Reasons
for sailing
regarding
a stay at
Cebu

Being inform'd that *F. Antonine Tutio* of *Messina* was rector of *Manila*, I went ashore that same day to see him, and with his assistance provide me a lodging. He rejoic'd at my coming, for *F. Turcott*, had sent him an account of it from *China*, persuading him I was an apostolick emissary, sent to inquire into the differences between the millioners and vicars apostolick, of which opinion many more were at *Manila*. Asking *F.* rector what day of the week and month it was there, he told me that at *Manila*, it was *Monday* the 7th of *May*, whereas according to my reckoning and journal, begun in *Europe* from east to west, and according to the reckoning of the *Portuguese*, I took it to be *Tuesday* the 8th of *May*, the feast of the apparition of *St. Michael*. This surpriz'd me very much at first, seeing I should have two *Tuesdays* in one week, one at sea, and the other at *Manila*; but afterwards considering that the tables of the sun's declination are made for one fix'd, and determinate meridian; and that all the interval of time the sun spends with the motion of the *Primum-mobile*, performing his round, from his departure from one meridian till his return to the same, is divided into 24 spaces, call'd hours, my admiration ceas'd. Two vessels therefore departing from the same meridian upon the same day, and the one sailing east, the other west, with the same tables of declination, when they have both run round the world, and return to the place whence they set out, it will appear that the ship which sail'd east, will reckon a day more than in reality the sun has made, according to the tables of declination; for as the ship gains meridians eastward, so the days it reckons are all less than twenty-four hours, and every fifteen degrees it runs to the eastward, the days will have lost an hour, and so proportionably ninety degrees will cut off six hours, and the sun will fall short so much of the declination, set down in the tables for that day either increasing, or diminishing. So when the vessel has made the whole round eastward, running over the 360 degrees, which answer to a whole day, the sailor who comes into the port, will take it to be one day, according to his computation of short days, but in reality, and according to the tables by which the inhabitants of the port are govern'd, it will be a day short of his reckoning; and therefore if on that day, the declination increases, it is certain all that must be deducted, that the said declination rises in a day, and if the declination falls short, so much must be added, to come up to the declination of the tables, which is true and immutable. The contrary happens to the ship that sails westward; for

the further it goes from the port, the diurnal motion of the sun will be the more above twenty four hours, and therefore the sailor will always reckon greater days, that is, every 15 degrees he removes from the meridian where he set out he will gain an hour, and in 90 degrees six hours more than the tables set down; and lastly, having run round the world, will find one day less in his journal than is in the tables, and therefore will come to his port, according to his account, a day short of the account of the place. In this case he must add all that the sun increases in declination from one day to another, deducting what is wanting that day; all that has been said will be the plainer by the following example.

Two vessels sail'd from the port of *Lisbon* on the 1st of *May* 1630, the one east, the other west, and having both sail'd round the world, return'd together to the same port of *Lisbon* on the 1st of *May* 1631, being the third after leap year. On that day, according to the tables, the sun's declination was 15 degrees and 6 minutes, and its increase from one day to another is 18 minutes; that day at *Lisbon* happen'd to be *Thursday*; but he that had sail'd eastward having made the days less, it follow'd of necessity, that at the end of his voyage he had a whole one over; and found by his reckoning that he was come to *Lisbon* upon *Friday* the 2d of *May*, and therefore said the sun's declination was 15 degrees and 24 minutes, which was not true, because according to the tables he came to the port on the 1st of *May*, when the sun's declination was but 15 degrees and 6 minutes. Therefore deducting the 18 minutes the sun at that time advances in a day, there remains the true declination of the first of *May* 1631. But he that sail'd west, and consequently had longer days, of necessity at the end of his voyage found a day short, so that according to his account he thought he had come to *Lisbon* on *Wednesday* before the first day of *May*, and therefore found the declination on his tables to be 14 degrees and 48 minutes, but saw he was deceiv'd, finding at the port it was the 1st of *May*, and the sun's declination 15 degrees and 6 minutes. Therefore adding 18 minutes to 14 degrees and 48 minutes, it produces 15 degrees and 6 minutes, the sun's true declination on the 1st of *May*. Thus the two ships we speak of, according to their reckoning, differ'd from one another two days, because that which sail'd east, thought he came to the port of *Lisbon* on *Friday* the 2d of *May*, and the other believ'd he came on *Wednesday* the last of *April*; but according to the true account both vessels

GEMEL-
L.I.
1697.

GEMEL-fels arriv'd on the 1st of May. If it were possible to make a watch so true, as that it should never err; a sailor departing from *Naples* with it going, and sailing round the world, would at his return to *Naples* find the same day without any mistake. So setting out of *Naples* at six of the clock, and sailing 90 degrees in six hours, as the sun runs (were this possible to be done) when he would believe it to be twelve in the meridian he came to, as it was where he left, he would to his astonishment find it was still six of the Clock.

Having therefore found what I say to be true by experience, I shall hereafter proceed in my journal according to the computation of *Manila*, sinking a day I had over according to the computation of the east and *Macao*, and instead of *Tuesday* the 8th, I will call it *Monday* the 7th. *Tuesday* the 8th, I return'd to the vessel for my baggage, and din'd there with *D. Dominick de Seila* the factor, who staid there to take care of it, till it was searched. Three hours before sun-set, captain

Bafarte sent word every one might carry off his equipage, because the king's duties were fix'd at 3000 pieces of eight, which was a small matter for the value of 200000 pieces of eight, the *Chinese* paying six per Cent. I landed with my equipage near *St. Dominick's* gate, where I found an adjutant sent by the governor, who told me he expected me at his palace. I went thither immediately, and was courteously receiv'd and treated with sweetmeats and chocolate. He was a gentleman as honourable as curious, and therefore kept me with him four hours, enquiring concerning the customs of those kingdoms and nations I had travell'd through; so that his coach and six horses being ready to carry him out to take the air, he caus'd the horses to be taken out to satisfy his curiosity. When I took my leave he civilly offer'd me any thing I should stand in need of. I lent my goods to an apartment in the colleges, whither the rector came to honour me, as he had done the night before.

CHAP. II.

The description of the city *Manila*, and its suburbs.

Situation of *Manila*.

MANILA is seated in 14. degrees and 40 minutes of north latitude, and 148 degrees of longitude. For this reason the days and nights are always of a length, or at least never vary above an hour winter and summer; but is excessive hot, as being under the torrid zone. It stands upon that point of land, where the river that comes out of the lake runs into the sea; and whence *Ragia* the Moor, who had fortify'd himself with ramparts, upheld by palm-trees, and furnish'd with small guns, was beaten out by *Michael Lopez* on the 19th of June 1571. Its compass is two miles, its length a third of a mile. The shape of it is irregular, being narrow at both ends, and wide in the middle. It has six gates, call'd *De los Almazenes*, or of the magazines; *Santo Domingo*, or *St. Dominick*; *Parian*; *Puerta Real*, or the royal gate; *St. Lucia*; and the *Possigo*, or the postern. The wall on the side next *Cavite* is strengthen'd with five little towers, with iron guns; but on the angle next the land is a noble bulwark, call'd *la Pindazion*, or the foundary; and beyond it another not inferior to it, betwixt which two is *Puerta Real*, or the royal gate, which is also well furnish'd with brass guns, and good outworks. Further on is the gate of *Parian*, so call'd because it looks to the village of that name, over which there is very good brass artillery. Going along

Strength.

still by the river side, the next is *St. Dominick's* tower, as being near the monastery of the *Dominicans*, as fo going on the circumference of the city ends at the castle, which terminates the length of the city. Thus on the south it is wash'd by the sea, and on the north and east by the river, over which there are draw-bridges to enter at the royal gate, and that of *Parian*.

The palaces of *Manila*, though they be built all of timber above the first floor, yet are beautiful to behold for their handsome galleries. The streets are broad, but the frequent earthquakes had spoil'd their uniformity; several houses and palaces being overthrown, and little hope of re-building them; and this is the reason why the inhabitants live in wooden houses. *Manila* contains about 3000 souls, but these of such different mixtures as to qualities and colour, that they are distinguish'd by several strange names. This has happen'd by the conjunction of *Spaniards*, *Indians*, *Chinese*, *Malabares*, *Blacks*, and others inhabiting that city and islands depending on it; as is also fallen out in the *Portuguese* conquests in the *East Indies*, and the kingdom of *Peru* and *Mexico* in the *West Indies*. They call him *Criollo*, whose father is a *Spaniard*, and mother a *West Indian*, or the contrary; *Mestizo* is the son of a *Spaniard*, and an *East Indian*; *Castizo*, or *Terzeron*, of a *Mestizo* man and woman; *Quartaron* of a black

black man and *Spanish* woman; *Mulato* of a black woman and white man; *Griſo* of a black woman, and *Mulato*; *Sambo* of a *Mulata* woman, and an *Indian*; and *Cabra* of an *Indian* woman, and *Sambo*; and fo other ridiculous names.

The women of quality in *Manila* go in the *Spanish* habit; the common fort have no need of tailors, for a piece of *Indian* ſtuff call'd *Saras*, wrapp'd about their middle, and hanging down, ſerves for a petticoat; and another they call *Cbinina* from the waſt upwards, for a waſtcoat. The legs and feet ſtand in need of no ſhoe and ſhoos by reaſon of the heat. The *Spaniards* are clad after the *Spanish* faſhion, only on their feet they wear wooden clogs, becauſe of the rains. The *Indians* are forbid wearing ſtockings, and they muſt of neceſſity go bare-legg'd. Thoſe that live well have always a ſervant to carry an umbrella to ſave them from the ſun. The women have fine chairs, or hamacks, being nets hanging by a long pole carry'd by two men, in which they are carry'd at their eaſe.

Though *Manila* be ſmall, if we look upon the circumference of its walls, and the number of inhabitants, yet it will appear large if we include its ſuburbs; for within a muſket-shot of the gate of *Parian*, is the habitation of the *Chinese* merchants call'd *Sangleys*, who in ſeveral ſtreets have rich ſhops of ſilk, porcellane, and other commodities. Here are found all arts and trades, ſo that all the citizens are worth, runs through their hands, through the fault of the *Spaniards* and *Indians*, who apply themſelves to nothing. There are about 3000 of them in this ſuburb, and as many more about the iſlands; which is permitted them, if not as chriſtians, at leaſt in hopes they may become ſuch, tho' many are converted for fear of being baniſh'd. There were formerly 4000, but abundance of them were put to death in tumults they rais'd at ſeveral times, and particularly that on *St. Francis*'s eve in 1603, and they were afterwards prohibited ſtaying in the iſland by his catholic majesty. This order is very little obſerved, for there always remain behind hid many of thoſe that come every year in 40 or 50 *Cibampans* loaded with commodities; the profit being very great at *Manila*, which they could not find in *China*, by reaſon of the ſmall price manufactures bear. The merchants or *Sangleys* of *Perian* are govern'd by an *alcade*, to whom they allow a good ſalary, as they do to the ſolicitor their proteſtor, to his ſteward, and other officers. Beſides all the duties and taxes to the king, they pay his majesty 10000 pieces of eight a year for the privilege of

Vol. IV.

playing at *Metua*, at their new year, and yet this permiſſion is but for a few days, that they may not throw away other men's money. *Metua* is the game of even or odd, at which they play laying down ſmall heaps of money to be won or loſt by gueſſing right. They that uſe this ſport are ſo expert, that they know the number by the dimenſions of the heap, and ſometimes ſharply withdraw a piece to make their number fall right. The *Spaniards* keep theſe *Chinese* very much under, not ſuffering them to be in chriſtian houſes at night, and obliging them to be without light in their houſes and ſhops, to break them of the abominable vice that nation is inclin'd to.

Over the bridge adjoining to *Parian*, or the ſuburbs or hamlets of *Tondo*, *Minondo*, *Santa Cruz*, *Dilao*, *S. Miguel*, *S. Juan-de-Bagumbaya*, *Santiago*, *Nueſtra-Senora-de-la-Hermita*, *Malati*, *Chiapo*, and others, to the number of 15 in all, inhabited by *Indians*, *Tagalis* and other nations, under the government of an *alcade*. The houſes are generally of wood, near the river and ſtanding on pillars, with boats going up to them, after the manner of *Siam*. The tops of them are cover'd with *Nipa*, or palm-tree leaves; the ſides are of cane, and they go up ladders to ſome of them, becauſe the ground is moiſt and ſometimes full of water. In the time of the petty king *Matanda*, *Tondo* was fortify'd with ramparts and cannon, but could make little reſiſtance againſt the *Spaniards*. In the ſpace between theſe hamlets on both ſides of the river, as far as the lake of *Babi*, there are gardens, farms and country houſes, pleaſant enough to behold, ſo that looking on it altogether, it is much like the large ſcattering villages of *Siam*.

Wednesday 9th, after other viſits I went to wait upon the father provincial of the Jeſuits, and he being a very knowing perſon, and who had travell'd much, particularly in *America*; we ſpent the reſt of the day in diſcourſe of ſeveral ſorts, but eſpecially arguing whether *California* was an iſland as ſome imagine, or a part of the continent join'd to *New Spain*. The provincial was of opinion it was part of the continent, becauſe ſome fathers of the ſociety having gone up the mouth of its ſtreight which is 60 leagues over, and run up it many leagues, found at laſt that there was but very little water in the channel, and could go no further; by which he gueſs'd that long bay had no communication with the northern ſea, ſo as to make *California* an iſland.

Thursday 10th, I went to the monaſtery of *S. Clare*. The church is little, but has three conſiderable altars. In the monaſte-

5 L

ry

GEMEL-ry are 40 nuns of the order of *S. Francis*, who live upon alms given them by the king and many private persons, being such strict observers of their rules that they receive no portions nor servants. These good religious women came first out of *New Spain* in 1621.

Chapple
royal.

Next I saw the royal chappel seated before the castle, apart from the governour's palace. It is well adorn'd with images, and the high altar is all gilt, as are the two side ones, and that in the wall on the right hand. At the end of the chappel there are two quires, one over another, both well wrought. Eight chaplains serve it with an allowance of 15 pieces of eight per month, and 50 to the chaplain major, all paid out of the king's revenue, and these may be chang'd at the governor's pleasure. They are oblig'd to bury the soldiers, and have a settled allowance for masses for their souls. Upon great days the governor is on the right or gospel side of the altar, with a chair on a floor lifted up a step, and the *ordores* or judges of the king's court on the left, next to whom are the *alcades* of the city.

Orphans
hospital.

Friday 11th, I went to the church of the *Mercordia*, dedicated to *S. Elizabeth*, in which monastery the orphan daughters of *Spaniards* and *Mestizos* are receiv'd, and if they marry have a portion of 300 and sometimes 400 pieces of eight given them. If they will be nuns they have also an allowance for it, they are 40 or 50 at most. The church has a fine high altar, and two side ones.

Augusti-
ani.

Saturday 12th, I was in the monastery of the fathers of the order of *S. Augustin*, which is very large and has spacious dormitories vaulted. The church is also vaulted, but low. There are in it 15 altars well gilt, and some of them with antependiums of beaten silver. The sacristy is rich and handsome. On the outside the church has a good front, but most of the structure is wood, because of the continual earthquakes, so that it was easily burnt in 1582. There are in the monastery about 30 religious men.

The ca-
stle.

Sunday 13th, I saw the castle of *S. James*, seated as was said before, at the west end of the city, shut in on one side by the sea, and on the other by the river. The ditch that parts it from the city is very deep and fill'd with the flood, there is a drawbridge over it. At the two ends of the ditch there are two bulwarks, one close to the river, the other not far from the sea, but furnish'd with good cannon. The other point of the triangle westward near the sea, is defended by a great tower, which guards the mouth of the river, and the port (which is only fit for small vessels) with two small batteries level with the wa-

ter. After passing two gates is the *corps de garde*, and then a large place of arms, opposite to which is the second *corps de garde*, the governor of the castle's house, and another place of arms.

The college of the fathers of the society *Jesu* is very large, and adorn'd with high and long vaults and spacious dormitories, but all above the ground-floor is wood for fear of the earthquakes. For the same reason it is all supported by high pillars, that the weight may not lye upon the wall which would not be able to withstand such shaking, which same thing is used in all the houses in the islands. In the middle is a stately cloister, and the church, which is one of the best in the city. The high altar is made like a semicircle, all well adorn'd with pillars, and delicate carving richly gilt, which shines the more by reason of the nearness of the cupolo. Six other altars well gilt answer the high altar. The front over the great gate is of carv'd stone very finely. This college is of the invocation of *S. Ignatius*, and was founded upon the arrival of the first bishop of *Manila* in 1581, by *F. Antony Sedeno-y-Alonso*. Joining to the same is the college of *S. Joseph*, where at this time there are 40 collegians studying humanity, philosophy and divinity; for all degrees are given in it. It has particular revenues besides the king's allowance; and some collegians pay 150 pieces of eight a year. They are clad in purple with red cloth gowns. The graduates, by way of distinction from the humanists, wear a thing like a collar of the same cloth.

Monday 14th, I went to see the cathedral, which is large but not well adorn'd within, the walls being black, and the altars in no good order. It has in all 12 chappels and altars besides the high altar. The roof is supported by 12 pillars, 6 on a side. The quire is near the great gate, and there sits the archbishop, whose revenue is 6000 pieces a year, with 12 canons who have 4 or 500 each out of the king's revenue, because there are no tithes. *F. Francis-Dominick-de-Salazar* came in 1581, to be the first bishop of *Manila*, and the first archbishop in 1598, was *F. Ignatius-de-Santi-Bannez* of the order of *S. Francis*.

Tuesday 15th, I saw the church of the barefoot fathers of the order of *S. Augustin*, which tho' small is well set out, there being 7 altars well gilt, and the roof handsome enough. Wednesday 16th, I was in the church of *S. Dominick*, which if it were not dark, would be one of the best in the city. There are in it 8 altars well painted, but not well gilt, no more than is the roof. The dormitories and gilleries are large enough. These religious men came to settle

tle at Manila in 1587. Adjoining to the church is the college of *S. Thomas*, whose revenue maintains 50 collegians, to study the sciences. Their habit is green, with carnation satten gowns. There is another college call'd of *S. John Lateran*, belonging to the same *Dominican* fathers, where about 70 boys are taught to read and write, to be remov'd from thence to that of *S. Thomas*, there to study humanity, philosophy and divinity, and to take their degrees as they do in that of *S. Joseph*; yet with this difference, that none but the sons of *Spaniards* are admitted into the college of *S.*

Thomas; but in the other they admit those of *Mestizos*, who are clad in blue, and oblig'd upon festivals to serve in the royal chapel, as maintain'd in a college of a royal foundation. They are receiv'd gratis in both of them. His catholic majesty out of his goodness allows oyl for the lamps, and *Spanish* wine for the masses to all the churches here mention'd, and all others in the islands. But where there are commendaries or baronies, the possessor pays the curate, and every 500 houses are made to allow 25 pounds of oil.

C H A P. III.

What more the author saw in Manila, after his return from Cavite.

A Galeon being shortly to sail for *New England*, whither I was desirous to go, I desir'd the governour to grant me my passage aboard it; which he very honourably did, notwithstanding the great difficulties that commonly occur in such cases; because there are a great many *Spanish* merchants that desire to come from thence every year to the *Philippine* islands on account of trade, and there is but one ship, which cannot carry so many, and therefore they get mighty recommendations to secure their passage a year before. However the governor, because I was a stranger, and he had all this while taken much pleasure in discoursing with me, prefer'd me before another; ordering me to go to *Cavite*, where the galeon lay, and he would order I should have conveniences allow'd me aboard it. Accordingly I went on *Thursday* 17th, and having a little cabin assign'd me, which was to be my prison for a voyage of 7 months, I found much difficulty about my diet; for the captain, pilot, master and mate, being desir'd by the castellan of *Cavite* to admit me to their table, excus'd themselves, saying, They had already undertaken to furnish so many passengers, as could be maintain'd by the provisions they were allowed to put aboard. I was therefore oblig'd to agree with the boatswain, who with difficulty consented to do it for an hundred pieces of eight, to oblige the governor of the castle; whereas it is usual to pay 5 or 600 pieces of eight for a cabin and diet, because the cabin costs more than the provisions.

Friday 18th, I lodg'd at *Cavite* in the house of *Joseph* of *Milan*, who had been 30 years married at *Cavite*. He was master or chief pilot to a small vessel of the king's, which was by his majesty's order to sail speedily for the *Marian* islands, with supplies, and to discover the southern islands

particularly *Carolina*, discover'd some years since, the conquest whereof had been laid aside. *Saturday* 19th, I return'd to *Manila*, and because the religious mutter'd at my stay in the monastery, I thought of leaving that lodging, that the *F. rector*, who had entertain'd me so courteously, might not hear those indiscreet complaints. They said my apartment was for those who were to perform the spiritual exercise; and they knowing my speedy departure would not allow me leisure to enter upon it, as having business to do in the city, told me I might stay, if I would go upon that act of piety. Being sensible of what they aim'd at, I told them I had not so much leisure to perform that devotion, which requir'd time and sedateness, and so left the apartment.

Sunday 20th, I remov'd to the apartment of *F. Antony* of *St. Paul*, chaplain to the royal hospital. This hospital was founded for the *Spanish* soldiers. The king allows it 250 pieces of eight per month, whereof 40 to the chaplain aforesaid, 25 to the apothecary, 25 to the steward, 25 to the physician, and other officers, and the rest is spent upon the sick: Besides, the king allows fowl, rice, grain, wood, salt, sweetmeats and cloth. As for the fabrick it is very large, with galleries that will hold 300 sick men, and rooms for all servants. This hospital was burnt in 1603, when a great part of the city was consum'd, as also the monastery of *St. Dominick*, and the king's magazines. *Monday* 21st, I went to return the governour thanks for the favours he had done me, he being then at a little country house in a small island made by the river, half a league from the city. He was retir'd thither to be more at leisure to dispatch the galeon, the court being shut upon the same occasion. This holds for a month, that all the ministers may have

GEMEL have time to write to court, and draw up
LI. all proceſſes and informations that are to
1697. be ſent thither. The houſe is handſome

tho' the upper apartment be of wood. The garden is pleaſant and has the proſpect of the river, on which boats are continually going up and down, carrying provisions to the city from the lake of *Babi*. *Tueſday* 22d, I went two miles out of town to ſee the *Doctrina*, or pariſh of the fathers of the order of *St. Auguſtin*, otherwiſe call'd *Nueſtra-Senora-de-los-remedios*. All the front and inſide of the church was adorn'd by a *Portugueſe* father, with oſter and other ſea-ſhells artificially placed, as in the cloiſter and galleries above; ſo that any ſtranger that takes the pains to go thither, does not think his labour loſt. Before the gate is a ſquare bank of flowers parted in the form of a croſs, with little trees that are a great beauty to it.

Franciſcans. *Wednesday* 23d, I ſaw the *Franciſcans*. Their church is ſmall, but has ſix altars well gilt, and adorn'd ſuitable to the poverty they profeſs. Theſe fathers came to *Manila* on the 2d of *Auguſt* 1577, and were diſtributed to take

An hoſpi- care of pariſhes. *Thursday* 24th, I went tal. to ſee *St. Potenciana* a monaſtery or rather hoſpital, founded by the king for 16 poor orphans, to whom he allows a competent maintenance, and a portion when they marry. Marry'd women are alſo admitted, and leud women put in by the magiſtrates, but they have no communication with the 16 orphans. The whores are maintain'd by the king, and they are to work for him. The church has three decent altars.

Friday 25th, I went out at the *Puerta real*, or royal gate, to the hoſpital of *St. Lazarus*, a mile from the city. The men were in the under gallery, and the women in the upper, all well ſerv'd at the king's expence. Walking out on *Sunday* 27th, I went ſo far before I bethought me, that I was near the powder-houſe three miles from the city. Going in I found it was a ſmall fort, with little towers and ſmall guns on them, and within the place ſeveral rooms where they make the powder for the king's ſervice.

Cock-fighting. *Monday* 28th, I ſaw a cock-fighting, a ſport ſo much us'd in the *Philippine* iſlands, that whole families are ruin'd by it. They breed them tame, and apart, that they may be the more fierce when they come together. The owners lay great ſums on their heads, and faſten gavelocks on their heels; then they make them peck one another on the head, the more to enrage them, and then let them down together to arm'd. They fall on more like lions than cocks, attacking, and riſing one againſt another, till they tear their very bowels out, and one is left dead, or ſo wounded, that the other remains maſter of the field.

Tueſday 29th, the porter of the royal court ſhew'd it me. We went in at another door than that which leads to the governor's apartment, and going up a large ſtair-caſe, came into a fine gallery, and then into the hall handſomely hung with damask. At the end was a great canopy, and under it a long bench cover'd with ſilk, on which the governor ſits in the middle of the *oydores*, or judges, who take place according to ſeniority, with a great table before them cover'd with crimſon velvet, all eight ſteps above the floor. The advocates or lawyers generally ſit on two low benches, out from under the canopy, and on another little bench the relator, or clerk, below on the floor of the hall oppoſite to the judges, who as they ſit together in a body have the title of highneſs given them. Adjoining to this hall is another room, where they uſe to meet to conſult about important affairs. There is alſo a chapel to ſay maſs in, all well hung with damasks, and other ſilks; and all the ſtructure beautify'd with galleries plac'd for the judges to divert them.

The governor's palace adjoining to it, *Court* cho' a timber building for the moſt part, is not ſo large and handſome. It is ſquare, and the windows and galleries uniform on every ſide, as well without, as in the court, and wants nothing either for ornament or convenience. Before it is a ſpacious parade, on which, by reaſon of its largeneſs, and being but little frequented, there grows as much graſs and hay, as would keep ſeveral horſes.

Wednesday 30th, I went to *Dilao*, a pa- riſh belonging to the *Recollects*. The church is ſmall, and the convent no bigger than for eight friars. *Thursday* 31ſt, I ſaw the pariſh belonging to the fathers of the ſociety without the walls of the city. The church is large, but indifferently adorn'd. There they adminiſter the ſacraments to the *Chi-neſe* chriſtians, and preach in their language.

Friday the firſt of *June*, I went to ſee the *Dominicans* church of *Parian*, which is well adorn'd, and ſerv'd by three prieſts, who aſſiſt the *Chineſe* and *Indians*. This is all that *Manila* affords remarkable for churches, palaces, or any other thing. I ſhall conclude this chapter with a ſtrange paſſage told me by *F. Francis Borgia*, of the ſociety of *Jeſus*, procurator of the miſſion in the *Philippine* iſlands, and by ſeveral religious men and citizens of reputation. In the year 1680, *D. Maria de Quiros*, Wife to *D. Joſeph Armijo*, was deliver'd at *Manila*, after going two years with child, and the birth was declar'd legitimate. The matter of fact is publick, and well known, and happen'd very lately, but it being a very difficult matter, and almoſt impoſſible to go two years with child, the reader may believe as he pleaſes.

CHAP. IV.

The author's short journey to the lake of Bahi.

^{Bridges of} ^{canes.} **H**AVING a particular curiosity to see the lake of *Bahi*, I set out towards it a horseback on *Saturday* the 2d betimes. After riding six miles, I pass'd through *Paragnach*, a parish belonging to the fathers the order of *St. Augustin*, where there being a bridge of Canes over the river, the horses were fain to be swum over, which was repeated a league further in passing another channel where there was another bridge of canes. What with these delays, and the guides not knowing the way well, night overtook me near a farm of *St. Peter*, belonging to the fathers of the society, where I was forced to lie. The father who resided there made as much of me, as the country and smallness of the place would permit.

Sunday 3d, I proceeded on my journey, but the ignorant *Indian* having carry'd me again, as he did the day before, into plow'd lands and woods, where he knew not how to get into the road again, I was oblig'd to put into *Vignan*, a farm belonging to the *Dominicans*. I heard mass, and then to be rid of the folly of my guide took a small boat the best I could get. Leaving the horses with a *Dominican* father, I went up the river to the lake, where I was well wet with the water the wind threw into the boat. Not being able to cross a small bay, to go to *Bagnos*, or the baths, as I design'd, I took a bigger boat that happen'd accidentally to come in my way. About sun-set it carry'd me to *Bagnos*, or the baths, a parish of the *Recolets*, where I was courteously receiv'd.

Monday 4th, the *Indian* told me the boat was gone, because the water-men came thither with an ill will; and I having a mind to go to another little lake, took another boat to carry me to it. This lake is small in compass, but very deep, and in the middle of it they find no bottom. The water is blackish, though it stands on a mountain not far from the great one, which may proceed from the minerals under it. In it there is a sort of unfavoury bony fishes. About it in the day time there is an infinite number of large bats, hanging on the trees, one by another in ropes. But towards night they fly away in swarms to the woods a great distance off to get their food, and sometimes they fly so thick together, that they darken the air with their fleshy wings, some of them six spans long, which I was an eye-witness to whilst I staid at the aforesaid *Bagnos*, or the baths. They

VOL. IV.

know how to chuse in the thick woods such trees, whose fruit ripens at certain seasons, which they devour all the night, making such a noise that it is heard two miles off. About break of day they return to their quarters. The *Indians* seeing the best fruit God has provided for their sustenance, especially the *Goyavas*, and pears, destroy'd by these scurvy birds, kill all they can of them; and revenging themselves thus at once, save their fruits, and provide themselves meat, eating the bats. They say their flesh tastes like rabbit, and indeed when they have flea'd them, and cut off their heads, they are not at all unlike them. They take as many as they please without any great trouble, for they bring down a great many with an arrow. *Tuesday* 5th, I went to see the water of the baths; whereof there is at the monastery a great rivulet, which runs into two neighbouring baths. It is so violent hot ^{Hot wa-} that there is no enduring a hand in it; but ^{tters.} if a hen is put in it scalds off the feathers, and the very flesh from the bones. And not only a hen, but if a crocodile should happen to go into it, the water would kill it, and scald the scales off. The smoke which rises from the spring, is no less than that of a flaming furnace. It flows from the neighbouring mountain, and running under the monastery, casts such a heat up to the sweating-room, that it cannot be endur'd a quarter of an hour; for my part, I was no sooner in, but I leap'd out again. A *Portuguese* had the care of building these Baths with the alms of charitable persons; afterwards by the king's order an hospital was built there, but the care of the sick in process of time has been laid aside; and the fathers residing there take care of souls, and not of bodies. It is to be observ'd, That the water, though mineral, is as clear and well tasted as any other water, and being cool'd is excellent to drink. I drank it all the while I was there entertain'd by the fathers, who use no other.

Wednesday 6th, I went half a league from the monastery to see a little river, which ^{ver over} runs from the mountain, and whose water ^{minerals.} is excessive cold, and very wholesome. Yet its channel is upon minerals, for digging a little in the sand there rises a very hot water.

As for the great lake of *Bahi*, it is very ^{Bahi lake;} long but narrow. Round about it, being 90 miles in compass, there are several monasteries of *Franciscans*, *Augustinians*, and

5 M

Jesuits,

GEMEL-Jefuits, because the place is well peopled, and till'd by the *Indians*. It abounds in fish at all times. There are also in it crocodiles, and sword-fishes, but not like ours. These two fight together furiously, because the crocodile thinking himself absolute lord of the lakes, cannot endure any other fish of prey should be in them. For the most part the sword-fish gets the better, for he perceiving his enemy arm'd with scales which bear off the stroke of his sharp sword, dives under water, and strikes the crocodile in the belly, where he has no scales, and so kills him. I was shew'd a sword six spans long with teeth on the sides,

as sharp as nails, or rather like a saw, that pierces and cuts at once. The many crocodiles of this lake do much mischief, for there is never a year but they devour many people, and kill horses and cattle that graze about, or drink at the lake. The *Indians* revenge themselves laying snares for them with pieces of meat, or dogs, for the crocodiles are such lovers of dog's flesh, that they will leave a man for it. *Thursday* 7th, I return'd by water to *Vigan*, where I found my horses had broke their halters, and were run away, which made me stay till others were taken in the farm, which carry'd me to *Manila* on *Saturday* the 9th.

CHAP. V.

Of the government of Manila, and the adjacent islands.

Archbishop and bishops.

THO' the *Philippine* islands are very remote from *Europe*, and from his catholic majesty's court, to whom they are subject, yet they are excellently governed. For spirituals, there is an archbishop at *Manila* chosen by the king, who decides all matters not only in his own diocese, but all appeals from his suffragan bishops. If the metropolitan's sentence does not agree with the first, there lies an appeal to the neighbouring bishop of *Camerines* the pope's delegate. The king, as has been said, allows the archbishop six thousand pieces of eight a year; and the bishops of *Sibu*, *Camerines*, and *Cagayan* 5000. Besides these, there resides at *Manila* a titular bishop, or coadjutor, by the *Spaniards* call'd *Obispo de anillo*, or ring-bishop, who succeeds in the first vacant church, that there may be no intermission in the care of souls during fix years before a new prelate can come. As for the inquisition, there is a commissary appointed by that court at *Mexico*.

Governor and court.

For the temporal government there is a governor with the title of captain general, and president of the royal court, whose authority lasts eight years; and four *Oydores*, or judges, and a solicitor, but these are for life. When this court was erected in 1584, it consisted of two *Oydores*, or judges, and a solicitor; and the president was doctor *Santiago de Vera*. Sometime after a third judge was added. Experience afterwards shewing, that there was no need of such a court, it was suppress'd by order of the king and council, and instead of it a body of 4000 men rais'd, which was perform'd in 1590. But in 1598, it was again erected, and D. *Francis Tillo* was appointed president over three *Oydores*, or judges, and a solicitor. This court does not only receive appeals from the common magistrates of the city, which are two *Alcades*, but

from all the islands; and it tries violences committed by church-men like the court of *Fuerca* in *Spain*. The governor sits in it as president, but has no vote, but when they are equally divided he appoints a doctor to give a casting voice. D. *Gabriel de Sturis* acted twice in this capacity whilst I was at *Manila*. Tho' a small matter would suffice to maintain an *Oydore*, or judge, because provisions are cheap, as are stuffs for apparel, and all other necessaries for decency; a saddle horse being sold for ten pieces of eight, and enough to keep him a month for two; yet they have a plentiful allowance, each of them being paid every four months 1100 pieces of eight. The solicitor has over and above 600 pieces of eight a year from the *Sangleys*, or *Chinese* merchants, as their protector, and 200 more as solicitor for the *cruzade*. The governor's salary is 13300 pieces of eight; 4000 as general, 4000 as president of the royal court, and 5300 as civil magistrate. If the governor dies, the eldest *Oydore* or judge receives this salary, and manages the martial and civil government; for which he is afterwards accountable to the new governor.

Were not the *Philippine* Islands so remote, that government would be coveted by the chief grandees, because his government is unlimited, the jurisdiction large, the prerogatives not to be parallel'd, the conveniences great, the profit unknown, and the honour greater than that of viceroy in the *Indies*. But, as I said, the distance makes the greatness of this post not to be known in *Spain*. To shew something of it, the governor besides the civil government, and administration of justice, which he exercises with the royal court, has the gift of all military employments, makes 22 *alcades* to govern as many provinces, and appoints the governor of the

Secret
Uran.

Marian islands, when one dies, till the king names another. Formerly he made the governors of the islands *Formosa* and *Ternate* (one of the 5 moluccas) when they were subject to the crown of *Spain*. He also bestows all the *Encomiendas*, or lordships over *Indians*, given as a reward to soldiers that have serv'd in *India*. These are given for two lives, the wife and children succeeding in them, after which the land returns to the king. These *Encomenderos* or lords, receive the duties that should be paid to the king, that is, 10 royals from married men, and 5 from others; but these lords are oblig'd out of it to allow towards the maintenance of the forces, 2 royals and 4 *Cavans* of rice for each head, and 2 royals more to the parish priest. The king out of his own demesnes, besides the 10 royals, has 2 *Cavans* of rice: A *Cavan* weighs 50 pounds *Spanish*. It is very remarkable that the governor fills up all the vacant canopies in the cathedral, and then acquaints the king to have them confirm'd, as he does by the *Encomiendas* above-mention'd. When any parish of secular priests is vacant, the assembly is held before the archbishop, who names three of the ablest for the governor to choose one. The same is practis'd in the vacancies of canopies and royal chaplains. The parishes belonging to the religious men, are supply'd by the provincial of the order, in a provincial chapter. These need no confirmation, and they may hear the confessions of the *Indians*, but not of the *Spaniards* in their parish, without the ordinaries approbation. If the secular curates commit such a fault, as deserves they should be expell'd their benefice, it is done with the advice of the diocesan and governor. The governor of *Manila* has also the nomination of the commander of the galeon, that sails every year to *New Spain*, a post worth above 50000 crowns a year. He appoints two majors for *Manila* and *Cavite*, and several captains and officers, that are not commission'd at *Madrid*. He gives the *Indians* commissions as colonels, majors and captains, without much difficulty; they paying the king half a year's value of the place. To honour the governor a company mounts the guard every day before his palace, and to curb the mutinous *Chinese*. There are in the city of *Manila* about 800 soldiers in all, but their pay is only two pieces of eight, and 50 pound of rice a month.

This grandeur and power is somewhat eclips'd by a dreadful trial, the wicked people of *Manila* make their governors go through. They do not then examine the heinousness of offences, but the sums receiv'd in eight years, punishing the purse instead of the person. The accusers have

60 days allow'd them, after proclamation made through the provinces to bring in their complaints, and 30 days to prosecute before the judge, who is generally the successor in the government, by special commission from the king, and his supreme council of the *Indies*; which refers to it self the judging of some matters of consequence. Therefore the judge having receiv'd all informations, without deciding any thing, returns all the proceedings to court, after giving sentence in those cases which are left to him. The *Oidores*, or judges, who govern after the governor's death, or are remov'd to another post in *Mexico*, are subject to the same trial; but with this difference, that they may go away, leaving an attorney to answer for them. There is so much Rigour us'd in this trial, that sometimes they proceed to imprisonment, without respect to greatness of the post possis'd by the person; as happen'd to *D. Sebastian Hurtado de Corcuera*, and *D. James Faxardo*; the first of which was kept prisoner 5 years in the castle of *St. James*; and the other not much less; but by special order from his majesty they had all restor'd that had been wrongfully taken from them at their trial. 'Tis true the council of the *Indians* has moderated this rigour, ordering that the governors be not imprison'd, but that the informations being taken, they be sent into *Spain*; but this is not punctually observ'd because of the great distance. The inhabitants of *Manila* did so terrifie *D. Severiano Manriquez de Lara* at his trial; that being imbark'd for *Spain*, he never ceas'd all the voyage to ask whether the vessel could return to *Manila*, and being at last assur'd by the pilot that he must either land in *New Spain* or die, he pleasantly said, *Then a t-----d for Manila*. In short since the islands were conquer'd, no governor has return'd to *Spain* but he and one more; for all of them either break their hearts at their trial, or die with hardship by the way. It is certain this trial is worth 100000 crowns to the new governor, which he that goes off must have ready to come off well in this dreadful trial.

When I went thither the governor was *D. Fausto-Cruzat, y-Gongora*, Knight of *Santiago*, or *St. James*, descend'd from the ancient kings of *Navarre*, and one of the best captain generals the islands had since they were conquer'd. All the other governors before him had anticipated upon the revenue several thousands to maintain the soldiers; but he during his government, not only clear'd all debts, but so improv'd the revenue, that when I was at *Manila*, there were 400000 pieces of eight in the treasury; for he by his great ability, wisdom,

GEMLL-
LI.
1697.

Severe
trial.

dom,

GEMEL-dom, zeal and application had advanced the revenue 110000 pieces of eight a year. As for the execution of Justice, and places bestow'd, if the people of *Manila* will lay aside all prejudice, they cannot choose but commend his conduct, for he has behav'd himself uprightly in all his actions, and has bestow'd the *Encomiendas* or lordships before-mention'd on well deserving soldiers; the offices of *Alcades* on natives of the place well qualify'd, according to the king's orders; and church livings on the most deserving, without suffering himself to be corrupted. I do not write for favour or affection, for what I say is so true, that the king being inform'd of it, declar'd, he was faithfully serv'd by that governor, and continu'd him in his government, at such

time as he had receiv'd 70000 pieces of eight, and given the commission to his successor to go take possession of the place. I was actually at *Mexico* when the king's orders came for restoring the 70000 pieces of eight to the intended successor out of the king's treasury. This gentleman's good behaviour set him above the fear of a trial. He was unfortunate in setting out galleons, for in his time two of the greatest that were built in the islands were cast away. The one was call'd *St. Joseph*, the other *Santo Christo*; and in them both the people of *Mexico* and *Manila* lost above a million, which reduc'd *Manila* to great poverty, but it recovers by the arrival of other ships.

C H A P. VI.

Of the Philippine Islands, their discovery, and of the several nations that have peopled them.

THERE being a great number of islands under the governor of *Manila*, of which place we have hitherto spoke, it will be convenient to give a short account of the most remarkable of them; and the more because they are little known in *Europe*, and not taken notice of in Maps.

Philippines in general

The author of nature, and of the wonderful creation of this world, placed an archipelago strew'd with islands, now call'd *Philippines*, in the great *Indian* ocean beyond *Ganges*, and almost opposite to the long extended coasts of *Malaca*, *Sian*, *Camboja*, *Cbiampa*, *Cbochinbina*, *Tunkin* and *Cbina*. The famous *Ferdinand Magellanes* call'd it *Archipelago de S. Lazaro*, because he came to an anchor there in the year 1521, upon *Saturday* before passion *Sunday*, vulgarly in *Spain* call'd of *St. Lazarus*. The name of *Philippines* was given them in 1543, by the general *Luis Lopez-de-Villalobos*, in honour to prince *Philip*, then heir to the crown of *Spain*; or as others will have it in 1564, when he was actually reigning, when the *Adelantado Michael-Lopez-de-Logujpi* came to conquer the islands. What their ancient name was is uncertain, yet some authors affirm they were call'd, islands of *Luzones*, all of them taking the name, as the *Canaries* have done, of the biggest, which is *Manila*, or *Luzon*; which in the *Tagala* language signifies a mortar, as if they had express'd the country of mortars. *Luzones* are certain wooden mortars a span deep, and the same diameter, in which the *Indians* pound their rice, which they afterwards sift through sieves they call *Biluas*. There is no *Indian*

but has one before his door. The inhabitants of the island *de los Pintados* cut out three upon one same piece of timber along one by another, that so many people may work at once, for the inhabitants of all the islands feeding on rice, they first bruise it in a mortar, before they boil it. Others, call them for instance the *Portuguese*, call them *Manilas*, a name known ever since *Ptolemy*, as some will have it.

The ships that come from *America* to the archipelago of *St. Lazarus*, or *Philippines*, when they discover land, must of necessity see one of the four islands of *Mindanao*, *Leyte*, *Ibabao* and *Manila*, from the cape of *St. Augustin*, because they front the vast ocean, which they call of *Spain*, for above 600 miles, lying in a semicircle. *Manila* is seated north-east; *Ibabao* and *Leyte* south-east, and *Mindanao* south. To the west of them is *Paragua*, the biggest next to *Manila* and *Mindanao*, with the which it makes a triangle, but the point of it next to *Borneo* belongs to that king, and the other to *Spain*. In the midst of this sort of triangle, besides the five islands already nam'd, there are five others, large and populous, viz. *Mindoro*, *Panay*, *Isla de Negros*, or the island of blacks, *Sebu* and *Babol*. So that the most remarkable islands of this archipelago are but ten, the number mention'd by *Ptolemy* in the place above-mention'd. Among these ten there is the same number of small ones, all peopled, which beginning to reckon them as they fall in the way the ships take that are bound for *New Spain*, are *Luban*, where the galeon *St. Joseph* was cast away, *Marinduque*, *Isla de Tablas*, *Rom-*

It is no easy matter to give a distinct relation of all other small ones, partly inhabited, and partly desert, but all known by the *Indians* that go to gather their product; I can only say in general that opposite to the island of *Manila* on the north-side, between two capes call'd *Boxador* and *del Engano*, at 24 miles distance, are the islands *de los Babuyan*, the first inhabited by christian *Indians*, who pay a tribute; the other by savages near the *Iequios*, and island of *Formosa* on the west. Near *Paragua*, opposite to *Manila*, there are three islands call'd *Calamianes*, and then eight or nine more, all inhabited. Then turning to the southward, ninety miles from *Calamianes*, opposite to *Caldera*, and point of *Manilano*, are *Taguima*, *Xolo*, with other small ones about them.

The island of *Cuyo* lie between *Calamianes* and *Panay*, in the province of *Ota* and *Muras*. The island of *Fugas*, or *Ficos*, is near that of *Negros*, or *Blacks*. There is also *Bantayan* not far from *Zebu*; *Panglo*, near *Bobol*; *Panamoa*, *Maripipi*, *Camigui*, *Sargao*, and *Puzon*, which lie between *Mindanao* and *Leyte*, and many others whose fix'd number it is hard to know. This shews their mistake, who say the *Philippine* islands are forty, for if they mean the great ones, they are not so many; and of all forts there are many more.

All these islands are in the torrid zone, between the equinoctial and tropick of *Cancer*, for the extreme points of latitude in this archipelago are *Sarrangan* or cape *St. Augustin*, the point of *Mindanao* in five degrees and a half; *Babuyan*, and cape *de Engano*, the utmost points of *Manila* in twenty degrees; *Embocadero de St. Bernardo* in thirteen degrees; and the middle of the island and city of *Manila* in fourteen degrees and a few minutes. Their longitude according to the best maps, and carts is 155 degrees; though according to *Magellan's* account it be 161, and this because all men do not reckon from the same point. Now whereas *Ptolemy* places his islands *Manila* in 142 degrees, it plainly appears, that considering the different accounts, and rules of taking longitudes, the *Manila* are not the same, as the *Munilos*, either as to situation or number, and that they are much out of the way, who will have *Manila* to be built 160 years after the birth of Christ, when *Ptolemy* flourish'd; without being able to deduce any conjecture, from the antiquity of its structures, because those nations use no o-

VOL. IV.

ther materials, but wood and cane, and their buildings are very weak.

There are sundry opinions concerning the original of these islands. Some say they were created with the world, when the author of nature discover'd the land, and divided it from the waters. Others think that they remain'd after the flood. Others affirm they were made by particular inundations of provinces, tempests, earthquakes, natural fires, and other accidents, which use to cause alterations both at sea and land; as, some say, happened to *Niobe*, which they conceiv was formerly contiguous to the continent of *Italy*; the island of *Cyprus* to *Syria*, and others. Lastly, others by the heaping of matter, and the natural alterations of these two elements; particularly occasion'd by rivers, which carry the earth from one place, and settle it in another, or else by the usual washing of rivers, which the sea with the motion of its waves, by degrees, heaps in one place or other, so that in process of time they come to be islands. All this may be said of all the islands in the world, as well as those; but the *Philippines* may be said particularly by the last means spoke of, because in several parts of them, there are burning mountains, and on the tops of others springs of hot water. The earthquakes are frequent and terrible at certain times; insomuch that they scarce leave any structure standing, as *Manila* can sufficiently testify. The winds call'd by the *Indians* *Baguyes*, by the *Spaniards* *Tifones*, and by us *Hurricanes*, are here so violent, that besides the wrecks they cause at sea, they root up mighty trees, and drive before them, vast quantities of water, which drown countries a great way up the land. Among the islands there is a shoal water, and many flats, especially near the continent; insomuch that in many places there is no sailing, and the ships are forced to seek out channels, which providence has left to keep up a communication from one country to another. These may be grounds to conjecture, that if any of these islands were at the creation join'd to the continent, several accidents, and especially the flood might have divided them into so many distinct parts, making of one great one, an archipelago of little islands.

It is not my business here to argue, whether *Ibarfis*, the son of *Javan* with his brothers, was the first that inhabited these parts; but when the *Spaniards* first came to *Manila*, they there found three sorts of people. On the sea coasts they liv'd and call'd *Malay Moors*, come, as they said, from *Borneo*, and the continent of *Malacca*; where a freight call'd *Malay*, has given

5 N

its

GEMEL-its name to all the *Malayes* dispersed throughout the greatest and best part of that archipelago. From these are descended the *Tagalians*, which are the natives of *Manila* and the country about it, as appears by their language being very like the *Malayan*; by their colour, shape, habit they wore when the *Spaniards* arriv'd, and in short by their customs and manners, taken from the *Malayes* and other *Indian* nations. The coming of these people into the islands, might be accidental, occasioned by some storm; for we see by experience, that several other nations have been drove hither by storms. In 1690, some *Japoneſe* were drove ashore, who became christians, and lifted themselves in the king's forces, it being inevitable death to them to return home, after they had been in another country, though against their wills. I saw some of these *Japoneſe* in *Manila*, who wore two wide garments, with wide round sleeves. The under garment was girt with two girdles, one from the left, and the other from the right, as the *Spaniſh* clergymen wear them. Their breeches were long, and their shoes like recolets sandals. They were their hair short, but the forehead shav'd as far as the crown of the head. Besides, the *Malayes* might come design'dly to inhabit there, on account of trade, and for profit sake; or else being banish'd their country; but these are all uncertainties.

Bisayas
and *Pintados*.

The natives call'd *Bisayas*, and *Pintados*, of the provinces of *Camerines*; as also those of *Leyte*, *Samar*, *Pangy*, and other places, it is likely came from *Macassar*, where they say there are some people who trim and paint their bodies like these *Pintados*. In the relation, *Peter Fernandes de Quiros* gives of the discovery made in 1595, of the islands of *Salmon*, he says they found in ten degrees of north latitude, 1800 leagues from *Peru*, much about the latitude and distance of the *Philippine* islands, an island call'd *la Magdalena*, or the *Magdalen*, inhabited by well shaped *Indians*, taller than the *Spaniards*, who went naked, with all their bodies wrought, after the same manner as the *Bilayas*.

It is likely the inhabitants of *Mindanao*, *Xolio*, *Bobol*, and part of *Zebu* came from *Ternate*, by reason of their nearness, trade, and likeness of religion, to whom they still have recourse, in case of war. The *Spaniards* at their first coming, found they had the command in the aforesaid islands.

Negrillos.

The *Blacks*, by the *Spaniards* call'd *Negrillos*, who live on the mountains and in thick woods, whereof there is plenty in *Manila*, differ quite from all the rest. They are meer barbarians, and feed on such fruit and roots, as the mountains afford, and

upon all they can kill, even to monkeys, snakes, and rats. They go naked, except their privities, which they cover with the barks of trees, by them call'd *Bubiques*; and the women with a clout wove of the fibres of trees, call'd *Tapisle*. They use no other ornament, but bracelets made of rushes, and *Indian* canes of several colours. They have no laws, letters, or government, but that which kindred makes, for they all obey the head of the family. The women carry their children in wallets made of the bark of trees, and ty'd about them with a cloth, as some women of *Albania* do in *Italy*, or like the *Irish* women. When night overtakes them, there they lie, either in the hollow of a tree, or under mats, made of the bark of trees, set up like huts; and thus they live like brute beasts, only for the sake of liberty, that is, not to be subject to the *Spaniards*. This same foolish love of liberty, is the cause they will not suffer the *Blacks* of another mountain to come to theirs, and on this account they fight with one another desperately. They are such enemies to the *Spaniards*, that if they happen to kill one, they invite all their kindred, and rejoice for three days, drinking out of the Skull, clear'd for that purpose; by which means, they afterwards get wives the easier, as being more courageous. Their weddings consist only in touching of hands, the parents making their children hold them out.

This mixing with the wild *Indians* produced the tribe of *Mangbian*, who are blacks dwelling in the isles of *Mindora* and *Mundos*, and who peopled the islands of *los Negros*, or of *Blacks*. Some of them have harsh frizz'd hair, like the *African* and *Angola Blacks*, others long. The colour of some of them, is like *Ethiopian*; others more whitish, and some of these have been seen with a tail half a span long, like those islanders *Ptolemy* speaks of, *Cemen. lib. 7. Tav. 11. pag. 166.*

The *Sambali*, contrary to the others, *Sambali*, though wild, have long hair, like the other conquer'd *Indians*. The wives are delivered in the woods, like she-goats, and immediately wash themselves and the infants in the rivers, or other cold water; which would be immediate death to *Europeans*. These *Blacks* when pursu'd by the *Spaniards*, with the sound of little ticks, give notice to the rest, that are dispersed about the woods, to save themselves by flight. Their weapons are bows and arrows, a short spear, and a short weapon or knife at their girdle. They poison their arrows, which are sometimes headed with iron, or a sharp stone, and they bore the point, that it may break in their enemies body, and so be unfit to be shot back. For

The who
leagues, a

For their defence, they use a wooden buckler, four spans long, and two in breadth, which always hangs at their arm.

Though I had much discourse about it, with the fathers of the society, and other missionaries, who converse with these blacks, *Mangbians*, *Mandi* and *Sambali*, I could never learn any thing of their religion; but on the contrary, all unanimously agree they have none, but live like beasts, and the most that has been seen among the *Blacks* on the mountains, has been a round stone, to which they pay'd a veneration, or a trunk of a tree, or beasts, or other things they find about, and this only out of fear. True it is, that by means of the heathen *Chinese*, who deal with them in the mountains, some deformed statues have been found in their huts. The other three before-mention'd nations, seem'd inclin'd to observing of auguries, and *Mabometan* superstitions, by reason of their commerce with the *Malayes* and *Ternates*. The most receiv'd opinion is, that these blacks were the first inhabitants of the islands; and that being cowards, the sea coasts were easily taken from them by people resorting from *Sumatra*, *Borneo*, *Maccassar* and other places; and therefore they retir'd to the mountains. In short, in all the islands where these *Blacks* and other savage men are, the *Spaniards* possess not much beyond the sea coasts; and not that in all parts, especially from *Maribebes*, to cape *Bolinao* in the island of *Manila*, where for 50 leagues along the shore, there is no landing, for fear of the *Blacks*, who are most inveterate enemies to the *Europeans*. Thus all the in-land parts being possess'd by these brutes, against whom no army could prevail in the thick woods, the king of *Spain*

has scarce one in ten of the inhabitants of *GEMEL*-the island, that owns him, as the *Spaniards* often told me. See *Navarette*, who gives a much better account of this matter, and not by hearsay, but as an eye-witness. 1697.

The fathers missionaries, take much pains, to bring these people to salvation, going into the woods to preach to some of them, who are not altogether so fierce, and build little huts or houses, for the conveniency of the missionary, who sometimes prevails upon a few; but upon the least firmness of jealousy, they burn houses, churches, and all in them, and run into the thickest of the wood. This happens, because the christian *Indians*, that they may have all the profit of the wax, the *Blacks* gather in the woods, have persuaded them by all means to shun coming under the *Spanish* yoke, because they would be oblig'd to pay a tribute. Whoever catches one of them may keep him as a slave; but if he becomes a christian, when he has serv'd ten years he is to be made free, and then natural inclination prevailing, he certainly runs away to his native mountain.

There is another sort of people, not so polite as the first, nor so barbarous as these last, who live near the springs of the rivers, and are therefore call'd *Ilayas*, or *Tingbianos*, as inhabiting the mountains. There are others call'd *Zambales*, and *Igelos*, who converse with the *Tagalis*, and *Bisayas*. Some of these pay tribute, tho' they are not christians, and they are judg'd to be a mixt race of the other barbarous nations, and therefore resemble them in behaviour, colour, and manners. Yet all this does not make out, that inhabitants might not go over to these islands out of *China*, *Japan*, *Siam*, *Camboja*, and *Cochinchina*.

CHAP. VII.

A particular account of the island of Luzon, vulgarly call'd Manila.

HAVING spoke of the islands in general, it will be proper now to give the description of them in particular. Therefore to begin with *Luzon* or *Manila*, as the *Spaniards* call it, which is the chief of them. The middle of it is in 15 degrees of latitude, the east point in 13 degrees and 30 minutes, and the most northerly point in 19 degrees. The shape of it is like an arm bow'd, but unequal in thickness, for in the east it is so narrow that it is but one day's journey over; and in the north it stretches so large, that the narrowest part from sea to sea must be 30 or 40 leagues. The whole length is about 160 *Spanish* leagues, and the circumference 350.

At the elbow of this arm looking towards the south east, a great river falls into the sea, and makes a noble bay 30 leagues in compass, call'd *Babia* by the *Spaniards*, because it flows from a great lake, call'd *Babi*, eighteen *Italian* miles from *Manila*. In this place the *Indians* had their principal village, consisting of about 3500 houses, towards the east, in the angle made by the river and the sea. Behind it were many ponds, which made the place naturally strong, and the soil was fruitful of all things, necessary for the life of man; for which reason *Michael Lopez*, the first conqueror of the island, thought fit to found the principal city in this place, under the ancient

GEMEL-ancient name of *Manila*. This was done, L.I. as has been said before, on the feast of St. John baptist 1571, five days after the conquest, which falling out on the 19th of 1697. the month, being the feast of St. Potenciana, she was chosen patroness of the island.

Cavite
Port.

In sight of *Manila*, and three leagues from it, is the port of *Cavite*, upon the lime bay, which for the most part is deep, and abounds in fish, and the shores are cover'd with many trees and villages. Directly against the mouth of the bay, eight leagues from *Manila* is *Maribebes*, a little island three leagues in compass, and half a league in length, but high. Here is a renown'd officer, with six souldiers upon guard, he is also *Corregidor*, or chief magistrate of a village of 50 houses, seated on the side of *Manila*. The greatest profit he makes is by the *Blacks*, who bring him store of wood, for a little tabacco and rice, which he sells at good rates in *Manila*. This shews the *Blacks* are such enemies to the *Spaniards*, as he speaks of before. There are three mouths to come out of the sea, into the bay; the first is most us'd, by reason of its depth, and being half a league over, and lies between the said island, and *Punta del Diablo*, or the *Devil's Point*; the second is a quarter of a league wide, lying between the opposite shore, and the rock call'd, *de las Cavallos*, or of the *Horses*, it is unsafe, as having little water and some rocks under it; the third is wider, being three leagues over, and lies between the aforesaid rock, *de los Cavallos*, and the point of *Marigondon*, but it has flats, and there must be much care in sailing up it.

Without the said bay, on the left hand, the way the ships go to *New Spain*, at 14 leagues distance, is the bay of *Balayan* and *Bombon*, three leagues in compass, behind which is a lake well peopled round about. Sailing on still eastward, is the point of *Batangas* *Azufre*, or *Brimstone*, and the bay of *Batangas*, inhabited round about by *Indians*; near the point wherof, there is a small island call'd *la Coza*, as abounding in game. Between this and the point before mentioned, is the port of *Malacaban*; fatal for the death of the governor *Gomez Perez de las Marinas*, murder'd by the *Chinese* that row'd the *Cassiana* galley, with several other persons.

Batayan
province.

Beyond the bay of *Batangas*, are the villages of *Labo* and *Galvan*, about which there are signs of mines. Here ends the province of *Balayan*, beginning at *Maribebes*, and inhabited by about 2500 tributary *Indians*. It abounds in cotton, rice, and palm-trees. Then follows the province of *Calilaya*, or *Tayabas*, which reaches to *Cape Bondo*, and up the country to *Mau-*

Tayabas.

ban, on the opposite coast of the island. It has more inhabitants, and is larger than the other. Next is the province of *Camarines* in which are *Bondo*, *Pasigao*, *Ibalon*, metropolis of the government of *Catanduanes*; *Bulan*, where the ship call'd the *Incarnation* was cast away, returning from *New Spain* in 1649, *Sorsocan*, or *Bagatan*, where the king's great ships are built; and *Albat*, a large bay without the strait, where there is a high burning mountain, which is seen at a great distance by the ships coming from *New Spain*. In this mountain there are some springs of hot water, and among the rest one of such nature that whatsoever falls in, whether wood, bone, leaf, or cloth, is turn'd into stone. The governor *D. Francis Tello* had a crab presented him half petrify'd, care having been taken, that it should not all be converted. At the village of *Tivi*, two leagues from the side of the mountain, there is a great spring of luke-warra water, which has the same quality of petrifying, even living creatures, as crabs, serpents, and crocodiles. One of these was found converted into stone, as long as a man's arm, by *F. John de Santa Cruz*, whilst he was curate there. But particularly the woods *Molave*, *Binanuco*, and *Nuga* turn stone. The same is to be seen in other islands.

Beyond *Albat* eastward, is the cape of *Busfagay*, and then the island runs northward, leaving the isles *Catanduanes* on the right hand. Coasting from them westward, they meet the river *Bico*, which flows from a lake and runs by the city *Caceres*, founded by the second governor, and proprietor of these islands *D. Francis de Sande*. Here resides the bishop of *New Caceres*, under whom are the provinces of *Calilaya*, *Camarines*, and *Ibalon*. Next to the province of *Camarines* is that of *Paracale*, where there are rich lines of gold, and other metals, and of excellent loadstone. In it dwell about 7000 tributary *Indians*. The soil is good and plain, producing *Cocoa* and palm-trees, from the last of which, they get much oil and wine. Three days journey from *Paracale* along the coast, is another bay call'd *Mauban*, where the island winds, and makes as it were the bowing of the arm, opposite to the elbow where *Manila* stands. Sometimes the ships coming from *New Spain* have left their Money here, to be sent to *Manila*. Without this bay, is the port of *Lampoon*, like that of *Manila*.

From *Lampoon*, to cape *Ergano*, the *Camarines* coast is inhabited by none but infidels, and *New* barbarians. Here begins the province, and district of *Gagayan*, which is the largest in the island, being 80 leagues in length, and 40 in breadth. The metropolis of it, is the city call'd *New Segovia*, founded by the

the governor *D. Gonzalo Ronquillo*, and in it the cathedral church, to which *D. Miguel de Benavides*, was chosen bishop in 1598. The city is founded on the bank of the river of the same name, flowing from the mountains of *Santor*, in *Pampanga*, and runs almost across all the province. There resides the chief alcalde of the province, with a garrison of *Spanish* foot, and of other nations. A stone fort was built here, and other works made of gabions and wood, for a defence against the revolted *Indians*, call'd, *Irayas*, who live on the sides of high mountains, which divide the whole island. In this province, the parishes belong to the *Dominicans*. The most northerly cape, is that call'd *del Engano*, dangerous by reason of the northern winds, and great currents.

Fifteen leagues from *New Segovia*, eastward is cape *Boxeador*, and then turning the cape, and coasting along from north to south, 20 leagues ends the province of *Cagayan*, and begins that of *Ilocos*. The peaceable *Cagayanes*, who pay tribute, are about 9000, besides those that are not subdued. The whole province is fruitful, the natives able of body, inclin'd to tillage and arms, and the women to several sorts of work in cotton. The mountains produce plenty of wax, without any trouble; there being such abundance of honey-combs, not only in this province but throughout all the island, that wax is exceeding cheap, and all the poor burn it instead of oil. They make their candles in a hollow stick, after this manner. They leave a small hole at each end, for the wick to run through, and then stopping the bottom, fill it with wax at the top, and thus the candle is made in a moment of any size whatsoever, which when cold, they break the mould and take it out. On the mountains, there is abundance of the wood we call brazil, ebony and other sorts of great value. In the woods there is store of wild beasts, as boars, but not so good as ours, and deer, which they kill for their skins and horns to sell to the *Chinese*.

The province of *Ilocos*, is counted the richest, and best peopled in the islands. Its coast runs 40 leagues. On the bank of the river *Bigan*, the governor *Guilo de Laccazaris*, successor to the *Ablantado*, in the year 1574 built the city *Fernandina*. Up the country the province is not above 8 leagues in breadth, for thither come the mountains, and woods inhabited by the *Igoloti*, a tall warlike people, and by *Blacks* not subdued. Yet the extent of the country was view'd, when the army march'd seven days, travelling 3 leagues a day, always among trees of wild nutmegs, and pines, and at length came to the top of the

Vol. IV.

mountain, where were the principal habitations of the *Igoloti*. They live there, because of the rich gold mines in those parts, which they gather, and exchange with those of *Ilocos* and *Pangasinan* for tobacco, rice, and other commodities. Besides gold, this province produces much rice, and cotton, whereof they make quilts and other furniture.

Next follows the province of *Pangasinan*, for about 40 *Spanish* leagues along the coast. Its breadth is about 8 or 9 leagues, and plain like *Ilocos*. The mountains and plains produce much brazil wood, call'd by the *Indians* *Sibucan*, and us'd in dying red and blew. The inland is full of wild *Indians*, who, like brute beasts, wander naked up and down the woods and mountains, only covering the privities with a leaf. They sow a little in their valleys, and what more they want, they get in the conquer'd country, in exchange for small bits of gold, they gather in the river. In the province of *Ilocos*, there are 9000 that pay tribute, and 7000 in that of *Pangasinan*. On the coast of this province, is the port of *Bolinao* and *Playabenda*, famous in the *Philippine* islands, for the victory there obtain'd by the *Spaniards* over the *Dutch*.

The next is the province of *Pampanga*, *Pampanga* where the diocese of *New Segovia* ends, and begins that of the archbishop of *Manila*. This province is large, and of great consequence; because the natives being well instructed by the *Spaniards* help to defend the island, and have stood by them upon all occasions, serving not only in *Manila*, but in *Ternate* and other provinces. Besides the soil is very fruitful, particularly for rice, by reason of the great plenty of water, so that it furnishes *Manila*. It also yields timber for building of ships, the woods being on the bay, not far from the port of *Cavite*. It contains about 8000 *Indians*, who pay their tribute in rice. In the mountains of this province dwell the *Zambali*, a fierce people, and *Negrillos*, like the *Blacks* of *Angola* and such curl'd hair. These are always fighting among themselves, and defend their woods from their neighbours, and secure their game, and pasture.

The province of *Babi* lying east of *Ma-Babi*, is no less important for building of ships. About the bay of this name, of which we have spoke before, and in the neighbouring farms grows the best fruit that is eaten in *Manila*, especially the *Bonga* or *Arecca*, and the *Buyo*, which is the same as *Belle*. This is an aromatick, and delicate fruit, whereof enough has been said, when I spoke of the *Portuguese* dominions in *India*; but it must be observ'd that this of *Manila* exceeds all good, and

5 O

the

GEMEL- the *Spaniards* from morning, till night, never cease chewing of it. The fruit this
 1697. plant bears, is call'd *Taclove*. This province suffers very much, by the continual labour the natives are put to, of selling timber for building ships, two hundred, and sometimes four hundred being employed every month in this work on the mountains, or at the port of *Cavite*. The king allows them a piece of eight a month, and rice enough. The whole province contains six thousand tributary natives.

Bulacan. There is also the province of *Bulacan*, lying between *Pampanga*, and *Tondo*. It is small, its inhabitants *Tagalians*, and abounds in rice, and *Palm* wine. The number that pays tribute, three thousand.

Product. All the island of *Manila* produces gold, abundance of wax, civet, cotton, sulphur, wild cinnamon, cocoa, rice, even on the mountains which want no watering, good horses, cows, buffaloes, and on the mountains deer, wild boars, and wild buffaloes.

Catanduanes Having gone round *Manila*, it remains to say something of a small province, near the mouth of the channel, which was designedly omitted; because though its metropolis be on the land of *Manila*, yet the rest of it is made up of several islands, as *Catanduanes*, *Masbate*, and *Burias*. *Catanduanes* is 30 leagues, in compass, ten in length, and its shape is almost a triangle. It is one of the first met with, in the way to the islands, and so near the *Embocadero*, or mouth of the channel of *St. Bernardine*, that some pilots mistaking it, have lost their ships there; for believing they were entering the aforesaid mouth of the strait, they found themselves among dangerous flats, which are all round the island a musket-shot from the shore. Its being expos'd to the north wind; makes it always stormy;

for which reason there is no sailing thither, but from the 15th of *June*, to the middle of *September*. It abounds in rice, oil of palms, cocoa, honey, and wax. There are several rivers, dangerous to cross, in whose channels there is gold found, brought down from the mountains, by floods running down deep trenches. The biggest of them is call'd *Catandagan*, and by the *Spaniards*, *Catanduanes*, whence the island took its name. The natives chief employment is carrying wood; making very little boats, and carrying them to sell at *Mindoro*, *Cadaya*, *Balayan*, and other places. They first make one very large, without any deck, and not nail'd, but few'd together, with *Indians* canes, and then others less and less, one within another, and thus they transport them an hundred leagues. The people are warlike, and paint themselves like the *Bisayas*; they are excellent sailors, and leaping into the water, in a moment turn a boat again that has been overtaken. For fear of such accidents, they carry their provisions in the hollow of canes close stop'd, and ty'd to the sides of the boats. Their habits is only a *Bagab*, or waistcoat which reaches down to the knees. The women are masculine, and apply themselves as much as the men to tillage, or fishing. They are modestly clad, in a coat or jerkin, after the manner of the *Bisayas*, and a long mantle. Their hair they tie on the crown of the head, making a knot of it like a rose. On their forehead, they wear a plate of massive gold, two fingers broad, lin'd with taffeta; in their ears three gold pendants, one in the place where the *European* women use it, the other two higher. On their ankles they have rings, which make a noise as they go.

C H A P. VIII.

Of the Islands of *Capul*, *Ticao*, *Burias*, *Masbate*, *Marinduque*, *Mindoro*, *Luban*, *Babuyanes*, *Paragua*, *Calamianes*, *Cuyo*, *Panay*, *Imaras*, *Sibuyan*, *Romblon*, *Batad* and *Tablas*.

Capul. WITHIN the aforementioned archipelago, are *Capul*, and other little islands, which make the channel narrow, and the current stronger, their force being such, that sometimes they hurry ships about two or three times, though they be three deck'd. *Capul* is three leagues in compass, the soil fruitful, pleasant, and commodious for the *Indians*, who have good dwellings in it after the manner of the *Bisayas*. Eight leagues north-west from the mouth of the strait is *Ticao*, an island eight leagues in compass, inhabited by *Indians*, for the most part savage. There is in it a

good port with the conveniency of fresh water and wood, and is therefore the last land the ships bound for *New Spain* touch at.

Four leagues west of *Ticao* is *Burias*, five *Burias* miles in compass. It has but few tributary *Indians*, who are allotted to the parish of *Masbate*, which is another larger island south of it, and not far distant from *Ticao*, brought under the obedience of the *Spaniards* in 1569. They say *Masbate* is thirty leagues in compass, eight in breadth, and proportionably long. Its ports are commodious for any ship to water. In it live about

about 250 Indian Families, which pay tribute in wax, salt, and civet. But those that dwell in the mountains, and came from other parts are numerous. Here are such rich gold mines, 22 carats fine, that the mate of the galeon *St. Joseph*, aboard which I went over to *New Spain*, going ashore in one of them, in a very short time dug out an ounce and a quarter of pure gold. They do not at present work at these mines, for want of industry in the *Spaniards*, who having commission every year from *New Spain*, to lay out some hundred thousand pieces of eight, with an allowance to them of ten per Cent. take no care to look for gold in the mines. As for the *Indians*, if they have but a dish of rice, they never mind that precious metal; and if ever they gather any in the rivers, it is when they are press'd for their tribute, and then they gather as much as serves to pay it. The shores of these islands are often enrich'd with precious ambergris, call up by the current of the channels that run upon them.

Leaving *Ticao*, *Masbate*, and *Burias* behind, and holding on the same way as the ships that came from *Acapulco*, is the island of *Marinduque*, 15 leagues from *Manila*. It is 18 leagues in compass, high, and abounding in cacao and other fruit-trees, which the inhabitants live on, because there is but little rice. There is a great deal of Pitch made, but little wax. The peaceable inhabitants are about 500, incorporated in the nation of the *Tagalians*; tho' they are of another race, as appears by the peculiar language they have among them.

Mindoro is about eight leagues from *Manila*, and five from *Marinduque*. This island is fifteen leagues long, eight in breadth, and seventy in compass. The broadest part of it is that which looks towards the south, where together with another high and round small island, call'd *Ebin*, it makes a streight between it and *Panay*, which they call *Potol*. There is another known by the name of *Calabite*, between it and *Luban*. The inhabitants of *Mindoro* presently submitted themselves, upon Capt. *John de Salzedo's* assuring them, he would do no harm. And therefore as an acknowledgment they gave him some ornaments of gold they then us'd, and call'd *Oimos*. The land of *Mindoro* is high and mountainous, abounding in cacao, and all sorts of fruit-trees; but rice grows only in some parts. Along its channels, and the mouths of its rivers there dwell peaceable *Indians*, who pay tribute; and on the east, north-east, and side opposite to *Manila* are *Tagalians*; and so towards *Panay* and *Bijay*. Up the inland live the *Mangbiani*, who, though differing in language,

agree in having no form of government. They go naked, only covering their privities with barks of trees, call'd *Bobagues*; and change their habitations according to the season of the year, because they live upon wild fruit. Though they are not far from *Manila*, they have not lost their simplicity in exchanging the wax of their mountains, for nails, knives, needles, rags, and other baubles. Some fathers of the society of great credit told me, that these *Mangbiani* have a tail a span long. In other respects they are brave, and pay tribute, but have not as yet embraced the christian faith, except some few of the territory of *Naubon*, and this because they live remote on the tops of mountains. *Baco* is the metropolis of the island, where the *Alcayde*, or governor resides; which place abounds in wholesome waters, running from the mountains, which produce abundance of *Salsaparilla*. Not far from *Baco* is a place they call *Old Mandoro*, from which all the island took its name. One cape of it call'd *Varadero*, stretches out towards *Tal*, a village on the coast of *Manila*, between the two bays of *Bombon*, and *Batangas*, and a small island call'd *Verde*, or green island lying between them; the channel for the ships going to, and from *Cavite*, is not above a mile over, and this narrowness is the cause of the whirlpools and currents which endanger ships when they have not a fair wind and current at their entering the channel. In *Mindoro* and *Luban* they reckon there are 1700 inhabitants who pay tribute in wax, and a thing like black hemp, which the cacao trees produce, and serves to make cables for the king's ships built at the village of *Tal*.

Luban is a small low island, 5 leagues in compass. Near it is the little isle of *Anbil*, in which is a high round mountain seen at a great distance by the *Indian* galiots by reason of the flames it casts up. The people of *Luban* are passionate, and given to drunkenness. It was the first that opposed the *Spaniards* with a few small pieces of cannon planted on a fort. The galeon *St. Joseph*, before-mention'd, bound for *Acapulco*, and loaded with 12000 bales, worth about two millions, was cast away upon this island, and nothing sav'd but a few men.

Beyond *Luban* northwards there is no island of note, only beyond cape *Boneador*, opposite to *New Segovia*, at eight leagues distance from it, are the low little islands of *Babuyan*, stretching out to the island *Formosa* and *Lequios*. In the nearest, which is conquer'd, there are about 250 natives that pay tribute. It produces wax, ebony, botaras, cocoas, plantans, and other things

Babuyanes was deriv'd.

Fourteen, or fifteen leagues south-west of *Luban* are the *Calamianes*, a province made up of seventeen islands all subdued, besides many others not yet reduced, among the first of which is a great one called *Paragua*, partly belonging to the *Spaniards*, and partly to the king of *Borneo*. This island of *Paragua* is the third in bigness among the *Philippines*. Its shape is long like a strait arm, by means whereof *Manila* and *Mindoro* seem to shake hands with the great island of *Borneo*. The compass of it is 250 leagues, the length 100, but the breadth not above twelve in some places, and fourteen in others. The middle of it lies between nine and ten degrees of latitude: its furthest cape call'd *Tagusau*, towards the south-west, is fifty leagues distant from the island of *Borneo*, in which interval there are many low islands that almost join the two lands. The inhabitants of the coasts of these islands, and of *Tagusau* are subject to the *Mabometan* king of *Borneo*; but up the inland there are wild *Indians* unconquer'd, barbarous, lawless, and subject to no king; and therefore all their care is not to be subdu'd by the king of *Borneo*, or the *Spaniards*. Two parts of the island are in their possession. The *Spaniards* have in it about 1200 tributary *Indians*, *Black*, like those of *Africk*, who range from place to place, without any certain place of abode. In cold weather they make one great fire, and all the multitude gets about it. They are very faithful to the *Spaniards*, who keep a garrison there of 200 men, part *Spaniards*, and part *Indians*, with an *Alcayde*, or governor, whose residence is at *Taytay*, on the opposite point to *Borneo*, or as the *Spaniards* call it *Bornei*, where there is an indifferent fort. The *Lampuan*, or governor for the king of *Borneo* resides at *Lavo*. The island is almost all over mountainous, and full of abundance of sorts of trees and wild beasts; and produces abundance of wax on the mountains, but very little rice. Captain *Emanuel de Arguelles* of *Oviedo*, a person of great worth on all accounts, told me, that he going upon some business to confer with the *Lampuan*, he, after entertaining him five days very courteously to bind their friendship the firmer, drew a drop of his blood, and gave it him to drink in a glass of wine; which the captain in the same manner did to him. The *Moor*s after performing this ceremony, are so faithful, that they will sooner wrong their brother than their friend. Another barbarous custom is practis'd by the christians of *Paragua*, subject to the

Spaniards, which the missionaries have never been able to abolish (as I was inform'd by the same *Arguelles*, who was there two years *Alcayde*, or commander in chief) which is, that when a child is born blind, halt, lame, or decrepit, so as to be unfit to work; they put it alive into a hollow cane, and so bury it, destroying it, as useless to its parents, and the world. Besides the aforesaid garrison, the *Alcayde* formerly commanded a small fleet of galleys to defend himself against the people of *Borneo*; but this was put down upon the conclusion of the peace in 1685, by *D. John Morales*, governor of the castle of *Manila*. Having several times discours'd the said *Morales* concerning the ceremonies us'd in that embassy, for concluding the peace, he told me, the king of *Borneo* receiv'd him in publick, sitting after the *Mabometan* manner, on a throne rais'd upon several steps; causing him to sit upon cushions on a carpet; but that this reception was singular, that king using to give others audience from behind a curtain. Nor is this to be wondered at, for he is so haughty, and reserv'd, that he suffers only his prime minister to see his face upon important affairs; nor is it in his power to do other, having taken an oath to be so retir'd at his accession to the crown. The said *Morales* staid three months at *Borneo*, and was well entertain'd at the king's expense.

Not far from this northern cape of *Paragua*, are the three islands call'd *Calamianes*, which give their name to a province or government. These, and nine others near them, all small, are inhabited by peaceable *Indians*. In some of them there are 150 that pay tribute, in others less. The chief product of their mountains is wax; which they gather twice a year. In the rocks over the sea are found those so highly valu'd birds-nests, before spoken of, and about the shores there are very fine pearls taken.

Beyond the *Calamianes*, in sight of the high mountain of *Mindoro*, are the five islands of *Cuyo*, not far distant from one another. In them there are about 500 tributary families, more civiliz'd, and better affected to the *Spaniards* than those of *Calamianes* and *Paragua*. They are very laborious, and therefore gather abundance of rice, grain, and other fruit. The mountains abound in all sorts of beasts and fowls. At these islands ends the province of *Calamianes*, and begins that of *Panay*, the first land whereof is *Polol*. As *Paragua* is the biggest next to *Manila* and *Mindoro*, so *Panay* is the best peopled, and most fruitful in all the archipelago. Its shape is triangular, and its compass 100 leagues. The

names of its principal capes are *Nasfo*, *Nasfo*, and *Bulacabi*. The coast from *Bulacabi* to *Potol* lies east and west; from *Potol* to *Nasfo* north and south; from *Bulacabi* to *Ililo*, another cape less than the three great ones, is also north and south; from *Ililo* to cape *Nasfo* east and west. The middle of the island is in the latitude of ten degrees. On the north side, almost in the middle between the two capes of *Potol*, and *Bulacabi* the famous river *Panay* falls into the sea; and as soon as out, meets with a small island call'd *Lutaya*, in which port the *Spaniards* had a safe retreat before they discover'd and conquer'd *Manila* and *Cavite*. The fertility of *Panay* is caus'd by the many rivers that water it (so that there is no travelling a league along the coast, without meeting a river that runs into the sea) but more particularly by the already mention'd *Panay*, which gives its name to all the island, and runs forty leagues. *Spaniards* of credit told me, that when it thunders in this island, instead of thunderbolts there fall crosses of a greenish black stone, which have great virtue. As for the crosses, I have seen them in the hands of *Spaniards*; it is possible they might make 'em of the stones that fell; but they affirm they are natural, and fall in that shape from the sky. The island for the better administering of justice is divided into two jurisdictions. The first call'd of *Panay*, contains all that lies from cape *Potol* to *Bulacabi*; the rest of the island is subject to the *Alcayde* of *Oton*, who resides at *Ililo*, and point of land running out into the sea on the south side, between the two rivers of *Tig-Bawan*, and *Jaro*, and forms a streight, not above half a league over, with the island *Imaras*, or rather an open harbour. On this point the governor *D. Gonzala Ronquillo* caus'd a fort to be built in the year 1681. The island contains about 16361 tributary *Indians*, partly belonging to the king, and partly to particular *Encomienderos*, or lords; but they all pay in rice, the island producing 100000 bushels *Spanish* measure, and but little other grain. The inhabitants are corpulent, and good country-men and hunters, the island being full

of wild boars and deer. The women make GEMEL-cloth of several colours. There are in the island 14 parishes belonging to the fathers of the order of *St. Augustin*, three benefices of secular priests, and one college of the society of *Jesus*, where they administer the sacraments to the garrison of *Ililo*. Besides the tributary *Indians*, there are here of those *Blacks* the *Spaniards* call *Negrillos*, who were the first inhabitants of the island, and afterwards drove into the thick woods by the *Bisay* who came to conquer it. Their hair is not so curl'd, nor they so big, as the *Guinea Blacks*. They live in the most uncouth parts of the mountains with their wives, and children all naked, like wild beasts. They are so swift that they often overtake wild boars and deer. They stay about the dead beast as long as it lasts, for they have no other harvest but what they reap with their bow and arrows. They fly from the *Spaniards*, not through hatred, but for fear. Eight years since, *D. John de la Sierra*, a gentleman well qualified, and a very zealous and upright minister, going to visit the island, some of the *Blacks* came down to ask missionaries of him to instruct them in our holy faith; and brought him in a basket, a *Black* woman twenty years of age, and but two spans and a quarter high, who being baptiz'd was call'd *Mary*.

Among the islands lying about *Panay* *Imaras*; is *Imaras*, opposite to *Ililo*, and about a quarter of a league distant from it. It is long and low, ten leagues in compass, and three in length; the soil fertile, abounding in *Salsaparilla*, and good water. On the mountains there are wild boars, deer, and good trees. It has the port of *St. Anne*, three leagues from *Ililo*.

Ten or eleven leagues to the northward of the point of *Bulacabi*, is an island call'd *Sibuyan*, equal to the last. Two leagues to the northward, are *Romblon* and *Batan*, and then the island of *Tablas*, larger than the others, and five leagues distant from the point of *Potol*. In it there are many *Indians* of the same language, and little differing from those of *Panay* in other respects.

CHAP. IX.

Of the Islands of Samar, Leyte, Bohol, Sibu, Bantayan, Camotes, Negros, Fuegos, and Panamao.

Samar.

BETWEEN the two great islands of *Manila* and *Mindanao* are those of *Leyte*, *Samar*, and *Bohol*, which one after another make a part of the semicircle formed by them altogether. The first of the three, and nearest to *Manila* is call'd *Sa-*

mar, on the side shut up by the isles, and *Ibabao* on that side next the main ocean. Its shape is like the trunk of a man's body, without head or legs; its greatest length from cape *Baliquaton* (which with the point of *Manila* makes the streight of *St. Bernardine*)

GEMEL-dine) in thirteen degrees, and thirty minutes of north latitude, to that of Guignan in eleven degrees, towards the south. The other two points representing the elbows of the body, and making the greatest breadth of the island, are *Cabo de Spiritu Santo*, or

1697.

cape *Holy Ghost*, whose high mountains are the first discover'd by the ships coming from *New Spain* into those eastern parts, and that which lying opposite to *Leyte* westward, makes another freight, scarce a stone's throw over; and yet the ship *S. Juanillo*, or the *Little St. John* coming from *New Spain*, pass'd through it. The whole compass of the island is about 130 leagues. Between *Guignan* and cape *Spiritu Santo*, is the port of *Borongan*, and not far off, those of *Palapa*, and *Catubig*, the little island of *Bin*, and the coast of *Catarman*. Vessels of unknown nations are often cast away on the aforesaid coast of *Palapa*. To which purpose persons of credit told me, that some years since, there arriv'd people there, who said they came from islands not far distant, one of which was inhabited by none but women, and that men go over to them at certain times to lie with them, and bring away the male children. The *Spaniards* by fame call it the island of the *Amazons*. They also reported there were such vast quantities of ambergris found there, that they made use of it instead of pitch about their boats; which seems the more probable, considering, the abundance of it thrown up by storms on the said coast of *Palapa*. *F. Antony Borgia* of the society of *Jesuits*, and general procurator for the *Philippine* islands, told me further, as did *Michael Martinez*, commander of the *Galeon*, that carry'd me to *New Spain*; that a christian *Indian* had there found a piece of a vast bigness; which, he not knowing the value of, us'd as pitch, about his boat; but the curate, who was of the society, hearing of it, bought it at a small rate. *F. Borgia*, and the commander *Martinez* were of opinion, that the aforesaid islands, not yet discover'd, might be those of *Solomon*, rich in gold and amber, which the *Spaniards* have several times sought after.

Within the freight of *St. Bernardine*, and beyond *Baliguaton*, is the coast of *Samar*, on which are the villages of *Ibatan*, *Bangahon*, *Catbalogan* (where the military commander, and *Alcayde* reside) *Paranos*, and *Calviga*. Then follows the freight call'd of *St. Juanillo*, or *Little St. John* (whose coast looks to the south) without which standing eastward, appears the point and little island of *Guignan*, where the compass of the island ends. It is mountainous and craggy, but fruitful in the few plains there are. The fruit is much the same as that of *Leyte*, but here is one peculiar sort,

call'd by the *Spaniards* *Chicoy*, and by the *Chinese* (who put a great value on it) *Sey-zu*, without kernels. There also grows near *Catbalogan* another plant of a prodigious virtue, little known among the *Europeans*, as having been discover'd by the fathers of the society, but of late years. The *Dutch* are also acquainted with it, as trading at *Batavia*, and therefore at first would give double the quantity in gold for it. The plant is like ivy, and like it twines about a tree. The fruit, which grows out of the knots and leaves of the plant, resembles a melocoton in bigness and colour, and within has eight, ten, or sixteen kernels, as big as a hazel-nut each, green and yellow, which when ripe drop out of themselves. Some call them fruit of *Catbalogan*, others of *St. Ignatius*, and the *Indians* *Bisay-Igajur*. These also grow in the islands of *Bantajan*, *Ilabao*, *Igajur* and *Caragas*; but those of *Panamao*, and *Leyte* are most esteem'd. They work their effect better, adding to them another fruit the *Indians* call *Ligazo*, and the *Spaniards*, *Pepinillo de S. Gregorio*, much like the balsam plant, but full within of a substance like a bundle of hemp. I brought of both sorts into *Europe*, that the curious may make trial of the rare virtues ascrib'd them in those countries. What they are the reader will perceive by the following account given me word for word by the apothecary of the fathers of the society, who told me it was no more than what *F. Moleco* of the said society had found by experience.

The dose must be proportionable to the patient's strength, and distemper, but the most usual is the weight of half a royal, that is, the 16th part of an ounce, powder'd, and mix'd in wine, or water. If it has no effect the first time, the dose may be repeated. In the first place it is a powerful antidote against any poison either of venomous herbs, or by blowing, as is us'd by the *Indians* of *Borneo*, the *Philippines*, and other islands; for being carry'd about one, the person so carrying is not only safe from being hurt by the poison, but it hurts him that designs to destroy another. This is so certain, that *F. Alexius*, a *Jesuit*, having one of these nuts he found in the garden accidentally, in his pocket, and an *Indian* coming to poison him with a blast of venomous herbs, instead of doing the father harm, he himself drop'd down in his sight. Inquiring into the occasion of this accident, other *Indians* own'd the truth, as being very well acquainted with the virtue of their herbs, and thus discover'd the wonderful power of that fruit. Being drunk in wine, as aforesaid, it is excellent to bring up any poison. Secondly, It is good against the colick, and windy distempers being

being carry'd about one, like *Tumbaga*, or drunk in wine. Thirdly, It takes away all pains in the belly and stomach, drank in water. Fourthly, It is good against convulsions drank, and laid upon the part. Fifthly, It helps women in labour, and has such power that being apply'd before the time, it may cause miscarriage. Sixthly, It is good against the gripes. Seventhly, Against the bite of venomous creatures, both apply'd to the place, and drank in liquor. Eighthly, Against the sting of the insect *Bajul*, found in the *Philippine* islands, taken the same way. Ninthly, Against *Tertain* and *Quartan* agues given when the fit comes on. Tenthly, Being apply'd to Wounds it stops bleeding, either whole or in powder. Eleventhly, It helps catarrhs, tooth-aches and pains in the gums. Twelfthly, Carry'd in the mouth it settles the belly and stomach, especially if the party swallows its spittle. Thirteenthly, Worn about one it is good against witchcraft. Fourteenthly, Against all sorts of fluxes, either proceeding from a hot cause, or a cold. Which virtues here mention'd are certain, and try'd; but 'tis believ'd it has many more, which will be found by experience, having been in use but a short time. It has been also found by experience, that the oyl these nuts are fry'd in, has all the aforesaid virtues, either taken inwardly, or apply'd outwardly; and it further helps hearing, and dimness of sight.

The island of *Leyte* takes its name from a village call'd *Gleyte*, seated on a bay opposite to *Panamao*. From the point of this bay, northwards, one side of the island runs as far as the streight of *St. Juanillo*, or *Little St. John*, twenty leagues in length. Then turning down from north to south, is the island of *Panaban*, at about 30 leagues distance, where there are two points, 3 leagues asunder. The first is call'd *Cabalán*, the other *Motavan*, a name taken from a rock directly opposite, now call'd *Sogor*. *Ferdinand Magalhaens*, the first discoverer of these islands in 1521, entered through this streight of *Panaban*. He that gave him the best entertainment, was the lord of the little island of *Dimassavan*, who conducted and guided him to *Cebu*, and there was baptiz'd, together with the king of that island. In the villages of *Cabayan* and *Abuyog* dwelt *Tendaya*, a great lord, who was the only refuge of the *Spaniards*, and of *Villalobos's* fleet in 1543, whose tract was afterwards follow'd by the captains of *Michael Lopez de Legaspi*.

From *Dimassavan* or *Sogor* westward, there are 40 leagues to the point of *Leyte*, and so ends its compass of 90 or 100 leagues. It is well peopled on the east side, that is, from the streight of *Panamao* to that of *Panaban*, by reason of the fruit-

ful plains, which yield an hundred, and two hundred for one. Vast high mountains cut it almost through the middle, and occasion so great an alteration in the air, that when it is winter on the north side (at the same time as with us in *Europe*) it is summer in the southern coast, and on the contrary. Thus when one half of the island reaps, the other sows, and they have two plentiful harvests in a year; to which the rivers running down from the mountains, do not a little contribute. These mountains abound in game, as deer, wild cows, and boars, and several sorts of fowl; as also mines of yellow and blew minerals. The earth produces great store of roots, on which the inhabitants feed as much as upon bread, grain, cacao-trees, and good timber to build ships. Nor is the sea inferior to the land, yielding plenty of good fish. The island contains about 9000, that pay tribute in rice, wax, and quilts. The fathers of the society have the charge of them. The people are susceptible of any learning, and have two good customs, the one to entertain one another interchangeably when they travel, the other never to alter the price of provisions upon any dearth, and this under severe penalties. The Air is fresher in *Leyte* and *Samar*, than at *Manila*.

On the side of *Bay-bay* and *Ogmua*, *Babol*. *Leyte* is, next to *Babol*, the third island under the care of the fathers of the society. Its length from north to south, is 16 leagues; its breadth, 8 or 10, and its compass 40. The south coast looking towards *Mindanao* is best peopled; that is, from *Lobog*, the metropolis, to the little island or peninsula of *Panglao*. There are three others, with fewer inhabitants, but in all they do not make above 1200 that pay tribute. The soil does not produce rice, but is rich in gold mines, and abundance of *Cocos*, *Batatas*, and several sorts of roots, which serve instead of rice. There is abundance of cattle in the mountains, and fish in the sea; which the natives exchange with those of the neighbouring islands, for cotton. The people speak the *Bisayan* language, but are whiter, and better countenanced than those of *Leyte*, *Samar*, and *Panay*, and bolder both at sea and land. Their haughtiness appears by his fir-name, who commanded them before the coming of the *Spaniards*, which was *Baray Tupueng*, that is, non-such. But their pride was humbled by the *Ternater*, *Portuguese* and *Spaniards* successively; and this was foretold them by a *Baylona*, or priestess of theirs call'd *Caripa*, in a lamentable tone in verse.

Sogbu, *Sibu*, or *Zebu* might have de-
serv'd the first place in this description, had the order of conquest been follow'd; this being

GEMEL-
LI.
1617.

GEMEL-being the first island, on which his catholic majesty's royal standard was set up by L. I. Ferdinand Magalbaens in 1521, and whence afterwards in 1564, they set out to subdue Manila, and all the islands before mentioned; but I taking them in their natural order, as they lye going from the east, will speak of it after Manila, Samar, Leyte and Bobol. Its shape is longish, not extending above 15 or 20 leagues, the breadth 8, and the circumference 48. The chief point of it looking towards the south-east, is call'd *Burulaque*, and hence its two coasts, run the one from north-east to south-west, to the streig' of *Tarawa*; and the other from north to south to the island of *Matta* (four leagues from *Burulaque*), and the city of the holy name of *St. Augustin* is seated on a point in the latitude of 12 degrees, almost in the middle of the island, and distant from the aforesaid isle of *Matta* a musket-shot on the east, and a cannon-shot on the west, where *Magellan* was kill'd, with his father-in-law the chief pilot, and captain *John Serrano*. Between these two islands is a port shelter'd from all winds, and with two ways into it, that is, one from the east and one from the west, but there are flats at both the entrances. Here *Magellan* found many vessels of several nations at anchor, and the king of that place demanding of him the duties for merchandize and anchorage, he excus'd himself alledging the greatness of the Spanish monarch. There were at that time in *Zebu* 3000 families of warlike people; and in it was afterwards founded the first town of *Spaniards*, with all magistrates of note. In 1598, the king made it a city, sending *F. Peter de Aguirre* of the order of *St. Augustin* to be the first bishop. It was then permitted to *Zebu* to send ships into *New Spain*; as at this time only *Manila* can send two: 'Tis true, that *Manila* to save paying twice 70000 pieces of eight, builds one so big, that it is as good as two, and thus the king is defrauded. This island in process of time increasing in trade, *Zebu* decay'd, and came to be a small village, where at present resides the bishop, the chief justice, two *Alcaldes* and other officers. The cathedral and houses of the chief men are in the parade, opposite to which is a good stone triangular fort with three bastions, to defend the port, city and country. In it is a garrison of two companies made up of *Spaniards*, *Pampangi* and *Cagayani*. The ancientest monastery is that of the barefoot *Augustinian* fathers, who were the first preachers of the gospel here, and is call'd of the infant *Jesus*. This image of an infant was found among the spoils of those that were defatall, on the day of the conquest by a soldier that had been in *Magel-*

lan's fleet. The *Indians* afterwards declared, that the said image (which must be suppos'd to have been left there at the first discovery by *Magellan's* men) was by them held in great veneration, and always anointed with oyl, as they did their own idols; and that they had recourse to it in their distresses. Here is also a college of fathers of the society. Of two hamlets or villages, that of *Paryan* is inhabited by *Chinese* merchants and artificers; the other by native *Indians*, free from any tribute, because they were the first that submitted to the *Spaniards*, and helped them to discover the other islands. In *Zebu* there are about 5000 houses all in the parish of the fathers of *St. Augustin*. The chief product of all the country about is *Borona*, which the people make use of for want of rice. Its colour is like *Millet*, but smaller and different in taste. It also produces much white *Abaca* to make cables for ships, and cloth of the finest part. This plant is like an *Indian plantain*, and is sow'd; when ripe it is beaten to spin for the uses aforesaid. The same is done with the *Gamuto*, taken out of the heart of some palm or cocoa-trees, to make black cordage, but not so lasting in water. There grows also a great deal of cotton, tobacco, onions, and other things; and in the mountains they find much wax and civet. Of the cotton they make fine quilts, as also of the thread of the cocoa-tree, a sort of cloth they call *Madrenaque*, with the warp of cotton.

