly*, we lay at *Sanchin-xien*.

Thursday the 24th, we rested in the town of *Pecuxo*. Before we got in, I saw several *Bonzes* pass by, who were going to take up a dead body, two and two, in procession with copes on; some of them playing on certain instruments, and others carrying umbrellas with long silk curtains about them, banners, and other ornaments. Next we pass'd through the forsaken town of *Xinn-xyen*, and then through the suburb, which is large and populous, in the midst whereof, under two arches, were several idols, and *Bonzes* sacrificing, in order to go then to eat up an excellent meal provided by the kindred of the dead man. Here we lay at night after travelling eighty miles.

Before sun-rising on *Friday* the 25th, we breakfasted in the town of *Chio-pecuu*, because of the good fish there is in the lakes about it. Near the bridge is a

notable inscription, set up there on account of the emperor's passing that way. We din'd in the suburb of the town of *Gin-chyeu-xien*, which has not such good streets and shops as the suburb of the other town before, but is only remarkable for being wall'd two miles in compass with a wet ditch. After riding one hundred and twenty *Ly*, we set up at *Refelipu*.

Saturday the 26th, we rested in the town of *Sbian-kelin*, and went on to lie at *Fuchian-y*, having rid one hundred and twenty *Ly*. Having travel'd the same way in my journey to *Peking*, I omit to mention the town, or rather cities then spoken of in the way to *Nanchianfu*, and will here only mention those where I stay'd at noon, and night, with the distance of *Ly*, or *Chinese* furlongs.

Sunday the 27th, we din'd at the towns of *Manxo*, and at night having travel'd one hundred and thirty *Ly*, lay at *Liu-chi-miau*. The cold travellers endure this days journey is very great, there being neither wood, nor coal, so that our host at night, burnt dry herbs and straw to dress the supper. *Monday* the 28th, we din'd at *Cushipi*, and lay at *Jau-chiaen*, one hundred and twenty *Ly* journey. *Tuesday* the 29th, we din'd at *Cautan-chou*, lay in the suburb of the little town *Schipin-xien*. *Wednesday* the 30th, din'd at *Tunchen-y* lay at *Cbyen-xien*, one hundred and twenty *Ly*. *Thursday* the 1st of *December*, din'd at *Xuan-gua-biena*, lay at *Sbiagoben*, one hundred and ten *Ly*. It may be said we travel'd all the way through a well-till'd plain, so careful are the *Chinese* at improving. Here we observ'd, that to the plough-share, they added a round iron plate, to break the mould. *Friday* the 2d, rested at *Uvam-shian-xien*, lay at *Cau-sio*, ninety *Ly*. *Saturday* the 3d, din'd in the city of *Jenchifu*, which is well enough inhabited, has good shops, is enclos'd with a handsome wall and wet ditch. There is such plenty of pheasants in *China*, that I bought four here for about two shillings. We lay at *Tantan-tien*, having travel'd sixty *Ly*.

Sunday the 4th, we rode through the town of *Zuxien*, which is small, and has nothing remarkable, and then thro' its suburb, where there is a good *Pagoda*. First we came into a square place, each side of it a musket shot in length, adorn'd with tall cypress trees; thence into another such court, wall'd in, and with such like trees, on the front whereof are three doors, leading into as many

GEMELLI

ny courts, all enclos'd with walls. Opposite to that in the middle, there are three doors, near which is a noble epitaph, and tomb of a *Cbinese* lord bury'd there, supported by a great crocodil, the other two courts have but one door each. Going in at the middle door of the three aforementioned, there is a porch, with cypresses, which are never wanting in the *Cbinese* burying places which leads to the chief *Pagod*. In it there are two large idols, one in the main nich, the other on the left; both of them sit looking on something they hold in their hands. From their heads hangs down a diadem after the antient manner, to which before and behind are fastned strings of beads of several colours. Near to this is another *Pagod* little inferior to it, where the idol is a woman sitting, whose ornament on the head is five birds carv'd as if flying, with long tails. Going in at the door on the left, there is a *Pagod* in the porch, where is an idol sitting with a long beard, as time is pictur'd among us. Behind there is another, where they adore the figure of a woman, like the other before-mention'd, but with only three birds, they call her *Mamon*. There are other statues before the door, and at the feet of those here describ'd, all of them frightful and arm'd, as if they were bravoes to guard the entrance. They are all made with clay cover'd with lime, or plaister of *Paris*, the bone-part of wood. At the door on the right: there are two other *Pagods*, and other courts with cypress-trees and epitaphs, and two good cover'd galleries on the sides. We dind at *Cbyay-xoy-te*, after passing through the little town of *Uya*, which tho' enclos'd with mud walls, has an excellent suburb. At night we lay in *Sbiaxotien*, having travell'd one hundred and twenty *Ly*. Before we got into this place we met abundance of mules loaded, with a good guard of soldiers, and then a bier carry'd by thirty men, on which was a coffin with the body of a *Cbinese* lord. To denote what it was, there was ty'd on it a white cock, which is the colour of mourning, according to custom; but this is sometimes transgress'd for want of one of that colour. Behind it came a lady in white, with a white cloth over her head, and carry'd in a white chair by four men. Two maids attended her with white hoods on their heads, as were their cloaths, but their faces cover'd with black veils. They told me that was the dead man's wife. Then follow'd

about twenty litters in which were the dead man's women, attended by many soldiers.

Monday the 5th, We din'd at *Sbiacubian*, and lay at *Ninij*, one hundred and twenty *Ly*. This place has such plenty of hares that they are sold for about three half pence a piece. *Tuesday* the 6th, din'd at *Luyala*, where is a long bridge over the river, and passing the rapid river *Suchen* in a boat, lay at *Sanpu*, one hundred and ten *Ly*. *Wednesday* the 7th, din'd at *Senfun*, and lay at *Nanfuchen*, one hundred and twenty *Ly*. There might be good eating in the inns, but the *Cbinese* refusing to pay more than their usual ordinary at dinner, and for supper and bed, the host gave them the worst fowls and swines flesh; but I made them kill the fowls before my face, and paid more for them, because I cannot eat them stale. *Thursday* the 8th, by reason of the rain, we could go no farther than *Sanbian*, fifty *Ly*. *Friday* the 9th, din'd at *Cuchen*, lay at *Leanchen*, eighty *Ly*. *Saturday* the 10th, leaving the road to *Nanking*, and taking the way on the left to *Nanchianfu*, we cross'd the river *Xuayxo* in a boat, into which we were carry'd on the backs of peasants, who continually wait on both sides for this purpose, with stirrups on them, because the boat came not close to the shore. We din'd at *Cbianchingoy*, a town on the bank of the same river; and lay at the town of *Fumanfu*, ninety *Ly*. This place tho' large has no wall, but good streets. There are also courts in it, with a large hall in the middle, and several rooms one over another all of wood, but well built. At the door of this hall were several prisoners, with chains at their feet, and a great square board about their necks, which weighed about an hundred weight.

Sunday the 11th, We lay still to rest the horses, and therefore taking a chair I went to see the town of *Xuanchen*. Its wall is half a mile square, within which there are none but little thatch'd houses. But it is to be observ'd, that the north side is clos'd by the tops of mountains, and longer than the others. On that side also there are few houses, the rest being plough'd fields. *Monday* the 12th, we din'd in the town of *Hyn-chie-chyen*, and having travell'd all the rest of the day over plains and mountains, lay that night in the town of *Tinganxyen*, ninety *Ly*. The walls are not above a mile in compass, nor is there in it any more than one street, where the market is kept, and there are good shops as are

in the suburbs. Tuesday the 13th, rest-
ed at *Chianchiau-yen*; and travelling con-
tinually along a plain country, came at
night to *Patein*. For so good a road
the inns are bad; and I was forced to
lie in the same room with a *Tartar*,
who being laid in his bed, made his
page beat his belly like a drum, that
he might fall asleep, and the same mu-
sick was repeated three hours before day.
The day's journey was one hundred *Ly*.
Wednesday the 14th din'd at *Leaux-yen*,
having first pass'd through *Tienpu*, a large
but open town, where the *Tartar* re-
main'd that lov'd to be beaten by boys.
Going out of *Tienpu*, I met a *Manda-
rine* with a great retinue. Before him
went many carriages guarded by sol-
diers; next came a great number of ser-
vants and officers in chairs all in a row,
and pages and other attendants on horse-
back: Next follow'd the *Mandarine*
in a chair carry'd by eight men, and be-
set with abundance of soldiers, carrying
several small banners, and one great
one. After all came many more sol-
diers and servants to the number of about
a thousand. These *Mandarines* we must
own take more state upon them than
any vice-roy in *Europe*. At night after
travelling one hundred and ten *Ly*, I lay
in the city of *Luchifu*, the compass of
whose walls, surrounded with water, is
small, there being but the third part of
a mile from gate to gate. Yet there
are good shops, and the suburbs are
large. Thursday the 15th, I din'd at
Paxoy, having travell'd over plains well
till'd, I came at night to the town of
Tauchen, after a journey of an hundred
Ly. This place, tho' without a wall, is
large, and has good shops. Having
cross'd the river here upon a bridge of
boats, we lay in the suburb. Friday be-
comes we pass'd through the town of
Luchibin-xyen, which tho' wall'd, has
nothing good in it. We rested at *Nan-
zian*, and having travell'd a while among
mountains, came out into a plain, amidst
valleys well inhabited, and lay at *Tacu-
on*, after a journey of an hundred *Ly*.
About these mountains is found a sort
of *Tartufs*, which are no other but *Pig-
nuts*, call'd by the *Chinese* *Mati*; but
small like a little turnip, and tasting like
a new chestnut. Saturday the 17th, ha-
ving travell'd over plains and moun-
tains, we din'd in the town of *Tunchin-
xyen*, seated at the foot of mountains,
well wall'd, inhabited, and has good
shops, tho' the suburbs are much lar-
ger. In the shops here I saw some turnips
hanging up by the small end, in which

Vol. IV.

corn was growing, which they did by
putting a little earth into a hole made
in them, and watering it every day. At
night we lay in the town of *Tauchen*,
after a journey of an hundred *Ly*.