The neighbouring islands to *Zebu* are on the north-east, near cape *Burulaque*, *Bantayan*, a small isle encompassed by 4 or 5 leagues, in all which there are only 300 that pay tribute, and employ themselves in fishing, and making cotton cloth and hosiery. Eastward, between *Zebu* and the coast of *Ogmuich* and *Leyte*, are other islands call'd *Camotes*; the chief of which is *Camotes*, *Poro*, subject to *Zebu*. Its point of *Tanion* stretches out to the island of *Negros*, 100 leagues in compass, and is separated from it by a small channel a league over, but dangerous because of the current. This island extends northward from nine to ten degrees and a half. It is fruitful in rice, in which its tribute is paid, and it supplies *Zebu* and other adjacent parts. The mountains are inhabited by *Blacks* with curl'd hair (who by reason of their numbers gave the name to the island) and who live in their brutal liberty, like their forefathers. The land is divided among them; some living on the tops of mountains, others on the sides; but they fight fiercely among themselves, if one party attempts to go into the liberties of the other. This happens very often; for it is the custom among them, that those above can take but one wife, and her they must take by force from them below,

low, and on the contrary; and consequently every day there is blood-shed, and some kill'd, especially with poison'd arrows. These are headed either with iron, flint, bone or wood hardened at the fire. At the mouths of rivers dwells a third sort of Blacks who have no commerce with the other two, and are such enemies to the Spaniards that they give them no quarter. Nevertheless if the island happen to be invaded by pirates of *Mindanao* or *Xolo*, they run with their arms to defend it, and this done they retire to the mountains. They behave themselves in this manner, as still looking upon themselves to be the first lords of the island. The *Bisays*, 'tis true, as an acknowledgment for having been by them receiv'd into the island, supply them with rice, and the Blacks requite them with wax. These *Bisays* live in the plain, and the greatest number of them is on the west side, under the charge of the fathers of the society. In the island there are about 3000 that pay tribute govern'd by a *Corregidor*, or civil magistrate, and a military commander. Here grows a great deal of cacao lately brought to the *Philippines* from *New Spain*, as also much rice, which the mountains produce without watering.

The island *Fuegas*, otherwise call'd *Si-GEMEL-quior*, is near the last and *Zebu*. Tho' small, 'tis inhabited by people of valour, 1697. and dreaded by those of *Mindanao* and *Xolo*.

The island *Panamao* lies west on the further coast of *Carigara*, and not above a musket-shot from *Leyte*. Its compass is 16 leagues, the length four, and the breadth proportionable. It is mountainous, watered by several rivers, and full of sulphur and quicksilver mines. Formerly it was desert; but of late the king has suffer'd it to be inhabited, and be under the government of *Leyte*.

In all the islands here mention'd there are about 250000 Spaniards and Indians subject to the crown of Spain; tho' scarce the 12th part of them to be conquer'd, as has been said elsewhere. Marry'd men pay 10 royals tribute, others 5, from 18 to 60 years of age; as also maids from 24 to 50. Of this number about 100000 are tributary to the king, the others particular lords. However the king's revenue does not amount to 400000 pieces of eight, which not being enough for the pay of 4000 soldiers there are in all the island, and the extravagant salaries of ministers, he lays out 250000 that come from *New Spain*.

CHAP. X.

The wealth, trade, and climate of the Philippine islands.

THESE islands are rich in pearls (especially *Calamians*, *Pintados* and *Mindanao*) excellent ambergris, whereof there was once a piece found at *Xolo* weighing an hundred pounds, cotton and choice civet. This is taken from a sort of cats that are in the mountains, which they take with snares. The males, after taking away their civet, they turn loose; the females they keep because more can be made of them.

But gold is the chief and greatest treasure; for in the mountains there are rich mines, and the rivers have it mix'd in their sand. The governor of *Manila*, discoursing with me several times, upon this point, told me, that in all there is to the value of 200000 pieces of eight a year gather'd, without the help of fire, or quicksilver; by which may be guess'd what a prodigious quantity would be found, did the Spaniards apply themselves to it as industriously, as they do in *America*. The first tribute paid the king in gold by the provinces of *Illocas* and *Pangasinan* amounted to the value of 109000 pieces of eight; for then the Indians apply'd themselves to gathering it more industriously, than they do at present, for fear it should

be taken from them. The province of *Paracale* abounds in it above any other, as do the rivers of *Butuan*, *Pintabos*, *Catanduanes*, *Malbate*, and *Bohol*, for which reason formerly abundance of ships resorted to *Zebu*, to trade for it. The same provinces call'd of the *Bisayas* have plenty of amber, civet and wax.

As for *Manila*, the author of nature placed it so equally between the wealthy kingdoms of the east and west, that it may be accounted one of the greatest places of trade in the world. The Spaniards coming west about, and the Portuguese east about, conclude their voyage at the *Molucco* islands, which were formerly under the government of the *Philippine* islands; and generally the middle participating of the extremes as being that which unites them; hence it was that the *Philippines* had share of the best of both the *Indies*. For here are found the silver of *New Spain* and *Peru*; and for the east, the diamonds of *Golconda*, the rubies, topazes, sapphires, and precious cinnamon of *Ceylon*; the pepper of *Sumatra* and *Java*; the cloves and nutmegs of the *Moluccos*; the pearls and rich carpets of *Persia*; the fine silks and stuffs of *Bengala*; the camphire of *Borneo*; the

GEMEL-benjamin and ivory of *Camboia*; the musk of *Leguos*; the silks, mullins, calicoes and quilts, with the curious porcellane, and other rarities of *Cbina*. When there was a trade with *Japan*, there came from thence every year two or three ships, and brought pure silver, amber, silks, chests, boxes and boards of precious wood, delicately varnished; in exchange for hides, wax, and the fruit of the country.

It is easy to perceive how advantageously *Manila* is seated to gather vast riches by trade, because a vessel sailing thence to *Acapulco*, returns loaded with silver, the profit being four hundred *per cent*. I am of opinion there are no such plentiful islands in the world. For where shall we find mountains that will maintain such a number of savage men with their fruit and roots naturally produced by the trees and soil; for they apply themselves to nothing but shooting, and their number is ten times more than the subjects of the *Spaniards*.

The air of the *Philippine* islands is hot and moist. The heat is not so violent as in the dog-days in *Italy*, but more troublesome by reason of the sweat and weakness it causes. The dampness is greater, because the land is generally water'd with rivers, lakes, and pools, and there fall great rains the most part of the year; so that tho' the sun twice a year, that is, in *May* and *August*, be in their *Zenith*, and consequently darts down his rays perpendicularly, and therefore most powerful, yet the heat is not so great as to make the place uninhabitable; as *Aristotle* and other ancient philosophers imagin'd of the places under the torrid zone. This I observ'd which is wonderful, that first it rains and lightens, and the thunder is heard after the rain is over. During the months of *June*, *July*, *August*, and part of *September*, the west and south winds blow, which they call *Vendavales*, bringing such rains and storms that the fields are all flooded; and they are forced to have little boats to go from one place to another. From *October* till the middle of *December*, the north wind prevails; and from that time till *May* the east-south-east, which winds are there call'd *Breezes*. Thus there are two seasons in those seas, by the *Portuguese* call'd *Monzoens*, that is, the *Breezes* half the year with a serene dry air and the *Vendavales*, the other half wet and stormy.

It is further to be observ'd, That in this climate, no lice or other vermin breed upon *Europeans*, tho' they wear dirty shirts several months; whereas 'tis otherwise with the *Indians*, who have great store. Besides, they never know what snow is, nor do they use to drink any liquor cold, unless perhaps some person, who has no care of his health,

will cool it with salt-petre, in those months when the north wind prevails, which makes the water somewhat cool. In the *Philippines* the weather can never properly be said to be cold, for the reasons aforesaid, and because the days and nights are there always of an equal length; for which reason at *Manila*, they never change the hour of dining, supping, doing business, studying, or praying; nor do they change their cloaths, or wear cloth, but only against the rain. The air being here, as has been said, hot and moist, is not wholesome, and hinders digestion; yet is worse for young men that come from *Europe*, than for the old. Providence has provided against this inconvenience by furnishing the natives with provisions easy of digestion. They use no other bread but rice, but that not so nourishing as what we have in *Europe*. The oil, wine and vinegar comes from the palm, or cacao-trees which grow in great numbers, by reason of the predominant moisture. True it is, there are all sorts of flesh, but those who live plentifully eat flesh only at noon, and fish at night; and the poor for the most part have no other diet but fish ill dress'd; nor do they ever taste flesh except on festivals. The great dews that fall in fair weather contribute towards making the country unhealthy; for it is such, that shaking a tree sometimes it falls like rain. This does no harm to the natives who live to 80 or 100 years of age, but the *Europeans* who are us'd to better food, and have stronger stomachs live there but indifferently. In both *Indies* the hilly country is better than the plain. At *Manila* there is no eating, or sleeping, without sweating; which is not so much in open places where there is an agitation of the air; and for this reason the richer sort have their little country-houses to live at from the middle of *March* till the end of *June*, whilst the heat lasts. Though the heat be violent in *May*, very often at night it thunders and lightens with mighty rains. The occasion perhaps is because the clouds, carry'd towards the mountains by the winds they call *Vendavales*, there meet the opposite *Breezes*, which drive them back to the plain; which contrary motions and agitation set on fire the sulphureous and nitrous matter, making it go off in that manner, as I observ'd whilst I was writing this fame.

Manila is also subject to great earthquakes, especially when they happen in the fair weather. Many attribute it to the subterraneous concavities, the waters, vapours, and exhalations; without considering there is no part of the world but has many such concavities, waters, vapours, and exhalations; and yet no earthquakes. Secondly, they mistake the word exhalations,

ons; as if exhalation were a thing lock'd up in the bowels of the earth, and not that which goes from it, thrust out by some other thing that is mov'd, or drawn by some outward cause. If I may give my opinion, I believe it to proceed from the fires, which give a vehement motion to several minerals there must needs be about them, and they having no room to dilate themselves, push forward with great force against the neighbouring solid bodies, which, by reason of the good connexion of the parts, not being able to break and give way (for in that case the earth would open in many places) are shaken, so that the motion is communicated to all that is over it, even to the superficies of the earth; and thus happens the earthquake. This is sufficiently made out by the force of the salt-petre in gunpowder; and by experience, which shews us those places are more subject to earthquakes, which abound most in minerals and subterraneous fires; as to our sorrow is observ'd in *Campania*, *Calabria*, and *Sicily*.

To return to *Manila*, there was such a terrible earthquake there in *September* 1627, that it levell'd one of the two mountains call'd *Carvallos*, in the province of *Cagayan*. In 1645, the third part of the city was overthrown, with the slaughter of 300 souls; and the like happen'd the next year after. The old *Indians* say they were yet more dreadful in former times; and that

for fear of them they built all timber houses; not as the *Spaniards* have them now, of timber above the first floor.

The many burning mountains about the island confirm all that has been said; for at certain times they cast up flames, and shake the earth, producing all those effects *Pliny* ascribes to the burning mountains in *Italy*, that is, driving from them the neighbouring rivers and sea, scattering ashes round about, and rending the stones about, which give a report like cannon. On the contrary, there is no soil more pleasant, or fruitful. The grass grows, the trees bud, blossom, and bear fruit at once all the year round, and this as well on the mountains as in gardens; and the old leaves seldom fall before the new ones are come. For this reason the *Tinguiani*, that is, mountaineers, have no particular place of abode, but always live under the shelter of the trees, which serve them instead of houses, and furnish them with food, and when the fruit there is eaten up they remove to a fresh place where there is a fresh fort. The orange, lemon, and other *European* trees bear twice a year. If they plant a sprig, within a year it becomes a tree, and bears fruit; therefore without any hyperbole I may say I never saw such a verdant soil; nor woods full of such old and thick trees; nor trees that yield more sustenance to man.

GEMEL-

1697.

A Voyage round the World, by Dr. John Francis Gemelli Careri. Part VI.

Containing the most remarkable things he saw
in the PHILIPPINE ISLANDS.

BOOK II.

CHAP. I.

Of the language, characters, and customs of the Indians of the Philippine islands.

GEMELLI.
LI.
1697.
Writing.

THE ancient inhabitants of these islands receiv'd their language and characters from the *Malays*, of the continent of *Malacca*, whom they also resemble in shallowness of judgment. In their writings they make use of three vowels, tho' they pronounce five, and have thirteen consonants. They write upwards beginning at bottom and going up to the top, placing the first line on the left, and so proceeding towards the right; contrary to the *Chinese* and *Japoneſe*, who write from top to bottom, and from the right to the left. Before paper was us'd, and now in places where there is none, they write on the smooth part of canes, or on palm or rather cocoa-tree leaves with the point of a knife. But when it is a letter that must be folded they can only use the leaves; and the same is still practis'd in *Siam*, *Pegu* and *Camboja*. In the *Philippine* islands, the *Indians* have almost forgot their way of writing, making use of the *Spanish*.

Language.

The languages are so numerous, that there are six in the only island of *Manila*, which are the *Tagalian*, *Pampangan*, *Bisayan*, *Cagayanian*, *Pangasinaman*, and that of *Illoas*. Though they all differ, yet with the help of the one the rest are soon understood, by reason of their likeness. The *Tagalian* and *Bisayan* are generally understood. The language of the *Negrillos*, *Zambalos*, and other savage nations is not understood.

Customs.

As for their customs they salute one ano-

ther courteously; which was formerly done by taking off their heads a cloth, call'd *Potang*, and in the *Tagalian* language *Manapulon*, which they wear wrapp'd about like a cap; and this I saw done in my time by the common sort of *Indians* among themselves; but when they met any persons of greater quality, they bow'd their bodies low, clapping one or both hands on their jaws, and at the same time lifting up one foot with knee bent. At present when they meet with any *Spaniards*, they make the *Torre*, or obeisance, taking off the afore-said cloth, bowing their bodies, and stretching out their hands clapp'd together towards him.

The *Tagalians* always speak in the third person, and say my lord, or my master; they sit without any seat, upon their legs, that is, all their weight on their feet, without any other part coming to the ground, as people do to ease themselves in the fields; and they expect to be first spoke to that they may answer; looking upon it as ill manners to speak before their superiors.

Formerly the mothers gave their children their names, and those generally taken from some circumstance at their birth; as for instance, *Malivag*, which signifies difficult, because it was brought forth with difficulty; *Malacas*, that is, strong, because it appear'd such at first coming into the world; which custom the *Chinese* still observe. Other times they gave it the name of the first thing that occur'd, as *Dian*, a chimney;

chimney; *Dama* the name of an herb; and by this only name they were known, without using any surname, till they were marry'd. Then the first son or daughter gave the name to its parents, as *Amani-Malvoag*, *Imanani-Malacas*, that is, the father of *Malvoag*. The mother of *Malacas*. The difference between the names of men and women consisted in the addition of the syllable *in*, as for instance, *Iloge* is a man's name, and *Ilogin* a woman's.

Persons of the Islands.

The *Indians* are of a middle stature, well shap'd, both men and women, of a purplish colour inclining to black. The *Tagalians* wear their hair long down to their shoulders; the *Cagayanians* longer; those of *Illoco* shorter; and the *Basayans* shortest of all. The *Sambalians* cut all close before, and wear the rest of their hair loose. They are not so intelligent and quick as those of the *East-Indies*, who are excellent at any business; but particularly in trade and writing. The women of all the islands differ but little in colour, except the *Basayans*, who in some parts are white; but all wear their hair without breeding, yet handsomely ty'd. The general colour being black, those that are not, endeavour to make themselves so, by the help of bark of trees, and oyl mix'd with musk and other scents. The women's chief care and pride is to file and order their teeth so in their youth that they may grow even. They cover them with a black dye to preserve them; and the ladies of quality adorn them with little plates of gold. The men formerly took no care of their whiskers and beard, and pull'd them with nippers. Both men and women in some countries delighted in wearing pendants in their ears; and the bigger the hole in the ear was, the handfomer it was counted; some of them had two in an ear. No man might be clad in red that had not kill'd another, nor in strip'd stuff till he had been the death of seven. The men's habit was a thin doublet, that scarce reach'd the waist with short sleeves; the lower parts they wrapp'd in a piece of stuff, sometimes adorn'd with gold, which wound about between their legs; as the *Indians* on this side *Ganges* use at present. On their arms they wore bracelets of gold and ivory, or strings of jewels; about their legs black cords; on their hands abundance of rings. The uppermost garment was a little mantle, thrown up under one arm. At present men and women, young and old, smoke abundance of tobacco all the day. Their head they cover with the *Manpaton*, above describ'd, and the greatest beaus among them let the end of it hang down on their back. They also wear a short garment, call'd *Cbinina*, to which the women add a long piece of

Vol. IV.

stuff, call'd *Saras*, which serves instead of a petticoat, and when they go abroad a little mantle. But their greatest pride is in the jewels they wear on their fingers, at their ears, and about their necks, according to every one's ability. They wear neither shoes nor hose, because of the heat; but the women of quality who are clad after the *Spanish* fashion, wear as they do. Besides all these sorts of garments, it is still in use among them to have their skins wrought after several manners; first, pricking themselves till the blood comes, and then strewing powder on it, that the impression may last. For this reason the *Spaniards* gave the island of *Bisay* the name of *Pintados*, those people delighting in this above the rest, as if it betoken'd valour and nobility. They did it not all at once, but by degrees, as they perform'd any noble actions. Therefore the men painted their very beards and eye-brows; the women only one hand, and part of the other. In the island of *Manila*, at present, only the people of *Illoco* paint themselves, but not so much as those of *Bisay*.

L.I.
1697.

They sit very low when they eat, and accordingly their table is low, either round or square. There are as many tables as guests; and they drink more at them than they eat; for the common food is rice boiled in fair water; and flesh only upon festivals. Their wine or liquor is drawn from the palm, or cocoa-tree, cutting a bough before it blossoms; and thus the moisture that should go to feed the fruit, drops into vessels, set for the purpose; as our vines would do, if cut at the proper season. This liquor being somewhat sharp or acid, the poor put into it some bark of trees which give it a colour, and a hotter taste, and then it is called *Tuba*. The rich distill it before it is sour, more or less, according as they would have it stronger or weaker; and keep it as we do brandy, which is clear, and of a very drying nature. The liquor call'd *Cbilang*, is nothing but the juice of sugar-canes, boil'd a little over the fire, so that it looks like wine, and tastes like sugar. The *Bisayans* make another sort of rice, and call it *Pangati*. They first put some herbs into a pot, with some leaven, then cover it with rice, till the vessel be half full, and then pour on water. Thus it works or ferments and the water grows strong and thick, so that to use it they must pour a great deal more water on it, till it is thin enough to draw. When they have a mind to drink they suck it through a trunk or hollow cane from the bottom of the vessel.

Liquors.

Their musick and dancing are after the *Musick Chinese* fashion, that is, for singing, one and dances through and the other repeats the song.

5 R

stanza,

GEMLL-Itanza, to the sound of a metal drum.

LI. The dancing is an imitation of fighting, but all the motions and actions regular.

They also have many actions with their hands, sometimes holding a spear or javelin, with which they assault one another, retire, grow hot, and cool again; charge up close, and fall off very gracefully; so that the Spaniards do not think them unworthy to be admitted to their festivals. The compositions in their language are pleasant and elegant enough. But their greatest delight is cock-fighting, whereof we have spoke before, a sport once us'd by the Roman emperors.

Bathing. Bathing is so much in fashion among them, that the children new born, and the women just deliver'd use it, and this is cold fresh water, before sun rising, and after its setting. For this reason their dwellings are all on the banks of rivers and lakes; and there is a washing trough before every house for those that go in, to wash their feet.

Cures. Having observ'd the extravagant method of curing the sick, practis'd by the physicians in the Portuguese conquests in India, I cannot but give an account of those of the Philippine islands. Among the rest two cures of diseases seem'd to me wonderful. The first of these by the Indians is call'd *Sutan*, by the Spaniard. *Tabardillo*, and is no other but a violent pain in the head and stomach, and is certain death unless the patient be well beaten on the arms, thighs, legs, and right breast. Then the bruises are rub'd hard with salt, till they grow black; that the blood being thus drawn to the skin, may flow abundantly when cut with the lancet. Then they are wash'd with vinegar, and the patient has nothing given him to eat for three days, but rice boil'd in water without salt. (*Tabardillo in Spain is a malignant distemper breaking out in spots, if black incurable, if red to be cur'd so they do not fall in, and is cur'd another way, but this in the Philippine islands is another distemper, and another cure, tho' the Spaniards, because so dangerous, have given it the same name.*)

The other disease peculiar to the isles of *Negros*, *Pobol*, *Panay*, *Onton*, and *Xolo*, makes the tongues and privy parts both of men and women sink in so violently, that it endangers their lives. They say cold is the cause of it, and it is cur'd by giving the patient the genitals of the woman-fish, concerning which see the chapter of birds and fishes, or of a crocodile, powder'd in wine or water.

Religion. Nothing has hitherto appear'd in writing, either of these people's religion, their government, or history; but only some traditions, deliver'd from father to son, and preserv'd in songs, concerning the ge-

nealogy and heroick acts of their gods. By these it appears they had one principal god call'd by the *Tagahians*, *Barbala-may-capal*; that is, the god-maker. They ador'd birds and beasts, like the *Egyptians*; and the sun and moon like the *Affrians*. There was not a rock, stone, promontory, or river but what they sacrific'd to; nor any old tree to what they did not pay divine honours; and it was look'd upon as a sacrilege to cut it down on any account whatsoever. This superstition continues among them still; so that no force would prevail with the *Indians*, to make them cut down a certain great old tree, call'd *Balette*, whose leaves are like those of a chestnut-tree, and its bark good for some wounds, nor some ancient tall canes, vainly believing the souls of their ancestors dwell in them, and that the cutting of those trees or canes would put them into a fever; and that therefore an old man, they call *Nana*, would appear to complain of their cruelty. This is to be understood of such as are not christians or not well instructed. This vain belief continues among them, because sometimes they fancy they see several apparitions, call'd *Tibalong*, on the tops of the trees; and they are fully persuad'd, that the same appear to children in the shape of their mothers, and carry them to the mountains without doing them any harm. They say they see them vastly tall, with long hair, little feet, long wings, and their bodies painted, and that their coming is known by the smell. Be it as it will, for I will not take upon me to argue the point, 'tis certain the Spaniards do not see them, though the *Indians* tell them they are then actually present. The *Tagahian* dictionary compos'd by a *Franciscan*, gives a large account of these phantomes.

In *Pampanga*, and particularly on the mountain call'd *Bondo*, or *Kalaya*, which is a league and a half high, and belong'd once to the petty kings, *Sinoquan*, and *Minggan*, there are *Plantans*, *Betles*, and other sorts of fruit. These they say may be eaten upon the spot; but if any man attempts to carry them from the place, he certainly either falls down dead, or some way lam'd. Perhaps the devil, by God's permission may cause some such strange accidents, to keep those people in paganism; however it is, the *Indians* themselves have a good share in it, for they are notable forcerers, and are said often to convert themselves into crocodiles, wild boars, and other fierce creatures.

They also ador'd some particular Gods, left them by their ancestors, and call'd by the *Bisayans*, *Davata*, by the *Tagahians*, *Anito*. One of these was believ'd to keep in the mountains and fields, to assist tra-

vellers; another to make the seed sprout
 up, and they left him things in certain places,
 to gain his favour. There was also a
 sea *Anito* for the fishery, and another be-
 longing to the house, to take care of the
 children. Among these *Anitos*, were placed
 their grandfathers, and great grand-
 fathers; whom they call'd upon in all their
 troubles; keeping little ugly statues of stone,
 wood, gold, and ivory, in memory of
 them, which they call'd *Licbe*, or *Lara-
 van*. They also accounted among their
 Gods, all those that dy'd by the sword, or
 were kill'd by lightning, or eaten by cro-
 codiles, believing their souls ascended to
 heaven, by way of an arch they call'd *Ba-
 langao*. For this reason, the eldest among
 them, chuse to be buried in some remark-
 able place on the mountains, and particu-
 larly on the promontories that run into the
 sea, that they might be ador'd by sailors.
 They tell abundance of fables, concerning
 the creation of the world, and the first
 men that inhabited it.

Govern-
 ment.

There were no kings, or lords of any
 great note, throughout all the archipelago;
 but in the continual wars they had among
 themselves, the little ones join'd in confederacy
 with the greater. In *Manila* the
 uncle and nephew, were lords, or chiefs,
 and had equal authority. Every several
 precinct, or petty dominion, was call'd
Barangai; for as the families came hither
 in a *Barangai* or bark, to seek dwelling
 places; so they remain'd subject, either to
 the commander of the vessel, or to the
 head of the family, and from him took
 their name. Then they apply'd themselves
 to tilling of so much land, as they could
 defend against the neighbouring *Barangais*;
 and though, when they were once settled
 in the place, they were in their turn assist-
 ing to the others; yet they might not up-
 on any account mix with them, that is,
 one go into the tribe of another (especi-
 ally marry'd people) unless they paid a
 certain quantity of gold, and made a feast
 to all the *Barangais*; otherwise they would
 cause a war. If two persons of different
Barangais marry'd, the children were to
 be divided, as if they had been slaves.

Nobility.

Nobility was not hereditary, but ac-
 quir'd by industry and force; that is, by
 tillage, working in wood, gold, or other
 matter, and such like trades, so as to ex-
 cel in them; and then such a one was
 call'd *Dato*, or chief, and among the *Taga-
 lians*, *Manguinao*, and all his kindred
 and friends follow'd his party. If this
 man afterwards lost what he had, he lost
 his reputation; and his children remain'd
Origuin, or in the *Tagalian* language *Ali-
 pin*, signifying as much as slaves. Those
 were reputed the common sort, who got

their living by digging, fishing and hunt-
 ing. Since the *Spaniards* rule over them,
 they are grown lazy; they are good at
 mechanicks, as for instance, at making
 small chains, and curious beads of gold,
 and other things. In *Camarines* and other
 parts, they make boxes, cases, and chests
 of several colours, curiously wrought out
 of *Indian* canes, for there are excellent
 ones throughout all the islands, and 50
 spans in length, which twine about trees
 like ivy. The women make purls not in-
 ferior to those of the *Low-countries*, and
 admirable silk embroideries. It is their la-
 ziness, that makes them appear less ingeni-
 ous; and they are so entirely addicted to
 it, that if in walking they find a thorn run
 into their foot, they will not stoop to put
 it out of the way, that another may not
 tread on it.

The chief *Indians* had formerly a great
 number of slaves of their own nation, some-
 times an hundred. The cause why so ma-
 ny fell into slavery, was usury, so much
 us'd among them, that neither the father
 would lend his son any thing, nor one brother
 the other, though he saw him in never
 such distress, without bargaining to re-
 store it double. Now if the debtor could
 not perform at the time agreed on, he be-
 came a slave to the creditor, till he pay'd
 the debt; and in the mean while the longer
 it was unpay'd, the more the interest in-
 creas'd, till it far exceeded the principal;
 and so they and their off-spring remain'd
 slaves, without redemption. To this day
 debtors pawn their children of both sexes;
 and in some places sell them, especially the
Bisayans; notwithstanding the king has
 prohibited that barbarous custom, under
 severe penalties. Sometimes the masters
 will add to their interest, the value of a dish,
 the slave has happen'd to break, that he
 may have the less hope of redemption. All
 prisoners of war were also made slaves;
 though it were among people of the same
 race and dominion. Besides, the great ones
 tyrannically enslav'd the common sort, ei-
 ther because they had happen'd to break,
 the morning silence, or thrown some dirt
 on them; or for passing some place, where
 they were bathing; or some such slight oc-
 casion; and these slaves they afterwards
 sold at pleasure. These remain'd in their
 houses to live upon their labour, but the
 master took from them one harvest in the
 year, or part of it, according as he was,
 more or less, rigorous. Another sort of
 slaves serv'd their masters, when they en-
 tertain'd any body, sow'd, reap'd, or went
 any where by water. These were call'd
Nomana Bay; by the *Tagalians*, *Sangai-
 guilir*; and by the *Bisayans*, *Halan*. Some-
 times the same man happen'd to be slave

GEMEL- to several persons; or else half free, and
 LI. half a slave. This was when he came of a
 1697. father that was free, and the mother a
 slave, or the contrary, and he was the third
 son; for the first follow'd his father's fortune, whether free or a slave; the second the mother's; and the third was half free. When the mother was free, that son was only a quarter free. The *Sambalians* pretend that the *Tagalians* are their slaves.

It is us'd to this day, when there happens an eclipse, to make a great noise with drums, and other instruments, to fright

the dragon they imagine swallows the moon, and make him vomit her up again. They us'd formerly to swear before a wild beast, or a lighted candle, wishing they might be devour'd by such a beast, or consume like the candle, if they broke their promise; or be torn in pieces by a crocodile, or swallow'd up by the earth. It is impossible to force an *Indian* to curse the devil, and if he is press'd to do it, he will answer; he is not to curse one that has done him no harm.

CHAP. II.

The government, weapons, marriages, sacrifices, auguries and funerals of the Indians of the Philippine Islands.

Punishment of murderers.

THE first law among them, was to respect and honour their ancestors, and especially father and mother. The head of the *Barangai*, with some of the ancient men of it, judg'd of all causes whatsoever. Civil controversies were decided after this manner. The parties were summon'd, and endeavours us'd to make them agree. If this did not take effect, they made them swear to submit to the sentence; and they examin'd the witnesses. If the proofs were equal, what they contended for was divided; if not, judgment was given to him that had the best evidence. If the party that was cast was dissatisfy'd, the judge became a party; for he took from the person who lost the suit, the value appointed or adjudg'd, whereof a good part he kept to himself; then he pay'd the plaintiff's witnesses, and gave him the rest, which was the least part. In criminal cases sentence of death was never given in form of law, unless the person kill'd, and the murderer were both poor; for when any such had no money to satisfy'd the party griev'd, then the *Dato*, or chief, and other great men of the *Barangai*, came with spears, and binding the criminal to a post, kill'd him. If the person kill'd was of note, then all his kindred made war upon the murderer and his; till some mediator interpos'd to declare, what quantity of gold he promis'd to make amends for the other's death. Of this money, the one half was given to the poor, and the other to the wife, children and kindred of the party kill'd.

Theft.

As for theft, if the fact were made out, but the person not known, all the parties accus'd were oblig'd to lay something under a cloth, after which, if the thing stolen, was not found there among the rest, they had two ways of purgation. The first was to place them all near any deep river, with spears in their hands, and then

make them run and cast themselves into it. He that came out first was reputed guilty, and therefore many for fear of the punishment were drown'd. The other was to command them one after another to take a stone out of a basin of boiling water, which whosoever refus'd to do, pay'd the value of the thing stolen.

The punishment for adultery, was paying a fine; and the quantity of gold agreed on, or appointed by the elders, once pay'd, the adulterer was clear, and the husband restor'd to his honour; so that he return'd to his wife. But the children got in adultery, did not inherit their parents nobility, no more than those born of slaves, but were accounted of the common sort. The legitimate children inherited nobility, and the eldest succeeded his father, if he was lord of the *Barangay*. The first failing, the others succeeded orderly, that is, the 2d, 3d, &c. after them the females, and then the next of kin. Incest us'd to be severely punish'd.

Their arms offensive, were bows and arrows, and lances, or pikes with the spears of iron of several shapes, or else of wood hardened at the fire; broad daggers with two edges, well shap'd; and trunks with which they us'd to shoot poison'd arrows, like those of *Borneo* and *Sumatra*. To cover their bodies, they use a long narrow shield.

These nations are much given to sensuality, so that their women, either marry'd or unmarried, are seldom continent. When they marry'd, the man found the portion, and then they contracted settling a penalty, in case of divorce, which when it happen'd was not look'd upon as any dishonour, so the forfeiture agreed on were paid. But this was, during the life of the sureties, that is, the parents; for when they were dead, the children were free. At present their

expences are exorbitant, for on the wedding day, they make the bridegroom pay for admittance into the house, which they call *Passava*; for speaking to the bride, call'd *Paiengog*; for eating and drinking with her, by the name of *Passalog*; and lastly for consummating the marriage he pays to her kindred, which they term *Ghinapuang*; all according to their quality. Formerly the portion was paid to the father-in-law, who at his death dispos'd of it as he pleas'd, among the children; and if the bride had no father, her kindred receiv'd it, to be restor'd to the children born of her. The marriage was solemniz'd by the *Catalona*, or priests, with a sacrifice; after which the gossips gave the marry'd couple to eat and drink, out of the same dish; and then the bridegroom told the bride he took her for his wife, and she receiv'd him. Then the *Catalona* gave her blessing, after which some beast was kill'd, and next follow'd the entertainment, and making themselves drunk. If there was any falling out between the marry'd couple, another sacrifice was offer'd, the bridegroom slaying the beast so sacrific'd, and after dancing spoke to his *Anito*, or ancestor, desiring him to grant peace according to his desire. They took care not to marry out of their own tribe, and always the nearest of blood, except in the first degree. There was no difficulty in being forced; for the wife restor'd the portion, if it was through her fault, and the man lost it if it were through his, and he took another wife. Polygamy was not us'd among the *Tagalians*; but if any man had no children by his wife, he might, with her consent, have to do with his slaves. The chief of the *Bisayans* had two or more lawful wives, and the children born of them, all inherit'd as legitimate; but those by the first fire had double as much as those of the second. The children by slaves had something given them out of the moveables, at the pleasure of the legitimate, and the mother was free. The gold given in portion was measur'd, not weigh'd. Adoption was also us'd, the person adopted paying a certain sum, which, if he dy'd first, fell to the person adopting; but if otherwise, he that was adopted recover'd double the sum out of the other's estate.

Place de
Paris

Formerly there were men that made it their trade to deflow maids that were to be marry'd; and they were paid for it; because the maidenhead was look'd upon as an obstruction to the bridegroom's pleasure. At present (as some missionaries of the jesuits told me) some of the *Bisayans*, if they find, when they marry, their brides are maids, say they have got bad ones; because no man has had a mind to, and debauch'd them.

VOL. IV.

As for their religion, it has been mention'd before, that there was no temples found among them, but only certain little idols, in caves near their houses, to which they offer'd sacrifice, by means of priests, call'd by the *Tagalians*, *Catalonan*; by the *Bisayans*, *Babayan*. The manner of sacrificing was thus. They all assembled in a hut or cottage made of wattles for this purpose, and having danced awhile caus'd a handsome young girl to give the first stroke with a spear to the victim, which was always some four-footed beast. The sacrifice being slain, they cut it in pieces, and when dress'd eat it in a respectful manner. If the sacrifice was not upon any occasion of rejoicing, but for some sick body; they made a new hut of wood, and laid the patient in it upon a mat on the ground, together with the offering. Instead of an altar they cover'd several Tables with variety of meat. Then the *Catalona*, being the same handsome young girl, came out dancing to the noise of instruments, and having wounded the beast, the sick person, and some of the standers by were anointed with the blood. Having slain the beast, they all came again before the patient, and the *Catalona* muttering some words betwixt her teeth, open'd, stretch'd and view'd all parts of his body; winding herself into sundry shapes, and foaming at the mouth. Then she stood awhile besides her self; and at last having cover'd her senses (as is writ of *Sibyls*) she prophesied concerning the party's life or death. If she sat down to eat or drink, it was a sign of life; if not, of death; but for fear of frightening the sick person, she us'd to say the *Anitos*, or their predecessors had chosen him for their companion. Then the patient recommended himself to her, that she might persuade his kindred to put him in the number of the *Anitos*; and lastly the sacrifice ended in eating and drinking; but the guests were oblig'd to leave an offering of gold, cotton, birds, or some other thing for the priests.

They were so superstitious, that if they Superstitious found a snake on their garments, they would never wear them again, tho' they were new; and the same if an owl sat in the night on their house. If they found a snake on the way; or anybody sneez'd, a dog bark'd, or a rat made a noise, they turn'd back. The fisher-men made no benefit of fish they took the first time with a new net; believing if they did, they should catch no more fish for the future. Nor was any body to talk in a fisherman's house of new nets; nor in a huntsman's of young dogs, till they had taken a prey, positively believing if they did, the virtue of the nets and value of the dogs would be lost. They that went by sea, were to take nothing that be-

5 S

longed

GEMEL-longed to the land, nor so much as name it; nor those that travell'd by land, any thing of the sea. To conclude, they undertook nothing without casting lots.

F. *Xuaquin Affin*, minister of *St. Peter*, of the society of *Jesus*, told me, that he having serv'd as missionary several years among the *Tagalians*, observ'd, that they never eat alone, but will have one companion at least. That when the wife dies, the widower keeps with a mat before him, and is serv'd during three days by widowers, for marry'd men and batchelors would be accounted unlucky. The wives do the same when their husbands die.

When the women are to be deliver'd, they will allow no maids to be present, because they say it would make them have hard labour. When any body dies, not only the kindred and friends, but hired people come to lament and make a dismal song. Then the body, being wash'd and perfum'd with *Storax*, *Benjamin* and other sweet gums found on those mountains, is wrapped up in more or less silks, according to its quality. Formerly they anointed and embalmed the bodies of persons of note, with aromatick liquors, aloes and eagle-wood, and put into their mouths the juice of betle, that it might sink into their body.

The poor were bury'd in a grave in their own house; the rich in a coffin made of one piece of precious wood, and clos'd so artificially, that no air could get into it. They left on the body gold bracelets and other rich ornaments. Then they placed the coffin, lifted up from the ground, in a corner of the house, with the dead person's best apparel, and his arms if a man, or her necessities for work if a woman. At certain times, they placed before them several

sorts of meat, in token of affection and respect; but the greatest sign of loving the dead, was to make much of the slave that had been his favourite, and then kill him to bear his master company. Others bury'd the dead in the fields, and made fire in the house for many days, that the dead might not come to take them that were left alive. When the body was bury'd, lamentation ceas'd, but not the gormandizing, which lasted more or less, according to the dead man's quality; but the widow and children fasted to express their sorrow, eating neither fish nor flesh, but only grain or herbs. This fast the *Tagalians* call *Sipa*.

The *Tagalians* mourning is black; the *Bijayans* white, but these last over and above shave their heads and eye-brows. Formerly, if any man of note dy'd, they were to keep silence many days, and not to strike any place, nor go upon the neighbouring rivers. To this purpose they set up a certain sign, that all persons might know it was a time of silence, and none should presume to pass by upon pain of death, which was severely executed. In honour of those that dy'd in war, they added sacrifices and offerings, to the usual obsequies. If the person had been basely kill'd in war, or treacherously murder'd in peace, the mourning was never laid aside till his kindred had made the *Balata*, that is, taken revenge, killing a number, not only of the enemies with whom they were at war, but of all strangers, not their friends, that came before them. In the mean while they wore a list of leather about their neck, and spent all the day by land and water, in search of men to destroy, and satisfy their rage. This done, they broke silence with great rejoicing, and then the mourning was left off.

CHAP. II.

Of the beasts, bird, and fishes of the Philippine islands.

WILD cat- THERE is so great a number of wild tle, buffaloes, like those of *China*, grazing about the plains, that a good hunter a horseback with a spear, may kill ten or twenty in a day. The *Spaniards* kill them for their hides; the wild *Indians* to eat them. The woods abound in deer, boars, and wild goats, like those of *Sumatra*, which last are so numerous, that they have given their name to one of the islands, called *de las Cabras*. The *Spaniards* have carry'd thither out of *New Spain*, *Japan*, and *China* horses and cows, which have much ply'd considerably; but not the sheep, by reason of the excessive moisture of the earth.

There are also in the mountains, innumerable monkeys, and baboons so monstrous big, that once at *Samboangen*, they say some of them defended themselves with sticks, against a *Pampango* soldier that assaulted them; so that the soldier in a few days dy'd with the fright. The little apes are diverting in the house. My friend *D. John del Poco* had a white one; but so old, that it held its paw over its eyes to see any thing, as a man does, when he would observe something at a distance. He told me, he once had another of *Borneo*, which cry'd like an infant, and went upon two feet, carrying a mat under its arm, to change its sleeping place. These monkeys seem to be sharper in some respects

of it, as w

spects than men, for when they can find no fruit on the mountains, they go down to the sea-side to catch crabs, oysters, and the like. There is a sort of oysters, call'd *Talovon*, the fish whereof weighs some pounds, and it commonly lies open on the shore. The monkey fearing it should close and catch its claw in, puts in a stone first, that it may eat the oyster without fear of its shutting. One sort of them, that they may take the crabs, put their tail in to their hole, that when the crab lays hold of it, they may draw him out.

Civet-

cats

There is in the islands, a great multitude of civet-cats; and this is chiefly to be observ'd, that if their civet is not taken away every month, the heat they receive from it, is so great, that they tumble about the ground, till the bladder break, wherein it is contain'd, and so ease themselves of that pain.

Flying

cats

There is another sort of cats, as big as hares, and of a fox colour, call'd *Taguan*. They have wings like bats, but hairy on both sides, by the help of which they leap from one tree to another, sometimes above thirty spans, that is, seven yards and a half distant.

Mice

In the island of *Leyte*, there is a peculiar sort of creature, call'd *Mago*, about as big as a mouse, with a tail like it, and so the long hairs on the snout, but the head is twice as big as the body, and it eats nothing but coals.

Snakes

There are snakes of a prodigious bigness. One sort of them are call'd *Ibitin*, which are very long, hang themselves by the tail down from the body of a tree, expecting deer, wild boars, or men to pass by, to draw them to them with their breath, and swallow them whole; and then winds it self round the tree to digest them. Some Spaniards told me, *The only defence against them was to break the air between the man and the serpent*; and this seems rational, for by that means, those magnetick or attracting particles spread in that distance are dispers'd. Another sort of snakes call'd *Aji-gua* eats nothing but hens. That they call *Olopong*, is venomous. The biggest are call'd *Babes*, which sometimes are 20 or 30 spans long.

Insects

Another sort of four-footed creature, which is also found in *America*, and devours hens, is call'd *Iguana*. It is like an *Alligator*, the skin purple, speckled with yellow spots, the tongue cloven, but the feet close and with claws. Though a land creature, it passes over rivers swiftly. The *Indians* and some *Spaniards* eat it, and say it tastes like a tortoise.

Birds

De Ta-

von

Among the birds of the islands the *Tavon* deserves to have special mention made of it, as well for its quality, as because it

is not known whether there are any of the *GEMEL*-species elsewhere. It is a sea fowl and black.

As to its size it is less than a hen, but has

a long neck and legs, and lays its eggs in

a light sandy ground. These eggs are

wonderful; for besides their being as large

as a goose's, when boil'd there is very lit-

tle white found in them, but all yolk, yet

not so well tasted as a hen's. The strange-

ness of them is, that contrary to all others,

when the chickens are hatch'd, the yolk ap-

pears whole and sweet as it was at first

with the chickens beak fast, and without

any white. By this it appears that it is

not always true, that the generative virtue

of the feed makes the yolk fruitful, and

that in this case the yolk serves for the

same use as *Placenta Uterina* does to an in-

fant. The chickens roasted before they

are flogg'd, prove as good as the best pi-

geons. The *Spaniards* very often eat the

chicken and the yolk of the egg together

in the same dish. The old bird is eaten by

the *Indians*, but is tough. The hen lays

about 40 or 50 eggs in a trench near the

sea and covers them with sand. For this

reason it is call'd *Tavon*, which in the lan-

guage of the islands signifies to cover with

earth. There the heat of the sand hatches

them, and the chickens feed on the yolk,

till they gather strength to break the shell,

throw up the sand and get out. Then the

hen which keeps about the neighbouring

trees, runs about them making a noise, and

the young ones hearing her, labour the

harder to get out to her. This is no less

wonderful than what the scripture says of

the ostriches eggs, *Job 39*. We see the

disposition of providence, in giving this

bird that instinct to bury its eggs so deep,

and the chicken such long claws, as to make

its way. They make nests in *March*, *A-*

pril, and *May*, like the *Halcions* the an-

cients make mention of; because at that time

the sea is calmest, and the waves do not

swell so high as to spoil them. The sailors

go in quest of them along the shore, and

where they find the sand has been thrown

up they open it with a stick, where they

sometimes find eggs and sometimes chick-

ens, which are equally valuable and nour-

ishing.

There is also a sort of turtle-dove with

gray feathers on the back, and white on

the breast, in the midst whereof is a red

spot, like a wound with the fresh blood up-

on it.

The *Colin* is a fowl as big as a black-*Colint*,

bird, black and ash-colour'd; without any

feathers on its head, but instead of it a

crown of flesh. That is yet stranger which

the *Spaniards* call *Paloma-Torzac*; it is of *Torzac*,

several colours, as gray, green, red and

white on the breast, with the same spot like

a wound.

GEMEL-a wound on the breast; and the beak and feet red. These and other sorts of birds I

1697. saw in *D. John del Pozo's* volery at Manila. There was also a black-bird brought from *Suratte*, as big as a turtle-dove, with a yellow beak, and a list of the same colour like a collar. It endeavour'd to speak like a parrot. He had also some little birds of the coast of *Coromandel* less than a linnet, their breast white and red, their wings gray with little white spots, and the end of their tail red, so that they were most beautiful to behold. Besides a great number of white doves with their tails always lifted up like a graceful femicircle, which he told me were brought out of *Perfia*.

Salangan. The *Salangan* is a strange bird of the islands of *Calamianes*, *Xolo* and others. It is as big as a swallow, and builds a little nest on the rocks over the sea-shore, cleaving to the rock as the swallows do to the wall. These are the so famous birds nests, whereof we have spoke in the foregoing volume.

Herrero. The *Herrero* is a green bird, as big as a hen. Nature has furnish'd it with such a large and hard beak, that it bores the bodies of trees to build its nest. From the noise it makes at this work, which is heard at a great distance, the *Spaniards* took occasion to give it this name of *Herrero* or smith. Others think it was so call'd for its knowledge of an herb, which lay'd upon iron breaks it; for it is known by experience, that the hole on the tree being cover'd with an iron plate to save the young that are in the nest, it seeks out this herb, and laying it on the plate, breaks it, and so clears the way; but I will not vouch for the truth hereof.

Colo-Colo. There is another rare bird call'd *Colo-Colo*, little less than an eagle, black, and half fish half bird, for it equally dives under water, and flies in the air. It overtakes any fish and kills it with its beak which is half a yard long. The feathers are so close that as soon as out of the water it shakes them dry.

Peacocks, &c. In the island of *Calamianes* there are abundance of peacocks. The wild mountain cocks supply the want of pheasants and partridges, and well dress'd are excellently tasted. The quails are half as big as ours, and have a red beak and feet.

In all the islands at all times there are green birds, call'd *Volans*, and several sorts of parrots, and white *Cacatuas*, which have a tuft of feathers on their heads.

Camboxa. The *Spaniards* carry'd turkeys out of *New Spain*, but they did not thrive or increase, by reason of the dampness of the soil, as is believ'd. The want of them is supply'd by a hen call'd *Camboxa*, because the first of them were brought out of that

kingdom, whose legs are so short that the wings trail on the ground. The cocks of another sort, call'd of *Xolo*, which have long legs, are not inferior to turkeys. Besides the common hens like ours, there is another sort that have black flesh and bones, but are well tasted.

Another bird that breeds about the lakes, especially that of *Babi*, has the feet and beak red, and the colours of several colours, as big as a hen, and would be as well tasted did it not eat fish.

The *Oydore* or judge, *D. John Serra*, Bird of shew'd me another dead bird that had most beautiful feathers, as big as a black-bird, brought him from the island of *Borneo*, where it was taken. It had no feet, but only great wings to bear it up, and is therefore call'd the bird of paradise. *F. Comber* in his history of the island of *Mindanao*, says there are such there.

We have spoke before of the great bats of the island, so that it is needless to say more in this place; only that in the island of *Mindanao*, they extract a great deal of salt-petre from their excrement by the means of fire, but it is not so strong as the common sort.

The very fish of the island have some thing singular. One of these is the *Dugong*, by the *Spaniards* call *Pee-Muger*, that is, woman fish, because it has breasts and privities like a woman, and there never was any male seen. The bones of it have a notable quality of stopping bleeding and curing a cough. The flesh of it eats like pork.

The sword-fish differs not from ours, only that there are some there 20 spans or 13 foot long, and the sword 9 or ten spans in length. We gave an account of the fighting with the crocodiles when we spoke of the lake of *Babi*. The damage they do to some small boats will appear, if we observe that their swords have been found broken upon great ones.

As for the crocodiles, providence has figur'd it self after several manners in them. For in the first place the females of these monsters being extraordinary fruitful, so as to bring sometimes 50 crocodiles, the rivers and lakes would have been full of them in a very short time, to the great damage of mankind, had not nature caus'd it to lie in wait where the young ones are to pass, and swallow them down one by one; so that only these few escape that take another way. Secondly, the crocodiles have no passage for excrements, but only vomit the small matter that remains in their stomachs after digestion. Thus the meat continues there a long time, and the creature is not hungry every day; which if they were, they could not be fed without the utter ruin of infinite numbers

numbers of men and beasts. Some of them being open'd, there have been found in their bellies men's bones and skulls, and stones, which the *Indians* say they swallow to pave their stomach. The female lays her eggs out of the water that they may hatch. They are twice as big as a goose-egg, whiter and as hard as a stone. The yolk in them is but small, like that of the tortoise's egg. The *Spaniards*, as well as the *Indians*, eat the little crocodiles. The same *Indians* affirm there are little bladders of excellent milk sometimes found under their jaws. *Engelbuis* in his history, lib. 22. cap. 5. mentions the same thing, and experience has often verifi'd it.

There is another species of crocodiles found in their lakes, call'd by the *Indians* *Rubaya*, by the *Portuguese* *Caynanes*, and also those we call *Alligators*. The difference between them and the crocodiles is, that they have no tongue, and have a difficulty in turning. For want of a tongue it can make no noise, nor swallow in the water, but it must tear and devour its prey on the bank. The *Indians* say it has four eyes, two above and two below, by help whereof it easily discovers the fishes and stones, which it takes from the bottom with its paws; but that on land it is short-sighted. Besides that the male can go but half out of the water, and that only the females go out to seek something to eat in the fields, because it appears that all those kill'd on land are females. It is a most assured defence against the *Caymans* or *Alligators*, to carry about one the *Bonga* or

Nang-kau-Vagan, a sort of fruit growing on a cane, which I have by me. It hinders the *Alligator* from coming near, as has been try'd with a dog, and is also a preservative against witchcraft.

In the sea of *Mindanao* and *Xolo* there are abundance of large whales, and sea-horses like those of the land, but without feet, and with a tail like a crocodile.

The sea-shells in the same island are so large that they serve for holy-water pots, and to give water to the *Buffaloes*. A religious man told me, *That as he was going to the island of Pintados, the sailors took one so large from a rock it was struck to, that the meat in it gave them all a belly-ful.* These shells are every where valued, but especially by the *Chinese*, who make several curiosities of them.

There are two sorts of tortoises found in those seas. The great ones are eaten, and their flesh tastes like beef, but the shell is not valued. The flesh of the lesser sort is not eaten, but the shell is good for several uses. Some of them are an antidote, it being found by experience that rings or beads made of them would fly in pieces like a glass, if they touch or come near any poison.

The thornbacks are mighty large, and their skin esteem'd by the *Japanese* to make scabbards for their scimitars. To make short concerning this matter, I must declare that of all the sorts of fish mention'd by *Pliny*, there are very few wanting in these seas.

CHAP. IV.

Of the trees and fruit of the Philippine-islands.

THE most valuable sorts of fruit in the islands are of two sorts, and both of them grow in the woods without any improvement. The first of them is call'd *Santor*, in bigness, colour and shape like to a ripe peach, but somewhat flatter. When gather'd in season the rind is sweet, but open'd, there are in it five kernels, like the seeds in an orange, and as four and white. The *Spaniards* esteem it equal to a quince, and therefore preserve it after the same manner. It is also good pickled with vinegar, and gives a pleasant relish in pottage when half ripe. The woods being full of these trees, and sugar at about four shillings and six pence the hundred weight, all the

friers in the *Philippine* islands preserve a great quantity to eat after dinner and supper. Besides the leaves are medicinal, and the wood excellent for carving. The tree is like the walnut, but has larger leaves.

The other sort of fruit, which they call *Mabol*, is somewhat bigger than the other, but downy like a peach, and of the colour of an orange. The flesh of it is ill tasted, hard of digestion, and contains six kernels. The tree is as tall as a good pear-tree, has the boughs thick, the leaves large, long and green like the laurel. The wood when wrought is little inferior to ebony. Both of them may be seen in the following cut.

GEMEL-LI-1697. Here are also *Bilimbines*, which the Portuguese call *Carambolas* (as I observ'd in the third volume) but as in the *East-Indies* they are sharp, so here they have a mixture of sharp and sweet. They are eaten with sauce raw, and prepar'd with vinegar and sugar.

The *Macupa*, call'd by the Portuguese *Giamba*, is bigger than that which grows at *Goa*. There are also *Banchilins*, which the Portuguese call *Bilimbines*; *Giaccas*, call'd by the Spaniards *Nancas*, *Tanpays*, by the Portuguese call'd *Giambas-de-Malaca*; *Cassuis* or *Caguis* and others, which being describ'd in other places are therefore here purposely omitted.

There are also *Mangas* of *Siam*, by the Portuguese call'd *Mangas-de-Papagalbo*, brought but of late years; and *Camies*, the fruit and tree like the Portuguese *Carambolas*, but without kernels, and more sharp.

Lumboy. All hitherto mention'd are as it were garden fruit, but there are other sorts wild, not inferior to them in taste, if gather'd in season. The *Lumboy*, by the *Tagalians* call'd *Dobat*, is a tree in all respects like the pear-tree; it puts out a pretty, but small white blossom, the fruit like a cherry, only long'h like an olive. The Portuguese give it the name of *Giambulon*.

The *Dottoyan* is a scarcer tree, whose fruit is in all respects like the *Giambulon*, red, and with a kernel, the flesh of it is white, and the taste sweet and sour.

The *Panunguan* is a very large tree, producing a fruit, as big as a pigeon's egg, with a red shell, in shape and hardness like our pine-apples. Within it there are kernels, and a transparent flesh of good taste and helping digestion. Others have given this fruit the name of *Licias*, for its likeness with those of *China*, but they differ from them.

The *Carmon* is good boil'd and sharpens the appetite. It is as large as an apple, and has a rind like an onion, and the flesh within sharp and sweet. The tree is as big as an apple-tree, and thrives well on the banks of rivers.

In some of the islands there are the so much celebrated *Duriones*. The tree is large, and the fruit grows to the thick part of the boughs, like our pine-apples. At the first tasting it sends up an ungrateful taste of onion to the nose, but when grown familiar it becomes most delicious to all strangers.

There are also *Maranes* like the *Duriones*; and *Lawzones* or *Boufhas*, which for taste and other qualities may be call'd grapes.

All of it

Paxos. Instead of olives, there grow *Paxos* in the mountains of the islands, which differ but little from olives when gather'd young. Green they are eaten with vinegar, and ripe they have an exquisite taste.

Pine-trees. On the high mountains of *Illocos* and *Cagayan* there are vast wild pine-trees. They do not bear pine-apples like ours, but *piles*, not unlike them, which taste like almonds, and serve for all uses as almonds do among us.

Lumbon. The *Lumbon* produces some small nuts, with a hard shell, the kernel whereof tastes like pine-apple kernels. But this being hurtful to the stomach, the general use the *Chinese* make of it is to extract oil, which serves instead of tallow for ships.

Oranges. Their oranges are of several sorts, all differing from, and bigger than those of *Europe*. There are great and small lemons, but for the most part sweet.

Jamboas. The *Jamboas* are twice as big as a mans head, round and yellowish. Some of them have white, some red and some yellow seeds. Their taste is like a lemon, with a mixture of sweet to the four. The tree is also like the lemon-tree in bigness and leaves.

Of the fruits of *New Spain* there are brought hither *Aies*, *Anonas*, *Zapotes-prietas*, *Chicos Zapotes*, *Aguacatis*, *Papayas*, *Mameyes*, and *Goyavas Peruleras*; of which last there is such plenty in the mountains that they are a great support to the poor. They make preserves of it, and wine better than that of the cacao-tree, or the fider of *Tirol*. This fruit eaten green is astringent, and when very ripe is laxative. The leaves of it boil'd are good for swell'd legs; and the *Indians* reducing them to powder heal themselves therewith of the disciplines they take in the holy week. The *Islanders* know nothing of the *European* fruit, because the soil will not produce it; and tho' in the castle of *Cavite* there are some vines of muskadinge grapes, they never come to maturity, no more than the figs and pomegranates in the monastery of the *Je-fuits* in the same place.

All those hitherto mention'd, serve only to please the palate; but the trees that yield both profit and pleasure, and wherein for the most part the estates of the chief men in the *Philippine* islands consist, are the palm-trees. They reckon there are 40 several kinds of them; but among the best, which give daily sustenance, that is the choicest, which the *Tagalians* call *Toro*, the *Pinatas Landan*, and the inhabitants of the *Malucco* islands *Sagu*. This, to distinguish it from the others, grows naturally without any improvement on the banks of rivers. It runs not very high but is thick. All of it from top to bottom is a soft substance like a radish, cover'd with a bark

only an inch thick, not very hard nor smooth. They use it after this manner: 1697. they cut it in pieces and lay it a soaking in water, then they take only a narrow slice of the bark, that the remaining part may contain the inward substance, and cut the white within it extraordinary small; then they press it with their feet in baskets made of cane, near the river, so that the best of the juice may run through, by pouring on water, into a vessel set under full of water. Then they take up that substance so bruised and put it into moulds made of palm-tree leaves, like our cheese-fats, where it hardens a little, like soft starch, which being afterwards dry'd in the sun, without any oven serves instead of bread, and is very nourishing, and will keep.

The second sort of palm-trees is that which yields their wine and vinegar. The *Tagalians* call it *Sasa*, the *Bisayans* *Nipa*. They do not grow big enough to deserve the name of a tree, for they are generally in places that abound in salt water, and especially where the waves of the sea come. The fruit would not be unlike the date, but it never comes to maturity, because the *Indians*, as soon as ever it blossoms, cut off the bough, as has been said before, that the liquor may run into the cane-trough placed under it. One of these troughs will hold ten *Neapolitan* *Ciraffas* or bottles, and is often fill'd in a night. When it is not distill'd or prepar'd as has been mention'd before, that is, with the bark of *Calunga*, which is like cinnamon, it grows as sour as vinegar. The leaves of these palm-trees, interwoven with small canes, serve to cover houses instead of tiles, and will last six years.

There is also wine, vinegar, and *Tuba*, ^{Cocao tree.} made of the cacao-tree, which besides are of great use to the islands because of the oyl drawn from them, which when fresh is good to eat. From the middle of the same cacao comes a water as sweet as sugar, and a sort of sugar made of the same water condens'd. The outward rind serves to make ropes, match, and to caulk ships. The shell within it to make cups, and for other uses elsewhere spoken of.

There is another sort of palm-trees call'd *Burias*; *Burias*, from which the islands of *Burias* towards the streight of *S. Bernardine* took their name. The tree is thicker than the cacao; the fruit are perfect dates, of the stones whereof they make good beads, and the leaves are like those of the common palm-trees in *Africk*. About the beginning of the year the *Bisayans* cut the stem or stalk, and so they gather the liquor, as is done with the *Nipa* and cacao-tree. Of this liquor, besides vinegar, they make over the fire

Instead

GEMEL. fire a sort of honey, and black sugar, which they call *Pacassas*, and sell in little boxes, as a thing much valu'd among the islanders. I tasted it and found it was somewhat saltish and easy to dissolve. They also make *Sagu*, after the same manner as it is made of the other trees; and in times of dearth they make a sort of meal of the fruit ground; but not so wholesome as that of the *Sagu*.

Bonga. The other palm-tree call'd *Bonga*, has large leaves like the *Buri*, but the tree and fruit unlike. The body of the *Bonga* is tall, slender, strait and knotty all the way. The fruit is like a large acorn, highly valu'd, because of it, the leaves of *Belle* and chalk, they make a composition as big as a small acorn, which they and all the *Indians* value at a great rate, as a thing that comforts the stomach, fastens the teeth, causes a sweet breath, and makes the lips beautiful and red; yet immoderately us'd, it turns the lips and teeth black, as most of the *Indians* find by experience, who never cease chewing it from morning till night. Some of them will pass a day or two without eating, believing they are nourish'd by it.

Yonsta. The last sort of profitable palm-trees (to say nothing of the rest tho' they bear fruit) is the *Yonsta*. It furnishes the islanders with wool, call'd *Baroz*, to make quilts and pillars; and with black hemp, call'd *Jonor*, or *Gamulo*, to make cables for ships. Its threads in length and thickness are like hemp, in blackness like horses hairs, and they are thought to last long in sea-water. Both the wool and hemp are taken from about the trunk of the tree. It produces some small cocoas in long bunches or clusters; but of no use. The *Indians* from the young branches draw sweet *Tuba*, which when grown four makes them drunk. The tender tops are eaten, but are not so good and well tasted as those of the cocoa, which they eat boil'd.

The leaves of all these palm-trees in general will bear weaving, as well to make hats or hoods, as to cover houses, make mats for rooms, sails for ships and other uses; so that in them the poor people find meat, drink, cloth and houses, as *Pliny* in his natural history, lib. 13. cap. 4. writ above 1500 years since.

Tamarines. The *Tamarines* or *Sampalos* are a wild fruit, and grow in pods like green beans. They have a biting taste, and are therefore eaten with salt, and preserv'd with sugar. The tree is tall and thick, the leaves small, and the wood serves for several works like ebony.

Cassia. The islands produce abundance of *Cassia*. The tree is not so large as the *Tamarine*, but much thicker of boughs. The leaves are of a beautiful green, and bigger than

those of the pear-tree, and being boil'd with the blossoms, in the nature of a conserve, work the same effect as the fruit, and are less nauseous. So the young fruit, made into a preserve, is safe, and a good laxative. The mountains do so abound in it, that in *May* and *June* they fit the swine with it, especially in the island of *Minlora*.

There are so many other sorts of great trees on all the mountains, which serve to build ships and houses, and are always green, that those whom long experience has not made well acquainted with the ways, cannot by any means go far among them, as I saw with my own eyes going a hunting. Among the best of them is the black ebony, the red *Baliyong*, the *Alana* or *Naga* of which they make dishes to drink out of, for the water grown blewith with standing in them is very wholesome, and not ill tasted, as I found by experience; and cutting a slit in the bark of the tree there runs a liquor from it, call'd dragon's blood. There is besides the *Calingak*, sweet scented, and with an aromattick bark call'd cinnamon; and many more all very useful, as well for dying, as for their smell, and a bundance of other uses, whereof the hundredth part is not yet known to those people. Those call'd *Tigas*, that is, hard, are excellent for building of ships, and there is one kind so hard, that it cannot be cut but with a saw, and water, like marble; and therefore the *Portuguese* call it *Ferro*, that is, iron.

On some of the mountains in the island of *Manila*, there is abundance of wild nutmegs, of which no use is made. But in the island of *Mindanao*, there are on the mountains many cinnamon trees. The most wonderful thing of all, is that the leaves of some trees, when they come to a certain pitch of ripeness, become living creatures, with wings, feet, and tail, and fly like any bird, tho' they remain of the same colour as the other leaves. The body is made of the hardest fibres, in the middle, bigger or less according to the leaf, that part joining to the tree becomes the head, the other end the tail; the side-fibres the feet, the rest the wings. *F. Joseph de Omense*, a recollect, provincial of the province of *St. Gregory* in the *Philippine* islands, told me that when he was a minister in the province of *Camarines* in the village of *Camulo*, he was actually an eye-witness to this, and gave it me under his hand, in form before a notary, as I have it to shew by me. *D. F. Gines Barrientos*, bishop of *Troy*, and coadjutor to the archbishop of *Manila*, confirm'd the same. I have here inserted the following figure of the leaf for the satisfaction of curious persons. But were it my business to

defiant upon this subject, I should say, there was but one way to make this out, which is, the said leaf breeding a worm, which afterwards takes wing, as we daily observe in flies, gnats, silk-worms, and many other sorts of worms.

GEMLL-

1697.

1. The head.
2. The body.
3. The feet.
4. The tail.
5. The wings.

The cocoa plant, has been carry'd out of New Spain into the islands; and the increase is so great (tho' it proves not altogether so good) that in a little time they will have no need of any from America.

Those ancient woods, which for many and many ages have not felt the stroke of an ax, are very beneficial and profitable to the islanders; because there are in them, infinite multitudes of bees, which furnish them with vast quantities of honey and wax, without their taking any pains about it. There are sundry kinds of them. Those the Indians call *Pocoytan*, are bigger than ours in Europe; and make their combs, which are full four spans in length, and proportionably in breadth, under the boughs of high trees; and sometimes six or seven in the same place, which continue whole notwithstanding the mighty rains. Those call'd *Liguan*, are as big as the Europeans, and make their combs in the hollow of trees. Another sort of little ones no bigger than flies, call'd *Locot*, have no sting, but make four honey, and black wax, and seek about for the honey of the others. There is another sort they call *Camomo*, which like those call'd *Pocoytan*, settles upon high trees. Besides all this, the trunks of these trees put out several sorts of gums all the year. One kind, which is the commonest, by the Spaniards call'd *Brea*, is us'd instead of pitch; of the others some are medicinal, others odoriferous, and others for other uses. There is such vast plenty of them, that not only the trees, but the ground is cover'd with them; and there

are plants that have it on their leaves, in the months of April and May. Thus we see the ancients had reason to say, the trees in these countries distill'd honey and other precious liquors.

We must here pass by the tree, call'd *Ai-Aimit*. It is indifferent large, and so full of moisture, that when the hunters and wild people want water, they cut a hole in it, and in a very short time draw from it a hollow cane full of pure water. It also bears some fruit in clusters, which when ripe, are not altogether unfavoury.

I will here conclude this chapter with the Twining Indian cane, by the Spaniards call'd *Vexuco*, growing among the trees, and running up to the tops of them, twining like the ivy. It is all cover'd with points, which being taken away, it remains smooth. If cut, it will yield as much fair water, as is enough for a draught, so that the mountains being full of them, there is never any want of water. The thickest part of them serves for several uses, as covering walls, roofs, and other things; that part which is somewhat thinner, being very strait, and not apt to be worm-eaten, serve to make pikes, and the royal armoury at Manila is altogether furnish'd with them. In the province of Camarines, they make pillars of them, so that all the house is made of cane. The thinnest part serves for captains canes, after the Spanish fashion, and walking sticks, as every body knows; and when split, to bind, make baskets, boxes, chests, hoods for Franciscans, and many other uses the Indians put it to.

CHAP. V.

Of the plants and flowers in the Philippine-islands.

Those the Portuguese call Indian figs, are by the Spaniards call'd *Plantans*, and for quantity are next to the palm-trees. Their plant withers as soon as it has bore the fruit. It has no branches, but leaves to long and broad, that there is no doubt but Adam might have made himself a cloak with a couple of them; this being thought

to be the fruit that made him fall in paradise. There are several sorts of it, all differing in taste. One of them is call'd *Obispo*, or bishop, because it is fit for a prelate's table; another is call'd *Plantano de Pepita*, and the Indians have them about their houses, not only for the sake of the shade of the leaves, but to make use of

GEMEL-them. instead of napkins and plates, and
 L.I. of the fruit for vinegar. The choicest and
 1697. most nourishing, are the *Tunduques*, a span
 and half long, and as thick as a man's arm,
 which they eat roasted, with wine and cin-
 namon, and they taste like the quinces of
Europe. Those they call *Venti coxol* are
 also excellently well tasted; but those they
 call *Dedos de dama*, or *Ladies fingers*, are
 much better. An hundred, and sometimes
 two hundred plantans hang by one twig,
 so that it must be propp'd up. The *Indi-
 ans* think it so wholesome, that they give it
 to the sick; and tho' they be somewhat
 hard of digestion, they are good for the
 lungs and reins; and cordial, if we may be-
 lieve *Avicenne*. The *Arabs* call them *Mu-
 sa*, and the *Malabars* *Palar*.

There are also abundance of sugar canes,
Batatas. ginger, indigo, and tobacco. The *Bata-
 tas*, very nourishing to the *Indians*, and much
 valu'd by the *Spaniards*, are of several
Camotes. kinds; as are the *Camotes*, which look like
 great radishes, and have a pleasant taste and
Glabis. smell. The *Glabis* are like great pine-apple
 nuts, and boil'd serve the *Indians* in-
 stead of bread, and the *Spaniards* instead
 of turnips in the pot, and the leaves make
Ubis. soups. The *Ubis* is as big as a pompon,
 and the plant like ivy. The *Xicamas* taste
Xicamas. like the *Ubis* and *Batatas*, are eaten prefer-
 red or raw, with pepper and vinegar, like
 cardoons; for when fresh, they are juicy and
 wholesome. The wild *Carots* taste like a
Carots. pear, and the plant is like ivy. The wild
Taylan. *Taylan* has great leaves, and tastes like the
Batatas. There is such vast plenty of all
 these roots throughout the islands, that ma-
 ny thousands of savage men live on them,
 as has been said elsewhere.

Pinnas. The *Pinnas*, by the *Portuguese* call'd
Ananas, have the first of these names, from
 their likeness, with the pine-apple nut.
 They are much valu'd for their smell, co-
 lour, and taste; and they are preserv'd to
 eat after dinner. At that time they help
 digestion; but eaten fasting, tho' they cre-
 ate an appetite, they are not wholesome.
 A knife stuck for half an hour in one of
 these *Pinnas*, loses its temper.

There are abundance of odoriferous
 herbs and flowers in the islands, growing
 of themselves naturally in the fields, with-
 out any labour of the *Indians*, who make
 their benefit of them. It is no wonder they
 do not apply themselves to improve them,
 since they can scarce be persuaded to sow
 their rice; and for this reason there are not
 such fine gardens in *Manila*, as in *Europe*,
 and but few flowers in those of the mona-
 steries, and belonging to the *Spaniards*.

Flowers. The first place is due to the flower of
Zampaga, Zampaga. It is like the *Portuguese* *Mogo-
 rin*, that is, like a little white rose, with

the three rows of leaves, much sweeter than
 the jessamin of *Europe*. There is another
 call'd *Solasof* of a sweet scent, and two sorts
 of it; besides a wild one, call'd *Locoloco*,
 which smells like cloves. The *Balanay*, o-
 therwise call'd *Torongil*, and *Damoro* has a
 small seed that smells like baum. It is good
 for the stomach, and the richest persons mix
 it with the *Belle*. The *Dajo* has an aroma-
 tick root, smelling like ginger, and the fields
 are full of it; as also of the other kind of
 it, which is hotter and stronger, call'd
Langeovas. The *Cabling* is sweet green,
 but more when dry. The *Talo* is also an
 odoriferous herb, and more fragrant than
 the *Calaton-lon*; of which they make sweet
 water. The *Sarasa* or *Oja de S. Juan* is
 slightly, and has long leaves, with white
 and green stripes.

As for medicinal herbs, no island in the *Medi-
 cal*
 world abounds in them so much as the *Pbi-herbs*.
lippines, for besides sage, *St. Mary's-cori-*
baum, house-lick, and others known in
Europe, they have many peculiar. The
 herb call'd *del Pollo*, is like porcelaine, and
 grows every where. They have given it
 this name, because in a very short time it
 cures any wounds their game-cocks receive.
Panlipan is a taller herb, with a white flow-
 er like the bean blossom. Pounded and
 laid on wounds, it soon draws out any poi-
 son, and cleanses all corruption. The *Go-
 londrina* and *Celidonia*, speedily cure the flux.
 There is also the herb *del Sapo*, and many
 others of great virtue. In the islands of
Mindanao and *Xolo*, there are also many
 herbs peculiar to them, to heal wounds in
 a short time; for drinking a decoction of
 them, and applying the herb to the wound,
 it heals in 24 hours. There is another they
 use after the same manner as the *Turks* do
 opium, to put them besides themselves, be-
 fore they join battle. It takes away the
 right use of reason, so that there remains no
 fear of any danger; and the enemies swords
 and spears are made no account of. The
 greatest wonder is, that the wounds of those
 who have taken it, will not bleed; if the
 governor of *Samboangan* spoke truth, in
 the account he gave of it, to him of *Ma-
 nila*, as did several *Jesuit* missionaries that had
 been with him. They added that there
 were two other wonderful herbs; one of
 which apply'd to the reins, makes a man
 sensible of no weariness; the other held in
 the mouth, prevents fainting, and gives a
 man such vigour, that by the strength of it,
 a man may travel two days without eating.

The island being hot and moist, and not *Venous*
 well cultivated, abundance of venomous *creatures*
 creatures breed in all parts; and the ground *and veg-*
 produces herbs, flowers and roots of the *tables*
 same vile quality; insomuch that they not
 only kill those that touch or taste them, but

even infect the air about them; and for this reason it is that so many die, at the time that such plants and trees blossom. But on the other side, providence has furnish'd those same islands with several sorts of excellent antidotes, among which the preference must be given to the *Bezoar* stone, found in the belly of deer and goats. The *Malungal* powder'd, and given in lukewarm water, and in oyl of cocoas, is a most powerful remedy, against malignant and pestilential fevers. The leaves of the *Alipayon*, which are like those of the *Plantain*, purge or cleanse any fore wonderfully, making the flesh grow up, without any other help, but now and then, changing new leaves. The root of the *Dilao*, which is like ginger, has an admirable virtue for healing of wounds and venomous thorns, applying it bruised and boiled with oil of cocoas.

An herb by the *Spaniards* call'd *de Colebras*, or of snakes, and by the *Tagalians* *Tarogtong*, is excellent for joining together, and knitting of parts that have been fever'd, so that the snakes sometimes cut in two, heal themselves with it. The like virtue is in a sort of wood, call'd *Doñon*. The *Amuyon* bears a fruit like a nut, of a biting taste, like pepper, and good for any distempers in the belly, proceeding from cold. The *Pandacague* bruise'd, and apply'd hot, helps women in labour. The tree *Camandag* is so venomous, that the *Pilchards* eating the leaves that fall into the sea, die and kill those that eat of them. The liquor flows from the trunk of the tree, serves those people to poison the points of their arrows. The very shadow of the tree is so destructive, that as far as it reaches no herb, or grass grows, and if transplanted, it kills all the other trees in the place, except only a small shrub, which is an antidote against, and always with it. A bit of a twig of this shrub, or a leaf carry'd in a man's mouth, is a security against the venom of the tree, and therefore the *Indians* are never without it. The earth of *St. Paul* has also been found to be a powerful antidote.

The *Maca Bubay*, which signifies giver

of life, is a sort of ivy, which grows about any tree, and grows as thick as a man's finger. It casts out some long twigs, like vine-branches, whereof the *Indians* make bracelets, to wear against any poison. The juice of this plant is very bitter. The root of the *Balet* taken on the east side, and apply'd bruise'd to any wound, heals it in 24 hours, better than any balsam. This tree grows among buildings, and does so pierce them with its roots, that it overthrows palaces. It also grows on the mountains, and because it there grows to an excessive bigness, it is much honour'd by the *Indians*.

There are many other trees and plants in the islands, that have notable virtues, of which brother *George Carrol*, a *German*, and apothecary to the college of the *Jesuits* at *Manila*, has given an exact description, in two volumes in *Folio*, with the draughts of them, so exactly to the life, that any man having the book, may easily know them in the field. He has also set down their virtues, and the manner how they are to be prepar'd. This is the work and labour of fifteen years, he having gain'd the knowledge of them, by means of the *Indians*, who are extraordinary *Botanists*; and it very well deserves to be printed for the publick benefit, which I do not omit to declare to the father, vice-provincial, and the brother himself.

Among the sensitive plants, which are a sensitive medium between plants and animals, as plant.

Pliny observes, *lib. 9. cap. 45*, besides the *Struga* and sea-nettle, there is one in the islands, in all respects like a cole-wort. This was found out in the year 1642, by a soldier of the garrison of the coast of *Tabao*, who going to pull it up, saw it fled from his hand, and drew back to the rock, which was under water in the sea. There is another more wonderful, which grows on *St. Peter's* hill, about *Manila*, not very tall, and with little leaves, which, whenever it is touch'd, though never so lightly, draws back, and closes all its leaves hard together. For this reason the *Spaniards* call it, *la Vergon Cosa*, that is, the *Bashful*.

CHAP. VI.

Of the islands of Mindanao and Xolo.

Mindanao islands.

MINDANAO, and *Xolo* being reckoned among the *Philippine* islands, and we having omitted before to relate some particular circumstances concerning them, it will be proper before we proceed any further, to give a short account of them. *Mindanao* is the next island to *Ma-*

nila in greatness, its shape almost triangular, ending in the three famous promontories of *Samboangan*, cape *St. Augustin*, and cape *Sulago*. Between *Sulago*, and cape *St. Augustin*, which lie north and south, is the province of the warlike *Caragas*. Between *Sulago*, which points to the north-east,

GEMEL-east, and *Samboangan*, is the province of
 L. I. *Iligan*, the jurisdiction of *Dapitan*, and
 1697. the people call'd *Subanos*. *Samboangan*,
 and cape *St. Augustin* lie east and west, and
 the people of them, on the one side, and
 the other, border upon the provinces of
Bubayen, and *Mindanao*. Its situation is in
 the latitude of six degrees, in which lies
 cape *St. Augustin*, to ten and a half where
 is cape *Sulago*. Its compass is about 300
 leagues, but has so many long points run-
 ning out into the sea, and deep bays, that
 a man may go across it in a day and a
 half. It lies south-east of *Manila*, and 200
 leagues from it. About it there are many
 islands; among those that are inhabited,
 is *Xolo*, thirty leagues distant from *Sambo-
 angan*; *Balijan*, divided by a strait of 4
 leagues; *Sanguil*, the peninsula of *Santran-
 guan*, and others.

Mindanao being so far stretch'd out and
 divided, partakes of several climates, and
 is encompass'd by stormy seas, especially
 on the coast of *Caragos*. That part which
 is subject to the government of *Samboan-
 gan* is most temperate, the winds pleasant,
 storms rare, and rain scarce. The pro-
 vinces of *Mindanao* and *Bubayen*, subject
 to two *Moorish* kings, are boggy and uneasy
 to live in by reason of the gnats. There
 are throughout the island about 20 naviga-
 ble rivers, and above 200 little ones. The
 most remarkable are *Bubayen* and *Butuan*,
 both flowing from the same spring, but the
 first runs towards the coast of *Mindanao*;
 the other towards the north, and falls into
 the sea in sight of *Babol* and *Leyte*. The
 third river, call'd *Sibuguey*, rises near *Dap-
 itan*, and with its waters divides the ter-
 ritory of *Mindanao* from that of *Samboan-
 gan*. There are also two lakes, and one
 call'd of *Mindanao*, which in that language
 signifies, a man of a lake, and gives its
 name to all the country. This is very large,
 and cover'd with a sort of herbs they call
Tanfon, that spread themselves in many
 branches over the water. The other, be-
 ing eight leagues in compass, is in the op-
 posite side of the island, and known by the
 name of *Malanao*. All the country, ex-
 cept near the sea, is mountainous, yet a-
 bounds in rice, and produces very nourish-
 ing roots, as *Batatas*, *Ubis*, *Gaves*, *Aperes*
 and others. There are infinite numbers of
 the palm-trees call'd *Sagu*, of whose meal
 they make bread and bisket, throughout
 all the island of *Mindanao*, but especially
 on the coast of *Caragos*, near the river
Butuan.

Its pro-
 duct.
Durions. *Mindanao* produces all the sorts of fruit
 the other islands do, and the *Durion*, be-
 fore spoke of, over and above. But it is
 to be observ'd, besides what has already
 been said of it, that its rind is not very

hard, and opens as it ripens. Within it
 are three or four kernels, cover'd with a
 soft white substance; and a sort of nut,
 like the kernel in a prune stone, which is
 eaten roasted like chestnuts. It is of the na-
 ture of the fruit of the east; viz. That it
 is gather'd green, to ripen in the house.
 There are abundance of them all the way
 from *Dapitan* to *Samboangan*, for 60 leagues
 in length, more especially on the high land
 of *Dapitan*, but above all in the islands of
Xolo and *Basilan*. They say the tree stands
 20 years before it bears.

The cinnamon is a tree peculiar to *Min-Cin-
 danao*, grows on the mountains without any
 improvement, and has no owner but him that
 first finds it. For this reason every one, to
 prevent another's making his advantage of
 it, takes off the bark before it is ripe; and
 so though at first it be strong like that of
Ceylon, yet in a small time, and at farthest
 in two years, it loses all its taste and virtue.
 It is gather'd in 25 villages, and about as
 many rivers of the coast of *Samboangan*,
 towards *Dapitan*, on high and craggy moun-
 tains; and in one village of the province
 of *Cagayan*.

The inhabitants of *Mindanao* find good Gold,
 gold digging deep into the ground, as also
 in the rivers making trenches, before the
 flood. There is sulphur enough in the Sulphur
 burning mountains, the ancientest of which
 is *Sanxil*, in the territory of *Mindanao*. In
 1640, a high mountain broke out, and so
 clouded the air, land and sea with its ashes,
 that it look'd like doomsday.

In the sea of this island and that of *Xolo* Pearls
 there are large pearls taken. It has all the Birds
 birds of the other islands, and among the best
 rest *Carpintera*, which, as I said before,
 finds out the herb that makes iron fly.
 There are also multitudes of all sorts of
 beasts, as wild boars, goats and rabbits,
 but above all lascivious baboons, which
 suffer not the women to go far from their
 habitations.

Thirty leagues south-west of *Mindanao*, *Xolo*
 is the famous island of *Xolo*, govern'd by
 a king of its own. All the ships of *Bor-
 neo* touch there, and it may well be call'd
 the mart of all the *Moorish* kingdoms. The
 air is wholesome and fresh by reason of the
 frequent rains, which make the land fruit-
 ful in rice. This only island of all the
Philippines breeds elephants; and by rea-
 son the *Islanders* do not tame them, as they
 do in *Siam* and *Cambaya*, they are mighti-
 ly increas'd. There are also goats with
 fine spotted skins like leopards. Among
 the birds, that which builds a nest like a
 sparrow, call'd *Salangan*, is the rarest. For Fruit
 fruit it produces the *Durion*, abundance of
 pepper, which they gather green, and a pecu-
 liar sort of fruit call'd of paradise, and by the
Spaniards,

abundance of
en, and a pecu-
ice, and by the
Spaniards,

Spaniards, the king's fruit, because it is found no where but in his garden. It is as big as a common apple, of a purple colour, and has little white kernels like cloves of garlick enclosed in a thick shell like a piece of sole-leather, and is of a delicious taste. As for herbs, either wholesome or venomous, it produces all that have been describ'd above; but the natives make special use of one call'd *Uosbamban* to sharpen the appetite. Choice pearls are taken here, and the divers, before they sink to the bottom, anoint their eyes with the blood of a white cock. The sea throws up abundance of amber on the shore, whilst the winds call'd *Vendavales*, which are south and south-west do not prevail, that is, from May till September. Some say the whale vomits it up, others that it is the excrement of a greater fish, call'd *Gadamina*, others that it is the root of a large odoriferous tree.

The island of *Basilan* is three leagues from *Mindanao*, and twelve leagues in compass. Being opposite to *Samboangan*, it may be call'd the garden that furnishes it with *Plantains*, sugar-canes, *Gaves* and *Lavonzes*. The fruit in the island *de los Pintados*, call'd *Boaba*, is no bigger than a nut, and within its shell has three or four very sweet kernels, so delicious that a man may eat a prodigious quantity without being cloy'd. The *Durion*, or duriun, as the islanders call it, is here found in great plenty. The *Maron* in the island of *Leyte*, call'd *tugap*, has a downy rind; when ripe it is as big as a melon, and within contains small kernels, like the *Alas* and the *Cirimajas* of *New Spain*; the flesh is soft and savory. The *Balono* without is like a quince, and within it is a kernel with the thickness of a finger of flesh about it. When green, it is pickled in vinegar. The island abounds in rice, differing in colour, smell and quality; thanks to the rivers, which are great and troublesome to cross, tho' the island be small. In the woods there is no want of wild boars and deer, nor of good timber for building. The sea, besides some fishes known in *Europe*, has other peculiar to it; good tortoisés of the 2d sort, that is, such as are valuable for their shell, and two sorts of jett.

There are four principal nations in *Mindanao*, which are the *Mindanaos*, *Caragas*, *Lutaos* and *Subanos*. The *Caragas* are brave both by sea and land. The *Mindanaos* faithless, as being *Mahometans*. The *Lutaos*, a new nation in all the three islands of *Mindanao*, *Xolo* and *Basilan*, live in houses built on the tops of trees, on the banks of rivers, which at flood cannot be cross'd a-foot; for *Lutao* in their language signifies a man that swims on the water. These men are such enemies to the land, that they

Vol. IV.

take no pains for sowing, but live the best GEMEL-
they can upon fishing, wandring about the U.
sea of *Mindanao*, *Xolo* and *Basilan*. Yet 1697.
they are cunning traders, and wear turbants, and use the same weapons the *Moors* do, as trafficking, and being in amity with those of *Borneo*. The *Subanos*, that is, dwellers on rivers, for *Suba* signifies a river, are the least look'd upon of any people in the island, as being base and treacherous. They never depart from the rivers, where they build upon long timbers, so high, that there is no reaching their nest with a pike; they climb up to it at night by a pole fastened to it for that purpose. They are as it were vassals to the *Lutaos*. The *Dapitans* surpass all the four nations before-mention'd for valour and wisdom; and there is no doubt but they were very assisting to the *Spaniards* in conquering the islands.

The inland is subject to the mountain people, who being fond of sloth and liberty, keep there without any inclination to come down to the sea, or love of tillage; and being thus grown wild for want of commerce, gave strangers an opportunity of possessing themselves of the forsaken shore and rivers.

There are also in *Mindanao* some *Blacks*, like *Ethiopians*, who own no superior, no more than those of the island of *Blacks*, and mountains of *Manila*; but live like beasts conversing with none, and doing harm to all they can. They have no settled place of abode, and in all the bad weather have no shelter, but the trees. Their cloaths are such as Nature gave them, for they never cover so much as that which ought to be hid. Their weapons are bows and arrows. They reap no other fruit of their barbarity but liberty.

The generality of the inhabitants of these Religio-
islands are heathens; but from *Sansil* to *Samboangan* the people along the coast are *Mahometans*; more particularly in the islands of *Basilan* and *Xolo*, which are as it were the metropolis of that superstition, and the *Mecca* of the archipelago; because the first teacher of it is bury'd there, of whom the giddy-headed *Casikes* tell a thousand fables. The *Spaniards* at their coming destroy'd his tomb. However, to say the truth, they are generally atheists, and those that have any religion are forcerers. The *Mahometans* know nothing of their superstition besides eating no swines flesh, being circumcis'd and keeping many wives; tho' they all agree in giving their minds to observations and auguries upon every light accident. The devil appears to some of them, because they call upon him in time of need, and offer sacrifice to him. The mountaineers are absolute atheists, for they have not the least sign of a mosque or other place of prayer. They are very temperate,

5 X

GEMEL- rate, contenting themselves with a little boil'd rice, and where that is not to be had, with roots of trees; without making use of any spice

LI. 1697. whether they are rich or poor; the better sort when they have a deer, goat, or fish, using no other seasoning but salt and water. Their

Habits. cloaths are plain, for being enemies to society, every man is his own taylor. One and the same garment serves for breeches, doublet and shirt. By their side they wear daggers after their fashion, with gilt hilts. Over their breeches they bind about them a piece of the country stuff; so broad that it hangs down to their knees, and on their heads wear a *Moorish* turbant. The women in the day time wear a sack instead of a petticoat, which at night serves for sheet, blanket and quilt, upon a fcurvy mat. Yet they wear rich bracelets.

Houses: The little wooden houses are cover'd with mats; the ground is all their seat; the leaves of trees, plates and dishes; the canes large vessels, and the cocoas drinking cups.

Customs. As to their manners they are more barbarous than the other *Mabometans*; for if the father lays out any money for his son, or ransoms him out of slavery, he keeps him as his slave; and the son does the same by his father. For any little kindness they do, they deprive him that receives it of his liberty; and for the crime of one man make slaves of all the kindred. They do much wrong to strangers that deal with them, and the purse pays for all. He that is taken in adultery buys himself off with money, this being look'd upon as no disgrace among them. They abhor theft.

Government of Xolo. Incest in the first degree is punish'd with death; that is, casting the criminal into the sea in a sack. Law-suits are soon decided without many formalities, either in civil or criminal cases. The king of *Xolo*, for the administration of justice, has a governor, whom they call *Zarabandal*, which is the supreme honour at court. The great ones oppress the poor, because the king is not absolute enough. There are degrees of nobility; as of *Tuam*, that is, lord; *Otancayas*, rich man; and lords of vassals. In *Mindanao* the princes of the blood-royal are call'd *Caciles*.

Of the Subapas. The *Subanos* of the mountains of *Xolo* and *Mindanao* have a more barbarous government than the rest. They do not go to war one nation against another, or one village against another; but, like enemies of human kind, they all endeavour to destroy one another; for they know no other power or authority but what is got by force and violence. They have no other way to try their causes, but the power of the party griev'd to take revenge, which yet in the most heinous cases is mollify'd with gifts. For this reason, when one of the

Subanos designs to commit a murder safely, he first heaps up a sum of money to pay for it; that he may afterwards be admitted to the number of brave men, and as such wear the red turbant. More cruelty is us'd among the *Caragas*, where to have the privilege of wearing a turbant of several colours, call'd *Baxache*, they must kill seven, as has been hinted before, and therefore for this inhuman vanity, they do not spare even their friends, whensoever they catch them sleeping or unprovided.

At the funerals of their dead they are very religious and bountiful considering their poverty, for they spend all they have, cloathing the dead body in new garments, and laying rich tissue over them. About the grave they plant palm-trees and flowers; and if the person deceas'd was a prince or king, they burn perfumes, and cover the tomb with a pavillion, placing four white banners on the sides. Formerly they slew others to bear the dead man company, and cast all the best things they had into the sea, particularly the *Lutao*. To put themselves in mind of death, they make their coffin whilst living, and always keep it in sight in their houses. A custom observ'd by the *Chinese*, and which ought to be imitated by christians.

The women are chaste and modest, a virtue much forward by their deformity. Their marriages are celebrated with much state; that is, treating the company a whole fortnight, or rather making them drink, wherein consists all the satisfaction. The bride is generally carry'd in state, in a palanquine or chair on men's shoulders; the kindred and friends attending her with their swords and bucklers, and music. The bridegroom comes to meet her with his company; and when they have accepted of one another, the bride remains clad in white, and the husband changes his garments into red. When they come to the house, they all make merry with modesty and plenty.

The boats of these islanders are few'd together with canes split, and on the sides have fences made of cane, that they may not overset.

Their weapon in the town is a dagger with a flaming blade. The great men have ivory, or gold hilts. In their wars by land they use a lance, and round buckler; whereas in all the other islands it is long and narrow, to cover all the body. Upon sea, besides the weapons already mention'd, they use *Bugacayes*: These are small canes, about the thickness of a finger, hardened and made sharp, which darted strike through a board.

The *Mabometans*, whose original is from *Borneo*, brought thence the use of the trunk, through which they shoot little poison'd arrows,

arrows, with the help of a little paper;
which, if they make but a slight wound, are
mortal; unless the antidote be presently ap-
ply'd, and particularly human dung, found
by experience to be a sure preservative.

The people of *Xolo*, call'd *Xembanos*, are
resolute, and wear white armour. The
Mindanaos, besides the lance, dagger, and
buckler, carry a heavy cutting scimitar,
like the inhabitants of *Ternate*.

About the lake of *Malanao*, there are
several villages of *Moors* and *Gentiles*, go-
vern'd by a petty king independent of him

of *Mindanao*, who could never subdue
them. Their food is rice, and some roots;
their poor garments of hemp, dy'd blew.

The commonalty are heathens; the better
fort *Mabometans*, and have no communica-
tion with the others. This lake is triangu-
lar, seated on a pleasant place, between the
coast that looks towards *Bobol*, ten leagues
distant, and that of *Mindanao*, an hundred
leagues distant by sea, and fifteen at most
by land. It has a point of land running
out four leagues eastward, and another three
leagues southward, both well peopled.

CHAP. VII.

Of the Molucco islands, and others in the archipelago.

THE *Molucco* islands lying within the
line of the *Spanish* conquests, and hav-
ing been formerly under the governor of
Manila (of whose jurisdiction we have here
propos'd to speak) whilst the crown of
Portugal was united to that of *Castile*; it
will be proper to give some account of
them.

Moloc is a Malay word, deriv'd from the
Hebrew, *Malach*, signifying the head of a
great thing; and the *Molucco* islands were
the chief of all the archipelago. They are
seated under the line, 500 leagues east of
Malaca, and as much south-west of *Ma-
nila*. There are five in number, and lie in
such order for 25 leagues north and south,
along the country call'd *Belucbina del Moro*,
that they are always in sight one of the o-
ther. The first and chief of them is on
the north side, and call'd *Terranate*, or
Ternate, six leagues and a half in compas.
Some place it in half a degree of north la-
titude, others in but twenty minutes. In
it is a burning mountain, whose largest
mouth on the top is a stone's throw over;
the other two are less, one on the east side
towards the *Malay* sea; the other on the
north-west over *Tacome*; about them all
three there is much sulphur gather'd. The
greatest quantity of fire, smoke, and ashes
usually gushes out in *April* and *September*.
Yet in 1648, on the 15th of *June*, it did
a vast deal of mischief, for three days with-
out intermission; casting out, besides flames,
smoke and ashes, burning stones for a great
distance, which burnt all that came in their
way; so that they reduced a village of
Moors, call'd *de la Sula*, to ashes. All the
while this lasted the island was continually
in motion, a dreadful noise being heard in
the subterraneous caverns, like the ham-
mering in a forge, and now and then like
firing of guns.

The country is all mountainous, and al-
most inaccessible by reason of its tall thick

trees, with abundance of *Indian* canes, and
roots almost wove together. The climate
is hot and dry. There are no rivers, nor
springs, but only one lake; and yet the
plentiful rains make it extraordinary fruit-
ful, and always green. On the hills the
winds are cold; and in the bottoms the
heat, considering the latitude, moderate.
The provisions are slender, and not nourish-
ing.

The south-west wind blows here without
its natural moistness; but on the contrary
passing over the burning mountain of *Ma-
chica*, and over *Montiel*, and *Tidore* at such
time as the clove is in blossom, and the
nutmeg ripening; it is rather hot and dry;
so that it causes distempers, especially that
they call *Berber*, a dangerous and incur-
able disease. The people of *Ternate* are of
the same colour, as the *Malayes*, that is,
a little darker than those of the *Philippine*
islands, handsome visag'd, and the men
better shap'd than the women. The great-
est price of both sexes is in decking their
hair, which they anoint with oil of *Ayon-
joli*, a certain herb growing in the *Indies*,
and in *Spain*, which has a very small insi-
pid seed, whereof they make comfits in
Spain, and put to other uses. The men
wear it down to their shoulders; the wo-
men, as long as they can. As for their
apparel the men wear a doublet of several
colours, a sort of breeches down to the
knee, and a girdle; all, even the best a-
mong them, being bare-footed, and bare-
legg'd. The women wrap a piece of cot-
ton cloth about their waist hanging down
to their knees; over which they have ano-
ther of better value which serves for an up-
per coat. The doublet is of the same sort
as the mens, but upon it they have a rich
piece of silk and cotton cloth, like a man-
tle. They live miserably, like all the o-
ther *Mabometans*, upon bread of *Sagu*, or
else *Maiz*, that is, *Indian* wheat, and *Ca-
motes*;

GEMEL-motes; and yet they live to an hundred years of age without being sickly. As to their behaviour, they are little troubled with religion, and less with honesty. The men are inclin'd to arms, the women to sloth. Their language is generally that of the *Malayes*; their weapons those of *Mindanao*. The chief, and almost only product of the island, before the *Spaniards* came into it, was cloves and nutmegs; but afterwards the islanders, in hatred to the *Spaniards*, went about destroying all the trees. At present there is but little *Maiz*, or *Indian* wheat, or other grain, because of the war; whereas otherwise the soil might produce abundance. The sea abounds in all sorts of fish; the mountains in wild boars, civet cats, and other creatures, as also an infinite multitude of snakes, of a prodigious bigness, whose gall is a medicine against fevers.

Among the other kinds of parrots, there is one tame and tractable enough, call'd *Cacatuas*, all white, talks little, and makes much noise. There are herbs of singular virtue, all well known by the natives, who make use of them in several diseases.

On the east side of the island towards the mountain, a lake stretches it self out for about half a league, its water good and sweet, and has no bottom in the middle. Being near the sea it flows and ebbs, breeds no sort of fish, and yet there are sometimes crocodiles seen in it. The *Moors* have thoughts of cutting a communication between the lake and the sea to make a good harbour, but never durst put their hands to so great an undertaking.

Tidore.

Two leagues from *Ternate* is the island of *Tidore*, which fails place in fifteen minutes of north latitude. It is more healthy than *Ternate*, as well by reason of the winds, as because the soil is more fruitful; which is in some measure the better, for not having been so much wasted with war as *Ternate*. It is somewhat bigger in compass, that is, seven leagues, and is four in length. On the south side whereof there flow several hot sulphureous waters, good for many distempers. The people are warlike, and can put to sea twenty or thirty great vessels with 6 or 7000 men. The king resides at *Tidore* or *Gamolamo*, which signifies great village, a place strongly situated. The little island of *Pulicaballo* is half a league distant from *Tidore*, and is two leagues in compass.

The principal product of *Tidore*, and natural to it, is clove, as at *Ternate*; but at present the natives do not improve it, because the trade is decay'd, and the king takes it from them by way of tribute. After they have gather'd in all the clove, follows the nutmeg, of which there is great

plenty. The *Moors* have apply'd themselves to sowing of *Maiz*, or *Indian* wheat, and rice; but their chief sustenance is *Sagu*. They have three peculiar trees; one of them they call *Atilobe*, that is, moist wood, because the body, branches and leaves are always dropping water, of a greenish colour, good to drink. The second is *Apilaga*, or good tree, from whose bark, cut like a spout, there runs so much water, that it supplies the want of brooks and springs. The third is of a pernicious quality, for the wind that passes between its leaves scorches what it meets, as does its shade. None of these trees bear any fruit, but their leaves are always green.

Mutid or *Timor*, the third of the five islands of *Ternate* lies directly under the line, and is a league from *Pulicaballo*. The land is high and desert because unhealthy, but produces clove.

The fourth island is call'd *Macbien*, and *Macbi* has a burning mountain of the same shape as that at *Ternate*. It yields the *Dutch* much clove, they having four forts and a factory there.

Bachian, sixteen leagues distant from *Macbi*, is the fifth and greatest island, being twelve leagues in compass. A burning mountain in it, is of the same nature as that in *Tidore*. It abounds in beasts and fowls; it of all sorts; tobacco; and *Sagu* for man food. It is govern'd by a king of *Macbi*, who pays tribute, and makes the *Saba*, that is, a sort of homage to the king of *Ternate*.

Besides these, and three other islands properly comprehended under the name of *Meluccas*, there are four more about eighty leagues north of *Ternate*. The nearest is that of *Meao*, five leagues in compass, and bearing nothing but only a little clove. It has no port, and the inhabitants live upon fishing.

Tajures is six leagues south of *Meao*, and *Tajur* scarce three leagues in compass. But it is very fruitful, abounding in cocoa-trees, *Sagu*, and other sorts of fruit; and has a great lake. At present it has no inhabitants, for they all went over to *Meao*, to avoid the hardships put upon them by the *Spaniards* in 1631.

Sixteen leagues to the northward is *Ta-Tagolanda*, a large island, being 6 leagues in compass. It has a burning mountain, which does not obstruct its abounding in cocoa-trees, *Sagu*, and fruit, and produces some rice and clove. There are two good ports in it, and a deep river on the south-side, with two small islands, convenient for fishing, with burning mountains in both. It is govern'd by a king of its own, whose power extends no further than to be able to put to sea eight or ten *Caracoas* for war, with

with fire-arms and other weapons. Their language differs from *Malay*.

The kingdom of *Siao* lies 4 leagues north of *Tagolanda*, and 30 of *Ternate*. It is an island with a burning mountain, from whose top issue abundance of burning stones; and on the other side a plentiful spring of water. The compass of the island is about four or five leagues, the inhabitants heathens. The king was a catholic when the *Spaniards* possess'd the *Moluccos*, and ever very faithful to them, and therefore always at war with him of *Tagolanda*, who was a *Mahometan*. This was the ancientest christian place in the archipelago, christianity having been planted from the time that *St. Francis Xavierius* went over thither. The kingdom is poor and small, containing but 3000 souls. It produces many cocoas, and but little rice, *sagu*, plantans, camottas, and popayas. In the places inhabited, there are hens, and several sorts of creatures on the mountains.

Twelve miles north of this kingdom is the burning mountain and kingdom of *Colonga*, lying east and west; and having but 6 or 7 leagues in compass. From the burning mountain flow many springs of warm water, which moisten the island, and make it produce several sorts of fruit. The inhabitants are about 5 or 6000, using fire-arms and other weapons. On the north side of it is a safe harbour.

Cauripa is a small kingdom, forty leagues from *Colonga*. On the south side it looks upon the great island of *Mateos*, and kingdom of *Macassar*. On the north side it has a deep river and good harbour. The king, and 4 or 5000 subjects he has, are heathens. The climate is temperate, and the soil produces such abundance of *Sagu*, that it sometimes supplies *Ternate*; and besides that, all the common fruit of *India*, cocoas, grain, and several sorts of beasts, among which one call'd *Caraboas*, or *Sibolas*. Nor do the sea and rivers abound less in fish. The people are indefatigable and warlike. Men and women are clad like those of *Tidore*. They set out to the number of fifteen *Caracoas*, or great barques.

The kingdom of *Bulan* is 7 leagues west of *Cauripa*, on the land of *Macassar*. It has more plenty of rice than *Cauripa*, and produces the same fruit. There are several rivers that lead up to villages, inhabited by about 3000 souls. This king sets out 10 *Caracoas*, and his men use fire-arms, and other weapons, being supply'd with salt-petre from the village of *Mogonda*, and with iron from mines. The province of *Manados* is twelve leagues east of *Bulan*, and forty from *Ternate*. It abounds in fruit, rice, and grain; and as for beasts, in *Sibolas*.

Vol. IV.

bolos, buffalos, and swine. The inhabitants are at least 40000, among whom the greatest wealth is, iron, cotton and brass.

They go naked, covering their privities with clouts, and the women wear a sort of stuff, made of cane, from the waist to the knees. These are the whitest and best shap'd of any we have hitherto spoke of. These people use no fire-arms, and yet are very cruel, for they persecute one another, without sparing the lives of those that are overcome, for their greatest glory consists in hanging up the skulls of those they kill, at their doors. They are not so superstitious as the other heathens, but great observers of the singing of birds. In other respects they are affable, and lovers of trade.

All the islands, or kingdoms, here mention'd, either are comprehended in the *Molucco* archipelago, where formerly the arms of *Spain* bore sway; or were protected by them; or at least gave a helping hand to curb the enemies of the confederates, and keep the *Dutch* in awe; and therefore I have made mention of them alone, though there be many more, as the kingdom of *Macassar*, in the great island of *Celebes*, and others subject and tributary to the same king.

Beyond the island of *Gilolo*, is the land of *Papuas*, the queen of which place be-
coming a christian, was a long time maintain'd out of the king's revenue at *Manila*; because the leaving her idolatrous husband, and marrying the christian king of *Tidore*, came to *Manila* to demand succours. They will have this country to be part of *New Guinea*, for *Papuas* signifies *Blacks*, whence *New Guinea* had its name, which as yet is not known whether it be an island or continent, though some maps set it down as an island. So also between *Amboina* and *Ternate*, are the isles of *Banda*, being as many as the *Moluccos*, and as valuable for their nutmeg, and other spices, as those are for their clove. All five of them take the name of the biggest, and lie in four degrees, and thirty minutes of south latitude, and three leagues from *Amboina*. Here grows all the nutmeg and mace that furnishes the world, for though they grow in other places, yet they are not so good.

Banda, as it is the biggest, so it is also the most delightful and plentifullest of all things. Its shape is like a horse-shoo, the two points whereof running out north and south are three leagues distant. In the bay between them is the chief village frequented by many ships, and all the coasts about are cover'd with abundance of nutmeg-trees; whose blossoms spread such a fragrancy, as if nature had employ'd all her art to make them wonderful sweet. These trees by degrees quit the green, so natural

5 Y

to

GEMEL- to all vegetables, and put on a blew, mix'd with black, red, and gold colour like the rainbow; though not so regularly distributed. Beyond this delightful plain, there rises a little mountain in the middle of the island, from which flow some brooks that water the country; and then follows another plain, cover'd with the same trees, growing naturally out of the earth. The nutmeg-tree is like the pear-tree in height and branches; but the leaves are more like a walnut, as is the fruit, cover'd with such a rind, the soft inside whereof call'd mace, is as aromatick as the other. The natives of *Banda* extract a precious oil to cure cold distempers. Of these nuts they chuse the freshest, weightiest, largest, and full of moisture, without any hole; they are good to correct a stinking breath, clear the sight, comfort the stomach, and several other diseases. The trees they grow on are in common, and when the nuts are gather'd, which is in *August*, they are divided among the inhabitants of the villages.

The people are strong, but ill favour'd, melancholy, and wear long hair. They are all *Mahometans*; the men give to trade, the women to tillage. They have no king or lord, but obey the eldest, and these seldom agreeing in opinion, they often are at variance and quarrel; not to be reconcil'd, but by the nations, that resort to their ports to trade for nutmeg and mace. When these islands were discover'd by the *Portuguese*, the people of *Malaca* and *Java* traded to them.

Amboina. The *Portuguese* and *Dutch* count the island of *Amboina*, eight leagues north of *Banda*, one of chiefest. It lies in four degrees of south latitude, and is seventeen leagues in compass. This alone produces more clove than all the five *Moluccos*, but it is not so good. It also abounds in oranges, lemons, citrons, cocoas, sugar-canes, and the like. There are several sorts of beasts, and birds, and among the rest parrots of several colours, and one with red feathers, most beautiful to behold. The inhabitants are more docible than those of the *Moluccos* and *Banda*. They wear the same sort of apparel, and live on the trade of spice. Their hardiness both by sea and land makes them much valu'd for soldiers or sailors. Besides fire-arms, they use scimitars, and javelins,

which they dart very dextrously. The land is mountainous and well peopled, abounding in rice, palm-trees, to make wine, and very excellent fruit. It was once in the possession of the *Dutch*; but the inhabitants revolted with the assistance of the king of *Macassar*.

Having so often made mention of the clove, it will be proper to say something of it. Because of its being shap'd like a nail, the *Spaniards* gave it the name of *Clavo*. Its blossom is like that of myrtle, but the leaves extraordinary small, coming out between those four little teeth, which when dry remain like a star, and compose the head of the clove. Abundance of them grow in a cluster, like the myrtle, or elder, and yield the most fragrant scent. The tree is like the laurel, but thicker of leaves, and they thinner and narrower. Sometimes they are of several colours; but the cloves do not come out, or grow ripe all at once. The backwardest are white, then green, and when near ripe grow red; which variety is a very pleasant sight to strangers. They are gather'd in *February* and *September*, and do not grow every year, but every two, and sometimes three; but then the harvest is very plentiful, as if nature would make amends for the delay. They are gather'd like the olives, by shaking the boughs, after cleaning the ground about them. Then they are spread out in the sun, and in three days are dry enough, between black and ash colour. Fresh water roots, and the salt preserves them. Those that remain on the trees, and are call'd mother-cloves, within a year grow bigger and stronger, and are therefore more valued in *Java*. These falling to the ground produce other trees, without any help of art; and they after 8 years bear, and last sometimes to an hundred. It is commonly said that only the *Molucco* islands produce clove, because of the infinite quantity that grows there, and so good that it exceeds the clove of the other islands, but that of *Amboina* is larger, and little inferior to it. The virtue of clove is wonderful against all distempers proceeding from cold and dampness. When green, they extract from it a water of a most delicious smell, and very good for the palpitation of the heart.

CHAP. VIII.

How the Philippine islands were discover'd.

Magellan. PROVIDENCE made the choice for the discovery of these islands of *Ferdinand Magallians*, a *Portuguese*, knowing in the affairs of this archipelago, by

the relations he had from his friend *Francis Serrano*, who was the first discoverer of them round by the east. He was at *Malaca* in the year 1511, when *Alonso de Albuquerque*

buquerque completed the conquest of it; after which, thinking he could better make his fortune in Europe, he return'd to Portugal.

In December, that same year, *Francis Serrano*, and *Anthony d'Aren* sail'd from *Malacca* towards these islands, and the second of them happen'd to discover the isles of *Banda*, where the nutmeg grows; and the other the *Moluccos* valuable for the clove. *Serrano* staid there, at the request of *Boleyse*, king of *Ternate*; but he sent *Peter Fernandez* to give the king of Portugal and his friend *Magellan* an account of the nature and importance of those islands.

Magellan, as we call him in *English*, hearing this news, and not being able to move his own king *Emanuel* to give ear to him; went over to the court of the emperor *Charles V.* in *Spain*, whom he made so sensible of the consequence of the undertaking, and that the conquest belong'd to the western part, assign'd the crown of *Castile*; and not to the eastern appertaining to Portugal; and the emperor, seeing the account written by *Serrano* and his map, furnish'd *Magellan* with five vessels well equip'd, for him to try to find a way westward.

He sail'd on the 10th of *August*, 1519, from the port of *St. Lucar*, well furnish'd with all necessaries for so long a voyage, as the finding a passage from the north into the south-sea. Having run along the coast of *Brazil*, and cut the line; in 50 degrees of south latitude he enter'd the river of *S. Julian*, and in 52 and some minutes found the strait of his own name. He enter'd on the 21st of *October*, and about the end of *November* came out into the south sea, without meeting with any storm in a run of 4000 leagues. Having again cut the line and being in 15 degrees of north, latitude he discover'd two islands, which he call'd *Los Velas*; in 12 degrees those known by the name of *Isas de los Ladrones*, or the islands of thieves, and a few days after the island of *Ibabao*, of the islands here describ'd. The first he met with was *Humunum* a little desert island, near cape *Guiguan*, now call'd *La Encantada*; where the first *Indians* that went to meet him were those of *Siloban*, now under the government of *Guiguan*. *Magellan* call'd this island *de Buena Senales*, or of good tokens, and all the archipelago of *S. Lazarus*, because he landed on *Saturday* before *Passion-Sunday*, in *Spain* call'd *Sunday* of *S. Lazarus*, in the year 1521.

On *Whitsunday* the first mass was said on the land of *Butuan*, a cross erected, and possession taken in the name of the most invincible *Charles* the 5th. The Lord of *Dimaassava*, kinsman to the king of *Butuan*

and to him of *Cebu*, was assisting to *Magellan*, for he brought the ships into that port on the 7th of *April*. Before mass was said on *Whitsunday*, that lord and the king of *Cebu* were baptiz'd, and by their means many men of note and others to the number of 500; and after dinner the queen with 300 more. The next day the royal standard being set up with great solemnity, the king and all his people took an oath of fidelity after the *Indian* manner, whereof speedy notice was sent back to *Spain*.

On *Friday* the 26th of *April*, *Magellan* and some of his men were kill'd in the first encounter, with the chief men of the island of *Matan*, opposite to *Cebu*. On the first of *May*, the treacherous king of *Cebu* at a bloody entertainment, cut off the heads of 24 of the principal men belonging to the ships, and among them *Duarie Barbosa*, kinsman and successor to *Magellan*, all the mischief being contriv'd by a *Black*, who was slave to *Magellan* and had serv'd as interpreter, in revenge for some injury done him by *Barbosa*. Upon the receipt of this news, *John Carvalho* put out of the port of *Cebu* with his ships and men steering east-four-east. Being come to the point of *Bobol* and *Panglao* he lay by; and then discovering the island *delos Negros*, directed his course to *Zuyit* on the coast of *Mindanao*. Thence he sail'd to *Borneo*, where he took *Molucco* pilots, and returning by way of *Cagayan*, *Xolo*, *Taguima*, *Mindanao*, *Sarragan* and *Sangul*; on the 7th of *November* discover'd the *Moluccos*, and the 8th anchor'd in *Tidore*. The king receiv'd him courteously, allowing him to trade, and set up a factory to buy clove and other spice; which was soon done. Whilst they were getting all things ready, the ship call'd the *Trinity*, which had attempted to sail directly back to *Panama*, came back and deliver'd it self up to the Portuguese at *Ternate*. The ship *Victory* took the same way home the Portuguese us'd, and having seen *Amboina* and the isles of *Banda*, and stay'd some time at *Solor* and *Timor*, sail'd along the east-side of *Sumatra*, keeping off from the coast of *India*, to avoid falling into the hands of the Portuguese, till it turn'd the cape of *Good Hope*, and arriv'd at the port of *S. Lucar* in *Spain* on the 7th of *September* 1522, three years and some days after it set out, with only 18 men out of 59 that sail'd from the *Moluccos*, *Sebastian de Cano* being captain. The account of the new and wonderful voyage of the ship *Victory* being known throughout *Spain*, with the information concerning the rich trade of spice; *D. F. Garcia Joire de Loaysa*, of the order of *S. John* of *Malta*, was sent thither with a squadron of seven ships, and *Sebastian del Cano* for his successor.

GRMEL- successor. These sailing from *Corunna*, came to an anchor in the new streight of *L. I.* 1697. *Magellan* in *January* 1526, and in *May* following got out into the south-sea, after losing one ship in that narrow passage. In *June* a violent storm parted the ships, and sunk most of them. Aboard the admiral, which on the last day of *July* was in four degrees of south latitude, the commander in chief *Loayza* dy'd, and four days after his successor *Sebastian del Cano* and many more. On the 2d of *October* those that remain'd landed in *Mindanao*, and not being able to go over to *Cebu*, directed their course for the *Molucco* islands; where they were well receiv'd by the king of *Tidore* on the last day of *December* 1526. But as well he, as the king of *Gilolo*, were so threatened by the *Portuguese* for having receiv'd the *Spaniards* belonging to *Magellan's* squadron, that they seiz'd the four factors left there by the ship *Trinity*, and those that return'd now, and secur'd all the goods; whence ensued a war between the *Spaniards* and *Portuguese* that lasted till 1527. In the mean while the marquis *del Valle* fitted out three ships in *New Spain*, under the command of his kinsman *Alvaro de Saavedra*, who sailing on the eve of all saints in the year 1527, on the day of the epiphany in 1528, being in the latitude of eleven degrees, discover'd some of the islands *de los Ladrones*, and thence sail'd to *Mindanao* in eight degrees of latitude. He there recover'd some christians, belonging to one of *Loayza's* ships which was cast away at *Sanguil*, and then going on to the *Moluccos* fought the *Portuguese*. Then coming to *Tidore* he there found 12 *Spaniards*, who had fortify'd themselves under the command of *Ferdinand de la Torre*. Having repair'd his ship, about the end of *May* he set out again for *New Spain*; and passing by some of the islands of *Ladrones* in the latitude of 14 degrees, was drove back

first to *Mindanao* and then to the *Moluccos*, whence he set out. Whilst it was here disputed by dint of sword, at the expence of the subjects blood, who had the best Title to the islands; the matter was controverted in *Spain* and *Portugal* with the pen, astrolabe, sea-charts, and other geographical instruments. Judgment being at last given for *Portugal*, the few *Spaniards* that remain'd in the *Moluccos*, left them upon condition they should be convey'd from *India* into *Spain*.

Ruiz-Lopez-de-Villalobos by order of the *Spanish* viceroy of *Mexico*, sail'd from the port of conquest the nativity on the day of all saints, in the year 1542, with five ships to conquer the *Philippine* islands, and instructions not to attempt any thing against *Moluccos*, or other conquests of *Portugal*. After two months sail in the latitude of ten degrees he discover'd the island call'd *de los Corales*, and then others of the number of those call'd *de los Ladrones*. Then the pilots varying, he came not upon the islands in eleven degrees of latitude, but in ten; and the winds starting up against him, in *February* he came to an anchor in the Bay of *Caraga*. Here he lost many of his men with sickness and famine, and all his ships, but the admiral, perish'd in storms. Then forced by necessity, as having but ten days provision, he steer'd his course for the *Moluccos* to supply his wants; and arriv'd at *Tidore* on the 24th of *April* 1544. The *Portuguese* oppos'd and would not allow him to take any provisions or other necessities, so that being there now in *February* 1545, without doing any thing, he came to composition with the *Portuguese* to give him a ship to return to *Spain*. But whilst this treaty was in hand he dy'd for grief at *Amboina*, and all the religious men of the order of *St. Augustin*, return'd afterwards to *Lisbon* in 1549, by the way of *Malacca*, *Cochin* and *Goa*.

CHAP. IX.

The conquest of the Philippine islands.

THE ill success of the attempts before-mention'd made the conquest of the *Philippine* islands be laid aside for ten years, till at the persuasion of *F. Andrew de Urdaneta*, of the order of *S. Augustin*, king *Philip* the second order'd the viceroy of *Mexico* to send thither four ships and a frigate, with 400 men, under the command of *Micbael-Lopez-de-Legaspi*, a native of *Mexico*. *F. Andrew* would go with him, and took four more of his order.

In *January* 1565, this fleet came to an anchor among the islands *de los Ladrones*;

on the 13th of *February* arriv'd at the island of *Leyte*, and running successfully thro' the streight, came to an anchor in the port of *Zebu* (by the direction of a *Moor* of *Borneo*, who was acquainted with those islands, taken near *Panaon*) on the 27th of *April*, being *Whitsunday*, and dedicated to *S. Vitalis* the martyr, who was therefore chosen patron of the city.

The fleet enter'd *Zebu* in peaceable manner, but perceiving that *Tupas*, who govern'd there, put off the *Spaniards* with good words, they plunder'd the place. The

third day, among the plunder was found the image of the infant Jesus, before mention'd, and therefore the first church was by the fathers of *S. Augustin* founded under the invocation of the name of Jesus.

On the first of *June*, *Philip de Salzedo* captain of the admiral ship, sail'd in it with *F. Andrew de Urdaneta*, to discover the way back to *New Spain*. He arriv'd thither on the 2d of *October*, but found that *D. Alonso de Arellano* was come thither with his vessel two months before, to gain the honour of being the first discoverer. However, all is due to *F. Andrew*, for he took a particular account of the voyage, and made charts proper for it.

Tupas and his people submitted themselves to the king of *Spain*, promising to pay tribute; but whilst *Legaspi* was building the city *Zebu*, the *Portuguese* came with several pretences to disturb him. He sending advice to the viceroy of *Mexico*, had a supply of 200 men sent him, in the year 1567, under the command of *John de Salzedo* and *Philip de Salzedo*, his nephews; so that *Gonzalo Pereyra* coming afterwards with the *Portuguese* fleet to expel the *Spaniards*, was forced to return with disgrace.

In 1570 came the first letters from court to *Legaspi*, approving of all that had been done in the islands, and commanding him to proceed in the conquest, constituting him *Adelantado*, or lord-lieutenant of the same. In 1571 the *Spanish* arms reach'd *Manila*, reduced it without any expence of blood. On the 24th of *June*, being the feast of *St. John* baptist, the foundation of the city was solemnly laid, and trade settled with *China*, so that the first *Cbiampan*s came thence to traffick in *May* 1572. The governor of *Legaspi* died in *August* that same year; and *Guido de Labazaris*, entring upon the government, continued the conquest of the island, giving Soldiers that had serv'd well several *Encomiendas*, or parcels of *Indians*, to be their tenants, which was afterwards confirm'd by the king. In *November* 1574, *Limabon*, a *Chinese* pirate, assaulted *Manila* with a fleet of 70 barques, but was bravely repuls'd.

In *August* 1575, *Doctor Francis de Sande*, alcade of the court of *Mexico*, was sent governor. He 'twas that undertook the famous expedition against the king of *Borneo*, in which that king was overthrown, and his court plunder'd, the islands of *Mindanao* and *Xolo* oblig'd to pay tribute, and he and other governors afterwards continued the conquest. In 1597, the marquis *Stephen Rodriguez de Figueroa* undertook the conquest of *Mindanao* upon his own coast, by the king's leave. He also made war on the side of *Tampuan*, against the kings of

Malana, *Silongan*, and *Buayan*, and against *GEMEL-Bubisan*, father to *Coralt* king of *Mindanao*; but he died in the enterprize at the hands of *Obal*, uncle to the king of *Mongey*; and colonel *D. John de Romquillo* was sent by the governor of *Manila* to prosecute it.

The fathers of the society of *Jesus* enter'd the isle of *Mindanao* on the 6th of *February* 1624, to take charge of the new christians; the governor *D. Francis Tello* putting them in possession of the parishes.

The general *John Chaves* carried on the conquests with a good force, compos'd in *Manila* partly of *Indians*. On the 6th of *April*, 1625, he landed at *Samboangan*, fortified himself, putting all about to fire and sword, and at last erected a fort there. *Sultan* king of *Mindanao* sued for a peace, which was concluded on the 24th of *June* 1645, by captain *Francis Aienza-y-Banez* governor of the fort of *Samboangan*, by commission from *D. James Faxardo* governor of *Manila*; the principal articles were, That the aforesaid king *Sultan*, and his subjects, should be friends to the king of *Spain*, and the king of *Spain* theirs. That if for the future either side was aggriev'd, it should acquaint the court, to require satisfaction; and the peace should not be suppos'd to be broken till after six months. That the subjects of both sides might go and come freely, without let or molestation, with leave of their king, and the governor of *Manila*. And other articles, which may be seen in *Robles's* history of *Mindanao*, lib. 7.

This king of *Mindanao* could bring into the field 30000 men with fire-arms, sold him by the *Dutch*, bows and arrows, and other weapons. His residence was in an open place fortified only with palisadoes and a few pieces of cannon.

In 1662, the governor of *Manila*, fearing the threats of a *Chinese* pirate, of whom we spoke in the 4th volume, the better to secure *Manila*, resign'd *Samboangan* to the king of *Mindanao*, conditionally that he should restore it when demanded by the *Spaniards*. The pirate, who was also petty king of *Formosa*, died soon after in a rage, and so deliver'd *Manila* from that fear.

Notwithstanding the garrison of *Samboangan* was withdrawn, the province of *Caragas* remain'd under the dominion of the *Spaniards*, govern'd by an *Alcade mayor*, placed there by the governor of *Manila*, with a good garrison of *Spaniards*. Besides, there's the fort of *Iligan*, belonging to the province of *Dapitan*, kept by a *Spanish* captain and corregidor, or civil magistrate. The people of *Dapitan* pay tribute, and are subject to *Spain*, with an inviolable fidelity ever since the *Spaniards* first set foot there. 'Tis true, that then they submitted out of fear; for seeing them with their swords by

GEMEL- their sides, eat biscuit and smoak tobacco, L. I. they went and told their petty king, that 1697. those were a people with tails, who eat stones, and cast smoak out at their mouths.

This account astonish'd the petty king; but being at war with the king of *Mindanao*, he join'd in amity with the *Spaniards*, and guided them to *Zebu*.

Illigan and *Dapitan* are parishes and missions of the fathers of the society, and in temporals depend on the *Alcade mayor* of *Zebu*, but a few leagues distant.

Whilst I was at *Manila*, *F. Maurice Pereira*, a *Catalonian*, set out with a companion for the mission of *Samboangan*, and soon after I heard they had been all well receiv'd by the king of *Mindanao*, and sent to the place of their mission, posses'd by the prince his son. There is a good correspondence between this king and the governor of *Manila*, inasmuch that nine years ago the king sent an ambassador to the governor, to acquaint him, that he had concluded a peace with another king his neighbour. I had the curiosity to enquire of the governor, who was *D. Fausto Cruzat y Goryora*, how he had receiv'd that embassy. He told me in the first place, that the ambassador was the king's brother, and clad after the *Moorish* fashion, bare-footed and bare-legg'd. That he had him led thro' the *Spanish* foot drawn up, and receiv'd him under a canopy. That neither the ambassador, nor any of his retinue, would lodge in the palace, but all of 'em retir'd at night to their vessels. The present was only a few quilts, of no great value.

Xolo conquer'd.

D. Sebastian Hurtado de Corcuera, governor and captain-general of *Manila*, subdued the island and kingdom of *Xolo*, going thither in 1638 with 80 barques, and 600 *Spanish* soldiers, besides many *Indians*, so obliging the *Indians* to submit themselves. The

peace of *Xolo* open'd the way to the christian religion, and the fathers of the society; but it was soon broke, thro' the indiscretion of captain *Gaspar de Moroles*. It was restor'd again on the 4th of *April* 1646, upon condition the king of *Xolo* should pay a yearly tribute of three *Xoonga's*, or barques six yards long, loaded with rice. The same captain *D. Francis de Atienza* manag'd this treaty for *Spain*; and *Batocan* and *Arancaye Daran*, ambassadors of *Sultan Corabat* king of *Mindanao*, and mediator, for the king of *Xolo*. The *Dutch* laid siege to *Xolo* on the 27th of *June* 1648, but did nothing considerable. Afterwards the king of *Xolo* broke the peace, doing much mischief with a fleet he put to sea; so that at present he remains absolute master of his kingdom, and being at peace with *Spain*, his subjects trade in the *Philippine* islands. The governor told me, that some years before, that king sent him an embassy, giving him an account of his brother's death, and his own accession to the crown, sending the governor a mourning suit of clothes to wear for his brother, and a present of two quilts, and other trifles.

When the union of the crowns of *Castille* and *Portugal* had put the *Molucco*-islands under the *Spanish* dominion, the governor of *Manila* perceiving there still remain'd much to conquer, in *October* 1593 fet out a considerable fleet for that purpose; but as he was going in a galley to join the fleet already under sail, the *Sangleys* that row'd, mutinied, and kill'd him and other *Spaniards*, carrying away the galley into *China*. His son *D. Luis de las Marinhas* succeeded him in the government in *February* 1596, and prosecuted his father's enterprize. After him other governors apply'd themselves to it, and particularly in 1606 a good fleet was sent to the *Moluccos*.

CHAP. X.

The author's short voyage to the port of Cavite, and the description of that city.

TO return to our journal, after a digression perhaps not displeasing or tedious, I spent a week in providing my self with necessaries for my long voyage to *New Spain*, and taking leave of friends; and on *Sunday* the 16th putting my equipage into a *Banca* boat, I went with my *Black* to the port of *Cavite*, where we arriv'd about noon. These *Bancas* are made of the body of a tree, six spans in breadth, and longer than the *Feluccas* at *Naples*. I found not as I expected *Charles Joseph* of *Milan*, because he was gone to the *Marian* islands, to carry the soldiery the king's allowance, and the

fathers of the society. This done, he was to go on to discover the southern islands, and, being come to them, to send men ashore to enquire into the religion and customs of the inhabitants, and then to bring away some islander, for further information, as the governor had given him in his instructions in my hearing. But above all, he had orders to find that which he himself had discover'd, and call'd *Carolina* in 1686, when he went to relieve a vessel run aground. 'Twas generally thought he would go in vain, because from 13 degrees to the line the currents

Twas generally
in vain, because
ine the currents
arc

are violent, inasmuch that a small vessel cannot stem them; and the less, by reason of the winds that prevail there: otherwise 'tis not to be doubted, but that in all that space to the line there are islands inhabited by savage people, and many more northwards as far as *Japan*; for there are often boats of those parts brought by storms to the island of *Samar*, and coast of *Palapa*, as has been said elsewhere. The said *Charles* being absent, *Michael Martinez*, commander of the galeon that was to sail, entertain'd me in his house.

Monday the 18th, I went to see the castle of *St. Philip*, seated on that point of land which makes the bay. 'Twas built since the fort of *Manila*, is a regular square, with four bastions, well provided with cannon, but small, besides some pieces over the gate. About it they were building caverns for the soldiers, magazines, and cisterns, leaving a large parade in the middle. Here, in the year 1679, was built a wooden house, to serve as a prison to *Dr. Ferdinand Valenzuela*, with a chapel in it, that there might be no infringement of the communities of the church, and he there perform his ten years banishment. At first he was kept very strictly, without being allow'd to write, or to live on the first floor, but afterwards he had so much liberty that he caus'd several plays to be acted in the castle. He spent the day in writing, reading, and praying, and so made the time easier to him. The king had assign'd him an allowance of two hundred and fifty pieces of eight a month. In 1689, the ten years being expir'd, he went away to *New Spain*, where the count de *Galva*, brother to the duke of *Pastrana*, whose page he had been, being then governor, he was well receiv'd, and was punctually paid a thousand pieces of eight a month, allow'd him by the king of *Spain*, with a prohibition to go over into *Spain*. His misfortunes had afterwards an unhappy end; for, as he was intent upon managing his horses, he receiv'd such a kick as was the cause of his death; a good instance of the turns of fortune, with those that think they have secur'd her favour. This minister being brought into the queen-mother's service, by means of an aunt, who was one of her women, knew so well how to gain upon her affections, by his faithful services; especially twice he was sent to the court of *Vienna*, on important affairs; that from a private gentleman, he was rais'd to the honour of prime minister, and a grandee, which was afterwards the cause of his fall.

Tuesday 19th, I took a view of the city *Cavite*, or *Cavit*, as the *Tagalians* call it. 'Tis seated in sight of *Manila*, three leagues

south of it, on a long narrow neck of land, on one side of which is the sea, and on the other a bay that makes the port. Thus being almost enclos'd with the sea, it has no wall about it, but only the castle before mention'd at one end, and at the other next the land a wall, with some pieces of cannon. In this wall is the gate, to which they go over a drawbridge, because of the ditch, which at flood is full of water. The city might with a small charge be made an island. The port before mention'd is in the shape of a semicircle, like that of *Trapani*, in the kingdom of *Sicily*. 'Tis shelter'd from the south winds, but not from the north, and therefore large ships, which cannot come close under the shore, are not very safe; and in the year 1589 two were there cast away.

As for the buildings and publick places, there's no beauty in them, the houses being of timber or cane, and very few with the first floor of stone. The parish church is of timber, the house and church of the *Dominicans* of the same. The monastery of the barefoot *Augustinians* is somewhat better, and the church of stone; but the house of the *Jesuits*, tho' began of late years, is very good. The countable of the castle governs it and the city, as chief justice.

Wednesday 20th, I went to see the *Ribera*, or arsenal seated on the aforesaid point of the castle. There 2 or 300 *Indians*, and sometimes 600, brought by force from the neighbouring provinces, work at building galleons and other ships. The king allows every one a piece of eight, and a *Cavan* of rice a month, which is the time they are to stay, for at the end of it, they take others to relieve them. Some of them plane, some saw, some nail the timber, some make cables, some careen, which is done there with oil of *Cbina*, mixed with lime; but the greatest number fell trees on the mountains; and these must be many, and large, to keep out the tempestuous sea, they are to cross. Besides that this sort of wood is hard, and heavy as a stone, the planks are made so thick, and so lin'd both within and without, that they receive little damage by common balls. That vessel which fought some years since, with fourteen *Dutch*, that came to take *Cavite*, had 90 balls taken out of her sides, which stuck there as if they had been in a wall of soft stone; and this was because being run aground, she was forced to fight all the while on one side, to the great astonishment of the enemy. The *Arsenal* is very large, and fit to build any great ship. In 1694, the famous galeon *St. Joseph*, before mention'd to be cast away, was finish'd there, being bigger, or at least as big, as that of the

GEMEL-
LI.