Sunday the 18th, riding through groves
of cypress-trees, and coating the moun-
tains on the right, we went to dine at
Siabicheu; whence we went into a plain,
many miles in length, full of little coun-
try houses, gardens, and Farms. At
night we lay at *Zenxyan-xyen*, a town
enclos'd with low walls, broke down in
some places, and with wretched houses
within; the whole days journey ninety
Ly. Monday the 19th, we travell'd
much such a road to dine at *Seaubi-y*.
In the afternoon pass'd through the
town of *Taixu-xyen*, which is two miles
in length from one gate to the other.
In the houses there is nothing to please
the eye, yet there are good shops,
both within and without the suburbs,
which are very populous, by reason of
the trade a small river by it brings thi-
ther. At night we lay at *Fun-xyan-y*,
the last town of the province of *Nan-
king*, which we entred at *Sucbeu*. Tues-
day the 20th, we entred an angle of
the province of *Huquani*, through plains
all cultivated, not far from the moun-
tains. We din'd at *Tinzan*, and lay at
Xuan-may-xien, a town that has an in-
different wall three miles in compass,
and good suburbs. Within it were shops
not at all contemptible. The whole day's
journey an hundred *Ly*. Departing
from the mountains on Wednesday the
21st, and travelling through open plains,
we went to dine at the town of *Cun-
lunga*, on the bank of a small river,
and tho' open has good shops. At night
we lay in *Siauchi-kue*, having travell'd
ninety five *Ly*. This city is on the left
bank of the river *Kian-xo*, which is the
greatest in *China*, and divides the pro-
vince of *Huquani*, from that of *Kiang-fi*.
The city is small, without any enclosure,
but well inhabited, and has good shops.
Thursday the 22d, mules and baggage
were put into a boat and we cross'd over,
paying twenty *Zien*, which is not three
half pence for each beast, but not for
the men, and there is a custom-house,
which takes cognifance, only of packs,
for passengers equipages are not search'd.
The river is about two *Italian* miles
over. Mounting we rode to the city
Kiukyafu, seated on the right hand of the
river. The walls are eight miles in com-
pass, but there are more fields than
streets within them. The suburb is
large, being about three miles in length,

Reeee . populous

GEMELLI
1696.

GENELLI
1696.

populous, and full of good shops. Between the city and suburb there is a great lake, from which runs a small river. We din'd at *Tun-Jueny*, a town among the mountains, having travell'd sixty *Ly*. It is incredible what a vast Quantity of fish is taken in the rivers and lakes on this road; and therefore the inn-keepers for ten *Zien* furnish a bed, and a better supper of fish than they would of flesh. Friday the 23d, going on still among mountains, we rest'd at *Ushimen*; and passing through the little city of *Tengan-xyen*, which tho' partly unpeopled, has something good still, came at night to *Tnan-pu*, having travell'd ninety *Ly*. Saturday the 24th, we rode through fruitful plains, and over pleasant hills to the town of *Sinkyen-xien*, which tho' large in circumference, is partly disinhabited, and has nothing in it observable. We pass'd over the river, which is a mile off, in a boat, and din'd at the town of *Saniaru*, where we again cross'd the same river in a boat, without paying any thing for it, the watermen being paid by the country. That day we travell'd a hundred *Ly*, and lay

that night at *Coxoa*. Sunday the 25th, having rode thirty *Ly*, we came to *Nanchianfu*, after travelling thirty four days, and three thousand two hundred and thirteen *Ly* from *Peking*; and the city being all encompass'd by the river, I went over in a boat, leaving the mules on the other side. I took up my quarters in the house of the *Jesuits*, whose superior was not yet return'd from *Canton*; so that I spent so great a day as the nativity of our Saviour alone and melancholy, without so much as hearing mass, for want of a priest. In the afternoon I went to a great palace, call'd the school, or academy of *Confucius*. When I went into the hall, one of my servants who was a christian, knelt down, worshipping the picture of the philosopher which was there; and I having severely reprimanded him for such an action of abominable idolatry; the wretch told me, *That the Missioners of the Society allow'd that to be done; as an outward Act of Worship*; which silenced me, calling to mind the controversy there is on this account, between them and the *French* vicars apostolick.

CHAP. II.

The Continuation of the Author's Journey to Kuan-cheu or Canton.

HAVING hir'd a boat to continue my journey, for two *Lean* and seven *Zien*, which amounts to four ducats, and a very small matter over, articles being formally drawn in the presence of such persons as have power over the boats, and having provided all necessities, I set out before noon. All that day we advanced but thirty *Ly*, and lay that night at *Serimi*. Tuesday the 27th, having run fifty leagues we came to *Cbiangutu*, a town of few houses; but on Wednesday the 8th, after sailing eighty *Ly*, lay on an open shore. Thursday the 29th, came to the town of *Xopu*, eighty *Ly*. Friday the 30th, lay at *Sbiakian-Xien*, a wall'd town, tho' seated on the tops of mountains. We sail'd but eighty *Ly*, because there was but little wind, tho' the *Chinese* sailors to make it blow the more, superstitiously kept whistling. Saturday the 31st, a stiff north wind carry'd us one hundred and forty two *Ly*, tho' we lost some hours expecting it should abate a little, so that I was constrain'd to make them set out by force. At night we came to *Kinangfu*; and I refusing to go to the house of father *Gregory Ibanez*, a *Franciscan*, he came to

see me in the boat, where he diverted himself till midnight.

Sunday the first of January 1697, we lay at *Jynsun*, eighty five *Ly*. Monday the 2d, at *Pekiazun*, seventy *Ly*. We made little way because the Waters were low, tho' the river of *Nangansu* at *Canchenfu* is increas'd by another on which there is but indifferent going to *Fukien*. Tuesday the 3d, at *Huenlon*, one hundred and twenty *Ly*. Wednesday the 4th, at *Taukian*, only seventy *Ly*. Thursday the 5th, at *Canchenfu*, ninety *Ly*. Leaving a servant in the boat, I went in a chair to the church of the *Jesuits*, where father *Grillon* a *Frenchman* was superior. There I found father *Provana* of *Turin*, with whom came from *Goa*, father *Vanderbeck* a *Flemming* of *Mecblin*, and father *Amiani* of *Piemont*, worthy persons design'd for the mission of *China*. It was a great comfort to me to meet these friends. That night there was a great resort of christian *Chinese* to the church, on account the next day was the feast of the epiphany, and they play'd on so many instruments, that I could not sleep a wink. Because of that feast, I did not set out on Friday the 6th.

6th. *Saturday* the 7th, towards evening I return'd to the boat, but could only sail twenty *Ly*, because of the winding of the river, and stay'd in the suburb of the same city of *Canchoufu*, call'd *Namen*, but a mile from it by land. Here I went to see a spacious *Pagod* in a field. In the first place there is an idol with two swords in his hands, and two other statues on his sides. In the inward *Pagod* over a court, is a great gilt idol, with a sword in its hand, placed in the biggest nich, and two other statues at his feet. On the floor there are four, two on each side, very coarse, large, and arm'd, as if they were to defend the entrance.