1697.

~~~~~

Buildings.

GEMEL-the Portuguese call'd, *O Padre Etermo*. Its keel was 62 cubits (each cubit a span and a half) long, and proportionably broad. The loss of it ruin'd the inhabitants of Manila, but that of the other call'd *Santo Christo*, completed their misery. This last was sixty cubits, as before in the keel, and had made but one voyage to *New Spain* after it was built at *Bagatao*. Whilst I was at Manila, another vessel was building at *Bagatao*, call'd *St. Francis Borgia*, 55 of those cubits in length, to go to *New Spain*, in 1697. What success it will have, God knows; for the citizens of Manila, having obtain'd a grant from the king, to load a galeon, and send another to convoy it, paying 74000 pieces of eight for each, they 2 gave paying for two, building one at the king's expence, so very large, that though it carries burden enough for three, yet it requires a storm to move it; and this mighty mass, not being strong enough knit together, to resist the furious tempests of that vast ocean it is to traverse, it is easily cast away, as appears by experience, and it is demonstrable, that midling ships are properer for that voyage than the great.

Suburb. *Thursday* 21st, I went to see the suburb of *St. Roeb*, stretching without the wall from sea to sea, all of it consisting of timber houses, among woods of trees. The parish church is very good, being built by *D. Ferdinand Valenzuela*, for his particular devotion. There are more inhabitants, *Spaniards*, *Indians*, and *Sangleys*, or *Chinese* in this suburb, than in *Cavite*. Here is good fruit of the country, and some few grapes, the vines being carry'd out of *Europe*.

*Friday* 22d, the vessel having all its lading aboard, I embark'd. This ship was built at *Bagatao*, by *Dr. John Garicocea*, and had made one voyage on the coast. Because of the loss of the afore said galeons, the king had bought it of him, for 30000 pieces of eight, to carry over the royal revenue to *America*. It was 45 cubits, of those above mention'd in length, proportionably broad and strong.

*Saturday* 23d, there were prayers for our good voyage. When we were ready to sail, the commander call'd the pilots, and all other officers to give their opinions, whether the vessel was fit for the voyage of *New Spain*, and in a good sailing posture.

Most of them were of opinion it was overloaded, and therefore could make little way. He therefore order'd all the seamen's chests to be put ashore, that all those who had two might have one left behind. The governor being inform'd of it, sent colonel *Thomas de Andaya* to lighten the ship. *Andaya* came on *Sunday* the 24th, and caus'd all the casks of water to be taken out; for the burden of the vessel being 1500 bales, they had put aboard 2200, besides provisions and other necessaries. On *Monday* 25th, the colonel caus'd abundance of bales, and parcels of wax to be unshipp'd, leaving only the 1500 bales that the ship was entred for. The governor and *Oydores*, or judges, according to the king's order, are to distribute the stowage proportionably among the citizens; but there is little justice done in this point, favour carrying all, so that the rich have cockets given them, for 30 or 40, and even 50 bales, and the poorest fort only for two or three, pretending the ship can carry no more, and this contrary to the king's intention. *Tuesday* 26th, there were more bales and parcels of wax unloaded, still delaying our departure, whereas the king's orders were that the galeon sail the 24th of *June*. It is the practice in this voyage to carry the water in earthen jars, to the number of 2, 3, or 4000, proportionably to the number of people, and bigness of the galeon; and these falling short for a voyage of 7 or 8 months, the continual rains supply the defect. This time they had made two cisterns, on the sides of the ship, reaching from the deck to the bottom of the hole, as is us'd by the *Portuguese*, and *Moors*; and these had prov'd very good; yet they were broken to stow more bales in their place; without considering that relying on the cisterns, they had made no earthen jars, and it was not easy to make them in so short a time. This was done, because the officers put in bales of their own in those places, notwithstanding the king's prohibition, they not minding that they sent so many men to perish with thirst, in such a spacious sea. In fine, on *Wednesday* 27th, 800 barrels of water were cast away, by breaking the cisterns; and the same was done on *Thursday* following being the 28th, the bales belonging to the colonels friends and acquaintance being put aboard again.

## *A Voyage round the World, by Dr. John Francis Gemelli Careri. Part VII.*

Containing the most remarkable things he saw  
in the *PHILIPPINE ISLANDS*.

### B O O K III.

#### CHAP. I.

*The most dangerous voyage from the Philippine islands, to America; and first to the place call'd, Varadero.*

**T**HE voyage from the *Philippine* islands to *America*, may be call'd the longest, and most dreadful of any in the world; as well because of the vast ocean to be cross'd, being almost the one half of the *Terraqueous* globe, with the wind always ahead; as for the terrible tempests that happen there, one upon the back of another, and for the desperate diseases that seize people, in seven or eight months, lying at sea sometimes near the line, sometimes cold, sometimes temperate, and sometimes hot, which is enough to destroy a man of steel, much more flesh and blood, which at first had but indifferent food.

The ship being again laden, and about a thousand jars of water, put in by the commander and other officers, we set sail on *Friday* 29th, before noon in the presence of the colonel. Having sail'd two leagues, we came to an anchor within the same bay. On pretence that he wanted water, the commander left behind a *Dominican*, who had given him five hundred pieces of eight for his voyage; a recoler, and a physician he had agreed to keep at his own table; which accident put me into a good little cabin for my bed and equipage. *Saturday* the 1<sup>st</sup> day of *June*, the wind continuing at south against us, though we had hoisted sail, we soon drop'd anchor again. The same we did *Sunday* the first of *July*, having sail'd but half a league. *Monday* 2d, stirr'd not; and *Tuesday* just weigh'd and drop'd anchor again, the wind continuing

Vol. IV.

contrary both days with much rain; so that GEMEL- in five days, we scarce sail'd three leagues. LI. Some water being spent, the boat was sent 1697. to take in more, near the hill *Baian*. Being curious, I went in the boat with the major *Vincent Arambola* a *Biscainer*, and landed on a plain, where the arrows of many *Negrillos* or island *Blacks*, who were hunting in the woods, could reach us. The women and children began to bark like dogs, to drive out the wild beasts before their husbands, and fathers, who lay ready in ambush. So whilst the water was taking in, we stood very fearful, as not being able with two firelocks to oppose hundreds of *Blacks*, arm'd with bows and arrows, short javelins, and long knives; wherefore I retir'd to the boat, without requiring into the matter of hunting, as *Arambola* did. The *Indian* sailors belonging to our ship, bringing the water from the wood, were no way molested by the savages, because they are friendly among themselves. Having taken the water, we return'd aboard after midnight, more afraid than hurt; having stood upon our guard, not only because of the *Blacks*, but also on account of the unconquer'd *Sambolos*, who live upon part of that mountain.

*Wednesday* 4th, we stirr'd not, the wind being contrary. *Thursday* 5th, before day, drove along with the tide, and very little wind, but the wind then starting up against us, came to an anchor near *Maribeles*. The governor came aboard in a little *Parao*, which is a tree hollow'd, with two wings

6 A

on

GEMEL-on the sides, to prevent its overfetting, to bring our captain some fruit, and then went away. *Friday* 6th, the same wind continu'd with those rains, which never fail about *Manila*. *Saturday* 7th, the wind freshning, and the rain growing tempestuous, we weigh'd anchor, and brought the ship under the shelter of the hill of *Balan*. The same southerly winds and rains continuing, we lay in the same place, all *Sunday* and *Monday* the 8th, and 9th. *Tuesday* 10th, we were tow'd a little way. Nothing troubled me but the heat; for there was none of the other plague of lice, so frequent in other ships; because, as has been said, in those parts they do not breed on *Europeans*. Search was then made, to discover whether there were any jars, that instead of water, were fill'd with commodities, upon pretence of carrying them safer; and several were cast into the sea full of pepper, porcelaine, and other goods of value. The south wind ceasing, and the north succeeding, we weigh'd anchor *Wednesday* the 11th, before day, and drove with the tide with little wind, between *Maribeles* and the hill of *Bazan*; so that by sun-set we pass'd the point of *Maricondon* and *Limbones*, and then the rock of *Fortune*.

*Thursday* 12th, about noon, we left astern the desert island of *Ambil*, and that next it of *Lavan*; between which, and the point *Calavite*, in the island of *Mindoro*, pass'd the so often mention'd galeon, *St. Joseph*, as it was running to perdition. Before sun-set, we pass'd by point *St. James*, in the island of *Manila*, which makes the bay of *Balayan*. *Friday* 13th, we coasted the island of *Mindoro*, where it forms a long ridge of high mountains, and two sides of its triangle; besides a long high neck of land running out towards the south. This island is mostly inhabited by savage *Mangians*, not yet subdu'd. They are of an olive complexion, and wear long hair. The *Jesuit* missionaries that were aboard told me, that these people had a tail half a span long. They do no harm to the *Spaniards*, and trade with those few tributary *Indians*,

*Mangian*  
of *Mindoro*.

who live in villages, in the plains of the island, under the care of the barefoot fathers, of the order of *St. Augustin*. These savages exchanged gold, wax, parrots, and other things, for rice, and the like. The island abounds in buffaloes, deer, and great numbers of monkeys, which run in troops along the shoar, seeking what the sea affords to eat.

The wind rising, and against us, opposite to the island of *Maricavan*, a place not far from *Manila*, where there are plenty of buffaloes and deer; it was thought fit to lie by at night, since we could not advance; but the weather growing stormy about midnight, we lost all we had gain'd, and so on *Saturday* 14th, found our selves opposite to cape *St. James*, and got but little from it, all the day after. The worst was, the coast afforded no good anchoring, and we had no shelter from the wind. *Sunday* 15th, the violence of the contrary wind abating, we coasted along to weather the cape. First we left on the right-hand, a little bay near to the cape, then another larger, call'd, *El Varadero Viejo*, and then the streight between the aforementioned point of *Mindoro*, and the island of *Maricavan*; near the bay of *Baguan*, on the land of *Manila*, where are the garrisons of *Guarnio*, *Balaxivo*, and *Batangas*. Turning the cape, we came to the *Varadero*. All the ships that go to *Acapulco* put into this port, to take in wood and water. It is a semicircular bay, form'd by a crooked neck of land, running out of *Mindoro*, and other islands opposite to it. The greatest danger in this narrow passage, is caus'd by the contrary currents, which here meet, one of them running toward *Maribeles*, and the other towards the streight of *St. Bernardin*. After dinner I went ashore to hunt, notwithstanding the island was full of savages. I could not get into the woods, by reason of the thickness of the trees, not to be pierced by dogs, much less by men; and finding neither deer, nor buffaloes along the shoar, went aboard again empty-handed.

## CHAP. II.

*The voyage continu'd to the port of Ticao.*

HAVING taken aboard 200 jars of water brought us by the king's galliot, which expected us there for that purpose, we set sail on *Monday* 16th, with a fresh gale at south. We left on our right-hand near the coast of *Mindoro* seven little islands named *Bacbus*, pleasant to behold for their green trees, but not inhabited, and on the left cape *Galvan* of the land

of *Manila*. At sun-set we sail'd among the colonels islands near the two islands call'd *Las Ermanas*, or the *Sisters*; and then by three others, call'd *Virreyes*, or *Viceroyes*, all full of trees, but not peopled.

*Tuesday* 17th, before day, we pass'd between the islands of *Banton*, and point of *Marinduque*, which was on our left. This island abounds in fruit, and very nourish-

ing

the plains of the  
the barefoot fa-  
Augustin. These  
tax, parrots, and  
the like. The  
deer, and great  
which in troops

fail'd among the  
vo islands call'd  
; and then by  
s, or Viceroys,  
pled.  
; we pass'd be-  
; and point of  
our left. This  
d very nourish-  
ing

ing roots; as also in wild boars, deer, buf-  
faloes, and other creatures; and therefore  
we sent the *Chiampan* thither before us to  
get fresh provisions. Near the point of  
*Marinduque* is a small island, like that at  
*Banton*, call'd *Botonillo*, or *Little Button*;  
behind which is another call'd *Simara*, inha-  
bited by civiliz'd Indians, as *Banton* is. As we  
sail'd east, we saw at a great distance on the  
right the islands of *Romblon*, *Tablas*, and  
*Sibuyan*, all inhabited; for all the way from  
*Manila* to the *Embocadereo*, or mouth of the  
strait, is a labyrinth of islands, 80 leagues  
in length, and very dangerous. Wednesday  
18th, we were becalm'd; but Thursday  
19th, had a little wind that carry'd us as  
far as the island of *Sibuyan*. Friday 20th,  
it freshned, and about sun-set we got  
through the strait made by the islands  
of *Bonas* and *Masbate*, where there are rich  
gold mines, and the strange birds call'd  
*Tavones*, and then by *Ticao*, all of them in-  
habited by Indians not yet subdu'd, and  
very fruitful.

Having coasted along the island of *Ticao*  
all night, on Saturday 21st, in the morn-  
ing, two hours after sun-rising, we came to  
an anchor in the port of *Hyacinthus*, oppo-  
site to *Surfegon*. The *Alcade mayor*, or  
chief magistrate of *Alvay*, came aboard on  
Sunday 22d, and brought the captain a  
present of 20 hogs, 500 hens, and a great  
deal of fruit. Monday 23d, the *Chiampan*  
came from *Marinduque* loaded with re-  
freshments given them by the *Jesuits* of  
that parish, for the fathers *John Grigoyen*,  
*Antony Borgia*, and *Peter Antony Martinez*,  
who were aboard us bound for *New Spain*;  
one to stay there, the other to go to *Rome*  
for the affairs of mission.

The wind coming up very fair for us to  
put into the bay of *Ticao*, we weigh'd an-  
chor on Tuesday 24th, early, and advanc-  
ing a little with the stream, came to an an-  
chor in it. A bare-foot father of *St. Au-  
gustin*, that belong'd to that province came  
to bring us some refreshment of fruit. Go-  
ing ashore after dinner to bathe me, I was  
inform'd that the village was formerly near  
the shore, but having been burnt by the  
pilot of a ship that put in there, the *Indi-  
ans* retir'd half a league up the land into  
the middle of the wood. There are about  
thirty wooden houses cover'd with palm-  
tree leaves, and the church and dwelling of  
the missionaries is of the same sort. But these  
are the most part of the year at *Masbate*,  
because the *Indians* go away into the moun-  
tains every one to plant his *camotes*, and  
*Gavias*, and only come to that place when  
the fathers go to make their visitation.

Wednesday 25th, being *St. James's* day,  
the wind being contrary, we lay at anchor;  
because the ship stood in need of a strong  
south wind to carry it out of the strait a-

gainst the current. Thursday 26th, a mus-  
ket was made to see, if any man was a-  
board without licence, for which they pay  
twenty pieces of eight to the king. Six-  
teen persons who had none were put a shore,  
only two hundred remaining aboard. Fri-  
day 27th, five hundred *Bombones* of cane  
full of water were brought aboard, which  
the *Alcade* had caus'd to be cut by the cap-  
tain's order; they were eight spans in length,  
and as thick as a man's thigh. The same  
day a fresh gale starting up at fourth, we  
weigh'd anchor to sail, but soon dropt it  
again, the chief pilot and his two mates  
disagreeing, the first being of opinion there  
was not wind enough. Saturday 28th, it came  
about to north, and so hindred our sailing.  
It was pleasant to see the ship like a float-  
ing garden with such abundance of fruit and  
greens brought from the neighbouring parts,  
as also swine, and hens, in their *Caracoas*,  
or boats, few'd with Indian cane, which  
have a sail made of mat, triangular or py-  
ramidal, fasten'd to two poles, and long  
canes on the sides to prevent over-setting.  
Sunday 29th, the same wind continu'd;  
but at night was a dead calm, which last-  
ed Monday 30th; and on Tuesday 31st, the  
contrary north wind came up again.

Wednesday the 1st of August, some boats  
brought advice of the safe arrival of the  
galeon, the *Rosary*, from *New Spain*. It  
had cast anchor for fear of the *Embocadereo*,  
or mouth of the channel, at the port of *Pa-  
lapa*, in the island of *Samar*, and there  
landed the money to be carry'd by land to  
*Manila*. Thence some boats had tow'd  
her to the nearest coast of that island;  
where, when the galeon has taken port, it  
is unlawful to put to sea again without fresh  
orders. The same contrary wind kept us still  
Thursday 2d. Friday 3d, we sail'd with  
something of a fair wind, which soon com-  
ing about, we return'd to the port; where  
the festival of *St. Dominick* was celebrated  
Saturday 4th. Sunday 5th, the wind blew  
so hard at north, that we were forced to  
drop another anchor. The same continu-  
ing on Monday 6th, we diverted the tedi-  
ous hours with cock-fighting, there being  
abundance aboard, which was not pleasing  
to me, because we eat no other meat. Tues-  
day 7th, the *Chiampan* went for water.  
Wednesday 8th, the pilot's mate had some  
words with a passenger he carry'd over on  
his own account, who complaining that his  
table was too poor, the other struck him  
on the face, and then run after him with a  
knife. The captain desirous to enquire  
into the matter, would have me be assist-  
ing to him, but all the punishment ended in  
causing them both to stand some hours in  
the bilboes. Thursday 9th, after mid-night  
the wind blew fresh at south-east, so that  
about noon the pilot thought fit to sail, be-  
cause

GEMEL-  
L.I.  
1697.

GEMEL- cause there is no getting out at the *Emboc-*  
L.I. *cadero*, or mouth of the channel, where the  
1697. currents are always impetuous, without a  
wind that's stronger than they. The *Em-*  
*bocadero*, or freight, is eight leagues in  
length, and four or five, and in some pla-  
ces six over. 'Tis enclos'd, like the court  
or yard of a house, on the one side with  
the coast of the island of *Manila*; by the  
islands of *Borias*, *Ticao*, and *Masbate*; by

the six little islands *de los Narayos*, or of  
*Orange-trees*, which are desert; by the fruit-  
ful island of *Capul*, by the *Indians* call'd  
*Ava*; by the *Alupores*; and, lastly, by the  
west coast of *Palapa*; and on the other, by  
the island of *Maripipu*, inhabited by *Ta-*  
*laxians*, *Tagapola*, *Mongol*, *Kamanda*, and  
*Limbanquayan*, which all together render  
the passage out towards *America* very diffi-  
cult, what way soever a man would go.

## C H A P. III.

## The voyage continued to the Marian islands.

THE wind holding brisk at south-east,  
the pilots all agreed to make their  
way out of the freight, and accord-  
ingly about noon weighing the two an-  
chors, the tide being then with us, they  
hoisted sail, and before sun-set were near  
the mouth of the freight, which is made by  
cape *Malpal*, in the island of *Capul*, on the  
south of the small isle of *Kalentan*, where  
there are some flats near cape *Tiklin*, and  
the island of *Manila* on the north, two  
leagues distant from one another. 'Tis to  
be observ'd, that between *Kalentan* and  
*Tiklin* there's water enough, for a quarter  
of a league over, for the galeon to pass, but  
the pilots will not venture into such a  
freight, nor into those that lie between the  
islands of *Narajos*, and between *Capul* and  
*Samor*. As we were upon getting out, there  
fell such violent storms of rain, that toge-  
ther with the contrary current, whilst the  
moon was above the horizon, we could not,  
tho' the wind blew hard for us, advance  
one step, but rather lost ground, so that we  
were all night in great danger. I was asto-  
nish'd, and trembled, to see the sea have a  
motion like water boiling over a hot fire,  
understanding that several ships, notwith-  
standing the help of their rudder, had been  
by the violence of the current whirl'd a-  
bout, and at last wreck'd. Friday 10th,  
the tide turning for us, we got out of the  
freight before noon. First, we pass'd near  
the coast of the island of *Manila*, the moun-  
tain of *Buleflan*, where is the burning erup-  
tion of *Atani*, and the rock of *St. Bernar-*  
*din*, in 13 degrees of north latitude, leaving  
them on our left, and about sun-set we had  
cape *Espritu Santo*, or *Holy Ghost*, on our  
right; this being the most easterly point of  
the coast of *Palapa*, and the first the ga-  
leons discover coming from *New Spain*, as  
has been observ'd above. It lies in 12 de-  
grees and 30 minutes of north latitude.

Being come into the open sea, to our  
great satisfaction, our cables were coil'd be-  
tween decks, being to cast anchor no more

till we came into *New Spain*, and the boat  
was set adrift, that it might be of no hin-  
drance, because we had another, in case of  
need, as the *Spaniards* call it, in quarters,  
that is, in pieces ready to clap together.  
The south-west wind blew hard all night,  
and the sea being rough, made many sick.  
Saturday 11th, the wind continued at south-  
west, and taking an observation, we found  
our selves in the latitude of 14 degrees.  
They that come from *New Spain* to the  
islands sail continually upon the same paral-  
lel of 13 degrees; for sailing from *Acapulco*,  
which is in 17, to the 13 aforesaid, they al-  
way run in a freight line, before the wind,  
on a smooth sea (whence that is call'd the  
*Pacifick Ocean* by the *Spaniards*) as if they  
were in a canal, without any roughness of  
water; so that they come in 60, or at fur-  
thest 65, days to the *Marian* islands, and  
thence in 15 or 20 to the *Philippines*. On  
the contrary, those that go thence to *New*  
*Spain* have a very difficult voyage, for the  
sea may rather be call'd enchanted than  
boisterous; and, that they may gain ground,  
and not be drove back, as often happens,  
they are forced to run away to the north-  
ward, even to 40 or 41 degrees of latitude,  
sometimes coming in sight of *Japan*, that  
they may afterwards fall off till they meet  
with the *Signs* (being weeds the sea of *Ca-*  
*lifornia* carries some hundreds of leagues)  
and so continue their voyage with the com-  
mon winds, that are more favourable. The  
pilot propos'd to pass by the islands *de los*  
*Ladrones*, at 19 degrees and 20 minutes  
of north latitude (whereas the general me-  
thod is to pass them between 20 and 25)  
that he might from thence gain the greater  
latitude; this having of late years been  
found by experience to be the best course,  
and therefore he directed his course east-  
north-east.

Sunday 12th, the fresh gale which had  
continued all night fell, and we were be-  
calm'd; and by observation we found our  
selves in the latitude of 14 degrees and 13  
minutes.

minutes. That day the cloth the king al-  
lows the seamen, to keep 'em warm, was  
divided among 'em. *Monday* 13th, the  
calm continued, and an observation shew'd  
us to be in the latitude of 14 degrees and  
20 minutes. *Tuesday* 14th, the wind came  
up at north-west, and we fail'd east and by  
north; our latitude by observation 14 deg.  
34 min. The fairer wind continuing, we  
steer'd north-east on *Wednesday* 15th, and  
found the latitude of 14 deg. and 45 min.  
*Thursday* 16th, we were becalm'd, but the  
current carried us some way, so that we  
found 14 deg 53 min. latitude. *Friday* 15th,  
a small gale turn'd about all the points of  
the compass, and we found our selves in the  
same latitude. *Saturday* 18th, we stood east-  
north-east, with little wind at north-north-  
west, and the latitude was 15 deg. 1 min.  
The allowance of water was cut shorter, be-  
cause there was but little, and we had far to  
sail. At night the wind came up west-  
north-west, which made us lie east; and so  
we held on all *Sunday* 19th, in the latitude  
of 15 deg. 24 min. as also *Monday* 20th, in  
15 deg. 34 min. At night a violent storm  
blew, which kept us all awake, and beat  
us very heavily all *Tuesday* 21st. That day  
a little rain fell, and every one strove gree-  
dily to gather the water. We found 16 deg.  
16 min. latitude, and the wind blew at  
west-south-west, which held all *Wednesday*  
22d, and our coast being east and by north,  
found 16 deg. 26 min. latitude. *Thursday*  
23d, we fail'd east with a north-west wind,  
and found 16 deg. 44 min. latitude. *Fri-*  
*day* 24th, the wind was all north, so that  
we stood east and by north. The latitude  
16 deg. 46 min. *Saturday* 25th, the wind  
was south-west, and we stood north-east and  
by east. *Sunday* 26th, the wind at west-  
south-west, but we alter'd our course, the  
latitude 17 deg. 1 min. The same wind  
and course continued *Monday* 27th, latitude  
17 deg. 15 min. but on *Tuesday* 28th, we  
found 17 deg. 18 min. tho' we had been  
becalm'd. *Wednesday* 29th, the wind at  
south, but we made little way, and found  
17 deg. 34 min. latitude. *Thursday* 30th,  
the wind east-north-east, we stood north.  
No observation could be taken. *Friday*  
31st, the wind came about from west-south-  
west to west-north-west, and still no obser-  
vation to be taken. About sun-set there  
fell a great rain, and all the thirty sailors  
went out naked to gather the water, so all  
the empty vessels were soon fill'd. A great  
storm continued all night, without taking  
any more water for want of stowage; so  
that there being plenty, all the men dress'd  
their rice.

*Saturday* the 1st of *September* we stood  
east and by north, the wind at south-west,

the latitude 18 deg. 50 min. *Sunday* 2d, GEMEL-  
LI.  
1697. before day the wind came about, and blew  
hard at east, so that there was no faying  
masts, nor taking an observation; and the  
pilots were oblig'd to lower their top-masts  
for fear they should give way, and hinder  
our voyage, as had happen'd other times  
for want of masts. We all watch'd day  
and night, the danger was so great; for the  
waves broke upon the galeon, and beat ter-  
ribly upon its sides. We lay under a main-  
fail reef'd; and the image of *S. Francis*  
*Xaverius* being expos'd, the captain vow'd  
to make an offering to the value of the fail,  
which was worth two hundred pieces of  
eight, devoutly attributing to his interces-  
sion the faving of the fail, and calming of  
the sea. Three hours before day the wind  
came about fair.

*Monday* 3d, the wind coming to north-  
west, we held on our course east-north-east,  
and hoisted our top-masts again. The same  
day the first *Cacborreta* (a sort of fish the  
*Spaniards* call by that name) being taken,  
'twas expos'd to sale to the highest bidder,  
according to the custom spoken of else-  
where. The captain bid up to sixty pieces  
of eight, to make an offering to the blessed  
virgin of the conception; but four sailors  
bid five pieces more, and carried the fish.  
Afterwards about twenty *Cacborretas* and  
*Bonitos* were taken; these are fishes full of  
blood, somewhat like mackrel. The storm  
blew again at night, with rain, so that the  
sailors could not be got upon deck without  
beating, the e fell such a violent shower.  
This weather hinder'd our taking any ob-  
servation the next day, being *Tuesday* 4th,  
but we held on our course with that wind.  
*Wednesday* 5th, the wind first at south-west,  
and then at south-south-west, the latitude  
19 deg. 33 min. About break of day,  
*Thursday* 6th, we discover'd four of the  
*Marian* islands, but the wind would not  
permit the pilot to pass them by in 19 deg.  
20 min. latitude, as he had design'd. When  
we advanc'd farther, we saw at a distance  
towards the south, the biggest of them,  
which is exactly shaped like a long saddle.  
The second bearing upon the same point,  
was a steep, round, burning mountain, in  
the sea-charts call'd *Griga*, sending out  
smoak from the top. They told me, 'twas  
three leagues in compass, and was inhabited  
at the foot of the hill on the south side; to  
which the master's mate of the galeon ad-  
ded, that as he pass'd by at another time,  
a great many of those inhabitants came out  
in boats, to bring him fish, coconos, *buya*,  
and excellent melons; but, that they never  
after came to meet the galeons, because an  
extravagant passenger had struck one of  
their men.

...gale which had  
and we were be-  
on we found our

## CHAP. IV.

## Of the discovery and conquest of the Marian islands.

Marian  
islands, or  
de los La-  
drones.

THESE islands were formerly call'd *de las Velas*; and afterwards, by the *Spaniards*, *de los Ladrones*, or of *Thieves*, because they sometimes putting in there as they went and came between *New Spain* and the *Philippine* islands, the inhabitants stole all they could, and then fled to the mountains. *Michael Lopez de Legaspi* took possession of them for king *Philip* the 2d, in *January* 1565, when he was going with four ships and a frigate to conquer the *Philippines*; but this possession was only in words, for there was no garrison placed there, nor fort built, nor were there any missionaries sent to convert the inhabitants to our holy faith; perhaps because it was thought impracticable to talk of religion to men who shunn'd all manner of communication with the *Spaniards*, and fled to their thickest woods. Afterwards the fathers of the society going to, and coming from, the *Philippines* on their missions, out of their religious zeal, seeing those wretched people forsaken, and plung'd in the darkness of idolatry, they propos'd to the queen-mother, then regent during her son's minority, the cultivating that vineyard, grown wild under paganism: persuading her that the seed of the gospel might be sow'd there to good purpose, if a mission of their order were founded. The queen, out of her wonted piety, granted their request; whereupon the governor of *Manila*, having receiv'd orders from court, set out a convenient number of ships and men for the conquest of the islands, and with them went as many fathers as were thought necessary. The *Spaniards* soon made themselves masters of the island *Iguana*, in 13 deg. of north latitude, as also of *Sarpanas* and then continuing the conquest without any great difficulty, subdued them all from 13 to 20 deg. of latitude, where the burning mountain is.

Islands  
conquer'd.

Missioners  
unsuccess-  
ful.

The missioners had no such success, for venturing to go alone about the island preaching, they were ill treated; particularly *F. Morales* was hurt with a javelin on the leg, in a place near the burning mountain. In this same place *F. S. Victor* receiv'd the crown of martyrdom twenty-nine years ago, for having baptiz'd a young girl without her father's consent; and they reckon ten missioners in all were put to death. For this reason the fathers are retir'd into the islands *Iguana* and *Sarpana*, under the protection of the *Spanish* garrisons.

During one hundred seventy-seven years the *Spaniards* have continued this voyage;

passing between several islands, they have found this is a continued row of 'em from north to south; that is, from the line, where it begins, opposite to *New Guinea*, almost up to *Japan*, in 36 deg. of north latitude. The names given to all the islands discovered in this space, are as follow, *Iguana* in 13 deg. *Sarpana* in 14, *Buenavista* in 15, *Saspara* in 15 deg. 40 min. *Anatan* in 17 deg. 20 min. *Sarigan* in 17 deg. 25 min. *Guagan* in 18. *Amaguan* in 18 deg. 18 min. *Pagon* in 18 deg. 4 min. The burning mountain of *Griga* in 19 deg. 33 min. *Tinay* and *Mauga* in 20 deg. 45 min. *Urrac* in 20 deg. 55 min. The other three burning mountains, the first in 23 deg. 30 min. the second in 24, and the third in 25 deg. The island of *Patias* is in 25 deg. 30 min. *la Desconocida* in 25 deg. 50 min. *Malabrigo* in 27 deg. 40 min. *Guadalupe* in 28 deg. 10 min. The three islands of *Tecla*, discover'd the 23d of *December* 1634, by the galcon *S. Joseph*, between 34 and 36 deg. There are other islands from 13 degrees of latitude, towards the line and *New Guinea*, not yet known.

There's another chain of islands beginning at the line, three hundred leagues from *Callao* in *Peru*, and running westward, the end whereof is not yet known; those that are best known are not inhabited, and have no beasts in them, but only birds, that are kill'd with cudgels, being never frighted by man, as I was told by some that had been there. The pirates that go thro' the streights of *Magellan* into the south sea repair to these islands to wash and tallow. They are call'd *de los Galapagos*, because of the great quantity of those creatures found there, which are very like tortoises, or rather a species of them.

The chief of the *Marian* islands is *Iguana*, *Isaua* and therefore a strong castle is built on it, and guarded by eighty or ninety men. The second is *Sarpana*, in which there's also a garrison, but the governor lives in *Umatta*. They are both flat, so that the ships can come no nearer than within three leagues of 'em. In *Agana* there are two colleges, the one of children, the other of *Indian* maids, instructed and govern'd by twelve fathers of the society, and maintain'd by the king, with an allowance of three thousand pieces of eight a year, besides his bounty for maintenance of the fathers. His majesty generously spends thirty-four thousand pieces of eight a year to keep these islands, the governor's

nor's salary being three thousand pieces of eight, and the rest for a major, an hundred soldiers, the *Jesuits* and colleges aforementioned. All this is sent from *New Spain* to *Manila*, with cloth for the soldiers. There is also a small vessel kept to carry all necessities thither. The houses of the fathers of the society are made of mud walls, because

the islands furnish no other materials. Those of the *Indians* are huts cover'd with boards, or palm-tree leaves like caves. The island is ten leagues in compass, and is six from *Sarpana*. This is not so large, nor have the *Jesuits* any house in it, but repair thither as there is occasion. There is a small garrison to curb those barbarous people.

## CHAP. V.

## Of the people, religion, climate and wonderful boats of the Marian islands.

THE inhabitants of the *Marian* islands are of a giantlike stature, corpulent, and very strong; and will sometimes clap 500 weight on their backs as if it were nothing. They are great swimmers, and dive so easily that they will take fish. Before the coming of the *Spaniards* they liv'd under a chief, naked, wandering about the mountains. They knew not what fire was, or the use of iron; but did eat raw fish, sometimes rotten, coconuts, and roots, drinking fair water. There never was, nor is there at present, any selling among them, but only exchange; and should the *Spaniards* carry never so many pieces of eight, no man would give them a coconut or a hen, and they might starve, did they not give stuff, cloth, or other things those people want in exchange.

No token of any religion has been hitherto found in any of the islands discover'd, as several missionaries told me, who had been long there; only an extraordinary veneration for their ancestors, not out of love, but fear, keeping their skulls in their houses, and calling upon them in time of need; by which it appears they have some true notion of the immortality of the soul, and that there is some place for them to reside in, from whence they can do good, or harm. Their language is different from that of the *Philippines*. Their weapon is a spear pointed with the bone of a man's leg, or a sharp stone.

Tho' in these islands the trees are not so large and thick as in the *Philippines*, yet the soil is proper to produce all things necessary for man's sustenance. Formerly there was nothing but the fruit of the country, and some hens; but afterwards the *Jesuits* and soldiers residing there, brought over rice, herbs, and other things from the *Philippine* islands; and as for beasts, horses, cows, and swine, they have increas'd considerably in the mountains. There were not so much as rats, but the ships have furnish'd them. No venomous creature at all breed there.

The most wonderful and peculiar fruit of these islands is, the *Rima*, which serves

the natives instead of bread, and is very nourishing. The plant is thick, and full of leaves; the fruit as big as a man's head, of a date colour, but prickly like the *Giacca* of *God*; and in the middle is a kernel, like a white nut. Boil'd or roasted, it serves for bread, and keeps four or six months. The taste is like an *Indian* fig, or plantain. Besides the mountains abound in cocoa-trees.

The *Ducdu* is a tree like the *Rima*; and *Ducdu* the fruit, which is green without, is like a long pear. The inside pulp is white and soft, sticking to about 15 kernels which roasted, taste like chestnuts, as do those of the *Giacca*. For common food, there are abundance of roots, as *Ubis*, *Gavvas*, *Gammotes* and others. The water is very good. The air is better and more temperate than that of *Manila*, tho' that island, be upon the same parallel with *Iguana* and *Sarpana*.

The little boats of these islands are very strange, as well for their make, as swiftness. They are made of two crook'd bodies of trees hollow'd, and sow'd together with *Indian* cane. They are about five or six yards long, and because the breadth of them is not above four spans, and they would easily overset, therefore they join to the sides pieces of solid timber, which poize them; and as for passengers, the boat being scarce able to contain three *Indian* sailors, they therefore lay boards across in the middle, hanging over the water on both sides, where those that will be carry'd from place to place, sit. Of the three sailors aforesaid, one is always in the middle to lade out the water, which certainly comes in over the sides, and at the seam; the other two keep one at head, and one at stern, to move and steer the boat. The sail is like those we call *latin* sails, that is, triangular, made of mat, and as long as the boat, which being therefore easy to overset when the wind is alter'd, they keep out of it as much as they can. No sort of boat whatsoever, can come near them for swiftness, for they run ten or twelve *Italian* miles an hour. When they are to return from any place, they remove the sail without turning the boat about,

GEMEL-bout, so that which was the stern becomes  
 11. the head, and he that was in the prow, is  
 1697. steerfman. If any thing is to be mended in  
 the boat, the goods and passengers are fet  
 upon the fail; and the boat is presently  
 righted, and turn'd up if it was overfet;  
 things so wonderful, the Spaniards them-  
 selves can scarce believe them, tho' they see  
 them every day. Tho' these be fit only for

a short cut, yet in case of urgent necessity,  
 two fet out from *Iguana*, crossing a sea of  
 900 Italian miles, to go to the *Philippine*  
 islands; but one of them was cast away.  
 That the reader may the better comprehend  
 the manner of them, I have here added the  
 cut of one.

See cut, Number IV. Page 438.

## CHAP. VI.

*The author's tedious and dreadful voyage to the port of Acapulco.*

**F**riday the 7th, the wind being east, we  
 flood N. N. E. without taking any ob-  
 servation. Saturday 8th, the wind at S. E.  
 flood E. N. E. and found 21 deg. of lat.  
 Sunday 9th, the wind S. S. E. flood N. E.  
 the lat. 21 deg. 40. min. Monday 10th, the  
 same wind and course continuing, lat. 20 deg.  
 The sky appear'd of a violet colour, with  
 green clouds, which I, and the fathers of  
 the society look'd upon as a prodigy, hav-  
 ing never seen the like before. The pilot  
 began his devotions for obtaining a good  
 voyage, and at night there was dancing,  
 and such sports as the ship could afford.  
 Tuesday 11th, we were becalm'd; that lat.  
 22 deg. 10 min. Wednesday 12th, the  
 wind at E. S. E. we flood N. E. the lat.  
 22 deg. 37 min. Here it is fit to acquaint  
 the reader, that during this long voyage,  
 there is a strange variation of the needle ob-  
 serv'd; for which, neither pilots nor mathe-  
 maticians have assign'd any reason in a hun-  
 dred and eighty years, that voyage has been  
 us'd. It begins at cape St. Bernardin, be-  
 tween twelve and thirteen degrees of lati-  
 tude, insensibly increasing for about half the  
 way, to eighteen or twenty deg. for above a  
 thousand leagues. There it begins to lessen,  
 till they come to cape Mendocino, where it  
 is observ'd to be two degrees. Now this  
 variation in some places being N. E. in o-  
 thers N. W. and in some places more, in  
 others less, it is therefore the more unac-  
 countable. There is no pretending it is  
 caus'd by the loadstones, because the islands  
 are at a vast distance, and perhaps a thou-  
 sand leagues. The pilots perceive this va-  
 riation when the sun is setting, for marking  
 the true west point, they then see whether  
 the north and other two cardinal points an-  
 swer.

Thursday 13th, the wind being S. E. we  
 flood N. E. the lat. 23 deg. 30 min. so that  
 we were got out of the torrid, into the tem-  
 perate zone. That night it blew a great  
 storm, and Friday 14th, we flood N. the  
 wind E. N. E. the lat. 24 deg. 12 min.  
 Saturday 14th, the wind at E. N. E. we  
 still run due N. Towards noon, it blew so

hard that the pilot was forced to lie by,  
 backing the main-fail, and three hours be-  
 fore night, the wind came more to N. E.  
 Such abundance of *Cachorretas* were taken all  
 the day, that the seamen grew weary of  
 them; and would give them to any body  
 for asking. They greedily swallow'd the  
 hook, being deceiv'd by a flying fish, made  
 of rags, which, as the ship run under fail,  
 could scarce be distinguish'd from the true,  
 as we shall observe hereafter. Sunday 16th,  
 the wind being at S. E. we flood N. E. by  
 E. the lat. 25 deg. 5 min. Monday  
 17th, the wind, S. S. W. run E. N. E.  
 Tuesday 18th, lay the same course, tho' the  
 wind was S. W. No observation could be  
 taken either day. Four sharks were catch'd,  
 and opening one of them, there were seven  
 small ones found alive in its belly. This  
 caus'd an argument or dispute between the  
*Jesuits*, the *Dominicans*, and the *Augusti-*  
*an*, to decide whether this fish brought  
 forth young or not. Some foolishly said,  
 the old one had swallow'd them to save their  
 lives by vomiting them up again, and that  
 they came from eggs laid and then kept in  
 the opening under their jaws, as is said of  
 other fishes, and particularly the trout. But  
 the most receiv'd and likeliest opinion is this,  
 that all fish bring forth their young hatch'd  
 out of the egg, or form'd out of the  
 spawn; for several persons well vers'd in  
 sea affairs have told me, that there have  
 been eggs found in sharks, and young  
 ones at the same time. I give it here the  
 name of eggs, because the Italian word *Uova*  
 in the author, signifies either eggs or spawn,  
 and as some fishes spawn, others lay eggs, as  
 do the *tortoise*, *crocodiles*, and *sharks* here  
 mention'd. To this purpose John Zaccaria  
 a Biscainer, who had follow'd the whale  
 fishing, several years in Europe, said he  
 had often found young whales in the belly  
 of the old. That same day there fell much  
 rain, and the sailors went out naked to  
 catch the water, so that they fill'd all the  
 empty vessels, and therefore instead of  
 shortning the men's allowance of water af-  
 ter two months and a half sail, it was in-  
 creas'd.

Wed-

Wed-

Wednesday 19th, the wind at E. we stood N. N. E. the lat. 25 deg. 50 min. we had some diversion with sharks that were taken. One great one was thrown into the sea again with a board tied to his tail, none of the passengers daring to eat any more of them, and it was pleasant to see him swim about without being able to dive down. Two others were ty'd together by the tails, one of them being first blinded, and then being cast into the sea, the blind one oppos'd the other that would have drawn him down, thinking himself taken. Thursday 20th, we were becalm'd till noon, at which time a little wind blew at S. E. and we stood E. N. E. The lat. 26 deg. Friday 21st, the wind at S. W. we lay the same course, and making much way, caught abundance of *Cacborretas*, with the same bate, of a flying fish made of rags, for those fishes running to catch it, were hung in the hook hid under it. That night the pilots two mates began their nine days devotion with abundance of lights, and gave sweetmeats to all the company; and at night there was dancing, and acting of parts made extempore. Saturday 22d, the wind at S. we stood N. E. and by E. the lat. 27. deg. Sunday 23d, held the same course, the wind at S. E. the lat. 27 deg. 30 min. Monday stood as before, lat 28 deg. 12 min. Tuesday 25th, the wind blowing fresh at S. S. E. we steer'd E. N. E. the lat. 29 deg 3 min. That night we were watchful, to avoid two small rocks in the lat. of 30 deg. Wednesday 26th, the wind at S. we stood N. E. to get a greater lat. which we found to be 29 deg. 58 min. Thursday 27th, a great shower fell, and the wind blowing at E. made us run N. and by E. the lat. 30 deg. 30 min. Friday 28th, stood N. E. the lat. 30 deg. 49 min. the needle varying a point N. W. Saturday 29th, the feast of *S. Michael* was kept, that being our captain's name, extraordinary allowance was given, and a play acted. The wind blew at S. E. and we stood at N. E. and by E. the lat. 31 deg. 58 min. Sunday 30th, the lat. was 31 deg. 58. min. so that we thought our selves about th. clat. of an imaginary island, reputed to be rich in gold, and placed in the sea charts, in 32 deg. wanting some few min. whereas it is certain no body ever saw any such island. Till now we sail'd N. E. and by E. the wind being S. E. then follow'd a calm till mid-night, after which the wind came up at S. S. E. and we stood N. E. That night the master began his nine days devotion, treating the company, and dancing.

Monday the 1st of October, the wind continuing at S. S. E. we steer'd N. E. and by N. the lat. 32 deg. 28 min. Afterwards the wind came to S. E. (abundance

VOL. IV.

of *Cacborretas* and *Albacoras* being taken, GEMBL. LI. 1697. by reason the ship made such swift way) and at night blew so hard at S. that the pilot was forced to lower his top-sails and main yard. A great storm blowing on Tuesday 2d, at S. and the sea beating hard upon us, we were forced to lie by the fore-sail back'd, and the waves beat so furiously on the rudder, that the whiptaff broke; the lat. 23 deg. 20 min. The wind came about to N. W. but the storm nothing abated; but rather increasing, the ship was toss'd upon vast mountains of water, and then again seem'd to sink to the abyss, the waves breaking over it. No fire could be lighted, and so all eat cold meat, and there was no chocolate to be made [the author was very dainty, to expect chocolate at all times] and there was no standing or sitting in a place, but we were toss'd from side to side. About midnight I had like to be knock'd in the head, by two linestocks of the guns falling upon my bed. Wednesday 3d, the same wind continuing, the storm was nothing abated; we steer'd N. E. and by E. All this time we had seen sea fowls, but this day two ducks flew by us. Besides, a sailor catch'd a little bird, like a canary bird, which being carry'd away by the wind, found no place to stay itself, but the rigging. The captain endeavour'd to keep it in a cage, but being quite spent with hunger and weariness, it dy'd the same day, and there was sand found in its belly. This little creature set the pilot, his mate, and the passengers upon asking whence it could come; and they concluded it came from *Rica de Plata*, an island 30 leagues distant southward, being carry'd away by the wind; the lat. was 34 deg. 7 min. The pilots suppose the islands, *Rica de Oro* and *Rica Plata*, with others about them, to be the islands of *Salomon*; but I am of opinion these are imaginary islands, because as long as this voyage has been used they have never been seen. The situation and latitude of the islands of *Salomon* is unknown; nor could they ever be found in so many years as they have been search'd after by the king's order. A galeon sailing from *Manila* for *New Spain*, was drove by tempest upon an island. The storm having removed and thrown away all the earth, about the hearth or furnace in the cook-room, they took some from the island to put it in the place of it. When the galeon came to *Acapulco*, this earth being remov'd, they found under it a mass of gold, which the violent heat of the fire had melted and separated from the earth. The commander admiring at this unexpected accident, acquainted the viceroy of *Mexico* with it, and he the king, who order'd a Squadron to be fitted out to find these islands,

GEMBL-lands, the pilot having taking their latitude. In short, the *Adelantado D. Alvaro* 1697. *de Mendoza* sail'd from *Callao*, the port of *Lima*, in the year 1596, with some ships to find out these islands of *Salomon*, whereof that above-mention'd was suppos'd to be one. After a long and tedious voyage he lighted upon an island of *Blacks* of *New Guinea*, near the line, on the south side of it, where he, and many of his men dy'd; and his wife the lady *Elizabeth Barreto* return'd with only one ship to *Manila*, the rest being lost in the vain search after these rich islands. See more of this particular in the fragment of the islands of *Salomon*.

*D. Antony de Medina*, about 30 years since, offer'd the king to go upon this discovery, relying on the great experience he had learnt on those seas. Orders being therefore sent to the viceroy of *Mexico*, and governor of *Manila*, to send him commander of the galeon that was to return from *Acapulco* to the *Philippine* islands, the viceroy gave him that post; but the new governor of *Manila*, who was aboard the galeon, when they were far enough from *New Spain*, depriv'd him of the command, and put into it him that came from *Manila*. *Medina* highly resenting this affront, as soon as he came to the islands, stole away in a small boat to *China*, in order to go over from thence to *Madrid*, to make his complaint to the king; but there being no news ever heard of him, it is suppos'd he was kill'd by pirates.

*Thursday* 4th, the wind coming about to north, and then to N. N. W. we sail'd E. for fear of running upon *Rica de Plata*, and found the lat. but 33 deg. 30 min. It was there very cold. The pilots said the current there help'd the way of the galeon. *Friday* 5th, the wind blew at east, and we sail'd north, and then N. and by E. the lat. 33 deg. 50 min. A storm rising in the night, the galeon was let run at pleasure. *Saturday* 6th, the storm increasing, the two top-masts were lower'd, and we drove with the wind. These are the usual storms observ'd to happen before and after the feast of *St. Francis*, perhaps by reason of the equinox. After noon the wind being S. E. we steer'd N. E. under a fore-sail; but the wind blowing a mighty storm again, we drove as before. *Sunday* 7th, we stood N. and by W. the wind being east, with terrible waves breaking over the poop. *Monday* 8th, the wind being south, we sail'd N. E. and by E. leaving the imaginary island of *Rica de Plata* south, in the lat. of 34 deg. 20 min. *Tuesday* 9th, the wind abating, and by degrees growing slack at S. E. we steer'd N. E. and by E. At night it blew harder. *Wednesday* 10th, sail'd E. N. E. with the same

wind; the lat. 37 deg. 34 min. *Thursday* 11th, steer'd N. E. and by E. and after noon N. E. the wind coming to E. S. E. *Friday* 12th, stood N. E. and by E. and afterwards N. N. E. the wind blowing S. E. and E. S. E. To avoid running further to northward, the pilot tack'd about to southward, the wind blowing hard at E. S. E. In this latitude we observ'd the sky was always clouded, and a small rain fell, which the *Spaniards* call *Garcova*. *Saturday* 13th, betimes we tack'd about to N. E. the same S. E. wind continuing. The cold was very sharp, but the *Indians* and *Blacks* born in hot countries were most sensible of it. *Sunday* 14th, by reason of the beating of the sea, and breaking of the waves masts could not be sail'd; at night we drove, the wind being contrary; and at mid-night sail'd east, the wind at N. N. E. But coming to N. E. on *Monday* 15th, we tack'd about to S. E. and before noon the wind coming to E. S. E. we were forc'd to tack again. The lat. upon observation 36 deg. 30 min. for we made southward. At night the wind chang'd. *Tuesday* 16th, the wind at E. S. E. we stood N. E. but it coming about to east, oblig'd us to steer N. N. E. and N. E. and by N. The lat. 37 deg. 2 min. The rain which fell all these days wet many bales and chests of silk, and other goods of *China* to the great loss of the owners.

*Wednesday* 17th, we were becalm'd, the lat. but 37 deg. At sun-set the wind came up S. S. W. which made us steer east, but the calm returning at mid-night we drove N. N. W. The same wind coming up again *Thursday* 18th, we sail'd east, which was our course; tho' to do it safely we were to keep in the lat. of 36 deg. 42 min. which is the greatest elevation ships use to take in this voyage. This they do, because if they do not place themselves enough to the northward, before they meet the *Senas*, that is, the floating weeds before-mentioned, being once to the leeward from the coast of cape *Mirido* to *California*, it will be very hard afterwards to get to the northward. So it happen'd six years before to the pink that set out for *New Spain*, after the galeon *St. Joseph* was cast away; for having run up to 35 deg. of lat. and not keeping up to that fame, it could never meet the *Senas* or weeds by reason of its being fallen to leeward; and all the *Seamen* had insensibly dy'd for want of meat and drink, had not providence provided they should put into an unknown island in the lat. of 18 deg. 20 min. which being found on *St. Sebastian's* day, had his name given it. Here they got water out of a little lake; and flesh by killing abundance of birds, which the *Spaniards* call *Bebos*, or fools (elsewhere spoken of)

4 min. *Thursday* by E. and after-  
 ming to E. S. E.

 of)

of which they carry'd salted in earthen  
 vessels. This island was small, plain, and  
 full of pleasant trees. After dinner the  
 wind came to north, and we sail'd E. and  
 by N. the lat. 36 deg. 30 min. *Friday*  
 19th, we were becalm'd, the lat. 36 deg.  
 19 min. the current driving us to south-  
 ward. The wind came up at S. W. and we  
 steer'd E. and by N. It blew hard at  
 night; and the major *Arambulo* began his  
 nine days devotion. *Saturday* 20th, held  
 the same course. A small rain quell'd the  
 wind. The lat. of 36 deg. 30 min. *Sun-*  
 day 21st, we had a troublesome calm, but  
 at length the wind came up at S. W. and  
 we steer'd E. and by N. the lat. 36 deg.  
 37 min. the needle varying a point east-  
 ward, we stood east to make the more  
 way. Tho' this variation be sometimes  
 more, and sometimes less, yet by it the  
 pilots know how far they are from land.  
 The fight of a dove rejoic'd all aboard,  
 taking it as a good omen of the success of  
 a voyage, and guessing we might see land  
 in less than a month. They thought that  
 dove might be drove by the wind from the  
 island they call of *D. Maria Laxara* (because  
 in that latitude a *Spanish* woman so call'd,  
 coming from *Manila*, cast her self into the sea)  
 where there is such abundance of them that  
 they darken the air: yet they are not land  
 doves, tho' like them in beak and feathers,  
 but of the sea, and have feet like ducks.  
 This island is in the lat. of 31 deg. *Monday*  
 22d, the wind continu'd to blow hard at  
 S. W. as it had done the night before, so  
 we steer'd E. and by N. but at night it  
 came to N. N. W. *Tuesday* 23d, before  
 day the wind settled at N. blowing so hard,  
 that the galeon made much way E. and by  
 N. the lat. 36 deg. 16 min.

There is no doubt but this voyage has  
 always been dangerous and dreadful. In  
 1575, the ship *Espritu Santo*, or the *Holy*  
*Ghost*, was cast away at *Catanduanes*, through  
 the ignorance of the pilot, who could not  
 find out the *Emboccadero*, or mouth of the  
 strait. In 1596, the contrary winds  
 drove the galeon *St. Philip* as far as *Japan*;  
 where it was taken by way of reprisal with  
 all the lading design'd for *New Spain*;  
 which gave occasion to the emperor *Tayco-*  
*fama*, then reigning, to persecute the christi-  
 ans, wherein he proceeded so far as to put  
 to death *F. Peter*, a *Recolet*, who went thi-  
 ther from *Manila* with the character of am-  
 bassador, the better to exercise the function  
 of a missionary. In 1602, two other gale-  
 ons were cast away, and others after that.  
 Nor is the difficulty and danger any less at  
 present; though the voyage has been us'd  
 almost two ages; for many galeons are  
 lost; and others having spent their masts,  
 or drove by contrary winds return, when

they are half way over, after losing many *GEMEL-*  
 men at sea, and the best but ill condition'd,  
 as happen'd to the galeon *Santo Christo* not  
 long since.

The wind continu'd to blow hard at  
 north all night, and *Wednesday* 24th, and  
 put us on E. and by N. Abundance of  
 pigeons were seen about the ship. The cap-  
 tain because of the sharpness of the wea-  
 ther caus'd some wine of palm-tree to be  
 distributed among the sailors, to warm their  
 stomachs. The lat. 35 deg. 45 min. The  
 pump was play'd eight or ten times in 24  
 hours, the ship made so much water. The  
 wind from north came to N. N. E. which  
 oblig'd the pilot to back the main-sail,  
 keeping her head E. S. E. that she might  
 not fall away to the southward. *Thursday*  
 25th, we continu'd the same method lying  
 sometimes one way, and sometimes another,  
 to rack the galeon the less; and found  
 the lat. but 35 deg. 10 min. The wind  
 blowing harder at night, the two top-masts  
 were struck. A great shower of rain laid  
 the wind, and calm'd the sea; yet we lay  
 by most part of the day, the rain continu-  
 ing with thunder and lightning. These  
 were look'd upon as tokens of our being  
 near the continent, or at least some island;  
 some being of opinion that thunder and  
 lightning could not be produced, but from  
 the fiery exhalations of the earth; and not  
 from vapours rising out of the water; as if  
 in the air over the water, there might not  
 be much nitre, sulphur, and the like, to  
 occasion thunder and lightning. At night  
 we steer'd N. and by E. the wind at E.  
 and E. N. E. Three hours in the stormy  
 night, that light the sailors call *Santelmo*,  
 appear'd on the round top, and was salu-  
 ted by all the passengers as the fore-runner  
 of fair weather. *Saturday* 27th, we steer'd  
 first N. N. E. and then E. and by N. the  
 wind at E. and E. S. E. with much rain.  
*Sunday* 28th, the thunder and rain conti-  
 nu'd, and the two top-masts being hoisted  
 again, we steer'd first E. and by N. and  
 then E. N. E. and lastly, N. E. the wind  
 being at S. S. E. S. E. and E. S. E. the  
 lat. 36 deg. 10 min. The wind grew more  
 favourable at night, and so we sail'd E. N.  
 E. to gain the latitude we had lost against  
 our wills. The sky clearing on *Monday*  
 29th, the sun shin'd out bright to cheer  
 the hearts of the passengers, who had been  
 so many days buried under dark fogs, and  
 rains, the wind coming to S. W. we steer'd  
 E. and by N.

The poor people stow'd in the cabbins Hardships  
 of the galeon bound towards the Land of abroad.  
*Promise of New Spain*, endure no less hard-  
 ships than the children of *Israel* did, when  
 they went from *Egypt* towards *Palestine*.  
 There is hunger, thirst, sickness, cold, con-  
 tinual

GEMEL-tinual watching, and other sufferings; besides the terrible shocks from side to side, 1697. caus'd by the furious beating of the waves. I may further say they endure all the plagues God sent upon *Pharaoh* to soften his hard heart; for if he was infected with leprosy, the galeon is never clear of an universal raging itch, as an addition to all other miseries. If the air then was fill'd with gnats; the ship swarms with little vermine, the *Spaniards* call *Gorgojos*, bred in the biscuit; so swift that they in a short time not only run over cabbins, beds, and the very dishes the men eat on, but insensibly fasten upon the body. Instead of the locusts, there are several other sorts of vermin of sundry colours, that suck the blood. Abundance of flies fall into the dishes of broth, in which there also swim worms of several sorts. In short, if *Moses* miraculously converted his rod into a serpent; aboard the galeon a piece of flesh, without any miracle, is converted into wood, and in the shape of a serpent. I had a good share in the misfortunes; for the boat-swain, with whom I had agreed for my diet, as he had fowls at his table the first days, so when we were out of sea he made me fast after the *Armenian* manner, having banish'd from his table all wine, oil and vinegar; dressing his fish with fair water and salt. Upon flesh days he gave me *Tassajos Fritos*, that is, steaks of beef, or buffalo, dry'd in the sun, or wind, which are so hard that it is impossible to eat them, without they are first well beaten, like stockfish; nor is there any digesting them without the help of a purge. At dinner another piece of that same sticky flesh was boil'd, without any other sauce but its own hardness, and fair water. At last he depriv'd me of the satisfaction of gnawing a good biscuit, because he would spend no more of his own, but laid the king's allowance on the table; in every mouthful whereof there went down abundance of maggots, and *Gorgojos* chew'd and bruis'd. On fish days the common diet was old rank fish boil'd in fair water and salt; at noon we had *Mongos*, something like kidney beans, in which there were so many maggots, that they swam at top of the broth, and the quantity was so great, that besides the loathing they caus'd, I doubted whether the dinner was fish or flesh. This bitter fare was sweeten'd after dinner with a little water and sugar; yet the allowance was but a small cocoa shell full, which rather increas'd than quench'd drought. Providence reliev'd us for a month with the sharks and *Cacborretas* the seamen caught, which, either boil'd or broil'd, were some comfort. Yet he is to be pity'd who has another at his table; for the tediousness of the voyage is the cause of

all these hardships. 'Tis certain, they that take this upon them, lay out thousands of pieces of eight, in making the necessary provision of flesh, fowl, fish, biscuit, rice, sweetmeats, chocolate, and other things; and the quantity is so great, that during the whole voyage, they never fail of sweetmeats at table, chocolate twice a day, of which last the sailors and grummetts make as great a consumption, as the richest. Yet at last the tediousness of the voyage makes an end of all; and the more, because in a short time all the provisions grew naught, except the sweetmeats and chocolate, which are the only comfort of passengers. Abundance of poor sailors fell sick, being expos'd to the continual rains, cold, and other hardships of the season; yet they were not allow'd to taste of the good biscuit, rice, fowls, *Spanish* bread, and sweetmeats. put into the custody of the master by the king's order, to be distributed among the sick; for the honest master spent all at his own table. Notwithstanding the dreadful sufferings in this prodigious voyage, yet the desire of gain prevails with many to venture through it, four, six, and some ten times. The very sailors, though they forswear the voyage when out at sea; yet when they come to *Acapulco*, for the lure of two hundred seventy five pieces of eight, the king allows them for the return, never remember past sufferings; like women after their labour. The whole pay is three hundred and fifty pieces of eight; but they have only seventy five paid them at *Cavite*, when they are bound for *America*; for if they had half, very few would return to the *Philippine* islands for the rest. The merchants, there is no doubt, get by this voyage, an hundred and fifty, or two hundred *per cent.* and factors have nine in the hundred, which in two or three hundred thousand pieces of eight amounts to money. And indeed it is a great satisfaction to return home in less than a year with seventeen or eighteen thousand pieces of eight clear gains, besides a man's own venture; a sum that may make a man ease as long as he lives. Captain *Emanuel Arguelles* told me, that he without having any employment, should clear to himself that voyage by commissions twenty five or thirty thousand pieces of eight. It was reckon'd the pilot would make twenty thousand pieces of eight; his mates nine thousand each. The captain of the galeon forty thousand. The master, his mate, and boatwain, who may put aboard several bales of goods, may make themselves rich in one voyage. He that borrows money at fifty *per cent.* may get as much more, without standing to the hazard of losses. These extraordinary gains induce

induce many to expose themselves to so many dangers and miseries. For my own part, these or greater hopes shall not prevail with me to undertake the voyage again, which is enough to destroy a man, or make him unfit for any thing as long as he lives. I have made this digression to shew the reader through what thorns men must venture to come at the so much coveted roses of riches. The *Spaniards*, and other geographers, have given this the name of the *Pacific Sea*, as may be seen in the maps; but it does not suite with its tempestuous and dreadful motion, for which it ought rather to be call'd the *Reflux*. But the truth is, the *Spaniards* gave it this fine name in failing from *Acapulco* to the *Philippine* islands, which is perform'd very easily in three months, without any boisterous motion in the sea, and always before the wind, as was said before.

*Tuesday* 30th, the wind blowing hard at S. W. we steer'd E. and by N. but afterwards the wind came about to the west stormy, the lat. 36 deg. 40 min. and we steer'd E. N. E. it being requisite to get more to the northward. That night the waves beat so violently that ten men were fain to stand to the helm. *Wednesday* 31st, the day broke with the wind at N. W. which made us steer E. and by N. A piece of wood being seen on the sea about eight spans long, and wrought, it was look'd upon as a token of being near land; but it might as well be the sign of a wreck. No observation was taken.

The month of *October* ending with so many hardships, the sky appear'd serene, and the sea calm on *Thursday* the 1st of *November*. At night the wind was N. W. and came to W. we steer'd E. N. E. the lat. 37 deg. 18 min. All the night the wind blew hard at N. W. and so continu'd *Friday* 2d, without any alteration, and we held on our course E. N. E. the lat. 37 deg. 10 min. and therefore perceiving we fell off to southward, by reason of the currents, we stood N. E. and by E. *Saturday* 3d, the wind turn'd to N. N. W. and therefore we steer'd E. N. E. We saw another piece of wood, but not wrought, which confirm'd the hopes of our being near land; notwithstanding the pilots, being deceiv'd by the currents which ran E. reckon'd themselves above an hundred leagues further off. The wind at night coming up again at N. W. we fail'd N. E. and by E. afterwards it chang'd to N. N. E. and we stood E. *Sunday* 4th, the wind being more favourable steer'd, E. N. E. the lat. 37 deg. 14 min. *Monday* 5th, wind at N. W. course N. E. and by E. lat. 39 deg. 2 min. Afterwards we stood E. and the wind coming scant at night we

VOL. IV.

run E. S. E. *Tuesday* 6th, fail'd E. and *GEMEL*. E. S. E. the wind being at N. N. E. we found we were fallen to southward, the lat. 1697. being 36 deg. 40 min. nor could it be otherwise as long as that wind continu'd. At night the wind N. N. E. fail'd E. *Wednesday* 7th, the wind coming to N. E. we stood E. S. E. the lat. 36 deg. 10 min. At night we tack'd about to N. N. W. to avoid falling off any more to southward. *Thursday* 8th, held the same course, the lat. 36 deg. 13 min. The moon was eclips'd at night, but could not be seen by reason of the clouds. *Friday* 9th, in the morning the wind N. N. E. and therefore we steer'd N. W. and by W. lat. 36 deg. 17 m. *Saturday* 10th, the same wind continu'd, lat. 36 deg. 40 min. *Sunday* 11th, the wind at east, we stood N. N. E. lat. 37 deg. 25 min. *Monday* 12th, wind E. S. E. fail'd N. E. and then E. N. E. lat. 38 deg. *Tuesday* 13th, the wind S. fail'd E. and by N. The cold began to nip, and the few provisions there were left corrupted. They were therefore us'd very sparingly, and in the best messes; they gave a dish of chocolate in the morning betimes, some other small matter two hours before noon, and the dinner late. In the evening they gave another dish of chocolate, and later some sweetmeats without any supper. The wind veer'd quite round the compass, *Wednesday* 14th, the S. W. wind put us on a great rate, but in the evening it came to west. We saw a large branch of a tree with small boughs brought by the current from the continent. No observation could be taken. *Thursday* 15th, we made good way E. and by N. the wind continuing at W. but afterwards came to N. W. the latitude by observation 39; and we stood N. E. and by E. to get more to northward, for fear the wind should come to N. E. Abundance of *Tonians*, or tunny fishes were seen about the galeon, which they say do not go far from land. After mid-night the wind came again to S. and S. E. which continu'd all *Friday* 16th, and at night chang'd to W. S. W. our course was E. N. E. No observation could be taken. At night the wind at south.

*Saturday* 17th, it blew hard at S. W. The *Indians* born at *Manila*, where they are always in a sweat, could not endure the cold of this climate. We held on our course E. N. E. but only under a fore-fail, because it blew a storm. The same weather lasted *Sunday* so furious, that there was no faying masts. The wind afterwards falling, and coming again to N. W. we held on our course E. N. E. the lat. 39 degrees 20 min. In the evening the wind came again to S. W. and lasted part of *Monday* 19th, then changing to W. but blowing hard

6 D

we

GEMEL- we would carry no more but a fore-fail and top-fail; the lat. 39 deg. 38 min. so that the pilots thinking we had no occasion to gain more to northward, we stood E. and by N. and the rather, because at night the wind came to N. W. At sun-set about fifty ducks flew over our prow, which made us conclude we were near land. *Tuesday* 20th, steer'd east, which was our proper course. That day the north wind blew the coldest we had yet felt, and it hail'd for half an hour, which I had never seen since I left *Europe*. This made the *Blacks* aboard creep into the very hen-coops; and those that got under the deck could not be got out at night to do their business, if they had beaten 'em never so much; so that they poison'd the place where they lay, and in the morning all was full of complaints of the seamen. The lat. was found to be 39 deg. 20 min. having lost 18 min. of elevation. Afterwards the head pilot and his two mates declar'd how much they had been mistaken: The first reckon'd we were ninety leagues from land, the other seventy, and the other sixty under cape *Mendocino*. The north wind continued cold, with hail, and we held our course east. *Wednesday* 21st, being the last day, within which I had laid a wager that we should see land; none being seen, I lost a pair of gold buttons with emeralds in 'em; the lat. 38 deg. 45 min. At night the wind came to west, somewhat stormy, and grew still more boisterous till four of the clock; after which we saw the light they call *Santelmo*, on the main, and fore-round-top, which was fluted by all, as a good omen. The ship roul'd much all night, and the wind coming to N. W. we sail'd E. and by N. *Thursday* 22d, we stood the same course, the wind at N. N. E. lat. 38 deg. 3 min. Finding we fell away to southward, by reason of the current, which ran S. E. we back'd our main-fail. A great storm of hail fell, and the wind blew hard in the night at north, swelling the sea, which made us beat furiously.

*Friday* 23d, the wind N. N. W. with hail and rain. The galeon lay with the sails back'd, very much to's'd; the lat. 37 min. less than the day before, the wind and current driving us to southward; so our latitude was 37 degrees 26 min. The pilot, perceiving he fell off from the land by losing latitude, stood his course N. E. and by E. the wind being N. N. W. *Saturday* 24th, in the morning the wind N. W. sail'd N. E. and at night with a gale at W. S. W. stood E. N. E. This day we saw another large piece of a tree in the sea. At night it blew a storm at W. with a rowling sea, and we saw *Santelmo* on the round a third time.

*Sunday* 25th, held the same course, but began to be out of hopes of seeing the *Senas*, or weeds, tho' we were run as many leagues as the pilots had calculated would bring us near land. A violent wind with hail beat the ship, but at the same time drove it on a great rate. The wind still rising, after noon we steer'd N. E. and by E. to discover land, or the *Senas* or weeds. At night we ran E. N. E. and E. S. E. the pilot altering his course as the wind chang'd. The storm lasted all night, the sea running so high, and beating with such fury, that twelve men could hardly manage the helm. At midnight the light *Santelmo* appear'd the fourth time above the main-mast, but the storm continued at west. *Monday* 26th, held on our course E. and E. N. E. with a boisterous sea, but made much way; the lat. 37 deg. 15 min. *Tuesday* 27th, the fury of the storm began to abate, after it had toil'd us for three days, tho' we ran before the wind, which now coming to S. W. we stood E. the lat. 37 deg. 45 min. At night there blew a storm, which oblig'd the pilot to back his main-fail, tho' the wind was fair. *Wednesday* 28th, the wind blowing furiously at S. W. we ran E. and by S. the lat. 37 deg. 20 min. For fear of being ashore, we lay by all night. *Thursday* 29th, the wind continued in the same place, but not so violent, with much rain. The wind came to N. W. and then to S. W. so we ran to E. *Friday* 30th, we held the same course, the lat. 37 deg. 16 min. but the wind at night coming to S. W. we steer'd E. and by N. with much rain.

*Saturday* the 1st of *December*, we held the same course, the wind at first being S. and afterwards S. W. That day a sailor dy'd, and was presently thrown overboard, being the first we lost, notwithstanding all our sufferings. There was no other distemper among us but a raging itch, caus'd by the salt meat. *Sunday* 2d, steer'd upon the same point, the wind at S. and afterwards at S. W. *Monday* 3d, the lat. 38 deg. we stood E. and then S. E. the wind at W. This day we saw other signs of land, which was still distant from us, tho' we made much way. It rejoic'd all aboard to see a very long weed, with a root like an onion, which they said had been pull'd up from the mouth of some river, by the violence of the sea. Hereupon the sailors (according to custom having power so to do) took the bell and carried it to the prow; and the judges they chose of their court (call'd in jest the court of *Senas*, or of *Signs*) made proclamation to try the officers of the ship. *Te Deum* was sung, and all persons congratulated one another with the sound of drums and trumpets, as if we had been in our port, whereas we were then seven hundred leagues

course, but being the *Senas*, many leagues would bring us with hail beat me drove it on till rising, after by E. to discover. At night E. the pilot al- chang'd. The sea running so much fury, that manage the helm. *Atelmo* appear'd main-mast, but Monday 26th, E. N. E. with a much way; the Tuesday 27th, the abate, after it says, tho' we ran now coming to 37 deg. 45 min. in, which oblig'd in-fail, tho' the wind 28th, the wind we ran E. and in. For fear of night. At night, I continued in the same with much rain, and then to S. W. both, we held the deg. 16 min. but to S. W. we much rain. December, we held at first being S. that day a sailor trown overboard, withstanding all no other disem- itch, caus'd by steer'd upon the land afterwards lat. 38 deg. we wind at W. s of land, which tho' we made aboard to see a like an onion, bull'd up from the violence of ors (according do) took the row; and the court (call'd in f Signs) made persons congra- bound of drums been in our seven hundred leagues

leagues from it. This unseasonable rejoicing was caus'd by that long and dreadful voyage of above three thousand leagues; which makes them think themselves in the port when they have seven hundred leagues to it. The failor who first saw the weed had a chain of gold given him by the captain, and at least fifty pieces of eight by the passengers, and others. It now appear'd that the pilots had mistaken above two hundred leagues in their accounts. That night we were becalm'd, and upon Tuesday morning, it blew gently at south, which made us stand east. Mass was sung in thanksgiving, and indeed 'twas a great mercy that the wind had for twenty days blown hard, right a-stern of us; for the pilots had not manag'd it so well, lying upon the tack between north and south, without advancing on our way. That day we saw a fish the *Spaniards* call *Lobillo*, with a head and ears like a dog, and a tail like that they paint the mermaids with; and with it another weed like a sugar-cane, with a large root. These being both signs of land, we alter'd our course from E. to S. E. and by E. and thus fell off from the land to make it more to southward, as is generally practis'd when they meet the *Senas*, or weeds. At night the S. W. blew harder. By reason of the great rain that fell, the judges put off holding their court till Wednesday the 5th, but the bad weather would not allow of it then. We steer'd E. S. E. because the wind was come to S. S. E. Abundance of *Lobillos* were seen, as also of the weeds before mention'd, call'd *Porras*, with fresh roots several spans in length. The wind coming up contrary at night, we lay by.

Thursday 6th, we steer'd S. E. and by E. the wind S. S. W. which afterwards came to W. S. W. the rain and dull weather continuing, and a boisterous sea. At night, the wind being contrary, we lay by. Friday 7th, in the morning died another sick man, who was thrown overboard. About noon we fail'd S. E. and S. E. and by E. the wind being S. S. W. A canopy being set up for the sailors court of *Senas*, or signs, after dinner the two *Oydores* or judges, and the president, took their seats, being clad after a ridiculous manner. They began with the captain of the galeon, chief pilot, under-pilot, master, mate, and other officers of the ship; and after them proceeded to the trial of the passengers. The clerk read every man's indictment, and then the judges pass'd sentence of death, which was immediately bought off with money, chocolate, sugar, biscuit, flesh, sweetmeats, wine, and the like. The best of it was, that he who did not pay immediately, or give good security, was laid on

with a rope's end, at the least sign given GEMEL- by the president-tarpaulin. I was told, a LI. passenger was once kill'd aboard a galeon, 1697. by keel-haling him; for no words or authority can check or persuade a whole ship's crew. I did not escape being try'd, it being laid to my charge, that I eat too much of the fish they call *Cacborretas*. The sport lasted till night, and then all the fines were divided among the failors and grummetts, according to custom. The lat. this day was found to be 37 deg. 50 min.

Saturday 8th, the wind being at W. we fail'd S. E. and then the wind growing scant, we steer'd E. S. E. At night we lay by, the wind being contrary. Sunday 9th, the wind blowing very hard at S. W. we steer'd S. E. the lat. was 37 deg. 38 min. That night we held on our course S. S. E. for fear of land, because there had been seen some snakes in the sea, brought out of the rivers by the tide. Monday 10th, steer'd S. E. with the wind at W. the lat. 37 deg. 10 min. for the sails being bad, the galeon made little way. All that night we lay by; as also Tuesday 11th, the wind being contrary. Here our mizen-sail was put up, which had been taken down at the *Embocadero*, or mouth of the chanel among the Philippine islands. We did not make any way till Wednesday 12th, when we flood E. S. S. and E. and by S. to discover land. The anchors were also taken up which had some months been buried in the hold; the lat. was 37 deg. This day one of those weeds call'd *Borras* was taken up, 25 spans long, as thick as a man's arm towards the root, and as small as a finger at the other end. 'Twas hollow within, like an onion run to seed, the root, as has been said, resembling it at the smallest end: from the thick part there grew out long leaves, after the manner of sea-grass, two fingers broad, and about six spans in length, all equally long, and of a yellowish colour. Some question'd whether the thick or the thin end were the root; for, not considering the nature of weeds that grow in the water; they could not persuade themselves that the thick part, being the top of the plant, could bear up, notwithstanding they saw the shells of fishes sticking to the small end; for this plant grows on the rocks under water. Indeed 'tis the largest that ever I have seen in so many countries I have travel'd. I tasted, and found it not unfavoury; and some failors put it into vinegar to eat it. At night, instead of gaining, we lost ground, the ship's head lying west for fear of land. Thursday 13th, we again steer'd S. E. and by E. with a S. W. wind, all the anchors being ready, to make use of 'em in time of need. After noon the wind came to N. N. W. and therefore we ran that night

GEMEL. night S. E. Friday 14th, holding the same course with the same northerly wind, we discover'd to the eastward, in the lat. of 36 deg. the island of St. Catherine, twelve leagues distant from the continent, and a little beyond the bay of *Toque*. Here are five small islands, and St. Catherine's is the largest, and inhabited by savage Indians. Any man may guess what a joyful sight this was to us, after having seen nothing for so many months but sky and water, the latit. was found to be 36 deg. 4 min. Towards evening we perceiv'd the aforesaid island of St. Catherine was longish, we having sail'd along one side of it. Saturday 15th, we again saw land, steering S. E. and by S. on a calm sea, as 'tis always observ'd to be near the coast. The wind coming to N. W. blew harder, we being in the lat. of 35 deg. 11 min. This day the few cannon the ship had were taken out of the hold, to be placed on their carriages; as also the pieces to make the new boat, instead of that we turn'd adrift. A fair stiff gale continuing at night N. W. we sail'd south-east and by south, and so continued all Sunday. Every body began to take heart, with the hopes of being speedily deliver'd from so many sufferings, and particularly from stinking provisions, which began to breed diseases; the lat. upon observation was found to be 33 deg. 49 min. Monday 17th, we steer'd the same course, with the wind at west; the lat. 32 degrees 27 min. About night, one of the pilot's two mates died, when, by reason of his robust constitution, he least expected death, so that with much difficulty he was persuaded to make his confession, but a few hours before he expir'd.

Tuesday 18th, all the masses having been said for the dead man, and other rites perform'd, he was thrown into the sea, with an earthen vessel ty'd to his feet. We sail'd S. E. with a N. W. wind; the lat. 31 deg. 10 min. The same day another sailor died, the same wind continuing. Wednesday 19th, we held on the same course, and they work'd at the boat, the stillness of the sea giving way to it. This night died the second captain of the galeon, whom the Spaniards call *Capitan de mar y guerra*, the chief commander being call'd by the great name of *General*; he li'd of the disease, call'd *Berben*. Tho' there be no soldiers aboard the galeon, yet the governor of *Manila*, besides the commander in chief, call'd *General*, as I said before, appoints a major, a captain, and a royal ensign; who have these titles without any command at all. When the galeon returns to *Manila*, it carries 250 or 300 soldiers, under fifteen or sixteen captains, who

buy those commissions for the honour; but as soon as they come to *Manila*, are reform'd, as the *Neapolitans* are serv'd when they go to *Flanders* or *Milan*. There are two dangerous diseases in this voyage, more especially as they draw near the coast of *America*; one is the aforesaid *Berben*, which swells the body, and makes the patient die talking: The other is call'd the *Dutch* disease, which makes all the mouth sore, purifies the gums, and makes the teeth drop out. The best remedy against it, is going ashore. This is no other but the sea scurvy. The same wind continued Thursday 20th, and we steer'd S. E. and by E. so that by break of day we found our selves opposite to the island *Cenifar*, ten leagues distant from the continent, and coast close under it. The length of it is about eleven leagues, and the breadth four, and in some places six, but 'tis naked of trees, and uncropeled. Then we left the island of *Guadalupe* on our right hand, to westward, which the galeons generally make, because 'tis far from the continent. After saying five masses for the dead captain, he was cast into the sea: The latitude was found to be 29 degrees 9 minutes, and we steer'd S. E. and by S. Next we discover'd the island *Cerros*, 17 leagues distant from the continent, 'Tis 36 leagues in compass, and two high promontories at its extremities make it resemble a saddle. At night we alter'd our course, for fear of being foul on the island; yet we perceiv'd in the dark we were very near it, which put us into some fear, so we tack'd about to west and by north, standing almost back, Friday 21st, we found our selves opposite to the same island, and the wind blowing at north, we steer'd S. E. we found we had but 28 degrees of lat. The same wind held all night; and on Saturday 22d, in the morning, the wind at N. N. W. we sail'd S. E. the lat. 26 deg. 35 min. Sunday 23d, held the same course, with the same wind, the lat. 25 deg. 19 min. and then we steer'd S. E. and by S. Monday 24th, the wind being N. W. (which is frequent those months on that coast) we sail'd S. E. to make the land, which lies N. W. and S. E. from *Acapulco*, to cape *Mendocino*. The same day proclamation was made by beat of drum, to discover all goods that were out of the hold, for them to pay the king's duties for the galeon. Tuesday 25th, five masses were said after midnight, in honour of the nativity of our Lord. We still steer'd E. S. E. to discover land; the lat. 23 deg. 56 min. Having fired ten cannon, and settled 'em in their places, all persons had muskets given 'em, to defend themselves against enemies

mies, that are often met on the coast of California. At sun-set we discover'd land, but at a great distance, so that we held on our course at night, with the same N. W. wind. The same we did on Wednesday 26th, coasting along a high country, opposite to cape St. Luke, the current driving us on towards *Acapulco*. This day we pass'd out of the *Temperate* into the *Torrid Zone*, for upon observation, we found 23 deg. 23 min. lat. and consequently we began to feel the heat. All night the wind shifted, till it forced us to steer N. E. and after that it fell altogether. Thursday 27th, the wind being W. we steer'd S. S. E. because we discover'd a high land near on the east side, beyond cape St. Luke; the lat. 23 deg. 10 min. Friday 28th, about break of day we found our selves directly opposite to cape St. Luke, which may be call'd a bald promontory, because there is no sign of any trees on it. The lat. of it, is 22 deg. 35 min. and there is a small island close to the point.

California. In the year 1595 the galeon *St. Augustin*, which was cast away in the port de los Reyes, was sent to discover this land, as yet unknown. In 1602, the count de Monterey, who then govern'd *New Spain*, by his majesty's command sent thither *Sebastian Biscaino*, with two ships and a tender. He sail'd from the port of *Acapulco*, and having discover'd all the coast, as far as cape *Mendocino*, and the neighbouring islands, made a sea chart of the whole. This chart I saw, with the journal belonging to it, for one of the pilots mates had it; and there I read, that he had talk'd with savage Indians, in several places, and found them well temper'd, loving, and some of them inclinable to entertain friendship with the Spaniards; which made them invite the people aboard the ships to their huts, about port *Monterey*, in the lat. of 37 deg. That he found the same inclination in the inhabitants of the small islands on the coast; but that the Spaniards must be upon their guard against the Indians of the bay of *St. Quintin*, in the lat. of 32 deg. and against those who live along the shore, in the lat. of 27 deg. because they are warlike and faithless. The religious man who writes this account, says, the aforementioned port of *Monterey* has water enough; and that about it there is timber to build ships, and for other uses; that there is plenty of game on the neighbouring mountains, that is, bears, deer, and other beasts, and of wild fowl in the plain, as also of ducks in the lakes; that six leagues N. W. of the port, there is a rapid river, which has at least seven fathom water, and another like it in the lat. of 41 deg. whose current is so strong, that they could not get up it with all

their sails aboard. He also reckons the aforementioned port de los Reyes, where the galeon *St. Augustin* was lost, a good one; that of *D. Gasper* in the lat. of 38, and others that have waters enough; giving an account of their depth or shallowness. He gives other particulars, which not belonging to our journal, but to the pilots of those parts, I shall forbear to set down. I shall only observe, what I think most strange, which is, that in those same ports, there is such abundance of good fish (besides the whales out at sea) that with a hook, in a day, a good vessel might be stor'd, or almost loaded. The inhabitants of those parts use canoes, or boats, like those of the *Marian* islands, as well for pearl as for other fishing. Those that inhabit along the coast of that streight, which separates *California* from the continent, use boats made of small pieces of wood bound together, call'd by the Spaniards *Balsas*, that is, floats. They are safe on them, being excellent swimmers; nor do they value half their body being in the water, because they go naked, covering only their privities with barks of trees, and therefore are not afraid of wetting their cloths. Ashore they lye, where night overtakes them. In winter they warm the ground with fire, and putting away the coals, lie down in the hot ashes. They have several languages; and among them some are mortal enemies, on account of their savage jurisdiction. Their weapons are long spears, with the points of wood hardened at the fire; and arrows headed with flint. They eat raw fish, and exchange pearls, in which all that coast abounds, and the more because the fishery is forbid the Spaniards, and conquer'd Indians, for knives and other trifles, having no knowledge of money. The author of the aforesaid account says nothing of the religion of these people, or of the product of the earth, as things not belonging to the profession of a sailor. But we are told they are idolaters, like all the rest, and that they live upon what they kill, upon roots, herbs, and Indian figs, call'd *Pitaxavas*, or *Tunas*, whereof there is great plenty in the country. These ships spent some months in their voyage to cape *Mendocino* (lying in the lat. of 41 deg. 20 min. whole top is bare of trees, and always cover'd with snow) where many of his men dy'd, and the rest came away sick, being pierced by the violent cold. Thus they were forced to turn back from the aforesaid cape, tho' they saw another at some distance, which they call'd *Cabo Blanco*, or *White Cape*, set down in the maps, in the lat. of 43 deg. In the year 1684 the marquis de la Laguna, or of the lake, governing *New Spain*, with the general applause of all men, two other

GEMEL-ships with a tender were sent thither, with  
 L. I. several missionaries aboard, to draw those peo-  
 1697. ple out of the darkness of idolatry. They  
 kept within cape St. Luke in the lat. of 22  
 deg. and entering the freight between it  
 and the continent run up a hundred and  
 eighty two leagues to 29 deg. of lat. where  
 finding the freight but seven leagues over,  
 they turn'd back for fear of the flats and cur-  
 rents, which ran very strong in that narrow.  
 From the violence of these currents they  
 concluded that the freight has a communi-  
 cation with the north sea, and that *Californi-  
 a* is an island. But on the other side the  
 flats, the want of water, and narrowness of  
 the channel, shew there is no passage much  
 further, and that *California* is part of the  
 continent. They add, That this continent  
 borders upon *Great Tartary*; and the *Je-  
 suits* of *Peking*, *Macao*, and *Canton*, told  
 me, That whilst *F. Martin Martinez* was  
 missionary at *Peking*, a christian woman of  
*Mexico* was brought thither a slave, who  
 going to him to confession, and being ask'd  
 how she came to be a slave, said she had  
 been made a slave in her infancy in *Mexico*,  
 and that she was carry'd thence by land into  
 the *Great Tartary*, and lastly into *China*:  
 Moreover, that in so long a journey she had  
 been carry'd in a boat, but that only to  
 cross over some freight, at farthest, not above  
 two days sail over. This is suppos'd to be  
 the freight of *Ayan*; through which some  
 will say a *Dutch* ship sail'd out of the south  
 into the north sea. The ships returning an-  
 chor'd in the bay, and port of *St. Bar-  
 naby*, where having built some huts on the  
 shore, the poor *Indians* came to them ra-  
 ther to satisfy their corporal hunger, than  
 to cure the distemper of their souls. They  
 devour'd all the *Spaniards* gave them; but  
 refus'd cloaths to cover their nakedness. A-  
 board our galeon was a religious man of the  
 order of *St. John de Dios*, who had been  
 aboard one of those ships. He told me,  
 the king's design had no success, because  
 the commodore spent five days to no pur-  
 pose at the aforelaid cape, but to his own  
 benefit, exchanging trifles with those wretch-  
 es for good pearls; that the *Indians* brought  
 no other provisions, but fish, which they  
 eat raw, roots, and herbs. That before he  
 went off, the commodore, to revenge the  
 death of a grummet kill'd by those barbar-  
 ians, loaded a cannon with partridge-shot,  
 and when those wretches came to gather up  
 the scraps the *Spaniards* had left, he fir'd it  
 upon them, killing two, and wounding fe-  
 ral others. So that it is not to be questi-  
 on'd, that if any other *European* should re-  
 sort to those parts, they would be ill re-  
 ceiv'd.

We steer'd next S. E. before a small gale  
 at N. W. to cross over the freight of *Califor-*

*formia*. *Saturday* 29th, we steer'd S. E. and  
 by E. with the wind at N. W. and  
 lost sight of land; the lat. 21 deg. 32  
 min. Then we stood E. S. E. and made  
 good way, at night the wind blowing hard  
 at north. *Sunday* 30th, the wind was quite  
 laid, and afterwards blew gently at N. N.  
 E. the lat. 20 degrees 45 min. Finding  
 that the current had carry'd the ship too far  
 from land driving it to southward, we stood  
 E. S. E. with but little wind. For this  
 reason on *Monday* 31st, we did not come  
 upon the three little islands call'd *Las tres  
 Marias*, that is, the *three Maryes*, as was  
 expected, our galeon being forty leagues  
 from cape St. Luke, and twenty from cape  
*Corrientes*, which make the mouth of the  
 freight of *California*. The three aforelaid  
 islands are ten leagues from the mouth of the  
 freight bearing N. E. and S. W. from it.  
 They have good trees and water, abundance  
 of game, and salt-pits; for which reason  
 the *English* and *French* pirates, who have  
 pass'd through the freight of *Magellan* to  
 rob upon the south sea, have sometimes  
 winter'd there. We found the lat. 20 deg.  
 24 min. At night there was but little wind.

*Tuesday* the first day of *January*, and of  
 the new year 1698, we were again becalm-  
 ed, and there appear'd abundance of *La-  
 billos* about the ship turning up their tails  
 and paws like jugglers dogs. We took five  
 good tortoises, whose flesh was exactly like  
 beef; but not so savory as ours in *Europe*;  
 the lat. was 20 deg. 11 min. The calm  
 held all night. *Wednesday* 2d, putting our  
*Parao*, or little boat, into the water, we took  
 seven tortoises that lay floating asleep; and  
 some sharks and dorees were struck with a  
 harping iron; the lat. 20 deg. 5 min.  
 About evening a small gale blew at N. W.  
 and at night drew to northward. Thus  
 holding on our course on *Thursday* 3d, we  
 discover'd the land of *New Spain*, a great  
 way beyond cape *Corrientes*. All the sea-  
 coast along here is inhabited by peaceable  
*Indians* from 20 deg. 55 min. We could  
 not get near the land because the current  
 beat us off; and for fear of certain flats  
 which lie opposite to cape *Corrientes*. Upon  
 an observation we found by three minutes  
 less latitude than the day before, and this  
 because we had steer'd all day and night,  
 and then E. and by S. Then we stood E.  
 S. E. to draw near land, and set ashore the  
 messenger who is to carry the letters to  
*Mexico*. We coasted along the said cape  
 at a great distance, where begins a ridge  
 of vast high mountains, call'd *Sancti*. At  
 night the little wind there was fell, and  
*Friday* 4th, we found we had made very  
 little way E. S. E. The N. W. wind,  
 which the *Spaniards* call *Virazon*, blowing  
 again, we advanced gently all that day, not

steer'd S. E. at N. W. and at 21 deg. 32 min. E. and made blowing hard wind was quite gently at N. N. min. Finding the ship too far toward, we flood wind. For this we did not come call'd *Las tres Muñes*, as was forty leagues twenty from cape mouth of the three afore said the mouth of the S. W. from it. water, abundance for which reason pirates, who have of *Magellan* to have sometimes the lat. 20 deg. as but little wind. *January*, and of again becau abundance of *Lo* up their tails fgs. We took five was exactly like ours in *Europe*; min. The calm 2d, putting our water, we took ting asleep; and re struck with a 20 deg. 5 min. e blew at N. W. thward. Thus *Thursday* 3d, we to *Spain*, a great s. All the sea ed by peaceable min. We could cause the current of certain flats *Corrientes*. Upon y three minutes before, and this day and night, hen we stood E. nd let afore the y the letters to g the said cape begins a ridge d'd *Sametia*. At e was tell, and had made very e N. W. wind, *blowing*, blowing all that day, not very

very far from the mountains (which they say are rich in gold and silver mines) seeing several small inakes of various colours swim by the galeon, which were brought by the current out of rivers. Before sun-set several mulkets were fir'd to give notice to the galleon, which is usually sent about that time from *Acapulco* to meet the galeon, or to have some boat of *Indians* come off with refreshments, but it was all in vain; only at night there were two fires seen upon the high barren mountains, suppos'd to be made by the country people. This night the wind blew sometimes at N. W. and sometimes at S. W. *Saturday* 5th, in the morning the new boat was launch'd, to land the messenger with the letters for *Mexico*, and *Madrid*. *F. Borgia*, a *Jesuit*, who had the *Dutch* disease, or scurvy, and other sick persons were also put aboard it, to be landed with all speed; but the news is known at *Mexico* by another express sent by the *Alcade* of a great ship seen at sea, which may as well be an enemy, they begin their prayers at *Mexico*, which are continu'd till the arrival of the messengers with the letters from aboard. When he arrives all the bells ring for joy; and this noise lasts, till a third express comes from *Acapulco*, who brings the viceroy advice of the galeon from *China*, being come to an anchor in the port. The city expresses the like joy upon the arrival of the *Flota*, the citizens having no less concern aboard it, and the same is done at *Manila* when the galeon returns.

The port of the *Nativity* is in the lat. of 19 deg. 33 min. has water enough for any ships, but there is a rock at the mouth of it. That of *Chiamela* is too shallow for any but small boats; but it is large, and shelter'd by several islands on the N. W. and S. E. and by the continent. It abounds in pearls, and good fish. All this tract of land from cape *Corrientes* to the port of the *Nativity*, is call'd *Nuevo Galicia*, and is inhabited by conquer'd *Indians*. After the calm, which generally happens every morning upon that coast, follows the *Virazon*, or settled breezes, beginning at S. W. and coming to N. W. The night we steer'd S. E. along the coast. *Sunday* 6th, being the fifth of the *Epiphany* we set forward on the rest of the way, which is counted eighty leagues from the *Nativity* of *Acapulco*, but let the pilots say what they please, they are full a hundred and fifty leagues. A gun was fir'd to give the guards on the coast to understand that the ship was a friend. At sun-set we found our selves opposite to the port and village of *Salaguna*. *Monday*

7th, steering W. N. W. before noon we came up with the port and burning mountain of *Colima*, where much salt is made, as well as at *Salaguna*. Still coasting along bare mountains, and steep rocks, about evening the wind having favour'd, we came upon the coast of *Motines*, or *Montinet*, as others will have it, because it is a space of land full of scattering small hills all alike. The country is almost desert, there being only here and there a village, some days journey distant from one another. *Thursday* 8th, we held the same course, but the little wind we had soon fail'd, and we found we had scarce gain'd 2 leagues all the day. In the evening a small gale came up at S. W. but fell again at night, so that we advanced not an inch. This coast of *Montines* is wonderful calm; the sky being free from clouds in the day, and at night serene, and the stars bright; especially after the rains are fallen, which begin in *June*, and last all *December*. *Wednesday* 9th, the calm continu'd, and the weather was as hot as the dog-days in *Italy*. At sun-set the wind came up at N. W. and last'd some few hours in the night. The calm held again *Thursday* 10th, only a small gale at N. W. blowing in the evening, which soon was over. *Friday* 11th, calm again, but late in the evening we had wind enough to come up with the port and village of *Signatanejo*, before which there are three rocks. Here is a good pearl fishery, and salt made. From this place the country appears not so barren, the mountains are cover'd with some small trees, and the sea abounds in several sorts of fish, whereof we saw shoals skud about the ship. The north wind blew as is usual on that coast, but we made little way, because it was none of the best for us. At break of day, *Saturday* 12th, we were still opposite to *Signatanejo*. The wind then quite fail'd, so that we lay all night in the same place with unsufferable heat.

*Sunday* 13th, the wind came a-head of us, so that we could do nothing but catch a number of *Cachorretas*, whereof, as of all other sorts of fish, there is great plenty along that coast. At length, after so many months the anchors were dropt about half a league from land, but at night we were plagu'd with abundance of gnats, and little flies, that stung most intolerably. The calm continu'd *Monday* 14th, and when it did not, the wind was contrary. We stood E. and E. S. E. changing our course as the land happen'd to wind. *Tuesday* 15th, in the morning the wind came up north, which set us forward. The boat return'd with but little fresh provision bringing an account that the letter-carrier finding nobody in the port of the *Nativity* that could furnish him with horses,

GEMEL-horles, caus'd himself to be carry'd to the port of *Siguatanejo*; where some fishers of 1697. pearls had found him horles to go to *Mexico*, and that the rest had set forward, some by sea, and some by land. It also brought

the news of the arrival of the *Flota* at the port of *Vera Cruz*, with the count de *Canele*, the new viceroy of *Peru*; and count *Montezuma* of *Mexico*, which two had fallen out before their landing. At sun-set we sail'd by *Salina*, a territory subordinate to the *Alcade* of *Patatan*, a town a few leagues distant in the valleys. In this country grow the best *bainillas* in the world; which brings no small profit to the *Alcade*, as do the cacao, and fishery of good pearls. This night the wind being sometimes north, and sometimes E. N. E. and the current against us, we rather lost than gain'd ground; which continuing *Wednesday* 16th, till night, we could not get beyond the port of *Patatan*, which is capable of great ships.

A calm held us all night, and *Thursday* 17th, the same contrary wind started up; but after dinner the usual *Vivazon*, or settled wind coming up, which is S. W. we advanced, and run along the coast del *Calvario*, full of cacao-trees, and excellent *bainillas*. At night we continu'd our course E. S. E. with the wind at north, so that on *Friday* 18th, we were in sight of the port of *Acapulco*. Our chief pilot was sick of the *Dutch* distemper, or scurvy, and of the *Berben*, which made his life in danger. At noon a fresh gale blew at S. W. which set us very forward, we steering E. S. E. As we sail'd along the coast of *Coyuchia*, we perceiv'd a *Piragua*, or great barque making towards us. Being come up it brought us fresh provisions, which were an ox, fowls, bread, sweetmeats and lemons, sent by the governor, and *D. Francis Mecca*, to our commander; besides other things for private persons; so that every one had something to refresh him. The north wind which blew all night carry'd us so far E. and by S. that on *Saturday* 19th, in the morning, we found our selves opposite to the village and port of *Coyucca*, whose coast being fourteen leagues in length abounds in cocos, cacao, *bainillas*, and other things. The wind holding fair, we enter'd the port of *Acapulco*, at the great channel, and came to an anchor there at five in the afternoon. All the night was spent labouring with the anchors to draw the ship up the bay, so that before day the stern was made fast with a rope to a tree; for though the port be good, and safe against all winds, yet being winding like a snail, the wind that is good to come in at the two mouths, one N. W. and the

other S. E. is not good to carry a ship up under the shore.

*Sunday* 20th, all that were aboard again embrac'd one another with tears of joy, seeing our desir'd port, after a voyage of two hundred and four days and five hours. *Te Deum* was sung in thanksgiving, but our commander had not the goodness to solemnize it with firing some guns, saying the powder would not be allow'd him at *Manila*. The castle was saluted with seven guns; and then answer'd with three, hanging out its colours.

Inquiring of the pilots how many leagues and degrees we had sail'd, I found them of several opinions; and this because, we had not kept our course, but ply'd backward and forward to no purpose. *Peter Fernandez*, a *Portuguese*, born in the island of *Madera*, the chief pilot, said, we had run one hundred and twenty five degrees, and two thousand five hundred *Spanish* leagues. But *Jsidore Montes d'Oca* of *Sevil* his mate, would have it to be one hundred and thirty degrees, and about three thousand leagues. In sailing from *Acapulco* to *Manila*, it is certain there is none of this needless compass taken, as has been observ'd before, for having fallen down from bare seventeen degrees to thirteen, they then run upon one and the same parallel quite to *Manila*, right afore the wind, which carries them in two months and a half, or three at farthest, without any storm; and therefore they run through only one hundred and eighteen degrees, which being from east to west it is hard to measure the leagues; but the pilots guess them to be about two thousand two hundred *Spanish*. Another way may be taken, which is from *Acapulco* N. W. as far as cape *Mevacino*, and then to steer for the *Marian* islands, and *Manila*; and then they say the whole run is one hundred and seventeen degrees, and allowing seventeen *Spanish* leagues to every degree, they are two thousand one hundred fifty nine leagues.

All *Sunday* we waited for the king's officers to make their search, that we might go ashore. They came three hours before night, and were the castellan, *D. Francis Mecca*, the *Cortador*, or comptroller, and the *Guarda Mayor*, or surveyor, to whom was deliver'd the register or entry of all that was aboard the galeon (to regulate the king's duties, which amounted to eighty thousand pieces of eight, including the present to the viceroy) and the duplicates of the letters to be sent to *Madrid*; all to be sent to *Mexico* with all speed, by another express, to make use of them in case the first sent by the other messenger, we said was put ashore, were lost.  an

an account who I was, they exprefs'd a great deal of civility, and offer'd their service to me. When they were gone, the image of our blessed lady was carry'd ashore, and I went along with it to the parish church, the galeon in the mean while firing all its guns. At night I came back, and lay aboard the galeon, that my equipage might not be left to my slave, through whose negligence it might have been damnify'd. Going ashore upon *Monday*, I was told that the centinel which looks towards *Peru* (there being two on a mountain, whereof this is one, and the other looks towards *Cbina*) had discover'd two ships out at sea, making towards the port. They were suppos'd to be the admiral and tender of the *Peru* fleet that came for the

count *de Canete*, the new viceroy. I din'd *GEMEL-* with *D. Francis Mecca*, and before we a- LI. rose from table we heard a cannon fir'd. I 1697. ask'd the meaning of it, and he told me it was to signifie to the ships that came, if friends, that they might come into the port; if others, to let them understand that the *Spaniards* were upon their guard, and ready to receive them. The castellan sent major *Arambola* with the boat of our ship to view them, and bring an account what they were, becaufe the boats of two vessels belonging to *Peru* were not fit to go. It is fit I should here stop my pen, that I may with fresh courage continue my voyage in the next, which is the last volume.

*An account of what happen'd to the author at Acapulco, and of that city.*

GEMEL-  
L. I.  
1697.

The in-  
troduction,

I Cannot chuse but condemn those persons, who, suffering themselves to be too much dazzled with the lustre of the noble actions of the ancients, make it their study to extol them to the skies, without reflecting that these later ages have furnish'd us with others more heroic and wonderful. He that hears talk of *Ulysses's* mighty travels, will doubtless conclude, he plow'd up mighty seas, and saw far-distant countries; yet, if I duly consider'd, he must find it will cost more time to read those very travels in *Homer*, than to perform 'em. What can a man, who has rambled but a small part of the world, judge of the labours of *Eneas*, in coming out of *Greece* into *Italy*? And yet the poet magnifies them at such a rate, one would think no body could chuse but have much compassion for this hero, persecuted by so many deities. However, all this to me looks like nothing, when I call to mind the toils of *Alexander*, surnam'd the Great, who, before he had subdued the greater part of *Asia*, is said to have wept for want of other worlds to conquer; and indeed had his master *Aristotle* been rightly in his senses, he might have given him to understand how great a part of the world there yet remain'd, which had not heard of so much as the fame of his victories. In short, which way soever I turn my self, I see nothing but a prodigious vanity in the ancients, when they make a judgment of their actions in their writings, and a great blindness in the moderns, to make so great account of them. In those times any idle,

or perhaps wicked, persons were receiv'd as gods, for any action they did for the publick good; every little spot of land was a kingdom; every two or three legions of *Romans* (who, to say the truth, were not so great boasters as the *Greeks*) were reckon'd a great army, and yet a legion did not exceed seven thousand men. I will not go about here to mention all the inventions, or glorious exploits of our times, but would only have it taken into consideration how those worthy ancient poets and historians would be confounded, if rising from the dead, in the last age, they should have attempted to discourse of *America*, and of the wealth nature has placed there, as the subject deserves. They having applauded actions so inconsiderable, that they look like nothing, in the most magnificent terms, and rewarded 'em with no less than divinity; could not afterwards think themselves capable of panegyrizing *Columbus*, and of giving any tolerable account of a country where, we may say, all that is seen is precious, and that which is trampled on is gold and silver. We must therefore say, the world is not now grown old, nor valour decay'd, or other virtues fled from the earth, but, that it is in the prime of its youth; and, that those we call virtues are rather encreas'd than diminish'd, because man learns something new every day, and is continually rising above his being. And if we see no such men as those so renown'd in antiquity, 'tis because those endowments, which being then rare, rais'd admiration in others; being now become common,

no body thinks them worth taking notice of.

Being now to treat of what I saw in *America*, in this last volume of my travels round the world, I would have the reader conceive so great an idea of it, that whensoever he finds the things describ'd, not to merit his admiration, he would lay the blame on my pen, and not attribute it to any defect in the things themselves; for so doing, I am satisfy'd he will not deviate from truth, and I shall attain my end, which is to deliver the truth.

There being no inn at *Acapulco*, I was forced to go, on *Monday 21st of January 1667*, to the monastery of *Nuestra Señora de la Guca* of the *Franciscans*, by whom I was courteously entertain'd.

*Tuesday 22d*, in the morning the castellan's lieutenant told me, he had been upon guard all night, by reason of the jealousy there was, that the two vessels discover'd might be enemies; because there was an account, that five *French* ships had pass'd the stright of *Magellan*, being sent by the most christian king, to commit hostilities in those seas; besides the catholic king's general order enjoying all castellans, and governors of the south coast, to be upon their guard whensoever any ships were seen at sea. In the afternoon the major *Arambulo* return'd, and clear'd all doubts, saying, they were the admiral and tender of the *Peru* fleet. It was not long before the admiral came into the port, saluting the castle with five guns, which answer'd with three. The galeon *St. Joseph* saluted with seven, and being answer'd with eleven, return'd the civility with seven.

*Wednesday 23d*, I went aboard the admiral, before he was search'd. It was a good ship, carrying forty two brass guns, indifferent large, and was come to take aboard the new viceroy of *Peru*, the count of *Canete*. Those aboard said they had spent forty eight days between *Panama* and *Acapulco*, by reason of the mighty storms, they met at sea, and the tedious calms on the coast of *New Spain*; and that they had lost twenty one men, of a sort of contagious distemper, besides one, who falling into the sea, was drowned.

As for the city of *Acapulco*, I think it might more properly be call'd a poor village of fishermen, than the chief mart of the south-sea, and port for the voyage to *China*; for mean and wretched are the houses, being made of nothing but wood, mud and straw. It is seated in the latitude of seventeen degrees, bating some few minutes, and in twenty six of longitude; at the foot of high mountains, which cover it on the east side, but make it very subject to distempers, from *November* till the end of

*May*. It was then the month of *January*, and yet I felt as much heat, as I have done in *Europe* in the dog-days, the reason whereof is, because there falls no rain, during those seven months last mention'd; but only a little between *June* and *October*, which does not cool the ambient air. But it is to be observ'd, that in *Acapulco*, *Mexico*, and other places of *New Spain*, it never rains in the morning, and therefore he that will not be wet, must take care to dispatch his business before noon, and then stay at home.

This ill temper of the air, and the mountainous soil, are the cause that *Acapulco* must be supply'd with provisions from other parts; and therefore it is dear living there, because a man cannot eat well under a piece of eight a day; the place, besides being dear, is dirty and inconvenient.

For these reasons, it is inhabited by none but *Blacks* and *Mulattoes*, and it is rare to see any native there, whose complexion is of an olive colour. The *Spanish* merchants, as soon as their business is over, and the fair made by the ships from *China* and those of *Peru*, which come loaded with cacao, repair to other places; the king's officers and the castellan himself going away, because of the ill air, and so the city is left desert. It has nothing good but the natural security of the harbour; which winding like a snail, as was said before, and having water alike in all parts, the ships are enclos'd in it with vast high mountains, as if they were wall'd in; inasmuch that they are fasten'd to the trees upon the shore. There are two mouths or channels to go into it, a small one at N. W. and a great one at S. E. The entrance is defended by the castle with forty two pieces of brass cannon, and a garrison of sixty men. This port is worth to the castellan who is also *Justicia Mayor*, or chief magistrate, twenty thousand pieces of eight a year, and little less to the *Contador* or comptroller, and other officers. The curate, though the king's allowance to him be but one hundred and eighty pieces of eight, makes fourteen thousand a year, exacting a great rate for burying of strangers, not only that die at *Acapulco*, but at sea aboard the ships from *China* and *Peru*; as for instance, he will expect one thousand pieces of eight for rich merchant. The trade of the place being for millions of pieces of eight, it follows that every man at his profession gets a great deal in a short time; so that a *Black* will scarce be satisfy'd with a piece of eight a day. In short all live by the port, and the hospital has not only a deduction out of the soldiers pay, but great alms from the merchants, which are afterwards freely distributed among the other monasteries and missions.

There

GEMEL. There is another port S. E. of this call'd

11. *del Marques*, or of the marques, only two leagues distant from *Acapulco*, which has water enough for great ships and good anchoring; whither generally the ships of *Peru*, that dare not put into *Acapulco*, because they have prohibited goods, resort to sell them.

These barren mountains are not without game, for there are deer, rabbits, and other creatures; and as for birds, parrots; turtles, less than ours with the tips of the wings of divers colours, which fly into the very houses; blackbirds, with long tails; ducks and other sorts of fowl, as well of those known in *Europe*, as of others peculiar to the country.

*Tuesday* 24th, there arose a dispute between the general, as they call him, or captain of the galeon, and the admiral of *Peru* about precedence, the latter pretending the other ought to strike his flag, because his was a royal man of war, and the galeon of *China* a merchant; and the general of *China* on the other hand pleading his ship ought to take place, because it was supreme (though it had none under it) the other being but vice-admiral. Thus both kept up their flags, one at the main-top-mast, the other at the fore-top-mast head, till they writ to the viceroy to decide the controversy.

*Acapulco*  
har.

Most of the officers and merchants that came aboard the *Peru* ships, went to lie ashore, bringing with them two millions of pieces of eight to lay out in commodities of *China*; so that *Friday* 25th *Acapulco* was converted from a rustick village into a populous city; and the huts before inhabited by dark *Mulattoes* were all fill'd with gay *Spaniards*; to which was added on *Saturday* 26th a great concourse of merchants from *Mexico*, with abundance of pieces of eight and commodities of the country and of *Europe*. *Saturday* 27th, there continu'd to come in abundance of commodities and provisions to serve so great a multitude of strangers; for, as has been said, the neighbouring mountains are barren, and the little fruit they produce, though to the eye it appear well, is not to be eaten unless preserv'd. *Monday* 27th, there came some fathers of *Beblem* begging alms to carry them to *Peru*. This is an order founded by the approbation of pope *Innocent* the 11th. The habit is like that of the *Capuchins*, and they live like them on charity; their institution is to be hospitaliers; it being their business to serve and attend those that are upon their recovery, till they have recover'd their strength; and this they do with extraordinary charity, even so far as to serve them on their knees. On the left side of their cloak they wear the figure of

A new  
order,

the cross, and therefore the *Spaniards* call them fathers of *Beblem*. They, as being a new order, have but few monasteries in the city of *Mexico*, city of *Angel*, *Lima*, *Ugaxacca*, *Guatimula*, and other places.

*Sunday* 29th, going to visit a *Spaniard* <sup>parrot</sup> aboard the man of war, he instead of chocolate, treated me with the herb of *Paraguay*. It grows in the province of that name, under the government of *Buenos Ayres*, on a tree no higher than a man, and to me it seems not to differ much from the myrtle of *Europe*. The leaves are first dry'd in the shade, and then in an oven; and thus dry'd are transported in leather bags, and sold all about *Peru*, where they are more in use than chocolate in *Spain*. It is accounted a wholesome liquor in that dry climate, for they say it is hot and moist; but on the other side, besides that it is not nourishing, it is insipid, and has one great fault, which is that it provokes vomiting, and takes away the stomach. It is prepar'd by steeping in cold water for half an hour in a mat, that is, a dish made of a calabash curiously wrought and adorn'd with silver, and then mixing it with boiling water and sugar, and straining it from the dust of the herb before they drink it; after which they pour more water upon that same herb, which serves many more. Some throw away the first water, and pour the hot upon a second infusion. Abundance of it is spent in *Peru*, it being counted an excellent quencher of thirst. The peasants take it in cold water, or else chew the herb. See more of this in *del Tecbo's* history of *Paraguay*.

*Wednesday* 30th, came to town the treasurer of the count de *Canete*, viceroy of *Peru*, in order to go away to *Lima*, and borrow of those merchants an hundred thousand pieces of eight for his master, to pay the debts he had contracted, laying out three hundred thousand pieces of eight to procure that government, and carry his family over to the *Indies*.

*Thursday* 31st, the express return'd from *Mexico*, with the settlement of the duties the galeon was to pay, being eighty thousand pieces of eight; so that on *Friday* the 1st of *February*, they began to land the bales. In the mean while abundance of men dy'd aboard the *Peru* ships, of a sort of contagious distemper; and the more because the violent heat and bad air of *Acapulco* did not suffer the sick to recover.

*Saturday* 2d, I went to see the little castle, which having no ditch or bastions, is only remarkable for its good brass cannon, sufficient to defend the port against any enemy. *Sunday* 3d, I went to a small spring at the foot of the mountain, which is the only place of recreation thereabouts. small. Monday 4th, more merchants came from Mexico, and yet I was told there were fewer than other years ; as fearing that the merchants of Peru had enhanced the price of China commodities. Tuesday 25th, I was much annoy'd with the heat and gnats, but much more on Wednesday 26th, by the babbling of a merchant of Peru ; for he, according to the custom of that nation, endeavouring to talk me into a bargain, gave me a violent head-ach, and yet we concluded upon nothing. The Spaniards of New Spain are of another temper, for they deal generously and gently, as becomes them. Thursday 7th, when all the goods were unloaded, the porters of Acapulco made a fort of funeral, carrying one of their number on a bier, and bewailing him as if he were dead, because their harvest was at an end ; for some had got three pieces of eight a day, and the worst of 'em one. About two in the afternoon there was a little earthquake, the noise whereof being heard from the mountains, would have given the people time to save themselves, tho' it had been violent. These earthquakes are so frequent at Acapulco, that the people are forced of necessity to build low houses. Friday 8th, the mate of the admiral having agreed with me for a Black at four hundred pieces of eight, he felt his lips, cheeks, and legs, to see whether he was not swell'd, without considering that the Blacks have naturally thick lips. Saturday 9th, I saw abundance of mules come in loaded with goods and provisions. Sunday 10th, I stirr'd not out

because of the great heat. Monday 11th, the castellan invited the general of China, admiral of Peru, D. Joseph Lopez, the viceroy's treasurer, me, and several officers of the ships, to see some very indifferent juggling perform'd by an old Genoese ; and the best of it was, that the guests paid for the entertainment, the old man going about when he had done to receive every man's benevolence, without receiving any thing from the castellan. Tuesday 12th, I order'd my affairs to set out for Mexico, hiring three mules for thirty pieces of eight each, tho' it was to cost me six rials a day upon the road for their meat. Wednesday 13th, after noon the Peru tender sail'd, to carry thither the aforementioned D. Joseph Lopez, the treasurer. He having contracted friendship with me, would have persuaded me to go to Lima, where, he said, he would persuade the viceroy to give me some good post ; but being resolv'd to return into Europe, no interest could draw me. I took my leave of all my friends the following days, and Sunday 17th being Shrove-sunday, the Blacks, Mulattos, and Mestizos of Acapulco, after dinner ran races with above an hundred horses ; which they perform'd so well, that I thought they far out-did the grantees I saw at Madrid, tho' these use to practise a month before they appear in publick. This is no fable, for those Blacks would ride an Italian mile, some holding one another by the hand, others embracing, without ever loosing their hold, or being discompos'd, in all that space.

## CHAP. II.

*The author's journey to the imperial city of Mexico, and description of the same.*

HAVING taken a guide from the custom-house, and the castellan's pass for the guard half a league from Acapulco, not to stop me, I set out on Monday 18th, at four in the afternoon ; and having pass'd the guard aforesaid, and gone up and down vast high mountains, in all three leagues journey, I came to the inn of Ataxco, consisting of five cottages, thatch'd and palisado'd about. Here a legion of gnats suck'd my blood all the night. The owner of the three mules having stay'd behind at Acapulco, I was oblig'd to stay for him at the inn on Tuesday 19th till noon. I could not chuse but have a bad Shrovetide in such a scurvy place, for the host made me pay a piece of eight for a pullet, and about a penny apiece for eggs. The wood adjoining was full of game, where, for my diversion, I kill'd some Chichilaccas. This bird is of an ash-colour, has a long tail, is

little less than a hen, and as well tasted. In the thickest of the wood I found many orange and lemon-trees, whose fruit was lost for want of some-body to gather it. Setting out hence, after travelling three leagues over mountains, and thro' forests of Brazil-wood, I came about sun-set to the Venta, that is, the inn of Lexido, where I had a bad night again by reason of the gnats. Wheat bread is quite banish'd from those parts, for the inhabitants eat none but cakes made of Maiz or Indian wheat, which is also give to the horses and mules instead of barley : They first wet, and then grind it on a stone as they do cacao. The cakes made of this dough they bake on an earthen pan, over a gentle fire. Hot, they're tolerable ; but when cold, I could scarce get 'em down.

I set out early upon Wednesday the 20th, and travelling thro' a plainer country, came

GEMEL after four leagues riding to the inn call'd  
LI. *de dos Arroyas*, or of two Brooks, where I  
1698. rested till towards the evening. An Indian

of this place gave me a sort of wild fruit to  
eat (call'd *Sbiociacos*, that is, *sharp*) red  
and white, as long as a finger, and of the  
taste of a cherry. Within it there were lit-  
tle black seeds like pepper. The tree that  
bears it is usually ten spans high, and its  
leaves long. The air being somewhat cooler,  
we travel'd four leagues farther, and  
lay at a place call'd *los Pozuelos*. Before  
night I kill'd a wild cock, which the In-  
dians call a *Pheasant*; 'tis bigger than a  
capon, has a long tail, and wings, a tuft on  
the head, and black feathers, but the breast  
black and white, and the neck bare, like a  
turkey-cock; the flesh of it is not unfavoury.  
The night was cool, and without gnats,  
tho' we lay under the canopy of heaven.

Thursday 21st, in the morning, we set out  
early to go take some refreshment at the  
*Pilgrims-inn*, on the mountain of the same  
name. Thence we rode very cautiously  
along the sides of the mountain del *Papa-  
gayo*, or of the Parrot, where a man must  
climb a league up a solid rock, and then go  
as far down, no less troublesome a road, to  
come to the river of the same name, which  
I forded over; but in winter, when swell'd  
with the rains, they cross it upon floats:  
These are made of planks ty'd across, and  
bore up by twenty, or sometimes sixty, ca-  
labashes, according to the bigness, fasten'd  
under it. When the float is loaded, an In-  
dian leaps into the water, drawing it with  
one hand and swimming with t'other till he  
brings it to the other bank; and the current  
always carrying it down, therefore the In-  
dian afterwards takes it on his back, and  
carries it to the right place. Having pass'd  
the river, we went to lie at the inn of *Cac-  
acotal* (so call'd because formerly there  
were abundance of cacao-trees in that place)  
having travel'd six leagues this day, over  
very uncouth mountains. At night I kill'd  
two *Chiabillacas*, which serv'd at supper for  
want of other meat.

Friday 22d, after riding four leagues of  
mountainous way, we rested at *las dos Ca-  
minos*, or the two Ways, the first village in  
the way from *Acapulco*. We lodg'd in the  
town-house, whither Indians came to do us  
any service we had to command. Among  
these mountains the air was cooler than that  
we came from. Four mules quite spent  
were left in this village, and others taken  
in their room. Setting out, we went up  
first, and then down, the dreadful steep  
mountain *de los Caxones*, which is a league  
high, and having rode four leagues, came  
to the guard of the customs of *Acaguisilla*,  
in which cottage we sup'd and lay. The

officers search'd my goods, and made good  
my pass I brought from *Acapulco*.  
Saturday 23d, we set out late, and tra-  
velling four leagues, part mountain and  
part valley, we came to the *Trajichi* of  
*Masatlan*, so call'd because there's a good  
sugar-work. Our muletiars, who reckon'd  
at pleasure, counted these but two leagues,  
because they were never weary with riding.  
Here we found good bread, which is no  
little rarity among the mountains, whose  
inhabitants eat none but little cakes of In-  
dian wheat. Not far from this place is a  
silver mine, and abundance of deer. After  
dinner we travel'd two leagues further, to  
the village *de las Pataquillas*, consisting of a  
few mountains at the foot of the hill, and lay  
in the town-house. At night we felt  
much cold, the climate differing from that  
of *Acapulco*.  
Sunday 24th, having rode two leagues,  
we heard mass at the village of *Chilpancingo*,  
a convenient place, in the midst of the val-  
leys, so plentiful of Maiz or Indian wheat,  
that they lay up their harvest in little coun-  
try houses, or barns made of wood and  
clay. The maidens in this place, to beau-  
tifie their faces, and secure them against  
the cold, daub 'em with a yellow flower pound-  
ed. We went hence two leagues further,  
to lie at *Zumpango*, another village in the  
valleys, which the Spaniards call *Canada*,  
because there is a road eight leagues in  
length, without shelter of any trees. In all  
these publick houses there's an inn-keeper,  
and other Indians, who serve travellers in  
dressing their meat, and find 'em salt and  
fewel for nothing, being paid for it by the  
publick. They keep the lodgings clean,  
and have always an altar in 'em with an  
image of our saviour or some faint.  
Monday 25th, I set out betimes, and tra-  
vel'd thro' a plain like that of *Tirol*, riding  
nine leagues without drawing bit, to the  
river *de las Balsas*, so call'd because they  
cross it on *Balsas* or floats. Both this river  
and that of *Papagayo* run down to the south  
sea. The Indians of the neighbouring vil-  
lage pass'd over all our goods and us on  
floats, as was said above, the current carry-  
ing them down a musquet-shot before they  
came to the further bank. Other Indians  
carried the mules over the ford, which was  
not above a musquet-shot over. We lay in  
the field, two leagues from the place they  
call *Nopalillo Canada del Carrizal*. About  
ten at night happen'd a terrible earthquake,  
which lasted whilst a man might say the  
creed twice: It could do no harm to us,  
who were in the open field; but at *Acapulco*,  
as was afterwards known, it laid several  
houses level with the ground.

Tuesday 26th, before sun-rising, whilst the mules were saddling, the earthquake return'd, being preceded by a noise like a cannon-shot. Mounting, we travel'd four leagues on an indifferent good road; by the way I shot several *Chiacalacas*, and other birds, whereof there's great plenty. Passing by *Rancho de Palula*, we came to dine near a little lake; and riding three leagues further, lay at *Pueblo Nuevo*, that is, *New Town*, where there's a great lake full of ducks.

Wednesday 27th, after travelling six leagues over rugged mountains, we rested by the water; and then riding as many leagues more, forded a great river at night, and lay at the village of *Amacufac*, of the liberty of *Cornavaca*. Such good order is taken, that whenever travellers come in, the *Topile* and *Mesnero*, or inn-keeper, come immediately to furnish them with all things necessary. The *Topile*, which in the Mexican language signifies *servant* or *servant*, is oblig'd to buy all the passengers stand in need of, and the inn-keeper to dress it, make the beds, and see there be no want of utensils, water and fuel.

Thursday 28th, after three leagues riding, we came to *Aguaguezingo*, where having rested a little, we went two leagues further to *Apugleca*, a village of *Cornavaca*, and there dined. In the publick house we found a *Teponaste*, or drum, such as the *Indians* us'd formerly to beat; 'twas made of a piece of timber hollow'd, four spans long, and both ends cover'd with skins, and made a noise that might be heard half a league off. After dinner travelling a league, I pass'd by *Cuchitepec*, where I saw an indifferent church of religious men; and three leagues further we lay in the open field. This day we cross'd two large rivers.

Friday the first of March, after a league's riding, we halted at *Cornavaca*, the chief place of the *Acadia*, or government of that name, belonging to the marquis *del Valle*, or of the valley, which reaches to the valley of *Amacufac*. The place is rich, because inhabited by many merchants attracted by the goodness of the soil. Having taken some refreshment I set out again, and at the end of half a league, having pass'd the small village of *Taltenango*, about a league further, the way very troublesome, came to the top of the mountain of *Cornavaca*, where stands a village call'd *Guicbalac*. The inhabitants of it make good *Pulere*, a liquor, which being drawn from the plant call'd *Magbey*, and work'd, up with some herbs, will make men drunk like wine. The excise upon this liquor formerly yielded the king one hundred thousand pieces of eight, but he prohibited it, because of the brutalities the *Indians* com-

mited when they were drunk. I drank *GEMEL* some of it, as it came from the plant, and thought it tasted like the mead in *Spain*, the colour of it was like whey, or milk and honey. Going three leagues further, we lay all night on a horrid mountain full of pine-trees; because the owner of the mules, to save the expence of towns, made thirty he had with him graze upon the common; which made them so weak, that only five of them wrought in their turns. The worst of it was that in mountainous places, there was none but wither'd grafs, such as the country people burnt to manure the ground. That night so much snow fell, that in the morning my quilt was quite cover'd, by which you may guess how hot I lay.

Saturday 2d, we went down the moun-*St. Augustin* along a craggy road, and travel'd *tin de las* four leagues and a half to *St. Augustin de Cuevas*, having first paid a rial for every mule to the guards of the road, whom we found at the foot of the mountain. The *F. procurator* of the mission of *China*, who was in this place treated me very civilly; for which reason I left him some goods, that might have caus'd me trouble at the custom-house at *Mexico*. We went on with a great storm of wind and rain; and passing by another house of toll, three leagues further entered the city of *Mexico*, over a causeway or terrace made upon the lake. The officer that is generally at the entrance of the city, went with me to the custom-house, to have my trunks search'd; but the officers there were extraordinary civil to me, only just opening them, and seeing what was at the top. Being dismiss'd at the custom-house, I went away to an inn very ill serv'd, to stay there till I had provided a lodging.

Monday 4th, I went to pay my respects to count *Montezuma* the viceroy; who receiv'd me courteously. Going out I met the *Sindies*, or chief magistrates of two *Indian* villages, attended by many people, they ing come in the name of all their people. It is their custom, when they are to present a petition, to carry a great tree, cover'd with flowers, which they leave with the viceroy. An express from *Acapulco* brought the news of the mischief done there by the earthquake on the 25th and 26th of the last month. In *Mexico* some monasteries were overthrown, and some houses damag'd.

Tuesday 5th, I heard divine service in the cathedral, and Wednesday 6th, went to the mint, where I was told they coin'd sixteen thousand pieces of eight a day. Thursday 7th, I saw the monastery of *St. Bernard*, of nuns of that order. It is very large, and the church adorn'd with rich altars. That of our lady of *Valranda*

GEMEL-  
LI.  
1698.

GEMEL-da is not inferior to it, where on Friday  
 11. 8th, I saw the church serv'd by venerable  
 1698. priests, and noble nuns in the upper and  
 lower quire.

Saturday 9th, the obsequies of the queen-mother were celebrated in the church of *Jesús Maria*, a *Mausoleum* being erected in the middle of it, and the viceroy, magistrates, and nobility being present. In this monastery they receive without any portions the daughters of the successors of the first conquerors, and of other well deserving persons; but they must have the king's order for it, who allows for their maintenance; other maids are admitted paying their portions.

Sunday 10th, four *Oydores*, or judges, and a *Fiscal*, or solicitor general set out for *Acapulco*, in their way to *Manila*, to succeed those there who were to come to *Mexico*, to be employ'd in the courts there. *D. Michael de Ijurrietta*, at whose house I was entertain'd, desir'd me to go with him to *St. Augustin de las Cuevas*, to bear his nephew *D. Francis de Castro y Gusman*, who was going captain of foot to *Manila*, company; which I did, as well to oblige *D. Michael*, and to bring away the goods I left there with the father procurator. We went in a coach, and came late to that *Hospitium* of the *Franciscans*. Monday 11th, after the captain was gone with the *Oydores* we return'd to *Mexico*.

Mexico  
 City de-  
 scrib'd.

*Mexico*, so call'd by the *Spaniards*, and by the *Indians Tenochtitlan*, is in the latitude of 19 deg. and 40 min. and in the midst of a valley, almost flat, fourteen *Spanish* leagues in length from north to south, seven in breadth, and about forty in compass; but if it were measur'd from the tops of the mountains next to *Mexico*, it would be seventy, or perhaps ninety leagues.

On the east side of this valley is a lake, into which several rivers, and other waters fall; which stretches southward, as far as the city of *Tehuaco*. The ridge of mountains that enclose it on all sides in the lowest place is forty two thousand five hundred *Spanish Varas*, or yards above the lake.

The city is seated in a perfect plain, near, or rather exactly in the middle of the lake; and therefore by reason of the instability of the soil, the buildings are half bury'd, in spite of the inhabitants, who use all means to lay the foundations secure. The plat of it is square; and it looks like a curious chess-board, by reason of its long, wide and well pav'd streets, lying north, and south, east and west; so that the whole extent of it may be seen, not only from the middle, as *Palermo* from the great market, but from any part of it whatsoever. The compass is two leagues, and the diameter half a league, the whole being almost a perfect square. There are five ways into

the city, over as many caufways, or banks on the lake, without walls, or gates: The ways are call'd *la Piedad*, or the piety; *St. Antony*, *Guadalupe*, *St. Cosme*, and *Cba-pultepee*; the *Calzada*, or caufway *del Pe-non*, which *Cortes* march'd over, when he came to conquer, being now quite taken away. For excellent structures and ornaments of churches, it may be said to vie with the best of *Italy*; but for beautiful women it surpasses it; for they are most beautiful, and excellently shap'd. They are great admirers of *Europeans*, whom they call *Cachopines*; and they had rather marry them, though never so poor, than their own country people, call'd *Criollos*, though rich; seeing them fond of the *Mulatto* women, whose ill customs they have imbib'd, as they suck'd their milk. For this reason the *Criollos* have such an aversion for the *Europeans*, that they jeer them, as they go along the streets; giving one another notice from shop to shop, by crying *Elis*, which signifies *'tis he*; and therefore the *Spaniards* newly come to the city, have sometimes in a passion fir'd pistols at them. Nay, they carry this prejudice so far, that they hate their own parents because they are *Europeans*.

*Mexico* contains about one hundred thousand inhabitants; but the greatest part of them *Blacks* and *Mulattoes*, by reason of the vast number of slaves that has been carried thither. Another reason is, that all the lands being in the hands of churchmen, as well as the houses; the *Spaniards*, and other *Europeans*, finding no way to get estates real, as all discreet persons ought to do, will not easily be perwaded to marry, and generally they themselves become religious men. Thus, though within the city there be twenty two nunneries, and twenty nine monasteries of *Monks* and *Friers* of several orders, they are all richer than they ought to be. That the reader may have some insight into this, the cathedral alone maintains nine canons (besides one for the king, whose revenue the inquisition enjoys, as it does one in every cathedral through-out *New Spain*) five dignity'd priests, viz. the dean, archdeacon, schoolmaster, chanter, and treasurer; six demi-canons, and six half demi-canons; one head sacristan; four curates chosen by the viceroy; twelve royal chaplains, elected by the chapter; and eight others call'd of *Lau-renziana*, these also appointed by the chapter; all the rest being appointed by the king. The arch-bishop takes to himself out of the publick stock sixty thousand pieces of eight a year; the dean eleven thousand; the four other dignity'd priests eight thousand each; the canons six thousand; the demi canons five thousand; the hali demi-canons three thousand; each cu-

rate four thousand; every chaplain three hundred; and the other priests and attendants less, being in all the number of three hundred. So that upon computation it will appear that the cathedral of *Mexico* has above three hundred thousand pieces of eight of yearly income; reckoning together with the livings, the allowance for repairs, wax, vestments, and other necessities for the divine service. In short, *Mexico* is a little city six miles in compass, a small space for so great a number of churches which cause a want of houses for inhabitants.

Climate.

The weather in *Mexico* is very unequal all the year about; it being for the most part both cold and hot at the same time; that is, cold in the sun. In other respects the air is not bad, being neither hot nor cold to any great excess at no time of the year; though the tender inhabitants complain of the cold being somewhat sharp in the morning; and of the heat from *March* till *July*. From that time forward the rains quell it, as happens at *Goa*; otherwise both those countries being under the torrid zone would be inhabitable, as the ancient philosophers imagin'd. From *September* the rains are less frequent, and very small till *March*. The *Indians* reckon those pleasant nights cold, which begin in *November*, and hold till *February*; but the *Europeans*, who are not so tender, like the climate, because

there is no great heat, or cold all the year, and the water they drink is as cool as the ambient air. The soil by reason of the great rains that fall, gives three crops in a year, but in several places; the first is call'd *de Riego*, that is, of watering, and falls out in *June*, being of the corn sow'd in *October*; the second, named *del Temporal*, that is, of the season, is in *October*, of what was sow'd in *June*; the third, because very uncertain, is term'd *Aventurera*, that is, accidental, the land being till'd in *November* along the sides of the cool mountains, to sow it as the weather proves. The *Maiz*, or *Indian* wheat, which is the chief sustenance of the natives, is sow'd the earliest in *March*, and the latest in *May*, and yields a wonderful increase: for this reason it is cheap living at *Mexico*, in comparison of other cities, half a piece of eight a day being enough for a man's expence. But 'tis to be observ'd, that there being no brass money, and the least piece in silver being half a rial, that is three pence, 'tis very chargeable buying fruit; however, 'tis only in the market of *Mexico* that cacao-nuts are current in buying of herbs, and they give sixty or eighty for a rial, according as the price of cacao runs higher or lower. In short, *Mexico* must be allow'd to be an excellent city, for all the year round there are flowers and fruits of all sorts in its markets.

## CHAP. III.

*Of the original of the city of Mexico, its conquests, and the chronology of its kings.*

THE ancient histories of *Mexico* make mention of a flood, in which all men and beasts perish'd, and only one man and woman were sav'd in a boat, which in their language they call *Acallé*. The man, according to the character by which his name is express'd, was call'd *Coxcox*, and the woman *Chicbequetzal*. This couple coming to the foot of a mountain, which, according to the picture, was named *Culbuacan*, went ashore, and there had many children, all born dumb. When they were multiply'd to a great number, one day a pigeon came, and from the top of a tree gave 'em their speech, but not one of 'em understood the other's language, and therefore they divided and dispers'd, every one going to take possession of some country. Among these they reckon fifteen heads of families, who happening to speak the same language, join'd together, and went about to find some land to inhabit. When they had wander'd an hundred and four years (which is denoted by the figure at number I.) they

VOL. IV.

came to the place they call *Anlan*, and continuing their journey thence, came first to the place call'd *Chapultepec*, then to *Culbuacan*, and lastly to the place where *Mexico* now stands, tho' the *Mexican* histories do not always give these places the same name. Thus *Mexico* was founded in the year the *Indians* call *Ome cagli*, which answers to the year 1325, from the creation. The pointed line is the way the founders travel'd; the figures by it are the places where they made any stay; the circles, the number of years every one continued there. The meaning of it all is express'd in every thing by a character or figure.

The design the author had in copying this picture from an ancient original drawn by the *Indians* in the time they were pagans, was to shew they were as ancient as the flood; tho' the chronology is not so exact as it should be, there being too few years allow'd between the flood and founding of *Mexico*. The reader will the better conceive it by the following cut, and by

what

GEMEL-what shall be said more distinctly hereafter.  
L.I. See Acosta's nat. and mor. hist. of the Ind.  
1698. lib. 7. cap. 2. pag. 453.

Wild people.

Thus it appears that the first inhabitants of *New Spain* were a sort of wild people, since they kept on the uncouth mountains, without tilling the land, without religion, without any form of government, and without clothes, living after a disorderly manner like beasts, feeding upon what they kill'd (whence they had the name of *Otomies* and *Chichimecas*) tho' they were foul creatures; and for want of them, on roots; and lying in dens, and under thick bushes. The women follow'd the same employments, leaving the children hanging on the trees. Now at this time, in *New Mexico* and *Parral*, there's such a sort of men, descended from *Chicbequetzal* and *Coccox*, who remain'd in barren and mountainous lands, without troubling themselves to seek for a better soil, and who still live upon what they kill, and never join together, unless it be to rob and murder travellers. The *Spaniards* have not been able to subdue them, because 'tis in vain to look for 'em, who hide themselves in thick woods, where they have no settled place of abode; and to endeavour to fight 'em, would be no other than hunting of wild beasts.

Those more polite and sociable men, descended from seven of those fifteen we said set out to find a good country, are call'd *Navallacas*, to distinguish them from the *Chichimecas*; and these, as their historians believe, came from a remote country towards the north, thought to be that call'd the province of *Aztlán*, or *Teucul*, in *New Mexico*. Some *Spanish* authors will have it, that these *Navallacas*, coming out of that country in 820, spent eighty years before they came to *Mexico*, where they settled in the year 900: but this does not agree with the picture before mention'd, or the histories of the *Indians*, who will have it to be in 1325, as has been said. The occasion of their stay was, their stopping now and then in obedience to an idol of theirs, to people some places; whence they afterwards departed by order of the said idol. I speak according to their histories and traditions. They came not all together to the lake of *Mexico*, but one after another. The first were the *Su-chimilci*, which signifies gardeners of flowers, who settling on the south bank, founded a city of their own name. The next, a great while after, were the *Gbiacli*, that is, people of the mouths, and built a city of their own name, not far from the former. Then came the *Tapanecas*, or people of the bridge, who, fixing on the west side of the lake, encreas'd to such numbers, that their metropolis was

Founders of cities.

call'd *Azcapuzaleo*, that is, *Ants-nest*. They were a long time very powerful.

Then came the founders of *Tefuco*, call'd *Culbua*, or the *Crooked People*, because in their country they had a crooked mountain, and planted towards the east. The lake being thus beset by these four nations, when the fifth family of the *Tlatelucas*, that is, ignorant mountain-people, came, finding all the plains as far as the mountains taken up, they went away to a fruitful hot plain beyond the mountains, and there built the city *Quahuac*, which signifies an eagle, and is at present corruptly call'd *Quernavaca*, and is the chief place of the estate of the marquis de *Valle*, and duke of *Monteleon*. The sixth generation was that of the *Tlascaltecas*, which signifies people of bread (in *English* generally call'd *Tlascallans*) who passing beyond that burning mountain, always cover'd with snow, which is between *Mexico* and *Puebla de los Angeles*, or the city of angels, founded many cities and villages to the eastward, calling the metropolis *Tlascala*. This nation afterwards assisted the *Spaniards* to subdue *Mexico*, and in requital was made tax-free.

Of all the *Chichimecas*, or wild people, none oppos'd the *Tlascallans* but the inhabitants of the opposite side of the aforesaid burning mountain; but they, not regarding the gigantic stature of their enemies, knew how to overcome them by policy. The barbarous *Chichimecas*, seeing these six nations keep a friendly correspondence with one another, contracting marriages together, marking out their borders, and vying to outdo one another in good government; they also began to take up a better form of living, covering their privities, building huts, obeying their superiors, and forsaking many of their brutal customs. However, they resolv'd still to keep in the mountains, remote from any commerce with the others; and from these, 'tis believ'd, the inhabitants of the other provinces of the *Indies* derive their original.

After the aforesaid six nations had been settled there three hundred and two years (according to the computation of *F. Acosta* above cited) came the sixth, call'd *Mexicans*, from their prince *Mexi*. This nation departed from its ancient country, upon the fatal promise made 'em by their idol *Viracipuztli*, that he would conduct them to a place where they should have the command over all the provinces peopled by the other nations; whereupon there's an author who is not aham'd to make a comparison between this people's travels and those of the children of *Israel* in the desert. Four priests declar'd the idol's will on the way, making all the multitude at their beck settle in several

ral places, build houses, and sow for some time, and persuading them to offer human sacrifices to their false deity. Then departing from those places by order of the idol, they left the old and sick behind to people them, if possible. Once the *Mexicans* settled at *Mecboacan*, that is, *land of fish*, because of the great plenty there is in its lakes; and having made many villages there, went on to inhabit *Motinalco*, the inhabitants of which place are reputed to be defended of a great forcerer left there in the temple. Being at length come to *Chapultepec*, they there fortified themselves, and in a short time overthrew and reduced the other six nations to a low condition; especially the *Chalcos*, who oppos'd and made war upon them.

The time appointed by the father of lies, ador'd in that idol, being come, *Vitzilipuzli* appear'd to one of those priests in a dream, and told him, the *Mexicans* must go and settle their abode in that part of the lake where they found an eagle perching upon a fig-tree, whose root was upon a rock. Having told this vision in the morning, they all went together in search of this sign given, and after some time spent, found a fig-tree growing out of a rock, and on it a most beautiful eagle, looking upon the sun, with her wings display'd, and holding a pretty little bird in her talons, and about her many others, some white, some green, some red, yellow, and blue. Upon this sight they all fell down to pay their adoration, and presently began to build their city, which they call'd *Tenochtitlan*, that is, *fig-tree on a rock*. For this reason, to this day, the arms of the city of *Mexico* are an eagle with her wings display'd, looking on the sun, holding a snake in her talons, and standing with one foot on a branch of an *Indian* fig-tree; and besides, by grant of the emperor *Charles V.*, a castle on a field *azure*, to denote the lake, with a bridge to it, and two others on the sides that do not touch it, on which are two lions rampant; in base two green fig-leaves in a field *or*.

The next day the *Mexicans* thought fit to build a tabernacle to place their idol in, till they could have leisure to erect a stately temple, when the city was finish'd. This done, the idol order'd, by the mouth of his priests, that all the *Mexicans* should divide themselves into four parts, leaving the tabernacle in the middle; and these are the four great quarters of *Mexico*, now call'd of *St. John*, of *St. Mary Redonda*, of the round, of *St. Paul*, and of *St. Sebastian*. After this division, he directed every quarter should make themselves an idol, and subdivide into other small wards: and thus, from a small beginning, the city of *Mexico*

grew up to its height; as more plainly GEMEL appears by the foremention'd cut.

See cut, page 487.

Next the *Mexicans* perceiv'd 'twas necessary for them to have a head, who should govern them, and study the means of preserving what they had got, and extending their empire over their neighbours. Accordingly they chose a youth call'd *Acamapichilli*, the son of a *Mexican* prince by the daughter of the king of *Culhuacan*, which name signifies a dog in the fist; and this they did to appease that king, who had been highly provoked by them, by killing and fleeing the daughter of his predecessor. From that time forward they began to have a form of government, and to be look'd upon by strangers; so that the neighbouring people envying their honour, endeavour'd to destroy them, particularly the *Tapaneas* of *Azacapuzalco*, to whose king the *Mexicans* paid tribute, as being the last that came to inhabit there. The king of *Azacapuzalco* seeking a pretence to break the peace, sent word to *Acamapichilli*, that the tribute was too small, and therefore, for the future, he should send him all materials for building his city, and every year a certain quantity of grain, but it must be such as grew within the water of the lake; otherwise he would destroy his kingdom. The *Mexicans* looking upon this as impossible, were very much concern'd; but their god appearing, encourag'd them to admit the condition of the tribute, for he would be aiding to them. To conclude, the next year they carried that king a floating garden, with several greens growing on it, besides timber for building; and such a floating piece of land on the lake is carefully cultivated to this day. They lay rushes and long grass interwoven together on the water, with earth upon them, which bears out the water, and when the seed there sown is grown up and ripe, they cut the roots of the rushes and grass grown in the water, and then carry the floating garden where they please upon the lake. The king of *Azacapuzalco*, much surpriz'd at this wonder, order'd, that the next year they should bring him such another garden, with a duck sitting on her egg, which were to be hatch'd before his face. Seeing this afterwards perform'd, and thinking it supernatural, he told his subjects, that the *Mexicans* would one day subdue all about them; yet he would not ease 'em of their tribute.

The king of *Mexico* having reign'd forty years, died without appointing his sons to succeed him; and therefore, in return for this his moderation, the chief men assembling,

GEMEL.  
L.I.  
1698.  
w

First government settled.

Acamapichilli first king.

GEMEL-<sup>LI.</sup>bling, chose one of his sons, whose name was *Huiztlauhtli*, which signifies *rich quill*, and then crown'd and anointed him with the oil wherewith they used to anoint their idols. Then they gave him to wife the daughter of the king of *Azcapuzalco*, who prevail'd with her father to change the first tribute into a couple of ducks and a little fish. The wedding was kept with great solemnity, according to custom, which was perform'd by tying one end or point of the bridegroom's cloak to the point of the bride's, to denote the matrimonial knot. The queen dying, the king did not outlive her a year, but died in the thirtieth year of his age, and thirteenth of his reign.

*Chimalpa*  
proa third  
king.

His son *Chimalpopoca* was chosen the third king, at ten years of age; adding to the ancient ceremonies of coronation, that of putting into his left hand a bow and arrow, and into his right a naked sword. There being a great scarcity of water in his kingdom, he got leave of the king of *Azcapuzalco*, his grandfather by the mother's side, to bring water from the mountain of *Chapultepec*, a league distant from *Mexico*; but the *Mexicans* having made the pipes of cane, and little or no water coming thro' them to the lake, they were so bold as to demand of that king, their friend, stone, lime, timber, and workmen to make a solid aqueduct. The *Tepanecas*, offended at it, made a bloody war upon the *Mexicans*, so that the old king died for grief, to see his grandson going to ruin, who was treacherously murder'd in his own palace.

*Tizocatl*  
4th king.

For their next king the *Mexicans* chose *Tizocatl*, which signifies *serpent of the knife*, being the son of their first king by a slave. He, to revenge the outrage committed against his predecessor, fought with the *Tepanecas*, and destroy'd 'em, plundering and ruining *Azcapuzalco*, and pursuing the people to the mountains, till he had made 'em subject to him. Then, according to custom, he divided the booty and lands of those conquer'd among his people. Nor did the course of his victories stop here, but having first subdued the inhabitants of *Tacuba* and *Cayanacan*, who lived under lords of their own, he also overthrew and destroy'd the *Suckimilcas*, first inhabitants of the lake, as was said before, obliging them to make a causeway on the lake to join communication with their city, which was four leagues from *Mexico*. Next, he bent his force against the city *Cuiclavaca*, the king whereof voluntarily submitting, own'd him for his sovereign. And thus *Mexico* gained the sovereignty over all the towns and people about it.

*Tizocatl* having reigned thus prosperously twelve years, died; and the general under

whose conduct these conquests had been made, whose name was *Tlacaellel*, and who was his nephew, took care to assemble the electors, which were the kings of *Tescuco* and *Tacuba*, and four others, to appoint a new king. *Moteczuma*, the general's nephew, was elected. He first instituted the barbarous custom, that no king should be crown'd till he had sacrific'd some captives taken by himself in war; and therefore a quarrel being pick'd with the province of *Chalco* for this very purpose, he in person took several prisoners, and then sacrific'd 'em at *Mexico*, upon his coronation-day. This sacrifice was perform'd by ripping open the breast of the captive with a knife made of flint, and taking out the heart immediately, which was thrown into the face of the idol, whilst 'twas yet leaping. To this he added the drawing of some blood out of his ears, and other parts, before the fire-pan they call'd divine, which serv'd in their abominable sacrifices. Then he bestow'd great larges among the people, and receiv'd the tribute of the provinces. Having subdued *Chalco*, he undertook to extend his empire, by the advice of his uncle, who was always of opinion not to conquer the neighbouring province of *Tlascala*, that it might serve to sharpen the courage of their youth in war, and to furnish prisoners to sacrifice to the idol. This king erected a stately palace for himself, and a sumptuous temple for his god, and erected several courts. He died when he had reign'd twenty-eight years.

The four electors meeting with the kings of *Tescuco*, and *Tacuba*, chose *Tlacaellel*, who would not accept of the crown, saying it was better for the publick, that another should reign, and he assist him with his service and advice. This generosity, which shew'd the barbarian was much superior to *Cesar*, who, through ambition, depriv'd his country of its liberty, mov'd the electors to leave it to him to make whom he pleas'd king, and he nam'd *Ticbo-chu*, son to the king decess'd. *Ticbo-chu* appearing to be no soldier, the *Mexicans* poison'd him, raising his brother *Axayacac* to the throne, by the advice of *Tlacaellel*, who dying with age, recommending his son to the new king, who in gratitude made him his general.

Before his coronation, *Axayacac* march'd against the province of *Tlaxuanpetec*; and in a short time plunder'd it and subdu'd it. In his return coming to a battle with the lord of *Tlaxcaluco* (where at present is the church of St. James) he slew him, and level'd his city with the ground. This king dy'd when he had reign'd eleven years.

After him *Ahuizotl*, the 8th king ascend'd the throne, but before his coronation, he went according to custom, to punish the

*Quasatlans*, who had taken the tribute, as it was coming to *Mexico* on the road. He extended the borders of his kingdom, as far as *Guatemala*, and encompass'd *Mexico* with water, by bringing to it an arm of the river that ran by *Cuyapacan*. This man, at the dedication of the temple to the idol *Huitzilopochtli* (which was in the year 1486) sacrific'd in the space of four days follow- ing 64080 men; six millions of people re- sorting to the festival, as the *Mexican* his- tories tell us. 'His *Indian Nero* dy'd in the eleventh year of his reign.

After him was chosen *Montezuma*, whom the *Spaniards* found there, when they came to *Mexico*, his name in their language sig- nifying a wife lord; because he, before his exaltation to the throne, was grave, and majestick, a man of few words, and dis- creet, which made him much honour'd and fear'd. Besides, he had refus'd the crown, retiring into the temple of the idol, where he had a solitary apartment; so that the electors were fain to go thither to per- suade, and bring him to the empire, with extraordinary modesty. When once a king, he chang'd his humility and meekness into such pride, that he order'd all places and employments about the court, should be taken from commoners, and nobles to come in their stead. Before his coronation, with the assistance of the nobility, he march'd to reduce a northern province that had re- volted, and brought him a rich booty, and many prisoners for sacrifice. At his return he was receiv'd with great joy by his sub- jects, and crown'd in great state, with a- bundance of tributes from the conquer'd countries.

If the royal standard happen'd to be lost, those people us'd to retire without pro- secuting the battle; as it happened at *Otumba*, where *Cortes* and his *Spaniards* pursu'd the flying *Mexicans*; the same they did, if the king was kill'd, to celebrate his funeral, ceasing from all labour. *Montezuma* made his subjects adore, rather than respect him; he was always carry'd on the shoulders of great men; never wore one garment twice, or eat or drank out of the same vessel. He kept in his palace all sorts of birds and beasts, and sea-fish in his salt-fish ponds, and river-fish in fresh water. If any kind could not be had, he kept them in gold, and for grandeur. He was very precise in

exacting punctual duty from his subjects; *GEMEL- LI*. and therefore sometimes went abroad in dis- guise, to see whether his orders were obey'd. 1693. Lastly, he seldom appear'd in publick, to avoid creating familiarity.

The downfall of the empire now drawing near; several signs appearing as blazing stars and pyramidal fire in the sky, mon- sters on the earth, and prodigies in the lake; *Montezuma*, tho' at first he had treat- ed the astrologers hardly (who foretold some great calamity; and the magicians who related dreadful visions) being at last brought to repentance, retir'd to a solitary house, expecting his ruin, to be wrought by the children of the sun, coming from the east, according to ancient predictions. In the fourteenth year of his reign, the *Spaniards* came from the northern sea in several ships, subdu'd *Mexico*, took *Montezuma* prisoner, and afterwards the *Inga* of *Peru* and *Cusco*, which last was lord of a country a thousand leagues in length from the kingdom of *Chile*, beyond that of *Quito*; and the first from the north, to the south-sea; and look'd upon more like Gods than men. Among other enormities the *Inga* was guilty of, he would marry his own sisters, whose son af- terwards inherited the crown, as born of the *Coya*, or first heirs; but if the king deceas'd left ever a brother, he was prefer- red before his nephew. Whilst *Montezuma* was still alive, the *Mexicans* chose *Quauhtimoc* for their king, who dy'd a prisoner to *Cortes*.

It is to be observ'd that the succession of the crown of *Mexico*, went to the collateral line, not the immediate issue, age taking the preference; the second, third, fourth, and so to the last brother, being chose after the first; and for want of them, they be- gan with the eldest son of the eldest brother, and so to the second, third, and so forth. At first the choice belong'd to all the peo- ple; but afterwards by the advice of *Tlacel- lel*, in the reign of *Yzcoatl* the fourth king, it was committed to only four electors of the blood royal, and the two kings of *Tecuco* and *Tacuba*; the first of which perform- ed the ceremony of the coronation. As long as the kings of *Mexico* were poor, they were moderate in their expence and atten- dance, but as they grew powerful, they be- came haughty, tyrannical and stateful.

## CHAP. IV.

Of the comparison some writers make between the Mexican monarchy, and the vision in the 13th chap. of St. John.

I have dilated a little upon the origin of the seven generations, and the genealo- gy of the ten kings of *Mexico*; that the in- Vol. IV.

genious and discreet reader, may in this chapter conceive how some persons came to take this monarchy, for the beast describ'd by

GEMEL by St. John, in the 13th chapter of his revelation; with no less reason than others did the Roman monarchy; for they considering the lake of Mexico, say the lake of Chalco, 1. makes the head and neck, 2. a rock, the eye; 3. another rock, the ear, 4. the caufway, the collar, 5. the lake on which Mexico is built, the stomach, 6. the feet they say are the four rivers, 7. the body, the great lake of Mexico, 8. the wings, the two rivers of Tefuco and Papatola, 9. the tail, the lake of St. Christopher and Xaltocan, 10. the horns, the two rivers of Tlamanako, Tepeapulco. And then the other lakes lying confusedly, they say they were made by the flaver of the beast.

See Cut, Page 490.

Now follows the resemblance between the Mexican monarchy and its religion, and the same beast.

The seven generations or nations inhabiting it, are, the seven heads.

Which together make 666, the number of the beast.

For the better understanding hereof, it is to be observ'd, that the Mexican language uses but 15 letters (not being able to pronounce the rest) to which applying the numbers, from one to fifteen, and these to the names of the kings, casting up every one apart, and then adding all the sums together, they make the just number of 666. To make this the plainer, I first set down the fifteen letters, and the numbers answering to them under; then the names of the kings, with each figure to each letter; then cast up the particulars, and the total of all those sums, is 666. This will appear by the calculation of every king's name, according to the Indian histories, quoted by Arrigo Martinez, at the end of his register of times, printed at Mexico in the beginning of the last age.

1698.

## CHAP. V.

Of the Mexican months, years and age, and of their hieroglyphicks.

Mexican  
age.

FOR want of letters, the ingenious Mexicans us'd symbols, or hieroglyphicks, to express corporeal things, which have a shape; and for other things, other proper characters; and so, for the benefit of posterity, they noted down all that happened. As for instance, to denote the coming of the Spaniards, they painted a man with his hair and cloaths red, in the sign of a cane, which betoken'd that year. Their way of writing was from the bottom of the board or paper upwards, directly contrary to the Chinese. They had certain rounds or circles painted, which contain'd the space of an age, divided into years with the proper symbols; to set down there the time when remarkable things happen'd, with the proper figures and characters. This age consisted of fifty two solar years, of 365 days each. The wheel, circle or round, was divided into four parts, each containing thirteen years, and answer'd to one of the four parts of the world, after the following manner.

A snake turn'd it self round into a circle, and in the body of the serpent there were four divisions. The first denoted the south, in that language call'd *Uutzilampa*, whose hieroglyphick was a rabbit in a blew field, which they call'd *Tocbtli*. Lower was the part that signify'd the east, call'd *Tlacopa*, or *Tlahuicopa*, denoted by a cane in a red field, call'd *Acatl*. The hieroglyphick of the north, or *Micolampa*, was a sword pointed with flint, call'd *Tecpall*, in a yellow field. That of the west, or *Sibuatlampa*, was a house in a green field, and call'd *Cagli*.

These four divisions were the beginning of the four terms that made up the age. Between every two, on the inside of the snake, there were twelve small divisions, among which the four first names or figures were successively distributed, giving every one its number to thirteen, which was the number of years that compos'd an indiction; the like was done in the second indiction, with the same names from one to thirteen, and so in the third and fourth, till they finish'd the circle of fifty two years, as follows.

This way of reckoning by thirteen, was not only observ'd in their years, but in their months; for tho' their month was of twenty days, yet when they came to the number thirteen they began again. To endeavour to find out the reason why they did so, is aiming at an impossibility, but perhaps they might in this particular follow their calculation of the moon. They divided the lunar motion into two times, the first of watching, from the *Heliacal*, or solar rising, till the opposition, which was of thirteen days; and the other of sleep, of the same number of days, till the morning setting.

This extravagant computation of the moon, was grounded upon a fable, which is, That the Gods having resolv'd to destroy the darkness that cover'd the world; two of them undertook this work, which were *Tecucistecatl*, and *Nanabuatzin*. These, after making great preparations at *Teotihuacan*, a place now call'd *Tzacagli*, having cast themselves into the fire of a burning rock, call'd *Tutexcagli*, and being converted into ashes, within a short while after appear'd in the east, *Nanabuatzin* become the sun, and *Tecucistecatl* the moon. At first they had no motion, but afterwards the wind, by order of the Gods, began to move them; but after a different manner, for at the end of thirteen days, the sun being come to the west, the moon began to appear in the east. This being so unlikely, they might perhaps say so, to give every one of their greater Gods, which were thirteen, the government and dominion of their years and days;

GEMEL-days; but the *Mexicans* themselves are ignorant of both.

1698.

From what has been said above there arise several doubts; the first is, why they begin to reckon their years from the south; the second, why they made use of the four figures, of a rabbit, a cane, a flint, and a house. To the first they answer, that when the gods had resolv'd at *Teotihuacan* to take away the great darkness, and *Nanabualzin* and *Teotihuacan*, by means of the fire, were converted into sun and moon, the rest of the gods set themselves to observe from what quarter of heaven the light would first appear; wherein they were of sundry opinions, some affirming 'twould come from the north; others, from the south; others, from the east; and others, from the west (as if the names of east and west, &c. had been invented before the sun had enlightned the earth) but that at length 'twas seen to come out of the south. Moreover, the ancient *Mexicans* believing the world would end with their age, among other ceremonies, on the last day of it, they knelt on the tops of their houses, with their faces to the east, doubtfully expecting to see whether the sun would continue his course, and whether the end of the world was come; and since in this posture they must of necessity have the south on their right hand, they thence argu'd that the light began from the south. To this may be added that the *Mexicans* firmly believ'd hell to be in the north, and therefore it was not proper that the sun should have commenced his course from thence, but from the opposite part, where the Gods *Vitiznaoa* dwelt, in respect to whom they call'd the south *Vitizlampi*.

They also said it was a benefit of those same gods, that the age was renew'd, because time naturally would end with the old sun; and that the sun of the new age was a new sun, that was to follow the course of nature, which every year made the trees green, after *January* (as is observ'd in that climate) when the sun was come away from the south, which is the habitation of the Gods. Having found this analogy between the age and the year, they would carry the similitude, or proportion, on further, and, as in the year there are four seasons, so they would adapt the like to the age; and accordingly they appointed *Tochtli* for its beginning in the south, as it were the spring and youth of the sun's age; *Acatl* for summer, *Tecpatl* for autumn, and *Cagli* for his old age, or winter.

These figures so dispos'd, were also the hieroglyphicks of the four elements, which is the second doubt; for *Tochtli* was dedicated to *Tevacayobua* God of the earth, *Acatl* to *Tlalzacatub* God of the water,

*Tecpatl* to *Chetzacatub* God of the air, and *Cagli* to *Xibicubil* God of the fire. Perhaps they meant to express the nature of the four cardinal winds, which were the only ones they knew, and this in honour of *Chetzacatub* God of the winds, who, as was said before, gave the first motion to the sun and moon. Whatsoever the reason of it was, 'tis certain that *Neptune*, whom they call'd *Teucipalli* was the inventor of these hieroglyphicks and method of disposing them, to the end that every man, without any other study, might know the number of years that made an age; the distinction of the indictions in what year it happened; the succession of their kings, and other things of note.

Their solar year consisted of 365 days, <sup>Mexican</sup> according to the form of the <sup>Years,</sup> *Egyptian* priests, which had its original from *Noah*, after the flood, as *Berosus* tells us (if it be true, that the books which now go under his name, were writ by that ancient chaldean) who writes thus. He also taught them (that is, the priests) the course of the stars, and ordain'd the year according to the course of the sun (for which reason he was thought to partake of the divine nature.) For which things (says the same author) they thought him to partake of the divine nature, and therefore call'd him *Ouibama* and *Asia*, that is, heaven and the sun. However, others differ in opinion, concerning the great diversity of years among the *Egyptians*; 'tis certain other nations had the same year of 365 days, but they learnt it of the *Egyptians*, who preserv'd the knowledge deliver'd by *Noah*, by means of his son *Cham*, or *Ham*. Now the *Mexicans* must of necessity follow the same doctrine, being originally descended from *Neptune*, who cannot be thought to have given them any other instructions, but what he learnt of his father *Mefraim*, who had them from *Cham*, or *Ham*, and from his grandfather *Noah*, among the inhabitants of *Egypt*.

As for the months, though some of the <sup>their</sup> off-spring of *Noah* reckon'd them after several manners, some allowing twenty eight days, some twenty nine, others thirty, and thirty one, and not always after the same manner; yet the *Mexicans* still following the same *Egyptians*, made their month regular, not of thirty, but of twenty days; but this turn'd to the same account, putting eighteen *Mexican* months of twenty days each, to twelve *Egyptian* months of thirty days. The names of the months are as follows. 1. *Tlacaxipe hua liztli*, 2. *Tozoztli*, 3. *Hueytozoztli*, 4. *Toxcatl*, 5. *Etzalcualiztli*, 6. *Ticuyil buil*, 7. *Hueytecuil buil*, 8. *Micayil buil*, 9. *Hueymicayil buil*, 10. *Ocapaniztli*, 11. *Pacbil*, 12. *Hueypacbil*, 13. *Cbeciogil*, 14. *Panabetzaliztli*,

*cbetzalitzli*, 15. *Atemoztli*, 16. *Tititl*, 17. *Tecaglli*, 18. *Atlacaco*, as may be seen by their characters upon the inner circle of the figure.

Their  
days.

Every one of the twenty days had its proper name, which were, *Cipaëlli*, *Cecatl*, *Caglicuetzapaglin*, *Coatl*, *Micbiztli*, *Marzatl*, *Tocbtli*, *Atl*, *Itzcuintli*, *Ozomatli*, *Malinagli*, *Acatl*, *Ocelotl*, *Quauhtli*, *Cozcaquauhtli*, *Ozlin*, *Tecpatl*, *Quabutli*, and *Xocitl*.

Noweeks.

These months were not divided into weeks, because these began among the *Hebrews* in the time of *Moses*, in memory of the days of the creation, long after the institution of the *Mexican* circle; or, as others will have it, was invented soon after by the *Babylonians*, to distinguish the days by the seven planets, and the dominion they assign'd them over the unequal hours, whereof they were the first observers. I said the days were also counted by the *Mexicans* by thirteens, though there were twenty in a month. This was done to avoid confusion; for giving the name of any day, according to this method, with the number answerable to it in this order of thirteen and thirteen, they knew what month it belong'd to, without ever mistaking. Besides this division by thirteen, there was another, of five and five days, on which they made *Tinguez*, as is still practis'd in several places, and this was on the third, eighth, thirteenth, and eighteenth of every month, being days dedicated to the four figures *Tocbtli*, *Acatl*, *Tecpatl*, and *Cagli*, and this rule was always the same, though the years did not begin with *Tocbtli*.

See Cut Page 493.

This further makes out the great resemblance with the *Egyptian* computation; for as these, to twelve months (which they call'd *Tuotli*, *Phaophi*, *Atbyr*, *Cear*, *Tybi*, *Mecir*, *Phamenoth*, *Pharmuthi*, *Phaicon*, *Paymi*, *Epephi*, and *Mejori*) which made three hundred and sixty days, added five days more, which they call'd *Epagomeni*, to complete the circle of the sun; so the *Mexicans*, their eighteen months in like manner making three hundred and sixty days, added five days at the end of every year, and call'd them *Nonontemi*, that is, wandering, to make up the same number of three hundred sixty and five. Some think that these five days being out of the number of the months, had no particular name, and that therefore the first of every month was *Cipaëlli*. But they are much deceiv'd, for they had not only names, but were brought into their thirteens. For the better understanding hereof, let us imagine an age, the first year whereof is *Tocbtli*, to which *Cipaëlli* answers, as first day of the

first month; if the three hundred and sixty <sup>GEMEL-</sup>days, which make the eighteen months of this year, be counted round successively by 1698.

thirteen and thirteen, it will appear that the last day of the eighteenth month, will be *Xocitl*. But if the five days call'd *Nonontemi* had no name, the following year must have begun from two *Mazatl*, with ten *Cipaëlli*. Thus the reckoning of the thirteens would have been interrupted, with *Cipaëlli*, had not they been reckon'd in. The *Mexicans* to this day sufficiently solve this difficulty; saying, that the days *Cipaëlli*, *Micbiztli*, *Ozomatli*, and *Cozcaquauhtli*, are companions to, that is, in all respects follow the order of the four figures that denote the years of an age, viz. *Tocbtli*, *Acatl*, *Tecpatl*, and *Cagli*; to signify that every year whose symbol is *Tocbtli*, will have *Cipaëlli* for the first day of the month; that, whose symbol or distinctive mark is *Acatl*, will have *Micbiztli* for the first of the month; *Tecpatl* will have *Ozomatli*, and *Cagli* will have *Cozcaquauhtli*. Yet this is to be farther observ'd, that the numerical value according to the thirteens, regularly counted from the beginning of the age (including the five *Nonontemi* days) will answer to that, which belongs to the first day of the year, according to the succession from *Tocbtli* forwards, as plainly appears by the draught above mention'd. The whole will be better understood after this manner. This first year of the aforementioned age the months ended with nine *Xocitl*, and the names and numbers answering to the five *Nonontemi* days, were ten *Cipaëlli*, eleven *Cecatl*, twelve *Cagli*, thirteen *Cuetzapaglin*, and one *Coatl*, which made up the year of three hundred sixty five days. Thus without breaking the order of names, the next year began *Micbiztli*, which is the day immediately following *Coatl*, and continuing on with the thirteens, since the last of the five *Nonontemi* days, was the first call'd *Coatl*; this also will be the character of the first day of the second year, viz. that will be *Ome*, and this *Ome* *Micbiztli*. This is not accidental, but very regular in all the years of an age (as may be easily demonstrated) and so this second year beginning at two *Micbiztli*, will end its months at ten *Coatl*, and three hundred sixty five days at two *Itzcuintli*, so the following third year *Tecpatl*, will begin at three *Ozomatli*, and the next being the fourth *Cagli*, at four *Cozcaquauhtli*, and so on in the rest, till the thirteen is out. By this it appears, that the four days *Cipaëlli*, &c. did not only answer to the four symbols of the years *Tocbtli*, &c. but that they had also the same numerical denomination, deriv'd from the thirteens.

They therefore, who know how much almost all the eastern nations err'd in this particular,

GEMEL- ticular, may be judges how much the wit  
 L. I. of the *Mexicans* deserv'd to be commend-  
 1698. ed, and look'd upon, for inventing so arti-  
 ficial and regular a circle. But this hon-  
 our is not due to the *Mexicans* of these  
 times, who are neither astrologers, nor ar-  
 rithmeticians, and therefore by their igno-  
 rance would convict me of a falsehood; but to those heathens, as we shew'd above, and to their most ancient master *Neptune*, as is learnedly observ'd by *D. Carlos de Sigüenza y Gongora*, professor of the mathematics in the university of *Mexico*, in his *Cyclographia*, where he brings texts of scripture, traditions of the *Indians*, paintings, and most notable hieroglyphicks, which had been preserv'd by *Dr. John de Alva*, lord of *Catzealga*, and of *S. John Teotihuacan*, who inherited them from his forefathers, kings of *Tezcuc*, from whom he was lineally descended by the males; and they were left in the hands of *D. Carlos* his executor. It is most certain the like is not to be found in all *New Spain*; because the *Spaniards* at their first coming burnt all they found; for seeing them without letters, and with such variety of figures, they look'd upon them as superstitious. *Monseñor Sumaria*, first bishop of *Mexico*, made an end of destroying what remain'd, and broke abundance of old idols; so that the figure of the *Mexican* year, and other antiquities of the *Indians* which follow in this volume, are all owing to the industry and courtesy of the aforesaid *D. Carlos* de

*Sigüenza*, who presented me with these extraordinary rarities.

They order'd the bissextile, or leap year, after this manner. The first year of the age began on the tenth of *April*, and so did the second and third, but the fourth or leap year, on the ninth, the eighth on the eighth, the twelfth on the seventh, the sixteenth on the sixth, till the end of the age, which was on the twenty eighth of *March*, when the thirteen days of the leap years, till the tenth of *April*, were spent in rejoicing.

Before the new age began, they broke their vessels, and put out the fire; supposing that since the world was to end with an age, perhaps that might be it. When the first day appear'd, they solemniz'd it with drums and other instruments they us'd; giving thanks to God, for having granted them another age; they bought new vessels, and receiv'd the new fire, from the high priest in solemn procession.

The people of *Peru* reckon'd by moons, Year and twelve months with as many days as we *Peru* do, and besides began their year at *January*, but afterwards one of their kings would have it to begin at *December*. They plac'd about the city *Cuzco*, which was the court of the *Inca* kings, twelve pillars, at such distances, and in such order, that each of them, every month, should point out the sun's rising and setting; and thus they regulated their festivals, and the seasons sowing and reaping, every pillar having its proper name.

## CHAP. VI.

*Of the horrid sacrifices the Indians offer'd to their idols, and of their festivals and habit.*

Sacrifice  
to Tezcuc-  
tlican.

THE *Mexicans* kept as it were a jubilee every fourth year, on the nineteenth of *May*, on which was the festival of the idol *Tezcucatlucan*. They fasted five days before it, and the priests abstain'd from their wives, and went about beating themselves in a penitential habit. All other people were clad after the same manner, and went in procession begging one another's pardon. Upon the day appointed a slave that was like the statue of the idol was sacrific'd, and others with him, ripping open their breasts, as was said before, and casting the hearts still alive, upon the idol's face. These captives, to make them the more miserable, were fatt'd up some days before, and worship'd about the city like Gods.

To Quetzal-  
za a le-  
stat.

The festival they kept in honour of their God, *Quetzalza a lestat*, was yet more detestable. Forty days before it, they bought a sound slave without any blemish, and

clad him in the idol's garments, that he might be honour'd. Nine days before the solemnity, two old men came from the temple, to tell him he was to die, and seeing him concern'd, they went and wash'd the knives of the sacrifice, and the blood they took off them they gave the wretch to drink mixt with cacao; believing that would cause him not to fear death. The festival day being come, they ripped open his breast, at midnight, and taking out his heart, offer'd it to the moon, and then to the idol. The body they threw down the steps of the temple; where the buyers took it up, and carrying it to the house of the chiefest among them, the next day made a plentiful feast.

There was another sort of sacrifice call'd *Racaxipe Valzili*, which signifies fleaing of people; because they flead a slave, and cloathing another in his skin, led him about the city, begging for the temple, and striking

striking those who gave nothing, over the face with some of the skin, as long as it was found. Other times they clad several slaves with the idol's garments, a whole year before the festival, leading them in the day-time about the city, that they might be ador'd like the idols, and keeping them shut up at night, feeding them plentifully. At the year's end they sacrific'd them, and substituted others in their places. Some years they butcher'd to the number of twenty thousand; for the barbarous priests would go tell the king, that the idols had nothing to eat, and were starving with hunger; and for this reason they made war to get prisoners to sacrifice. Four priests held the victims by the hands and feet, another ripp'd open the breast, and took out the heart, and another held up the neck, having first laid him with his back on a sharp stone.

In Peru they also sacrificed children from four to ten years of age, for the Inga's health; and so did sons for their parents when desperately sick, offering them to the sun, or Viracocha; stifling, or cutting their throats.

The most famous idols in Mexico, next to *Vitziliputzli*, were *Tescatepcca*, and *Huicilobos*, to whom they sacrificed every year two thousand five hundred men, fatted in pens. The offering was only of the foreheads, ears, tongues, lips, arms, legs, and other extreme parts. The temples were built after the manner of the pyramids of Egypt, ascending by stairs, and for the most part of clay; the idol being placed at the top in a tabernacle, near which was a place apart, to lay the heads of the victims. Close by the temple, there were apartments for the priests.

They had an idol of rain call'd *Tlaloc*, that is, fertilizer of the earth. His figure was of the common stature of a man, with a frightful face; and they often anointed him with a liquor, call'd *Oboli*, which distils from certain trees. All his ornaments were hieroglyphicks of rain, and plenty; for in his right hand, he held a plate of beaten gold, signifying the lightning; in his left a round border of blew feathers, garnish'd with I know not what sort of thing like a net. His garment was also of blew feathers, with such trimming at the edges, and another made of hares and rabbits wool, like white half moons. On his head was a great tuft of white and green feathers, signifying the green fruit, and leaves; about his neck a collar of buck's skin, his legs colour'd yellow, with gold horse-bells about them. This was the Indian hieroglyphick to denote rain. The whole may be seen more exactly in the adjoining cut.

See Cut Page 495.

In Peru, besides adoring the statue of *GEMEL* the *Inga*, when he dy'd, thousands of his favourite concubines and servants were kill'd, to serve him in the other world; and vast treasures were bury'd with him, that he might make use of them upon occasion. The other *Indians*, besides all this, placed meat near the tombs, believing the dead would eat. Besides, having performed the obsequies with abundance of ceremonies, they cloath'd the dead body in its robes or garment, that denoted its dignity, and then bury'd it in the court, or having burnt it, kept the ashes in an honourable place.

As for the manner of cloathing it, it was no less barbarous. The soldiers, that they might appear the more dreadful to their enemies, stain'd their naked body; or else cover'd it with a whole lion's, or tiger's skin, placing the head of the beast upon their own. They hung across them like a shoulder belt, a string of men's hearts, noses and ears, with a head at the end; and in their hands carry'd such things as may be seen in the cut.

See Cut Page 495.

The habit of the king and princes of the blood was not amiss, if compar'd with that of the common sort; but it was less commendable for the practice in use among them, of boring their under-lip, for to stick a gold nail or some other jewel in it, as appears by the cuts, copy'd from originals of great antiquity, which are in the custody of *D. Carlos Siguenza*, before spoken of.

The habit of the *Indians* at present, is a short doublet, and wide breeches. On their shoulders they wear a cloak of several colours, which they call *Tilma*, and, which crossing under the right arm, is ty'd upon the left shoulder, the two ends making a great knot. Instead of shoes, they wear sandals, like those of the *Franciscan* fathers, the rest being bare-footed, and bare-legg'd, as they are. But they will never part with their hair, though they were quite naked, or in rags. The women all wear the *Guaipil* (which is like a sack) under the *Cobaxa*, which is a fine white cotton cloth; to which they add another upon their back, when they are abroad, which when in the church they place upon their head. Their coats are narrow with figures of lions, birds, and other creatures, adorning them with curious ducks feathers, which they call *Xilotepec*.

All, as well men as women, are of a dark colour, notwithstanding their endeavours to defend their faces against the cold, and to make them fair with herbs pounded. They use also to daub their heads with thin clay,

such

GEMEL- such as they use in their buildings, thinking  
L1. it refreshes the head, and makes the hair  
1698. black and soft; so that several country-

women are seen about the city in that dirty condition. The *Mestizo*, *Mulatto*, and *Black* women, which are the greatest number in *Mexico*, not being allow'd to wear veils, or be cloth'd after the *Spanish* fashion, and scorning on the other side the *Indian* habit, go in an extravagant garb, wearing a thing like a petticoat across their shoulders, or on their head, like a cloak, which makes 'em look like so many devils.

All the *Blacks* and *Mulattos* are insolent to the highest degree, and take upon 'em as much as *Spaniards*, whose habit they wear; so, among themselves, they take the title of captain, tho' they be not so; nor can there be many in *Mexico*, where there's but one only company of *Spaniards*, and a few of militia in case of need. This rabble of *Blacks* and *Tawneys* is so encreas'd, that 'tis fear'd they may one day rebel, and make themselves masters of the country, unless the carrying off so many *Blacks* be obstructed by farming it.

Genus of  
the Indi-  
ans.

The *Indians* at present are nothing near so ingenious as they were formerly, when they successfully apply'd themselves to the liberal arts and mechanicks; but now they are altogether devoted to idleness, and apply themselves to nothing but cheating. Yet those that apply themselves to any trade

shew they are very capable. Some make several figures of nothing but feathers of several colours, of a bird the *Spaniards* call *Chupastor*, that is, *Sub-flower*, of which sort I have one; others work curiously in wood, and others contrive to deceive ducks, as shy as they are; for when they have us'd 'em to be frequently among calabashes left floating on the lake for that purpose, they make holes in those calabashes, so that putting their heads in them, they can see out of them, and then going up to the neck in the water, they go among the ducks, and draw 'em down by the feet.

The *Indians* are naturally very fearful; <sup>their vi-</sup> but excessive cruel, if well back'd. <sup>ces.</sup> The vices the *Spaniards* generally charge them with are, first, the want of sense of honour (for they make nothing of robbing one another of it, besides the incests they commit with their mothers and sisters) being beastly in eating, lying on the bare ground, and dying without any concern. They are very great thieves, cheats, and impostors; but, above all, the *Mulattos*, among an hundred of whom 'tis hard to find an honest fair-dealing man. On the other side, the poor *Indians* are worse than slaves, for only they work in the mines; and what is worse, all they get is taken from 'em by the governors and other officers, notwithstanding all the daily threats that come from court.

## CHAP. VII.

*The author gives an account of the most remarkable things he saw in Mexico.*

THESE being a great dearth in *New Spain*, by reason the harvest had not answer'd the foregoing years, and the scarcity being great, upon *Tuesday* the 12th of *March*, there happen'd on that day a sort of mutiny, abundance of the rabble going that day under the viceroy's windows to demand bread; this accident rais'd such a jealousy in him, that he caus'd several *Pederos* to be planted about at the loop-holes, to be able to make the better resistance, and not suffer the crowd to approach, perhaps to burn the palace, as they did in the year 1692, when the count of *Galve* was viceroy, firing the market-place at the same time, where many vast rich shops were burnt. To remedy this evil, the viceroy, on the 13th, sent out his orders and circular letters to the farmers, and other wealthy persons, for them to bring into the city all the corn that possibly they could; for at that time they eat small loaves, which cost about three pence, and were not worth a penny.

Some *Indians* having lain with a mother <sup>Malefic</sup> and a daughter, and then robb'd and mur- <sup>der'd</sup> 'em, two leagues from the city, two <sup>with'd.</sup> of 'em were executed upon *Thursday* the 14th. With them was brought another, who had been taken two hours before opening a shop with a false key, to rob it. This man, after receiving two hundred lashes on his back, was mark'd with a red-hot iron under the gallows, besides the punishment he was to receive after his trial, the viceroy being very severe in punishing thieves.

*Friday* the 15th of *March*, a devout pro- <sup>A Proce-</sup> cession in honour of our Saviour's passion <sup>sion.</sup> set out from the royal hospital erected by the king, with a revenue of eight thousand pieces of eight, for the sick *Indians*. Above an hundred brothers went first, in a penitential habit; then the nobility, and then other penitents; then follow'd a company of soldiers clad in black, with head-pieces on, and trailing their pikes; and in the midst of them was one on horseback carrying

rying a tunick hanging to a spear, repre-  
sented that of our Saviour; but there were  
very few musicians. This procession must  
infallibly be made, because the king has gi-  
ven a particular order for it.

Saturday 16th, I went out to shoot  
thrushes, there being abundance of them  
of several sorts, black, white, and speckled  
with red. At my return I went to the  
royal court, to hear the trial of my friend  
D. Antony Gomez. Being there in the gal-  
lery of the court, I saw the vice-oy go into  
the criminal court, and take his seat upon  
the same bench with the Oydores, or judges.

Sunday 17th, I went to the royal hospital,  
to see an indifferent-large theatre, where  
plays are acted, and the profit of them goes  
to the maintenance of the hospital. Mon-  
day 18th, I heard mass in the cathedral,  
which is large, and has three vaulted isles  
supported on high pillars of stone: the  
structure is not yet finish'd, but is carried  
on at the king's charge, who, besides an  
allowance out of his own revenue, has as-  
sign'd it a tax of half a rial a head through-  
out the diocese; and therefore the arch-  
bishop lives in a house the king pays for  
over against the mint. In the midst of it  
is the choir, curiously carv'd in sweetwood,  
with beautiful figures and feuillage, and  
four fine altars in the arms of the cross.  
About the church there are several chapels,  
gilt and vastly rich, nothing inferior to the  
famous high altar. The front is extraordi-  
nary noble, with three gates, besides five  
others on the sides. Historians tell us, that  
this church was founded by the marquis  
D. Ferdinand Cortes, on the very same  
ground where the heathen great temple  
stood; but others, from ancient paintings  
and draughts, prove that temple stood  
where now the college of St. Ildefonsus is.  
However it is, this was made a bishoprick  
on the 13th of October 1625, and an arch-  
bishoprick on the 13th of January 1645.  
It has eleven suffragan bishops, which are  
those of Puebla de los Angeles, or the city  
of angels, Mechoacan, Huxacca, Guadala-  
ra, Guatimala, Tucatan, Nicaragua, Cbiapa,  
Honduras, and Nueva Biscaya, or New Bis-  
cay; of which eleven bishopricks the tenths  
only amount to 516000 pieces of eight,  
and all the profits 5160000 pieces of eight.  
There has been spent in building the church  
of Mexico, from the day 'twas founded till  
the 22d of December 1667, 1052000 pieces  
of eight, and the work is not done to this  
day.

Tuesday 19th, being St. Joseph's day, I  
went to the church of the Mertenarians.  
The altars are vastly rich, and the roof  
gilt; and the monastery is large, and ca-  
pable of abundance of religious men. Go-  
ing thence, I met the blessed sacrament

VOL. IV.

going from the cathedral to some sick bo-  
dy. 'Twas carried by a priest in a coach  
drawn by four mules, maintain'd at the  
charge of the brotherhood.

Wednesday 20th, I heard mass at the nu-  
nery of St. Clare, famous for the excellent  
sweet pastiles the nuns make. The church  
is well adorn'd, and the monastery a good  
structure.

Thursday 21st, I rode three leagues out  
of town, to see the celebrated garden of  
St. Angel, of the barefoot Carmelites. The  
fathers shew'd me the upper church, which,  
tho' small, was all a meer mass of gold.  
The lower church was also beautiful,  
and had five altars. Then we walk'd  
about all the monastery, which is so large,  
that it has not only conveniency for fifty-  
two religious men that live in it, but the  
provincial chapter has been kept there these  
hundred and eight years. The library is  
one of the best in the Indies, containing  
about twelve thousand volumes. I was then  
led to the so much renown'd garden, which  
tho' it be not above three quarters of a  
Spanish league in compass about the wall,  
yet a great river running thro' the midst of  
it, makes it so fruitful, tho' only the Eu-  
ropean trees there planted yield a revenue of  
thirteen thousand pieces of eight a year.  
There are forty several sorts of pears, which  
are sold for six pieces of eight a load; va-  
riety of apples, peaches, and quinces; for  
there are but few walnuts, chestnuts, or the  
like. The archbishop claiming the title of  
this fruit, and the fathers refusing to give it,  
as being trees planted for the use of the  
monastery; by the king's order an Oydore,  
or judge, went to count the trees, and found  
thirteen thousand, as I was inform'd by  
credible persons. The garden is seated in  
a delightful place, at the foot of vast high  
mountains. The fathers of the same col-  
lege have a good flower-garden, in which  
there are clove-trees; but these, tho' they  
produce blossoms as sweet and fragrant as  
those of the Molucco islands, yet the fruit  
comes not to perfection. There is also a  
park, fish-ponds, and curious fountains for  
the diversion of the religious.

Friday 22d, I went to see a famous nu-  
nery call'd The Conception. The nuns are  
eighty-five, and have about an hundred  
women-servants; because most of the mo-  
nasteries in New Spain not living in com-  
munity, but every nun receiving money out  
of the publick stock to maintain her, that  
is, two pieces of eight and a quarter a head  
every week, some keep five or six maids.  
The monastery accordingly is large, and  
cost some hundred thousands of pieces of  
eight building; and the church is large,  
and well adorn'd.

6 L

Saturday

GEMEL-  
LI.  
1698:  
~~~~~

Nuns.

**GEMEL-
LI.** *Saturday 23d*, I went into the neighbour-
ing church of the nuns of *St. Lazarus*, which
is also well adorn'd, has seven altars, and
the roof gilt.

**Dominic-
ans.** *Sunday 24th*, I saw the hospital of *St. Hiacinthus*, belonging to the *Dominican* mis-
sioners of *Manila*. The church is small,
but beautiful; and the *Hospitium*, or house
new built, fit to receive and entertain fifty
religious men, who are maintain'd upon the
revenue of their garden, like the college of
St. Angel, and they have money over to
send to *China*; *F. Martin Ibanez* having
told me it yields eight or nine thousand
pieces of eight a year in only herbs and fal-
lads. 'Tis to be observ'd, that the com-
pafs of the garden wall is not above the
third part of a league. Its being near the
city, makes the revenue the greater.

**Augusti-
nians.** The *Hospitium*, or house call'd *St. Nicho-
las de Villanueva*, of the *Augustinians* of the
mission of *China*, is adjoining to the other
towards *Mexico*. Here's a church, and room
to entertain forty missionaries, as I was told
by *F. Peter Flores* the procurator. This
also is maintain'd upon the revenue of the
garden.

**Incarna-
tion nuns.** *Monday 25th*, I went to the nunnery of
the *Incarnation*, where the nuns sung well
enough. They are about an hundred, and
three hundred servants: the church has se-
ven little altars, but the monastery is very
great. Passing by *St. Francis the Great* in
the afternoon, I saw half the people of the
town got together, to see the obsequies of
three persons that had been put to death
and quarter'd a month before, for horrid
crimes. The fathers of *St. John de Dios*
begg'd 'em of the court, which is usually
granted. Having placed them in the chapel
of *los Desamparados*, or of *persons for-
saken*, in their monastery, they begg'd alms
to bury and say masses for them: then they
carried 'em to *St. Francis*, where those fa-
thers perform'd their obsequies according to
custom, and then carrying them thro' the
great streets of the city, buried 'em in the
aforesaid chapel of *los Desamparados*.

**Exche-
quer.** *Tuesday 26th*, I went to the exchequer,
which is the royal palace; three officers
have the care of it, and are the *Contador* or
comptroller, *Futor* or factor, and treasurer,
who receive all tributes, and the king's fifth
part of all the plate, for marking it. This
does not amount to less than six hundred
thousand marks a year, every mark being
eight ounces, besides what the king is cheat-
ed of, which is a greater sum. *D. Philip
de Rivas*, the king's refiner, or essayer in
that court, told me, that in the year 1691
he mark'd eight hundred thousand marks.
All this plate is afterwards coin'd, first se-
parating the gold from it, provided there

be above forty grains in a mark, otherwise
'tis not worth while to separate it.

Wednesday 27th, I met the governor of *Of N.
New Mexico*, whom I had known in *Naples, Mexico*,
and who was to reside five years in that post.

This country is newly conquer'd, tho' there
still remains much more to conquer. Upon
this occasion I was told, that those *Chichime-
cas* are such skilful archers, that they will
hit a rial toss'd up into the air, and shake
off all the grain out of an ear of corn with-
out breaking it off. They are great lovers
of mules flesh; for which reason they have
often robb'd travellers, and carried away
only the beasts, leaving behind the chests
of pieces of eight, which they do not value.
They also paint their bodies, after the man-
ner of people that have been at *Jerusalem*.
The king maintains six hundred horse in
several garrisons in *New Mexico*, with an
allowance of four hundred and fifty pie-
ces of eight a man, but the soldiers have
the least part of it, the governor putting
the rest into his own pocket, for he sells 'em
all they stand in need of, exacting twenty
pieces of eight for that which is worth two;
and by this unlawful practice the govern-
ment comes to be worth three hundred
thousand pieces of eight. These soldiers
are arm'd with a buckler, musquet, and
half-pike; not to fight with the *Chichime-
cas*, but to go a hunting after them, as it
they were wild beasts, in *November*. They
are order'd by the king to endeavour not
to kill them, but to bring 'em in to be
instructed in the holy faith. Thus an hun-
dred and fifty leagues have been conquer'd
westward, tho' the people endeavour to de-
fend themselves with their arrows. The
worst is, that being five hundred leagues
from *Mexico*, those barbarians quickly re-
volt, knowing there cannot be supplies of
soldiers sent in a short time. The country
is plain, and convenient for carriages, for
some months in the year, but they are to
pass such wide deserts, that they generally
intrench every night, and keep guard, for
fear of being set upon by the savages.
The *Franciscans* have the charge of the
conversion of these *Chichimecas*, who are
rather atheists than idolaters, and have brought
a considerable number of 'em to live like
men, but their wild nature always inclines
'em to solitude. The country is so ill peo-
pled, that they travel several days journey
thro' it without meeting any village; for
which reason the viceroy of *Mexico* sent se-
veral families thither of late years to people
it, the soil producing all things that are
sow'd in it plentifully, even of fruits of
Europe; besides that, there are rich mines
of gold and silver. The length of the way
not allowing travellers to carry their quilts

to lie on, the *Jesuits* that go to their mission of *Parral* have learnt of the *Indians* to carry before 'em on their saddles their mattresses and pillows, made of leather, which at night they blow full of wind, and in the morning let it out, and put 'em up as they were.

Saturday 30th, being the day for visiting the prisons before *Easter*, the viceroy heard mass in the royal chapel, where, on a row of chairs, he sat down in the middle, and the *Oydores*, or judges, and *Alcades* on his sides. Over against him were the two *Fiscales*, or solicitors-general, one for the king, and one for criminal causes. After mass they went to the court of criminal causes, and by the way there were presented to the viceroy two tall boughs full of flowers, with rabbits hanging about it, by some *Indians* representing their corporations, and nosegays to the other ministers of state, in token of submission. The viceroy took his seat on the middle of the bench, under the canopy, with the *Oydores*, *Alcades*, and *Fiscales* on his sides, being ten in number; and then the eldest *Oydores*, or judge, read the petitions of the prisoners; whose crimes being heard, the viceroy, with the advice of the *Oydores*, decreed what was to be done; but no mercy was shewn to thieves, for he order'd them all to be prosecuted. The same day I saw the formality of examining a refiner or assayer of gold and silver, which was perform'd, the king's chief refiner, and other officers, sitting under a canopy, and the person to be examin'd making a trial of giving the assay of gold and silver in their presence, there being a furnace there for that purpose; after which, sweet waters, chocolate, and sweetmeats were given about in such plenty, that there was enough to eat and carry home, especially abundance of pastiles, which are very much perfumed, and have figures stamp'd on 'em. The *Indians* use to give 'em with chocolate and biscuits, not to be eaten then, but to carry away, taking it ill if any man, for want of being acquainted with the custom, leaves 'em behind. They give more or less according to the quality of the person, and they are worth at least a rial apiece.

Sunday 31st, in the evening, I saw a fine ceremony perform'd at the cathedral, which they call *de la Segna*: thirteen canons in long black cloaks, with hoods, went from the choir to the chapter along iron galleries; there kneeling, the dean took up a black banner with a red cross in the middle of it, which, after singing some prayers and verses of the passion, he began to wave first towards the right, to touch with the point of it the last of the canons, then towards the altar; after that towards the left, to touch the

last canon on that side, he standing in the Gemel-midst of 'em; lastly, he flourish'd the banner a while in the air, and then laying it on his shoulder, walk'd about the chapter, in memory of our Saviour's walking in *Pilate's* court: then, all being rank'd with their backs to the altar of the chapter, made a low bow one after another, and went back towards the choir, dragging vast long trains after 'em. The dean went last, between two canons, with the banner in his hands.

On *Holy Thursday*, the 4th of *April*, three processions went out, one after another; the first, of the brothers of the *Trinity*, clad in red; the second, of brothers of the church of *St. Gregory* of the *Jesuits*; and the third, of brothers of *St. Francis*, call'd the procession of the *Chinese*, because made by *Indians* of the *Philippine* islands: each of 'em carried its images, with abundance of lights, and a company of arm'd men, after the manner as was mention'd before, besides some that went a horseback, with trumpets sounding dismally before 'em. The procession being come to the palace, the *Chinese* and brothers of the *Trinity* strove for precedence, and there pass'd some blows with painted clubs they carried instead of torches and the crosses, so that several persons were hurt.

The sepulchres and monuments they make at *Mexico* are beautiful and highly, but poor in lights, all made by one model, and every year the same; the tabernacles being high, with pillars, and fretwork gilt, which serves as long as the wood holds.

Friday 5th, I saw the procession of *Jerusalem*, or mount *Calvary*, which goes from *St. Francis the Great*, carrying the figure of the sepulchre. About eight in the morning three trumpets sounded a doleful tune, and then appear'd a great many brothers with lights in their hands, and among 'em several persons whipping themselves. Then follow'd a company of arm'd men, some of 'em a horseback, carrying the sentence in writing, title, garment, and other tokens of the passion. Then persons representing our Saviour, the blessed Virgin, *St. John*, *St. Veronica*, the good and the bad thief. Then two representing *Jewish* priests, on mules, and others in very good order. In the afternoon was the procession of the *Blacks* and *Indians* of the locality of *St. Dominick*, much like the others. After this, follow'd that of the *Spaniards*, call'd the funeral of our Saviour, in which went sixteen *Regidores*, who are like aldermen, two *Alcades*, and a *Corregidor*, who are the supreme magistrates of *Mexico*, with *Alguaziles*, and sergeants before them. Then follow'd abundance of knights, and brothers, and all the mysteries of the passion carried

GEMEL-on biers, by men clad in black like angels, and adorn'd with jewels. After them came ten penitents, with vast long trains; next, the company of arm'd men, in white armour, as has been said in other places; and lastly, an image of our Saviour in a rich shrine of silver and crystal, given the Dominicans by the bishop of Campeche. By the shrine was the blessed Virgin, and St. John, follow'd by an infinite multitude of devout people. In short, nothing was inferior to the magnificence of Europe. Another procession of Indians went from the parish of St. James, of the Franciscans, much like the last, only that some Indian women went in mourning weeping, to represent the daughters of Sion.

Saturday 6th, the viceroy and vicequeen went to hear service at the cathedral: he sat on a place rais'd above the rest of the church; she, in a closet shut up with Lattices, both on the right side of the altar. On a bench behind the viceroy sat the first chaplain, captain of the guard, and gentleman of the horse. On the left side of the altar sat the Regidores, attended by two mace-bearers, clad in damask, with silver maces in their hands. After the usual ceremonies, mass beginning at *Gloria in excelsis*; the rich marble tabernacle was uncover'd, the lower part whereof is supported by sixteen pillars, and the upper by eight, with noble gilt statues, which vast work rises to the top of the church. There's also a pulpit of the same fine marble of the pillars, curiously wrought.

Sunday 7th, I saw the viceroy at the church of St. Augustine the Great, at mass, sitting on his throne, and eighteen knights Santiago, or St. James, upon two benches by him, with their white mantles of the order. There are in Mexico abundance of knights of this and other orders, who sell cloth, and silk, chocolate, and other things of less value, saying, this no way lessens their gentility, they having a warrant of the emperor Charles V. for so doing. This church is very beautiful, and has thirteen altars extraordinary rich in gold, and adorn'd with curious pictures. At the entrance on the left hand is a small congregation of the third order, with five altars richly adorn'd. I saw a play in the afternoon very ill acted by *Criollos*, that is, the sons of Spaniards by Indian women, the Europeans looking upon it as a disgrace to act in publick.

Monday 8th, I went a league out of the city to visit the church of our lady of Guadalupe, which they say was built by command of the blessed virgin, appearing to an Indian, and is now a noted pilgrimage, whither the Mexicans resort with rich offerings, with which there's now building a

large church with three isles supported upon eight pillars, and will cost a great deal before 'tis finish'd. The high altar of a little church serves for the present, and is curiously wrought of silver. There are three other altars for saying of the masses, where are alms brought for every day. Near the afore said church is the place where the blessed virgin is said to have appear'd the fifth time, and a great spring; and not far from it, on the rock, an hermitage of great devotion, in the place where the Indian, who had the vision, is reported, by order of it, to have gather'd roses to shew the bishop, in token of the truth of what he said. This afternoon I went upon the canal of Xamaica, where people either walk on the banks, or divert themselves in boats on the water, there being many men and women who sing and play on the musick, striving to outdo one another. The banks are cover'd with little houses of Indians and inns, for the people to take some refreshment, such as chocolate, *Atole*, and *Tamales*. The principal ingredient of the two last nam'd is Indian wheat, order'd after this manner: they boil the Indian wheat with lime, and when it has stood a while grind it, as they do the cacao; then they strain that paste thro' a sieve with water, which makes a white thick liquor, like that we draw from almonds; which liquor, when it has been boil'd a little, they call *Atole*, and is drank either mix'd with chocolate, or by it self. The more dainty people drink it the latter way with sugar, but either way 'tis very nourishing, and much used in the Indies. Of the paste that remains after that washing, they make the *Tamans*, mixing it with minc'd meat, sugar, and spice, and colouring it over. I liked the taste of 'em both, tho' my mouth was used to good and bad.

Tuesday 9th, I heard mass in the nunnery of St. Agnes, founded by a citizen of Mexico, with a revenue to maintain thirty-three poor maids, which are now chosen by his heir. The monastery on the other hand, in gratitude, pays a thousand pieces of eight a year to this protector and heir, by order of the founder. This right of patronage is at present in a *Criollo*, or son of a Spaniard by an Indian woman of the family of Cadena. The church is well adorn'd, has nine altars, the roof vaulted, and all decent.

Thursday 11th, in the morning, I went to see Chapultepec, where history tells us Montezuma's palace of recreation, or country-house, stood; at present it serves to receive the viceroys till the city is ready to receive 'em, and their palace of residence put in order. Of late years this publick reception has not been made, the city having represented to the king what a great expence

A fine tabernacle.

Guadalupe.

Viceroy's
reception.

expence 'twas ; so that the present viceroy the count *de Montezuma* went in privately to take possession of the government in the great hall, where the courts are kept, and when all things were in a readiness, made his solemn entry a-horseback, over the causeway of *Guadalupe*, attended by the nobility and magistrates. When he came to the triumphal arch erected before the church of the *Dominicans*, the gate was shut, according to custom, to perform the ceremony of presenting the keys, and tendering the oath to keep the liberties of the city. As he was going to alight for this purpose, he fell from his horse, and his peruke dropt off his head, the horse being unruly, and he, as a scholar, little used to ride. Then he pass'd thro' the second arch, which was richly adorn'd, and then a bridge, over to the church-yard of the cathedral, at the gate whereof the archbishop, in pontificalibus, expected him, with all the chapter, to swear him to the keeping the privileges of the church. This done, *Te Deum* was sung.

To return to the palace of *Chapultepec* ; 'twas built at the foot of a hill (on the top whereof is a hermitage of the invocation of *St. Francis Xaverius*) by *D. Luis de Velasco*, who was viceroy in the reign of the emperor *Charles V.* as appears by the inscription over the gate, but 'tis too little for a viceroy's court. It has two courts, in one of which the city did use to have the *Juego de Toros*, or riding at bulls, whilst things were preparing for the entry. The garden is small, but has a good spring, which, after serving the palace, is convey'd in pipes to *Belehem*, the novitiate of *Mercenarians*, to serve the inhabitants of that quarter. They say this spring was accidentally found by a viceroy, who caused that place to be dug to find *Montezuma's* treasure. Close by it is a little wood, and not far from it the powder-house, the mills drove by water. At *Chapultepec* begin the famous arches, or aqueduct, which convey to the city of *Mexico* an excellent water brought from *Santa Fe*, three leagues distant. One *Mark Guevara*, a private citizen, was at all this charge, Almost all people use this water, because that of *Belen* is thicker. Some say 'tis spoil'd by being convey'd be-

yond *Chapultepec* in leaden pipes, but I found it good enough.

Friday 12th, I travel'd three leagues thro' a plain well-cultivated country, like that of *Poggio Reale* in *Naples*, to see the miraculous image of our Lady, call'd *de los Remedios*. The church is built on a hill, with convenient dwellings for the priests that serve it, under the care of a vicar. 'Tis adorn'd with excellent pictures in gilt frames, as is the roof and four altars ; but the high altar (on which stands the holy image, which is massy, and two spans high) besides being all gilt, has a noble canopy of beaten silver, an antependium of crystal, with gilt figures behind it, and about thirty large silver lamps of curious workmanship ; nor have they spared this metal to adorn the pulpit. Behind the high altar is a little treasury, where they keep all the things of value offer'd by the devotees. For fear of thieves, the church being vastly rich, and standing on a mountain, they never open it till ten in the morning.

Thence I went to *St. Joachim*, a monastery of *Carmelite* barefoot friers, begun to be built of late years, and therefore the religious are as yet but ill lodg'd, and say mass in a little church with three altars. They are walling in a great piece of ground to make a garden, which in time will be delightful, and yield great profit.

Saturday 13th, I went to the monastery of the *Dominicans*, to see the chapel of *D. Peter Montezuma*, descended from the emperor *Montezuma*, where I found a Spanish inscription, in English thus ; *The chapel of D. Peter Montezuma, who was hereditary prince to Montezuma, the lord of the greatest part of New Spain. The chapel is dedicated to our lady de los Dolores, or of sorrow, devoutly adorn'd, and enrich'd with gold, as are the other forty altars in the same church, besides oratories and particular congregations. The monastery is large, containing one hundred and thirty religious men in handsome dormitories. The nunnery of S. Teresa, of her order, is rich ; in the church there are six altars handsomely painted, and magnificently adorn'd with gold.*

GEMEL-
LI.
1698.

CHAP. VIII.

An account of the wonderful conveyance for the water to run out of the lake of Mexico.

BEING desirous to see this mighty work, I mounted a-horseback on Monday 15th, and travel'd three leagues along the plain to the village of *Tamipanlla*. Then going up the hill of *Barrientos*, two leagues further came to *Guauhtlan*, where there is good earthen ware made, like that of *Cilli*, so much valued in *Europe*, which when broke wanton ladies eat. In the evening crossing the river *Guauhtlan* (which falls into the *Disague*, or chanel made for carrying off the water from the lake of *Mexico*) I rode a league further, and set up that night at *Teploftlan*, in the novice-ship of the *Jesuits*, where the rector entertain'd me courteously. This house is built upon a hill, with dormitories and conveniences for fifty-two priests, novices, and lay-brothers. The church of the invocation of *S. Francis Xavierius*, and has six altars richly gilt, especially the high altar, which exceeds all other in magnificence. There is a chapel of our lady of *Loretto* of the same bigness, and exactly built like that in *Italy*. The garden is large, and has a great deal of *European* fruit.

Tuesday 16th, having travel'd some way over plains well cultivated, I came to *Gueguetoca*, the place where waters have their passage under the direction of the *Guarda mayor*, or head keeper. The viceroy is oblig'd, by the king's express command, to go thither every year in *August*, to view what condition the place is in, and give the necessary orders for it. *D. Thomas de Buytron y Mexica* entertain'd me courteously, and gave me a true account of that work.

Mexico
subject to
floods.

Mexico is so seated, that it is always subject to be overflow'd by the water of its lakes, which run down in vast quantities from the mountains about it. This happen'd the first time in the reign of *Montezuma*, the first of the name; afterwards under *Abuitzoll*, and under the last *Montezuma*; so that the inhabitants, seeing themselves forced to go in boats about the city, would certainly have chang'd their ancient abode, had not they been assisted by the neighbouring kings making some banks against the water.

The year after *Mexico* was conquer'd by the forces of the emperor *Charles V.* that is, in 1523, the waters swell'd so high that they were oblig'd to make the bank and caufway of *S. Lazarus*. This not being a

sufficient defence against the mischief that might happen, they began to turn away the river *Guauhtlan*, which did most harm; this by order of *D. Luis de Velasco*, who was viceroy in the year 1556, because the year before the city had been drown'd, notwithstanding the new bank.

Another great inundation happening in the year 1580, the viceroy *D. Martin Enriquez*, order'd some method should be found to drain all the lake; and the village of *Gueguetoca* was thought a proper place to convey the water into the river of *Tula*; but the work was not begun. In 1604 the inundation was so great, that the city had like to have been all drown'd; wherefore the marquis de *Montes Claros*, who had charge of conveying away the water, was for beginning the work immediately. The king's solicitor oppos'd it, alledging, *That work could not be finish'd under an age, and could never be maintain'd, because a chanel was to be cut nine or ten leagues in length, and in depth from sixteen to an hundred yards (every yard of these is three spans and a quarter of Naples, that is about three quarters and a nail of an English yard) on which work fifteen thousand Indians must be employ'd every day; and therefore the work was put off.* In 1607, *D. Luis de Velasco* governing, there was so great a flood, the fences made by his predecessor proving useless, that the city was almost swallow'd up; which made the carrying off the water, before thought impracticable, to be thought of again; and the place was often view'd by the viceroy, judges, magistrates of the city, clergy, engineers, and other understanding persons, to find the easiest way to convey the water. After several consultations, it was resolv'd, that the king's solicitor and the city should petition the viceroy. He going in person to the place aforementioned, with the judges of the royal court, and the visitor-general, order'd the work should be done; and accordingly, on the 28th of November 1607, after mass sung at *Gueguetoca*, the viceroy himself taking a spade, began to dig. This place was found out by *Arigo Martinez*, an *European*, who undertook to bring the work to perfection. The expence being so great, the same viceroy caus'd the houses, possessions, merchandise, and goods of all the citizens to be apprais'd, which were valued at 20267555

pieces

pieces of eight, upon which he rais'd one in the hundred, and that amounted to 304013 pieces of eight and two hundred and a half; which was paid by laity and clergy alike. Whilst *Martinez* was carrying on the work, the viceroy went thither with some persons of judgment, who were of opinion, that the trench or canal should be carried on open, from the bridge of *Guequetoca*, or salt-river, up to the lake of *Sitlaltepec*, for the space of a league and a half, and from the bridge downward the water should run under arches with gaps left open at certain spaces; and, that the canal all-along should be four of their yards (as above) deep, and five over. The number of *Indians* that wrought from the end of *November* 1607, till the 7th of *May* 1608, was 471154; and those that made it their business to dress them meat 1664, the expence of pieces of eight 73611. The viceroy and archbishop saw the water run to the end of the cover'd canal, at the foot of the hill of *Nocistongo*.

In 1611, the king, by special warrant of the 8th of *May*, demanded a particular account of the viceroy, the archbishop and city, of what had been laid out till that time, what benefit had been reap'd, what they could hope for the time to come, what it would cost to bring the work to perfection, and what the charge would be every year to keep it in repair. The viceroy, by the advice of understanding people, answer'd, *That they had taken wrong measures, and therefore all the expence was lost.* *Alonso d' Arias* was of opinion the canal under ground must be forty yards deep, of those before mention'd, and sixty thousand in length up to *Mexico*, to secure the city; and, that it was impossible to finish the canal as 'twas begun under ground, or to keep it afterwards in repair, because of its narrowness. The city gave the same account the viceroy had done, concluding all was mistaken, because they had not proceeded according to the first design; adding, that the expence to that time amounted to 413324 pieces of eight for the labour of 1128650 *Indians*. *Martinez*, on the other hand, writ in vindication of what he had done, clearing himself of what was objected by his adversaries.

Hereupon 'twas resolv'd at *Madrid*, to send over *Adrian Boot*, a *French* engineer, and accordingly he went. He coming to *Mexico* in 1614, view'd all the lakes and rivers that could do harm to the city, in the company of one of the *Oydores*, or judges; and at last concluded, that all the work done was in vain, and would only serve to ease the city of the river of *Guautillan*, which carries the greatest quantity of water into the lakes of *Mexico*, *Citlaltepec*, and

Sumpango. Then he offering to throw up *GEMEL* the banks about the city, the next year ^{LI.} 1615, for the expence of an hundred eighty ^{LI.} 1698. six thousand pieces of eight, his proposal was rejected, that method having been found unsuccessful in the years 1604 and 1607. *Martinez* was therefore order'd to carry on his work, upon condition he should finish it for one hundred and ten thousand pieces of eight. The king confirm'd this contract in 1616, ordering the money to be paid out of duty on wine in *Mexico*. The count *del Priego* being viceroy, to see how much the water must rise to flood the city, caus'd the work of the canal to be left off, the banks to be broke down, and the river of *Guautillan*, and other waters, to be let in, from the 13th of *June* till the last day of *October* 1623. The water was observ'd at first to rise a yard wanting two inches, but in *December* it swell'd so high that the city was in danger. The marquis *de Zerralvo* finding things in this posture, following the steps of his predecessors, made several fences, but they avail'd nothing, for the river of *Guautillan* running into the lake in 1627, the water was half a yard deep in the city. Hereupon the people of *Mexico* press'd the viceroy to make the canal be carried on as the king had order'd; whereupon, after some consultation, 'twas order'd to be proceeded upon. But upon *St. Matthew's* day, that same year, some banks breaking, so great a quantity of water came in, that it was two yards deep in the city, and they went about the streets in boats. This was caus'd by the river of *Guautillan* breaking into the canal of *Sumpango*, after the work of the canal was left off. Seeing the waters up to their chins by this inundation, they began to talk of removing the city to some high ground, according to several repeated orders from the king. In order to it, the viceroy, on the first of *November* 1629, held a council of all the courts and citizens, where 'twas agreed, that several magistrates and skilful persons should go find out the canal that had been begun.

On the 6th of *December* 1629, upon a debate, 'twas resolv'd to continue the canal of *Guequetoca*, which would now cost two hundred thousand pieces of eight to bring it to perfection, besides other works upon the causeway and banks. At the beginning of *January* 1630, the work was begun, upon condition it should be finish'd in twenty-one months, with the expence of two hundred and eighty thousand pieces of eight, and the labour of three hundred *Indians* every day, according to the method propos'd by *Martinez*, which was found to be easier than the rest. The marquis *de Zerr-*

GEMEL-Zerralvo viceroy, on the 12th of October 1630, put out an order for carrying on the canal to the mouth of St. Gregory.

Afterwards, considering 'twas impossible to find a passage for all the waters, obtain'd a new order of the 19th of May 1631, for building a new city between Tacuba and Tacubala, in the plains of the village of Sanctorum, towards the mills of John de Alcover, and would have this debated in a general council. The magistrates, chapter, and religious meeting, the greatest part would not consent to it, saying, there was no reason to lose the value of fifty millions and upwards in the structure of churches and houses, to save the expence of four millions 'twould cost to drain the lake; urging further the loss of the revenues of the church, the king, and private persons. Thus all that could be alledg'd on the contrary being of no force against private interest, nothing was concluded on.

In 1632 Martinez died, for grief that the Oydore Villabuena had reflected on him upon account of the mistake committed in making the canal.

The marquis de Cadereyta coming over viceroy in 1635, caus'd all the canals of the city to be cleans'd, for the boats to go upon them, with the expence of thirty-four thousand pieces of eight; and the following year, having seen an account of the condition of the banks, and of the canal of Gueguetoca, he order'd Ferdinand Zepeda and D. Ferdinand Corvillo to draw up another particular of all that happen'd, and what had been laid out upon the said canal, from the 8th of November 1607, when it was begun under the government of the marquis de Salinas the second viceroy, till the 27th of March 1637. Three points were consider'd in that paper. The first, whether in order to secure Mexico against inundations, it would be available to preserve the canal of Gueguetoca; whether being made open, deeper and wider, it would be capable of draining the lake of Mexico; and in case it were, whether it was possible to keep it in repair. The second, whether in case no way were found out for all the waters at Gueguetoca, or elsewhere, Mexico might be secur'd by banks. And the third, whether, if both were impracticable, the city ought to be remov'd. The computation was made of what had been spent till then, and it amounted to twenty nine thousand five hundred and sixteen pieces of eight, seven rials and a half.

This account being printed at Mexico on the 7th of April 1637, copies were given to all magistrates, the chapter, provincials of orders, and other persons of judgment; that they might examine it, and give their opinions. To this purpose, a

consult was held in the presence of the viceroy, where they all disagreed, according as every one stood affected. On the 20th of July 1637, the same viceroy order'd that the canal of Gueguetoca should be made open; whereupon the geometricalians declar'd, that between the causeway of St. Christopher, and the mouth of St. Gregory, there must be dug up seventy millions seven hundred twenty one thousand five hundred and twenty six cubical yards of earth, to make way for four cubical yards of water of the lake of Mexico. It has since appear'd by experience, that for almost an age past, wherein there has been continual labour and application, about three millions of gold have been spent, without compassing the intended end; for no other way having been found for the river Guatilan, upon floods it has carry'd trees, stones, and earth into the vaulted part of the canal; so that in process of time, it has by degrees obstructed the passage of the waters, which afterwards of necessity run into the lakes of Zumpango, thence to that of Xaltocan, and lastly into those of St. Christopher, Tezcuco, and Penon, indangering the city of Mexico, as particularly in 1645.

The inhabitants never agreeing to remove the city, according to the king's orders, the marquis de Cadereyta caus'd the work of the open canal to be carry'd on, causing the old arches to be broken down, the better to remove the impediments that hindered the passage of the water. This work, as has been said, was begun in 1637, and at this present, there remains much more to do than has been done; and the worst of it is, that they must cut down a vast depth, to lay open the old vaulted way, made them by digging under ground, like coney-buries. This work is carry'd on, but most is done in rainy weather, because then the flood helps to carry down the stones dug out, otherwise it would not be done in many ages. To do this, they fasten a beam on the bank of the river, or near the mouth of the vault; about this beam they wind several ropes, to which the Indians are made fast by the middle, who dig the earth and stones along the canal, to make them fall into the stream, into which they sometimes tumble themselves.

That I might give the reader a true account of the present condition of this canal, I went in the afternoon to see it. I found it open for a league and a half, to the place call'd Guinnata, where it winds, because they met with a solid rock, and from thence forward to the mouth of St. Gregory, being half a league in length, it is not open, except in some places for an experiment. Here it is necessary the ground be cut down open to the banks; to do which will employ ma-

And when all this is done, it will not secure Mexico against the floods; to prevent which, it would be necessary to make the canal much deeper, that it might carry all the water, that gathers in the lake, when the rains fall.

I went hence to see the bank or dike, call'd *Vertidero*, half a league above *Gueguetoca*, made to keep the river of *Guaquilan* from running into the lakes; and confine it to the small lake of *Cuyatepeke*, and this to avoid destroying the canal which is not capable of receiving it in time of floods. Sometimes the waters gush into the lake of *Zumpango*, which is twelve spans lower than that of *Cuyatepeke*, and as much higher than that of *Xaltocan*, and thus they

are kept as it were laid up, till the floods are over. Then, that they may not run out of the lake of *Zumpango*, into those of St. Christopher, *Tescuco* and *Penon*, to mischief Mexico, a strong bank is always kept up. There are also two other banks or dikes, which answer to the lake of *Zumpango*, the one with three sluices, the other with two, to convey the spare water of *Zumpango*, when it does not rain into the aforesaid canal. When I went thither, the canal was choak'd up, and out of use by reason of the great quantity of earth carry'd into it by the waters. Two other dikes, one after another have a communication with the river and lake of *Cuyatepeke*; the first has six sluices, the second four. The keeper of them led me all about, and, tho' an Indian, treated me courteously in his house.

CHAP. IX.

Of the danger the author run himself into, to see the slate dug, and a description of the mines of Pachuca.

THO' all my friends discourag'd me from going to the mines of *Pachuca*, as being incredibly deep; yet having fix'd my resolution, I set out upon *Wednesday* the 17th. I din'd at the village of *Tecubiac* two leagues distant, then went on a league further to the village of *Guipustla*, and from thence three leagues to lie at the farm of *Tusantlalpa*. I there kill'd four hares by the house, and might have kill'd more, but would not; first, because they are not so good as those of *Europe*; in the next place, because the *Mexicans* abhor them, because they have seen them eat the maggots bred in dead horses.

Thursday 18th, having travell'd six leagues, part mountain, part plain, I came to *Pachuca*, where I was entertain'd by *Dominick Lavarra*, the chief officer there of the king's revenue. My chief design being to see the mines, as soon as we had din'd he sent his *hacha*-law with me to the two nearest, about half a league distant, to which the way was rough and craggy. They were both extraordinary deep. The depth of the first call'd *Santa Cruz*, or *Holy Cross*, was ninety two *Estados* (an *Estado* is three *Spanish* yards, and a *Spanish* yard, as was said before, is three quarters and a nail of our *English* yard) so that the ninety two *Estados* being two hundred seventy six *Spanish* yards, makes two hundred twenty four *English* yards. The other, call'd of *Navarro* is eighty *Estados*, that is, a hundred and ninety five yards. In that of *Santa Cruz*, the metal was taken out with *Malacates*. This is an engine with a perpendicular axle-tree

resting in two irons. About the axle-tree moves a wheel, upon which, instead of a rope, an iron chain is wound, one end of which comes up with the metal hanging to it, and the other goes down for more, like buckets in a well. The engine is kept going by four mules, made fast to a piece of timber that crosses the axle-tree. Two of these *Malacates* work at this mine, as well to draw up the metal, as to drain the water, which would otherwise rise and hinder the work. I went down five ladders, or poles; but the miner would not let me go no further, for fear I should tumble headlong; and indeed the poles we were to go down by were wet, and a man's foot might easily slip as he was finding out the notch. Then I went to the mine call'd *del Navarro*, where the *Indians* brought up the metal on their backs, with eminent danger of their lives, in climbing so many ladders, or rather upright poles with notches. This they do for four rials a day; but at night they are allow'd to carry as much ore as they can at once, which they afterwards share with the owner of the mine. They had wrought five months to make a communication under ground from one mine to the other, and convey the water out of that of *Navarro* into that of *Santa Cruz*, which was deeper; as yet the miners had not met, but were so near one another, that both heard each others strokes.

Friday 29th, I went two leagues further to see the mines on the mountain. There I found a little city of clay houses cover'd with wood, as in other places the *Indians*

GEMEL-
LI.
1698.

GEMEL-cover them with leaves of maguey; for here at least twelve thousand got their living in those deep dungeons. There are in the space of six leagues about a thousand mines; some laid aside, others where they now work, and others they preserve; but some privately get down into them to steal the metal. Eight days before I was there, fifteen *Indians* had been kill'd in one of them, the earth falling in upon them as they were going down a narrow mouth; the great one being stop'd up by the owner's orders.

Having rested a little, I went to the mine they call of the *Trinity*; because it is made up of the three several mines, distinguish'd by the names of *la Chonopetiana*, *Joya* and *Pennel*. Tho' these have three mouths, they all go to the same mine. As for its riches, persons of experience and well acquainted with the place, say that in these ten years there have been thirty millions of silver drawn thence, more hundred thousand men working there every day. When they had sunk the work an hundred *Estados* (each three quarters of an *English* yard and nail, as has been explain'd before) they found water, to drain the which sixteen *Malacates* (before explain'd) were set up, and two millions were laid out in timber-work to keep the earth from falling in. Yet time, that consumes all things, has render'd this rich mine so dangerous, that it is counted impossible to get more plate out of it, and therefore all the mouths are stopp'd up.

However, a new mine was open'd close by it, eight years since, which has yielded great profit to the owners, and is call'd *St. Matthew's* mine; the veins of metal lying east and west, which are easily found and dug. In this mine, the which is fifty *Estados* deep (as above) I resolv'd to see the veins of silver; but having gone down five ladders or poles, I was astonish'd to see how likely it was to tumble down headlong. Being therefore about going up again, the miner, who has the charge of propping up the mines, encourag'd me, saying, there were but few poles to the bottom; whereupon he going before with a light in his hand, I ventur'd to go down the rest, tho' with much fear; because I sometimes found it very difficult to clasp the pole with my arms, and fix my feet on the notches on it. However recommending my self to Almighty God, I went

down three times as far as the miner had told me, only to encourage me; so I came at last to the place where the miners with iron wedges made the hard strong ore fly about. They told me, that in some places it is softer, and of several colours; and having rewarded them, they gave me a great deal of metal. Here I bethought my self of the danger I had run into; and the more because it was very unwholesome being in that deep dungeon, by reason of the pestilential damps of the place. Having therefore stay'd there, about two hours, I went up again, in much dread, because of the bad ascent, and got up into the open air, very weary. I thought I was then newly born into the world, and I confess, in my days I never undertook so rash, if not foolish, an action; nor was I ever so much afraid in five years I travell'd among barbarous nations. I would not have gone down again into that place, whither only my curiosity had led me, for two or three thousand pieces of eight.

The mines are so deep, because they always dig down perpendicularly, to find the veins of silver, which being dug away as they lie horizontally, they again begin to sink deeper, till they meet another; and that being spent, down again; so that this work continuing above an age, the mines must of necessity be vastly deep, as will appear by the following cut.

A. The mouth of the mine.

B. Poles, or timber with notches, very dangerous to go down.

C. *Indians* that carry up the ore, with light in their hands.

D. Veins of metal, where other *Indians* dig the ore.

See Cut Page 506.

The worst of it is, that tho' the wretched *Indians* carry light; yet this not shewing them what is below, they are forced to set their feet at a venture, and so they sometimes tumble down, with the metal on their backs. They would have carry'd me to see others, but I would not tempt God any more. I return'd betimes, to *Pacbuca*, and din'd with *Lavarrai's* son-in-law.

CHAP. X.

GEMEL-
LI.
1698.*How the silver is separated from the stone of the mines, by fire and quicksilver.*The ore
broken

AFTER dinner they carry'd me to the metal separated at the silver works, whereof there are many in *Pachuca*. It is done after this manner. When the ore is brought out of the mines they break it with hammers, to separate the metal from the *Tepetate*, or stone that has no silver. The *Pipinadores*, that is, the men that break it, being well skill'd in their trade, put the metal which is for the fire, and that which is for the quicksilver, into several sacks; experience teaching them how to know the one from the other, and so send it to the *Haciendas*, or mills.

Then
pounded

There the ore is ground, and pounded in six iron mortars, like those for powder, working like mills with water, or with mules. In order to run it, they mix with it a certain proportion of burning lead (first separated from the same metal) which is like a letharge of iron, and is put with an equal quantity of coals into a furnace, like a chimney, twelve spans high, and wider at the top than the bottom. Two great pair of bellows blow this furnace, two mules working the engine that moves them; and whilst the first metal is melting, they lay on more for about six hours. When the lead and silver are melted, they take off the burnt scum with a hook; whilst the silver is let run out at the small end of the furnace, through a trough into a mould, where it hardens; and, when cold, is taken out. Then they shut the spout of the furnace, and lay on more ore, lead, and coals as at first, to cast more pigs, or bars. The burnt lead, we have spoke of, is sold by the *Indians* to their masters; making it in their houses, when they melt silver by stealth. When they have made fifty or sixty pigs, in a week's time, more or less, according as the owner of the work is in wealth; they are put into another furnace adjoining, to separate the lead, and refine them. This furnace is like our ovens to bake bread in, with a trench in the middle, full of wet ashes moulded together to receive the pure silver. It is first heated with a wood fire in another furnace adjoining, call'd the refining furnace; and when the pigs are ready to run, they clap great bellows, like those of the first furnace, to it. Then the silver running, the pure part of it runs off along the aforesaid trench, and the lead, or earth, is drawn off with an iron hook; when cold, looks like a froth, or pumice-stone. This froth of the first and second running is kept to serve again

in the furnace where they melt the ore.

Then the pigs, or bars of pure silver, Marking, weighing eighty, or one hundred marks, of eight ounces to a mark, are carry'd to the king's refiner, or assayer, who tries whether they are standard, that they may be coin'd. If they find them so, they are mark'd, and the king takes his fifth; there being in all places where, there are mines, a treasurer, a controulor, and another officer call'd *Official Mayor*, to receive the king's dues. If they are not standard, they are refin'd over again, and then stamp'd, marking how many grains of gold there are in every mark, and if above forty, they are carry'd to the king's refining house to be separated.

If it is pure, or virgin ore, the *Costa ore* silver is us'd after this manner. After being well pounded in the mortars above mention'd, into fine powder, and sifted, it is moulded in a strong wooden box, with water, salt, and the dross of copper, if it were to make a clay to build walls. This done, they add the quicksilver to it, and tread it for twenty-four hours, so that it may mix through all the mass. Then they make a heap of it, under covert, but open to the air on the sides, with a mark to know the day it was made; for every two days it must be work'd up again with water, be stamp'd for twenty-four hours, and be put in the same place.

All the heaps, thus made, are visited, as if they were sick persons, by the *Azogue-ro*, or quicksilver man; who washing a little of that mass, by the silver that remains clotted together in the dish, and by the outward heat of all the heap, understands what quantity of *Mercury*, and of dross of copper, must be added to it, or taken from it; because too much quicksilver makes it turn black, and it must be cool'd with the ouse taken out of neighbouring rivers. If it is cold, they add more copper dross, because the quicksilver's no fermentative menstruum, and it receives but gives no quality. Skillful men say, that when the mass is of a colour like bran, it shews there wants more quicksilver; if of a pearl colour, that the work is in a good condition; if of an ash colour, that the heap cannot be better than it is. This perfection it comes to in twenty days, or a month, more or less, according to the nature of the ore.

This mass, or mixture is afterwards wash'd Washing, at the *Lavadero*, or washing-place, with hand-

GEMEL-hand-wheels: the earth thus wash'd running through spouts into three several vessels, one under another, that the silver running off from the first, may stop in the second or third; from the last of which the water runs out through a spout, and falls into a place, where the women always find some small quantity of silver.

The silver that remains at the bottom of the vessels, is put into a thin cloth bag ending in a point at the bottom, that the Mercury may drop out at the point, the weight at top pressing it. Yet only the fifth part goes off this way; for which reason they use to put several balls off about three pounds each, of that first paste, or *Amalgama*, as the chymists call it, into a brass or earthen bell, or crucible, with little plates of iron across the mouth of it, that the silver may not fall when it is harden'd. Such another bell is put into the ground, one third part of it full of water; and then the mouth of the other is fitted to it so exactly that nothing may evaporate. Then they make a coal fire on the uppermost, till it is red hot; which is the sign that the quicksilver is separated, and the silver alone remains in a body.

This is carry'd to the king's officers to be assay'd; and if not standard, is again run to refine, and cast into bars, on which they put the stamp to shew it has paid the fifth, and the mark denoting how many grains of gold it contains, as has been said.

The silver might be separated in a few hours by only fire, but then there would be a great loss; on the other hand, it requires a whole month to do it with quicksilver; and a greater expence, because mercury coming from *Spain*, or *Peru* is very dear; they paying eighty-four pices of eight the hundred weight, and being oblig'd to separate an hundred marks with it. In my time I saw three hundred pices of eight given for it; not that the king sells it so dear; but because his officers sometimes make

their advantage of the necessity of the owners of the mines; and this want of quicksilver is what impoverishes *Mexico*. Hence it is also, that in *New Spain* for the king's fifth, they take but ten in the hundred, and one call'd *de Cobos* for the *Affayer*, and other officers, by reason of the great expence the proprietors are at; whereas in *Peru* they take twenty in the hundred to the full, the quicksilver being cheap there. In former times the silver was separated with only mercury and salt, and it lay a whole year; but afterwards a *Dominican* friar made the work easier, by the invention of the dross of copper, which presently heats the mass.

There is one wonderful particular to be observ'd in this matter, that is, that the quicksilver receiv'd by the water in the lower bell is found so much short of what is put in, as is the weight of the silver gain'd by its means. And therefore some make a question, whether the mercury fixes, or whether evaporating, it consolidates the silver. The first is counted the more likely opinion, because of the equality of the silver and of the mercury that is missing.

Saturday 20th, I set out from *Pacheca* betimes, and having travell'd seven leagues, din'd at the inn of the village of *Telayuca*. Then riding two leagues further I lay at *St. Lucia*, a farm of the *Jesuits* belonging to the noviceship of *Tepelestan*. This farm contains many leagues of pasture, and tillage. There are on it about an hundred marry'd *Blacks*, who living in cottages multiply, to the great benefit of those fathers; every one being sold for three or four hundred pices of eight. They have about fourteen hundred thousand sheep and goats; five thousand horses and mares; and ten thousand cows and oxen. Those that look after them have the tithe of all the increase, which is bought by the fathers, at a set rate. Sunday 21st, I travell'd seven leagues on a good road to *Mexico*.

A Voyage round the World, by Dr. John Francis Gemelli Careri. Part IX.

Containing the most remarkable things he saw
in NEW SPAIN.

BOOK V.

CHAP. I.

Upon what conditions the mines are granted to proprietors.

Mines
free to all.

ANY person whatsoever that discovers a mine, whether of gold or silver, may make this advantage of it, paying the king the fifth part of its product. A mine forsaken by the first discoverer for three months, falls to the king; so that any man is free to go dig in it, giving notice to the first owner. If he opposes, and shewing a reason why he has not kept men at work, the royal court judges whether this opposition is to take place or not.

How dis-
posed.

The king gives sixty *Spanish Varas*, or yards, such measure as above, towards every quarter of the heaven from the mouth of the mine, or all on one side, as the miner likes best; without which space another may open another mine, leaving five yards between them to part their ground. As they sink under ground, one may work into the other's division, till he meets with the

other's workmen, for then he must retire to his own; or dig lower that the other may not meet him again digging in the upper part.

GEMEL-
LI.
1698.

If the lower mine be drowned by any spring, as often happens, he that is above is oblig'd to give him the sixth part of the metal ore he gets; and if the water breaking out in the upper should run into the lower, the owner of the first of them is bound to drain it, because the veins of metal being like those in the body, full of moisture, and water instead of blood; when open'd, they send the water down; which if it were not drain'd by the lower miner, the higher would be forced to do it.

These, as has been said, pay the tenth to the king, wherein they differ from the *Peruvians*, who pay the fifth, as to silver; due, but as for gold, there is no privilege, and they are all bound to pay the fifth.

CHAP. II.

Of the mint, and royal office of the Apartado, or house to separate the gold from the silver.

How much
Para is
deter'd.

ALL the plate dug out of the mines in *New Spain* is to come to *Mexico* to be entred in the exchequer; and they say there are two millions of marks of eight ounces as has been said, entred in a year, besides what is slipt aside, or conceal'd; and out of this sum they coin every year seventy thousand marks into pieces of eight at the mint.

VOL. IV.

The silver that is to be coin'd into pieces of eight, besides the first entry to pay the king's fifth, is to be again entred in the exchequer, there to pay to the king a rial in a mark, which the *Spaniards* call *Senmoraje*, that is, the duty of lordship, to wit, when the plate is such as they call *de ley Canfada*, that is, bare standard, which is two thousand two hundred and ten *Maravedies*.

Manner
of coining.

6 O

GENE-*rales* a mark, and so up to two thousand three hundred sixty seven *Maravedies*, call'd 1.1. 1698. *Ley Subida*, that is, the high standard. The king's officers will not mark it, unless it be so fine; and if it be otherwise, they first reduce it to the fineness of two thousand three hundred seventy six *Maravedies*; and then add to every mark five eighth parts of an ounce of alloy, to reduce it to two thousand two hundred and ten *Maravedies*; such as is the plate of the common pieces of eight. The owners are at the charge of this work in the furnaces of the mint, where a great deal of silver is lost in casting the bars, for want of good utensils. These bars are carry'd to the assayer, for him to see whether they are standard, that is, worth two thousand two hundred and ten *Maravedies* a mark; and he finding it right, they are carry'd to the *Ornazas*, which are the eight places where they coin. In each of them is a *Capataz*, or head, of ten or twelve men. To him the bars are deliver'd, being weigh'd by the weigher, and entred in their books by the clerk and treasurer. Here the bars are put into the fire, that they may be cut, and when cut, because the silver is harsh, they are wetted with water, and being put into the fire again are coin'd.

Sort of coin.

There are five sorts of money made there, which are pieces of eight, half pieces of eight, quarter pieces, single rials, and half rials. When cut according to their due weight, they return to the treasurer, who receives them at the hands of the same weigher, clerk, and other officers. The money coming out black by reason of the copper, it is lent first to the whiteners; and then passing the officers who are to see it has the just weight of sixty seven rials to a mark, it is deliver'd to twenty coiners who are together in a great room. To them are deliver'd every day the five stamps call'd *Trueles*; but at night they are carefully kept by the proper officers upon danger of their lives. The money being stamp'd, returns to the treasurer, with all the formality before mention'd, and he delivers it to the owner, deducting what belongs to the officers, viz. the treasurer himself, the assayer, cutter, clerk, weigher, two guards, and other under-officers, and twenty coiners. But this deduction is no less to the owner, because it is taken out of two rials added to the value of the plate before it was coin'd; which being worth sixty five rials before it came to the mint, according to the common weight of thirty four *Maravedies*, goes thence worth sixty seven royals, according to the weight of thirty three *Maravedies*. This increase is divided among the officers by *Maravedies* and *Raciones*, that is, shares, or parts, e-

very *Maravedi* having one hundred thirty seven *Raciones*, or parts, as follows.

To the treasurer twenty two *Maravedies*, Feet, and one hundred and twenty *Raciones*, or coin's parts.

To the assayer one *Maravedi*, and sixty *Raciones*.

To the cutter five *Maravedies*, and sixty *Raciones*.

To the *Escrivano*, or clerk, one *Maravedi*, and sixty *Raciones*.

To the weigher one *Maravedi*, and sixty *Raciones*.

To one guard one *Maravedi*, and sixty *Raciones*.

To another guard one *Maravedi*, and sixty *Raciones*.

To a *Merino*, or under-clerk, sixteen *Raciones*.

To an *Alcade*, sixteen *Raciones*.

To the *Capataces* and *Brazajeros*, that is, heads of the firemen, and firemen themselves, twenty four *Maravedies*.

To the coiners eight *Maravedies*.

Which in all make sixty eight *Maravedies*.

All the chief officers, as treasurer, assayer, cutter, clerk, weigher, two guards, and two *Alcades* are appointed by the king, and all the inferior are appointed by the treasurer, paying three thousand pieces of eight. The first are all liable to pay for any cheat or fraud committed by their companions, that they may all be a check upon one another, and this upon pain of death, particularly to the assayer.

The said principal offices are bought, ^{of the} and every one has a right to make his over, ^{of the} or resign it to whom he pleases. But that this resignation may stand good, he that resigns must live twenty days after it; and he who has the benefit of it, is to make it known to the viceroy within sixty days; and pay the third part of the value of the place to the king, and the other two to the owner, or his heirs. If he that resigns does not live twenty days, or he to whom it is made over does not make it known in sixty, it is forfeited, and sold for the king; and therefore they that have the places resign them once a month, that they may always reckon they liv'd twenty days after. The treasurer's employment is worth ^{Value of} between fifty or sixty thousand pieces of their pla- ^{of their pla-} eight a year. Those of assayer, and four, ^{con-} der (given for ever to the monastery and hermitage of the barefoot *Carmelites* of *Mexico*) being serv'd by the same person, yield fifteen or sixteen thousand pieces of eight. That of cutter ten or eleven thousand; and the rest of the great ones above-mention'd, some three thousand five hundred, and the worst of them eight hundred pieces of eight a year. The masters of the eight

er's slaves, he makes the profit of their
places.

Selling of
plate.

Though every private citizen that has
silver may have it coin'd into money, yet
the mint is almost continually employ'd by
merchants, and at present there are three
richer than the rest, who buy the metal of
private persons, who are not so rich, pay-
ing two rials short of the value in a mark;
one that they pay to the king of *Seunorage*,
or duty of lordship, and the other for the
cost of work; for whereas the value of
standard silver of two thousand three hun-
dred seventy six *Maravedies*, is eight pieces
of eight, and six rials a mark, they pay
but eight pieces of eight and four rials.

Separat-
ing of gold
and silver.

There being some gold, as has been said
before, mix'd with the silver, it is separa-
ted in another place, call'd *el Apartado*, or
the separation. Before the plate goes thi-
ther, it must go to the exchequer to pay
the king's fifth, to be then sent thither.
The separation is made in the aforesaid
house after this manner. The silver being
run is converted into little balls, which are
put into vessels with *aguafortis* to dissolve.
The gold remains at the bottom of the
vessel like black powder; and the *aguafor-
tis* containing the silver is put into two

glasses with their mouths together; by the
Spaniards call'd *Cornamusas*. Putting fire
to it, the silver remains in one of the two
glasses, and the *aguafortis* in t'other. The
gold is run in a furnace, and is first cast
into round pieces, and then into bars, as is
done with the silver separated from it. For
this trouble there are six rials a mark al-
low'd to the *houle del Apartado*, or of separa-
tion. Both the gold and silver return to
the exchequer, where the first appearing to
be twenty-two carats fine, and the silver
two thousand two hundred and ten *Marave-
dies*, 'tis stamp'd, as has been said above.
The office of the *Apartador*, or separator,
belongs to a private person in *Mexico*, who
bought it of the king for seventy-four thou-
sand pieces of eight.

GEMEL-
LI.
1698.

When the gold is coin'd, 'tis done after
the same manner, as has been said of the
silver; and they may have pieces of sixteen,
of eight, of four, and of two pieces of eight,
which are call'd crowns of gold. But
there's a difference in the fees; for whereas
the silver pays two rials a mark, the gold
pays three and a half; the money being
deliver'd out by a weight which is less than
the common, by which the gold is receiv'd,
as has been said of the silver.

This is all I could learn touching this
matter, part of which I was an eye-witnes
to, and the rest was told me by D. *Philip
de Rivas* of *Seville*, who had been assayer
thirty years.

CHAP. III.

The Journal continued.

UPON Sunday the 28th, I went to
divert me on the canal of *Xamaica*,
in a boat made of one tree, call'd a *Canoo*.
This being the only diversion at *Mexico*,
there used to come aboard there men and
women, young and old, fair and foul, with
garlands of flowers on their heads, and so
go up and down the canal, after having
fill'd their bellies with those wretched dain-
ties I have spoke of before, which are sold
along the banks. If they would cleanse the
canal, and make convenient boats, this
would be a pleasant diversion. I went in
the canoo as far as the village of *Ixtacalco*,
which in the *Mexican* language signifies the
white house. The water of this lake being
boil'd with a sort of earth they call *Tecbif-
ebite*, or of saltpetre, and run off thro' a
pipe, makes salt. By the way I saw an
ear of corn like a pyramid, with eight
other ears joining to it, all upon the same
reed; a sufficient argument of the fruitful-
ness of the soil.

Monday 29th, five thieves were hang'd,
a *Spaniard*, a *Mestizo*, a *Mulatto*, and two
Indians. The *Spaniard* had kept a *Mejiza*
woman, whereupon his father-confessor pre-
vail'd with him to marry her; which done,
the criminal press'd to consummate the
marriage, pleading the legality of it, and
was so eagerly bent upon it that the priest
had much difficulty to dissuade him, tho'
he was to be executed the next morning,
which was done accordingly, they being
carried to execution clad in white, with
caps on their heads on which was the cross
of the brotherhood of the *Misericordia*. 'Tis
the custom there, when any are hang'd,
to pull down their feet by a chain they carry
dragging with 'em.

Tuesday 30th, I went to *Tacubaga*, two
leagues from the city, where there are fe-
veral pretty country-houses, with fountains
and gardens, and particularly the count *de
Santiago's* olive-garden, which at present is
going to ruin. Thursday the 2d of May, I
went

GEMEL-went to *S. Cosmo*, half a league from *Mexico*, to see the house and garden of *D. John de Vargas*; the first finely furnish'd, and the second full of pleasant fountains. This gentleman keeps his coach and six, and spends six thousand pieces of eight a year, without any other revenue but what he has from cards and dice, for some nights he wins thirty thousand pieces of eight.

Friday 3d, I went to shoot rabbits at the *Pedregal de S. Angel*, that is, a stony spot of ground, extending two leagues, which, they say, was made by the eruption of a burning mountain, but found no sport. The next day I saw the farm of the *Jesuits* of *Manila*, which they bought for an hundred thousand pieces of eight. There was a good house, and they were building the *Hospitium*, or place to entertain the fathers that come from *Spain*, to go to the *Philippine* islands. *Tuesday* 27th, I saw forty-five thousand marks of silver carried into the mint, brought from *Parral* in carts, a journey of six months; and *Wednesday* 8th, two hundred thirty-six marks of gold twenty-two carats fine from *S. Luis de Potensi*, to be coin'd into *Spanish* pistoles. *Thursday* 9th, I visited the infirmary of the fathers of *Bethlem*, for the use of sick persons that are recovering. There were two galleries, of a good structure, with decent beds. The church has beautiful altars, and a fine sacristy, for the use of secular priests, because the religious themselves never ascend to the degree of priesthood. Their place of burial is a long gallery, with benches on the sides, where they place the dead sitting. *Friday* 10th, there was new barley and wheat in the market, but the scarcity was yet so great, that the magistrates were fain

to deliver it out to many thousands of *Indians* by measure, as they saw the greatest necessity. *Saturday* 11th, the bishop of *Mechoacan*, who had been viceroy *pro interim*, or till the new viceroy came, was attended out of town by him, and had the right hand, abundance of the nobility and great officers following in their coaches. *Sunday* 12th, was the solemnity of the *Dominican*, electing a provincial, which is alternative, for one time they chose a *Spaniard*, and another the son of a *Spaniard* born there. The *Franciscans* chose one time a *Spaniard*, the next the son of a *Spaniard* born there, and the third time a *Spaniard* that has taken the habit in the *Indies*. *Monday*, *Tuesday*, and *Wednesday*, there were processions, being *Rogation-week*, but nothing worth the observing. *Friday* 17th, a collegian was examin'd in the university, in order to take his degree of bachelor in philosophy: they who were to be his judges argued against him: his master, the professor, being a religious man, of the order of the *Mercenarians*, sat in the pulpit above him, and wore on his head a priest's cap, such as they use in *Spain*, with some purple tufts on it, as doctor in philosophy; and two white ones, as doctors in divinity. The doctors of the civil law wear 'em red; those of the canon law, green; and the doctors of physick, yellow. The votes being for the candidate, when he had made a profession of his faith, he went up to the pulpit where his master had been, and the ceremony ended with a great noise of trumpets; the new graduate mounting a horseback, to be attended about the city by others of his profession:

CHAP. IV.

The description of the Hermitage of the barefoot Carmelites.

HAVING obtain'd leave of the provincial of the barefoot *Carmelites* to see the hermitage of that order, which is not to be seen without his leave, I went thither upon *Saturday* 18th, and came to it an hour before night, the way being bad, and having spent much time in climbing the mountain, up a path half a league in length, which cost the order six thousand pieces of eight to make it passable. Being come to the gate of the first enclosure, we waited there half an hour after ringing the bell for admittance; the monastery being a full mile from thence, so that we were forced to send an *Indian*, who was within, and he return'd with the key. The father rector, and some other religious men, came out to receive, and entertain'd us courteously. *Sun-*

day 19th, one of the fathers shew'd us the church and dormitories: the first is small and has five altars, modestly adorn'd, and in it is the burial-place of the founder and his family. In the dormitories the roof is low, and the cells small. At small distances there are small oratories, where the fathers may say mass when they please. There's a good library, and a garden that produces nothing but apples and roses. Besides the monastery, there are nine solitary places, to which the fathers may retire in *Lent*, *Advent*, or any other time: in each of these is a little cell, with a kitchen, and a little garden with fruit and flowers, water'd by a clear cool fountain. Here the fathers may not eat so much as fish, but only fruit and cheese, or, at most, boil'd herbs.

BOOK V.

herbs. They pray at the same time as those in the monastery, being govern'd by the same bell.

All the ground belonging to this monastery being about seven leagues, is encompass'd with a good wall of lime and stone. Within it there are vast high mountains cover'd with tall thick pine-trees, and a few fir-trees, so that the inclos'd deer, lions, tygers, and rabbits, have liberty enough, and come under the windows of the monastery. I happening to kill a deer, the fathers were very much displeas'd, it being forbid to kill any creature there.

The most wonderful thing is, that ever since the first founding of this solitude, there have always been two crows there, which suffer no others from abroad to come in; but, as soon as their own young are able to fly, drive them away. The cook calls them with a whistle, and they come and feed, and then fly away into the wood. The feat is melancholy and unwholesome, by reason of the continual fog rising every morning from the rivers and valleys about; and therefore the fathers suffer much who reside there.

At a small distance from it, is a mountain, call'd of the *Idols*, because formerly the *Indians* sacrific'd there. There are still to be seen some little idols of clay in the hollow of a low ancient wall, and some *Indians*, who are not well grounded in the faith, go thither to make their abominable offerings.

The hermitage was founded on the 25th of January 1605, under the invocation of our lady of *Carmel*, or the *Carmelites*, by *D. Melchior Quellar* an *European*, who liv'd in the city of the *Angels*. Besides the building of the monastery, and settling revenues to maintain the religious men, he laid out twenty-six thousand pieces of eight upon walling in so great a tract of ground, and then presented the monastery with the employments of assayer and founder (as has been observ'd above) which are worth near sixteen thousand pieces of eight; so that, calculating the whole expence as near as a man can guess, it amounted to about six hundred thousand pieces of eight, which he got by his ingenuity in the aforesaid employment, for he came poor out of *Spain*. His Wife, *Do. Mariana Nino*, was also a benefactress to the order, founding the college of *S. Angel*, to which, out of her portion, she left a sufficient revenue for the maintenance of the fathers.

There's no reason to think this strange, because many other *Spaniards*, from mean beginnings have arriv'd to vast wealth, and then finish'd prodigious works: among the rest, one *James del Castillo*, born at *Granada*, coming poor out of *Spain*, laid the

foundation of his fortune by following the trade of a brazier, and in progress of time came to be worth above a million of pieces of eight, built the great monastery of *Cibola*, of the order of *S. Peter de Alcantara*, a league from *Mexico*; that of *S. Elizabeth*, of barefoot *Franciscan* nuns, within the city; and that of *S. Agnes*. After all this vast expence, when he died, he left a million to *D. Dominick de la Rea*, knight of the order of *Santiago*, or *S. James*, who had married a young maid kept out of charity by *Castillo*.

Joseph de Retes, knight of the order of *Santiago*, after building a nunnery of the invocation of *S. Bernard*, left a million to his daughter, who obtaining the pope's dispensation, married her cousin *D. Dominick de Retes*, knight of the order of *Alcantara*, and marquis of *Xorke*. His wife dying without issue, he restor'd the million portion, and yet was not left poor, for his brother, *D. Joseph de Retes*, had left him one hundred and fifty thousand pieces of eight.

D. Francis Canales, knight of the order of *Calatrava*, having made his wife heir of all he had, which amounted to six hundred thousand pieces of eight, she, tho' left young, despising many rich and noble persons who courted her for a wife, gave all she had to the poor, and in the year 1695 became a nun, to the great edification of all people, in the monastery of the *Capuchin* nuns. This nunnery was founded by *Simon de Haro*, as was that of the *Conception*, and yet this *Haro* brought nothing out of *Spain* but the clothes on his back.

Dominick Laurencana coming poor into the *Indies*, acquir'd so much wealth that he built the famous monastery of the *Incarnation*; and afterwards a nun of the same, without letting it be known who did it, built the nunnery of *Valvaneda*.

John Navarro Pasfrana, by no better a trade than a coachman, got so many pieces of eight, that he built the nunneries of *St. Joseph de Gracías*, and that of the *Conception*.

Stephen de Molina Mojquera, tho' he had built the church and nunnery of *St. Teresa*, yet at his death he left a hundred thousand pieces of eight.

D. Mark de Guevara made the aqueduct of *Mexico*, a league in length, which was a vast expence by reason of the many arches it lies upon. As an acknowledgment for his good work, he was made *Alguazil Mayor*, and had place in the chapter for him and his heirs. I pass by many other instances, to avoid being tedious, and think it enough to say, that all that's great and magnificent in the structures of the *Indies* (which cost four times as much as they do in *Europe*)

GEMEL- is all the work of Europeans and Spaniards, who by their industry have rais'd their fortunes there.

It being forbid to stay above twenty-four hours in that solitary place, we return'd upon Monday 20th, by the way of Santa Fe, to see the source of the water that goes to Mexico, which is two leagues from the hermitage. It rises at the foot of a mountain, and is convey'd into open troughs about a

league from Mexico, and then into close pipes, which convey it to all the quarters of the city. Near the spring is the house where Gregory Lopez, born at Madrid, led an eremitical exemplary life for several years. A Mexican lady built an oratory there, and a convenient house for any that would go thither to say mass. That night we return'd to Mexico.

CHAP. V.

What more the author saw during his stay at Mexico.

Escapusalco. FRIDAY 24th, I went to Escapusalco, to see whether there were any foodstuffs left of the palace of the king so call'd. Having rode a mile and a half out at the quarter of St. Cosmo, I came to the little village of that name, which is a parish of the Dominicans, where I found no other structure of stone but a little monastery of that order, no bigger than for five friars, and a very plain church with twenty altars in it. The palace, we may suppose, was destroy'd by the first conquerors. Calling, as I return'd, in at the Hospitium of the Dominicans, call'd St. Hyacinth, the vicar in the garden shew'd me that so highly valued *Cocbinille.* Cocbinille for dying scarlet. There were certain worms of an ash-colour sticking to the leaves; these, he told me, when ripe, they shook off upon a cloth, and when dry they turn scarlet. The greatest quantity of 'em is gather'd in the province of Uguaxaca, or rather Guaxaca, famous for good chocolate.

The royal palace. Saturday 25th, the viceroy remov'd to the new palace, rebuilt after it had been burnt. They say this belongs to Cortes, and that, for the viceroy's greater convenience, it was exchange'd for that of Montezuma, which belong'd to the king. Whilst the royal palace was rebuilding, the marquis del Valle, successor to Cortes, gave the viceroy house-room gratis in that we have mention'd of Montezuma, opposite to the cathedral. The said royal palace has a front to the great square, nothing inferior to that of Naples, the beautiful symmetry of open windows, or balconies, supplying the want of curious carv'd work; and the want of other ornaments being sufficiently recompens'd by its being square, with a court in the middle, and two towards the great square, on which there are small brass guns, to make use of in case of any mutiny.

From the great court there's a pair of stairs (like that of the palace at Naples) leading to the apartments, which are not only beautiful, but many and large. The

courts of justice are apart, and is the Corps de garde for those few soldiers that mount. The viceroy, in the morning, went to the court of criminal causes, in order to the goal-delivery for Whitsuntide, and took his seat between five Oidores, or judges, of the royal court, and five Alcades de Corte. There were four hundred prisoners Spaniards, and Many all for theft; for, living idle, and like vagabonds, they must steal and cheat to live; and therefore, tho' a stranger be never so much upon his guard, he'll never get out of Mexico without losing some money or equipage; for they are so expert at lying, that they will deceive a man, tho' never so cunning. They had rather be poor and naked, than follow any trade, or serve; and yet they may get four times as much as in Spain. If vagabonds were taken up, as is practis'd in other countries, people might live safe in their houses; but, as 'tis, tho' they be shut, they are not safe, the thieves making their way in at the tops, or else burning the doors: besides, in the day-time no purse is safe in the church, they are so very dexterous; and one day I saw my sword taken from my side. Tho' this was a day of mercy, yet very little was shewn by the viceroy and his ministers: mentioning of whom puts me in mind, that when any of them is dying, the viceroy is oblig'd, by special order from the king, to go visit, and ask whether he has any thing that lies upon his conscience to discover to him; and, when he's dead, he is to attend the body to the church.

Wednesday the 5th of June, I saw the Trinity Hospital of the Blessed Trinity, which is only for sick priests, of any nation whatsoever. The church is well adorn'd with twenty-one altars gilt. The infirmary holds about twenty beds, and is serv'd with great charity and neatness. There's an apartment for the superior, and some lodgings for the chaplains, as also to cure madmen. The licenciado, de Alphonso Gomez, made a present to this charitable place, of the twelve pictures of the apostles, of a great value.

Thurs-

Corpus
Christi
procession.

Thursday 6th, againft the proceffion of *Corpus Christi* all the ftreets and windows of the city were richly adorn'd with images, carpets, and quilts, which together with the green herbs and beautiful flowers, made a delightful fhew. In the filver-fmiths ftreets was the conquest of Mexico curioufly painted, with the houfes exactly as they were then, and the habits the Indians then wore. The proceffion began with about one hundred images adorn'd with flowers, then follow'd the brotherhoods, and religious of all orders, except the *Jesuits* and *Carmelites*. Then came the canons carrying the bleffed facrament on a thing like a bier. The laft were the archbifhop, the viceroy, the miniftry, magiftrates of the city, and nobility.

Friday 7th, I went to the monaftery of St. Francis the Great, to fee the tomb of Ferdinand Cortes, the conqueror of Mexico. On the right hand of the high altar was his picture under a canopy; and a little higher than the ground a tomb, where he told me the bones of that great commander were preferv'd, not yet honourably beftow'd. The feaft of S. Peter and S. Paul, being the 29th, was kept in the cathedral, the high altar being fo richly adorn'd, that it was valu'd at an hundred and fifty thoufand pieces of eight, the chalice alone, which was fet with emeralds, having coft eleven thoufand. Sunday, being the laft day of the month, I went in a coach to the Alameda (which is the place to take the air like the park in London) all the diversion there is

about a fountain, becaufe there are feveral GEMEL-water-works. The bafon is of brafs, much better than that in the middle of the great square.

There having been a plentiful harveft of the grain they call *de Riego*, that is, which comes up with watering, the viceroy, on Monday the 1ft of July, fent for all the bakers and farmers, and defir'd them to make the bread of the weight it us'd to be; and the more to oblige them, treated them with bifkets and chocolate, being by himfelf all the while. They promis'd fairly, whilst they were drinking, but were very unwilling afterwards to be as good as their words; being us'd to get half in half; or elfe they could never wear cloaths worth four or five hundred pieces of eight.