Sunday the 8th, we came to the guard and town of *Kiumiu*, eighty *Ly*. *Monday* the 9th, we continu'd the morning at the *Tanfu*, and guard of *Jasutan*; and then entred between the mountains of *Nanganfu*, where the river has so many windings, that the way is twice as long as by land. *Tuesday* the 10th, we came to the guard of *Lanzun*, eighty *Ly*. *Wednesday* the 11th, to *Nanganfu*, seventy *Ly*. Here I was entertain'd by father *Peter de la Pilona* of *Mexico*, a *Franciscan*, who treated me handsomely, and therefore without much intreating I consented to stay with him *Thursday* and *Friday* the 12th and 13th. That day I hir'd three chairs, at the rate of one hundred and sixty *Zien* each (a piece of eight at *Nanganfu* is chang'd for one thousand *Zien* or more) and several porters to carry my equipage, at eighty *Zien* a man. *Saturday* betimes I took chair with father *Peter*, and was carry'd up the steep mountain, for above three miles without setting my foot to the ground; for which the poor men better deserv'd a piece of eight, than about a shilling they had. About the middle of this mountain is a *Pagod*, which divides the two provinces; and here the vice-roy, the *Chiankyun* general of the *Tartar* troops, and the *Titu* general of the country troops, take possession of their employments; the seals being deliver'd to them in the said *Pagod*, by persons deputed by the courts of *Canton*. This *Pagod* serv'd by *Bonzes*, is divided into the lower and the upper. In the first is a gilt idol sitting, of a gigantick stature, and without any beard. The *Chinese* who pay him great veneration, call him, *Fu*, and others *Foe*. Ascending some steps in the upper *Pagod*, appears an idol call'd *Vuen-shin-shon*, with a crown on his head, and a sort of royal mantle on his shoulders. This

statue like the other is gilt, and sitting with two others close by its feet. On the right hand going in is the statue of *Chian-lao-je*, who was a great *Mandarine*, at present honour'd as a God, and accounted the protector of courts. All over this mountain and that near it call'd *Nanganfu*, there grow certain small trees, call'd *Mufchiu*, which produce a fruit as big as a little nut, round and black, with some seeds in it, which press'd, yields the best oil there is in all *China*. The fruit they call *Muzu*, and the oil *Mu-yen*, that is, oil of trees, to distinguish it from the other sorts made of herbs, and several seeds, which serve for lamps. Being come up the mountain I met several troops of soldiers, and other persons of note, going to *Nanganfu*, to meet the *Titu*, who was coming to take possession of his employment, in order to go on to *Canton*. A little way behind came the wife of a *Mandarine*, with a great many people on horseback, and officers of justice with rods and staves before her; after the same manner as her husband would have travell'd, stopping every body they meet in a chair or on horseback. She was carry'd in a chair by eight men, and follow'd by others that carry'd her maids. A little son of hers but three years of age, but brisk and sprightly, sat on a horse alone. I din'd half way, and then setting forward came to *Nanganfu* two hours before night, tho' I set out late and the days were short. The *Chinese* chair-men, are not inferior to a *Tartar* horse, for they trot five miles an hour. They reckoned that days journey twelve leagues, but they were not above eight, or a hundred and four *Ly*, a league being thirteen *Ly*. This happens in all the high-ways, where for the benefit of the couriers the *Chinese* make the *Ly* short, and in other places long. Father *John Nicholas de Ribera*, of the order of *St. Augustin*, and apostolick missionary in this city, treated me very courteously, especially with good chocolate, as he at *Nanganfu* had done before. There being a scarcity of boats because the *Titu* was expected, I had much difficulty to hire one to *Canton* for three thousand three hundred *Zien*, which are three pieces of eight; whereas they usually give but one thousand or one thousand one hundred *Zien* for one in that city.

Sunday the 15th, after dinner, having return'd thanks to father *John*, I went aboard a great boat, which I well knew to be slow, because there was but little water,

Mountain
of Nan-
ganfu.

water, but having paid the master before-hand, I was forced to have patience. Two women row'd much better than the men; tho' they carry'd their children at their backs. Having pass'd two bridges, near the one and under the other, they joining two little suburbs to the city, we lay at *Peyentan*, after sailing twenty *Ly*. Monday the 16th, we sail'd but fixty, by reason of the bigness of the boat which touch'd where there was but little water, so we lay at the town and guard of *Xuan-tan*. Tuesday the 17th, we lay at the guard and town of *Sinchi-an-Shiwy*, sixty *Ly*. Here the water grows deeper, for at the town of *Kiankeu*, another river from the mountains falls into that we were on. Wednesday the 18th, we came to *Sbiachufu*, one hundred and twenty *Ly*. I went to the house of the French fathers, and tho' I found not the missionary, was well receiv'd by his servants. Thursday the 19th, I went about to see the city. It has stately walls, so contriv'd that a man may go quite round always under cover. The compass is above four miles besides the suburbs. The streets are long, strait, well pav'd, and with good shops. At the south end of it, a navigable river falls into the great one that comes from the west. After dinner I went aboard at the south gate, the wind being fair, but the weather calming afterwards, we could sail but forty *Ly*, to the town and guard of *Peru*.

Friday the 20th, we run one hundred and ten *Ly*, to the guard of *Vanfucan*, the two women still rowing, as did the five men. The fair north wind continuing. Saturday the 21st, we run one hundred and forty *Ly*, and came at night to the guard of *Xyackeu*. Having on Sunday the 22d, pass'd the other streight between the mountains, where there is a great *Pagod*, with other little ones among the rocks, shaded with high trees, we held on our way with little wind, but much heat, tho' it was then the depth of winter. This is found in *China* by reason of the variety of climates. Near the northern mountains the cold is very piercing as far as *Nanganfu*; and from thence southward the heat prevails. About sun-setting we met three great boats, well cover'd with abundance of flags and banners, as the custom of the country is, for there were *Mandarines* in them. Our European missionaries use these outward shows, to perform their mission with success and decency, because the Chinese christians are much addicted to these exterior pomps.

Having run one hundred and forty *Ly* we lay at *Quantikou*, where the aforesaid *Mandarines*, who were going to meet the *Tsu*, stay'd that night. The soldiers who expected them on the shore saluted with small shot. The heat was intolerable on Monday the 23d, when leaving on our right hand under the shadow of an infinite number of trees, the populous town of *Seutan*, we stop'd at the guard of *Licbi-Iwen*, having run one hundred *Ly*. Setting out hence four hours before day on Tuesday the 24th, (that we might come betimes to *Kuancheu-fu* or *Canton*, as the Portuguese call it) we came before break of day to *Fucian*. I went there in a chair to see father *Capaccio*, a missionary of the society, crossing the city, which is three miles over, all the way among handiome and rich shops of all sorts of commodities and provisions, and all manufactures of the country. This place in *Italy* would pass for a village, because it has no wall, and is subordinate to *Canton*. It is five miles in length, and three in breadth, the river running through the middle of it, and there are as many boats on the water, as houses on the land. It is govern'd by a *Mandarine*, who can decide no controverſie without consulting the courts at *Canton*. For military affairs here resides another small martial *Mandarine*. All *Mandarines* generally say, *Fucian* contains a million of inhabitants. Taking leave of father *Capaccio* I continu'd my voyage, and God be prais'd, after running eighty *Ly*, came back safe to *Canton*, when the *Franciscan* missionaries imagin'd, I had either been stop'd on the road, or fallen into some trouble at *Peking*, because the *Jesuits* do not like that *Europeans* should go thither. They were the more confirm'd in their opinion because I knew not the language, nor my two servants one word of *Portuguese*, to understand me in changing so many boats, and travelling so far by land; to which must be added my distemper and weakness, which I never recover'd. This I say to shew that dangers and misfortunes never stay'd me, but despising them all, with the divine assistance, I at length by God's help overcame them, and found by experience, that they are ever represented greater than really they are by envious persons, on purpose to disappoint the most glorious undertakings. The muletiers reckoned from *Peking* to *Nanchianfu*, three thousand two hundred and thirteen *Ly*; and the watermen from *Nanchianfu* to *Canton* two thousand

ty paces each, which reduced to *Italian* miles, make a thousand four hundred and two.

GEMELLI 1697.

CHAP. III.

The Chinese New Year, and solemn Festivals of the Lantorns.

I Came to *Canton* with a resolution to go on to *Emuy* in the province of *Fokien*, and there embark for *Manila*; but finding the loading of *Canton* already gone, and a ship belonging to that island in the port of *Macao*, I chang'd my mind, and expected to go aboard that vessel; and the rather, because in the house of the *Franciscan* fathers I found three *Spaniards*, who came to *Canton* to lay out one hundred and eighty thousand pieces of eight, they had brought aboard their ship. Getting acquainted with them I laugh'd at the wonders they made at my boldness, in coming to *Canton* without a pass, and then going on to *Peking*; whereas the *Xu-pu* or custom-mer, took thirty pieces of them for their pass. On *Wednesday* the 25th, several friends came to congratulate my happy return; and on *Thursday* the 26th, there being no such visits to receive, I went about the city to see the preparations for the festival of the new year. The gates of the old city call'd *Lauchin* were shut on *Friday* the 27th, for fear of some mutiny, and there was a search of the very feats of the guards at the gates. One they said was a captain of mutiniers, who was imprison'd with twenty of his confederates, and still there was looking out to secure others, for fear they should come with a great number of boats to besiege *Canton*. The people it is certain are so oppress'd with taxes and impositions, since the *Tartar* government, that peace is not likely to last long in *China*. *Sunday* the 29th, the search was continu'd against the mutiniers, not only in the old city, but in *Sanchin*, or the new.

A famous Pagod.

Monday the 30th, I went over the river in a boat to see a famous *Pagod*. At the gate of the first court I found two gigantic statues on each side, standing as if they guarded the entrance. At the second gate of the second court were four others terrible to behold, one of which held a guitar in his hand. Opposite to them was a great *Pagod*, in the biggest nich whereof there were three gilt idols sitting of an extraordinary magnitude.