Tuesday 2d, being the vifitation of the College of bleffed virgin, the viceroy and his lady orphans. went to the college of the maids of St. Elizabeth, where they were entertain'd. Here twenty fix orphans are maintain'd by the brotherhood of the bleffed facrament, which allows every one of them fourteen rials a week, and five hundred pieces of eight portion when they marry. However they have a chance to partake of other portions given in other charitable places.

Saturday 6th, I went to the college of *Amor de Dios*, or the love of God, which has thirty fix thoufand pieces of eight a year of royal foundation to be fpend in the cure of thofe that have the French difeafe.

CHAP. VI.

The funeral of the lady Faufta Dominica Sarmiento, grandchild in the fifth defcent of Montezuma; alfo the feftival of St. Hippolito, and Pendon.

Montezuma's
offspring.

ON Tuesday 16th, dy'd the lady Faufta Dominica Sarmiento, grandchild in the fifth defcent to the emperor Montezuma, and daughter to count Montezuma the prefent viceroy. She was but eight years of age, and by her death a revenue of forty thoufand pieces of eight a year she had in the Indies, fell to her younger fiftter. For the clearing of her genealogy the reader is to underftand that the emperor Montezuma, among his many wives, had one call'd Miyabuaxocbite, who was alfo his niece, as being the daughter of his brother *teftilcuecabuac*. By her he had a fon, whole name was *Tlacabuc-pantizinyobualycabua-catzin*, who was afterwards baptiz'd, and took the name of Peter. He took to wife the lady Magdalen Quayaubxocitl, his own coufin (as being the daughter of *Tlacabucpan*, third brother to Montezuma) of

whom was born D. James Luis Ikuil Temolzin, who marry'd in Spain. From him are defcended the counts of Montezuma, Tula, &c. to whom the king's exchequer of Mexico pays forty thoufand pieces of eight a year. By another wife, whole name they fay was *Teitcalco* (which it is likely has been ill fpelt, becaufe it is no Mexican name) Montezuma had a daughter call'd at firft *Tecubieb potzin*, and when baptiz'd, *Elizabeth*. Her firft husband was her uncle *Chitlabuatzin*, who ought to have fucceeded Montezuma in the empire, had not Quaubtimoc ufurp'd it. Her fecond husband was Quaubtiemolzin; after whole death Ferdinand Cortes gave her in marriage to D. Alonfo de Grados, who had no iffue by her. She had to her fourth husband Peter Gallego de Andrada, from him are defcended the *Andradas Montezumas*, now living

GEMEL-living in Mexico. Her fifth husband was
 L.T. John Cano, from whom come the Canos
 1698. Montezumas.

The funeral.

This lady, above-mention'd, her funeral was put off to the next day, being Wednesday 17th, and in the mean while all the bells in the city rung peals. About ten in the morning all the religious orders in the city came to the palace to pray for her soul. She lay on the same brocade'd bed, on which her mother dy'd, under a canopy, in a room hung with damask. Then all the religious nobility and officers came to attend the funeral. The first that took up the body were the judges of the royal, and criminal courts, who upon occasion represent but one body, after them the officers of the court of *Cuentas* and exchequer took it, then the magistrates of the city, and lastly four *Dominicans*. Next the body march'd the *Spanish* company with their arms revers'd, and drums unbrac'd; and then the doctors of the civil and canon law, and of physick, being distinct parts of the university, with their mace-bearers. Then follow'd the magistrates of the city and courts, in their proper places, and lastly the viceroy nephew clad in sad colour. By the way there were three canopies erected upon scaffolds only for shew; not that the body was to be set down there. All the religious, with the clergy, and chapter, being come to St. *Dominick the Great*, the body was set upon a high mausoleum, with a garland of flowers, as being a maid; and the mafs being sung, the foot-company that was in the church-yard gave two volleys; for at the elevation nothing was done but only the ensign flourish'd the colours near the high altar. Then the body was carry'd to be bury'd in the chapel of *Peter Montezuma*, before spoken of. The arms of his family are an eagle with her wing extended towards the sun, and *Indian* legs about her.

Monday 29th, I went to the hospital of the love of God to see D. Charles Siguenza y Gongora, of whom I had the cuts I have inserted in this volume, and found him busy distributing a purse of an hundred pieces among the poor. Inquiring of him about that D. Francis de Aguilar y Sexios Gallego, the archbishop of Mexico, provided such a purse every Monday to be distributed among poor women, that could not work; and that with his own hands he gave two pieces of eight to every person recover'd after sickness, that carry'd a certificate from the hospital. This good pleasure in the year gives about one hundred thousand pieces of eight more than his revenue in charity; for besides what has been said, he distributes one hundred pieces eve-

Notable charity.

ry Friday in his palace. and every day twenty bushels of *Indian* wheat, which cost eighty pieces of eight. He allows the hospital of the trinity thirty pieces a day; among all the sick two pieces; to the dead twelve rials; to private poor men and women about three thousand pieces every first day of the month.

Friday the 9th of August, going to the college of *Ildefonso* to see some antiquities; I found on the east side of it, some ancient stones, upon one of which there were figures and hieroglyphicks carv'd; and among the rest an eagle with leaves of the *Indian* fig-tree about it; and another on the wall, besides circles, and other figures. D. Charles Siguenza, a great antiquary in what concerns the *Indies*, told me, those were the remains of a temple of *Huitzilpochtli*, dedicated in the year 1486; because by other pictures, and ancient pieces of the heathen times, it appear'd that temple had stood there; but others will have it, that it stood where the cathedral is. Both may be true, for it might be so large as to reach to both places. Saturday 10th, I saw some *Indians* that kill'd the least birds upon the highest trees with pellets shot out of trunks.

On Monday 12th, after Vespers began solemnly the solemnity, they call *del Pendon*. or of the standard, which is the greatest that is kept in Mexico, in memory of the conquest of Mexico, which fell out upon the day of St. *Hippolitus*. All the magistrates of the city, and gentlemen invited by them, being assembled, they took up the standard with which Cortes conquer'd Mexico, and went to the viceroy's palace, where they found all the officers of state. Here the procession began after this manner. First went four kettle-drums upon two asses (asasts esteem'd in America) then follow'd the trumpets, twelve *Alguaziles* on horseback, and the city's two mace-bearers; then the gentry and magistrates of the city, and then all the king's officers, and among them the standard, carry'd by a magistrate of the city. In all they were about an hundred, ill mounted. They were all displeas'd at the viceroy for refusing to go with them, contrary to the king's orders, which particularly enjoin him to mount and attend the standard, going to the left hand of it; and therefore to omit, it is reckon'd an offence he may be call'd in question for. It was said he staid at home for fear, having fallen from his horse at his entry. Having left the standard in the church of St. *Hippolitus*, they all return'd in the same order to the palace. The same company heard mafs on Tuesday 13th, being the day of St. *Hippolitus*, and then carry'd back again, the

its feet, 1684 *Castellanos* of gold, and the
whole value of it is about thirty thousand

pieces of eight. It belongs to the *cathedral*, where there are other precious reliicks, rich furniture, and vessels of silver and gold. Here several maidens chew lots for three of them to have three hundred pieces of eight a piece, portion.

CHAP. VII.

Of the sport the Spaniards call la Gamita.

MONDAY 26th, I set out of *Mexico* with some friends to shoot deer, but finding none where we expected on *Tuesday* 27th, went away upon *Wednesday* 28th, to the village of *St. Jerome*, inhabited by *Otomito Indians*, where we were fain to make use of an interpreter, because they understand not the *Mexican* language. These wretches, like many more in *New Spain*, live rather like beasts than men, among frightful mountains. They live the most of the year upon herbs, because they have no *Indian* wheat, by reason they till but little land, and are given to idleness. The tears stood in my eyes to see them in that miserable condition, that they had scarce wherewith to cover their nakedness, both men and women; and grinding the empty ears of new *Indian* wheat on a stone to make chocolate, to which they added some bran to make dough of it, and bake that green paste. Seeing one of them pick up the crumbs of bread that fell from me, I gave him some. Their lodging is answerable to their diet, for they have no other bed all the year round but the bare ground. There is no doubt but their own sloth is the cause of their misery, as also the avarice of some *Alcades*, who take from them all they have got in the whole year, obliging them to buy oxen, mules, horses, and quilts of them, at three times the value, and taking their provisions at their own rates.

After an uneasy night spent in a cottage, we went upon *Thursday* 29th in the morning to the mountain to shoot by way of the *Gamita*. This is a noise resembling the cry of the young fawns, which draws the does within reach of the gun to be shot. Many thots were made all day, and but one doe kill'd. The next day, being *Friday* 30th, though twenty six does came to the noise of the *Gamita*, only two were kill'd; but having now venison enough, we return'd to *St. Jerome*. By the way we

met abundance of bucks (I kill'd a great one) and *Guaquilotes*, or *Turkeys*, that went about the wood in troops. These are the best fowl the Spaniards found in *América*, so good that they bred some tame, and brought them into *Europe*. That night we lay at *St. Jerome's*, and the next day, being *Saturday* the 31st of *August*, return'd towards *Mexico*, with four deer upon a mule, but it is to be observ'd they are no bigger than a good fawn in *Europe*. Night overtook us in a farm, where we were fain to lie that night. The man of the house civilly gave us cheese, and milk, without taking any money for it. *Sunday* the 1st of *September* we return'd to *Mexico*. Nothing remarkable happen'd till *Saturday* the 14th, when the price of bread having before at half a rial for fourteen ounces, a baker was fin'd for selling sixteen ounces for the same price. An action altogether unaccountable.

Monday 16th, going to the palace, I *Chicimecas* found in the great hall four *Chicimecas* (a *cali* word signifying, bred up amidst bitterness) come from *Parral*, to beg an alms of the viceroy. They had no part cover'd but their privities; all the rest of their bodies being naked, and stain'd of several colours. All their faces were streak'd with black lines made by pricking the skin till the blood comes, and rubbing it with ink. Some cover'd their heads with a stag's skull with all the horn on, and the skin of a beast's neck fitted to theirs. Others carry'd a wolf's head with all the teeth; others a tyger's, and others a lion's, to look the more terrible. But when they are abroad, the cries are more terrible, than their presence. The mules and horses smell the stink of their flesh at a great distance, and will not go on. They desire above all things to kill *Spaniards*, that they may flea their heads, and fit that skin upon their own heads, with all the hair, and so wear it as a token of valour, till it rots off in bits.

C H A P. VIII.

Of the Cus, or pyramids of St. John Teotl, Guacan.

Pyramid
of the
moon.Pyramid
of the sun.

THE time of my departure from Mexico drawing near, I thought fit to see some Indian antiquities, not far from the city, and in order to it on Thursday 19th, I rode a-crois the lake of St. Christopher to Acotlan, or Acotlan, a parish of the Augustinians; and having rested there a while went on to the village of Teotiguacan (which in that language signifies a place of Gods, and of adoration) six leagues distant. That night I lay in the house of D. Peter de Alva, Grandson to D. John de Alva, descended from the kings of Tescuco. Friday 20th, in the morning, he bore me company to see the pyramids, a league from his house. First we saw that call'd of the moon standing towards the north, two sides whereof we found to be two hundred Spanish yards in length, that is, about six hundred and fifty spans, or a hundred and sixty yards English, the other two sides a hundred and fifty Spanish yards. We had no instrument to take the height, but as near as I could guess it was about two hundred spans, or fifty English yards. To say the truth, it was nothing but a heap of earth made in steps like the pyramids of Egypt; only that these are of stone. There stood once on the top of it a vast great idol of the moon, made of hard stone, coarse enough; but the lord Summarica, first bishop of Mexico, caus'd it to be broke in pieces, out of a religious zeal; and there are three great pieces of it at the foot of the pyramid to this day. Within this great pile, there were some vaults, where the kings were bury'd; for which reason the road to it is still call'd Micaotli, which in the Mexican language signifies, the way of the dead. About it are several little artificial mounts, suppos'd to be the burying places of lords. Thence we went southward to see the pyramid of the sun, call'd Tonagli, two hundred paces distant from the other. Measuring two sides, we found them three hundred Spanish yards in length; but the other two were not above two hundred. Its height was about a fourth part more than that of the moon. The statue of the sun that stood at the top of it, after being broken and remov'd out of its place, was left in the middle, there being no throwing it down to the ground by reason of the greatness of the stone. This figure had a great hollow in the breast, where the sun was placed; and all the rest of it was cover'd with gold, as was that of the moon, which afterwards the Spaniards

took away at the time of the conquest. At present, there are two great stones at the foot of the pyramid, which were part of the idol's arms and legs. This gives occasion for two doubts or questions; the first, how the Indians, having no use of iron, could cut so hard a stone: The second, how they could carry and raise it to such a height, being destitute of convenient engines, and wanting the art to make them. Besides, there are no such hard stones in the neighbourhood, and they had neither mules, horses, nor oxen, to draw it so far, those creatures having been carry'd thither by the Spaniards. The word Cu is not Mexican (it might perhaps be of Aztec or some other province) for the Mexicans call the church Teocalli or Zopli.

The building of these pyramids is attributed to the Umecos, the second planters of New Spain, who came from that island Atlantis, Plato speaks of in his Timæus. This conjecture is made because all the Indian histories, unanimously agree, that these Umecos came by sea, from the east; and on the other side, according to Plato, the inhabitants of the island Atlantis, deriv'd their original from the Egyptians, who had the custom of raising pyramids. Aristotle, in his book de Admirandis, says, that the Carthaginians use to sail to an island, very far distant from Hercules's pillars; and that many of them settled themselves there; but that afterwards the senate forbid them, for fear that, being taken with the delights of the place, they should forget their country. If this be true, it is not to be look'd upon as any wonder, that the Mexicans should raise pyramids after the Egyptian manner, and have the same year; no more than that which Ammianus, in his 17th book, relates, viz. That on the Egyptian obelisks, there were sometimes birds, and beasts of another world carv'd. No Indian historian has been able to discover when the American pyramids were set up; but Dr. Charles Siguenza believes them to be very ancient, and not much later than the flood. It is certain, that where they stand, there was formerly a great city; as appears by the vast ruins about it, and by the grots or dens, as well artificial as natural; and by the number of mounts, believ'd to be thrown up in honour of their idols. One of them is call'd Tonaghi-iguenza, which signifies, the fall of the sun. Saturday 21st, I return'd home. Monday 22d, it rain'd so much that

that several houses were ruin'd, and they were forc'd to go in boats, in the quarters of St. John de la Penitencia, or of penance

St. Francis, and St. James, almost as far as the Alameda, or publick place of taking the air.

L1.
1693.

CHAP. IX.

Of the birds and beasts of New Spain.

BAGS.

There is such variety of beautiful birds in *New Spain*, that no country in the world can parallel it. The preference among them all is given to the *Sofontle* (which, in the *Mexican* language, signifies five hundred voices) a small matter less than a thrush, and of an ash-colour; only the tail and wings, which are speckled with white. That the *Spaniards* call *Gorrión*, or sparrow, sings sweetly, is as big as our parrow, and its colour inclining to black. The bird call'd the *Cardinal* sings well, is as big as a wood-lark, and has not only the feathers, but the beak scarlet; and besides, on the head a most beautiful tuft. It is taken in the temperate parts of *New Spain*, and *Florida*; and the *Spaniards* give ten, or twelve pieces of eight apiece for them, to send into *Spain*. There is another small bird of the same colour; he is less than the other, and does not sing. There is another as big as a thrush, by the *Spaniards* call'd *Tigrillo*, or little tiger, because spotted like a tiger, valu'd for singing. The *Cuir-lacobe*, has dark feathers; and is as big as the *Sofontle*, but has a longer beak, and red eyes. When kept in a cage, it must have a pounce-stone by to grind its beak on as it grows, that the length may not hinder its eating. There is another call'd *Cacalototol*, which in the *Mexican* tongue, signifies black-bird. It is as big as our black-bird, of a yellow colour, and sings delightfully enough. The *Silgueros*, are black and white, as big as a sparrow, and are valu'd to keep in cages. There are some black wood-larks, black and yellow, who build their nests, hanging at the trees, by horse-hair, wove like a purse, and they sing well.

PARROTS.

As for those that imitate the voice of man, or speaking, there are parrots of several sorts. Some call'd *Catanarillas* green; others *Loros* which are green, but have the tips of their wings and their head yellow. *Pericos* little bigger than a thrush, and green. Others as big as a dove, call'd *Gnaccanayas*, very beautiful; for they have red, green, and yellow feathers, and a beautiful tail, as long as a pheasant's; but these do not talk.

FOWLS.

As for eatable fowl, there are two sorts of pheasants; one with black wings and tail, and a dark body, which they call *Gri-zones*; another of a murrey, much bigger than the last, call'd *Real* or royal, because

it has a thing like a crown on its head, better relish'd. There are *Chachalacas*, in all respects like our hens, but their feathers are of a murrey colour, and they are not so big. Abundance of wild turkeys, which about the new moon, are easily kill'd upon the decay'd trees, on which they perch; for when one falls to the ground, there is no danger, the rest should fly away at the noise of the guns. There is another sort of birds good to eat, which they call black-birds, who go tamely into the houses. There are several sorts of them, some quite black, others with red wings; others with yellow heads and breasts, and others bigger than a black-bird, black, and with a long tail, call'd *Urracas*, that is, pies.

The quails are of the same colour as ours, but with some feathers standing upon their heads, and not so well tasted as ours in *Europe*. The *Pito Real* is as big as a turtle-dove, and with a bill as long again as its body. Its feathers are all black, except those about the neck, which are yellow. The *Spaniards* look upon the tongue of it, as a sovereign remedy against the heart-burning; giving the patient warm water to drink, that it has been steep'd in. Besides, the smok of the feathers cures other pains by sympathy; as for instance, those of the wings, pains in the arms; those of the legs, in the legs, and so of the rest. There is another wonderful bird, call'd *Guachichil*, or *Chupastores*, that is, sucking flowers, because it is always seen in the air, sucking flowers, without ever lighting on the ground. The *Indians* say they flick their beaks in the boughs of trees, for several months in the year, where they take them asleep, to make of them their images, and other curiosities abovemention'd.

The *Suppilotes* are as big as crows, there are two sorts of them, the one has a tuft of flesh on the head, and do not eat carrion; the other, a tuft of feathers, and these last eat all the carrion and filth of the city and country. At *Vera Cruz*, it is forbid to kill these birds, for the good they do; and it is allow'd to kill pigeons in the house or abroad. Of *European* birds, there are geese, cranes, ducks, pigeons, turtles of two sorts, some as big as ours in *Europe*, and others less, and several sorts besides.

As for beasts, there are bears, wolves, Beasts, wild boars, but different from ours, for they

GEMEL-they have the navel upon their back,
 LI. hares, rabbits, deer, foxes, tigers, lions, and
 1698. other forts. The lions are not so fierce as
 those in *Africk*, but being pursu'd by the
 dogs, run up the trees. For such as are pe-
 culiar to the country, there are *Siboles*, as
 big as a cow, whose skin is much valu'd for
 its long soft hair. *Ardillas* black and sad-
 colour'd, like dormice; *Lobos* like leo-

pards; *Zorillas*, as big as a cat, with black
 and white hair, and a beautiful tail. These,
 when pursu'd, stop to piss for their defence;
 because this water of theirs infects the very
 air for an hundred paces about, and over-
 comes those that pursue it; and if it light
 upon any garment, it must be bury'd to
 get out the stink.

CHAP. X.

Of the fruit and plants of New Spain.

TO speak the truth, the best product of
New Spain, is the gold and silver, the
 pearls taken in its seas, the emeralds found
 among the rocks, in the kingdom of *Santa*
Fe, and precious stones of *Peru*, but hav-
 ing spoke of them elsewhere, there is no
 need of repeating it here.

Fruit. But to speak of the fruit growing
 on trees, there are all sorts that *Europe*
 affords, except nuts, cherries, medlars, and
 service berries. Those peculiar to the
 country, are plantans, pine-apples, or *Ana-*
nas, *Anonas*, *Cocos*, *Alcs*, and *Dates*, of
 which I have given an account elsewhere,
 and set down their shape and figure. Those
 which grow in no other country, or if they
 be in the *Philippine islands*, have been car-
 ry'd out of *America*, are these that follow.

Aguacates. The *Aguacate* grows on a tree like a walnut,
 but thicker. It is sometimes long like a
 pear, and sometimes round. The colour
 without is green, and green and white with-
 in, with a large kernel in the middle. It
 is of a most exquisite taste, so that it is ei-
 ther eaten raw with salt, or boil'd; for it
 is very unctuous and sweet. Physicians
 count it hot, and therefore forbid it to nur-
 ses, for fear they should lose their milk.
 All that have tasted, do allow it exceeds
 all the fruit of *Europe*.

Sapotes. The next place is due to the *Sapotes*,
 whereof there are four several sorts. Some
 they call black *Sapotes*, their tree is as big
 as a walnut, and thick; but the leaves ve-
 ry green, and smaller than those. The
 fruit is round, and has a very thin green
 rind; within it is of the colour and taste of
Cassia, with four small kernels. Green, it
 is poison for fish; ripe, it is very whole-
 some for sick people. The second sort
 is call'd, white *Sapote*. The tree is as tall
 as a pear-tree, the fruit as big as a pear,
 green without, and white within, with four
 white kernels. It is good to make people
 sleep. The third sort is call'd *Sapote Bor-*
rachio, or drunken *Sapote*. The tree is like
 the last, but the branches more slightly.
 The taste of the fruit, is between sweet and
 tart, but very pleasant; the colour is green

and yellowish without, and whitish within,
 with two kernels. The fourth is call'd
Cibico Sapote, or little *Sapote*. The tree is
 higher, bigger, and thicker than the wal-
 nut. The fruit without is almost purple, and
 within higher colour'd. It has four small
 kernels placed as it were in niches. The
 taste is sweet, and the most valu'd of all
 that grow in a hot country. They make a
 composition with it, which the ladies chew
 to keep their teeth white.

The *Mamey* is a very tall thick tree, *Mamey*,
 which always has fruit on it, from one year
 to another, and it is as big as a large lemon.
 The outside is a barly colour, and red with-
 in, with a large purple stone, in which is
 a kernel like a bitter almond, call'd *Pestle*,
 which they make use of in glisters.

The *Granadilla de China*, grows on a *Grana-*
 plant like the ivy, which winding about *dilla*,
 any tree, covers it all. It is as big as an
 egg, and as smooth; white and yellow
 without, and whitish within; and has seeds
 like those of a grape. Its taste is sweet,
 somewhat inclining to a pleasant tartness,
 very pleasing to ladies. Some fancy they
 see the instruments of our Saviour's passion
 represented in it, as may be seen in the cut.

All the aforesaid sorts of fruit are eaten
 in *Mexico*, from *March* till *September*; but
 the *Mameys* and *Black Sapotes*, are always
 to be found on the mountains, when any
 body wants them.

Among the *Indian* plants the first place *Cacao*
 is due to the *Cacao*, as well for the profit it
 yields the owners, as for being the chief
 ingredient of a sort of drink become almost
 general to all the world, and very grateful
 and delightful, particularly to *Spaniards*.
 It is sow'd in a soil that is hot and dry,
 with the eye upwards, well cover'd with
 earth. It springs out within a fortnight;
 and does not grow above three spans in two
 years; at which height it must be trans-
 planted; where it is to be observ'd, That
 the plant must be taken up with all the earth
 that covers the root. When they are trans-
 planted they must be set in rows eighteen
 spans from one another. A stick is set up
 to

to support every one, and about them plan-
tains and other fruit-trees, because it grows
well under their shade. Besides, all sprigs
that shoot out at the foot of the plant must
be cut off, that they may not hinder it run-
ning up; the ground must be weeded, and
the roof must be kept warm, from too much
wet, and from some worms that use to
come about it. After five years, it is as
thick as a man's fist, seven spans high, and
then bears. Its leaves are somewhat like
those of the chestnut-tree, but a little nar-
rower; the blossom comes out all over the
body and branches, like the jessmin; but
scarce the fourth part of it holds. From
the blossom there shoots out a little sort of
an ear, like that of the *Indian* wheat, which
before it is ripe is greenish, and when ripe
of a chestnut colour, and sometimes yellow,
white, and purple. Within them are found
the cacao nuts with a white down upon them,
being from ten to fifteen in number. These
ears are gather'd after the full of the moon,
open'd with a knife, and the nuts taken
out, which is then kept three days in the
house a drying in the shade; then laid three
days longer in the sun; then again as many
more in the house, and lastly in the sun a-
gain, that it may be thorough dry. These
thrubs make the air somewhat unwhole-
some.

Bainilla, is a sort of *Indian* cane by
the *Spaniards* call'd *Bexuca*, which twines
about the orange-tree like ivy. That long
rod it produces, when gather'd, is green,
but is dry'd in the sun, and stretch'd out
now and then, that it may not split, and
at last it remains hard and blackish. The
Spaniards, to make them the sweeter, use
to sprinkle them with rich wine, in which
a *Bainilla* has been boil'd cut in bits. It
grows on the south coast of *New Spain*.

Every body knows that *Cacao* and *Bai-
nillas* are the principal ingredients of cho-
colate. The *Europeans* to every pound of
cacao add a pound of sugar, and an ounce
of cinnamon. The *Indians* use no *Bainil-
la*, whether they be rich or poor; nor the
Spaniards that live in *America*, because they
say it is not wholesome; and the goodness
of their chocolate consists in good cacao and
cinnamon; adding to every pound of cacao
two ounces of *Indian* wheat, that it may
froth the better; nor to save cacao, which
is very cheap in those parts. Others add
some of the cacao to the same purpose. In
Europe they use to add some nuts to the ca-
cao, which gives the chocolate a pretty res-
lish. This drink is very ancient, and us'd

by the *Indians* before the *Spaniards* conquer-
ed the country; but the *Spaniards* improv'd
it. In the *Indies* it is so common now that
there is not a *Black*, or a porter, but drinks
it every day, and the better sort four times
a day.

There is another usual plant in the *Indies*
call'd *Maghey*, which grows in a temperate
soil. From the leaves they draw something
like hemp to make ropes, sacks, shirts, and
several sorts of curious works. It also yields
wine, honey, and a good balsam. The
liquor, when it comes from the plant, is sweet
as honey; a while after it is like mead, and
good for the strangury and other distem-
pers. The *Indians* put into it a root that
makes it boil up and ferment like wine, and
it makes people as drunk as wine, and
is call'd *Pulebe*. The plant is frequently
found about the fields; and there is of it in
Spain, especially between port *St. Mary*
and *St. Lucar*. It is like our house-leek,
but much taller, and its leaves thicker, and
more solid. When it is of six years stand-
ing, they cut away the middle leaves, mak-
ing a concavity in the middle, which re-
ceives the liquor, and the *Indians* every
morning take it away, and keep it a month
in vessels; after which the plant withers,
and young sprouts shoot out, so that it is
with good reason call'd the *Indian* vine. If
it be not cut, it produces nothing but a
stalk like a ferula, with a fruit that is of
no use. They make *Aquavita* of it after
the same manner as was said of the coco
wine in the foregoing volume.

This drink is so universal among the *In-
dians*, that the excise upon it was no less
than 110000 pieces of eight; but it was
taken off by his majesty's order, after the
Indians set fire to the great square, and pa-
lace in the year 1692, as was said above,
and the drink it self was prohibited. Ne-
vertheless it is conniv'd at, and some *Spa-
niards* drink it as well as the *Indians*; for
which reason, whilst I was there, fresh or-
ders came from the king to receive the du-
ty again, and allow of the drink as formerly.

The *Indian* fig-trees do not only produce
pleasant fruit, but also the cochinille for dy-
ing scarlet, as was said before. For dying
blew there is the plant they call *Annil*,
whereof there is great plenty in the island
Hispaniola and elsewhere. This is what
we call indigo. Besides these, and many
more *Indian* plants too tedious to be men-
tion'd here, there grow almost all that *Eu-
rope* affords, of which it is needless to give
any account.

*The author's journey to the city of the Angels, and an account of what
is remarkable there.*

GEMEL-
LI.
1698.

First day's
journey

BEING weary of my long stay
in Mexico, and having taken
leave of all my friends, I set out
from that city on Thursday the
10th of October, intending to embark a-
board the advice-boat, bound for the Ha-
vana, in order to sail from thence for the

Canary islands, there being no hopes that
the fleet would sail in any reasonable time.
After two leagues riding, I came to Mexi-
calingo, a little village, where a river that
comes out of the lake of Chalco, runs out
towards that of Mexico, and is very service-
able for conveying of goods. Travelling

d is very service-
ods. Travelling
on

on a league further, over marshy plains, I came to the village of *Itapalapa*, and, at the end of four leagues more, to the inn of *Chalco*, where the host made me pay dear for a bad supper, and worse bed.

Chalco is an indifferent village, and the best *Alcaydeship*, or little government, upon that lake, thro' which all the meal, sugars, and several other things, are convey'd to Mexico. Near *Mexicalcingo* the river is so rapid, that it may be said to hurry the boats on headlung.

Friday 11th, I set out before sun-rising, with other company; and after riding up a dirty steep way a league in length, baited at *Cordoba*; whence entering upon a mountain which was all-along cover'd with pine-trees, we went four leagues further, to lie at *Rio Frio*, that is, *cold River*, an inn in the middle of the mountain, where every horse pays a rial to the guard. Our host look'd mere like a robber than any thing else.

Saturday 12th, we proceeded betimes along the mountain-way two leagues, to the inn of *Tejmeluca*, thence I descended into a delightful plain strew'd with little country houses; and three leagues thence, by noon, to the little village of *St. Martin*. After dinner, I would go to *Tlascala*, three leagues distant, to see the remains of that city, against which the arms of the Mexican empire could never prevail. Having rode thro' some marshy plains partly under water, near the city I crok'd a river, where I had like to have perish'd, by reason of the flood and darkness of the night; and, to mend the matter, lodg'd in a scurvy inn, after so troublesome a journey.

Sunday 13th, I heard mass in the parish church, where there hangs up the picture of the ship that brought *Cortes* to *Vera Cruz*. And being satisfied there was nothing worth seeing in *Tlascala* (which is become an ordinary village) besides a monastery of *Franciscans*, I set out for *Puebla de los Angeles*, or the city of the *Angels*, to which the bishoprick is translated. Thither I came at one in the afternoon, having rode five leagues over the plain, and was lodg'd in a private house near *St. Christopher's*, for a piece of eight a day.

Puebla de los Angeles, or the City of *Angels*, was founded by the *Spaniards* on the 26th of April 1531, and so call'd, as they say, because queen *Isabel*, or *Elizabeth*, of *Spain*, whilst the city was building, saw in a dream a great many *Angels* with lines marking out the ground. The buildings here, for the most part, are of lime and stone, and vie with those of *Mexico*; but the streets are much neater, tho' not pav'd, all of 'em handsome and straight, crossing one another towards the four quarters of

the world; whereas those of *Mexico* are always stinking and dirty, so that a man had always need to go in boots. About the city there are many mineral waters; on the west side they are sulphureous, on the north nitrous and allumy, and on the east and south sweet.

Monday 14th, I went to see the great square: three sides of it are adorn'd with good porticoes, uniform, and set off with rich shops of all sorts of commodities. On the other side is the cathedral, with a most beautiful front, with a high tower, the fellow to which is not yet finish'd, so that this square is finer than that of *Mexico*. Going into the church, I found it built after the same model as that of *Mexico*, but somewhat less. It has seven stone pillars on each side, like that of *Mexico*, which make three isles. The choir and high altar are also like those of *Mexico*, but lower, and have only twelve pillars of good marble. The entrance was then adorning with marble, and good iron-work. The church has twenty-five altars in all, a decent sacristy, and a little room call'd *Ochavo* (to keep the things of most value) richly gilt, as is its little *Cupula*. The chapels are well painted and gilt. Near the same church, towards the square, is another chapel, where the blessed sacrament is kept, with three altars. There are three gates on another side, which is handsomely wrought, leading to the bishop's palace and the seminary. The bishop's canopy is in the church, on the right side of the altar; whereas the archbishop of *Mexico*, to avoid contention with the viceroy, has none, but sits in the choir, in pursuance to the king's orders. This bishoprick is worth eighty thousand pieces of eight a year, besides two hundred thousand that go among the canons and officers of the church, whose whole revenue is about three hundred thousand pieces of eight. Ten canons have every one five thousand pieces of eight a year; the dean fourteen thousand; the chanter eight thousand; the master of the school seven thousand; and the archdeacon and treasurer not much less. There's a proportionable allowance to six demi-canons, six half-demi-canons, and other inferior officers.

Monday 14th, I saw the college of the *Holy Ghost* of the *Jesuits*, whose church has fourteen altars richly gilt. Tuesday 15th, I saw the church of the barefoot *Carmelites*, without the city, which is small, and has ten altars; but the monastery is large, and has a good garden. This day *D. Nicolas Alvarez*, master of the ceremonies, shew'd me a loadstone as big as an ordinary apple, which holds up twelve pounds *Spanish* of iron, also a giant's rib as thick as a man's arm, and ten spans long. There's a tradi-

GEMEL-tradition, that these giants dwell on the mountains above *Tlaxcala*. In this city it rains in the afternoon, as at *Mexico*, and that day the flood carried away houses and cattle, and, what was worst of all, four men and two women.

Churches.

In the church of the nunnery of *St. Jerome*, there are seven altars very well adorn'd. The monastery of *S. Dominick* is a noble structure, the church vaulted, and has about twelve chapels richly gilt, particularly that of the *Rosary*. The church of the *Augustinians* is also vaulted, very large, and more magnificently built. The parish-church of *St. Joseph* has three isles vaulted, and twelve altars. On the right hand of it, the chapel of *Jesus of Nazareth* was building, with a *Cupula* upon four large stone arches. *S. John de Dios*, of the fathers hospitallers, has a large cloister with good pillars, but the monastery is poor. In the church there are eleven altars. The church of the nuns of *S. Monica* is worth seeing for the gold about its six altars. Nor are the nine of the nuns of *S. Catherine* inferior to them. The church of the nuns of the *Trinity* is beautiful, and has six altars, and the monastery has a curious front. The college of *S. Luis*, of the *Dominicans*, without the city, is not very great, and the church has only four altars: twenty fathers live there, subject to the provincial of *Mexico*, and keep the schools.

Cholula.

Sunday 20th, I went to the village of *Cholula*, a league from the city: it looks more like a wood, for all the houses are among gardens. The government is profitable, because many rich merchants live there. In the midst of it is an ancient pyramid of earth, on the top of which at this time there is an hermitage. To return to the city; the church of *S. Christopher* is richly adorn'd, being vaulted, and having

nineteen altars. Nor is that of the nuns of *S. Clare* inferior to it, in which there are six curious altars. The monastery is vastly rich, having five hundred thousand pieces of eight rais'd by portions, which lie dormant. *S. Francis* is a very spacious church, with twenty-four chapels well set off, as is the arch. Before one comes into the church, is the chapel of the third order, with nine altars well gilt: in the monastery there are a hundred and fifty religious men. That of the *Recolets* is not so big, where there are but twenty-five friars; and the church is small, and has but five altars. *S. Paul*, the college of the *Dominicans*, is also but small, containing twenty religious men, and the church has but four altars. As I went out of this city, I could see the burning mountain of *Mexico* cast out mighty flames. The monastery of the *Mercenarians* is convenient for fifty religious men it contains; the church is beautiful, has twelve altars, and ten chapels, well gilt. That of the fathers of *Beblem* has been fifteen years building, with the monastery. The college of *S. Radebonfus*, of the *Jesuits*, newly built, is very large, and there are fifty fathers in it; the church has seven altars, well gilt. Adjoining to it, is the parish-church of *S. Mark*, in which there are twelve altars. The church of *S. Agnes* has seven altars; that of the *Conception*, eight; the *Holy Cross*, a parish of secular priests, fourteen; and *S. Roch*, of the fathers of *S. Hippolytus*, only four.

The reader, by the number of monasteries so rich and well provided, may judge of the greatness, magnificence, and wealth of the city. The bishop, when I went to take my leave of him, made me a present worth fifty pieces of eight.

CHAP. II.

The author continues his journey to Vera Cruz.

5th day's journey
5 leagues.

PROCEEDING on my journey towards *Vera Cruz*, upon Monday the 21st, three leagues from the city I came to the village of *Amataque*; and then travelling two leagues further, lay at the village of *Quacbiula*, in the Indian governor's house.

6th day
7 leagues.

Tuesday 22d, after riding a league on a plain road, I rested at the village of *S. Augustin*. Near to the parish-church of this place is a great pyramid, like those before mention'd. After dinner I travel'd three leagues further, and set up that night at the farm of *Istapa*.

Wednesday 23d, having rode up a dreadful mountain, I met the guards of the way, who took a rial for each horse. Soon after, upon another boggy mountain, my mule fell into a slough, where several of the country people were fain to help her out. Having travel'd a league further over precipices, I rested at the village of *Aculingo*, built in a wood of *Cirimoya*-trees. I dined with the *Alcayde's* deputy, and then set out again; and travelling three leagues further, stopp'd at that they call *Ingemo del Conde*, or *the Earl's engine*, passing over a large river on a long bridge. I found no body to entertain me here, besides that it would have

have been dangerous, the people being all Blacks, and therefore I went on, guided by a Black on horseback, because the place was so dirty that the mud and water reach'd up to our stirrups. I came late, after riding a league, to the farm of S. Nicolas, crossing the same river again upon another bridge at the foot of the mountain Orizava. Here a Spaniard, who was owner of the farm, receiv'd me courteously; but a fowl I gave him to dress came to table without legs or wings.

Having rode a league on Thursday 24th, I was oblig'd to take a great compass to cross the white-river, over a bridge, and go to Orizava to take fresh horses: where, at the Alcade's house, I found the vice-admiral of the windward navy, who would make me stay and dine with them. Mounting after dinner, I rode a long way thro' the town of Orizava, which, standing among so many trees of Cirimoyas and Anonas, looks like a wood, and came into a spacious plain, near the burning mountain of the same name, which is cover'd with snow. The guide led me thro' a dirty way to a more dirty mountain, therefore call'd Despenadero, or the Precipice, where I thought it a miracle that our beasts came off safe. Being over this mountain, I was forced to climb such another; and being come down into the valley under it, cross'd a great river upon a bridge. Having in all travel'd five leagues of very bad way, I came to lie at the town of Cordova, the head of that Alcadeship, or little government. The place is inhabited by rich merchants, who have sugar-works; most of 'em are Spaniards, the air being wholesome, and the soil producing all sorts of fruit-trees. I lay that night in a pitiful inn, where the Black that was my guide, seeing he could steal nothing else, took away my mule's halter.

Friday 24th, coming into a hotter country, I saw parrots of several sorts, and abundance of turkeys (call'd by the Spaniards Guaxolotes, or Gallos de la tierra, which shews they are not right turkeys, these being call'd by them Pavos) sitting tamely on the trees. Having travel'd four leagues thro' the wood, I baited in the village of S. Lorenzo de los Negros, or S. Lawrence of the Blacks, in the midst of a wood. This place being all inhabited by Blacks, looks like some part of Guinea, but they are handsome, and apply themselves to husbandry. They are descended from some runaway slaves, and they were afterwards permitted to remain free, upon condition they should not entertain any more fugitive Blacks, but restore them to their owners; which they religiously observe. Riding fix leagues further, I lay at the inn of S. Compus, where there was neither man's

meat, nor horse meat; and, for our greater plague, the hungry dogs and rats would not let us sleep, so that we were forced to hang up our stirrups and shoes, that they might not be eaten. The host was a lean naked Spaniard, who led an eremitical life there, rather than serve any body. Many Spaniards of quality, for this reason, marry Indian and Mulatto women, and live miserably as herdsmen on those plains, being ashamed to return into Spain poor; as if the soil of America were all gold and silver, and every man that goes thither must of necessity be immediately rich: How many perfectly starve, in respect of those few that rise to great honour and wealth in the Indies? even as 'tis in the army, where many thousands perish, for some few that rise to be colonels or general officers. Abundance of Blacks and Mulattos live in the neighbouring plain, like so many wild beasts.

Saturday 26th, I travel'd four leagues, which might pass for six, over a wild plain not till'd, no more than the last, and rested at Passo de las Carretas, or the pass of the Carts. In this place there's nothing but a house of Mulattos, without any provision, so that the horses fasted, and we eat some small matter we carried with us. The neighbouring mountain might have furnish'd fruit enough to fill our bellies, but the Indian fruit cannot be eaten till it has been three days in the house. These Mulattos make good thread, call'd Pita, to sew shoes, of an herb like Magbey, which they plant. Here I found my self in some distress, being to ford a great river; at length making a virtue of necessity, I and a Spaniard of Orizava made one of those Mulattos guide us; and, being come to the bank, caus'd him to go over first upon a tall mule, and saw the water come up to her crupper. There being no going back, I made the Mulatto come again to carry over my portmanteau, in which were all my manuscripts; and then recommending my self to God's protection, went into the rapid river bare-leg'd in great fear; and tho' there were two several branches to divide the river, yet the water came almost over my mule, and wash'd my thighs. Being by God's mercy come to the other side, and having recover'd our selves, we bethought us how little we should have been pitied, had the Mulatto left us in the lurch, and gone away with the mule and all we had, that is, a thousand pieces of eight of the Spaniard's, and my four years and four months manuscripts of my travels, and my money for my journey: but fear had blinded our understandings, so that we forgot that one of us ought to go over first to the other side. There was formerly a boat in this place, to waft over travellers, but the

GEMEL- Alcade, to punish the *Mulatto* that kept it
 LI. for some offence, took it from him, forbid-
 1698. ding him to receive or entertain any passen-
 gers, but to send 'em the way of *Cotapa*,
 which was for his advantage; and the *Mu-
 latto* answering, *He might order them to be
 call'd, and told of it by the inhabitants of that
 village*, he was abused by the covetous *Al-
 cade*. Thence we travel'd over a plain,
 and thro' a thick wood, of a sort of palm-
 trees that bore a fruit like green walnuts,
 hanging in clusters; the pulp within 'em
 tastes like our almonds. We pass'd several
 small lakes, and had like to lose our way,
 by reason of the high grass; and the more,
 because there being no boats to carry us
 over, we were forced to ford, and were
 very wet. Having travel'd four leagues,
 we came to a farm call'd *Alperilla*, where
 there was an infinite multitude of gnats,
 and we were forced to pay dear for two
 hoods to defend us against 'em.
 11th day, Sunday 27th, we rode two leagues, to
 5 leagues.

the farm of *Xamapa*, and cross'd the river
 of that name in a boat. A *Spaniard* there
 confirm'd what *F. Colin* writes, in his *Histo-
 ry* of the *Philippine* islands, concerning the
 bird *Carpintero*, viz. that it finds an herb
 which makes iron file like glass; which, he
 said, he had try'd by nailing an iron plate
 over that bird's nest, but, that he never
 could find out the herb in all those plains.
 After dinner, we travel'd three leagues fur-
 ther, to the port of the new *Vera Cruz*,
 where I found my equipage, sent thither a
 month before by *Ferdinand Mercado*. There
 are no inns in the city, so that a stranger
 is forced to hire a house. Here I rested
 after my journey, and tho' a small vessel
 sail'd for *Havana* on *Wednesday* the 30th,
 would not go aboard it, being promis'd
 better conveniency aboard another that was
 to set out soon after. Being ill lodg'd where
 I was, *D. Antony Penalosa*, lieutenant of a
 troop of horse, generously gave me an apart-
 ment in his house.

CH A P. III.

The description of the new town and port of Vera Cruz.

Vera Cruz. THE new city of *Vera Cruz* is seated
 in the latitude of 19 deg. and 16 min.
 and 27 1/2 degr. of longitude, on a sandy
 barren soil, so that provisions coming a
 great way, 'tis very dear living there. Its
 figure is longish, lying east and west, and
 the whole compass scarce half a *Spanish*
 league. The air is not wholsom, especial-
 ly in summer. Very often, when the north
 winds blow, to which 'tis very subject, the
 houses are half buried in the sand about
 them.

The walls. They who were entrusted to wall it in,
 cheated the king impudently, making a
 thin wall about six spans high, which would
 scarce serve for a cover'd way; besides that
 at present every body rides over them, be-
 cause they are buried with sand; and there
 is no need of shutting the gates, all parts
 being passable. Some bastions and redoubts
 there are about it, at a great distance from
 one another, and irregular; only two little
 forts or redoubts on the shore, at both ends
 of it, might make some defence. This
 city was built instead of the old *Vera Cruz*,
 because that port was not fit for great ships.
 In 1683 'twas taken and sack'd by one
Torrenillo, a pirate of *Petiguayas*: he land-
 ed one morning early half a league west of
 the city, and surpriz'd the inhabitants, who
 made no opposition; afterwards his ships
 anchor'd at the island of *Sanfco*, because
 'twas out of the reach of the castle-guns.

The castle. This castle is half a league from the city,
 so that it can no way defend it, but only

serves to secure the port and ships that an-
 chor under its walls. The port is natural-
 ly strong, because on the east and west 'tis
 defended by abundance of rocks, which
 strangers, who are not acquainted, cannot
 avoid running upon.

Now, tho' all the fleets, or single ships, ^{inhab-}
 that go out of *Europa* to *New Spain*, ^{port towns}
 into this port; yet the city, instead of be-
 ing rich and large, like *Mexico*, is, for the
 reasons above alledg'd, small and poor, lit-
 tle inhabited by *Spaniards*, but the most
 part by *Blacks* and *Mulattos*; so that there
 are scarce any white people to be seen, but
 only when the flota is there: as soon as that
 is gone, they that are well to pass retire up
 the country, as well because of the unwhol-
 somness of the air, as because their effects
 are not safe; and therefore they build
 none but little wooden houses, not at all
 lasting.

Friday the first of *November*, I went to
 the parish-church, which has four pillars on
 a side, that support the vaulted roof, and
 has three isles, in which there are nine cha-
 pels. The church of the *Jesuits* is poor,
 has but ten altars, and those meanly adorn'd.
Sunday 3d, I dined with the governor, be-
 fore whose house one of the two *Spanish*
 companies that are in garrison in the city
 always keeps guard; as does a troop of
 sixty horse, to scour the coast. *Saturday* 9th,
 there being no diversion in the town, I went
 out a shooting, and riding five leagues, fer-
 ry'd over a great river to the old *Vera Cruz*.

This

cross'd the river

ast. Saturday 9th,
n the town, I went
g five leagues, fer-
the old *Vera Cruz*.

This

This at present may more properly be cal-
led a village of fishermen, than a city; for
it has no houses, but cottages cover'd with
leaves and enclos'd with canes. The inha-
bitants are always tormented with the sting-
ing of gnats. Before me they took some
fish in the river called *Bobos*, or *Fools*; be-
cause when the north wind blows they make
to the sea, and so fall into the nets. Their
rows dry'd are excellent to eat. These ri-
vers and all those of *New Spain*, but par-
ticularly those of *Guatemala* being full of
crocodiles or alligators, it is worth observ-

ing, that the dogs when they cross them, ^{GEMEL}
knowing by instinct of nature, that the al-
ligators are most fond of their flesh, go ^{L.I.}
first, to secure themselves, and bark in one ^{1698.}
place, that the alligators may come thi-
ther, and then run to swim over at another
place. *This same is related by F. Navar-*
rete in his account of the Philippine islands.
That day I kill'd abundance of *Pheasants*,
of a better sort than the black ones. They
were as big as turkeys, with a black and
white tuft on their heads, and all the rest
of their feathers murrey.

CHAP. IV.

A short account of the discovery and conquest of New Spain.

CORTES's ships having anchor'd in
the port of the old *Vera Cruz*, it will
not be from our purpose to say something
in this place of the discovery and conquest
of *New Spain*; adding to what other au-
thors have already made publick, some par-
ticulars kept in that country by tradition
from father to son, and extracted out of
four letters writ by *Cortes* to the emperor
Charles V. printed copies whereof are still
preserv'd by *D. Charles Siguenza*.

Some will have it that *America* was acci-
dentally discover'd by a ship drove thither
by tedious storms, which returning after-
wards to *Lisbon* with but a few men, the
master of it gave *Christopher Columbus*, born
at *Nervi* on the coast of *Genoa*, an account
of his voyage and what he had found, and
then dy'd. Many other preposterous noti-
ons go about this particular, too tedious
for us to handle, and therefore we will
come to the point.

^{Columbus.} *Columbus* being himself in no condition
to undertake this voyage upon his own ac-
count, apply'd himself to the kings of
England and *Portugal*, who both giving
him but little encouragement, he in the
year 1486, went and offer'd himself to *Fer-*
dinand and *Isabel* or *Elizabeth*, king and
queen of *Spain*, who were then engag'd in
the war against the *Moors* of *Granada*, and
so far prevail'd, being seconded by cardin-
al *Mendoza*, archbishop of *Toledo*, that he
had sixteen thousand crowns allow'd
him, wherewith he fitted out three ships,
mann'd with one hundred and twenty soldi-
ers and sailors. He set sail on the 3d of
August 1492, and having furnish'd himself
with necessaries at the *Canary* islands, con-
tinu'd his voyage. On the 11th of *Octo-*
ber he discover'd land, which was one of
the islands *Lucayos*, call'd *Guanabani*, be-
tween *Florida* and *Cuba*, where he landed
and took possession of the *Indies*. Thence
he pass'd on to the island *Hispaniola*, where

he gain'd so far upon the *Caique* or lord of
that place, that he allow'd him to build a
fort of earth and wood on the shore, in
which he left thirty eight *Spaniards* under
the command of *Roderick de Arana* of *Cor-*
dova; and taking ten *Indians*, forty par-
rots, some gold, *Indian* wheat, and other
things to make out the truth of his disco-
very, return'd to *Spain* with two ships. The
court being then at *Barcelona* he repair'd
thither. The king was much pleas'd with
what he brought, and the account he gave
of his discovery. Six of the *Indians* were
baptiz'd, the king and queen being god-
father and godmother. *Columbus* had much
honour done him, and pope *Alexander VI.*
granted the crown of *Castile* all the islands
and continent that should be discover'd west-
ward, and all eastward to the *Portuguese*,
dividing the world between those two kings,
by two lines drawn from north to south.

Columbus for a second voyage was fur-^{Second}
nish'd with eighteen ships, and one thou-^{voyage.}
sand five hundred men aboard them, be-
sides mares, cows, sheep, goats, swine and
asses to breed in the *Indies* where there were
none; besides wheat, barley, and several
herbs and plants of *Europe* to bring up in
that country. This fleet sail'd from *Cadiz*
on the 25th of *September*, and keeping a-
long near the line, the first land it disco-
ver'd was, the island afterwards call'd *De-*
feada. Then they came to *Puerto de Plata*
in the island *Hispaniola*, and thence to
Puerto Real, where they found the thirty
eight *Spaniards* who were kill'd for having
attempted to force the *Indian* women. Here
Columbus founded a city and call'd it *Isa-*
bella, in honour of the queen. This done,
he sent back *Antony de Torres* with twelve
ships into *Spain*, to carry presents of gold,
parrots, *Indians* and other things, and he
with three other ships went on to discover
further according to his orders. He disco-
ver'd the island *Buba*, and other lesser i-
lands,

Discovers
Land.

GEMEL-lands. He fell at variance with the pope's vicar for his severity towards the priests and 1698. *Spaniards*, and thereupon was call'd to court, whither he carry'd rich presents, and yet was reprov'd for his harshness to the *Spaniards*.

Third voyage. Having obtain'd eight sail more he sent away two before him under the command of his brother, loaded with provisions and ammunition; and he himself with the other six set out from *S. Lucar de Barrameda* in May 1697. From the *Madera* island he sent three ships to *Hispaniola* with three hundred men. With the other three he kept close to the line till he discover'd the continent call'd *Paria*, along which he coasted three hundred and thirty leagues, as far as cape *Vela*, where striking athwart a great tract of sea he arriv'd at *Santo Domingo*, a city built by his brother on the banks of the river *Ozama*, where he was receiv'd as governor. Here the *Spaniards* suffer'd much, because the *Indians* thinking famine would drive them away, did not sow their wheat, which forced them for want to eat snakes and filthy vermine. The *Spaniards* are also said to have got the pox of the *Indian* women, and some of them bringing it over to *Naples*, gave it to the *Neapolitans* and *French*, which made the first of these call it the *French* disease, and these the *Neapolitan*.

Fourth voyage. *Bartolomew Columbus*, brother to the admiral, having disoblig'd the *Spaniards*, they made their complaints to the king, who sent over *Francis de Bovadilla*, who clapt the admiral and his brother in irons, and so put them aboard and sent them into *Spain*. After some trouble *Columbus* was restor'd to his authority, and return'd with three ships to *Hispaniola*, where the governor would not suffer him to come into the port, and therefore he went on to discover as far as cape *Higueras*, and then on the fourth coast to *Nombre de Dios*. He return'd to *Cuba* and *Jamaica*, but could not get to *Santo Domingo* for want of ships. Here his men mutiny'd, but the mutiniers were defeated in fight by *Bartolomew Columbus*. The admiral after this return'd to *Spain*, and when he thought to have gone back to *America*, was prevented by death at *Valladolid*, in May 1506. I omit to say more of him, because his life is to be seen at large in this collection of travels.

Afterwards several attempted to conquer the continent discover'd, but without success. *Francis Fernandez de Cordova* sail'd thither in 1517, with three small vessels, and discover'd from *Compeche*, to *St. John de Ulva*. *John de Grijalva* in 1518, with four sail set out by *James Velazquez*, governor of *Cuba*, both of them had skirmishes with

the *Indians*, but could make themselves masters of no place.

Heaven had design'd this conquest for *Cortes*. *Ferdinand Cortes*, born at *Medellin*, in *Estremadura*, who was sent thither by the aforesaid governor of *Cuba*, in November 1518, with the command of ten sail; which he would afterward have taken from him, ordering the alcade of the town of the *Trinity* to secure him. But he could not bring it about, *Cortes* being very much belov'd by five hundred and eight soldiers, and one hundred and nine sailors he had with him.

His first conquest, was over the village of *Tabasco*, where the inhabitants made some opposition. They having never seen any horses, thought the horse and the rider had been all one creature. Upon Maunday Thursday, in the year 1519, *Cortes* arriv'd at *St. John de Ulva*, where all his men landed upon Good-Friday, for which reason, that place was call'd *Vera Cruz*. Here they continu'd some months, by reason of the opposition made by the *Indians*; till at length, being resolv'd to conquer, or to dye, *Cortes* caus'd the ships to be broke up, that his men might have no hopes left of retiring; and be sensible their safety, consisted in their swords. Accordingly on the 15th of August 1519, he set forward with four hundred men, for the province of *Tlascala*, leaving a sufficient garrison at *Vera Cruz*. He had several encounters, with the *Tlascallans*, who thought they were sent against them, by the *Mexicans* their enemies. The *Spaniards* dress'd theirs and their horses wounds, with the grease they took out of the bowels of the *Indians* they kill'd. The *Tlascallans*, at length dismaying, su'd for peace. Whilst they were treating, four *Indians* came from *Montezuma* to bid him welcome, and offer a tribute, provided he would not go to *Mexico*. *Cortes* entred *Tlascala*, on the 23d of September 1519, attended by *Caciques* and lords of towns; who, after giving him the best accommodation they could, offer'd him their daughters for wives; and set free many wretches they kept up a fattening for sacrifice. *Montezuma* sent other ambassadors with gold and jewels, fearing some ill consequence after the peace concluded with the *Tlascallans*. After this *Cortes* was receiv'd by the chief men of *Cholula*; but being inform'd that they, by order of *Montezuma*, conspir'd to betray him, he put a great number of them to death, and rescu'd the prisoners kept to be sacrific'd. Hereupon *Montezuma*, being more terrified than before, sent another embassy to him, with presents of gold and rich coverlets, excusing himself on account of the business

finets of Cholula, and offering vast gifts to Cortes, and tribute to the emperor Charles the fifth, provided he would not come into the city, which was all in confusion, for fear of him, and for want of provisions. Cortes persisting in his resolution to go, severely reprimanded the ambassadors, Montezuma perceiving there was no putting a stop to this evil, making a virtue of necessity, sent his nephew Camatzin, lord of Tezcuco, and other noblemen in great pomp, to meet him a day's journey off, and conduct him. Cortes came with them, thro' Iztapalapa, to the broad caufway of Mexico; whither Coadlavacca and Cuyoacan, the emperor's near kinsmen, came out to meet him. After them, came other lords, and Montezuma himself alighted when he saw Cortes, who did the like and presented him with a collar of false stones. After this ceremony Montezuma departed, ordering his nephews, the lords of Tezcuco and Cuyoacan, to conduct him to the palace, where his father Axayaca had liv'd, whose idols and treasure were there still; and to provide quarters for the soldiers. Here Montezuma again met Cortes, and presented him a collar of gold, treating all his men plentifully at supper. This they say was on the 18th of November 1519.

The emperor was then forty years of age, of a good stature, a dark complexion, a cheerful countenance, wore short hair, and a little black beard. He liv'd in great state, as well in regard of the number of his courtiers, as of his soldiers. When he went to the Cu, or temple, he carry'd a rod made half of gold, and half of wood, several great men going before him; two of whom carry'd two maces, as the hieroglyphick of justice. Cortes and some of his officers desiring to see this great temple, to which there was an ascent of one hundred and fourteen steps; Montezuma receiv'd him very courteously, and from the top of it, shew'd him all the city, most of it in the lake, to which the way was over three banks, or dikes, one call'd of Iztapalapa, another of Tacuba, the third of Tepeaquilla, with draw-bridges, at certain distances. He also shew'd him the temple of Huycilobos, the god of war, and of Tezcatlipuca of hell, both brothers, full of a deadly stench caus'd by the men there sacrific'd.

The soldier one day searching about for a place to make a church of, broke through into an apartment, the door whereof had been lately made up, where they found a great quantity of gold and jewels, it being Montezuma's treasure, which they thought fit to shut up again without taking any thing away. Cortes had resolv'd to secure Mon-

tezuma, but was afraid of the success, be-cause of the small number of his men. For this reason he contriv'd to deceive him, bringing him by fair means to his quarters, and then tell him he must be content to live a prisoner or to dye. Afterwards understanding that the Indians at Vera Cruz had kill'd John de Escalante, and six other men (which made the Indians take heart, perceiving that the Teulis, or Gods come from the east, were mortal) he laid hold of this opportunity to quarrel with Montezuma. Having therefore sent a message before, he went with five of his most resolute commanders to the emperor's palace, and there loudly upbraiding him with breach of faith, told him, he must submit to be his prisoner, or resolve to die. Montezuma excus'd himself, promising satisfaction, and urging it was not proper to make him a prisoner; but being frighted at the officers swords, and at the words of Marina the woman interpreter, who made him sensible of his danger, he offer'd a son and two daughters as hostages, and Cortes refusing, suffer'd himself to be carry'd to his quarters, where a guard was put upon him. Lords and other subjects came from places far distant to him about their affairs, and went into his presence bare-footed, not right forward, but sideling with their eyes fixt on the ground, and ordinary coverings on them, leaving the rich ones without. When they came before him, they bow'd three times, and when they went away were not to turn their backs. The four commanders who had kill'd Escalante, were brought prisoners, and Cortes condemn'd them to be burnt; putting fetters upon Montezuma whilst it was doing. He ask'd leave once to go a hunting, and another time to the temple; that his people might believe he was not kept prisoner, which was granted him with a guard of a hundred and fifty Spaniards, and notice given him, that upon the least commotion of the people they would kill him. Cacamatzia king of Tezcuco, seeing his uncle Montezuma made a prisoner, thought of rescuing him, and crowning himself emperor, which his design he imparted to the lords of Iztapalapa, Tacuba and Cuyoacan, Montezuma's nephews. He having notice of it, would have Cortes secure them all, as was accordingly done by his orders, which were obey'd, tho' he was a prisoner. The imprisonment of these great men embolden'd Cortes to demand of Montezuma, that he should swear fealty to the king of Castile; and he consulting with the principal Caciques, resolv'd to do it, which he did in form, promising to pay a tribute, with the tears standing in his eyes, and the same was done by the petty kings subject to him.

GEMEL-
LI.
1698.

Cortes seeing so much gold, would needs know where they found it, and *Montezuma* sent some *Indians* to three several places with *Spanish* officers, who return'd with the value of fifteen hundred pieces of eight in gold dust, which the *Indians* had gather'd in the find of certain rivers. After this the emperor made a present by way of tribute to the king *Spain*, of all his father's treasure, which was shut up in the aforementioned apartment; besides many jewels brought him by the *Caciques*. All the gold being melted into plates by the king's officers and seal'd, there was found to the value of 600000 pieces of eight; whereof one fifth part being deducted for the king, and another for *Cortes*, the rest was divided among the men. The idol priests, provok'd that *Cortes* had set up the cross upon their temple, excited the peop^{le} to fall upon 'em, and therefore *Montezuma* advis'd him to be gone; but he, to save time, said he had destroy'd his ships, and could not go till he had built three ships. *Montezuma* allow'd of the delay, order'd workmen to build the ships, and promis'd to keep the people quiet.

Narvaez,
sent to
assist
Cortes.

This being the posture of affairs at *Mexico*, and *James Velasquez* understanding that *Cortes* had sent deputies to the emperor with rich presents, without giving notice of him, he fitted out nineteen ships with fourteen hundred men and twenty pieces of cannon, and sent them under the command of *Pamphilo de Narvaez*, with whom went an *Oydore*, or judge, of *Santo Domingo*, to mediate between him and *Cortes*, since it had been in his power to hinder his setting out. The fleet coming into the port of *St. John de Ulva*, *Montezuma* soon had notice of it; because the *Indians*, who were upon guard at that port, brought the whole fleet painted upon a cloth of *Nequen* or *Maghey*. He sent *Narvaez* a good present of gold, quilts, and provisions, and had in answer from him, that *Cortes* was a run-away and rebel to his king, and that he was come to secure him, and deliver *Montezuma* from his imprisonment. *Cortes* being inform'd hereof by *Montezuma*, who thought he had known it all before, having advis'd with captains, writ to *Narvaez*, desiring him for the honour of their nation, and the sake of the king's service, not to raise the city against him, caus'd *Montezuma* to be set at liberty, offering him all that was conquer'd, and promising to retire to another province. *Narvaez*, instead of giving ear to these fair proposals, put the *Oydore* into irons, because he advis'd him to peace, and march out with his forces towards *Mexico*. *Cortes* hearing of it, left *Pedr de Alvarado* with some men to secure *Montezuma* and their fort, and set out himself with the rest of his

forces to meet *Narvaez*, demanding assistance of his friends at *Tlafcala*. His men, and above six thousand *Indians* arm'd with pikes to keep off the horse, prepar'd to defend themselves. *Cortes* being come with his little army within a league of *Compoalla*, in the dark of the night, pass'd over a brook that was before him, and surprizing *Narvaez* and his forces, routed, and took him prisoner, with others of his officers, and all his cannon; obtaining a compleat victory over an army six times more numerous than his. The next day all the foldiers of the adverse party took an oath to be obedient to him; so that he having now secur'd nineteen ships, sent to several parts to make new conquests. Advice was brought him from *Peter de Alvarado* that he was besieged, the city having revolted, and stood in need of speedy succour. *Cortes* therefore leaving *Narvaez* in custody at *Vera Cruz*, march'd away in all speed with thirteen hundred foot, and ninety six horse, besides two thousand *Tlafcallans*. He enter'd *Mexico* on the 24th of *June* 1520, and *Montezuma* coming to meet him in the court, he would not speak to him, being angry that he had held a correspondence with *Narvaez*. This so incens'd the emperor, that not regarding the fealty he had sworn, he caus'd *James de Ordaz*, as he was marching out of the garri- son with four hundred men, to be set upon by an infinite multitude of *Indians* with slings, arrows, staves, and stones; so that they wounded him, and kill'd several of his men, and then went to fire their quarters, which was put out at night. In the morning the *Spaniards* renew'd the fight, but being overpower'd by the multitude of enemies, many were kill'd, though they fell not unreveng'd; and the rest retir'd to their quarters, to fortify themselves. Here they were so vigorously assaulted in the night, that many dropt on both sides.

The war continuing, the *Spaniards* made some wooden towers to remove, and went out to burn the temple, but were beaten back to their quarters with the loss of forty six men. This made them resolve to sue for peace the next day, and to depart *Mexico*; but as soon as ever it was day they were attack'd by the *Indians* on all sides, with such fury, that *Cortes* was forced to send a religious man to *Montezuma*, to desire he would make his subjects desist, and he would be gone immediately. *Montezuma*, being still angry, refus'd at first, but then comply'd, and from a gallery commanded the *Mexicans* to lay down their arms. This was accordingly done, but immediately four *Caciques* came up to the emperor, and told him, that the people being highly offended, and resolv'd that the *Spaniards* should perish, whatever came

Montezuma kill'd.

Cortes to *Tlafcala*.

demanding assistance. His men, the Indians arm'd with bows, prepar'd to do being come with Narvaez, the siege of Cempoalla, routed. As he pass'd over a brook surprizing Narvaez, and took him and his officers, and all the Spaniards, more numerous than the soldiers of the Spaniards, the path to be obeying now secur'd several parts to make was brought him that he was besieged, and flood in need of therefore leaving Vera Cruz, march'd with thirteen hundred, besides two thousand Spaniards, to Mexico on the 15th of May. Montezuma, coming to court, he would not be angry that he had with Narvaez. This that not regarding him, he caus'd Jamexco, coming out of the garments, to be set up of Indians with stones; so that he kill'd several of them to fire their quarters at night. In the renew'd fight, by the multitude of Indians, though they fell, they rest retir'd to their selves. Here they altered in the night, the Spaniards made remove, and went to the lake, but were beaten with the loss of forty men, and to depart was ever it was day the Indians on all that Cortes was for-
ward to Montezuma, his subjects desist, immediately. Montezuma refus'd at first, but from a gallery he caus'd his men to lay down accordingly done, the Spaniards came up to him, that the people, and resolv'd that they, whatever came of it,

of it, had chosen another emperor, for which they nevertheless begg'd his pardon. No sooner were these words spoken, but the Indians let fly many stones and arrows towards Montezuma, so that he was wounded in the head, arms, and legs, whereof he soon after died, having reign'd seventeen years.

Cortes acquainted the new king with Montezuma's death, and sent him his body, that it might be honourably buried, and then demanded of the Mexicans to put one of Montezuma's sons in possession of the empire, because he, whom they had chosen, was not lawful emperor; renewing his demands of peace, in order to depart Mexico. Instead of peace, they fell so furiously upon his quarters, that they kill'd many soldiers; whereupon, the next day, Cortes march'd out with all his forces to be reveng'd, burnt many houses, and kill'd abundance of Indians, but with great loss on his side. Perceiving 'twas impossible to withstand such numbers of enemies, provisions and powder growing scarce, he resolv'd to depart Mexico. First he kill'd Montezuma's kindred, and the petty kings he had prisoners, and then on Thursday the 10th of July 1520, when the Indians least expected it, having divided the aforementioned gold among his soldiers, began to march silently out of the city, carrying along with him a wooden bridge, to pass over those places where the banks were broken down. As he was passing over the banks at midnight, tho' 'twas very dark, the enemy perceiv'd him, and attacking him both by land and from the canals, in a great number of boats, kill'd at least twenty Spaniards, part with the sword, and part drown'd in the water, besides several prisoners, the canals being choak'd with dead men and horses. Alvarado here taking a wonderful leap, to escape falling into the enemy's hands, that place is to this day call'd Alvarado's Leap. Having pass'd the bridge, Cortes came in all haste to Tacuba, with the Indians always at his back; but being ashamed that many were left behind wounded, expos'd to the cruelty of the barbarous enemy, he turn'd back to fetch 'em off: but seeing the people of Tacuba and Escapuzalco all in arms against him, he was forced, following Tlascallan guides, to take the by-roads, still pursued by the Indians in the dark night. Being come to a temple, he halted, fortifying himself, to have the conveniency of dressing his wounded men; for which reason afterwards the church of our Lady de la Remedias was erected there. This was call'd the dismal night, because of the great slaughter, especially of those who forwarded their own death by not forsaking their gold. They continued their retreat, still facing

the Mexicans; but the battle on the 14th of July, near Otumba, was very remarkable, and the slaughter was great on both sides, after which, upon a muster, there were found but four hundred and forty Spaniards. This small body coming to Tlascala was well receiv'd, tho' it had lost twelve hundred Tlascallans.

Quauhtimoc, Montezuma's near kinsman, began his reign at Mexico, being elected, as was said before, and at the same time one hundred and twenty men, and seventeen horse, accidentally reinforced Cortes; for Francis de Garay having sent three ships to take possession of the river of Panuco, the soldiers, meeting with more opposition than they expected, went all away to Cortes.

He now thought good to send away some officers and soldiers, part into Spain, and part to Hispaniola and Cuba, to make known what he had done till that time; and some to Jamaica to buy horses. Another parcel of soldiers came out of Spain, and arriving at Vera Cruz, join'd him; so that on the 26th of December he march'd towards Tescuco with his Spaniards and ten thousand Tlascallans. There he was honourably receiv'd by seven of the principal lords of the country and the petty king, who gave him a gold banner. Some days after, finding himself strong, having receiv'd another recruit brought by the king's treasurer in one ship, and thirteen brigantines he had caus'd to be built being ready, he first subdued the country about, which had revolted, and then resolv'd to go about the lake, thro' the canals, to find out the properest way to besiege Mexico.

Accordingly he set out on the 5th of April 1521, with three hundred sixty-five Spaniards, and above twenty thousand arm'd Indians, besides those who follow'd the army, like crows, only to glut themselves with man's flesh. After subduing Tescutlan, passing forward thro' Cornavaca, he overthrew the Mexicans in a bloody fight, but they bringing fresh forces, attack'd the Spaniards several times at Suchimilco. Cortes return'd to Tescuco, and understanding that a friend of Narvaez was conspiring with others to murder him, he caus'd the conspirators to be hang'd.

Upon a muster at Whitsuntide 1521, he found he had eighty-four horse, six hundred and fifty foot arm'd with sword and lance, and one hundred ninety-four with fire-arms. He took one hundred and fifty of these, and distributed 'em among the brigantines, each of which carried twelve oars; the rest of his men he divided into nine companies, giving one man the chief command over three of 'em. He order'd eight thousand Tlascallans to go to besiege Iztapalapa, Cuicacan,

GEMEL-can, and *Tacubá*, and broke down the aqueduct of *Chapultepec*, that carried the water to *Mexico*. He went in his brigantine about the lake, and sinking several canoes of *Indians*, made his way over to *Iztapalapa*, to relieve *Gonzalo de Sandoval*, who was beset by several bodies of *Mexicans*. Having brought him off, he sent him to attack the bank of *Tepeaquilla*, now call'd the caufway of our lady of *Guadalupe*, whilst he, dividing his forces into three parts, and back'd by the brigantines, went to assault the *Mexicans*. The *Spaniards* could do little good, because at night they had lost all the ground they had gain'd upon the caufways; for, all the houses being encompass'd with water, with trenches round about 'em, the *Indians* open'd them at night, that the men and hories might drop in.

On the 24th of *June* the *Spaniards* were attack'd on all sides, and tho' they kept their ground with a very small loss, yet *Cortes*, being sensible that all delays were prejudicial, his army decreasing, he resolv'd to break on a sudden into *Tlatelulco*, then the greatest square in *Mexico*, now the monastery of *Santiago*, or *St. James*, of the *Franciscans*, and thence advance to gain the streets of *Mexico*. The three little squadrons advanc'd three several ways, but all to no purpose; for *Cortes* pushing too forward upon one of the caufways, whither the *Indians* had drawn him by giving way, and being bore down by the water and mud, was wounded in the leg, and sixty of his men taken prisoners: nor did the other squadrons suffer less, being attack'd in canoes by water, and by land with sticks and stones from the tops of the houses; nor could the brigantines relieve 'em, being kept off by the timbers laid across the channels. The *Indians* sacrific'd all the *Spaniards* they had taken to the idol *Huycbilobos*, casting their bodies out to be devour'd by wild beasts, and keeping only the legs and arms, to eat them with *Chilmole*, a hot sauce. They flea'd their faces, to put on that skin they took off like a vizor at the solemnity.

After so many losses, the soldiers of *Tascale*, *Tescuco*, and other places, went a way home, despairing of success; so that a few *Spaniards* were left to keep the posts they had secur'd, part of them filling the ditches with earth and falcine, whilst others stood upon their guard; the brigantines, at the same time, with all their force, striving to break thro' the obstructions laid against them in the canals. Thus they advanc'd so far without falling into the water, notwithstanding the opposition of the *Mexicans*, that the soldiers of *Tascale* and *Tescuco* came again to their assistance.

In the mean while *Cortes* made application to the king for peace, but he daily turn'd more obstinate in carrying on the war, which made *Cortes* demand supplies of his confederates. They being come, perceiving the king would not hearken to any accommodation, he caus'd the city to be assaulted at all three attacks, and gain'd ground as far as the great temple of *Tlatelulco*, on which he set up his colours. Three days after, all the three attacks were carried on so successfully, that they met in one body. Then the king and his men retir'd to that part of the city where the houses were encompass'd with water, but there many were kill'd by the *Spaniards* shot, who had drawn up all their force in the place of *Tlatelulco*.

Peace was demanded a third time, but the *Indians*, after a cessation of three days, fell again upon the *Spaniards*, who had been supply'd with powder and other necessities by a ship come from *Spain*. *Cortes*, seeing the king would not hearken to peace, relying on the water that secur'd him, order'd *Christopher de Sandoval* to besiege him with the brigantines. This done, the king fearing the people would kill him, got into a boat with his wives and best moveables, and fled over the lake; which *Sandoval* understanding, he sent *Garcia Holguin* after him, who took him and all his company, and brought him to *Cortes*, without touching any thing that belong'd to him, particularly the women, for whom the king was concern'd. *Cortes* had been on the top of a temple, to view the action, but as soon as he heard of the king's being taken, he came down, to prepare a place to receive him friendly. The wretched prince, with tears standing in his eyes, said to him, *Lord Melincue, I have done my duty in defending my city and people: since fortune has thrown me into your hands, I desire you to kill me with that sword by your side, that I may not be reduced to a more miserable condition*. Because you have bravely defended your city (answer'd *Cortes*) you deserve the greater honour and esteem. That same day he sent him to *Cuyoacan* with *Sandoval*. This happening in the evening, on the 13th of *August* 1521, being the day of *St. Hippolytus*, after a siege of ninety-three days; therefore the anniversary of the conquest was kept on that day, as has been said before. *Quauhtimoc* was about twenty-four years of age, well made, of a dark complexion, and a long face. For this conquest *Cortes* had given him for his coat of arms three crowns, with a bordure of seven kings heads. He dismiss'd all the *Indians* that had assisted him, with thanks, sending them away loaded with spoils of the conquer'd; and the *Mexicans* thought themselves very rich,

in carrying av y many loads of dry'd flesh
of the slain *Mexicans*.

After cleansing the streets, and removing
the dead bodies, the next thing was, the
torturing the lord of *Tescuco*, to oblige him
to discover where the gold was hid, all they
had found being worth but three hundred
eighty-six thousand crowns. Then the city
was rebuilt, that it might be again inhabi-
ted; and several commanders were sent to
subdue other provinces; and Cortes went
in person, and conquer'd that of *Panuco*.
After his return to *Mexico*, he sent two ships
to *Spain*, and in them *Alonso de Avila* and
Antony de Quinones, with a present of twen-
ty-two thousand crowns in gold plates, and
all that was left of *Montezuma's* treasure, to
ask of the king the government of *New*
Spain for him, and entreat him not to send
lawyers into the *Indies*, to breed dissension
among the inhabitants.

These two sail'd on the 20th of *Decem-*
ber 1522; but being come to the *Tercera*
islands, *Florin*, a French pirate, took both
the ships, gold, and jewels, and carried
Avila prisoner into *France*, *Quinones* being
dead before. The king of *France*, when
that rich treasure was brought to him, said,
The emperor Charles V. and the king of Por-
tugal have divided the new world between
'em, without allowing me any share; I would
desire them to shew me Adam's will which
entitles them to it.

Avila going into *Spain*, did not only ob-
tain the government of *New Spain* for *Cor-*
tes, but a confirmation of the division he
had made of the country among the con-
querors, and power to do the like for the
future. Some time after, Cortes sent the
emperor eighty thousand crowns, and a
small culverin curiously wrought, all of
gold and silver, call'd the *Phoenix*, with this
inscription,

*Ave nacio sin par,
Tò en serviros sin segundo,
Y vos sin igual en el mundo.*

That is, as the phoenix has no mate, so nei-
ther had any man serv'd you like me; nor
have you any equal to you in the world.

CHAP. V.

The discovery and conquests of Peru.

Pizarro's
discovery. **FRANCIS PIZARRO** met not
with so much difficulty in *Peru*. He
sail'd thither in the year 1525, with two
ships fitted out by *James de Amagro*, and
Ferdinand Luque, a priest of *Panama*, ha-
ving the governor's leave. Landing when
he had sail'd an hundred leagues, he fought

VOL. IV.

Cortes going afterwards to punish the re-
bellion of *Christopher de Olid*, in the pro-
vinces of *Higueras* and *Honduras*, took a-
long with him *Quaubtimec*, and the lord of
Tacuba, and caus'd 'em to be hang'd in
the village of *Gbeyacola*; which action his
own men did not approve of. The king,
before his death, said, *I have been long con-*
vinced of the falshood of your words, captain
Melinche, and that you would put me to
death: unhappy I, that did not kill my self
that same day you were victorious over me.
I hope God will punish you for killing me so
wrongfully. The lord of Tacuba, said he,
was pleas'd to die with the king his uncle.
Finding *Olid* already put to death, Cortes
with incredible celerity subdued those and
other provinces, and return'd to *Mexico* in
June 1525.

Being afterwards put upon his trial by
the emperor's order, he was depriv'd of made a
the government of *New Spain*, and there-
fore went away to court. He was there
honourably receiv'd in the year 1527, and
created *marquis del Valle*, worth at this day
sixty thousand pieces of eight a year, and
had the title of captain-general of *New*
Spain, and of the south sea; and, to com-
pleat his honour, falling sick, the emperor
went to see him. Then returning into the
Indies, he retir'd to his own estate, and ap-
ply'd himself to building of ships, as he
had promis'd to do, to discover other islands
and countries on the south sea. After dis-
covering *California*, with a thousand disas-
ters, and the expence of three hundred thou-
sand pieces of eight, he came over to *Spain*
to have his expence allow'd him, but was
so far from getting his money, that he was
forbid going over to the *Indies* till he had
stood trial. At length returning with the
emperor from the siege of *Argier*, he died
at *Castilleja*, on the sea-coast, near *Seville*,
on the 2d of *December* 1545, at the age of
sixty-two. His bones were convey'd to the
monastery of St. *Francis* in *Mexico*, as he
had desir'd. He was of a proportionable
stature, a swarthy complexion, a black
beard, and had the scar of a cut on his un-
der-lip.

the inhabitants with much bravery, and
was wounded by them; but *Amagro*, who
had been with him in the fray, lost an eye,
and then return'd to *Panama* for more men.
Pizarro continuing his discovery, came to
a country all overflow'd, where the inhabi-
tants lived like birds, upon trees. Being

6 U

there

GEMBL- therefore in no condition to do them any
11. harm, he retir'd to the island *del Gallo*;
1698. and *Almagro* went again for recruits to *Pa-*

nama. *Pizarro* suffer'd much want in the island; and sailing thence after *Almagro's* vessel return'd, he stood towards *Tangarara*, and at *Tumbez* set ashore *Peter de Candia*, who afterwards return'd astonish'd at the wealth of king *Atabaliba*. Upon this information *Pizarro* return'd to *Panama*, and advising with *Almagro* and *Luque*, resolv'd to go over to *Spain*, to ask the government of those places he should conquer. The emperor, besides the government, gave him the title of captain-general and *Adelantado*, or lord-lieutenant of *Peru* and *New-Castile*; whereupon he, overjoy'd at the honour done him, return'd to the *Indies* with his brothers *Gonzalo* and *Ferdinand*, and *Francis Martin*, his brother by the mother's side; but, instead of a kind reception, he found *Almagro* much offended, because he had not obtain'd any honour of the emperor for him. At length being reconcil'd, he had two ships, with a sufficient number of men. Not being able, by reason of a storm, to arrive at *Tumbez*, he landed in that part which is properly call'd *Peru*. First he conquer'd the island *Puna*, not far from the shore, and then govern'd in the name of *Guascar Inga*, brother, but enemy to king *Atabaliba*; and thinking it convenient to gain his friendship, he sent him six hundred prisoners he had taken in *Puna*: yet this did not avail him, because *Guascar* was acquainted with his design. This done, he sail'd to *Tumbez*, and landed his men; and because the governor would not receive him peaceably, he cross'd the river by night in a boat, and routed him. *Pizarro*, allur'd by *Atabaliba's* wealth, after plundering the place, which he call'd *St. Michael*, set forward for *Caxamalca*; and being threaten'd on the way by the king, civilly answer'd, that he only desir'd to visit him from the emperor, and so went on. Being come to *Caxamalca*, he fortified himself against the will of *Atabaliba*, and then sent two messengers to acquaint him with his arrival at that place. They brought back a very ill answer; whereupon he prepar'd to give battle, tho' much inferior in power. The king being inform'd of the rashness of the *Spaniards*, mov'd with all his army towards *Caxamalca*. He was carried upon a seat of gold, adorn'd with parrots feathers; on his head, which was shav'd, he had a woollen crimson cap, which shew'd him to be king of *Cuzco*, and his ears were almost rent with the weight of the gold hanging at 'em. Being come to *Caxamalca*, and having heard of one sent from *Pizarro*, who advis'd him to pay tribute to the emperor, he was so much offend'd that he presently began to shew him-

Began his conquest.

self an enemy. Then the *Spaniards* fell upon the *Peruvians* on all sides, but more particularly upon the king; who, after much opposition, being at last pull'd by his garment off his seat, was made prisoner. Thus the *Spaniards* were soon victors, and took all the baggage, which was worth a treasure; but *Pizarro* was wounded in both hands. *Atabaliba*, for his ransom, offer'd to fill a great room with silver and gold, as high as *Pizarro* could reach with his hand; and his offer being accepted of, when his victorious commanders brought his brother *Guascar* prisoner, he commanded him to be kill'd. This *Guascar* had been appointed heir of all the kingdoms of *Peru* by their father *Guaynacapa*, and to *Atabaliba*, who was the younger brother, he left only the kingdom of *Quito*; and this was the occasion of a war between the two brothers: this was also the cause of *Guascar's* death; for the other being then lord of all, hoped to be able to pay *Pizarro* the promis'd sum: but he was punish'd after the same manner for his barbarity; for, having deliver'd the ransom, instead of being set at liberty, he was strangled, in vain suing for mercy, upbraiding *Pizarro* with breach of faith, and desiring to be sent prisoner to the emperor. Thus a vast country was subdued without any bloodshed, both brothers being dead, and none opposing the *Spaniards*.

The war with the *Indians* being at an Civil end, it began among the *Spaniards*, thro' ambition of command and hunger of gold; for *Pizarro* fell at variance with *Almagro*, and at last strangled him, and beheaded his own brother *Ferdinand Pizarro*. *D. James de Almagro* reveng'd his father's death, stabbing *Francis Pizarro*, bastard son to *Gonzalo Pizarro* of *Navarre*, at *Lima*, in the year 1541. This done, he rais'd considerable forces, and at length being in rebellion, came to a violent death. The emperor being inform'd of all these disorders, sent four *Oydores*, or judges, and *Blasco Nunez* to be viceroy, with new laws and ordinances; but the new conquerors refusing to obey 'em, rebel'd, and made *Gonzalo Pizarro* their commander. The *Oydores* seeing the country up in arms, imprison'd the viceroy, and took upon them the care of the government. Some were for putting him to death, and others for sending him into *Spain* to the emperor.

In the mean while *Gonzalo Pizarro* made himself governor of *Peru*, with absolute power; but the *Oydone Alvarez*, who had been entrusted to carry the viceroy into *Spain*, when they came to *Guauro*, set him at liberty. The viceroy now thought he had overcome all difficulties, but *Pizarro* routed his forces at *Quito*, and caus'd his head

head to be cut off by a *Black*; the same he afterwards did to *Vela Nunez* the viceroy's brother upon some slight jealousy. The emperor was much concern'd at the imprisonment of the viceroy, and insolence of *Pizarro*; and therefore to redress these disorders, sent *D. Peter Gasca* a priest, with full power, and blanks subscrib'd, to make use of as he saw occasion.

Gasca went over in the year 1546, with two *Oydores*, or judges, his friends, and very few others; and being come to *Panama*, writ to *Pizarro*, advising him to lay down his arms and submit to the emperor, who would pardon all that was pass'd, as might appear by his majesty's letter. These letters had no good effect on *Pizarro* or his principal associates; who joyning, to the number of sixty, answer'd *Gasca*, *That they thought it not convenient for him to come into Peru, after so much slaughter committed there, the minds of the people being still very much exasperated; and that they would write themselves, and send their deputies to the emperor to justify their proceedings.* *Gasca* perceiving there was nothing to be done by fair means, began to raise men, and manag'd *Peter de Hinojosa* so dexterously, that he put *Pizarro's* fleet into his hands. This discouraging *Pizarro's* party, many of them we t over to *Gasca*, who, by that means being grown formidable, went away into *Peru*.

There after several defeats given *Pizarro*, he at length took him prisoner in the last battle of *Xaquixaguana*. *Gasca* refer'd the trial of him and twelve others to the licentiate *Cianca*, and the marshal *Alvarado*,

who pass'd sentence of death against them for high treason. *Pizarro* was carry'd to the place of execution on a mule, with his hands ty'd, and a cloak over him. His head was carry'd to *Lima*, and set upon a pole in the market-place, with this inscription;

This is the head of the traitor Gonzalo Pizarro, who join'd battle in the valley of Xaquixaguana, against the emperor's standard. Monday the 9th of April 1548.

After the unfortunate end of the first conquerors of that country, and the imprisonment of the *Oydore*, or judge, *Zepeda* (for the other three who had seiz'd the viceroy were dead) *Gasca* apply'd himself to settle the government; and thus a churchman brought the war to that happy end his predecessors could not attain. He return'd to *Spain* in July 1550, and presented the emperor with a million and a half, for all which good services he was made bishop of *Placentia*.

The civil wars being ended with the death of at least an hundred and fifty captains, and other commanders; the soldiers carry'd on the conquest, always following the rich country, and leaving the poor; so that at present the crown of *Spain* is possess'd in *America* of a country nine thousand three hundred leagues in extent, viz. three thousand three hundred and seventy five southward, and the rest northward. It is to be observ'd before we leave this country, that in *Peru*, for five hundred leagues in length, from *Tumbez* to *Chile*, and fifteen leagues in breadth, it never thunders, lightens nor rains.

CHAP. VI.

The further account of what happen'd to the author at Vera Cruz before he embark'd.

SUNDAY the 10th, I return'd in the evening to *Vera Cruz*, and carrying the dainty pheasants I had kill'd with me, din'd with the governor on Monday 11th. Tuesday 12th, I went again a shooting to the farm call'd *St. John*, where besides the garden abounding in all sorts of fruit and especially of the tart, I found a little wood full of birds and wild beasts; and was courteously entertain'd by the owner. Wednesday 13th, I went out a shooting with a *Mulatto* for my guide, in a wood by the bank of a good river, where I kill'd some royal pheasants; and having shot down a wild boar, the ignorant *Mulatto* ran and catch'd him by one of his feet, and the boar turning, struck him through the arm with his sharp Tusks. It is to be observ'd, that though the boars of *America*, do not emit any excrement at that navel I said they

have on their back, a span from the tail; yet they send forth such a filthy scent, that if it be not cut off as soon as the beast is kill'd, it so infects all the flesh, that there is no eating of it. I return'd home full of *Garrapatas*, a sort of Vermin bred in the woods like crab-lice, which from the plants get upon people's cloaths as they go by, and pierce into the very flesh, so that it requires much trouble and dexterity to get them out.

Sunday 17th, I heard mass in the church of the *Mercenarians*, where there are thirteen altars, but ill set off. The monastery is very mean, but they have a fine bell-fry. The monastery of the *Franciscans*, which I saw Tuesday 19th, has large dormitories, and the church eleven altars. The *Dominicans* convent is poor, the church small and has nine altars. The parish church

from
him and
quest.

Churches
and me-
nasteries.

GEMEL-church is call'd *Nuestra Sennora la Antigua*,
 LI. or *Our Lady the ancient*. The *Augustinians*
 1698. are so poor that they have no church, but
 only a little chappel. The hospital of
S. Hippolitus is divided into two parts, one
 for men, and the other for women; but
 both finall.

Friday 29th, I went out to divert me,
 and happening to shoot a parrot, as he fell
 he cry'd out like a man, as it were to call
 the rest to his assistance, and they flew a-
 bout in swarms crying out, so that they
 seem'd to cloud the sky. Then I shot
 two royal pheasants, a cock and a hen, for
 they always go together. The cocks fea-
 thers are all black, except those upon his
 belly, and a curious curl'd tuft on his head;
 the hen is of a cinnamon colour. Those

they call *Gritones* are '60 bigger than a
 pheasant in *Europe*, and all black. Their
 bones are venomous to dogs. The wild
 turkeys here are mortal enemies to the
 tame ones, and kill them whenever they
 can.

Being near the time of my departure, *D*
Francis Loran y Roda, Knight of the or-
 der of *Santiago* or *St. James*, recommend-
 ed me to the captain of a vessel that was
 to carry me to *Havana*, and gave me let-
 ters of recommendation to captains of ga-
 leons there, as alio a present in money. *D*
Aloñs de Penaloja, captain of horse, sent
 me another present of sweetmeats for my
 voyage. I felt a fit of a fever, and had a
 mule stolen from me out of the king's stables.

CHAP. VII.

The author's voyage to the port of Havana in the island of Cuba.

HAVING taken leave of the gover-
 nor and friends, on Saturday the 14th
 of December, I went aboard the vessel cal-
 led the *Sevillian*, that came with licence from
Maracao, to joyn the galeons at *Havana*,
 and sail with them to *Cadiz*. The gover-
 nor added one favour to all the rest, which
 was not to suffer my trunks to be open'd
 at the custom-house. About noon we fell
 down the western channel, close to the cas-
 tle, which is little and inconvenient as well
 for the governor as soldiers; keeping a
 very watchful eye, because of the many
 flats on all sides; and that it was but now
 newly settling after the north winds, which
 hinder ships getting out of the bay of
Mexico, whose form is like a half moon,
 and much more out of the channel. There
 is another way in on the east for small boats.
 We got out about evening, and steer'd N.
 E. and by N.

Sunday 15th, we held on the same course
 with the wind at N. W. the lat. 20 deg.
 12 min. Monday 16th, held the same
 course, the wind S. E. lat. 21 deg. 1 min.
 Tuesday 17th, we had a great storm, which
 made the captain sick, much more the pas-
 sengers, and the same wind continuing, we
 run to northward to avoid certain rocks,
 and then sail'd upon a line for *Havana*, the
 lat. 22 deg. 5 min. Wednesday 18th, the
 wind blew stormy at N. which made us
 run away to E. the lat. 24 deg. The same
 wind continu'd Thursday 19th, and we kept
 upon the same line; but Friday 20th, the
 wind coming to S. we stood N. E. and by
 E. being 24 deg. 3 min. of lat. At night
 we stood E. N. E. and so continu'd Satur-
 day 21st, making much way. Finding 25

deg. 30 min. lat. which was enough to a-
 void the flats, we stood for the island of
Cuba due E. Four hours after night the
 wind blew hard at N. W. with rain, which
 made us steer E. and by S.

Sunday 22d, tunny-fish being seen, it was
 suppos'd we were near land, lat. 25 deg.
 26 min. Monday 23d, the wind at N. we
 ran E. S. E. and then E. and by S. finding
 the lat. 25 deg. 20 min. At night we were
 quite becalm'd; but Tuesday 24th, being
Christmas Eve, the wind came up at S. W.
 and drove us E. S. E. At night we were a-
 gain becalm'd; and Wednesday 25th, be-
 ing *Christmas Day*, the wind blowing at
 N. E. we sail'd S. E. lat. 24 deg. 55 min.
 That night no body slept, the waves beat
 so furiously.

Thursday 26th, we steer'd E. S. E. the
 wind at N. E. which drove us from the land
 we were in sight of, and gave us a more
 restless night than the last, lat. 23 deg. 17
 min. The wind coming about to S. we
 steer'd E. Friday 27th, we saw land, and
 coasted along it all day and night, our
 course E. At length we came to an an-
 chor near the castle call'd *del Morro*, which
 is at the mouth of the harbour, for though
 we fir'd two guns, the castellan took no
 care to put a light to shew the way into the
 port.

Saturday 28th, a south wind blowing out
 of the port, would not permit us to get in
 till noon, and that always upon a tack; so
 that at last we arriv'd safe at *Havana*, after
 a voyage of three hundred leagues. I lay
 aboard the vessel, because there were no
 inns ashore. Sunday 29th, the wind blew
 so furiously at north, that the waves beat
 over

over the castle *de Morro*, and had not we got in as we did, we had been in great danger. Monday 30th, I landed and car-

ry'd my goods to a house I hir'd near the hospital of *S. John de Dios*.

GENE-
L.
1698.

C H A P. VIII.

The description of Havana, and particulars of that country.

Havana. **T**HE *Havana* is a little city, half a league in compass, seated in a plain, and in the lat. of 23 deg. 20 min. It is almost round, enclosed with poor low walls on the land side, and defended on the other part by the water. The inhabitants are about four thousand souls, *Spaniards, Mulattos* and *Blacks*, who live most of them in low houses. The women are beautiful, and the men ingenious. The governor has also the title of captain general of the island, and administers justice with the assistance of an assessor, call'd a lieutenant, who is appointed by the council of the *Indies*.

It is very dear living there, for three ounces of bread cost fifteen grains of *Naples* money, that is, about three pence *English*; and half a pound of meat the same price. A hen is worth a noble, and fruit and other things proportionably; so that a man can scarce live under two pieces of eight a day, especially when the galeons are there. Though the climate is temperate, wheat has not thrive there for some years, and the reason is not known; so that what comes from abroad to the bakers is dearly paid for. But this want is in some measure supply'd by a root call'd *Jucca*, whereof they make bread, grating, and then pressing it to get out a venomous juice there is in it. They bake it upon little earthen stoves, and this bread serves not only the poor, but the better sort who have large families. This root produces neither leaves nor feed; but they set bits of it in the ground to grow again.

The island is three hundred leagues in length from east to west, and about thirty in breadth. The inhabitants are poor having no trade but tobacco and sugar. All the labour falls upon the *Blacks*, of whom their masters exact four rials a day, and six when the fleet is there, and at least three of the women; now what can a miserable *Black* do who has two masters, as often happens? In *Peru* the master's avarice is greater, for they send the *Black* women to be got with child like cows, and if they prove barren they sell them.

The city of *Havana* is encompass'd on two sides by its safe harbour, which is so deep, that the ships anchor within a few steps of the shore. It is defended by three castles, the chief of them call'd *del Morro*, on the left hand of the mouth of it; the

second, *de la Punta*, or of the Point, on the right; and the third, call'd only the foot, on the right of the last; we shall speak of them at large elsewhere.

Friday 3d, I saw the little, but neat church call'd *Santo Christo del buen viaje*, serv'd by secular priests. Next day that of the recolets seated on the best ground in the city, and in it twelve beautiful chapels, and in the monastery cells for fifty fathers. The weather, which had continu'd serene and warm as summer, on Thursday 9th chang'd so cold with rain, that I believe the like has scarce ever been felt in a place lying in 23 deg. and 2 min. of lat. Saturday 11th, a boat arriv'd in twenty four hours from the opposite coast of *Florida*. Sunday 12th, I set ashore some *Indians* of *Cuyo*, subjects to a *Cacique*, whose name was *Charles*. These, as well men as women, had no part of their bodies cover'd, but only a cloak before their privities; and wore long hair bound behind their heads. They were idolaters, of those that are given not only to idleness, but to all abominable vices. They were allow'd to trade in hopes to convert them, because their prince, or *Cacique*, had consented to receive fourteen *Franciscan* missionaries into his country. Their chief commodity is fish; some little amber they find along the shore; tortoiseshells, and a sort of scarlet birds to keep in cages, for their colour call'd cardinals.