On each side there were eight others made of plaster colour'd, and behind one of brass. On the sides of the court were two other *Pagod*s, in each of which was an idol standing of gold colour, well made. In the third court was a small marble pyramid thirty foot high, with figures carv'd all about it, and behind it another *Pagod* with several idols. About it were the apartments of two hundred *Bonzes*, who live on the revenues of the *Pagod*.

The *Chin-yue*, or *Chinese* new year, begins with the new moon that falls next to the 5th of *February*, or the 15th degree of *Aquarius*, which divides into two equal parts the space between two points in the equinox, and solstice; and on that day according to them, the sun enters a sign they call *Lie-chiun*, or the resurrection of the spring. They reckon twelve lunar months, one call'd little of twenty eight days, and the other great of thirty, and every fifth year they make an *Intercalar* year, adding all the days lost in the former, so that they come even with the sun, or solar year. The weeks they divide like us, according to the number of the planets, to each of which they assign four of their constellations, one a day, so that after four times seven, they return to the first. They reckon the day from midnight to midnight, dividing it not into twenty four hours as is done among us, but only into twelve equal parts, and all these, that is, the whole natural day is divided into an hundred parts, and each of those parts again into an hundred minutes, so that ten thousand of these make a day. Then as for their hours they do not count them by numbers, one, two, three, but by names and characters proper to each of them; whereof three are much observ'd and esteem'd very mysterious, by reason of the position of the heavens that must answer to them. The first is the moment of midnight, for then they say the heaven was created; then the second, because then they say the earth had its being and form; and in the third, man.

GENELLI This time the new year fell out in 1697. *China*, on the 3d of *February*, being *Friday*, whereupon the missionaries thought fit to dispense with the *Chinese* Christians eating of flesh, as also on *Saturday* following, else they would have taken leave. This dispensation rais'd new disputes between the bishop of *Macao*, and *French* vicars apostolick; for he having sent the dispensation, to exercise this act of jurisdiction, the vicars answer'd they had no need of it, being sufficiently authoriz'd from the see apostolick. *Tuesday* the 31st, I took my pleasure about the city, which was all sumptuously adorn'd, and resounding with joy; the courts being shut, and the imperial seal lock'd up several days before to give way to the festival. There is no certain day perfix'd, either for shutting up, or opening the courts and seal, but they are appointed from court, with the direction of the *Chronologers*; that the emperor may begin again to reign on the new year, in a happy day, and hour. That year 1696, they were shut up on the 22d of *January* in the evening. It is very dangerous to travel, during those days, because there is no administration of justice, all thieves and robbers going abroad then, upon the security that they cannot be presently punish'd. But in the streets, the guards are then doubled to catch thieves whose punishment is deferr'd till the opening of the courts. The poorest wretch puts on new cloaths at the new year, new papers his widows, and walls; renews the epitaphs, and inscriptions about his house, and is sure to lay in a stock of wine, and provisions to feast with his friends.

Wednesday 1st of *February*, I went at night, to see the illuminations all about the city. *Thursday* the 2d, being the last day of the year, began the solemnity of the new year, to take leave of the old. The celebration is as follows. At night in all houses, the sons kneel before their parents, the younger brothers before the elder, the servants before their masters, touching the ground with their heads, and perform the ceremonies according to the custom of the country, mention'd in another place. The women do the same among themselves; for in *China*, it is so strictly forbid to converse with women, that the father-in-law, must never see his daughter-in-law, if they are of quality, and goes only upon this day, with her son to perform this duty. But before they require this duty of their children, the

masters of the families pay it to their ancestors; touching the ground three times with their forehead before their tablet, that is, the fathers, grandfathers, and great grandfathers, and burning sweets before it. *Friday* the 3d, in the morning long before day, the most superstitious of them, went to those *Pagods* they had a devotion for, to touch the ground with their foreheads, and burn sweets, and of those coils, made of the barks of trees bruiz'd, we have given an account elsewhere. After which they use to pay visits to their friends, which is sufficiently perform'd by leaving it written on a piece of red paper, that they were there to wait on them; and this is done to save the trouble of compliments when they meet. But kindred and special friends see one another; and no man in their visits can avoid drinking three cups of liquor made of rice, and thus he who has many relations, and friends, tho' he goes from home never so grave, returns light headed and reeling. I say grave, because on these days, the *Chinese* go like so many religious men, in a very stay'd posture, being of opinion that if they laugh, weep, play, or commit any other light action, they shall be inclin'd to do the same all the year after. In short, this beginning of the new year, is celebrated with reciprocal visits, eating, drinking, and rejoicing; a troublesome noise of *Chinese* drums, and other instruments resounding for three whole days; besides fireworks, whereof we shall speak hereafter. Abundance of money is spent in powder, and paper, as well to be us'd in the houses, as to burn in the *Pagods*, after the sacrifice, and offering of flesh, fowls, and fruit, which they afterwards carry home to eat with their friends.

The same 3d day in the morning betimes, I went to see a very inconsiderable thing in my fancy, but very great in the opinion of the *Chinese*. Going out at the gate of *Lauchin* on the east side, I saw a vast great cow, made of colour'd clay, hemm'd in by a multitude of *Chinese*, who beating it to pieces with long poles, wherein consists the sport, went to logger-heads, about who should get the little calves made of the same stuff, which were in the cows belly. This they do in remembrance of an antient emperor of theirs, whom the multitude believes to have been converted into a cow, which was good only for the plough. They told me they afterwards presented the calves to great men.

men for a good new years gift. At my return, I went in to see two very large Pagods, the first erected in honour of *Cbianlaoye*, a deity, for whose service there are always horses standing ready before the temple gates, because they say he would ride a thousand leagues a day, on them. There are also about the courts, several statues in sundry horrid shapes. At the upper end of the Pagod is the aforesaid idol, *Cbianlaoye* sitting, with a thing like a diadem on his head. I found many idolaters offering meat ready dress'd, and fruit; burning sweets, and paper to be converted into gold and silver, to serve the dead. Others took a piece of stick, slit through the middle, and flung both pieces up into the air. If one or both of them fell to the ground with the flat side, that had been cleft through, upwards, it was counted a good omen, and a sign the idol was pleas'd with them; but if the bark of both was upwards, that was a very ill sign. But they threw them up so often, that at last the sticks must needs fall as they would have them. Others rolling about great faggots, drew out a stick to know their good, or ill fortune, and this they repeated till they drew one that was fortunate. The other Pagod was near the palace, which formerly belong'd to the petty king, but at present to the Tartar general. It is divided into three parts, one within another; in the first, I saw three idols in the nich, bare-headed, and other great statues on the ground. In the second there were also three idols in the nich, and four by their sides on the ground. In the third, there were five horrid figures upon the ground, and one great idol of a gold colour, and another little one in the niche. In my way home, I met a number of *Mandarines* in chairs, and on horse back, most richly clad, with the ensigns of their employments and degrees embroder'd on their garments. They were going to pay the usual adoration in the Pagods. *Saturday* the 4th, those who had receiv'd the compliments of the new year, were employ'd in returning the visits, either in person, or with the red paper, according to the custom of the country. This is to be understood of inferior *Mandarines*; for the five great ones receive them, and make the return by petty *Mandarines*, or other officers of their courts; and only visit one another personally. These five principal ministers of *Canton*, are the *Fuyen*, or vice-roy; the *Puchiansu*, or receiver ge-

neral, of all the taxes of the province; *Gemelli* the *Zian-chyun*, or general of the Tartar troops, and two associates of his, call'd *Tutun*, nam'd the right and left arm of his body, and these are of equal authority; being carried in a chair by eight men, with the *Chinese* drum before them, beaten with thirteen strokes following. *Sunday* the 5th, I went to the church of the *Spanish Franciscans*, whither abundance of *Chinese* christians resorted to perform their devotions. *Monday* the 6th, a *Chinese* merchant invited me to his house; but gave me my dinner too early, according to their custom. There were on the table, at least twenty little dishes with several sorts of fruit and sweetmeats and others with chickens, and swines flesh. I saw nothing worth mentioning the following days, till *Monday* the 13th, when I went about to see the preparations for the feast of the lanthorns made throughout the city, as being one of the chief festivals of the *Chinese*, and to say the truth, I met with wonderful inventions. The *Chinese* give the following account of its original. They say, that not long after the erecting of their empire, a *Mandarine* much belov'd of the people for his virtue, lost a daughter he doated on, upon the bank of a river; and going along the shore to look for her, all people follow'd him weeping, with lighted torches and lanthorns; but tho' he sought for her a long time in all places about the bank (much as *Ceres* did her daughter *Proserpine*) yet she was never found. The learned in their books, assign another original; which is, that three thousand five hundred years since, in the reign of the last king of the family *Ilia*, whose name was *Kie*, a cruel man, and wholly given up to sensuality; he being one day with his best beloved queen, lamented that the pleasures of this life, were not lasting; that few liv'd an hundred years; that time being so swift, he could not satiate himself with those pleasures, he so dearly lov'd, and in short he reflected upon nature as unkind, and cruel. The queen seeing him so disturb'd, said, *I know such a way to prolong time, as will satisfy you. Make a Month a day, and a Year a Month, and thus the Years, Months, and Days will be so long, that living ten Years, you will have the Pleasure and Satisfaction of an hundred.* Therefore she persuaded the foolish sensual emperor, to build a palace without windows, that no light might come in. Then the caus'd it to be adorn'd with

GEMELLI

Festival
of lanthorns.