Monday 13th, a small vessel from *Jamaica*, brought the news of the peace concluded betwixt *France* and the confederates. Wednesday 15th, I heard mass in the church of *S. Clare*, which has seven altars well adorn'd. The monastery will contain an hundred religious women and servants, who are there clad in blew.

Thursday 16th, the chests of pieces of eight began to be put aboard the galeons, the kings held three thousand each, and the rest two thousand, in all amounting to thirty millions, as well belonging to the king as merchants, for goods sold at the fair of *Porto Bello*, carry'd on between the traders of *Seville* and those of *Lima*. The great faith these traders repose in one another, is very remarkable; for, when once agreed about the price, they interchangeably deliver one another the bales of goods, and chests of pieces of eight, without seeing any thing of the contents, but giving

GEMEL-entire credit to the written particulars they
L.I. deliver to one another; for afterwards the
1698. bales and chests are open'd in the presence
of publick notaries; if they find any thing
amiss, the companies of *Seville* and *Lima*
are to make all good. This year the com-
pany of *Lima*-traders paid five thousand pie-
ces of eight for goods found over and above
in the bales at the foregoing fair. The
same is practis'd at *Acapulco*, when the ga-
leon comes from *Manila*.

A rich
pearl.

There was also deliver'd to the master of
plate (which is an officer aboard the ga-
leons, who had charge of all the plate and
jewels) aboard the admiral, a pearl weigh-
ing sixty grains, shaped like a pear, by
F. Francis de la Fuente, a *Jesuit*, to be deli-
ver'd to the king. This pearl was taken
at *Panama*, in the king's island, by a *Black*
belonging to a priest, who being rich, would
not sell it to the president of *Panama* for
fifty thousand pieces of eight, nor to the
viceroy of *Peru* for seventy thousand, both
of 'em being to send it to the king, but
said, *He would carry it to his majesty himself*.
Being come to *Porto Bello* with the pearl,
which he call'd *la Perseguida*, or *the Perse-
cuted*, he there died before he went aboard,
and therefore committed it to the care of
the afore said *F. Puente*, who told me 'twas
larger than that call'd *la Peregrina*, but
somewhat duller. The *Black* had his liber-
ty for his reward.

There went aboard the guleons twenty
doctors of *Peru*, being the sons of *Spaniards*
and *Indian* women, going to court for pre-
ferment; and the least that every one of
'em carried was thirty thousand pieces of
eight.

Cotorreras and Guacamaijas birds, Monday 20th, going abroad a shooting,
I kill'd a great many of those birds they
call *Cotorreras*. Some of 'em have black
and green feathers, and others blue; others
black and green wings; their breasts red,
and half the head white. They are not
amiss to eat. Returning home, I kill'd
two *Guacamaijas*, which, tho' they do not
talk, are so finely colour'd, that the best
pencil can scarce equal 'em. The country
is very delightful, being full of little hou-
ses with gardens and farms, where there is
no want of *Indian* fruit. I found a sort of
snails very large, like the sea-snails. Fri-
day 24th, I saw the church and monastery
of the *Augustinians*; the first has thirteen
little altars; the latter, very poor dormito-
ries. Sunday 26th, I was at the mother-
church of the city, where the bishop offi-
ciates with the clergy belonging to it, his
residence being at *Havana*, tho' the cathed-
ral is at *Cuba*, where the canons reside. I
spent some hours on Monday 27th, with the
governor of the island, and several other
gentlemen, that delighted to hear me dis-

course of my travels, and see the curiosities
I had, among whom was *D. Charles Soto-
mayor*, knight of the order of *Calatrava*,
and *Oydore*, or judge, of *Santa Fe*, to whom
an incredible accident happen'd.

This gentleman went, by order of his A very
court, to receive informations against the markab
governor of *Caribagena*, for having deli. Passage
ver'd up that place to the *French*, and car-
ried along with him the governor of *Santa
Marta* to put into his place. He going
alone into *Caribagena*, because the gover-
nor of *Santa Marta*, who was more crafty,
remain'd without to see what the event
would be, began to proceed with more ri-
gour than was convenient, without shewing
his commission; whereat the governor of
the place being highly offended, as thinking
he had defended it as became a good soldier
and man of honour; that is, as long as
'twas practicable; he in the night secured
the *Oydore*, notwithstanding he laid hand on
his sword, and call'd for aid and assistance:
thus the judge, instead of imprisoning, was
imprisoned, and his commission taken from
him, instead of removing the other from his
post. That same night, after he had been
twenty-four hours executing his commission,
he was put aboard a little boat, without
any other provision but biscuit and some
fruit, not being allow'd to take his own
equipage. Thus the governor of *Cariba-
gena* sent him to the governor of *Havana*,
to be kept as a disturber of the peace, till
the king were inform'd of the matter. The
governor of *Santa Marta*, who was two
leagues off, hearing what had happen'd,
fled, to prevent being seiz'd. The poor
gentleman was much concern'd at this acci-
dent; notwithstanding the governor, instead
of sending him to the castle, kept him in
his own house with very civil entertainment.
This gave me an opportunity to acquaint
him with my misfortunes, tho' I had never
been imprison'd, but undeservedly perfec-
ted.

Tuesday 28th, I heard mass in the church
of *S. John de Dios*, which is small, and has
nine altars; the monastery is also small,
and the hospital is for soldiers: its reve-
nue is twelve thousand pieces of eight.

On Saturday the 1st of February, arriv'd
the long-wild-for vessel, with provisions
for the fleet, being seventeen hundred *Quin-
tals*, or an hundred weight of biscuit, six
hundred load of meal, fish, and other ne-
cessaries for the galeons.

Tuesday 4th, I went to the ermitage of
S. James, a church built by the bishop,
within the walls of the city, for his own
particular devotion, well adorn'd, and with
an apartment for him to retire to some-
times. Wednesday 5th, I saw the castle of The fort
the Point, which is very small, and has four
bastions,

bastions. *Monday 10th*, going to visit the
castellan *D. Antony de Roxas*, I had the op-
portunity of seeing the castle they call *the*
Fort. Its compass is small, but it has four
good bastions, and a platform towards the
port, well furnish'd with brass cannon.

Sunday 16th, the admiral made procla-
mation by sound of trumpet, that the fleet
should sail on the 11th of the next month;
and, that all persons must be aboard on the
8th. *Tuesday 18th*, by his order 'twas pro-
hibited, upon pain of death, for any boat
to go out of the harbour, for fear the ene-
my should have notice that the galleons were
ready to sail; notwithstanding, the depu-
ties of the company of *Seville*, not liking the
admiral, used all means to obstruct his sail-
ing. News had been brought before from
Jamaica of the conclusion of the peace with
France, and a vessel from the *Canary* islands
brought the confirmation of it.

Fruit of
Havana.

There are two particular sorts of fruit at
Havana, which do not grow elsewhere:
one is like a heart, call'd *Guanavana*, green
without, and has some thorny prickles;
within, made up of white morsels of an un-
pleasant taste, between sweet and sour, with
some stones: the tree is as big as that which
bears the *Anonas*. The other sort, call'd
Camito, is exactly like an orange on the
outside, and within has a white and red
pulp of a sweet taste. The tree is as tall
as a pear-tree; the leaf on the one side is
green, and on the other of a cinnamon co-
lour. Of *European* fruit there grow quin-
ces, oranges, lemons, pomegranates, and
other sorts.

Birds and
cats.

The mountains are full of wild boars,
cows, horses, and mules. Of birds there
are abundance, especially parrots, and par-
tridges bigger than quails, with blue heads;
and, as for those that are fit for the cage,
there's great plenty of those they call *Cham-
bergos*.

Friday 21st, there arriv'd a bark from
Matacumbe, a small island on the coast of
Florida, with five *Franciscans*, who in *No-
vember* before had been sent for by the
Carique Charles, as missionaries, and were
since expel'd naked, for offering, out of an
ill-timed zeal, to make a procession in the
night before the temple of the *Indian* idola-
ters; who fled at first, but then came again
arm'd, and abused the friers, driving them
out of their country, so that they were for-
ced to go away half naked to *Matacumbe*,
a territory of christian *Indians*.

Saturday 22d, the captain of the *Matevan-
zas*, that is, of the several trades belonging
to the building of ships, represented to the
admiral, that the ships being higher built
than men of war, 'twould be sending of
them to be lost, if they went out under-
loaded, as the deputies intended to do.
Hereupon, on *Sunday 23d*, there was a
council held of all the sea-officers, where
they concluded that the hold must be well
flow'd, that the vessels might lie lower in
the water; a determination of judges who
spoke for their own interest, but that could
not be approv'd of by the council of the
Indies, which had order'd, that the galleons
should not be loaded with merchandize.
The admiral therefore, having on *Monday*
24th acquainted the captains of the galleons
and the deputies of the merchants, that it
was convenient for the king's service (or
rather for their own) that the gal'ons should
be more loaded, it began to be very dili-
gently put in execution on *Tuesday 25th*,
the time appointed for sailing drawing
near.

Monday 3d of March, I saw the castle *Calle del*
del Morro, built upon a rock, on the left *Morro*.

of the mouth of the harbour, which it de-
fends with a platform of eleven pieces of
cannon, call'd *the Apostles*, which lie level
with the water: there are in all about fifty-
five guns in the castle. The ditch about
it is cut out of the rock, and fill'd by the
sea. Abundance of the birds they call *Car-
dinals* being brought over from *Florida*, I
saw the people belonging to the galcon give
ten pieces of eight apiece for some of 'em,
and six for the worst. Upon computation,
they said, there had been eighteen thousand
pieces of eight laid out upon those foolish
birds, notwithstanding the deplorable loss
of *Caribagena*, and the expensive delay of
keeping the fleet three years in *America*.
Saturday 8th, proclamation was made, for-
bidding any that belong'd to the fleet to
stay in *Havana* upon pain of death; and
in the evening a cannon was fired, to warn
all aboard.

D. Ferdinand Chacon having generously
given me my passage gratis aboard his gal-
leon, he sent on *Sunday 9th* for my equi-
page. *Monday 10th*, several grummetts,
who had receiv'd their pay, ran away.
Tuesday 11th, I took leave of my friends,
and provided sweetmeats for my voyage.

LI.
1698.

C H A P. IX.

The author's voyage from Havana to Cadiz.

THE fleet being under sail, I went aboard on *Wednesday* 12th, in the afternoon. *Thursday* 13th, the warning-piece being fired, all the galleons weigh'd anchor again, and the admiral, by firing, made way out of the harbour. She touch'd upon some flat, and it cost time to get her off. Being out of the harbour, she saluted the castle *del Morro* with seven guns; the merchant-ships follow'd, and then our galeon, which saluted that they call *the Fort* with seven guns, and was answer'd with six; and then the castle *del Morro* with six, and was answer'd with the same number. We coasted along all day, to give the vice-admiral and the ship call'd *Garai* time to come up with us. At night it blew a storm, which oblig'd us to lie upon a tack.

Friday 14th, we were twenty leagues from *Havana*, but the two aforementioned galleons not appearing, we stood back again; and, meeting the *Garai*, understood she came out with the vice-admiral, but had parted in the storm, which made us stand our course again. A woman being found aboard in man's clothes, and there being no possibility of setting her ashore, she was left among the other women.

Saturday 15th, the wind E. we steer'd N. N. E. the lat. 23 deg. 40 min. *Sunday* 16th, the wind N. W. we steer'd N. E. and then N. N. E. lat. 25 deg. which is the latitude of the point call'd *Cabeza de los Martyros*, and entrance of the channel of *Babama*, form'd by the aforesaid point and *los Cayos*, or *little Islands*. In this place the galleons the year before were in such a terrible storm, tho' it was in *September*, that they had all like to have been lost, some of 'em return'd to *Havana* unmailed, and others had much ado to clear the water with several pumps. About evening we discover'd the small islands *de los Caimanos*. The wind came to E. which made us steer N. N. E. and then N. *Monday* 17th, the wind S. E. we steer'd the same course, the lat. 26 deg. 30 min.

At night it blew hard, and fiercer on *Tuesday* 18th, at N. N. E. lat. 27 deg. 40 min. The night was as uneasy as the last. The wind being N. E. on *Wednesday* 19th, we steer'd N. N. W. and coming about at noon to E. N. E. we alter'd our course to N. The lat. was found to be 28 degrees; wherefore the admiral gave notice by firing a gun, that we were out of the channel. This channel being eighty leagues

in length, and between eighteen and twenty in breadth, is very dangerous, by reason of the violence of the current, and the great number of islands about it, which is the cause that many ships have been lost, believing they were out of it. When the wind is fair, they run thro' it in little above twenty-four hours; but 'tis absolutely impossible for ships bound for the *Indies*, by reason of the force of the current.

Being come into the gulph *de las Téguas*, or of *Mares*, we steer'd N. and by E. Before sun-set, a ship made a sign that they saw land, which made all found, and they found first twenty-five, and then thirty fathom. *Thursday* 20th, the wind S. E. we steer'd N. E. the weather being bad because of the Equinox. *Friday* 21st, we steer'd E. and by N. the wind blowing hard at S. which parted our ships, so that on *Saturday* 22d, of twelve that we were at the first, only seven were to be seen; the lat. 28 deg. 30 min. because we had made but little way. *Sunday* 23d, the wind blew hard at N. which made us run E. and by S. We were inform'd by one of the seven vessels, that the admiral, with the rest of the ships, after the storm, had steer'd N. E. whereupon our galeon commanded as admiral; lat. 29 deg. 45 min. The wind being contrary, made us lie by all night, and before noon on *Monday* 24th, to run E. N. E. the wind at S. E. *Tuesday* 25th, held on the same course.

Wednesday 26th, the wind came to S. W. yet we held the same course, to get more to northward; the lat. 31 deg. 20 min. At night we made good way; but *Thursday* 27th, before noon, we were quite becalm'd.

Having lost sight of two merchant ships, our captain, *D. Ferdinand Cbacon*, call'd the other captains aboard him, and order'd 'em to follow his flag set up on the mizen, the admiral and vice-admiral being gone from us, because some danger was fear'd on the coast of *Portugal*, and appointed the best of the merchants to command as vice-admiral, since ours acted as admiral, and this notwithstanding all ships at *Havana* have their instructions how to sail in case they should be parted. The lat. 31 deg. 50 min. *Saturday* 29th, we sail'd E. N. E. the wind S. S. E. *Sunday* 30th, steer'd E. and by N. and then E. N. E. the wind at S. the lat. 33 deg.

Being near the *Bermudas*, which lie in 32 deg. 30 min. and four hundred and fifty leagues

leagues from *Havana*, the soldiers and gunners began to be exercis'd, for fear of meeting any enemy. The island *Bermuda* belongs to the *English*, is said to be very low, ten leagues in length, and fruitful: we left it to the southward. *Monday* 31st, steer'd E. and by N. the wind S. W. the lat. 33 deg. 40 min.

Tuesday the 1st of *April*, we held the same course; the lat. 34 deg. 13 minutes. *Wednesday* 2d, the wind at N. and the vice-admiral's mast failing, we lay by for him to repair it. The cold was very sharp, which made some gentlemen, who were clad in silk, and had no cloaks, fare but hardly. The lat. being found to be 34 deg. 32 min. we steer'd E. and at night, the wind failing us, S.

Thursday 3d, the wind being E. S. E. we steer'd N. E. and by E. and then E. N. E. *Friday* 4th, we made good way with the same wind, and found the lat. 34 deg. 40 min. At night the wind blew hard, and the sea beating in at the port-holes, abundance of goods were wet. *Sunday* 6th, the wind at N. W. and then at N. we steer'd E. N. E. the lat. 35 deg. 40 min. At night our galeon gave notice to the rest, that he alter'd his course, by reason of the contrary wind; but it blowing fresh on *Monday* 7th, at S. we steer'd the same course as before; as we did *Tuesday* 8th. *Wednesday* 9th, the wind continuing, we fail'd E. and by N. the lat. 37 deg. 10 min.

Thursday 10th, we having notice by a gun fir'd, that a sail was seen, our galeon made towards her, and found her *Dutch*, bound home from *Curacao*. The latitude 37 deg. 30 min. we steer'd the same course with the wind at S. W. At night we made much way, and the same on *Friday* 11th, the wind being fair. *Saturday* 12th, before day, the wind blew hard at south, then came to N. W. and was a great storm at night.

Sunday 13th, the merchants endeavour'd to persuade captain *Cuacan* that he might safely deviate from the king's orders, which were, to run up to 42 deg. of lat. since there was a peace with *France*, and therefore the reason why that course was appointed, had ceas'd; and the rather, because the merchant-ships being disabled, could not follow the galeon in that latitude, where the storms are more violent. All the pilots and captains being consulted upon the matter, 'twas agreed in favour of the merchants, not to exceed 40 degrees of latitude about the islands *Cueruo* and *Flores*. Our latitude then was 39 deg. 10 min. *Monday* 14th, the lat. 39 deg. 11 min. we were all day becalm'd, as also on *Tuesday* 15th, till afternoon, when the wind came up at S. S. E. and we steer'd E. *Wednesday* 16th, in the

morning we ran E. with the wind at S. but in the afternoon lay by, by reason of the contrary wind; as we did on *Thursday* 17th. *Friday* 18th, steer'd E. the wind S. the lat. 39 deg. 30 min. *Saturday* 19th, held the same course, with the wind at S. S. E. *Sunday* 20th, kept upon the same line, with little wind, the lat. 39 deg. 40 min. *Monday* 21st, ran E. and by N. the wind S. the lat. 40 deg. 5 min. *Tuesday* 22d, the same wind and course. We first heard a gun, and then saw the ancient sit up at the stern of a ship that had made ahead to discover land, which caus'd great joy: yet we could not make near to land, by reason of the calm; nor on *Tuesday* 23d, because the wind was contrary; wherefore we lay by, in sight of the islands of *Cueruo* and *Flores*, four hundred and eighty leagues distant from the *Bermudas*: that of *Cueruo* is not inhabited, but serves to graze the cattle of the *Portuguese*, who live in the island of *Flores*, which is no bigger, but more fruitful. We being to pass thro' a chanel three leagues in breadth, made by the two islands, we could not advance a step all *Thursday*, *Friday*, and *Saturday*, the 24th, 25th, and 26th. This last day, before noon, we discover'd a sail, which prov'd to be an *English* pink, bound for *Jamaica*, and confirm'd the news of the peace. All the rest of the day, and *Sunday* 27th, we lay still in the lat. of 41 deg. At night we steer'd south, and so on *Monday* 28th, till we came to 40 deg. 5 min. lat. Then we lay still without stirring *Tuesday* 29th, and *Wednesday* 30th.

Thursday the 1st of *May*, the wind blowing very hard, we lower'd our main-top-mast. *Friday* the 2d, upon observation, we found we were driving back against our wills, towards the *Indies*, by reason of the contrary wind, caus'd, as the pilots would have it, by the last quarter of the moon. The same wind blowing harder on *Saturday* the 3d, and not being able to lie by, we let it drive us to the S. W. What was a violent wind before, grew up into a dreadful storm, so that the waves broke over the galeon; and we being in danger of perishing, there were nothing but prayers, sighs, and weeping, but it soon pass'd over. *Sunday* 4th, tho' the wind was abated, still it blew hard against us, which made us steer south, having upon observation found the lat. 40 deg. 5 min. All the ships were scatter'd in the storm, and therefore we lay by for them, and to keep our latitude. The rain at night laid the E. S. E. wind, which had plagued us for fifteen days; yet tho' the wind blew fair at S. W. we did not sail till *Monday* 5th, because of the ships that were stray'd. Having discover'd five of 'em, we hoisted the top-sail, and steer'd E.

GEMEL-
LI.
1698.

Being come near one another, we understood that the vessel call'd *the Nazarene* was cast away. They told us, that being near to sink, because four pumps could not keep her above water, she call'd for help, and two other ships coming up to her, sav'd the men and money, and then fired her. God be prais'd, I went not aboard her, as I had design'd.

We steer'd E. with the wind at S. W. on *Tuesday* 6th, but that failing us at night, and coming to S. on *Wednesday*, we ran E. and by N. A great shower of rain in the night quite laid the wind. *Thursday* 8th, we again discover'd the islands of *Cuervo* and *Mores*, from which we had been drove an hundred leagues, and holding on our course S. E. and then E. found our selves in the self-same place where we had been fifteen days before. Being now so near *Europe*, I began to find my self better of the flux that had troubled me five years, caus'd by the mighty heat I had endur'd. The lat. upon observation, was found to be 40 degr. 9 min. We were becalm'd all midnight; but *Friday* 9th, we made way with the wind at N. and again at E. S. E. At night, for fear of land, we steer'd N. and by E. being in the lat. 39 deg. 50 min. *Saturday* 10th, steer'd S. S. E. the wind being E. About noon we discover'd the island of *Fayal*, which, they say, is very fruitful; the lat. 39 deg. 15 min. We coasted along the south side of the island, because we could not on the north side, the wind being contrary. After midnight we lay by, for fear of being aground. *Sunday* 11th, making much way towards E. S. E. with the wind at N. E. we pass'd by the island *Pico*, belonging to the king of *Portugal*, well inhabited, and fruitful in wheat and several sorts of *European* fruit. We were becalm'd at night. *Monday* 12th, the wind coming up at N. we steer'd E. and by S. and afterwards E. S. E. *Tuesday* 13th, sail'd E. and then E. S. E. the wind coming to N. E. the lat. 37 deg. 20 min. *Wednesday* 14th, steer'd E. S. E. and E. finding the lat. to be 36 deg. 56 min. *Thursday* 15th, we made little way upon the same point, the wind being northerly, and lay by at night, because the wind was contrary. *Friday* 16th, at break of day, we saw two *English* men of war among us, bound against the *Sallee* pirates. We lay by, the lat. 35 deg. 30 min. *Saturday* 17th, we steer'd N. E. the wind being E. S. E. and found the lat. 35 deg. 36 min. We made but little way; and *Sunday* 18th, the wind quite fell, which gave opportunity for a procession to be made aboard, and presently after it the wind blew fair at S. which carried us E. N. E. *Monday* 19th, the wind S. W. we steer'd E. N. E. to re-

cover the lost latitude; and, because we made good way, the captain recall'd the order he had given of shortening the mens allowance of biscuit to six ounces a day; the lat. 96 deg. About midnight the man at the helm cry'd out, that the rudder touch'd ground, which put all into a great fright; some said we were upon the flats, but the pilots deny'd it, saying, the flats were fifty-two leagues beyond the island of *St. Mary*. Others said, it had been an earthquake; others, that we had pass'd over a whale as the lay asleep; but hearing that the same had happen'd to the other ships, it confirm'd the opinion of the earthquake.

Tuesday 20th, it rain'd, and then the wind came to N. W. and we steer'd E. N. E. At night it blew a storm, which made us lie under a fore-sail, and it lasted till *Wednesday* 21st. After that, we were becalm'd, and then drove forward by a strong S. W. gale. At night it blew S. S. E. and we steer'd E. and by N. *Thursday* 22d, we steer'd E. N. E. the lat. 37 deg. 2 min. *Friday* 23d, we lay athwart the wind without any cloth abroad, because the wind was contrary. The pilots disputed about the distance from land, and the most favourable opinion was, that we were fifty leagues from cape *St. Vincent*. We continued in the same posture till *Saturday* 24th, at noon, the lat. 37 deg. 40 min. afterwards we steer'd S. and by E. rather than lie always in the same place. *Sunday* 25th, the order began to be put in execution, to give every man six ounces of biscuit a day, with a small measure of water, which rather increas'd than quench'd thirst. At night it pleas'd God to shew his mercy on us, sending a N. E. wind, which allow'd us to steer E. S. E. and *Monday* 26th, in the morning, we could lie E. and by S. the lat. 37 deg. 15 min. The same course was held at night, and *Tuesday* 27th till noon; when finding the lat. 36 deg. 50 min. we steer'd E. the pilot reckoning we were forty leagues from cape *St. Vincent*, and his mate but thirty.

That night, and all *Wednesday* 28th, we sail'd E. and by N. the wind at N. N. W. a small vessel keeping ahead and sounding all the way; the lat. 36 deg. 40 min. Two hours before sun-set we discover'd a small ship, which told us she was *French*, bound from *Brest* to the island *Madera*. Soon after, we saw four vessels more sailing the same course we did, whereupon our captain caus'd the guns (being about fifty brass pieces) to be made ready, and the deck to be clear'd of all cabins and other encumbrance. There was much confusion in stowing to many chests and bundles as lay about; then he furnish'd all persons with arms and ammunition, and assign'd every

every man his post : at night he kept lights
between decks, and all his crew in a readi-
ness, having heard five guns fired one after
another, which gave notice that the four
ships were close astern of us. All things
being in order, we expected the five ships
under our convoy, and then held on our
course.

Thursday 29th, we sail'd E. and by N.
and then E. N. E. the wind at N. W.
We understood those ships were friends,
bound from the north for *Cadiz*. No ob-
servation was taken. Before night we saw
three ships, which again put our galeon in-
to an alarm ; but *Friday* 30th, being come
nearer, we found one of 'em was our admi-
ral, and the other two the galeons of *Ovella*
and *Garay*, parted from us in the storm
above two months before. The merchant-
ships saluted them with five guns, were an-
swer'd with three, and return'd the like num-
ber ; then the admiral gave one, and the
merchants did the same. We were inform'd
that the admiral, coming out of the channel
of *Babana*, sprung her fore-mast and main-
top-mast, and had her sprit-sail carried into
the sea, by the violence of the wind, and
therefore had lain by eight days to refit,
being almost ready to return unto the *In-
dies*. We steer'd E. the wind at W. the
lat. 36 deg. 35 min. *Saturday* 30th, sail'd
E. and then E. and by N. the wind N.
Finding the lat. upon observation 36 deg.
11 min. and perceiving the current had cast
us off from 36 deg. 30 min. the lat. of *Cadiz*,
we steer'd at night E. N. E.

Sunday, the 1st of *June*, when, according
to the pilot's account, we thought our selves
near land, we saw nothing of it : we found
the lat. 36 deg. 14 min. and soon after a ship
fired a gun, to give notice they saw land,
which was very joyful news to us. We
perceiv'd the current set S. E. since we had
got but three minutes to northward. *Mon-
day* 2d, we could not approach the land by
reason of the contrary wind, which was E.
and therefore we steer'd N. We made lit-
tle way that night, and *Tuesday* 3d were
becalm'd, but before noon the wind came
up at S. and set us forward for the shore.

The best was, that in three days nine pi-
lots could not decide what land it was, or
how far from *Cadiz*, tho' it was their native
soil. Then we discover'd a sail, which be-
ing call'd in by a flat from the admiral,
put up *French* colours, and answer'd with a
gun : then the *Frenchman* saluted with se-
ven, and the admiral answer'd with five.
The *French* captain presented the admiral
with some refreshment, saying, he came out
of *Cadiz* the day before on purpose to meet
him, because he was hourly expected in the
city. He added, he had that morning
spoke with the captain of a *Turkish* ship of
fifty guns, of whom he understood there
were two more at cape *St. Vincent*. The
French ship bore us company (having
thirty-six guns) we steering E. and by N.
and then E. N. E. Two messengers were
sent before in the tender, with two packets,
one for the king, the other for the *India*
house. We held on our course towards
land E. N. E. and after midnight began to
found, as is usual, to find out on what part
of the coast of *Cadiz* we were. *Wednesday*
4th, steer'd first E. N. E. and then S. E.
to get into the bay of *Cadiz*. We left the
land of *Rota*, belonging to the Duke of
Arcos, on the left, and abundance of ships
that lay at anchor in the bay. At last,
God be prais'd, we came to an anchor
near the *Puñales*, having sail'd four hun-
dred and sixty leagues from *Bermudas*, and
thirteen hundred from *Havana*, in eighty-
five days. All *Cadiz* rejoiced, forgetting
the loss of several millions by the sacking
of *Carthage* ; not only the houses, but
the steeples being adorn'd with colours set
up ; and all the shore cover'd with a mul-
titude of people come down to see us, the
Bells throughout all the city ringing, to
echo the people's joy. Before the anchors
were dropp'd, I went ashore in a boat,
leaving all my equipage behind, know-
ing it could not be carried off till the *In-
dulto* was settled, which is a composition
for the king's duties. I took a room in
an inn, to recover my self after my past
sufferings.

CHAP. X.

The description of the island and city of *Cadiz*, and an account of what
the author saw during his abode there.

*Cadiz de-
scrib'd.*

THE island of *Cadiz* was first call'd
Junio's island, on account of a temple
there dedicated to her ; after that, it had
the name of *Gadir*, and *Gades*, and lastly
corruptly came to be call'd *Cadiz*. The
city is seated to the northward of the freight
of *Gibraltar*, in 36 deg. 30 min. latitude.

The port may be said to be one of the most
frequented in *Europe*, it being a place where
ships touch going to, or returning from, the
Levant, from the coast of *Africa*, the *East*
and *West Indies*, and those of the freights
bound into the ocean. The city is in an
island ; for on the east side, that is towards
the

GEMEL- the continent, it has a chanel that joins the
L.I. waters of the bay with those of the main
1698. ocean, over which is a most beautiful bridge;
its shape is irregular, the length east and
west, and the breadth north and south; yet
not above half a league in compass, and
that not at all enclos'd with a wall. Tho'
small, 'tis vastly rich, and the buildings,
as well publick as private, not inferior to
many in Europe, but the streets are ill-
shap'd and crooked. The island, tho' but
three miles in length, is very plentiful, and
supply'd with all sorts of flesh, fish, and
fruit, and most delicious bread, all brought
from the neighbouring villages, but at a
dear rate, so that a man can't live under a
piece of eight a day.

Forts,

On the east side of it is a small castle,
call'd *St. Catherine*; and two forts, call'd
los Puntales, upon the bay; one of 'em on
the island *Maia Gorda*, t'other near *Puerto
Real*, or *Port Royal*, both of 'em encom-
pass'd with water. The bay is about eight
leagues in compass, and deep enough every
where; but the dwellings all about, and
the great number of ships, that look like a
wood, make it very delightful to behold.

The bay.

D. Francis Gutierrez de los Rios y Cordova,
count of *Fernan Nunnez*, entertain'd me no-
bly on *Monday* 9th, to hear me give an ac-
count of my travels, and engag'd me to
take use of his table during my stay. Be-
ing there at dinner on *Tuesday* 10th, news
was brought us of the arrival of the tender
belonging to the galleons, with the news
that the vice-admiral was cast away five
leagues from *Havana*, thro' the fault of the
pilot, who was fled, who lay by on the
coast for the boat that was behind, and un-
advisedly fell into four or five fathom wa-
ter. This account turn'd all the joy of the
people of *Cadiz* into mourning, they having

twelve millions aboard: there was hopes
of recovering the plate, being in such shoal
water, but the goods were all spoil'd! I
had us'd all endeavours to come aboard
that ship, but it pleas'd *God*, for my
good, I did not prevail. *Wednesday* 18th, *Port St.*
the count carried me in his boat to *Port St.*
St. Mary, two leagues from *Cadiz*. This
place, and the country about it, belongs
to the duke of *Medina-celi*; 'tis much lar-
ger than *Cadiz*, the streets handfomer, as
are also the great houses. Lying west of
the bay of *Cadiz*, upon an inlet of the sea
that runs two leagues up the country, to the
monastery of *Caribushians*, call'd *Cartuja de
Xeres*, 'tis inhabited by very rich mer-
chants. *Friday* 20th, the count carried
me aboard *Monfieur Coetlogon*, who com-
manded ten *French* men of war, and re-
ceiv'd us very honourably, treating the com-
pany with coffee and tea, which the *Span-*
iards did not like. Thence we went out
as far as the *Puntales*, to see a vessel come
from the *West-Indies*, which, to my great
satisfaction, as having some concern aboard,
we found to be that call'd *Espanuoleta*,
commanded by *John de la Vaca*, which was
thought to be lost, and worth half a mil-
lion. There we were inform'd, that ano-
ther small vessel, call'd *the Sevillano*, was
put into *St. Lucar*, they having been both
thirty-one days at *Fayal*, by reason of the
contrary winds.

D. Thomas Eminente, having seen the ra-
rities I brought, presented me with a mine-
ral stone, in which was a large emerald,
that I might add it to the rest of my curio-
sities; a generosity unusual in these days,
for which I own my self extremely oblig'd.
The following days I spent in taking leave
of my friends, being to depart soon, as will
appear in the next book.

Francis Gemelli Careri. Part XI.*

Containing the most remarkable things he saw
in NEW SPAIN.

B O O K VII.

CHAP. I.

An account of what is most remarkable in the city of Seville, and the author's journey to Madrid.

ON Wednesday the 2d of July, I set out for *Port St. Mary*, and took up my lodging at the *Flemmings* inn, who gave good entertainment for nine rials a day; but I could have fasted all day to hear him talk of his quality. He drew out a greasy parchment which he said was a grant from king *Philip* the fourth, and had cost him four pistoles. But a *Dutch* captain of a ship made him mad, ridiculing him, and saying, the arms on the parchment were none of his; and that, as he had bought it for some sharper, so he cry'd it up to sell it him for a piece of eight.

Having hir'd a calash upon *Thursday* 3d, for twelve rials, I went in it through a well cultivated country three leagues to *St. Lucar de Barrameda*, a town bigger than *Cadiz*, seated on the left hand bank of the river *Guadalquivir*, which makes it abound in all things, and belonging to the duke of *Medina Sidonia*. Here I took boat, before sun-set, and having run up about six leagues with wind and tide, till about midnight, the watermen cast anchor, and we lay there the remaining part of the night. *Friday* 4th, the tide serving three hours after sun-rising, we went on again. This river, though winding, is smooth, and about one hundred paces over. At night we came to a village call'd *la Puebla*; and thence to *Corea* belonging to the king, not far from the other, both of them on the right side of the river, and twelve leagues from *St. Lucar*. Two leagues farther we came to *Gelves*, a village belonging to the duke of *Verraguas*, where we anchor'd, because the tide was ebb, and against us. About two in the morning we advanced again

with the flood; so that an hour before day we anchor'd at the *Golden Tower*, where I was forced to give the officers something that they might not search my trunks.

Saturday 5th, we got into *Seville*, through the gate of the arsenals where I gave the officers half a piece of eight to pass my goods. *Andrew Castagnola*, a *Genoese*, courteously receiv'd me in his house, and after dinner we went in a coach and four horses to take the air in the *Alameda*. Here are long rows of trees, and in the midst of them a fountain, which serves to water the place every night, and to fill the trenches about it. At the entrance into this place there are two high, and ancient pillars, with two statues on them much impair'd with age, one of which they say represents *Hercules*, and the other *Julius Cæsar*; it is not known whether they were erected by the *Romans*, and I doubt of it much, because of the words *Plus ultra* carv'd on them; unless perhaps they were not cut when the pillars were erected.

Seville is seated in a plain, in the latitude of 57 degrees, and 20 minutes. It is almost round, and not much less than two leagues in compass; so populous that it contains about forty-two monasteries of religious men, and thirty-six nunneries, and twelve hospitals, besides the parish churches; and all those good structures, as are the palaces and the houses of the citizens. But the streets are not pav'd, narrow, crooked, and much like those of the *Moorish* towns, which makes them very inconvenient in summer for dust, and in winter for dirt, besides their being so intricate that a stranger easily loses himself. There are fourteen gates in its low walls; the most remarkable

depart soon, as will

GEMEL-ble of which is that of *Xeres*, at which king
 11. *Ferdinand* made his entry, when he took
 1699. it from the *Moors*. The suburbs are those
 of *St. Bernard*, *St. Benedict*, *St. Roeb*, *Tab-*
lada, *la Fuente del Arcobispo*, and others.
 On the right side of the river is another lit-
 tle city, call'd *Triana*, join'd to *Seville* by
 a wooden bridge. There is nothing
 remarkable, but a monastery of *San*
ans, and the palace and prisons of the in-
 quisition. *Seville* is nothing inferior to *Ma-*
drid for bigness, or number of inhabitants.
 The men are handiomer than the women,
 but very proud.

Alcazar,
 or palace.

Sunday 6th, about evening, we went to
 see the *Alcazar*, or palace of the *Moorish*
 kings. About the first court, which is
 large, are the dwellings that serv'd for the
 family; whence passing through a portico
 supported by thirty two small marble pil-
 lars, where they lay was the king's table,
 they go to the *Baths*. Then we came into
 the second court, about which there are no-
 ble apartments, in the lower floor, which
 now serve for an archive; and those above
 for the governor of the city's habitation;
 they all look majestick, notwithstanding
 the carv'd work, and gilding appears to
 be made by a barbarous hand. In the void
 place about the *Baths* there are four squares
 of orange-trees, made as they say for the
 diversion of queen *Mary de Padilla*, wife
 to king *Peter*, surnam'd the *Cruel*, who of-
 ten us'd to resort thither. Opposite to 'em
 is the great gate that led to the apartments.
 First there is a long room or gallery,
 which leads into such another, and that to
 a good handsome chamber, out of which
 they go down to the lower apartments.
 Here is a fine court, in the nature of a
 cloister, with fifty two marble pillars, and
 about it seven state rooms after the *Moorish*
 fashion, curiously adorn'd with carv'd work;
 what deserves to be particularly observ'd, is
 a *Cupula*, and a state-room, where perhaps
 the royal throne stood. The work shews
 it was begun by the *Moors*, and finish'd
 and improv'd by the *Spaniards*. In the
 second gallery there is an iron gate which
 leads first into a square, in which is a fish-
 pond or great basin, with a statue pouring
 out water at several parts; then there is a
 way on the right down two pair of stairs in-
 to two squares encompass'd with high and
 thick myrtle-trees. Here there are several
 statues, clad in that same green, and repre-
 senting musicians, with several sorts of in-
 struments in their hands; on the ground
 there are abundance of little holes for wa-
 ter to gush out to wash people as they go
 by. Further on still upon the same level,
 on the right hand there are two other squares
 of myrtle-trees artificially cut. Hence we
 pass'd into another wall'd place, in which

there are eight squares with several plants,
 about them good hedge-rows of myrtle, and
 in the middle fine allies to walk. There
 are two fountains, one close to the wall cu-
 riously wrought, the other under an arch,
 with several figures of beasts and men, one
 of them founding a trumpet. At the end
 of the alley, opposite to this arch I have
 spoke of, is a door leading to a fountain in
 rock-work, which was going to ruin for
 want of looking after; about it there are
 thick squares of myrtle. Going through
 another door, opposite to it, is a little summer
 house cover'd with purcellane, but ill or-
 der'd, and by it another basin, with a sta-
 tue pouring out water. Here are several
 plats of roses and other flowers. Adjoining
 to this is another orange and lemon gar-
 den; and another of greens parted by a
 high wall. In this place there are two rows
 of arches, one upon another, with iron gilt
 balconies. All hitherto describ'd is enclos'd
 with high walls, with square towers at con-
 venient distances.

Monday 7th, going about to view the *Dur-*
city, I saw the monastery of *St. Paul* of
 the *Dominicans*, not yet finish'd; the plain
 is large, has great pillars, which are to sup-
 port the arches of dormitories for a hundred
 and fifty fathers. The church is large, and
 has three isles. Thence we went to the
Franciscans, a monastery remarkable, not *Paul*
 for beauty, but for bigness, having seven
 cloisters, with a great number of cells
 for two hundred friars. The noviceship
 stands a-part in an angle of the orchard.
 The church is not very big, but has many
 chappels about it, which are like so many
 little churches, especially those of the *Bis-*
cainers and *Portuguese*. On the side of the
 church is a round room, hung with crimson
 velvet, where the twenty four *Regidores*,
 who govern'd the city meet with the *A-*
caides and *Jurados*, who oppose them in such
 things as are not convenient. The first of
 these sit upon benches made fast on high a-
 bout the room; the others on benches cov-
 er'd with leather standing on the floor;
 there is such another room above stairs for
 winter. The church of the *Mercenarians*, *Mercan-*
 whither we went next, tho' small, is very an-
 beautiful; and the monastery spacious with
 pleasant cloisters adorn'd with marble pil-
 lars. This was the first built in *Seville*, af-
 ter expelling the *Moors* in the year 1249.

Thence I went to the *Lonja*, otherwise *The*
 call'd *Casa de Comercio de la India*, which *change*
 is the exchange; which is a large structure
 arch'd and supported by pillars of hard
 stone. Here a prior and two consuls ad-
 minister justice to merchants under a cano-
 py in a stately hall; and to assess, and re-
 ceive the *Indulto* the king demands upon the
 arrival of plate fleets; as also the duties for
 other

with several plants, rows of myrtle, and to walk. There is a wall under an arch, castles and men, one carpet. At the end of this arch I have going to a fountain in going to ruin for about it there are. Going through it, is a little summer reellane, but ill-order'd, with a statue.

Here are several flowers. Adjoining, and lemon garlands there are two rows, with iron gilt enclos'd square towers at con-

about to view the *Dome* of St. Paul of *Spain*.

It is finish'd; the plain, which are to suppositories for a hundred church is large, and once we went to the very remarkable, not *Spain*, *Spain*, having several number of cells. The novitship of the orchard is big, but has many which are like to many of the *Bible*.

On the side of the, hung with crimson forty four *Regidores*, meet with the *Ab* oppose them in such

on benches depending on the floor; from above stairs for of the *Mercenarians*, *Mercenarians*, tho' small, is very *small*.

nastery spacious with'd with marble pillars built in *Seville*, in the year 1249.

the *Lonja*, otherwise *The de la India*, which change

is a large structure by pillars of hard and two consuls adorns under a canopy to assist, and receiving demands upon the also the duties for other

other expences. That year, notwithstanding the loss sustain'd at *Caribagena*, the merchants were oblig'd to pay three millions and a half at *Portabello*, and the consuls endeavour'd to make them pay a greater sum.

Archbishop's palace. Then we saw the archbishop's palace of an ordinary structure. It has two courts, and large apartments, both above and below, fit for so great an archbishop, whose revenue amounts to 120000 pieces of eight. The finest thing above stairs is the oratory; and in the sacristy the rich vestments, adorn'd with gold, and artificially laid up in small drawers.

Cathedral. The cathedral, which is near the house, and the model of all the cathedrals in the *Indies*, may be call'd another St. Peter's at *Rome*, as well for its largeness, as because the work about it is not yet finish'd after so many years, being such as requires some ages. A square of orange-trees, encompass'd with half pillars with iron chains, leads to one of the five gates on the sides of the church, besides the three in the front, which is not yet finish'd. This church is about fifty paces in length within, and proportionably broad, having five isles, and handsome pillars. It has seventy five altars, but the great one is an incomparable structure, being a semicircle, with a way to it from the choir, enclos'd with gilt iron banisters. They told me the paschal candle set up there on *Holy Saturday*, weighs six hundred twenty five pounds. The choir is adorn'd with excellent carving, and two good organs. In the chappel, where the body of the holy king *Ferdinand* lies, on the one side is the tomb of king *Alphonso*, who was chosen emperor, and on the other that of queen *Beatrice*. On the tomb of *D. Ferdinand Columbus*, the son of *Christopher Columbus*, the first discoverer of *America*, are these words.

A Castilla, y a Leon.
Nuevo Mundo dio Colon.

That is, *Columbus* gave a new world to the crowns of *Castille* and *Leon*. The divine service is here perform'd by ninety five chapter men, besides interior priests, servants and musicians, to the number in all of two hundred and fifty, maintain'd according to their quality with a revenue of eighty thousand pieces of eight. In the sacristy, besides the ornament of curious carving and painting, and precious relics, is a silver tabernacle, weighing two thousand six hundred and fifty pounds; and a brass *Tenebræ* candlestick of two thousand pound, which they told me cost thirty thousand pieces of eight, because of its excellent workmanship. The musick books for the service of the choir cost eighty thousand pieces of eight.

They still shew the key the *Moorish* king *GEMPI* deliver'd to king *Ferdinand* upon the surrender of the city. Adjoining to the sacristy is the room before the chapter, adorn'd with half reliefs of marble made by an excellent hand. The place where the chapter meets is round, and arch'd, all hung with crimson velvet. On the side of the church is the oratory, for keeping the blessed sacrament to carry to the sick. There are in it eleven altars, and a good sacristy, all adorn'd with fine marble statues of half relief. This oratory is serv'd by four curates. The tower of the church is majestic enough, square, made of solid stone curiously wrought, and grows narrower till as it rises, being above two hundred geometrical feet in height. Within it the stairs are such that a man may ride a horse up to the belfrey, where there are twenty five bells, great and small, and there are several rooms for servants. On the top of it stands a statue of gilt brass call'd *la Giraldada*, which turns with the wind like a weathercock.

Next I went to see the house of the *Venerables*, or for priests to retire to, which was then building at a vast expence. The church is well enough adorn'd with gilt images, and sundry pictures; and the monastery has a stately cloister, with marble pillars. Without the city I saw the hospital of the *Charity*. The house is well built *Charity*, and large, and there are good beds in the galleries. The church, tho' small, and but with five altars, is remarkable for good painting. Here I saw a fine silver tabernacle.

The house of St. *Elmo* is the place where St. *Elmo*'s boys are taken to be instructed in the art of navigation, there being a ship in the middle of the court, and then they are sent to the *Indies*. When they return, the governors of the house receive them, and recover their wages of the king or traders, as long as they will continue to live in that house, which is very large.

Next we walk'd about the walls as far *Aqueduct*, as the *Aqueduct*, which, tho' built, as they told me by the *Romans*, still conveys the water to the city. Thence we went to the *Prado*, or plain of St. *Justa*, and St. *Rufina*, the protectresses of *Seville*, because they suffer'd martyrdom there, and then entered the city again at the gate of *Carmona*. By the way I saw the palace built by the duke of *Alcala*, when he return'd from his travels, after the model of *Pilate's* palace shewn at *Jerusalem*.

Tuesday 8th, I saw the tribunals, and Courts, passing through a handsome court, beset with beautiful columns, with a good fountain in the middle, found three halls, three for civil causes, in each of which four *Oydores*,

GEMEL-dores, or judges, meet; and the other for the criminal, where three *Alcades*, and a *Fiscal* 1699. or king's solicitor meet. A *Regent*, or chief magistrate of *Seville*, who is a gownman, sits as president, sometimes in one, and sometimes in another, as he pleases, and therefore has his apartment there.

India-house.

Thence we went to see the *Casa de la Contratacion*, or *Indian-House*, in which there are three halls, one call'd of government, or the chamber of direction, in which sit a president, and some other officers, all sword-men; another in the chamber of justice, where are three *Oydores*, or judges, and a *Fiscal*, or king's solicitor; and the third the treasury, where others of the king's officers meet. The president lives in this house.

S. Jerome. Wednesday 9th, my friend and I went to the monastery of S. Jerome. The most wonderful thing there, is an image of that saint, made of clay, about a hundred and eighty years since, with the crucifix and lion, by a *Neapolitan*; all so natural and artificial, that it looks as if it were really alive. Philip the fourth, of happy memory, saw, and would have had it for the *Escorial*; but the fathers excus'd themselves, alledging the difficulty of carrying such a brittle thing so far. The monastery is large; and the church, tho' small, has seven altars well adorn'd. Returning to the city we pass'd by the monastery of S. Lazarus, and that call'd *De la sangre*, or *Of the blood*; the first for securing of *Lazars*, the second for other distempers. This is a large structure, erected by the duke of *Alcala*, and there are in it stately rooms, and a court beset with pillars.

Carthusians.

Going over the bridge we came to *Triana*, and thence to *las Cuevas*, or the *Carthusians*. Tho' the monastery is large, and has stately pillars, the church is small, but well adorn'd. There are five tombs in it, with curious marble statues, of the counts of *Tarifa*. In the sacristy there are most precious relics, and church stuff of great value. They shew a brass piece, which they say is one of those given to *Judas*. In the chapter there are two statues of the aforesaid counts, and on a beautiful altar, one of our blessed lady well enough carv'd. In another room is the tomb of the archbishop *Mena*, founder of the place.

Statue of K. Peter.

As we return'd home late, I was shew'd in the street, call'd *El can delejo*, a half figure of king *Peter*, whom they call the *Cruel*. Asking the meaning of it I was told, that he going about at night incognito, as he was wont to do, to spy what was doing about the city, quarrell'd with a *Spanish* bravo, who would not give him the way, and had the fortune to kill him. The body being found in the morning, the king

order'd the murderer should be enquir'd after, and severely proceeded against. The *Alcade* was so diligent that he discover'd the truth; and the king asking about it, he answer'd, he could proceed no further, because the murderer was too powerful. Being again commanded to proceed to the utmost rigour of the law, whosoever the person was, the *Alcade* caus'd the king to be beheaded in effigie, and in memory therefore the half statue was set up in the street where the murder happened.

Thursday 10th, in the morning, I went to the great market, and there found a vast concourse of buyers and sellers; and after dinner to a castle they say was built by the *Moors*, now call'd S. *John de Alfarache*, half a league from the city. There is nothing to be seen, but the place where it stood on a mountain, the walls being ruin'd, but within them is a monastery of S. Francis.

Sunday 13th, having taken leave of all my friends, I set out for *Madrid*, in a coach journey to *Madrid*, hir'd for fifty-four pieces of eight, with D. *Andrew Herrera*, vicar general of *Quito* in *Peru*; F. master *Emanuel Mosquera*, a *Mercenarian* of *Papagan*, and D. *Paul de Offietta* of *Lima*. Going out of *Seville* near sun-setting, we came to *Castell-Blanco*, by one in the morning, having travell'd five leagues, part mountain and part plain. To be the more at our ease, we went to an inn; but were uneasy enough because of a hellish landlady, who would not find us beds upon any account, because we had sent the coach mules to another place.

Monday 14th, we travell'd over a steep craggy mountain. About noon we rested on the bank of a rivulet, and moving thence came two hours after nightfall to *Satan Olalia*, the day's journey being seven leagues. Before we got in, the coach overturn'd, and had like to have kill'd some of us. Our Supper was indifferent, but the bed very bad.

Tuesday 15th, we stay'd in the same place to rest the mules, and walk'd to divert us in the shade of a poplar grove, where we walks for that purpose. The host made us pay dear for ill accommodation, taking nine pieces of eight, for entertaining four of us.

Wednesday 16th, we set out betimes, and had two leagues of good road to *Monasterio*. This is the first place of *Estremadura*, and belongs to D. *Dominick Centorion*. After dinner, we went three leagues down hill, to *Fuente de Cantos*, a good village, where there are two monasteries of nuns, and one of friars.

Thursday 17th, we travell'd four leagues, all upon a plain to *Santos*, a town of the king's, well inhabited, where, resting all the

the reſt of the day, we ſet out late to go
two leagues further to Villafranca. In theſe
inns, when travellers have paid for their
meat and beds, they make them pay for
the noiſe, though they were never ſo ſtill.

Friday 18th, we did not ſet out till after
noon for Merida, fix leagues diſtant, whi-
ther we came about one in the morning.

We had a kuryy inn, becauſe all the good
ones were taken up, for the ambaffador
that was returning from Liſbon. Merida
is a royal city inhabited by about eight
hundred families, among which, there are
many of noted nobility, by the Spaniards
call'd Solariegas. The moſt notable thing
here is a noble ſtone bridge, half an Itali-
an mile in length, and broad enough for
two coaches to go abreſt; over the river
Guadlana. There is an ancient caſtle, which
did belong to the conventual priors of
Leon, who on their habit wear the croſs of
St. James. There are alſo four monaſte-
ries of friers, and four of nuns. The com-
mon walking place is not contemptible.

Saturday 19th, we ſet out late, and reſt-
ed after two leagues, at the little village of
St. Peter, whence going three leagues fur-
ther on a plain country, we came to Me-
dellin, and two leagues thence to Miajadas,
both places belonging to the earl of Me-
dellin. All the inns were taken up for the
ambaffador, ſo that we ſar'd ill.

Sunday 20th, we went after dinner three
leagues to St. Cruz, where we lay till mid-
night.

Monday 21ſt, proceeded to Tordeſillas,
leaving Truxillo aſide. We ſet out again
after dinner with violent hot weather, and
going up and down high craggy mountains,
the harbour of thieves, the coach broke,
and we were left in the open air. As we
were afterwar'd paſſing by Caſas de Mira-
bete in the dark, I broke my gun, and had
ſome other loſs. Three leagues further we
croſs'd the river Tagas over a great ſtone

bridge, and went to lye at Almaraz.

Tueſday 22d, the coach being mended
we ſet out in the evening, and having tra-
vell'd two leagues over a plain well culti-
vated, in which there was a very good vil-
lage, went to take up our quarters at Cal-
cada de Oropeſa.

Here we continu'd all Wednesday 23d in
the morning, and then ſet out along a
good country full of villages, and at the
end of two leagues paſs'd through Oropeſa,
belonging to the earl of that name. It is
ſeated on a hill, the walls about it are mean,
but there are good buildings in the ſuburbs
about it. Riding four leagues further
through a wood, we came to Peter Vene-
do's inn, where we found neither beds nor
meat, that place being always in danger
of highway-men. In April the year be-
fore, nine of thoſe ſtrollers had robb'd and
bound about forty travellers. Having reſt-
ed a little we went four leagues further to
Talavera, a town well known for the ex-
cellent earthen ware made there, and con-
taining about eight thouſand families. The
beſt ſtructures are fourteen monaſteries of
religious men and women; for the houſes
are diſorderly and not uniform. There is
a good walking place with long rows of
trees, call'd Nueſtra Sennora del Prado.

Thursday 24th, we ſet out late, and hav-
ing rode fix leagues over good plains, lay
at Santa Olalla, a village belonging to the
count de Orgas.

Friday 25th, continuing our journey
through olive gardens and good villages,
eſpecially that call'd Nover, for fix leagues,
we came to Caſa Rubia.

Saturday 26th, went four leagues further,
and lay at Moſtobes.

Sunday 27th, travell'd three leagues and
arriv'd at Madrid, over the bridge of Se-
govia. I took into an inn in the ſtreet cal-
led Calle de Silva, but then remov'd to that
of Olivo alto.

CHAP. II.

The deſcription of the royal town of Madrid, and what is moſt re-
markable in it.

THE royal Town of Madrid is feat-
ed in a champain, water'd by the
river Manzanares. The country about is
uneven, ſome plain, ſome high and ſome
low; but the air is very good and whole-
ſome, and though it be not in above 40
deg. and 40 min. latitude; yet the cold in
winter and the heat in ſummer are intoler-
able. The ſhape of it is almoſt oval, lit-
tle above a mile in length, and near five in
compaſs. It is grown up to this greatneſs
from a little town, ſince the kings of Spain

choſe it for the place of their reſidence.
However, the walls about it are low, and
of mud, with fourteen or fifteen gates. The
ſtreets are always very dirty, by reaſon of
the cuſtom of throwing all filth out at the
windows. It is worſe in winter, becauſe
they carry many hogſheads of water in
carts, which they let out about the ſtreets to
carry off the filth, and ſometimes it runs in
ſtreets that ſtop the way, and poiſon with
the ſtink.

GEMEL- The houses for the most part cannot
L.I. compare with those of Italy, being generally
1699. ill built with timber ribs. But as to
W particulars, the king's palaces are most magnificent, as well from the greatness of the structure, as for the rich furniture, curious pictures, abundance of fountains, fishponds and parks. Besides that where his majesty generally resides, there are those of *Buen Retiro*, the *Escorial Pardo*, *Aranjuez* and others, whereof having said enough in my first travels in Europe, I omit to repeat the same in this place. Among the chief palaces of the nobility that of the duke of *Uzeda* is none of the worst, as well for structure, as for the embellishments of marble; for which reason the late queen's mother had pitch'd upon it for her residence. All the churches are well serv'd and adorn'd.

Plaza Mayor. Among the publick buildings the Plaza Mayor, or great square, is very graceful. It is a perfect square and has several avenues. All the houses about it are built after the same model five stories high, with as many rows of iron balconies, all curiously made and uniform. In the shops below under the porticos, are all sorts of rich commodities; and in the middle of the square all that can be desir'd for eating. But it is then most beautiful to behold, when they have the sport of riding at bulls, call'd by them *Juego de Toros*, or *Fiesta de Toros*; because then it is richly hung, and there are to be seen the king, the ministers of state, magistrates, nobility, and choice ladies richly clad.

Provisions are so dear, that a piece of eight a day will scarce serve a man. The wine is bad, because they put lime and other ill things into it; but the bread is excellent, and so is the flesh of gelt goats. Without the town there is good wine and cheap, because there it pays not the excise, which amounts to more than the price of the wine.

I found two fashions newly brought up, this last time I was at Madrid. The one is the keeping a great number of footmen to run before the coach; the other the wearing of periwigs, by all sorts of people, so full of powder, that it is no wonder bread is dear.

I having visited *D. John Francis Pacheco*, duke of *Uzeda*, and shew'd him all my curiosities gather in my travels, upon Wednesday 30th, he to requite me, shew'd me his library, which for largeness, choice of books curiously bound, and for the rare workmanship in ebony of the cases, all shut up with crystal glasses, is inferior to none in Spain. In his closet, besides choice medals, he had abundance of pictures of kings, and princes, some of them scarce

known in Europe, and all adorn'd with silver, gold and jewels. He told me the king had enquir'd after me, and would be glad to see my curiosities. Having spent many days in waiting upon persons of quality, who desir'd to hear some account of my travels, I went on.

Thursday the 14th of August, to see the monastery of the *Mercenarians*, which is *near*.

very stately, and has three dormitories one above another, for one hundred and fifty religious men, and the church is well adorn'd. Friday 15th, in the afternoon there was a great resort to our lady of *Atocha*, which image is cover'd with jewels, the altar with silver, and the chappel painted by our famous *Lucas Giordano*. Saturday 16th, I heard mass in the parish of St. Martin of the *Benedictine* fathers of *Monte Cassino*. The church is not extraordinary; but the monastery is large, and magnificently built. Sunday 17th, I saw the profess'd house of the fathers of the society. The church was not yet finish'd; but there were excellent pictures in the chapels that were complet. Monday 18th, heard mass at St. *Philippe el Real*. The monastery is of *Augustinians*, were small; but the church is well set off. Tuesday 19th, I saw the church of St. *Andrew*, which has a most beautiful *Capula*, and chappels and altars well adorn'd; especially that where the body of St. *Isidore* lies. Thursday 21st, I heard mass in the parish church of St. *Gines*, which is very large, has good altars, and is serv'd by many priests. Monday 25th, I saw the king and queen go out to take the air by the river. The ladies were clad almost after the German fashion, and their heads dress'd much after that manner. That day abundance of rich household-stuff, was carry'd out of the king's wardrobe, to furnish a house at *Leganios*, where the French ambassador was to be receiv'd, and entertain'd nine days at the king's cost. The workmanship of the plate was curious, but old fashion'd, and the stones that adorn'd it all false, except some Turkey stones. These things are always kept in the king's wardrobe, and never made use of, but upon such occasions.

Tuesday 26th, I went to see the hospital, *Hospital*, where there are generally about a thousand sick, attended very charitably. The structure shews it is a royal work. Friday 29th, I went to St. *Mary de Almudena*, where is an image of our lady, all cover'd with rich diamonds, emeralds, and other precious stones.

Wednesday the 3d of September, I went *Escurial* with *D. Peter Chaves*, who was to go with me into Italy, to see the *Escurial*, and din'd at *Roxas*, three leagues from Madrid, whence we travell'd the other four leagues, passing

Partheon.

passing through *Colmenarejo*, and lay that
night at the upper *Escorial*. On Thursday
the 4th, in the morning the father rector
appointed another father to shew us the ra-
rities of that monastery. We came into
the great court through a noble front of
massy stone, over which is the statue of St.
Lawrence; and proceeding thence into the
second, found there beautiful apartments a-
bout it, and a most curious frontispiece o-
ver the church-door, with six statues of pro-
phets. The church has three islands, sup-
ported as is the *Cupula* by large pillars of
hard stone. The high altar is exceeding
majestick, and adorn'd with double rows
of pillars, of choice marble, being eigh-
teen in number, which serve also to set off
the curious pictures. Going up seventeen
steps of the same stone, there appears a
tabernacle all garnish'd with gold, and pre-
cious pillars of jasper, and within it ano-
ther less tabernacle adorn'd with precious
stones of inestimable value. On the side
walls are the statues of *Charles* the 5th,
and *Philip* the 2d in fine marble. On the
left is the oratory, where the king and
queen use to withdraw. All the arches of
the church are painted by *Giordano*. The
father then shew'd us a great silver statue
representing St. *Lawrence*, kept in a cup-
board, with many relics of the most glo-
rious saints of the church.

Hence we went down to the place where
are the tombs of the kings, and queens
that are fruitful apart from that of the
barren ones, and kings children, and found
it all cover'd with curious black marble,
like the tombs of the kings of *Spain*, here
bury'd till this day. Then we went to see
the sacristy, and here were shew'd church-
stuff, adorn'd with precious stones, gold
fringes, and rich embroidery. There is
also a great silver tabernacle of extraordi-
nary workmanship, sent as a present by
the emperor to the king of *Spain*. We saw
an antependium of silver curiously wrought;
a mineral stone with several large emeralds
in it, which serves as a *Pax*; and a cross
of diamonds, rubies, emeralds, and other
stones of great value.

Then we were carry'd into a little room,
where there were many relics, some man-
uscripts of St. *Teresa* and other saints, and
a pitcher or stone vessel, that will hold
twenty *Caraffas* of *Naples*, in which they
say our Saviour converted water into wine,
at the wedding of *Cana* in *Galilee*. The
chapter whither we went next is all set out
with ancient and choice pictures. The choir
was of excellent workmanship, and the
books of plain song belonging to it, the
fathers said cost thirty thousand pieces of
eight. There are also two great organs,
besides the small ones distributed about the

isles. Near the great stairs we saw *Giordano's* best picture, which is the battle of
St. *Quintin*.
LI.
1699.

After dinner we went to see the rest, and
a religious man led us about the church,
within the wall left open on purpose. All
the arches of it made large chappels, like
those of St. *Sophia* at *Constantinople*, and all
of carv'd stone, as is the rest of the church.
Then we went into the library, and saw a
great number of books of several sciences
in excellent order; but they told me that
several *Arabic* manuscripts were gone they
knew not which way.

The pictures in this place are wonderful,
being painted by great masters, but the
most stupendious thing is a loadstone, that
bears twenty four pounds of iron, and is so
active, that it operates tho' a solid body
interpose. Yet what most amazes is, that
it does not draw the iron, unless it be set
length-ways with the north point to it. We
went up one of the corner towers to see the
chimes sent out of *Flanders* by the count de
Monterey, but they do not play exactly true.
The king's apartment is adorn'd with the
best pictures of the last age, and from his
bedchamber, he can see the tabernacle of
the high altar. There is a way out of the
same apartment into the oratory before-
mention'd.

In the monastery are fourteen cloisters,
with five rows of dormitories one above an-
other; but it is to be observ'd that in this
place there live three several families of re-
ligious men, with their several superiors,
all independent of one another. They are
in all two hundred maintain'd by the king,
and well serv'd, for all the inhabitants of
the next village are at their service, being
maintain'd by the monastery. There are
several orchards of fruit, and flower-gar-
dens, with myrtles curiously cut, represent-
ing the king's arms and other figures; nor
are the Crystalline fountains less delightful.
Besides the fine myrtles in the great cloister,
there is a stately *Cupula* of choice marble
in the middle; and fish-ponds full of se-
veral sorts of fish. There are also many
artificers adjoining to the monastery, for
its service, and apartments close by for the
courtiers, when the king is there. This
was built by king *Philip* the second, in pur-
suance of a vow made on the 10th of *Aug-*
ust, at the battle of St. *Quintin*, where,
for the conveniency of his army, he was
forced to destroy a church dedicated to the
same saint. The work was finish'd in thirty
two years, a short time for so great a
structure, that king laying out twenty mil-
lions and half upon it; besides the yearly
revenue of forty six thousand pieces of eight
a year, for maintenance of the monastery.

Friday

GEMEL- Friday 5th, we return'd by the way of
1.1. Roxas to Madrid, where being disappoint-
1699. ed of going by the way of Alicant, as I
had intended, I took two places for twenty

four pieces of eight, in the coach for Pam-
plona, and having taken leave of my friends,
prepar'd for my journey.

C H A P. III.

The author's journey from Madrid to Toulouse.

1st day's journey, 3 leagues. **M** On day the 28th of September, having perform'd my devotions in the church of our lady of *Betlem*, I took coach after dinner, and went three leagues to lye at *Rojas*, where the hostels made me pay dear for a poor supper, and worse bed. Setting out again at break of day, I cross'd the river *Guadarrama* upon a good stone bridge, then pass'd through the village of *Torrejon*, and came at the end of three leagues to the city of *Alcala*, by the *Latines* call'd *Complutum*, in the diocese of the archbishop of *Toledo*, and a famous university. It is seated near the river *Henares*, enclos'd by a low wall, and has noble streets, and good houses and shops. I went three leagues further to dine at the little village of *Alcobera*, and then three leagues more to lye at *Junquera*, leaving behind *Marcamalo* in sight of *Guadalajara*. *Junquera* belongs to the duke of *Pastrama*, and the country about it is so full of rabbits, that they would scarce get out of the road as we pass'd by.

3d day, 9 leagues. **W** On Wednesday 10th, when having travell'd six leagues, we din'd at *Xadraque*, and went three leagues further to lye at the village of *Regulara*, being tir'd with the ill way, and rain, which continuing we fet out late on

4th day, 5 leagues. **T** Thursday 11th, and therefore were forced to stay and dine at the inn of of *Rio Frio*, but two leagues from where we lay, and then proceeded three leagues still with rain, to lodge at *Barakona*, but had ill accommodation, this being a wretched village, reported to be inhabited by witches.

5th day, 5 leagues. **H** Having travell'd two leagues on Friday 12th, and pass'd through two villages, we bated at *Amagan*, a town belonging to the earl of *Altamira*, enclos'd with a wall, standing on a hill, and water'd on one side by the river *Duero*, whence going three leagues further we lay at *Amaril*.

6th day, 7 leagues. **S** Saturday 13th, after five leagues riding, we din'd at *Avingosa*; and then passing over high mountains came to *Ageda*, the last city of *Castile*, seated not far from the mountain *Moncayo*, which is ever cover'd with snow, where we had a good supper and bed. Here we stay'd on

7th day, 6 leagues. **S** Sunday 14th, till noon, to shew what gold and silver we carry'd for our expences, because it is not allow'd to export above a

piece of eight and half. I shew'd what gold I had, and paid one in the hundred for it. Before we fet out, I saw in a monastery of nuns, the body of the b. *Mary of Ageda* held there in great veneration. As soon as out of the city gates, the officers came upon us again, and I was forced to give them something to avoid being stopp'd, but I would not give any thing to others we met four leagues further on the frontiers. In this place the three kingdoms of *Castile*, *Aragon*, and *Navarre* meet, so that three kings might here dine at one table, and every one sit in his own kingdom. When pass'd the village of *Centronico*, we came into a warmer country, and an hour after night came to *Curella*, a place of great trade, rich, and inhabited by a thousand families; for tho' seated on a mountain, it has good vineyards and gardens, excellent fruit.

M Monday 15th, we lay in the same place. 8th day, Tuesday 16th, after two leagues travel- 6 leagues ling, we cross'd the river *Ebro* in a boat, and a league further came to *Valtierra*. Three leagues beyond that, we ferry'd over the river *Aragon*, which falls into the *Ebro*, and lay at *Marfella* a city near to it.

W Wednesday 17th, we fet out two hours before day, and din'd at *Tafalla* four leagues distant, a large city, enclos'd with a wall, and belonging to the king. Then we pass'd through *Barafain* and other places, in the space of two leagues, and went two leagues further of very bad way, to lye at the inn, call'd *de las Campanas*, or of the bells in the village of *Tieves*.

T Thursday 18th, having travell'd two leagues, we came before noon to *Pamplona*, 8 leagues, and I lodg'd at a good inn, in St. *Nicolas's* street.

This city seated in the latitude of forty three degrees, is the metropolis of the kingdom of *Navarre*, and therefore the usual residence of the viceroy, and of all the courts. For spiritual affairs it has a bishop, who at this time acted as viceroy till another were sent. This bishop's revenue is twenty two thousand pieces of eight, and he has a palace better than the viceroy's. The city stands upon an uneven ground, at the foot of the *Pyrenean* mountains, and has some insensible rising ground and plain. The compass of its walls, which are almost

an octagon, is about half a league. The houses are generally well built, and provisions at a reasonable rate. The monasteries and churches are not very stately; the cathedral is large, and has five isles, but of smooth stone, and is very dark, the cloister joining to it, is a handsome structure. The citadel is very large, and the walls so thick, that two coaches may go abreast on them. The ditch is very deep, and the place very strong, provided it be well furnish'd with men and cannon.

The inhabitants of *Pampelona*, and generally all the *Navarrois* are affable, and lovers of strangers, shewing them much respect as they pass through their country, and preferring them before their own people, either in felling, or any other thing; and therefore any man may travel through the kingdom, without apprehending to be affronted or wrong'd. I found not so much difficulty in getting a pass of the bishop, acting as viceroy, as in finding horses, because it was harvest time, and all the beasts were employ'd in the country. *D. John Cruzat*, marquis of *Gongora*, and governor of the city, remov'd this difficulty, ordering his lieutenant to furnish me with mules to pass the mountains. I had brought this nobleman news from his brother, *D. Fausto*, governor of the *Philippine* islands, for which he shew'd me extraordinary civility.

Having got mules by means of the lieutenant, for eight pieces of eight each, to carry me to *St. Jean de Pied de Port*: We set out on *Friday* 19th, at one in the afternoon, and rode three leagues over the valley, a country well cultivated, and full of good villages, to the bridge of *Suvert*, where the major of *Pampelona*, who is governor, has a guard, that examines all passengers; here we took much pains to climb a steep mountain, and lay at the village of *Erro*. On this road there are but few that understand *Spanish*, all the country people speaking the *Gascon* language, so that the muletier was our interpreter.

Saturday 20th, we set out two hours before day, along a very bad and mountainous road, and leaving behind us at the end of a league, the village of *Espinal*, and a league further *Burgheto*, where a governor with a guard keeps the pass; about an hundred paces beyond it, we came to the village of *Roncevalles*, an excessive cold place, and therefore the houses there are cover'd with planks that cannot be broke by the frost. The church belongs to the king, and there belongs to it twelve canons, who have each three hundred ducats a year, beside the demi-canons. The canons themselves fill up the vacancies among them, but the king has the nomination of the prior. In this church they shew two clubs cover'd

VOL. IV.

with iron, us'd formerly in war, and one GEMEL- of the stirrups of *Orlando*, the great champion of *France*; the slippers *Turpin* the historian, and bishop of *Paris*, who came into *Spain* with *Charlemagne*, wore when he said mass; the same *Turpin's* tomb, in a place apart from the church, where the famous battle is painted, in which several of the bravest men of *France* dy'd, as they were returning home with *Charlemagne*; and lastly their tombs. Riding hence along a craggy dangerous path, on the mountain, and going down on the other side, such another way cover'd with trees, in all two leagues and a half, we cross'd a small river, which divides the two powerful kingdoms of *France* and *Spain*. A league from thence we came to *St. Jean de Pied de Port*, the metropolis of the lower *Navarre*. It is well wall'd, and has a small suburb. Thro' the midst of it runs a rapid river, which afforded us good trout for supper. On the hill that commands the city, is a castle regularly fortify'd without, and good houses within for the garrison. We lay in a good inn.

Sunday 21st, we heard mass there, and saw the women, by reason of the cold, cover their heads with mantles, like those the *Moors* wear, and the men with a sort of black caps. I hir'd three horses to go as far as *Pau*, for nine *French* crowns.

Monday 22d, we set out and travell'd through a country well cultivated, and green, with country houses at convenient distances. We cross'd several rivers on bridges, and among the rest a great one, a league short of *Navarrens*, where the bridge is shut up with gates to make people pay for passing. Having rode several leagues, we took up in the fortrefs of *Navarrens*, at the customers house (as we had done at *Pied de Port*) who did not practise that strictness us'd in other parts of *France*, but pass'd my trunks without opening them, taking my word for what was in them. This fort, seated in the province of *Bearn*, is garrison'd by a battalion of foot, and by it runs a good river that abounds in trout. The king, of *France* has not only made the way safe, but, for the travellers great convenience, has at certain distances, caus'd poles and stones to be set up to shew the way, and the distance of leagues; an action worthy to great a monarch.

Having paid the duties of the custom-house, I set out betimes on *Wednesday* 23d, and having pass'd over the river on a stone-bridge to the place of arms, the guard carry'd me before their officer, who enquiring very civilly, whence I came, dismiss'd me. The road I travell'd, though mountainous, look'd like one continu'd garden. After riding two leagues and a half, I bated at

Moncim,

GEMEL-*Moucin*, where an old hostess made me pay dear for a bad dinner. A league from thence we ferry'd over the river *Gave*, which falls into the *Adour*, and went to the town of *Lascar*, where the states of the province meet, to avoid contest about precedence, in the parliament of *Pau*. Besides the city in the plain which is open, there is another among the mountains, but small, and inclos'd with low walls. Departing thence, we rode six leagues further, and lay at

Pau. *Pau*, the metropolis of the province of *Bearn*. It is divided into the lower, which is water'd by the river *Gave*, over which there is a stone bridge of a vast length; and the upper, where the parliament resides, where there is a good castle. Neither city is wall'd; but the upper has very good houses and rich shops. Its shape is long, and it may be said to have but one street upon the level, for there is a descent to those on the sides. The castle is well built after the ancient manner, without any modern fortification. In the court of it, there is noble carving, and half statues of exquisite workmanship; especially a shepherd and shepherds set in a wall. They shew'd me *Henry* the IVth's royal chapel, and the room where he was born, being on the west side over the garden. The alleys in this garden are all arch'd over by the trees, and thick plants running up interwoven, and knotted together like arbours. Thence I went into the second garden adorn'd with myrtle, curiously cut; thence into a wood enclos'd with high walls, in which there are two strait walks of a vast length, shaded by tall oaks; and thence to a hill, to see another garden, which was that great king's delight; but at present they are all ill look'd after.

Returning home, I saw the palace where the parliament meets, near the castle. Here fifty two counsellors meet in four courts, which are, one for criminal causes; one for the revenue or exchequer; and the two for civil causes. Every counsellor is allow'd by the king a hundred pistoles a year, besides their profits, but the presidents have more. All these places are bought for ever, and may be sold again with the king's leave.

A league from *Pau* is the city *Morlans*, the ancientest in the province, and five leagues from it the wholesome waters of *Bagnères*; and at four leagues distance, the miraculous image of our lady of *Beteran*. There are in *Pau* four monasteries of men, and two of nuns.

Wednesday 24th, the weather being bad, I did not travel, but hir'd three horses to *Toulouze*, for 15 French crowns, and set out on

Thursday 25th, rode two leagues through a plain well cultivated country, water'd by

small rivulets, to bare at the inn of *Bordes point*, and thence three leagues to lye at *Tarbe*, by reason of the bad way. *Tarbe Tauris* is a city seated in a plain, and compos'd of several parts, for there is a good suburb at first coming in; then a wall'd city; then another bigger than that, and wall'd too; and lastly other houses, continu'd for an Italian mile in length. It is the head of the province of *Bigorre*, but subject to the parliament of *Toulouze*.

Friday 26th, I travel'd four leagues through a well cultivated country, always in sight of the high, and hoary *Pyrenean* mountains, which divide the two greatest monarchies in *Europe*, and din'd at *Puidarias*, thence four more to the valley of *Lamette*, and one more to lye at *Bataille*.

We mounted at break of day on *Saturday* 27th, and riding three leagues, bated at *Lombez*, a wall'd place, but small; and thence continu'd our journey five leagues further to *Plaisance*, where we took up that night. There came with me from *Madrid*, a half *Milanese* of Spanish extraction, who lov'd water as a dog loves a cudgel, so that he would be continually drunk, and therefore could not sit his horse going down hill, nor ride in the night, so that he was often lost, yet I always found him in some tavern, with a pot in his hand; so that I had excellent company of him.

Sunday 28th, we set out by break of day, and travel'd two leagues along a plain cultivated country, and so arriv'd at the suburb of *Toulouze*, which is wall'd in. Here the officers were satisfy'd with a piece of money, and forbore opening my trunks, and therefore without making any stay, having cross'd the suburb, we went afoot from the bridge, to the cuckold's inn.

Toulouze, a city famous for its parliament, and university, is seated in the lat. of 43 degrees, and 20 minutes, in an excellent air, and many be call'd the greatest city in *France*, next to *Paris*, being half a league long, from east to west, and the third part of a league in breadth. In the year 638, after the building of *Rome*, *Cepio* destroy'd it, and carry'd thence a vast quantity of gold and silver. The walls at present are of brick, with towers after the ancient manner, at proper distances, with a narrow, but deep ditch about them. The houses are indifferently built of brick, and the streets well pav'd. In short, to me it look'd like another *Tauris* in *Persia*.

Abundance of gentry live in it, and generally the inhabitants are well affected to strangers, behaving themselves honestly, civilly, and respectfully towards them, as is usual throughout *France*. Provisions are cheap. The bridge of *Toulouze* over the *Garonne*, is not inferior to any in *Paris*.

It

the inn of *Bordes* leagues to lie at bad way. *Tarbo Tarbo* and compos'd of a good suburb at wall'd city; then, and wall'd too; continu'd for an I-ut subject to the

live in it, and ge- re well affected to emselves honestly, towards them, as ce. Provisions are *Toulouze* over the to any in *Paris*. It

It is two musket-shots in length, and broad enough for six coaches to go abreast, all of good square stone. There was another ancienter brick bridge, which is gone to ruin. The *Garonne* springs in the *Pyrenean* mountains, and is navigable down to *Bordeaux*, where it falls into the sea. A mile from *Toulouze*, it meets with the canal cut by the present king *Luis* 14th. I could not well read the inscription on the gate upon the bridge, because a shrub was grown out from a cleft, between the marble stones, which hinder'd my seeing the letters; but what I could discern, was to this effect.

Anno Restaur. Sal. 1668.

Qui dedit Oceano, docuit te dulce Ga-
rumna

Ferre Jugum, primus qui tuas compefcuit
undas,

Haslenus inviso jungens tua littora ponte.
Hoc opus inceptum, desperatumq; pependit,
Donec Ludovicum felicia secla tulerunt,
Qui tot ——— posset mirante Tholosa,
Tantum potenti cervici imponere molem.

The sense, in short, is thus: *Anno* 1668. He that subdu'd the ocean first, made thee *Garonne* bear a yoke, curbing thy waves, and joining thy shores with such a bridge as has not before been seen. This work was begun, and given over in despair, till hap- pytimes brought *Luis*, who [here's a casina] to the admiration of *Toulouze*, might lay so great a weight on the powerful stream.

I went to hear mass at the *Dominicans*, whose church is arch'd, and supported by eight pillars, which divide it into three isles. In the middle of it is a curious high altar and choir. In the sacristy they shew'd me the head of *St. Thomas of Aquin*, upon a half-body of silver; the skull is seen by opening a plate on the top of the statue.

Thence I went to see the so renown'd parliament, instituted by *Philip the fair*, but found it shut up, that being vacation-time. After dinner I went to the town-house, where there are eight magistrates, who govern the city, and wear a long crimson garment with wide sleeves laced with gold. The house is stately enough, the walls all adorn'd with half-statues of marble, and the rooms with rich pictures of former magistrates. In the first room they shew'd me seats and benches, on which they sit when

they administer justice. Here was the pic- ture of *Luis* the 14th, king of *France*, swearing to the parliament on his knees, to keep their privileges, before he came into the city. In the next room there were such benches cover'd, for them to meet in private, and good pictures about the walls. Going up to the rooms above, I found in the first room the pictures of all the famous men that have been of *Toulouze*. In the next antichamber, where the assembly of the deputies of the province is held, there were chairs and benches orderly placed, for every one to take the place that was due to him. Here's the picture of *Luis* the 14th, very young, when he went to meet the *In-* fanta of *Spain*, his queen.

Then I went to see the great canal, made by as great a king, to open a communica- tion between the mediterranean and the ocean, cutting a way thro' mountains, le- velling the valleys, and forcing nature to submit to art. Several gather-ings of water, made on the plain and hills, supply the canal; banks thrown up keep in the water at certain distances, where the ground is low; and thus the boats go easily to *Toulouze*, and they go down to the port of *Set*, four leagues from *Montpellier*, where the water of the canal falls into the mediterranean, as the *Garonne* falls into the ocean after pas- sing by *Bordeaux*. This river and canal, as has been said, make the communication between the mediterranean and the ocean, to save sailing quite round *Spain*, and part of *France*. Its depth is ten or twelve spans, and the breadth about the length of two pikes, so that it will not carry very large boats, and it often requires cleansing. At this time 'twas dry, to be cleans'd, and made deeper.

Monday 29th, being *Michaelmas* day, I heard mass in the church of the *Carmelites*, where the feast was celebrated. It has but one isle, but there are two outlets near the door. The choir and high altar are in the middle, well adorn'd, as are all the chapels. After dinner I went to the cathedral, which, tho' it has three isles, is not very good, both because 'tis dark, and because there are in the middle of it many little parting walls, for all the several sorts of officers and magistrates upon festivals. The archbishop's palace is convenient, but not beautiful.

## C H A P. IV.

*The author's journey from Toulouse to Marfeilles.*

HAVING hired a calash for nineteen crowns to *Montpelier*, I set out on *Tuesday* the last day of *September* betimes, passing thro' the large suburb of *S. Michael*. After crossing the canal several times, upon bridges for the space of three leagues and a half, of a good country, I dined at *Baziege*, and then travelling thro' many villages, came very late to *Castelnau d'Ari*, four leagues and a half from *Baziege*: we sup'd well for half a crown a head, being twelve at table, and among them a religious man, that eat and drank like an honest *Frenchman*. At this place there's a gathering of water for the use of the canal, and two leagues off another, call'd of *Noroufe*.

Setting out early on *Wednesday* the 1st of *October*, I came, at the end of three leagues riding thro' a well-peopled country, to the village of *Alzone*, whence, after dinner, I went three leagues further to *Carcafonne*. This place is wall'd, the houses for the most part of stone, and handsomer than those of *Toulouse*; the city is large, and has a considerable trade, by reason there's good cloth made call'd by its name. All the streets are good, but the market-place beyond 'em all. The suburbs are large, and there's a long bridge leads to one of 'em over the river *Oodi*, where is a spacious citadel on the top of a hill. The bishop of this place has forty thousand livres a year.

*Thursday* 2d, before I left the city, I went to see the cloth made, and found seven looms, with two men at each of 'em, because the cloth was seven quarters wide: in another room they were sheering of it. Then going into my calash, after a league's riding, I again cross'd the same river, upon a bridge near the village of *Traves*, and then the canal several times, along which I saw many men and horses that drew along the boats. We dined in the little village of *Pischa*, three leagues from *Carcafonne*, and then went three leagues further, along a stony way, to lie at *Pouffel*.

*Friday* 3d, at the end of three leagues, we pass'd thro' *Capetlan*, a large place, and wall'd (many villages in *France* having either walls about 'em, or some castle to retire to) and over the river *Oodi* upon a bridge. Then crossing the canal again, (which, a league from thence, runs along a cavity cut for a hundred paces in the hard rock) came to the city *Beziers*, seated on a hill, and water'd on one side by the river *Oodi*. The city is longer than 'tis broad, fortified by art and nature, populous, plen-

tiful, and rich, by reason 'tis within three leagues of the sea: there's a garrison in it of eight hundred men. Four leagues from it, towards *Perpignan*, is a city not inferior to it, call'd *Narbonne*, thro' which those that come from *Catalonia* generally pass. Moving four leagues further after dinner, we lay at the city of *Perenes*, which is large, but of little trade.

*Saturday* 4th, when we had rode half a league, we came to a bank of earth two *Italian* miles in length, rais'd at a vast expence, to make the way more commodious in winter. In *France* they take great care of the high-ways, and I observ'd 'em to be generally pav'd, from the time I came into it. Then we pass'd through the town of *Monfagne*, a league from whence we set out, and then travelling at a small distance from the sea, at the end of four leagues, dined at the town of *Gigian*; whence advancing three leagues more, we came before night to *Montpelier*. This city is the capital of the lower *Languedoc*, as *Toulouse* is of the upper; and, being seated on the top of a hill, yields a fine prospect at a distance.

*Sunday* 5th, I went to see the town-house, which is not so good as that of *Toulouse*. The six consuls there are clad in scarlet, but without gold fringes. Here was the king's picture, sitting on a throne, done by a masterly hand; he is holding out an olive-branch to one of the six consuls, who kneels before him, to signify the peace concluded that year between him and the confederates; as appears by an ingenious, but haughty, inscription under it.

The church of our Lady, close by it, has no great matter of ornament, no more than the cathedral, and neither of 'em has but one isle. The bishop's palace has been a great structure, but being very ancient, as is the church, is gone to ruin. Not far from thence I went out at the gate of *Payrou*, lately rebuilt by the consuls, and adorn'd on the outside with trophies masterly carv'd, and with arms of the nations conquer'd by *France*, with ingenious *Latin* mottoes. The walking-place without this gate is one of the finest nature and art could produce, had they vy'd to outdo one another; for the eye is delighted with the prospect of the sea, and pleasant fields of a long delicious plain. The walls of the city are high and strong, tho' ancient, and encompass'd with a deep ditch. The houses are generally very good, three or four stories high, like those in *Naples*.

Carca-  
fonne.

Montpelier

Beziers.

Arles, but cover'd with tiles. The streets are narrow and crooked, by reason of the unevenness of the ground, and number of inhabitants. The courteous ladies are extraordinary beautiful, and fair of complexion. In other respects the city is rich, because of its trade, and in it are six sovereign chambers, that govern all the province.

After dinner I took another calash, for seven crowns, to *Marfeilles*; and having gone four leagues, lay at the inn of *Pont-lunel*, so call'd of *Lunel*, a neighbouring city, lying on the left hand of the way, where the hostesses treated me well. They wore a great hood, as the country-women do, to defend 'em against the sun.

*Monday* 6th, having rode four leagues, I dined in the city *S. Gil*: I wou'd willingly have gone as far as *Nîmes*, by the Latins call'd *Nemausum*, a city where they make good ferge, to have seen some Roman antiquities there; as, the temple of *Diana*, *le Maison quarré*, or the *square House*, built of vast stones, and *les Arenes*, or the amphitheatre for publick shews; but being to go three leagues, I chose rather to get soon to *Naples*. After dinner, having rode a mile, we ferry'd over an arm of the *Rhône*, which divides *Languedoc* from *Provence*: one that waited there to receive the customs ask'd me whether I had any thing new in my trunks, which ought to pay the king's duty; and telling him there were seven dozen of fans, he very civilly dismiss'd me, without receiving that little which was due to him: he also advis'd me, when I came to *Arles*, to tell the custom-house officers there, that the officers on the road had taken no custom, because the things were inconsiderable, and to make presents; and bid me not shew the note I carried, for then they would oblige me to pay. This civility to strangers is peculiar to the *French*, and I had such trial of it, that in a month's travelling thro' *France*, my trunks had never been open'd. Having paid fifteen fols for the calash passing the bridge, we came to *Arles*, after three leagues riding. When I came to the bridge of boats, an hundred paces in length, over the arm of the river *Rhône*, which is twice as broad as that before-mention'd, the officers ask'd four fols toll. The *Rhône* is counted the greatest river in *France*, which, after passing by *Lions* and *Avignon*, divides it self into two branches a league above *Arles*, and runs down into the sea seven leagues below it, at the port of *Bu*, whence great boats and tartans go up to load with wine and corn.

*Arles*, a city seated in 43 deg. of lat. is an archbishoprick, and has a good trade, but is not very rich: it stands upon a rising

ground, which makes it shew slightly without, and 'tis reckon'd to be ancienter than *Rome*. There's a theatre in it, built by the *Romans*, but not so entire as that of *Verona*. The walls about it, and the houses, are very good, but the streets narrow, and the town-house but indifferent.

*Tuesday* 11th, travelling along the famous aqueducts, at the end of four leagues we came to the inn of *S. Martin de Crau*, where we dined well for twenty fols a-head; then proceeding four leagues further along a dry stony way, we came to *Salon*, a city in the diocese of *Arles*, and therefore the archbishop has there an ancient large castle on an eminency. The walls of the city are half ruin'd with antiquity, and the houses of a very indifferent structure, without any symmetry. They say the way call'd *Via Aureliana*, made by the emperor *M. Aurelius*, from the frontiers of *Spain* as far as *Rome*, pass'd by this place. There's nothing in it remarkable but the sepulchre or tomb of *Nostradamus*, the famous astrologer of the last age, who is said to have foretold the murder of *Henry IV.* king of *France*: 'tis in the church of the *Franciscans*, on the left-hand wall entering the gate, with this following inscription;

*D. M. Clarissimi Ossæ.*

*Michaelis Nostradamus, unius omnium mortalium dicto digni, cujus pendit divino calamo totius Orbis, ex Astrorum influxu, futuri eventus conscriberentur. Vixit annis 62, Mensibus 6, Diebus 17. Obiit solo 1566. Quietem posteri ne irvideant. Anna Pontia Gemella Solonia Conjugi opt. V. F.*

In the same church is to be seen an image of the blessed Virgin, and the manner of taking our Saviour down from the cross, with seven marble statues, all the work of some great master.

Having travel'd five leagues on a very bad mountain road, we dined on *Wednesday* 8th at *S. Pon*, a small place in the midst of a plain that reaches for several leagues, all adorn'd with country-houses belonging to the inhabitants of *Aix*. After dinner we went four leagues further, and came to *Marfeilles* two hours after night-fall. We lodg'd at the *deux Pommes*, or *two Apples*, in the street call'd *le Cours*. A league and half short of the city, the custom-house officers ask'd me whether I had any new commodities; and telling them I had some dozens of fans to make presents, one of 'em advis'd me, when I came to the next officers, which were half a league off, to enter all I had, that it might not be seiz'd: I did so, without paying any thing, nor did they ask any thing of me when I enter'd *Marfeilles*,

GEMELL.

 L.L. which was shut.

1699.

*Marfeilles* was built by the *Phenicians* on the shore of the *Mediterranean*, in the lat. of 42 deg. 40 min. and was very famous in former times for its schools, which vy'd with those of *Rhodes* and *Athens*. At present 'tis one of the most celebrated ports in the *Mediterranean*, tho' so shallow that it must often be cleans'd, to be capable of indifferent vessels: the compass of its walls is not above two *Italian* miles up and down: the houses are very good, and four or five stories high; the streets bad, that is, narrow, crooked, and dirty, except that call'd *le Cours*. Here, 'tis true, the houses are built uniform and proportionable; and there are orderly rows of trees for half a mile; the empty space in the middle, enclos'd with iron chains and benches made fast to keep out cattle, and make it fit for the men without molestation to take the cool air under the trees, and converse with the modest women. The port is defended by the castles of *S. John* and *S. Nicholas*, as also by four small redoubts upon as many little islands or rocks, half a league distant, the biggest of which is call'd *Coslaadin*, where the ships stay to keep their *Quarentine*, when they come from places suspected for infection.

*Thursday* 9th, I went to see the *Darsene*, where the galleys are built. 'Tis big enough to build as many as they please, there being long cover'd walks for making of cables, and two cover'd docks to build two galleys at once. That which they call *the king's Arsenal* is very stately, and has a noble pavilion in the middle for the officers of the galleys, and two docks to build two galleys, besides a vast number of magazines for timber, and an armoury, as they told me, for one hundred thousand men.

The cathedral stands near the sea, in the west part of the city; it has three isles, and the chapels are well contriv'd; but the bishop's palace, who is a suffragan of *Arles*, has nothing remarkable.

Thence I went to see the aforementioned castle of *S. John*, on the right hand without the gate. It has a platform with good guns level with the water, but the rest of it was ill provided, some having been restor'd from thence to the duke of *Savoy* upon the last peace. Being seated on a rock, two parts whereof are encompass'd by the sea, it has no ditch but only on the land side. About noon twenty galleys came in, returning from the east, and from *Naples*; and these added to twenty-one more that were in the port, were a pleasant sight. After dinner I went over in a boat to see the opposite castle of *S. Nicholas*, on a hill to

the left of the harbour. It has several good modern works, and at the foot of them a great platform rebuilt, with many pieces of cannon both above and below. Upon another higher hill is a great fort, call'd *Nostre dame de Garde*, which serves for a land-mark to ships at sea.

In my return home I pass'd by the town-house, which, towards the sea, has a good marble front, and good rooms within curiously painted.

Being desirous to see *Aix*, the metropolis of *Provence*, I hired two horses on *Monday* 10th, and rode thither after dinner, along a dirty stony way, yet pleasant by reason of the mountains about it, and the hills, which are well cultivated, and strew'd with abundance of houses of pleasure, belonging to the inhabitants of *Marfeilles* and *Aix*. I came thither late, having travel'd five leagues, and lay at *la Selle d'Or*, or the golden Saddle. This city is seated on a valley encompass'd with hills, and tho' it be the residence of a Parliament, a chamber of accounts, and a generality, yet its compass is not above two *Italian* miles, enclos'd with indifferent walls, without a ditch: the houses however are beautiful, and four or five stories high, like those of *Marfeilles*; the streets are wide, straight, and well pav'd, some of 'em in the form of a cross, like the *Cassero* at *Palermo*.

*Saturday* 11th, I saw the cathedral, which is of the invocation of *S. Saviour*, has three isles, and is dark, and little adorn'd, as is usual in that country: the archbishop's palace is large, but plain. I went to the new church of the *Jesuits*, which is small, which was that day blest'd by the archbishop, and there were present the four chief magistrates of the city, whom in *Provence* they call *Procureurs du Pays*; they wore a belt of black velvet, which the *French* call *Chapeiron*, across from the right shoulder hanging down under the left arm. These sat on benches, with cushions and carpets before them. The town-house is a very good one.

Thence I went to *la Place de Precbeurs*, to see the parliament. After mass, all the members of it came into the hall, where I saw the president sitting in a long and wide crimson garment turn'd up with ermines, like a royal robe. On the same bench sat six counsellors clad in long black gowns gather'd on the back, with a long train and wide sleeves; their caps were like those priests wear, with a great tassel in the middle. This robe is common to the *Procureurs* and *Advocates*; but the counsellors, tho' they may wear no other in parliament; yet in processions, and other publick solemnities, they wear a red one of the same make. A clerk, clad after the same manner,

It has several

ner, read the petitions, but he wore a cap  
of crimson velvet laced with gold. This  
officer in French is call'd *Premier Huissier*.  
The *Procureurs* and *Advocates*, or pleaders,  
sat on benches below the others, and were  
allow'd to be cover'd. Thence I went to  
see the other five courts, one upon the same  
floor, and four above-stairs. The *Grand*

*Chambre* was best gilt and painted, and  
there was a chair in it for the king, when  
he should please to be present. In these  
courts are ten presidents, and about fifty-  
seven counsellors are sovereign judges of all  
the affairs of the province.

After dinner I return'd the same pleas-  
ant way, and got to *Marzeilles* betimes.

## CHAP. V.

*The author's voyage from Marzeilles to Genoa, and the description of  
that city.*

I WOULD willingly have gone to see  
the *Sainte Baume*, or the cave where  
*S. Mary Magdalen* is said to have liv'd  
thirty years; but thinking; every hour an  
age till I return'd into my native country,  
I made the necessary provision in haste, and  
on Sunday 12th set out for *Genoa* aboard a  
tartan. We sail'd out of the harbour an  
hour before sun-set, and coasting along the  
pleasant shore between the little islands,  
could not advance but two miles, because  
the wind was contrary, and anchor'd that  
night in a little bay. After midnight,  
the wind proving fair, we sail'd again;  
and on

Monday 13th, by break of day, pass'd  
by a village they call *la Citee*; and being  
five leagues from *Marzeilles*, sail'd in sight  
of the hill of *Sainte Baume*, where pilgrims  
are not allow'd to eat flesh. About sun-set  
we were off of *Toulon*, and could see the  
castle and several country-houses. We held  
on our way all night, and in the morning,  
on

Tuesday 14th, were opposite to the  
town of *Hyerres*, and then ran between the  
three islands of that name and the contin-  
ent. The wind falling then, we made  
but little way, but it came up again at  
sun-set, and we made good way till two in  
the morning, when, because it blew hard,  
we cast anchor near fort *S. Margaret*, to  
expect day. This fort stands in a small  
island on the coast of France, very fruitful  
in wine.