GEMELLI with gold, silver, precious stones, and
 1697 rich moveables, brought in a number
 of boys, and beautiful girls, all naked, and in fine, bury'd her self, and her husband there alive, without any light but that of an infinite number of flambeaux, and lanthorns, instead of the sun, moon, and stars. There the emperor *Kie* continu'd a whole year with his leud queen, giving himself up to all sorts of lustful pleasures; forgetting time, heaven, and every thing else, even their court and empire, and framing to themselves new times and new heavens in their own conceit. His subjects provok'd by these extravagancies, and his cruelty, revolted, and set up in his place *Cchim-tam*, head of a new family. After *Kie's* death, they destroy'd his palace, and repeal'd all his ordinances, except the invention of flambeaux and lanthorns, which they preserv'd to celebrate the festival. They tell further, that about two thousand years after that, another emperor of the tenth family call'd *Tam*, had such faith in a juggler of the sect of *Tao-fu* (whose profession it is to impose on the world with chimerical operations, promising endless gold and silver, a life almost everlasting, and in a moment to remove mountains) that one day he told me, he had a mind to see the lanthorns lighted in the city *Yam-cheu*, in the province of *Nanking*, which were the finest and most applauded throughout the empire; and the festival was the next night. The conjurer answer'd, he would carry him thither to see the lanthorns, and bring him back again the same night, at his ease, and without the least trouble. In effect, soon after there appear'd chariots and thrones in the air, made of clouds, which seem'd to be swiftly drawn by swans; and the king and queen mounting them with a great number of ladies; and musicians belonging to the palace, came to *Yam-cheu* in the twinkling of an eye, the clouds spreading and covering the whole city. The king saw the lanthorns, and to requite the citizens for the pleasure he had taken in their city, he caus'd his musick to play, and then return'd to his palace in a moment. A month after an express came according to custom from that city, mentioning what had been there seen on the lanthorn night. Lastly, they say, that five hundred years after, there was a king of the family *Sum*, who us'd every year at that time to shew himself familiarly to all the lords, and great men, with the doors open, affording

them the satisfaction of enjoying the sight of the fine lanthorns, and fireworks, and the hearing of the charming musick he had in his palace.

Thursday the 14th of February, and the 12th of the Chinese moon, I went at night about the city of *Canton* to see this rejoicing. In every quarter of it, or ward, was set up some figure of their idols, about which there were several persons disguis'd, some like women, and some otherwise, with preposterous habits and masks, and several instruments in their hands. In these shapes they went about the town upon asses, or a-foot (as is us'd in the carnival in *Italy*) with a long procession before them of lanthorns on long poles. They were made either of paper, or of taffeta of several colours, and in the shape of several creatures, as fishes, dogs, horses, lions, and the like, which with the light were very pleasant to behold; all this attended with noisy instruments of brass and drums. The best of it was that some went naked to act their parts more to the life. But the prime part of this solemnity is to be seen in the *Pagods*, and the palaces of the great lords, where there are lanthorns that cost fifteen, or twenty pistoles, and in those of the vice-roys and princes, they are not worth less than an hundred, two hundred, and three hundred crowns. They are hung up in the stateliest halls, by reason of their greatness, for there are some twenty cubits diameter, or more. Within them is a vast number of lamps and candles, whose light sets off the painting, and the smoke gives life to the figures, which with wonderful art run round, leap, and go up and down within the lanthorn. There are to be seen horses galloping, carts drawn, men at work on the land; ships under sail, *Mandarines* and princes going in and out with numerous trains; armies marching; plays acting; dancing, and other sports with several motions. The people go about all night enjoying these sights, playing on instruments, in companies made up of families and friends. There is no house rich or poor, but that night has its lanthorn either in a court, hall, or window. There are also puppet-shews, and others by shadows made to appear upon fine and transparent white silk, wonderfully representing kings, queens, commanders, soldiers, buffoons, and other things proper for the stage. The wonder is to see them express weeping, joy, anger, and other passions, with as much ease

case as they make all the figures move. Near the *Pagods*, besides the aforelaid figures and shows, there are several arches cover'd with silk, with variety of painting, which the light within shews pleasant and diverting. In short, upon this occasion there are several millions spent throughout the empire, as well in colour'd paper to adorn the houses, as to burn, make fireworks, and lanthorns. Methinks if it were possible to see all the empire at one cast of an eye from some high place, it would appear all in a flame, like one mighty fire; there being no man either in city or country, or on the rivers, but has his painted lanthorn, and all of them made after several manners, and that has not fireworks representing several creatures. I know

nation in the world that can compare ^{GEMELLI 1697.} with the *Chinese* in this particular of making fireworks; for they have been known to make a whole bower of red grapes, which all burnt without being consum'd; but on the contrary the body of the vine, the branches, leaves, bunches, and the very stones, all at once burning, appear'd in their proper colours, either red, green, or otherwise; so that to the beholders they seem'd rather real than counterfeit. But the most stupendous thing is to see, that the fire, which is so active and fierce an element, should operate so slowly, as if it had lost its own nature, to obey art; and serv'd only to shew the bower without burning it.

CHAP. IV.

Describing the publick Attendance of the Leamquam Tſunto, or Vicar of two Provinces, and other remarkable Things in Kuan-cheu, or Canton.

Attendance of
the vicar
of two
provinces.

Wednesday the 15th of February, and 13th day of the *Chinese* new year, I went to see the *Tſunto*, who was then at *Canton*, about business of his employment. Before he came out of his palace (which had belong'd to the petty king of *Canton*) three chambers were fir'd to give the people notice of his coming, and then he set out attending as follows.

A. *Chinese* drums on which they give thirteen strokes following.

B. 1. A Tablet with the sign denoting the civil magistrate.

C. 2. A Tablet denoting his martial power.

D. 3. A Tablet commanding silence.

E. 4. A Tablet to command all to clear the way.

F. Banners.

G. Several employments, and offices the ministers hold.

H. Gilt staves.

I. The dragon, the emperor's device.

L. Domesticks and servants.

M. Executioners and catchpoles.

N. An umbrella.

O. Assistants to the executioners.

P. One that carries the imperial seal on his back in a purse.

Q. Another who carries the commission.

R. The *Tſunto* in an open chair, carry'd by eight men.

S. An umbrella of another sort.

VOL. IV.

T. The first guards.

U. The second guards.

X. A Troop of *Tartar* horse.

Y. *Chinese* women that come to see the cavalcade.

Z. *Tartar* women.

See Cut Numb. III. Pag. 389.

After dinner I went to the top of an odd hill to see the preparations, made in a structure. house, where the vice-roy and some principal *Mandarines* were to be entertain'd at night. It had been built by a *Mandarine* within the old city call'd *Lauchin*, and consisted of one large room or hall supported by abundance of fine wooden pillars. Over it was another like it; both of them were spacious, but not beautiful; and therefore only afforded a noble prospect, because they discover'd all the city. In the upper hall was a *Pagod* with several idols; with many of their religious men call'd *Taozu* about them. In the first the tables were cover'd plentifully enough to entertain the *Fuyen*, or vice-roy. About the wall there were cupboards, cabinets, and other things of rich *China* and *Japan* varnish'd with abundance of figures. Having seen what was there I came down from the hill. At the foot of it I went in to see a covenant of women *Bonzes*. The good women gave me *Tea*, and carry'd me to see the *Pagod* and their monastery. The night following there

G g g g g was

GEMELLI was publick rejoicing throughout the city with lanthorns, and other superstitious follies.

Atten-
dance of
a mean
bride.

Sunday the 19th, there was a great resort of *Chinese* christians to the church of the *Spanish Franciscans*. *Monday* the 20th, being counted a fortununate day, a great many couple were marry'd. As I stood before the house, I saw a bride go by: Before her went six women, with as many *Chinese* boxes handfomly gilt and varnish'd, in which they carry'd the presents cover'd. Then follow'd about twenty musicians with several instruments, and several banners of painted paper, upon long staves. Then came the bride in a close chair, richly adorn'd with silk curiously wrought, and after her four relations that attended her. Ten porters carry'd as many chests with the goods, the bride being of mean parentage. The bridegroom waited at home, with his kindred, to receive her at his door.

A funeral.

Wednesday the 22d, I saw a stately funeral. First went twelve paper banners, statues, and other things, hanging at long poles; then about twenty musicians, and six boxes for burning of sweets, and to carry presents to the *Bonzes*. Next follow'd seven great umbrello's with curtains about them, and many *Bonzes* with their copes, attending the dead body. The procession was clos'd by about an hundred *Chinese*, with each a cord in his hand, of those they make of the bark of trees pounded, which burn gently. Among them were the nearest relations, clad in sackcloth, with their bodies bowing.

The *Tjun-
to's* pa-
lace.

Friday the 24th, thinking it a proper day to see part of the *Tjun-to's* palace, because of the visits made him by all the *Mandarines* of the city, and country, as their superior in civil and military affairs, he being captain general and vicar of the provinces of *Canton* and *Kiangsi*, I went thither betimes. The first court was a musket shot and a half long, and proportionably in breadth, where there were abundance of soldiers in tents. From two long Poles fix'd up there, hung two square yellow banners, with characters on them; after the same manner as they are in the vice-roy's court. At the entrance of the second court there were several officers, and among the rest forty in beautiful silk garments, on which some had a bird, some a lion, some a tyger, or other things embroider'd. Being in this second court, which is half a musket shot square, and going on to the third door, I met the guards, who

would not permit me to go any further; but from thence I look'd into the third and fourth courts, as big as the second, at the end whereof was the hall to give audience, well enough adorn'd. Having stay'd there an hour, I saw the *Fuyen*, or vice-roy, the *Zanbyun*, and other *Mandarines* take their leaves; the *Tjun-to*, who was an old man, but of a comely presence, and clad after the *Tartar* fashion, waiting on them to the fourth door with much respect, and civility; then I observ'd they went to the third gate upon a handsome causeway that divides the court, and there they reiterated their compliments. The vice-roy's train was more numerous than the *Zanbyun's*; for there went first sixteen banners; then as many tablets, on which were written the characters and privileges of his dignity; then umbrello's; thirty soldiers a horseback; above fifty inferior officers, executioners, and hangmen, with staves, chains, and wands in their hands, after whom came he in a chair carry'd by eight men. They said the *Tjun-to*, and two *Tagins* (*Ta* signifies great, and *Gin* a man in the *Chinese* tongue) were come by the emperor's order to review the troops in the province; that is, to fill their purses.

After dinner I saw another nuptial solemnity. First of all there were carry'd twenty great lanthorns hanging at poles, but they had no lighted candles in them. Next came a quantity of presents of several sorts, and twelve women with gifts, then other lanthorns carry'd by young lads, several curiosities in silk and paper, and lastly the bride in a fine cover'd chair.

Saturday the 25th, as I pass'd before the court of the *Quanchensu*, that is, the governor of the city, I perceiv'd they were beating a poor wretch, and asking the cause of it they told me, he was bastinado'd for another man's crime; it being the custom for a guilty person, condemn'd to receive so many strokes, to find one for money to take them for him; using this cruelty towards himself to relieve his poverty. But the executioner and goaler must be brib'd to consent to the exchange. Father *Augustin*, superior of the house when I lay, told me, this abuse had been carry'd so far of late years, that some thieves having been condemn'd to death, their friends, perswading some poor wretches they should receive so many strokes for a price agreed on, with the consent of the goaler, whom they had brib'd, got the condemn'd persons out of prison; and those

those miserable fellows were afterwards put to death by the *Mandarine* as having taken on them the names and crimes of the real malefactors. This villany being afterwards detected, the contrivers of it were punish'd with death.

Monday the 27th, the governor of the city proclaim'd a fast for fifteen days, to obtain rain of heaven to produce the rice, for there was a great drought. The best of it was, that they made even the christians fast by force, and keep lent in shrovetide; it being prohibited

under severe penalties, to sell beef, pork, fowl, eggs, or the like, but only herbs, and grain. These fasts are proclaim'd most years in all cities where there wants rain; and they endeavour to obtain it with prayers and processions, and lighting abundance of candles in their *Pagods*, and burning gilt and silver'd paper. If it does not rain in a fortnight, the fast is proclaim'd for as long again. *Tuesday* and *Wednesday* the 28th, and 29th, I prepar'd for my return towards *Europe*, and bought some curiosities.

GEMELLI

1697.

CHAP. V.

The Author's short Voyage to Macao.

BEING resolv'd to go for *Manila*, aboard the *Spanish* vessel then riding at *Macao*, I thought fit to wait on the captain of it to ask his consent, and accordingly order'd my affairs for that short voyage. *Saturday* the 3d of *March*, I sail'd late aboard a *Cbiampans*, or great boat that carry'd the silks the *Spanish* merchants had brought to *Macao*, and made little way, as we did also on *Sunday* the 4th, the wind being contrary, so that we could scarce come in sight of the town of *Sciunte*, where the *Spanish Franciscans* have a house and church; and the same wind continuing on *Monday*, we could not get beyond the town of *Aonfon*. *Tuesday* the 6th, the idolatrous sailors prepar'd for their sacrifice. The wicked pilot play'd the part of a priest, under an umbrello, that the idolatrous ceremony might be the more decent, or rather more detestable. The meat was set upon a table in *Chinese* dishes, viz. boil'd pork, fish, and sugar-canes cut in small bits with wine. First he struck his head against the ground several times holding his hands together, and the drum beating; then he began to mutter some words; and lastly, he pour'd a little wine on the meat, and, according to custom, burnt colour'd papers. Afterwards the meat and wine was distributed among the idolaters; which they greedily devour'd, vainly imagining themselves to be bless'd by it. This prophane action could not but produce an unhappy effect. One or two *Cbiampans* of robbers that were in the island came up to us. Our men thinking they had been guards of the canal receiv'd them as friends, saluting them with their drum. The robbers return'd the civility lifting their hands on high, in token of friend-

ship; then making up under the stern of our boat, asking whether we had any salt, they laid us aboard. We hereupon beginning to suspect them, laid hold of our arms, and fir'd two pistols to fright them. Being meer cowards they presently fell off in a fright; and went to take up a spy or sentinel they had left on the highest part of the island. Afterwards both the *Cbiampans* drew into the privatest part of the island, fearing lest the *Mandarine* of the white house upon information should send after them. Whilst we stood upon our guard against the robbers, I could not save my self from the knavery of our own sailors; who making use of their time, in the height of the hurry, stole a little watch I carry'd for father *Philip Fieschi*. The *Chinese* sailors would have cast anchor in sight of the pirates, upon pretence that it was ebb, and there was not water enough to go on; but being requir'd to go on as far as the white house, that we might be out of the danger above-mention'd, and the pilot obstinately refusing to go any further, he had some strokes given him, and then laughing hoisted both his sails. We came to *Macao* before noon, where I was again courteously entertain'd by father *Joseph* of the conception, prior of the monastery of *St. Augustin*, as I had been at my first coming thither, and that night being *Sbrove-Tuesday*, we had an excellent supper aboard the *Spanish* vessel, all the *Spanish* merchants being there. The following days were spent in devotion, which is great there, and the churches much frequented by men and women. The womens apparel there is strange, the whole consisting of two pieces of silk, without the help of taylor, seizars,

or

GEMELLI 1697. or needle. One they wrap about their waste, and serves for a petticoat; the other covers the head and breast, the legs being left out with no other stockings than nature provided, and the feet with a sort of slippers. This habit, tho' not convenient, is very modest. But the ladies are better, and more decently clad. They generally go in wooden chairs gilt, and close on all sides, sitting after the *Turkish* fashion, with their legs a-crofs, the lowness of the chair not allowing them to sit any other way. They are carry'd like cages, hanging by an iron ring fastned to the top, through which they run a coltstaff. The men

wear long breeches down to their ankles, so that they look like so many shaggy dogs. The condition of the poor *Portuguese* of *Macao* is very deplorable, for want of trade, especially among the meaner sort. Whilst the trade with *Japan* flourish'd, the citizens were able to pave their streets with silver; but that ceasing they were reduced to the poverty they now labour under. Tho' the vessel was small, captain *Basarte* very generously gave me my passage to *Manila*; and therefore having no other business at *Macao*, I took my leave of my friends, to return to *Canton* for my equipage.

C H A P. VI.

The Author's Return to Canton another Way.

HAVING hir'd a chair for eight hundred and fifty *Chiappas*, I set forward upon *Saturday* 10th, before noon, pass'd first by *Caja-Blanca*, or white house, a little town, and the residence of a small *Mandarine*, and at night came to the village of *Juma*, having travell'd eighteen miles. I found a bad lodging, and worse supper in the inn, there being nothing to be had for money. *Sunday* the 11th, I set out with a *Chinese* that fell into my company, and we travell'd through hills and mountains. The chairmen were so weak that they often rested, which made me in pity to them walk a great part of the way. They were nothing like those of *Nangansu*, who carry'd me up a steep hill, without ever setting my foot to the ground. After noon we came to *Aonjon*, having travell'd eighteen miles more. I presently went aboard the passage boat for a few *Chiappas*, set sail about sun-set, and sail'd all night. *Monday* the 12th, the fair wind continuing we pass'd by *Sciante*. In this channel, tho' it be fresh water, an infinite quantity of oysters is taken; so large, that the shell of some of them weigh a pound; but generally half a pound; but the taste is not so delicious as ours. The *Chinese* use the shells in building, as if they were stones; and the *Portuguese* work them so thin that they serve instead of glass in their windows. *Tuesday* the 13th, we arriv'd at *Canton*, and I return'd to my usual abode at the *Spanish Franciscans*. *Wednesday* the 14th, as I was going to the painter that was at work for me, I met a pro-

cession of *Tauzu-Bonzes* going to a funeral in their copes adorn'd with gold. Before them were carry'd several umbrellas, idols on biers, silk banners, and others of painted paper, perfumes, and other things. *Thursday* the 15th, I saw the *Fuyen*, or vice-roy set out with a noble train of two hundred great boats finely gilt and painted, belonging to himself and the *Mandarines* that bore him company as far as *Fusian*. He was going thither to provide for the security of a third part of his province, where some mutiny or invasion of robbers was fear'd. The emperor had order'd that for the better securing of the province, it should be divided among three; one part to the vice-roy; another to the *Titu*, or general of the forces; and the third to the *Tsunto*; and every one of them to be accountable for what should happen within his division. *Friday* 16th, the little *Mandarine* of *Tunlan* (which signifies of the east shore) set out by the vice-roy's order, to compose the difference between the people of that small town and the *Spanish Franciscans*; who having purchas'd the ground to build a little church for the use of the christians of the place, had their work obstructed by those people, who fancy'd they should all die if the church were built; because it would take away their *Fuen-Seivy* (that is, wind and water), or good luck, as has been mention'd before. Being resolv'd to depart, I took leave of all the fathers, and return'd thanks to the *Franciscans* for having entertain'd me several months in their house.

CHAP. VII.

The Author's return to Macao.

HAVING provided all things for my voyage, I put my goods and black aboard the vessel on *Tuesday* the 20th, and went thither my self after dinner. Tho' we were under sail all the rest of that day, and the following night, yet we made but little way. *Wednesday* the 21st, we pass'd by the town of *Sciunte*, and advanc'd considerably in the night. *Thursday* the 22d, the wind being contrary we made but little way. *Friday* the 23d, the same pilot made such a sacrifice, and with the same ceremonies as was mention'd before. He would not have us make water over that side of the boat which was reserv'd for that superstition. Coming to *Macao* betimes, the custom-house officers search'd the chests of silks, and weigh'd as well those that had gold in them, as the plain, wrought or unwrought, but they did not all pay alike. The duty is inconsiderable, that is, one, or one and a half per cent. The prior of *St. Augustin* lodg'd me. The following days I spent in visiting the captain of the vessel I was to go in, and some churches, and among the rest, the college of *St. Paul*, where there is part of the arm of *St. Francis Xavierius*, from the elbow to the shoulder, the rest with the hand being at *Rome*, in the profect's house of the *Jesuits*. *Wednesday* the 28th, I went up to see the fort on the north side, but when I came thither, the captain that was upon guard would not suffer me to go in; whereof making my complaint to some *Portuguese*, they desir'd

me not to look upon it, as proceeding from jealousy, but prudence, this being done, that none might see what a wretched condition the guns were in, which besides that they were few were all dismounted, by reason of the poverty of the city. So that I cannot perceive upon what grounds father *John Joseph* of *St. Teresa* says, the city of *Macao* is vastly rich, and that upon the coronation of king *John* the fourth, it sent him a considerable present of ready money, and two hundred pieces of brass cannon. The good father was so fond of cannon, that he would say any thing for it. I never heard a more extravagant romance, than when he tells us, that when the *Portuguese* took *Malacca* from the *Indians*, there were found in it three thousand pieces of brass cannon; whereas 'tis well known that number cannot be found in many considerable strong holds in *Europe* put together; and that *Malacca* is no other than a small village, made up of little houses, with mud walls, or at best of timber, and cover'd with palm-tree leaves, and the castle so small, that it could not hold so many pieces of cannon, tho' they had been laid one upon another. Perhaps the two hundred pieces *Macao* sent the king of *Portugal* were taken out of these three thousand, which could never be found throughout all *India*, either of brass, or iron. The following days, I took leave of my friends, and prepar'd for my voyage to *Manila*.

CHAP. VIII.

The Wreck of a small Vessel, and the wonderful escape, of some of the Sailors belonging to it.

Saturday the 31st, I took a boat to go see the green island, belonging to the fathers of the society, and not above a mile distant from the city. It is a mile in compass, and tho' it be all a solid barren rock, yet there is a convenient house in it, for the fathers to take their recreation, and about it some fruit-trees of *Lichas*, *Longans*, and *Vivas*, as also some few *Plantans*, and *Ananas*. In this island I found a brother, who told

me a strange story, which I had before heard from others, of a small vessel of the coast of *Coromandel*, aboard which, he himself had been a sailor. In the year 1682, it sail'd from the city of *Manila*, and port of *Cavite*, with about sixty persons aboard, *Portuguese*, *Moors*, and *Gentiles*. The pilot being ignorant of two banks, that lie off opposite to the islands of *Calamins*, run full upon one of them, where the ship split, and

H h h h h the

VOL. IV.

GEMELLI the goods were lost. The *Moors* and 1697. *Gentiles* attempting to get to a neighbouring island, a storm rising, sunk them, and the boat they went in. The rest waiting till the weather grew calm, made up a chest of boards, the best they could, and in it went over by degrees at several times to the island, which was not above two miles off, but finding no water in it, they remov'd to another, three miles from it; which they found as low as the other, very small, and without wood or water, so that for four days they were forced to drink the blood of tortoises. At length necessity sharpening their wits, they dug trenches in the island level with the water; and what came into them, tho' blackish they drank for want of better. In the mean while, providence, which never forsakes any body, fed them with tortoises; for they coming to lay their eggs, as they do for six months continually, they kill'd such a vast quantity, as serv'd to maintain them. When the season of the tortoises was past, there resorted to the island a sort of great sea-fowls, call'd by the *Spaniards*, but more especially by the *Portuguese*, *Paxaros-Bobos*, or *Passaros-Tolos*, that is, foolish birds, to build their nests; and these being very silly, as their name denotes, the men kill'd enough to serve them, with sticks; and thus eighteen of them, that had got into the island fed six months in the year upon tortoises, and the rest upon those birds, whereof they laid up provision drying them in the sun. They had no pots to boil them, but necessity taught them to make some of clay, but such as would serve only once. Their cloaths being quite worn out in seven years they led this painful life, they flead the birds, and stitching the skins together with needles, and thread, made of small palm-tree leaves, they made a shift to cover their nakedness. In winter they defended themselves the best they could in caves they dug with their hands. During this time several ships sail'd by, but, tho' they made all possible signs with fires to call them to their relief, none ever would come to their assistance, perhaps, for fear of the sands; and thus their hopes always ended in grief. At length they resolv'd to die, or put an end to their miseries; for the birds being frighted came not in such numbers as they had done at first; and they were like ghosts for want of fire and good food, and because the water was very

bad. They therefore made a small boat, or rather a chest of boards, caulking it with the cotton of a quilt they had, and instead of tar daubing it with tortoises grease. They made ropes of certain sinews in the tortoises, and sails of the skins of the birds sew'd together. In fine, they set out without a sufficient provision of birds, and water, reposing all their confidence in God's mercy, and at the end of eight days, arriv'd in the island of *Hainan*. Sixteen sailors landing, for two had dy'd in the little island, the *Chinese* fled, seeing them look like ghosts, and so strangely clad; but having given an account of their misfortunes, the *Mandarine* of the island caus'd them to be recover'd and restor'd to their strength with good provisions, and then furnish'd them with all necessaries to return home. The *Portuguese* coming to *Macao*, one of them found that his wife, believing him to be dead, had marry'd another husband; yet he took her again, and the other was forced to seek another, which perhaps was no great trouble to him.

Before I leave *China*, I am oblig'd, since it comes here into my mind, to acquaint the reader; that the *Chinese* women are much wrong'd in their reputation by the author of the relation of the *Dutch* embassy to *Peking*. In the first place he certainly dreamt that there were publick whores in *China*, and that they are carry'd about the towns on asses by those that deal in them; and that they cry, *Who will take her to him*, as other things are cry'd about the streets; further adorning his book with the figure of such a woman. To speak the truth, I have not met with any such piece of impudence in so many kingdoms and empires, as I have seen, whether they were *Moors*, or other barbarous nations; and as for *China*, having been in both the courts of *Peking* and *Nanking*, and gone the same way the *Dutch* ambassadors went, I never heard so abominable a traffick spoke of, much less could I see any thing like it; nay, they have not so much as the name of whores, much less a toleration of them, to prevent the debauching of youth; and if there should happen to be any such women, they would be most severely punish'd. So that father *Philip Grimaldi*, who was interpreter to the embassy had reason to tell me, that the author of that relation has writ as many lies as words.

Sunday the first of April, the last *Chi-
ampan*, or boat loaded with silks ar-
riv'd. It was hir'd by *Dominick Seila*,
factor to the *Spanish* vessel, that the ship
might not be detain'd any longer for
want of its loading. Yet they were fain
to stay Monday the 2d, as well because
Semea, the *Tjuntio's* servant was absent,
who had taken charge of that affair
which amounted to the value of twenty
eight thousand pieces of eight, and be-
cause a companion of his, who brought
the remainder of the silks, would not de-
liver them without him; as also by rea-
son the *Hupu*, or *Chinese* customer, for
his private interest, delay'd signing the
Chiappa, or license to depart, which cap-
tain *Bajarte* press'd for, that he might
sail; the *Portuguese* general, as they call
him, allowing none to sail without the
Hupu's leave: At last, on Tuesday the
3d, some of the chief customers clerks

came to the captain's house, with whom
the business was adjusted for fifty ducats,
over and above all duties; and accord-
ingly on Wednesday the 4th, the head
clerk came again with a great many un-
der clerks, and other small officers to de-
liver the captain the *Chiappa*, or license
to sail, and he rewarded them for their
pains. Thursday the 5th, *Semea* came,
and deliver'd silks to the value of twenty
eight thousand pieces of eight, re-
ceiving fifteen thousand that were be-
hind. Friday the 6th, when the vessel
was ready to sail, I having been too
negligent before, had a great deal of
trouble to make the necessary provision
for my voyage in such a hurry. Here
the reader must give me leave to put
an end to this volume of the account
of *China*, and to begin the next with
the *Philippine* islands.

Vol. I

A Voyage round the World, by Dr. John Francis Gemelli Careri. Part V.

Containing the most remarkable things he saw in the PHILIPPINE ISLANDS.

BOOK I.

CHAP. I.

The Author's Voyage from Macao, to the Philippine Islands.

SO great is the dignity and excellency of humane nature, and so active those sparks of heavenly fire it partakes of, that they ought to be look'd upon as very mean, and unworthy the name of men, who thro' pusillanimity, by them call'd prudence, or thro' sloth, which they stile moderation, or else through avarice, to which they give the name of frugality, at any rate withdraw themselves from performing great and noble actions. Many make it their business to extoll the glorious undertakings of others, both in verse and prose; and yet very few will attempt those things that may purchase them such praise. It is easy to find many poets and orators, who make it their business to panegyryze Alexander, Cæsar, Themistocles and Scipio, who had not the heart to imitate them in any one thing. Having from my youth been an utter enemy to this vice, and being taught by custom to endure the fatigues of long voyages; I resolv'd without any demur to sail from Macao, to the Philippine Islands, in the Spanish vessel bound thither with silks, as has been mention'd in the last volume; in order to expose my self afterwards to the most dangerous voyage that can possibly be imagin'd, in which for seven months I was to be by most boisterous and frightful storms.

It was now the 7th of April 1696, when the captain of the ship, being ready to sail, gave a noble fare-well feast to his friends, at which I was, and after dinner went aboard, thinking the Spanish merchants too dainty, who staid ashore to enjoy their beds

VOL. IV.

one night the more. Sunday 8th, the *Xipu*, GEMEL-
or customers head clerk, came aboard with LI.
other officers to search the vessel, according 1697.
to custom, to see whether there were any Chinese men or women aboard. Though they had been abundantly presented by the captain, yet their insatiable avarice put new projects of interest into their heads, notwithstanding the agreement made the day before. They said they must make a new search among the silks, to see whether there were any yellow, or that had dragons wrought in it with five claws, which are the emperor's peculiar device, or mark of distinction, and there being of both sorts abroad, and both prohibited to be exported, there was no remedy but compounding the matter for a sum of pieces of eight, whereupon they all went away about noon well satisfy'd. Being deliver'd from the troublesome custom-house officers, after dinner when the tide serv'd, we weigh'd anchor, and fell down with it, the wind not proving very favourable. Coming up with the fort of the bar, we kept so close under the land, that the vessel run a ground; but one *Salvaetta* a *Biscayner*, who was an able sailor, carrying out an anchor, soon brought her off. Having saluted the fort with five or six brass guns the vessel carry'd, we held on our way; but at midnight came to an anchor among some islands twelve leagues from Macao. That night there came up a *Lorgia*, or bark, with some bales of silk for the pilot. Whilst the silks were putting aboard, a *Moor*, and another slave of *Timor*, hid themselves aboard our vessel, in order to go away

GEMEL-away to Manila, but the captain made them be found out, and put aboard the 1697. *Lorgia*, notwithstanding the *Moor*, rather than be turn'd away, said, *he would become a christian.*

The author at sea.

Monday 9th, the wind being contrary, we weigh'd anchor late, and advanced but two leagues. *Tuesday* 10th, the wind being fair, we hoisted sail about noon, and held on our course, not only all night, but *Wednesday* 11th, got out of the narrow channels among the islands into the open sea. About sun-set, we sailed by the *White Rock*, which is very dangerous. *Thursday* 12th, the wind blew so fresh, that we made much way; and as before we steer'd east, to avoid the flats which stretch twelve miles in length, from this time forward, we flood east south east, which is the direct course for the island of *Manila*. *Friday* 13th, the wind was so full in our teeth, that we could not gain ground, and to add to it, on *Saturday* 14th, the current carry'd us away to the southward. *Sunday* 15th, the wind abated, and *Monday*, *Tuesday*, and *Wednesday* till sun-set, we were becalm'd; but a gale starting up afterwards, we began to make way. This pass'd like a dream, for it lasted only that night, and we were again becalm'd, upon *Maunday Thursday* in the Morning. *Friday* 20th, the sailors catch'd a great shark with a hook, and found in its belly three small ones, which being cast into the sea, scudded about. Some said the great one was a female, and the small ones her young, whom she had swallow'd, that they might not be lost, and they use to carry them under their fins, for the same reason. Others were of opinion they had been hatch'd in her belly out of eggs, which is more likely, if we consider there are some sorts of fish that breed in their bellies, as is daily observ'd in eels. The calm held holy *Saturday* and *Easter Sunday*, which was kept as well as such a small vessel would permit. *Tuesday* 24th, the wind blew fair a while, but the calm return'd. *Wednesday* 25th, *Thursday* 26th, after noon the wind came up again, and carry'd us so far, that on *Friday* 27th, we saw the land of *Ilocos*, in the island of *Manila*. *Saturday* 28th, we coasted along with a fair wind, so that *Sunday* 29th, we discover'd *Cape Bolinas*, and the land of *Pangasinan*, metropolis of the province. *Monday* 30th, continu'd coasting the island of *Manila*.

Tuesday the 1st of *May*, there being but little wind, we drew close under the shore; and *Wednesday* 2d, it was so calm, that we could not get by two little islands, call'd *Las dos Hermanas*, or *The two Sisters*. *Thursday* 3d, made as little way. *Friday* 4th, advanced no faster, and could scarce come

up with *Pla-ya-onda*. In this place is a small fort, with twenty *Spaniards* in it, sent thither by the governor of *Manila* as a punishment. The *Dominican* fathers have a mission-house there, to instruct the *Indians* that are converted to the faith. *Saturday* 5th, we saw a prodigy upon the sea, that is, a vast quantity of water drawn up into the air, the *Spaniards* call it *Manga*, the *English* a spout. The former said it was form'd in the air like a rain-bow; but would not grant upon any account, that the only difference between them, was that the rain-bow was compos'd of smaller drops, and the spout of greater. It was the fore-runner of a mighty storm, which rose at midnight, and lasted till next day at noon, putting us in danger of being lost; but ceasing then, we weather'd *Cape Capones*, so call'd, because of two little rocks lying off a little distant from it. This cape butts out far into the sea, and is therefore troublesome to weather. That night we anchor'd opposite to the bay of *Mari-mau*, because it was not thought fit to enter it in the dark, by reason of the flats. *Monday* 7th, the anchor was weigh'd sometimes, but little way made, for want of wind, and we scarce got to *Cape Botan*. At sun-set the wind blew hard, with thunder, lightning, and rain, driving us forward, not without danger. Next we pass'd by the rocks call'd *De las Puercas y Puerquitos*, that is, the sows and pigs, being two great, and five little ones, at the mouth of the channel near the island *Maribeles*, and another call'd *la Monja*, or *the Nun*. As we came up the channel, between the island *Maribeles* and the *Punta del Diablo*, or *the Devil's point*, the house upon *Mirabeles* put up a light, that we might not run aground in the dark night. Perceiving that the guard of the island of *Ilas*, or *Maribeles* had not discern'd us, by reason of the darkness, we set up a light to give notice; and then the ensign who was upon guard, came in a small boat to examine us, and know whence we came. He came aboard, and having stay'd an hour, telling us how affairs stood at *Manila*, went his way. Sailing on all night, on *Tuesday* 8th of *May*, we found our selves directly opposite to the castle of *Cavite*. Whilst we were drawing nearer to *Manila*, colonel *Andaya* came aboard to see our captain. He was saluted coming, and going, with six pedereroes. With him came several others, among whom was *D. Gabriel de Sturis* of *Pampilona*, who being a professor of the civil-law, as well as I, we soon contracted friendship. They brought a good refreshment of chocolate, grapes, melons, and other fruit of the country, which we had need enough of, after our fatigue.