Wednesday 15th, when day appear'd, we  
set sail, coasting along in sight of *Antibes*,  
where there's a castle and garrison, and  
*S. Laurence*, where a river divides *Provence*  
from the dominions of *Savoy*. We pass'd  
so close to *Nizza* that we could plainly see  
it on the flat shore, enclos'd by a good  
wall; as also its fortrefs on the high and  
craggy rock, render'd impregnable by art  
and nature. We anchor'd, after running  
one hundred and eighty miles, at *Villa-  
franca*, where every vessel going to, or  
coming from, the west is to pay two in the

hundred. *Villafranca* is a small wall'd town  
at the foot of high mountains, without any  
harbour, but only an open road. 'Tis de-  
fended by a castle on the shore, and a fort  
built on the high mountain *Albano*, garri-  
son'd by the duke of *Savoy*.

After dining and paying the duties, we  
went aboard again, and hoisting sail, pass'd  
along before the little castle of *S. Spicio*,  
and the fort of *Oviezza*, seated on the top  
of a hill, and belonging to the same duke.  
We came two hours before sun-set to *Mo-  
naco*, where landing, I went up a steep way,  
about the middle whereof there's a guard to  
the town. Being come to the upper gate,  
I found another guard, a drawbridge, and  
ditch cut out of the rock. Here I enter'd  
thro' a great gate, to see the prince of *Mo-  
naco's* palace. The way to it is up two  
spacious marble stair-cases made semicircu-  
lar, which afterwards meet in a stately long  
gallery, that leads to the lodgings and  
apartments, which for their number, mag-  
nificence, and furniture, may serve several  
princes together.

*Monaco* is a very strong place, on a rock,  
the walls inaccessible on all sides, and with  
only one gate, up to which there's a very  
uneasy way, as was said before: 'tis small,  
and has only one monastery of nuns, of  
*S. Teresa*, because 'tis poor, and cannot  
maintain friars. There are abundance of  
heavy cannon, besides the small, all well  
mounted. The garrison consists of about  
nine hundred men, pay'd by the king of  
France. At *Monaco* they recover the duty  
of two in the hundred only of the ships that  
return from the west, whereas all pay at  
*Villafranca*.

Thursday 16th, we advanc'd betimes,  
having on our left hand, on a hill, the vil-  
lage of *Rocca oscura*, and others belonging  
to the same prince, for ten miles along a  
dry country; and then began to coast a-  
long the *Genoese* shore, which begins at the  
city *Ventimiglia*, yet all that night could not  
get beyond *S. Remo*, a country abounding  
in oranges, lemons, and olives.

The

GEMEL- The calm held all the night, so that on  
 L. I. Friday 17th, at break of day, we were  
 1699. opposite to the village *del Cervo*. The wind  
 coming up against us, we were forced to  
 lie tacking upon the delightful coast of *Ge-  
 noa*, where the industrious *Genoese* make the  
 barren soil produce fruit-trees. After noon  
 the wind prov'd favourable, and carried us  
 on a great way in sight of curious gardens.  
 Passing by the city of *Albenga*, we soon left  
*Final* behind, with its two castles, one on  
 the hill, and the other on the sea-shore,  
 where there was a *Spanish* garrison; and  
 then the city *Noli*, which is large, and has  
 high towers upon the houses of private ci-  
 tizens, and at last came early to *Savona*,  
 where we pass'd the night. This city tho'  
 final is wall'd, and has a suburb as big a-  
 gain as it, with as good houses; besides the  
 delightful country houses about it, with  
 fruitful gardens, though almost contrary to  
 nature. The churches of *Savona* are beau-  
 tiful enough, as well for their embellish-  
 ments in marble as for the structure it self  
 and painting; especially the *Duomo*. The  
 castle stands upon the shore, and has a tre-  
 ble enclosure, besides several outworks, and  
 a deep ditch out of the solid rock. The  
 harbour though small is safe, but of diffi-  
 cult entrance. Five miles from the city is  
 an image of our blessed lady, famous for  
 many miracles. The church belonging to  
 it, besides its priests and religious men,  
 maintains about seven hundred orphans of  
 both sexes. *Savona* is also famous for its  
 curious earthen ware, exceeding all that is  
 made in the state of *Genoa*. The bishops  
 of this city, of *Venimiglia* and *Albenga*,  
 have scarce a thousand crowns a year each,  
 because their dioceses are very small.

Having hir'd a *Filucca*, I set out from  
*Savona* on Saturday the 18th betimes, and  
 passing by the neighbouring town of *Ar-  
 tisola*, the delicious plain of *Arenzano*, *Co-  
 goletto* seventeen miles distant from *Genoa*,  
*Vultri*, and other handsome towns on the  
 shore, with excellent houses of pleasure, as  
 far as the vale and river of *Pellevra*, whose  
 mountains are nothing inferior to the de-  
 lightfullest parts of its banks, came at  
 length to *Genoa* before noon.

*Genoa* lies upon the *Mediterranean*, facing  
 the south, in the lat. 43 degr. 40 min. and  
 being seated on the side of a hill looks from  
 the sea a noble theatre. All the buildings  
 throughout its whole compass of four miles,  
 are adorn'd with excellent marble; nor will  
 those in time be inferior to them, which  
 the rich inhabitants will be daily erecting  
 in the compass of fifteen miles, the wall  
 newly built has enclos'd. The worst is,  
 that the streets are narrow and dark. The  
 port is above a mile in length, with a  
 light-house on the west end, and good for-

rifications, under whose protection there  
 are two docks, one for the galleys, the o-  
 ther for the wine boats. In 935 it was  
 burnt by the *Saracens*, and all the inhabi-  
 tants slain or made slaves, but was after-  
 wards rebuilt much more nobly. It is cal-  
 led the haughty, because the nobility are so  
 proud and intractable, having a great con-  
 ceit of themselves, though the little domi-  
 nion of their common-wealth does not ex-  
 tend to above one hundred and forty miles  
 in length along the shore from east to west,  
 and under twelve in breadth. Since the  
 scourge of the *French* bombardment in  
 1684, they have erected two platforms, and  
 planted good guns on them, to keep off  
 those thunderbolts, which can humble the  
 proudest hearts. The ladies are beautiful  
 and witty, but their short way of speaking  
 makes them ridiculous. The men are ex-  
 tremely frugal and inclin'd to trade, which  
 has gain'd them vast wealth.

The *Doge's* palace is one of the largest  
 and most beautiful structures in *Europe*; but  
 not so much beautify'd with marble as the  
 private houses of the nobility. A few steps  
 led up out of a great court into a noble  
 hall, without which are the two so famous  
 statues of *Andrew d'Orta* and *John Andrea*,  
 the deliverers of their country. Adjoining  
 to this hall there are many apartments,  
 with their particular courts, beautify'd  
 with marble pillars. Then going up two  
 high stair-cases are the upper lodgings, where  
 is the chamber of the great council, for  
 electing of the *Doge*, and by it the college  
 for matters of government, where the twenty  
 seven senators and agents (as they told  
 me) meet, clad in long gowns almost like  
 the *French* civil magistrates; but the a-  
 gents cannot vote in all publick affairs. In  
 the opposite side are the *Doge's* apartments,  
 big enough, not only for him, but for any  
 absolute prince.

Towards evening I went out of town, to  
 see prince *d'Orta's* palace, standing on the  
 shore. It is well worth seeing for its noble  
 structure, marble, fountains, gardens, and  
 rich furniture.

Sunday 19th, I heard mass in the church  
 of the *Dominicans*, which has three isles,  
 supported on pillars, and though large, is  
 not much beautify'd with marble, as is the  
 cloister.

*S. Ambrose*, belonging to the *Jesuits*, is  
 built after the model of their profess'd house  
 at *Naples*, all lin'd with curious marble  
 finely wrought with large pillars; but it is  
 not so large as that of *Naples*.

The *Duomo*, or *S. Laurence's* church, has  
 a lofty noble front of marble of several co-  
 lours; it is large, and has three isles form'd  
 by eight marble pillars, but not so well  
 beautify'd as is *S. Ambrose*.

The

tection there  
alleys, the

In 935 it was  
all the inhabi-  
but was atter-  
ably. It is cal-

ence's church, has  
ble of several co-  
three isles form'd  
but not so well

The

The palace of *Eugenio Durazzo* has a noble front, and eight good pillars within the court. A stately stair-case which parts in two, leads into spacious apartments, all curiously adorn'd with marble and painting. And it may be truly said that the palaces of private men in *Genoa* are royal.

The church of the barefoot *Carmelites*, where I went to vespers, consists of but one isle, and has a good tabernacle of rich marble and precious stones. The most remarkable thing is the chappel of the *Franzoni* on the left hand, all cas'd in pure black marble, and particularly four marble pillars, twelve half bodies of brass, and a large crucifix worth ten thousand crowns. On the right is the chappel of the *Durazzi*, beautiful, but not so rich.

Going thence I saw the college of *S. Jerome* of the *Jesuits*, not yet finish'd. However it is remarkable for the great quantity of marble pillars, that adorn the front, and support the two galleries, one above another; and I can affirm I counted eighty-four great marble pillars in the cloister only. The church is well set out, and the upper hall for publick disputations embellish'd with good pictures.

The theatre, where I saw a play acted, is small, with only four rows of boxes, and eighteen in each row. The price was half a crown a man.

Monday 20th, going to *S. Ciro* of the fathers *Theatins*, I saw a most beautiful church with three arch'd isles, supported by sixteen great pillars of white marble. There are twelve chappels, six on a side; and before them twenty four pillars, and as many on the altars, all of fine marble of several colours, besides other curious works on the same stone. The tabernacle is of great value, the choir beautiful, and the high altar much more, for four pillars of delicate black marble. The arch and *Cupula* is richly gilt and painted at a great expence. In short, no city in the world exceeds *Genoa* for ornament of churches, because of the admirable marble which is not to be brought a great way.

Going out at *S. Martha's* gate on Tuesday 21st, I went up the hill to see the *Albergo*, which is one of the most magnificent and pious works in the state of *Genoa*. Coming to this place, I perceiv'd, that the noble *Venetians*, as sparing as they are towards themselves whilst living, they are as bountiful to the church dying, of those goods they can no longer keep. This appears by the incredible and prodigious charge, the structure we now speak of must cost; because in order to finish it, besides the structure erected, they have been forced to level precipices, and cut the uneven rock smooth. Two spacious ways lead from the first gate

VOL. IV.

to a *Portico*; and thence two other nobler *GEMEL*. ways to the first floor, where there are four statues of the benefactors of the place, with inscriptions; besides as many more upon the stairs. The walls within the church are cover'd with choice marble, with eight statues standing upright, and a high altar with seven pillars, and an image of the blessed virgin, carv'd by a master. Before we come to the church, we see on the right hand several galleries and rooms, as also the garden of the honest women and maids; for the condemn'd and penitent women live apart above the church, that they may not delude the maids. The governor shewing me the apartments, told me there were in that place six hundred and fifty women. From behind the high altar and the first *Portico* there is a way up to several apartments, one of youths, another of old men, and another of children, where these work for several uses of the house, and all these apartments by reason of the height of the place stand one above another, like a scene of perspective on a stage, and it is a great pleasure to view it from the galleries. The whole is govern'd with wonderful order and economy, orphans and poor children being there maintain'd and educated; and portions given to marry young maids. At that time there were one thousand three hundred persons maintain'd there.

Next I went to see the great hospital, where about four hundred sick of both sexes are maintain'd, and carefully attended with much charity. In the first gallery there is nothing beautiful but its length and extent, and this leads to another equal to it in bigness, which is the women's infirmary, with three other apartments for persons of quality and young girls. At the entrance into the second gallery is a beautiful chappel, and two long arches making a cross, and another large one on the right hand of the chappel.

The senate being to meet, I went thither, and saw at the end of a spacious hall, a great ring, with twenty-eight seats about it, like the ring of the royal chamber at *Naples*. The *Doge's* chair was somewhat above the rest under a canopy. He was clad in scarlet, and the seven senators about him, had long gowns of black damask, caps like those priests wear, and about their necks old fashion'd ruffs or gorgets. When they had read a petition, they all gave their votes by way of ballot. This *Doge* is chosen from among the senators, and when he has govern'd two years, is dismiss'd by a person appointed for that purpose, in these words, *Your serenity has finish'd the time of your government. Your serenity must retire to your own house.*

7 D

I heard

GEMEL- I heard mass in the church of *S. Matteo*, which is small, but has three isles form'd by eight pillars, and well adorn'd.

1699.

The parish church of *S. Luke*, though little and has but three altars, is beautiful for its marble inside. The bankers exchange and the merchants is great, but the structure nothing magnificent.

Wednesday 22d, I went to walk in prince d'Oria's garden, and took notice of a great fountain, over which is a *Neptune* drawn on a shell by three sea-horses, with several little boys sporting about. The palace is very spacious, and has a communication with the pear gardens by an iron bridge.

Hence I proceeded to see the *Pbaros* or light-house, in which at night they set up thirty-two lights, to direct the ships that come into the harbour. It is six hundred spans high, or four hundred and fifty foot, as the keeper told me, and a stair-case of three hundred and twelve steps, up which I could not get under half an hour. It is founded on a rock, and about it, as well as along the curtain, there are good pieces of cannon.

After dinner I went to our lady of the vineyards, a collegiate church with three isles, arch'd and sustain'd by twenty marble pillars. All the chappels are beautiful, with each of them two pillars and excellent paintings, but the high altar exceeds all the rest.

*S. Francis's* church belonging to the fathers of that order, is large, and has three isles divided by pillars. On the right side there are six good chappels, for those on the left are not yet finish'd.

Thursday 23d, I went to see our lady of the assumption, or of *Carignano*, a collegiate church, with twelve canons, an abbot and eighteen chaplains; founded by *Randinello Sauli*, and rais'd to its present grandeur by *Francis Maria Sauli Doge*. It is seated on a high mountain, which has a prospect of all *Genoa*, and the adjacent parts. The church is rais'd upon four solid pillars, which divide it into three isles. In the niches of the said pillars are four noble statues excellently cur'd. The eight chappels are well beautify'd with marble, as well as the high altar. A convenient stair-case made within the wall, leads up to the *Cupola* on the out-side, whence all *Genoa* is seen from three several galleries one above another.

Friday 24th, I went to see *S. George's* hill, where the greatest wealth of *Genoa* is. On the first floor is the custom-house, and above stairs on the right hand the ancient great chamber, with fifteen statues of noble *Genoese*, who have deserv'd well of their country, plac'd about the wall. The

new chamber, where sometimes the parties concern'd meet to the number of four hundred, is larger, and about its walls are sixteen statues of good marble, plac'd there in memory of good citizens. Through this chamber they go to that of the magistrates, which are eight senators, who decide all causes relating to the bank, and duties of the city, sitting on chairs cover'd with crimson damask.

Saturday 25th, I saw prince d'Oria's palace. It has a very curious marble front, and pleasant gardens on the files, and two galleries, each adorn'd with eight pillars. There are stairs that look majestick, which lead up to the court; and from the court another stair-case not inferior to the first, dividing it self into two branches goes to the lodgings above, of which it is better to say nothing than too little. The court is beautify'd with twenty great pillars, and and twenty-two more support the arches of the second floor.

At a small distance is the palace of *Brignole*, the lower arches whereof are supported by sixteen pillars, the stairs adorn'd with excellent statues, and the rooms richly furnish'd.

Sunday 26th, I heard mass at the *Annunciada* of the *Franciscans*, a fine church with three isles, divided by five pillars of fine marble on each side. The arches are well painted and richly gilded. The chappels on the left of the high altar are finish'd, and all fac'd with curious marble; the others on the right are not finish'd no more than the front of the church.

In the new street there are no houses inferior to those already mention'd. That of the marquis *Balbi*, which I saw Monday 27th, has twenty pillars on the first floor, going into the garden full of fountains, statues and other ornaments, as many more in the first galleries of the upper floor, and twelve in the second galleries. The furniture is vastly rich, as are the pictures and statues. This alone may prove as much as a thousand words, viz. That the only structure of the palace cost one hundred thousand pieces of gold. In this marquis's book of accounts, we saw in one leaf, the sum of five millions between debtor and creditor. The palace of *Charles Balbi* the marquis's kinsman, is nothing inferior to his.

Tuesday 28th, I saw the *Darsena* or place for the galleys and tartans of wine. The tartans are outwardmost, and further in five galleys of the republick, all of them shelter'd from any wind.

Wednesday 29th, my trunks being come by sea from *Cadiz*, I put them aboard a *Neapolitan Filucca* to be carry'd to *Naples*, being

times the parties  
ber of four hun-

being

being resolv'd to go my self by land, be-  
cause of the ill weather which had lasted  
many days. Accordingly on *Thursday* 30th,

I hired a calash for *Milan*, and order'd my GEMEL-  
affairs so as to depart.

L.  
1699.

## CHAP. VI.

*The author's journey from Genoa to Milan, and the description of  
that city.*

I SET out on *Saturday* the first of *Nov-  
ember*, and after several times crossing  
the river of *Pescevera*, and had enjoy'd the  
pleasure of the shore of *S. Peter de Arena*, I  
truck over barren mountains, and having  
travell'd twenty miles came at night to  
*Taglio*.

*Sunday* 2d, I went on to *Gavi*, a frontier  
town of the state of *Genoa*, and thence  
three miles to *Serravalle* in the state of *Mil-  
lan*. The town is very small, and has a  
castle on the top of the hill, with a small  
garrison and a few pieces of cannon. The  
country about is pleasant and well cultivat-  
ed. At night I return'd to *Gavi*.

*Monday* 3d, I bated at *Novi*, a wall'd  
town with a castle on a hill, and then pro-  
ceeding on my journey, at two miles end  
enter'd the state of *Milan*, and din'd at  
*Tortona*, fifteen miles from where I set out.  
This city is seated in a plain, and enclos'd  
with a low wall and ditch; has a castle on  
the hill with a good garrison; but the hou-  
ses are not handsome. Proceeding ten  
miles further I pass'd through *Voghera*, a  
good town, twice as big as *Tortona*, and  
four miles beyond it lay at the wretched inn  
of *Purana*.

*Wednesday* 4th, I set out betimes along  
a very dirty road, and after five miles rid-  
ding, ferry'd over the *Po*, and five miles  
further over the *Grevala*, and stay'd to dine  
at *Pavia*, crossing the *Tesin*, which waters  
it on a bridge.

*Pavia* is a strong place enclos'd with a  
broad wet ditch, and good outworks. The  
castle looks more like a palace than a for-  
tress, and within it is a good armory, re-  
stor'd by colonel, *D. Francis de Cordova*.  
The city is populous, rich and adorn'd  
with good palaces. It boasts of greater  
antiquity than *Milan*, and among others  
values it self upon holding out the memo-  
rable siege laid to it by *Francis I.* king of  
*France* in the year 1525. Its university is  
famous for having bred the famous *Civili-  
ans*, *Jafon*, *Balilus* and the most learned  
*Alciatus*. The monastery here of the *Car-  
thusians* is one of the most renowned in *Ita-  
ly*, and not without reason for the excellent  
picture in it. Riding ten miles after din-  
ner, I pass'd through *Binasco*, and came  
betimes to *Milan*.

The city of *Milan*, seated in 45 deg. of

latitude, is thought to have been built by  
the *Gauls* in the year 395, after the build-  
ing of *Rome*. It is above eight miles in  
compass, containing about two hundred  
thousand inhabitants, including the suburbs.  
This place is famous for four things, which  
are; the multitude of people; the magni-  
ficence of its *Duomo* or cathedral, which is  
never without workmen about it; its im-  
pregnable castle; and the famous library,  
call'd *Ambrosiana*, given by the cardinal  
*Frederick Borromeo*, archbishop of *Milan*,  
and containing at least thirty thousand vo-  
lumes. By reason of the conveniency of  
its situation, it has deserv'd from its founda-  
tion to be the residence of princes and  
emperors; *Nerva*, *Trajan*, *Adrian*, *Con-  
stantinus*, *Maximian*, *Constantine*, and o-  
thers having liv'd here for a considerable  
time. When the power of the *Roman* em-  
pire declin'd, it suffer'd together with all  
*Lombardy*, or the *Cisalpine Gaul*, under the  
cruelty of the *Goths* and *Longobards*; who  
being subdu'd by *Charlemagne*, it remain'd  
under the jurisdiction of the western empe-  
rors till 1162, when the emperor *Frede-  
rick* laid it level with the ground, and sow'd  
it with salt. Being afterwards restor'd to its  
former splendor, it continu'd as a fief of  
the empire under several princes. Lastly,  
the *Sforzas* being expell'd by the *French*,  
and these overthrown at the siege of *Pavia*  
by *Charles* the fifth's generals, king *Fran-  
cis* the first being made prisoner; that same  
emperor gave the investiture of the state to  
his son *Philip* the second, king of *Spain*, un-  
der whose successors it still continues.

*Wednesday* 5th, I went to see the castle.  
The way into it is over two bridges, and  
through three gates, which led to a very  
spacious place of arms. Thence passing  
through another gate, between the two  
strong houses of the dukes of *Milan*, there  
is a court, with a chappel in it, and the  
governor's house; that is, the strong house  
on the right hand of the gate, whose win-  
dows look upon the place of arms; for  
that on the left is taken up with the am-  
munition, armory and hospital, and its  
windows look towards the wall. I was told  
these two houses had been built there de-  
signedly, that the two dukes, who then  
were no good friends, might not so much  
as look at one another. This castle has  
fix

GEMEL- fix bastions, with twelve pieces of cannon  
LI. upon each of 'em, and six half-moons, and  
1699. a wide deep ditch. At the entrance there  
were two high towers with brick-walls about  
thirty spans thick, and cas'd with hard  
stone diamond-cut. On these and the walls  
of the curtains there are vast heavy pieces  
of cannon. This castle is generally look'd  
upon as the best, the greatest, and safest o.  
all the fortresses in Europe; and its armory,  
tho' at present not so full, is reputed  
sufficient to arm all Italy. They say 'twas  
built by Galeazzo Visconte, the second duke  
of that name, and afterwards improv'd by  
the emperor Charles V. It stands on the  
west side of Milan, and its liberty extends  
half about within the city, in which pre-  
cincts no officer can apprehend malefactors  
without the constable of the castle's leave.

At night I saw a very wretched play acted at the theatre in the governor's palace, which has an hundred boxes in four ranks.

Thursday 6th, I went with D. Ferdinand Valdes, constable of the castle, to see the ceremony of the king's birth-day, at the palace, and prince Vandemon's furniture. Having pass'd the hall and antichamber, we came into another hung with damask with gold fringes, and adorn'd with looking-glasses in silver frames, and other things of crystal. The next room was hung with crimson velvet, the edges embroider'd with gold, and there was a state-bed like a pavillion, embroider'd about with gold, and adorn'd with curious eagles on the top: nothing, in short, could be richer, or more stately, tho' it had been set with jewels. In the same room there were several tables cover'd with silver, and looking-glasses with frames of the same metal. When the hour of the ceremony was come, the constable order'd a gentleman to carry me in his coach to the collegiate church call'd *la Scala*, whither he was to come with the governor. Being at the church, I saw the prince come in a coach and eight horses, follow'd by two other coaches and eight horses, and one with six for his retinue. The *Præpositus* and canons went out to meet him at the door with holy water, then accompanied him to the high altar, he being carried in an open chair because he was gouty. All the officers, civil and military, were present, with the prince's courtiers richly clad; the footmen and Swiss guards were also new clad, some in velvet, and some in green cloth laced with gold. The governor took his seat, as absolute princes do, on a chair at the right side of the altar, within a damask curtain, above the choir; the *Præpositus* sat over against him, three steps lifted up above the floor, and said mass in *Pontificalibus*. There were ten other velvet

chairs, with cushions of the same, and desks to kneel at, cover'd with cloth, where sat first the constable of the castle, colonel Cordova; next D. Ferdinand Valdez; the marquis de Burgomayne, general of the forces, and grandee of Spain; the great chancellor, and other officers civil and military. The governor was incens'd, and had the gospel and Pax brought him to kiss; the others were only incens'd, and had the Pax. Then the *Te Deum* being sung, all the guns were fired.

I return'd in the same coach to the palace, and going in at the great gate (for before I enter'd at that of the theatre) saw other apartments richly hung with damask and tapestry. The prince governor retiring into the further chamber, dismiss'd the company with much more affability than is us'd in other places. I return'd thence with the constable to the castle, where the rooms were richly furnish'd, with curious tapestry, silver ingeniously wrought, scrutores, and pictures of the best masters of past ages. He led me into a room within the gallery, where formerly the clock stood, and that look'd into the parade; 'twas very light-some, hung with rich damask, and set out with other costly furniture. Here a table was cover'd, about which nine men and a lady being seated, many noble dishes were serv'd in. After dinner, the constable, because he could not go himself, appointed D. Francis Ramirez, commissary-general of horse, to conduct me to court, to see the solemnity: being come into the antichamber, we waited a long time among several officers civil and military, and when the ladies were come, the prince was drawn out in a chair upon wheels, and stopping in the antichamber, said, *Come in gentlemen*; a piece of civility I never saw any man in his post perform. We went with him into a room hung with damask, where the ladies were sitting in rows, and at the upper end the prince's governess, on another sort of chair. The prince went on as far as the bed before mention'd, and there discours'd with other ladies, and they all present, being now and then treated with variety of sweet-meats. An hour after, we all went to the boxes in the theatre, and there heard a consort of fifty instruments placed on the stage, and before it in a semicircle, and then a composition sung by four voices, call'd *The security of Piety*; which was so far from answering the sweetness of the instruments, that it made every one wish it at an end. In the mean while there was a noble collation of all sorts distributed. I was carried home late at night by the commissary.

Saturday 8th, I went to see the great hospital, founded by the dukes of Milan, and

same, and desks  
cloth, where sat  
sle, colonel *Cor-*  
*Valdez*; the mar-  
al of the forces,  
great chancellor,  
military. The  
d had the gospel  
kiss; the others  
d the *Pax*. Then  
all the guns were

coach to the pa-  
e great gate (for  
the theatre) saw  
ung with damask  
governor retiring  
himself'd the com-  
bilitian than is us'd  
d thence with the  
where the rooms  
curious tapestry,  
at, scratores, and  
ters of past ages.  
within the gallery,  
e food, and that  
'twas very light-  
mask, and set out

ce. Here a table  
n nine men and a  
noble dishes were  
the comfortable, be-  
himself, appointed  
missary-general of  
court, to see the  
into the anticham-  
me among several  
ry, and when the  
prince was drawn  
s, and stopping in  
*Come in gentlemen*;  
r saw any man in  
went with him in-  
mask, where the  
s, and at the up-  
eriness, on another  
e went on as far  
n'd, and there dis-  
and they all pre-

treated with va-  
hour after, we all  
theatre, and there  
struments placed  
it in a semicircle,  
ng by four voices,  
y; which was so  
weetness of the in-  
every one with it  
while there was  
rts distributed. I  
ight by the com-

to see the great  
dukes of *Milan*,  
and

Hospital, and may be said to be one of the best in  
*Italy*. It has a stately front outwards, and  
within a great square court, with double  
rows of pillars, which support both the upper  
and lower arches; and, both above and  
below, there are many galleries for the sick,  
who were then about eight hundred, well  
attended; not to speak of several stores,  
and apartments for the dwelling of those  
who serve the sick. They told me, the  
revenue of this hospital was above one hun-  
dred and fifty thousand *Philippines*. Half  
a mile from the city, without the *Roman*  
gate, they were making a burial-place for  
those that died in the hospital; and the  
work is so great, that they had already laid  
out two hundred thousand *Philippines* up-  
on it.

*Lazaretto*. Sunday 9th, I saw the *Lazaretto*, for peo-  
ple infected with the plague, which is ano-  
ther great square structure, two good mus-  
quet-shot in length, with above three hun-  
dred rooms about it. In the middle of it is  
a garden, let for two thousand *Philippines* a  
year.

Monday 10th, in the evenings, *Peter Paul*  
*Caravaggio*, professor of mathematicks, car-  
ried me out in his coach to see the city.  
After some time being drove about, we  
went to the exchange, and to the free-  
schools, which, they say, were founded by  
the *Longobard* queen; and there he shew'd  
me the chair on which *St. Augustin* taught.  
Opposite to it, we went into the college of  
the noble *Milanese* doctors, which is an ex-  
cellent structure, founded by a pope of the  
house of *Medicis*. None but persons of  
birth are admitted into that college, and to  
them is refer'd the first hearing of civil cau-  
ses by superior courts.

Tuesday 11th, the governor, archbishop,

and officers civil and military, went to hear *GEMEL-*  
mas and sermon at the *Duomo* or cathedral,  
that being the last of the nine days devo-  
tion to *S. Charles*. The governor sat with-  
in a curtain, on the left hand of the altar  
within the rail, and the prince in a fort of  
pew. The officers had not chairs, as in the  
royal chapel, but benches cover'd with da-  
mask, and cushions to kneel on. The ser-  
mon and musick were very good. This  
church being two hundred cubits long, and  
one hundred thirty in breadth, is counted  
the eighth wonder of the world for its large-  
ness, curious marble, excellent statues, and  
other rich ornaments; tho' it is not yet  
quite finish'd, after so many years, nor any  
hopes that it will be soon compleated, not-  
withstanding the great revenue left for its  
fabrick. It has five isles, divided by well-  
wrought marble pillars, which hold up the  
high arches, and which together with those  
of the high altar, are in all seventy. All  
the structure, both within and without, up  
to the very roof, is adorn'd with excellent  
statues of half-lengths, and other choice  
carving in marble. By this you may judge  
what the altars and chapels are, especially  
the high altar, on which there's a rich sil-  
ver tabernacle. The churches in *Milan* are  
generally well serv'd, notwithstanding their  
great number; for they told me there were  
eleven collegiate churches, seventy-one pa-  
rishes, and seventy-four monasteries of  
monks, friars, and nuns, besides hospi-  
tals.

In the evening, going down into the  
lower church of the cathedral, I paid my  
devotion to the body of *S. Charles*, kept in  
a crystal shrine with a silver frame, within  
another of silver and gilt bras; 'twas rich-  
ly embellish'd with gold within.

CHAP. VII.

The author's journey from Milan to Bologna.

WEDNESDAY 12th, I set out  
in a coach for *Bologna*, paying a  
pistole for my place; and having  
gone ten miles, much snow falling, dined  
at the castle of *Melegnano*, and lay ten miles  
further at *Lodi*, a bishoprick, on the river  
*Alda*, defended by a good castle.

*Lodi*.

Thursday 13th, I went ten miles thro' a  
well-cultivated country and dirty way to  
*Casale*, where I dined; and then riding ten  
miles further, came to *Piacenza*, ferrying  
over the *Po* hard by it.

*Piacenza*. *Piacenza* is seated on a plain, and is  
about five miles in compass: the houses and  
streets are very good, but ill inhabited. In  
the great market-place there are two bras

VOL. IV.

statues on horseback, of excellent workman-  
ship, the one of *Alexander Farnesius*, t'other  
of his son *Ranuccio*.

Friday 14th, in the morning I went to  
see the palace where the duke of *Parma* re-  
sides when he comes to this city. 'Tis  
magnificent, both for structure and furni-  
ture; and particularly, in the prince's ap-  
artment, there are four rooms hung with  
wrought satin, and the last with cloth of  
gold, with an extraordinary rich bed. The  
lower floor is hung with rich tapestry, and  
the theatre by it is as good as can be wish'd.  
The cathedral has three isles, with hand-  
some altars.

7 E

I set

GEMEL-  
LI.  
1699. I set out late from *Piacenza*, and having travel'd fifteen miles along a well-pav'd road, between pleasant fields well cultivated, lay at the inn of *Grattarolo*, there being no fording the river *Stiron*, because it was swollen with the rain fallen the night before.

We set out betimes upon *Saturday* 15th, pass'd thro' the city *Borgo*, and, having gone fifteen miles, at the river *Taro* met such a number of coaches and calashes, that I was forced to wait four hours to get over the two branches of that river, tho' there were two boats, which had a *Roman Tefone* for every one they ferry'd over. Riding five miles farther, we came late to *Parma*, where we should not have got in, had not the duke, having been himself at the river, order'd, out of his own goodness, that the gate should be open'd.

*Parma*. *Parma* is in the latitude of 44 deg. 20 min. on a plain, upon the *Via Flaminia*; and they will have it to be in such an excellent air, that some of its citizens have liv'd to one hundred and twenty, and even to one hundred and thirty years of age. Its buildings are magnificent, the churches well adorn'd, and the streets wide, especially that call'd *del Verze*. The compass of it is about four miles, and the river *Parma* runs thro' the middle of it, whence it takes its name. The duke's palace is large, and fit to entertain several princes, and has good apartments embellish'd with excellent pictures, and all sorts of rich household-stuff.

*Sunday* 16th, I heard mass in the cathedral, which has three isles divided by tall pillars, but without much ornament. The college is one of the finest structures that can be seen, both within and without, being all painted like the palaces opposite to it. There are rooms enough for two hundred and sixty collegians of good birth, and for the professors, officers, and servants. There are also two theatres, a little and a great one, well painted, as is the great hall for gentleman-like exercises. The publick theatre is not very magnificent, nor any of the best in *Italy*, being small, and having only five rows of seats.

We set out from *Parma*, and at five miles end passing over a bridge, where every traveller pays ten pence, enter'd the dukedom of *Modena*; and riding ten miles thro' it, among well-cultivated fields, diversify'd with houses of pleasure, came to *Reggio*. This city was built on the *Via Emilia* by *Lepidus* the *Triumvir*, who resided in it a long time. 'Tis famous for its great fair, for its good churches and streets, and for the palaces that embellish'd it, and, among the rest, that of *Prospero Scarusio*, before which there are two most excellent statues,

of *Hercules* and *Lepidus*, fit to be placed in any royal gallery. The church of our lady of *Reggio*, call'd of the *Fathers servants*, before which the afore-mention'd fair is kept, has three isles, of good structure, with most beautiful altars, especially that of the blessed Virgin, which has curious work in marble, and is adorn'd with silver.

*Monday* 17th, having travel'd nine miles, we were stopp'd by the river *Secchio*, swollen by the rain that fell in the night, so that we were forced to stay till the boat could be got ready, and paid two *Giulios* a man for our passage. Then travelling six miles further, we came in good time to *Modena*. This city is seated in 44 deg. of latitude, on the *Via Emilia*, which ran from *Rimini* to *Piacenza*; the country is marshy, having the river *Panaro* on the east, and *Secchio* on the west. 'Tis the residence of the princes of the house of *Este*, under whose auspicious government it enjoys that peace it formerly, and after death of *Cesar*, wanted a long time, thro' the ambition of private *Romans*. 'Tis enclos'd with a good wall, and defended by a great fort, built after the modern manner. Its compass is between three and four miles; but there's nothing remarkable in its houses or narrow streets, unless it be abundance of dirt. In the middle of it is a very high tower made of coarse marble, which is an argument of the antiquity of the place. Nothing is yet finish'd of the ducal palace but the left side, and yet it looks great: the entrance is under a high tower, into a court set about with large pillars; and passing thence into a less, there appears a spacious stair-case, adorn'd from top to bottom, with good marble pillars, which leads to a great hall before the duke's apartment.

*Tuesday* 18th, setting out betimes, at three miles end I ferry'd over the river *Panaro*, paying a *Giulio*; and three miles further enter'd upon the territory of *Bologna*, coming to *Castel Franco*, a town consisting of one long street, with good shops; but there is by it a good fort, with a garrison of the pope's. Then going four miles further, I dined at the inn of *Samoggia*, where the post is; and ten miles from thence, thro' a cultivated country full of pretty country-houses, came betimes to *Bologna*, and lay at the pilgrims inn. Meeting here with the messenger of *Florence*, who was to set out the next morning, I resolv'd to go with him.

*Bologna* is seated in 44 degrees of latitude, *Bologna* and on the *Via Emilia* as well as *Modena*. 'Tis a city of great antiquity, ennobled by the archiepiscopal dignity, and residence of the legate apostolick; famous for its universality, beauty, bigness, wealth, delightful-

Florence.

to be placed in  
the church of our  
Fathers servants,  
mention'd fair is  
of good structure,  
s, especially that  
which has curious  
adorn'd with fil-

travel'd nine miles,  
river Secchio, twol-  
in the night, so  
stay till the boat  
paid two Giulios a  
then travelling six  
in good time to  
ated in 44 deg. of *Modena*  
*ia*, which ran from  
country is marly,  
o on the east, and  
is the residence of  
se of *Este*, under  
ment it enjoys that  
near death of *Cesar*,  
o' the ambition of  
enclos'd with a good  
a great fort, built  
er. Its compass is  
miles; but there's  
its houses or narrow  
ndance of dirt. I  
ry high tower mad-  
n is an argument of  
ce. Nothing is yet  
ace but the left side,  
the entrance is un-  
o a court set about  
passing thence into  
spacious stair-case,  
bottom, with good  
leads to a great hall  
ment.

ng out betimes, at  
y'd over the river  
o; and three miles  
territory of *Bologna*,  
e, a town consisting  
a good shops; but  
ort, with a garrison  
going four miles fur-  
of *Samoggia*, where  
miles from thence,  
ntry full of pretty  
betimes to *Bologna*,  
inn. Meeting here  
*Florence*, who was to  
ng, I resolv'd to go

degrees of latitude, *Bologna*  
as well as *Modena*.  
iquity, ennobled by  
ty, and residence of  
famous for its uni-  
wealth, delightful-  
ness,

ness, and number of inhabitants, which  
amounts to eighty thousand. The build-  
ings are of the best in *Italy*, all adorn'd with  
noble porticoes, thro' which the people may  
always walk under shelter. The tower,

call'd *Degli Asinelli*, is very wonderful, as *GEMEL-*  
well for its crooked structure as extraordi-  
nary height. I pass by the rest in silence, *LI.*  
having said enough in the first volume of *1699.*  
my travels in *Europe*.

## C H A P. VIII.

*The author's journey from Bologna to Florence, and the description  
of that city.*

I Set out betimes on *Wednesday* 19, with  
the messenger, and after riding sixteen  
miles among the *Apennine* mountains,  
whose steepness do not hinder the country  
people from sowing a great deal of corn up-  
on 'em, we staid to dine at *Lujano*; then  
continuing our journey with a violent cold  
wind that had like several times to unhors-  
me, enter'd upon the dominions of the great  
duke, divided from the pope's by a rivu-  
let near the village of *Filicaja*. We shew'd  
our certificate of health, which must of ne-  
cessity be brought from *Bologna* at *Pietra-*  
*mala*, and at last came to *Firenze*, after  
fourteen miles riding.

*Thursday* 20th, we set out two hours be-  
fore day, the wind blowing violent hard  
and cold, and with great trouble mounted  
the six miles to the top of the high moun-  
tain *Giogo*, which to me seem'd like *Aolus's*  
court; all which way, at small distances,  
there are small houses of country people,  
who lead a wild sort of life. Then we  
went down six miles again, to *S. Peter à*  
*Seve*, a village defended by a fort, and  
stay'd to dine at the inn of the bridge,  
where we had good entertainment. Hence  
we rode six miles of good way, all the road  
from *Bologna* to *Florence* being pay'd: then  
ascending a mile, and going down five, we  
came to the gate of *Florence*, where my  
trunks were narrowly search'd, and my  
arms secur'd, before I pay'd the *Giulio* for  
entrance.

*Florence* is so beautiful, pleasant, and well  
built, that, in the opinion of so great a  
prince as *Charles* the fifth, it ought to be  
shew'd only upon holy-days; for it ex-  
ceeds the noblest cities of *Italy* in spacious  
streets, magnificent palaces, ornament of  
stately churches, magnificence of publick  
structures, squares, fountains, and excellent  
statues. 'Tis seated in 43 deg. 20 min.  
latitude, in a plain encompass'd with moun-  
tains, and is said to have been founded by  
*Sylla's* soldiers in the year 645, after the  
building of *Rome*. The *Triumvirs* made  
it a colony; and, after the declining of the  
empire, and rise of the *Longobards*, be-  
coming an imperial free city, it so con-  
tinued till 1530, when 'twas forced to sub-

mit to the power of *Charles* the fifth, who  
created *Alexander de Medicis* first duke of  
*Florence*. Its compass at present is about  
five miles, well wall'd, with a ditch about,  
and a strong castle, and inhabited by near  
one hundred thousand souls.

*Friday* 21st, I saw the collegiate church *S. Lau-*  
of *St. Laurence*, divided by fourteen pil-  
lars into three isles. Here is the ducal  
chapel, founded by *Ferdinand* the third, of  
whose magnificence and structure 'tis better  
to be silent than say too little. Of six  
tombs only that are to be placed in it, on-  
ly four have been finish'd in ninety years,  
so curious and artificially are the precious  
oriental stones wrought whereof they are  
made; by which a man may judge of the  
rest of the chapel. There is another, in  
which all the subjects of the Family are  
buried; and in it are six statues, made by  
the divine hand of *Michelagnolo Buonarota*,  
and three of his best scholars.

The cathedral is adorn'd on the outside Cathedral,  
with a curious front of marble of several  
colours, and a square tower of a prodigious  
height; within 'tis divided into three isles  
by four pillars cased with marble. All  
about it there are excellent statues, but the  
best are an *Adam* and *Eve*, one of our Sa-  
viour, and of God the Father; the work of  
*Baccio Bandinelli*, a *Florentine*, placed in the  
choir, and on the high altar. This choir is  
an *Octagon*, beset with small pillars, and  
other curious works in marble.

Opposite to this, is the church of *St. John*, *S. John's*  
built round in the form of a *Cupula*, with church.  
three brass gates of admirable workman-  
ship, over which there are nine statues, three  
over each, six of brass, and three of mar-  
ble, all incomparably fine. In this church  
are the tombs of some *Florentine* popes, and  
excellent statues.

Going home I pass'd through the new  
market, where the gentry us'd to walk un-  
der a noble gallery supported by twenty  
marble pillars.

After dinner I went to the great *Piazza*  
or great square, to see the statue of *Cosmus*  
de *Medicis* on horseback, all of brass, ex-  
quisitely wrought; and then the giant's  
fountain, with twelve brass statues about it,  
and

GEMEL- and one in the middle of an excessive big-  
 LI. nefs. Before the gate of the old palace,  
 1699. which was the house of the common affem-  
 blies of the commonwealth of *Florence*, are  
 two great statues; one of them being a  
 great master-piece, is said to be *Hercules*.  
 Within it is a court with nine pillars that  
 support a vast high tower. In the room  
 above are sixteen good marble statues, and  
 six great pieces, on which the conquests of  
*Siena*, *Pisa*, and other cities of the state is  
 painted by an able master. Opposite to this  
 palace is another, where the great duke's  
 guards live; and in its *Portico* there are two  
 curious brass statues, and one of marble.

G. duke's T'ho' I had once before seen the great  
 gallery. duke's gallery, yet I would go again a third  
 time. This is compos'd of rows of no  
 way contemptible building upon the river  
*Arno*, which runs through the midst of the  
 city; in one of which the duke's artificers  
 work, and he keep his armory; and in the  
 other his rarities are kept; both of them  
 are set off with long rows of excellent brass  
 and marble statues. In the first room are  
 the pictures of the most celebrated painters,  
 drawn by their own hands; in the next, se-  
 veral vessels of the finest *China* ware, plac'd  
 in excellent order; and in the middle, a ta-  
 ble made of touchstone, with most curious  
 workmanship of flowers, birds, and the like,  
 of other sorts of stones inlaid. In a place  
 on the left hand coming from the great  
 square, they shew thirteen cupboards full  
 of plate curiously wrought; one of gold  
 plates, dishes, and other vessels; another  
 with gold and silver *Antependiums*, made by  
*Cosimo de Medici* in pursuance of a vow, set-  
 ting in them diamonds, rubies, and other  
 precious stones. In another there are several  
 horse-furnitures, all cover'd with precious  
 stones; in such another, a chair adorn'd  
 with jewels, on which the great duke sits  
 in publick upon *S. John's* day, to receive  
 homage of his subjects; and in the rest,  
 vessels of gold and silver of incomperable  
 workmanship, and other rarities of inesti-  
 mable value. In another room they shew'd  
 me a tabernacle and antependium, enrich'd  
 to admiration with oriental pearls, for the  
 service of the chapel before-mention'd.  
 In another room there were abundance of  
 antiquities in brass, and rarities brought  
 from the *Indies*. A pillar and a table of  
 very transparent alabaster; a lamp of am-  
 ber presented by the duke of *Saxony*; a pic-  
 ture in *Mosaic* work, and other things of  
 great value.

Near this room is the armory divided  
 into four parts: In the first, there is armour  
 and weapons defensive; in the two next,  
 fire-arms and others of extraordinary work-  
 manship, and the skeleton of a mare stand-  
 ing, whose hair of the main and tail are

shewn, being four yards long. In the last,  
 there are horse-furnitures and *Turkish* arms  
 wrought with gold, silver and precious  
 stones.

In the great room is the so famous statue  
 of *Venus*, call'd of the *Medici*, made in  
*Greece*, as is supposed two thousand three-  
 hundred years since, with five other excel-  
 lent statues. Besides this, a cabinet set  
 with precious stones; a night-piece drawn  
 by a *Dutch-man*, in which is painted a wo-  
 man with a candle in her hand, which gives  
 it such a light that it is wonderful; another  
 piece of *Mosaic* work made not long since  
 by a *Frenchman*; a large head made of one  
 only *Turkey* stone; and abundance of other  
 things worth observing, which I omit for  
 brevity sake; besides the shape of the great  
 duke's prodigious diamond weighing five  
 hundred fifty two grains.

Going into the other room, I saw most  
 excellent pictures; a table of *Lapis Lazuli*,  
 ingeniously inlaid with other stones; a ca-  
 binet made in *Germany*, with wonderful  
 painting on *Lapis Lazuli*, representing all  
 the history of the Old and New Testament,  
 and within it is kept great curiosities in wax,  
 and white and yellow amber.

In one of the other two rooms, there are  
 pictures of great value, and a cabinet made  
 of east country-wood; a small table of jas-  
 per stone, with several precious stones set in  
 it; and several embroider'd chairs brought  
 from *Persia*. In the other, there are maps,  
 spheres, and other mathematical instru-  
 ments; and an extraordinary loadstone,  
 and a great piece of *Lignum Aloe*. The  
 east country stones design'd to be curiously  
 wrought, are below in a great room, where  
 are also the skins of elephants, and other  
 strange creatures.

Saturday 22d, I went over a stone-bridge Palace  
 to see the great duke's palace, seated on the  
 farther bank of the river *Arno*. In the  
 court is a stately fountain; up the stairs on  
 the right hand, are the princesses lodgings,  
 with curious statues at the entrance: On the  
 left the great duke's, with statues also, in  
 whose second room there is a way on the  
 one side to his own apartment, hung with  
 crimson velvet, fringed with gold; and on  
 the other, to the prince's, hung with tapestry.  
 Then I went to the garden, which is very  
 large, and on the left hand found delight-  
 ful fountains, a plat of myrtle curiously cut,  
 and a park with a great statue of the god-  
 dess *Ceres* in the middle. On the right hand  
 there were copses, and at the foot of the  
 hill a fountain call'd *The Island*, in which  
 there are excellent statues, and close by  
 rooms with several beasts, and birds shut  
 up in them.

Hence I went to the church of *S. Michael*,  
 which is a square building very strong  
 and

ng. In the last,

and high, all of marble. Within it there are fourteen excellent statues, some of brais, and some of stone, and four altars curiously adorn'd. Returning home I met with a *Florentin*, who had but one finger in each hand, and told me he had two brothers born with the same imperfection, and one of them had but two toes on each foot.

*Sunday* 23d, I saw the great duke's celebrated library, preserv'd in a monastery of *S. Laurence*. Over the gate appears a noble front, made by the direction of the re-

nowned statuary *Buonarota*. The chief va-  
lue of the library consists in above three  
thousand manuscripts in several languages; 1699.  
and among the rest they told me, there was a *Hebrew* bible, for which the *Jews* would have given the great duke seventy thousand crowns, he having taken it from them. This precious treasure of manuscripts was gather'd by pope *Clement* the seventh of the house of *Medici's*, he having the good fortune to get very many belonging to the library of *Constantinople*.

## CHAP. IX.

## The author's journey from Florence to Rome.

**H**AVING hir'd a calash to *Rome* for twelve *Pic'eres*, I went along with the messenger, who let out on *Sunday* 23d before noon; we travell'd along hills and mountains naturally barren, but made fruitful by the industry of the *Florentines*, who make use of all excrements to improve the ground. Being pass'd the castle of *Barberino*, where the lords *Barberins* of *Rome* have a farm in memory of their original, and making our whole day's journey twenty one miles, we lay at *Poggibonzi*, a wall'd town.

He set out on *Monday* 24th, five hours before day, and riding fourteen miles, came by break of day to *Siena*. This ancient city is longer than it is broad, seated on an ascent, the buildings few but good, the third part of it being full of orchards and vineyards. It is inhabited by a conspicuous nobility, which in all times has produced cardinals, and sometimes popes. The cathedral is cover'd both inside and outside with black and white marble, besides many statues and carv'd work. From the gate appear three beautiful and spacious isles, divided by above thirty pillars, cas'd in black and white marble. The pulpit is held up by twelve columns, and all curiously carv'd about in figures, nothing inferior to the curious statues about the church. The font is in the fine chapel of *S. John Baptist*. Adjoining to the church, opposite to it, are the princes and archbishop's palaces; and in the great square, that of the senate, with a tower of a great height, and a handsome fountain. We travell'd eighteen miles after dinner, through a well cultivated country, tho' not plain, where we met extraordinary beautiful country women, with great straw-hoods on their heads. This night we lay at the castle of *Turrineri*, and the inn which is the post-house.

*Tuesday* 25th, going out two hours before day, we did nothing but go up and down hills with rain and fog, and at the end of

eighteen miles came to the inn of *Radicosani*, so call'd of the village of that name. The rain continuing, we went down that high mountain for six miles to the valley and river of *Riego*, which we cross'd eight times, and not without danger, by reason of the flood. A little further ends the territory of the great duke at the river *Centino*, whence we went to lye at *Aquapendente*, the first city of the patrimony of the church, fourteen miles from *Radicosani*.

*Wednesday* 26th, after nine miles riding we din'd at the town of *Bolsena*, not being able to go farther, because of the cold and snow that fell. This place is on the bank of a great lake, in which there are two islands. Then passing through the city of *Montefiascone*, at the end of eighteen miles more, we lay at the city *Viterbo*, which is three miles in compass.

*Thursday* 27th, we first went five miles up a frozen mountain, and at the end of as many more came shivering to dine at *Ronciiglione*, a good town, seated on the cliffs of a mountain. Then we advanc'd fifteen miles, and lay at the inn of *Baccareo*, a bad place for strangers.

*Friday* 28th, riding fifteen miles, we came to *Rome*.

*Rome*, the queen of cities and head of *Rome*, the world, is seated in *Latium* in 41 deg. 40 min. latitude; tho' the *Vatican* suburb is in *Tuscany*, and is water'd by the *Tiber*, which comes in at the north end and runs out at the south towards *Ostia*. It is suppos'd to have been founded, and so call'd by *Numulus*, the son of *Rhea Silvia*, descended from *Eneas* about the end of the sixth olympiad, seven hundred and fifty three years before the birth of Christ. *Romulus* at first wall'd in only the *Palatine* hill; then that of the *Capitol* was added, and in following ages it grew to that bigness, that in the reign of the emperor *Aurelianus* it was about thirteen miles in compass. *Augustus* divided it into fourteen re-

GEMEL-gions, or wards. But why do I take upon me to speak of *Rome*, which by its actions has rendred it self glorious and immortal throughout the world, infomuch that he scarce deserves the name of man, who has not some knowledge of its posterity and adversity. It will suffice to say, that tho' it is not in its ancient splendor, yet the very ruins testify what it has been; and the modern structures are not so mean, but that they render it preferable to any other the most famous city. For, where can there be found such magnificent churches, such sumptuous palaces, such noble streets, such

delightful gardens, and such pleasant fountains? Not to speak of the wonderful painting and carving. The court may be call'd the mistress of others in *Europe*, and is the best theatre, on which that, the multitudinous fortune, acts her part, and shews her vicissitude. I will speak all its glory in a word: It is the seat of the true and lawful successor of *S. Peter*; that is, the head of the world, no less than it was in passages; for it is not to be accounted a less honour, but rather much greater, to rule the spiritual and nobler part of man, than to subdue their bodies by force of arms.

## CHAP. X.

*The voyage round the world concluded at Naples; with some account of that city.*

**S**aturday 29th, I set out betimes, and travelling twenty miles lay at *Velletri*, a longish open city, seated on a mountain. The houses and streets are convenient enough, and the fountain in the market-place, with the pope's statue in brass, is very beautiful.

Sunday 30th, we paid a *Giulio* at the gate for each trunk; and riding fourteen miles, staid to dine at *Sermoneta*, a town belonging to the duke of that name, seated on the top of a hill, where we were forced to pay toll again. Then we rode thirteen miles on a bad way, and came to lodge at *Piperno*, a town ill wall'd, on the sides of a hill, which in former ages made war upon *Rome*.

Monday the first of *December*, having travell'd fifteen miles, we din'd at *Terracina*, the last city of the pope's dominions, enclos'd with an old wall, and seated on the side of a hill. Going ten miles farther, we lodg'd that night in the city of *Fondi* in the kingdom of *Naples*. It is famous for being the place of the birth of pope *Soter*, for being ruin'd by *Barbarossa* in 1534, and for its antiquity; for in the year 421, after the foundation of *Rome*, it was in amity with the *Romans*. It is reported, that *Clement* the seventh, the anti-pope, resided here sometime in the reign of queen *Joanna* the second.

Setting out early on *Tuesday* the second, we came before noon to *Mola di Gaeta*, known formerly by the name of *Formia*. After dinner we ferry'd over the river *Garigliano*, and having rode eighteen miles, lay at *S. Agata di Sessa*. Short of the river are the ruins of a very ancient theatre, and other structures, ruin'd by age; and at a small distance a very long *Aqueduct*, perhaps belonging to the ancient *Minerva*.

Capua.

Wednesday 3d, we set forwards four hours

before day by torch-light; and came to dine at the city *Capua*, near the river *Vulturnus*, whose banks are join'd by a fine stone-bridge. This city is enclos'd with a good wall, and defended by a castle. Some think it was founded by *Capis Silvius*, king of *Alba*, and others of the *Oscans*, by whom it was call'd *Osca*. It was detected and reduced to servitude by the *Romans*, for having entertain'd *Hannibal*, who was debauch'd by its pleasures, and then came to be a colony, tho' it had before vy'd with *Carthage* and *Rome* it self. It was destroy'd by *Gensericus* king of the *Vandals*, rebuilt by *Narses*, and again subverted by the *Longobards*. At present it stands on the ground, where the ancient *Capilinum* is reported to have stood, and the ruins of the old one are to be seen two miles to the northward on the hill call'd *Tifata*. Riding eight miles after dinner through delicious plains, we came to *Aversa* (thought to be built out of the ruins of *Atella*) and four miles from thence I began to meet my friends, who were come out to honour me; and after mutual embraces we took coach, and proceeding four miles farther, entered the long wish'd for city of *Naples*: And thus I finish'd my journey round the world, having spent in it five years five months and twenty days; upon the festival of *S. Francis Xavierius*, the apostle of the *Indies*, and protector of travellers. For the reasons ment on'd in the beginning of the fifth volume, I did not reckon *Wednesday* the third by *Thursday* the fourth of *December* 1698, and consequently twenty one days above the five months. I spent above six months in satisfying the curiosity of several people; till they having enough of me, as is usual, I was deliver'd from their importunity.

*Naples* is seated upon that bay made by *Naples* the two capes or promontories of *Minerva* and

that bay made by Naples.  
itories of Minerva  
and

and *Misenum*, in 41 deg. 2 min. latitude. On the east of it is mount *Vesuvius*, and the fruitful plains of *Terra de Lavoro*, or *Campania Felix*. Towards the south it looks upon the *Tyrrhene* sea, and looks like a great shell enclos'd with fruitful and delicious banks.

This city (according to the most probable opinion) was founded by *Eumelius Pbalerus*, the son of *Alcon*, who was one of the *Argonauts*, and consequently before the destruction of *Troy*. *Parthenope*, the daughter of the king *Fera*, coming hither out of *Negropont* with a number of *Greeks*, and being taken with the delightfulness of the place, settled at *Pbalerum*, and began to enlarge it, so that the city afterwards was call'd by her name. Now because *Velleius Paterculus*, lib. 1. says, that *Naples* was built by the *Cumani*; I guess the ancient *Pbalerum* or *Parthenope*, to distinguish it from the city, was afterwards call'd *Palepolis* (whatsoever *Lipsius* says of its being founded by the *Cumani*) and of this place, I conceive the historian spoke these words, *Sed aliis diligenter Ritus Patrii mansit custodia*. The others diligently kept up the custom of their country. That is, the custom mention'd by *Strabo*, of sports by lamp-light, and the like. It is also to be observ'd from what has been said, that tho' *Palepolis* and *Naples* were neighbouring cities, and almost one same people; yet there was some difference as to their manners; nor were they so near, but that there was at least a mile distance between them: For *Livy* tells us, that the consuls *L. Cornelius* and *Q. Publicus* besieging *Palepolis*, a city in league with the *Samnites* about the year 426, after the building of *Rome*, placed their army between it and *Naples*, that the *Nicopolitans* might not relieve it. 'Tis true, we cannot tell which are the remains of *Palepolis*; but yet they are very blind who seek for them within the compass of *Naples*; as my learned friend Dr. *Matthew Egicchio*, to whom I am oblig'd for these conjectures, has much reason to say.

This city has run through several forms of government. At first it was under the *Athenian* laws, whilst a confederate of the *Romans*; but afterwards it submitted to their powers, and receiv'd laws as a colony. The empire being overthrown in 412, it suffer'd by the *Goths*, and in 456 by the *Vandals*. Then it fell under the dominion of the *Greek* emperors in 490, then under the *Herali*, and after them under the *Ostrogoths*, from whom it was taken in 537 by *Belisarius*. After him *Attila*, king of the *Goths*, took and kept it eighteen years, and then it was again brought under the *Greek* emperors by *Narses*. It continu'd a long time in the nature of a commonwealth, and

held out a siege against the *Saracens*, tho' *GEMEL-* reduc'd to great extremities, most of the LI. inhabitants being destroy'd. At length in 1699. 1128, it submitted to *Roger*, the third *Norman* duke of *Aquileja*, who had the title of king given him by *Anacleus* the antipope. The *Norman* line being extinct, the *Suevians* came next in 1195, the last king of whom call'd *Manfred*, being slain in battle by *Charles* the first of *Anjou*, the same *Charles* was declar'd king of *Naples* by pope *Clement* the fourth; and some time after he shed all that was left of the *Suevian* blood, causing the unhappy *Conradin* to be beheaded in the market-place. Eight kings of this family ruled the kingdom; and *Joanna* the second being at last left heirs, she adopted *Alfonso* king of *Aragon*; who in 1442 having overthrown the faction of *Renee* duke of *Anjou*, took *Naples* by the way of the aqueducts, and remain'd peaceably possess'd of it. Five of the family of *Aragon* reign'd, till *Frederick* the last of them was expell'd by the *French* and *Spaniards*, who had agreed to his ruin to divide the kingdom. But there being no lasting friendship between different tempers, and sovereignty being an indivisible point; soon after, king *Lewis* the twelfth, and king *Ferdinand's* commanders fell at variance; and *Gonzalo de Cordove*, call'd the great captain, had the fortune quite to expel the *French* about the year 1503. *Joanna*, the daughter of *Ferdinand*, and mother to *Charles* the fifth, inheriting the kingdom devolv'd to the house of *Austria*.

So many wars and changes of government are the cause that the ancient *Naples* is scarce to be found in the modern; but having been often enlarg'd, it is now grown to that degree, that the compass of its walls is almost ten miles; and that of all the suburbs included in twenty one miles and a quarter, containing above five hundred thousand inhabitants. It has nine gates on the land side, and sixteen towards the sea. There are three castles well provided with cannon and soldiers, for that of *Capuana* does not deserve the name, and at present only the courts meet there.

I should be furnish'd with the greatest eloquence, to give an account of the excellency of the country this noble city is seated in, and of the worth of the inhabitants; but I am not capable of such an undertaking: Besides, there is no ancient or modern writer that does not extol the beauty and fruitfulness of its hills and plains, the delicacy of its water, the excellency of its wines, the rarity of its fruit, the plenty of flowers, and in short all that is good dispers'd throughout the world, found together in this place; not to mention the charms of its gardens, and the delights of its *Possessors*.

GEMEL-filipo. This is sufficiently evinc'd for its habitation by the dearest sons of the muses, as *Virgil* the prince of poets, *Statius*, *Livy*, *Horace*, *Claudian*, *Silius Italicus*, and many more in the following ages; from them the *Neapolitans* seem to have inherited a natural inclination to the most noble and delightful studies.

If we regard its situation, the city looks like a noble theatre rising gradually along the sides of the neighbouring hills on the north-side of it; if the streets, they are excellently pav'd with pebbles, and wide enough; if the palaces and publick buildings, there is a vast number of them, and all magnificently adorn'd with gilding and painting, not to mention their symmetry and noble architecture. On the other hand, no city in *Europe* has such noble spirits, and families so greatly descended; and it is hard to decide, whether there are more great scholars, or noble-men. So many famous men have been bred up in its schools, that of their works alone might be made a large and compleat library; were not there a great neglect in publishing the worthy labours of the learned, and yet for what reason no man knows. It is an addition to its praises, that even the provinces subordinate to so glorious a metropolis, do, and men brought forth men, famous for learning in all ages; and not to mention *Salust*, born at *Anternum*, now *Aquila*; *Ovid* at *Sulmo*; *Ennius* at *Rudina* near *Leue*; *Nevius* in *Capua*; *Pacuvius* at *Brindisi*; *Horace* at *Venosa*; *Juvenal* at *Aquinum*, and many more; *Magna Græcia* alone, now known by the name of *Calabria*, may furnish a whole volume. It is most certain, that if *Italy* is more honourable for wisdom, it thence took its original: For, who is there that does not know, how far the *Pythagorean* philosophy spread there, being call'd by another name *Italia*? And if *Pythagoras* teaching at *Cotron*, had sometimes six hundred scholars, and none was ever admitted to his school but what had a comely presence, and a genius fit for philosophy, who can deny

but that soon after, a great number of notable philosophers liv'd about in our villages; *Cicero* tells us, that divine wit instructed all *Italy* in all sorts of learning: But if we attentively read the *Famblicus Calcedicus*, where he speaks of the *Pythagorean* sect, we shall find it was almost all made up of people of *Calabria*. I will not argue, whether *Pythagoras* was born in *Samos* of *Greece*, as is generally believ'd, or in that of *Calabria*, as *Theodoret* affirms; tho' *Plutarch* makes him of *Locris*, perhaps because *Samos* was in the territory of *Locris*. But no body can deny, that (not to mention others less famous) these that follow were *Calabrians* of *Reggio*, viz. *Teletus*, to whom *Plato* directed his dialogue of wisdom; *Timæus*, master to *Plato*; *Theogenes*, the first expofitor of *Homer*; *Aristides*; *Parmenides*; *Melissus*; *Archita*; *Zeno*; and *Zelexus*, the great philosopher and legislator; and also *Xenocrates*, an heroic poet and musician; *Steficorus*, a *Lyrick* poet; *Alexides*, another *Lyrick* poet; *Orpheus*, the writer of the *Argonautica*, for *Orpheus* the *Thracian*, who flourish'd before the *Trojan* war, could not make mention of king *Acinous*, who liv'd full three hundred years after; *Menander* the comedian; and the famous *Philolaus*, whose books were bought by the divine *Plato* for forty *Minæ* of *Alexandria*. Of later times, what country has not cause to envy *Calabria*, for having brought forth *Casiodorus*, *Gianus Parrasius*, *Coriolanus*, *Marivianus*, *Pomponius Letus*, *Berardinus*, *Antony Telefi*, and *Sertorio Quetrimani*; and now in our days *Marco Aurelio Severni*, and *Tommaso Cornelio*, the restorers of learning and philosophy? But perhaps I have proceeded too far upon this subject, and I fear I may have tir'd the reader with my unpolish'd discourse. It is fit therefore, that since the voyage round the world is now ended, he apply himself to more profitable studies; and that I put a period to the labour of writing, which I look upon as not inferior to that of travelling.

AN  
A C C O U N T  
OF THE  
SHIPWRECK  
OF A  
DUTCH VESSEL  
On the Coast of the  
Isle of Quelpaert,  
Together with the Description of the  
Kingdom of *COREA*.  
Translated out of French:

---

THE  
P R E F A C E.

**T**HIS short relation was first printed in Holland by the secretary, as he calls himself, of the ship that perish'd, and was one of those that escap'd, and, after a long captivity, had the good fortune to return home. There's nothing in it that carries the face of a fable, invented by a traveller to impose upon the believing world; yet there are some men, who will scarce believe any thing but what they see, and at the same time will not stir an inch from home to be inform'd. These sort of creature are not to be satisfied as to the credibility of any thing beyond their own capacities. But for those who only seek a reasonable testimony and probability to believe things, which in themselves are no way irrational, 'twill suffice, that when this account was printed in Holland, the eight men mention'd at the end of this journal, were all in Holland, and examin'd by several persons of reputation, concerning the particulars here deliver'd, and they all agreed in them; which seems to render the relation sufficiently authentick. Besides, as the French translator observes in his preface, there's nothing here asserted in the description of Corea, but what agrees with what Palafox, and others that write of the invasion of the Tartars, have said before. The account, tho' small, is curious; and it may be suppos'd this secretary, the author, was a man of some learning, to be capable of writing it, and not a meer seaman; tho', to say the truth, 'tis plain, and of matters so obvious, and in so indifferent a stile, that it requir'd no great matter of literature to compose it, but only as much as would raise a man above downright ignorance. Thirteen years residence in Corea, was time enough to have given a much more perfect description, and many men in that time would have made it more ample and satisfactory; but the author gave what he had, and I suppose his memoirs were small and ill digested, having leisure enough, but perhaps little inclination, to write in that miserable life, as not knowing whether ever he should obtain his liberty, to present the World with what he writ.

## An Account of the Shipwreck of a Dutch Vessel, &c.

The ship's  
departure  
from Hel-  
land.

**W**E sail'd out of the *Texel* on the 10th of *January* 1653, in the evening, with a very fair gale, and after many storms, and much foul weather came to an anchor on the 1st of *June*, in the road of *Batavia*. As soon as we had refresh'd our selves there for a few days, the governour general of the *India* company, commanded us away to *Taposwan*, and accordingly we set sail the 14th of the same month, in our ship call'd the *Sparrowhawk*. We carry'd aboard us *Min Heer Cornelius Lessen*, to take possession of the government of *Taposwan*, and *Formosa*, with their dependances in the place of *Min Heer Nicolaas Verburge*, who had resided there three years according to custom. We had the good fortune to come to an anchor at *Taposwan*, on the 16th of *July*. *Min Heer Lessen* immediately landed, and caus'd our ship to be unloaded. Then having advis'd with the council, he order'd us to *Japan*; in pursuance whereof having our loading and discharge, we put to sea again on the 30th of the same month. The next day held fair till towards the evening, when, as we were getting out of the channel of *Formosa*, there arose a storm, which increas'd all night.

forms.

On the 1st of *August* in the morning early, we perceiv'd a small island very near us; we us'd our utmost endeavours to get under shelter of it, and find some place to cast anchor, for in most parts of that sea there is no bottom to be found. However we compass'd our design though with much difficulty, because we were afraid to come near a floating timber that burnt close by us. Our pilot fortunately looking out, had discover'd that island, otherwise we had been lost, for we were not above a musket-shot from it. The fog clearing up, and the day growing bright, we found our selves so near the coast of *China*, that we could easily discern arm'd men scatter'd along the shore, expecting to make their advantage of our wreck. But God be prais'd, they mis'd of their aim; though the storm increas'd rather than diminish'd. There we continu'd all that day at an anchor in sight of them, as also the night following.

Various  
weather.

The next day the wind falling, we observ'd, that the number of the *Chinese* was much increas'd, which made us stand up-

on our guard, resolving to remove further from them as soon as possible, but were hinder'd by a calm, which lasted all day and next night. The third day we perceiv'd the storm had drove us twenty leagues from our course, so that we were again in sight of the island *Formosa*. We ply'd betwixt that island and the continent, the weather somewhat cold; and what troubled us most, was, that the uncertain winds and calms kept us in that channel till the 11th of that month, when a south-west wind grew up into a storm, with a heavy rain, and forc'd us to run north-east, and north-east and by east. The three following days the weather continu'd still more tempestuous, and the wind shifted so often, that we were continually hoisting and lowering our sails. By this time the frequent beating of the sea had much weaken'd our vessel, and the continual rain obstructed our making any observation; for which reason we were forc'd to take in all our sails, strike the yards, and commit our selves to the mercy of the waves.

On the 15th, the wind blew so boisterously, that we could not hear one another speak, nor durst we let fly an inch of sail: And to add to our misfortunes, the ship took in so much water, that there was no masting of it. Besides, the waves every moment broke in upon us in such manner, that we expected to perish every minute. That night our boat and the greatest part of our gallery were carried away, which shook our boltsprit, and made us fear we should lose our prow. All possible means were us'd to repair the damage sustain'd, and prevent the ill consequences it might produce; but in vain, for the gusts of wind were too violent, and came too close one upon another, besides the breaking of the waves which were ready to sink us every moment. At length finding there was no way to save our selves, but by abandoning the vessel and the company's goods, we resolv'd to loose a fore-top-sail, the better to avoid the greater surges. Whilst we were thus employ'd, a wave coming over our stern, had like to have wash'd away all the seamen that were upon the deck, and fill'd the ship so full of water, that the master cry'd out, My mates, cut down the mast by the board immediately, and recommend your selves to the mercy of God; for if

one

HAM: L.  
1653.

HAMEL, one or two such waves return, we are all  
1653. lost, and all our skill and labour will not save

us. This was our condition, when the second glass of the second watch being just running out, he that look'd out a head, cry'd, Land, land; adding, we were not above a musket-shot from it; the darkness of the night and the rain having obstructed our discovering it sooner. We endeavour'd to anchor, but in vain, because we found no bottom, and the roughness of the sea and force of the wind obstructed. Thus the anchors having no hold, three successive waves sprung such a leak in the vessel, that those who were in the hold were drown'd before they could get out. Some of those that were on the deck leap'd overboard, and the rest were carried away by the sea. Fifteen of us got ashore in the same place, for the most part naked, and much hurt, and thought at first none had escap'd but our selves; but climbing the rocks, we heard the voices of some men complaining, yet could see nothing, nor help any body, because of the darkness of the night.

36 men  
got to  
shore.

On the 16th, all of us that were in a condition to walk, went calling and seeking about the strand, to see if we could find any more that had got to land. Some were found scatter'd about, so that we made up thirty-six, most of us dangerously hurt. Then searching the wreck, we discover'd a man betwixt two planks, which had so press'd his body, that he liv'd but three hours. It is needless to relate how sensibly we were touch'd at the loss of our ship, and to see that of sixty-four men only thirty-six were left in a quarter of an hour. However, we went along the shore to pay the last duty to those bodies the sea had cast up. We found none but our captain *Egbertz* of *Amsterdam*, stretch'd out on the land, ten or twelve fathom from the water, with his arm under his head, whom we bury'd. Having scarce taken any sustenance for two or three days past, because there had been no possibility of dressing any thing, we search'd along the sands, to see whether the sea had not cast any of our provisions ashore, but could get only one sack of meal, a cask with some salt-meat, a little bacon, and, what was best for the wounded men, a hoghead of claret. Our greatest trouble was, to contrive how to make a fire; for having neither heard nor seen any living creature, we concluded we were on a desert island. Towards evening the wind and rain somewhat abating, we gather'd enough of the wreck to contrive some shelter for us, making use to that purpose of the remainder of our sails.

On the 17th, as we were lamenting our deplorable condition, sometimes complain-

ing that we saw no body, and sometimes flatter-  
ing our selves with the hopes of being  
near *Japan*, where we might find some-  
body that would put us in the way to get  
to the *Dutch* factory, our ship being in no  
condition to be refitted; we spy'd a man  
about a cannon-shot from us. We call'd  
and made signs to him; but as soon as ever  
he saw us he fled. Soon after noon we spy'd  
three more, one of them with a musket,  
and his companions with bows and arrows.  
Being come within gun-shot of us, they  
halted; and perceiving we made towards  
them, ran away, though we endeavour'd  
by signs to shew them we desir'd nothing  
but fire of them. At last one of us resolv'd  
to attack them; but they deliver'd up their  
arms without making any opposition,  
wherewith we lighted the fire we wanted.  
These men were clad after the *Chinese* fash-  
ion, excepting only their hats, which were  
made of horse-hair, and we were much a-  
fraid lest they should be wild *Chinese* or pi-  
rates. Towards evening there came an  
hundred arm'd men clad like the other,  
who after counting of us, kept us inclos'd  
all the night.

On the 18th, we spent all the morning  
in enlarging our tent; and about noon, there  
came down about two thousand men, horse  
and foot, who drew up in order of battle  
before our hut. Our secretary, the chief  
pilot and his mate, with a boy, went out  
to meet them. When they came before  
the commander, he order'd a great iron  
chain to be put about the neck of each of  
them, with a little bell, such as the bell-  
weather wears in *Holland*. In that condi-  
tion they forc'd them to fall down, and pro-  
strate themselves before that commander;  
all his men at the same time raising such  
a shout, that we who were in our hut, cry'd  
out, we are lost, and must prepare to be  
us'd after the same manner, which was im-  
mediately put in execution. When we had  
lain some time flat on our faces, they made  
signs to us to kneel. Being in this posture,  
they put some questions to us which we  
did not understand, and we on our side  
did all we could to let them know, that  
we intended to have gone to *Nangasaky* in  
*Japan*. They were as far from understand-  
ing us, as if they had never known *Japan*;  
for they call that country *Jeenare*, or *Jirpon*.

The commander perceiving, he could  
make nothing of all we said, caus'd a cup  
of *Arac* to be fill'd to every one of us, and  
sent us back to our tent. They that con-  
ducted us, to see what provisions we had,  
found only a little bacon and salt-meat,  
which they shew'd to their chief. An hour  
after, they brought us rice boil'd in water,  
and believing we were almost starv'd,  
would

would not give us much, for fear it should hurt us. After dinner they came with ropes in their hands, which very much surpriz'd us, imagining they intended to strangle us; but our fear vanish'd, when we saw them run altogether towards the wreck, to draw ashore what might be of use to them. At night they gave us more rice to eat; and our master having made an observation, found we were in the island of *Quelpuert*, which is in 33 degrees 32 minutes of latitude.

The na- tives ga- ther'd the wreck.

These people were employ'd all the 19th in getting ashore the sad remains of our wreck, drying the cloaths, and burning the wood to get the iron, being very fond of that metal. Beginning now to grow somewhat familiar, we went up to the commander of the forces, and the admiral of the island, who was also come down, and presented each of them with a prospective glass, and a pot of red wine, with our captain's silver cup, which we found among the rocks. They lik'd the liquor so well, that they drank till they were very merry. They return'd us the silver cup, with many tokens of friendship, and we retir'd to our tent.

Gave the Dutch Mast.

On the 20th, they made an end of burning all the wood of the ship, and saving the iron; during which time, a pleasant accident happen'd. The fire they made coming to two pieces of cannon which were loaded with ball, they gave so great a report, that they all fled, and durst not return a long while, or go near the vessel, till we had assur'd them by signs they need not to fear the like would happen any more. This day they brought us twice to eat.

They re- ceiv'd the Dutch men

On the 21st in the morning, the commander gave us to understand by signs, that we must bring before him all that we had sav'd in our tent, that it be seal'd, which was done in our presence. Whilst this was doing, some persons were brought before him, who had converted to their own use some iron, hides, and other things sav'd out of our wreck, which they had still in their possession. They were immediately punish'd before our faces, to shew us their design was not to wrong us of any of our goods. Each of those thieves had thirty or forty strokes given him on the soles of his feet, with a cudgel as thick as a man's arm, and as tall as a man. This punishment is so severe, that some of their toes dropt off. About noon they made signs to give us to understand, we must depart. Those that were well had hories provided for them, and the sick were carried in hammocks. Thus we set forward, attended by a numerous guard of horse and foot; and travelling four leagues, came at night to a little town call'd *Tadiane*; where,

VOL. IV.

after a slender repast, they carried us into *HAMEI*, a warehouse much like a stable. 1653.

The 22d in the morning, at break of day, we set out in the same order, and travell'd to a little fort, near which there were two galiots. Here we halted to dine, and at night came to the town of *Moggan*, or *Mocho*, where the governor of the island resides. We were all conducted to the square before the town-house, where about three thousand men were at their arms, some of whom coming forwards, gave us water to drink in dishes; but they being arm'd after a dreadful manner, we thought they design'd to rid themselves of us. Their vry habit increas'd our fear, for it had somewhat frightful, which is not seen in *China*, or *Japan*. Our secretary, attended by the same persons with whom he appear'd the first time before the commander of the troops, was carried to the governor. When they had lain a while prostrate on the ground, a sign was made to us to do the same, after we had been brought near a sort of balcony which was before the house, where he sat like a king. The first thing he caus'd to be ask'd of us by signs, was, whence we came, and whither we were bound. We answer'd us before, that we were *Hollanders*, and we bound for *Nangasaky* in *Japan*; whereupon he gave us to understand, by bowing his head a little, that he understood something of what we said. Then he order'd us to pass before him by four and four at a time; and having put the same question to us all, and receiv'd the same answer; he order'd us to be carried to the same house where the king's uncle, who had attempted to usurp the throne, had been confin'd, and dy'd. As soon as we were in, the house was beset with armed men, and we had a daily allowance of twelve ounces of rice a man, and the same quantity of wheat meal; but very little besides, and so ill dress'd that we could not eat it. Thus our common meals were for the most part only rice, meal, and salt, and we had nothing to drink but water. The governor seem'd to us to be a very understanding man; and we often found afterwards, that we had not been deceiv'd in our opinion. He was The go- then threecore and ten years of age, had vernor's goodnefs, been born in the capital city of the kingdom, and was in good esteem at court. When he dismiss'd us, he made signs, that he would write to the king to know what he was to do with us. It would be a considerable time before his answer could come, because the distance was fourcore leagues, whereof all but ten leagues by land, and therefore we begg'd of him to order we should have flesh sometimes, and something else to eat. We also obtain'd leave of him

7 H

for

HAMEL, for six of us to go abroad every day by turns, to take the air and wash our linnen; which was granted, to our great satisfaction, for 'twas very heavy to be shut up and live on bread and water. He also did us the honour to send for us often, and to make us write something before him, both in his tongue and in our own. There we first began to understand some words of that language; and he discoursing with us sometimes, and being pleas'd to divert us with some little amusements, we began to conceive some hopes of getting over one day to *Japan*. He also took such care of our sick, that we may affirm we were better treated by that idolater, than we should have been among christians.

A Dutch-  
man  
brought to  
interpret.

On the 29th of *October*, our secretary, the master, and surgeon's mate, were carried before the governor, where they found a man sitting who had a great red beard. The governor ask'd us, who we took that man to be; and having told him, we suppos'd him to be a *Dutch-man*; he fell a laughing, and said, we were mistaken, for he was a *Corelian*. After some discourse had pass'd between us, that man, who till then had been silent, ask'd us in *Dutch*, who we were, and of what country: to which we answer'd, that we were *Dutch-men*, come from *Amsterdam* in the service of the company, and being bound by their command for *Japan*, a storm had thrown us upon that island. That our vessel being stay'd, we begg'd earnestly of God that we might be sent on our way. Then we took the boldness to ask his name, and what countryman he was; to which he reply'd, that his name was *John Wetlevree*, born at *Riip* in *Holland*, whence he came as a volunteer in the year 1626, aboard the ship call'd the *Hollandia*; and, that going to *Japan* in the year 1627, aboard the frigate call'd the *Onderkerker*, the wind drove them on the coast of *Corea*: that wanting water, and being one of those that were commanded ashore to get provisions, he and two more had been taken by the inhabitants: that his companions had been killed seventeen or eighteen years since in the wars, when the *Tartars* invaded *Corea*: that one of them, born in the same town with him, was *Theodorick Gerards*; the other, *John Pieters* of *Amsterdam*. Asking him further, where he liv'd then, and what accident had brought him into that island, he told us, that his abode was in the capital city of the kingdom of *Corea*, whence the king had sent him to know what we were, and what had brought us into his dominions. He added, that during his long residence in *Corea*, he had often ask'd leave of the king to go over to *Japan*, without ever obtaining any other answer

*Riip* is a  
great vil-  
lage in  
*Noris Hol-*  
*land*.

than that he must never expect it, unless he had wings, and could fly thither; that the custom of the country was, to detain all strangers that came thither, but that they wanted for nothing, being provided with diet and clothes as long as they liv'd. Thus all the comfort he could give us, was, that we should be treated as he had been, if we were carried to the king. The joy of finding so good an interpreter dispel'd our melancholy, and made us forget all our misfortunes. 'Twas very surprizing, and even wonderful, that a man of fifty-eight years of age, as he then was, should so forget his mother-tongue, that we had much to do at first to understand him; but it must be observ'd, he recover'd it again in a month. The governor having caus'd all our depositions to be taken in form, sent 'em to court, and bade us be of good cheer, for we should have an answer in a short time. In the mean while he daily bestow'd new favours on us, inasmuch that he gave leave to *Wetlevree*, and the officers that came with him, to see us at all times, and acquaint him with our wants.

About the beginning of *December* a new *A new go-*  
governor came, our benefactor's three years  
being expir'd. We were much concern'd  
at it, as not doubting but that change might  
be prejudicial to us. 'Twould be a hard  
task to express how much kindness and af-  
fection he shew'd us at his departure, inso-  
much that seeing us ill provided against  
winter, he caus'd two pair of shoes, a coat  
well lined, and a pair of stockings of skins  
to be made for every one of us. Besides,  
he treated us nobly, and assur'd us he was  
sorry it had not been in his power to send  
us over to *Japan*, or to carry us over with  
him to the continent. He further added,  
that we ought not to be troubled at his go-  
ing away, because, being at court, he would  
use all his endeavours to obtain our liberty,  
or to have us carried thither. He restor'd  
us the books we had sav'd, with some other  
parcels of goods, giving us at the same time  
a bottle of precious oil, which might be of  
use to us for the time to come. The first  
thing the new governor did, was to reduce  
our allowance to rice, salt, and water. We  
complain'd to the old governor, who was  
detain'd in the island by contrary winds,  
but he sent us this answer; That his time  
being expir'd, 'twas not lawful for him any  
longer to hear our complaints, but that he  
would write to his successor. And as long  
as he was in the island, tho' sparingly, we  
were allow'd as much as might stop our  
complaints.

After that good Lord's departure, which The men  
was in the beginning of *January* 1654, we hardly  
were much worse used than we had been be- by him.

barley instead of rice,  
and

and barley-meal instead of wheat. Thus,  
if we had a mind to eat any other food, we  
must sell our barley, and live upon the twelve  
ounces of meal. This hard usage forced  
us to think of making better use of our li-  
berty of going abroad by six and six at a  
time, than we had done before. We were  
invited by the approaching spring to make  
our escape, and the more, because the king's  
orders did not come, and we were in dan-  
ger of ending our days in that island in  
captivity: therefore, after long consulting  
together how we might seize upon a boat  
in a dark night, at length six of us resolv'd  
to execute this design about the end of A-  
pril: but one of the gang being got atop  
of the wall, to discover the vessel we were  
to seize, he was unfortunately discover'd by  
some dogs, whose importune barking  
made the guards more watchful, and us  
lose an excellent opportunity of making  
our escape.

Some at-  
tempt to  
escape, but  
are pu-  
nish'd.

About the beginning of May, our master  
going abroad with five others, three of  
whom are still living, as he was walking,  
observ'd, that at a little hamlet near the  
city there was a barque well appointed,  
without any body to guard it. He pre-  
sently sent one of his company to get a lit-  
tle boat and some short planks. Then  
making every one of his men drink a  
draught of water, he went aboard without  
taking care for any more. Whilst they  
were labouring to draw the barque over  
a little shoal that was by it, some of the  
inhabitants discover'd their design, and one  
of 'em running out with a musket, went  
into the water to oblige them to return:  
yet that did not hinder their getting out,  
except one, who not being able to get up  
to the others, was forced to go back to  
land. The other five going to hoist sail,  
both the mast and sail fell into the water.  
They soon got 'em up, and setting every  
thing right with much labour, as they en-  
deavour'd a second time to hoist sail, the  
end of the mast broke off short, and could  
not possibly be mended. All these delays  
gave the natives time to get into another  
barque, and soon overtook them, our men  
having nothing to help 'em away. As soon  
as they came together, our men nimbly  
boarded them, hoping to make themselves  
masters of the vessel, notwithstanding their  
enemies weapons; but finding this barque  
was full of water, and unfit for service, they  
all submitted. Being brought ashore, they  
were carried before the governor, who cau-  
sed their hands to be made fast to a great  
log with a strong chain, and having laid  
them flat on the ground, and brought all  
us before them well bound and manacled,  
they were ask'd, whether they had done  
that action without our knowledge, or whe-

ther we had been made privy to it; they all  
positively asserting we knew nothing of it,  
Wettevree before mention'd was set to exa-  
mine what their design was; and they an-  
swering, 'twas no other but to go to Japan.  
How durst you, said the governor, attempt  
that passage without bread and water? they  
answer'd, they had chose rather to expole  
themselves once for all to the danger of  
death, than to die every moment. We  
were immediately unbound, but the six  
unfortunate wretches had every one twenty-  
five strokes on the bare buttocks with a  
cudgel a fathom long, four fingers broad,  
and an inch thick, being flat on the side  
that strikes, and round on the other. These  
strokes were so unmercifully laid on, that  
they who receiv'd 'em were forced to keep  
their beds a month, and we were all of us  
depriv'd of our liberty, and strictly guarded  
day and night.

About the latter end of May orders came  
to carry us to court, at which we knew not  
whether we ought to rejoice, or be troubled.  
Six or seven days after, they put us into  
four boats, with fetters on our feet, and  
one hand made fast to a block, to prevent  
our leaping into the water, which otherwise  
we might easily have done, all the soldiers  
being sea-sick. After two days struggling  
with contrary winds, we were put back, and  
our irons taken off: we return'd to our for-  
mer prison at *Quelpaert*. This island, *Quelpaert*  
which the natives call *Sebefure*, lies twelve  
or thirteen leagues south of the coast of *Co-  
rea*, and is about fourteen or fifteen leagues  
in compass. On the north side of it is a  
bay, where several barques lie, and whence  
they sail for the continent, which is of very  
dangerous access to those that are unac-  
quainted with it, because of several hidden  
rocks, and that there is but one place where  
ships can anchor and tide under shelter, for  
in all other places they are often drove over  
to the coast of *Japan*. The island is all  
encompass'd with rocks, but abounds in  
horses and cattle, which pay great duties  
to the king; so that, notwithstanding their  
breeds of horses and herds of cattle, the  
islanders are very poor, and despis'd by  
the inhabitants of the continent. In this  
island there's a mountain of a vast height,  
all cover'd with woods; and several small  
hills, which are naked, and enclose many  
vales abounding in rice.

Four or five days after, the wind came  
about, and we were ship'd again betimes in  
the morning, with the same precaution as  
before. Towards night we drew very near  
the continent, and having lain all night in  
the road, landed the next morning, where  
our chains were taken off; but our guards  
doubled.

HAMEL. In the morning we had horfes brought,  
1653. to carry us to the city *Heynam*; and having

been separated at sea, and landed in several places, we were very glad to meet all together again at that town. The next morning, having taken a very slender repast, we came to the town of *Jebam*, where *Paul John Cool* of *Piemerende* our gunner died, having never enjoyed his health since our shipwreck. Next day the governor of the town caused him to be buried, and we mounting a horseback, came at night to the city *Nadiao*. The day following we lay at *Sanjiang*, thence to *Tongap*, after crossing a high mountain, on the top whereof is the fort *Ippam-Sanjiang*, which is very spacious. Thence we went to the city *Teyn*, and the next day we baited at the little town of *Kunige*, and at night came to the great town of *Cbintio*, where the king formerly kept his court, and where now the governor of the province of *Thilado* resides.

This is a city of great trade, and very famous in that country, tho' a day's journey from the sea. Going thence, we lay at *Jeslan*, the last town of the province of *Tbilado*; then at the little town of *Gurun*, next at *Jenjan*, and lastly at *Consha*, the residence of the governor of the province of *Tongjando*. Next day we cross'd a great river, and enter'd upon the province of *Sengado*, in which *Sior*, the capital of the kingdom, is seated. After lying many days in several places, we cross'd a river as wide as the *Maese* is at *Dordrecht*, a league from whence is the city of *Sior*, where the king keeps his court. We reckon'd seventy-five leagues we had travel'd from our landing to this city, all the way northward, only a little inclining to the west. Being come to this town, they put us all together into a house, where they left us two or three days, after which time they put us into little huts, three and three, or four and four, with *Chinese* that are settled there: then they carried us all in a body before the king, who examin'd us to all points by the help of *Wettevee*. Having answer'd him the best we could, we humbly beseech'd his majesty, that since we had lost our ship in the storm, he would be pleas'd to send us over to *Japan*, that with the assistance of the *Dutch* there, we might one day return to our country, to enjoy the company of our wives, children, and friends. The king told us, 'twas not the custom of *Corea* to suffer strangers to depart the kingdom; that we must resolve to end our days in his dominions, and he would provide us with all necessaries. Then he order'd us to do such things before him as we were best skill'd in, as singing, dancing, and leaping after our manner. Next he caus'd us to have meat given us, which was well

enough after their manner, and gave each of us two pieces of cloth, to cloath us after their fashion. The next day we were all sent before the general of the forces, who order'd *Wetteeree* to tell us, that the king had put us into his life-guards, and that, as such, he would allow us seventy *Cattys* of rice a month. Every one of us had a paper given him, in which was set down his name, his age, his country, what profession he had follow'd before, and what he now was, all in their character, seal'd with the king's great seal, and the general's, which is nothing but the print of a hot iron. Together with this commission they deliver'd to each a musquet, powder, and ball, with orders to give a volley before the general every first and fourth day of the month ; to be always ready to march into the field with him, whither the king went, or upon any other reviews. In spring and autumn that general reviews his troops three times a month ; and besides, the soldiers exercise as often in private. A *Cingee* and *Wetteeree* were appointed to command us, the former as serjeant, and t'other to have an eye over us, and to teach us the customs and manner of behaviour of the *Corelians*. Most of the great men, being fond of novelty, invited us to dine at their houses, to see us exercise after our manner, and to make us shoot and dance. But, above all, their wives and children were eager to see us, because the meaner sort of the island of *Quelpaert* had spread abroad a report that we were monstrous, and that, when we drank, we were forced for to tuck up our nose behind our ear. These absurd tales were the cause that the better sort of people at *Sior* were amaz'd to see us better shap'd than the people of their own country. Above all, they admir'd the fairness of our complexion, and did so throng to see us, that at first we had much ado to break thro' the croud in the streets ; and we could not be quiet at home, their curiosity was so great. At length the general put a stop to this, forbidding all persons whatsoever to come near us without his leave ; and the more, because the very slaves of great men took the boldness to come and fetch us out of our chambers, to make a jest at, and divert themselves with us.

In *August* the *Tartar* came to demand <sup>A great</sup> the usual tribute, whereupon the king was <sup>fort.</sup> forced to fend us to a great fort, to be kept there as long as the Embassador was in the country. This fort is about six or seven leagues from *Sier*, on a mountain they call *Namma Sanfiang*. 'Tis three hours work to get up to it, and is so strong that the king retires to it in time of war, and most of the great men of the kingdom live there. 'Tis always provided for three years.

They  
come to  
court.

years, and for a great number of people. There we continued till the beginning of September, when the *Tartar* went away.

About the end of November the cold was so vehement, that the river, which is a league from the capital city, as was said before, was froze, and three hundred horses loaded pass'd over it. The general taking compassion to see the cold we endur'd, gave the king an account of it, who order'd some hides we had sav'd from our shipwreck to be distributed among us, which were most of 'em rotten, allowing us to fell 'em, and buy something to cloath us warm. Two or three resolv'd, with the money they got by these hides, to purchase to themselves a little hut, chusing rather to endure cold, than to be eternally tormented by their landlords, who were continually finding of us to the mountains, two or three leagues distant, to fetch wood. This labour was intolerable, both by reason of the cold, and because the ways are bad and uneasy. The little hovel they bought cost 'em nine or ten crowns; and the rest having cloath'd themselves the best they could, were forced to pass the remainder of the winter as they had done before.

Two Dutch im-  
pore the  
Tartar's  
assistance.

The *Tartar* returning in March, 1655, we were forbid, as before, under severe penalties, going out of our houses. The day he set forward to return home, *Henry Janus* of *Amsterdam*, our master; and *Henry John Bos* of *Haerlem*, a gunner, resolv'd to go meet this embassador on the way, upon pretence of going for wood. When they saw him appear at the head of several bodies of horse and foot that attended him, they laid hold of his horse's reins with one hand, and with the other turning aside their *Corefian* habit, shew'd him they were clad after the Dutch manner underneath. This at first caus'd a great confusion among the multitude, and the *Tartar* ask'd them earnestly who they were, but they could never make him understand them; however, the embassador order'd 'em to follow, and be where he was to lie that night. Being come thither, he made much enquiry whether there was any body that could understand what they said to him; and having been told of *Wettevee*, he sent for him to come to him with all speed. That interpreter having advertis'd the king, a council was held, where 'twas resolv'd to make the embassador a present, to the end he should so stifle the matter, that it might not come to the cham's ear. Our two poor wretches were brought back to *Sior*, and put into a prison, where they soon after dy'd, but we could never know whether a violent or a natural death, none of us having been ever allow'd to see them. As soon as this business was noised abroad, we were carried be-

VOL. IV.

fore the council of war, where 'twas ask'd, *HAMEL*, whether we had any intimation of our companions design? and tho' we could truly assert we had not, yet that would not save us from being adjudg'd to have every one fifty strokes on the buttocks, for not having given notice of our companions going out. We had certainly receiv'd that correction, had not the king remitted it, saying, we were poor wretches cast into his country by storms, rather than any design of plundering. All the penalty he laid on us was, sending us home again, with an injunction not to stir abroad without his orders.

In June, when 'twas thought the *Tartar* was to come, the general sent our interpreter to acquaint us, that a vessel was run aground on the island of *Zyelpaert*, and, that *Wettevee* being too old to perform that journey, those three among us, who best understood the *Corefian* language, must prepare to set out. In pursuance of this order, the assistant, the pilot's mate, and a gunner were chosen, who set out two days after, to bring an account of that shipwreck.

The *Tartar* coming in August, we were commanded, under pain of severe punishment, not to stir out of our quarters till three days after he was gone. The day before he came, we receiv'd letters from our companions, by an express, in which they gave us an account, that they were confined on the southernmost borders of the kingdom, where they were strictly guarded, to the end that if the great cham had receiv'd any intelligence concerning the two unhappy fellows that were dead, and should demand the rest, they might tell him they were all three cast away going to the island *Zyelpaert*. The *Tartar* came again about the latter end of the year, and we were by the king's order strictly confin'd to our houses, as we had been before.

Tho' the *Tartar* had sent twice into *Co-All* the *rea*, since the attempt unfortunately made *Dutch* by our two companions, without making *ba-* any mention of it; yet most of the great *nish'd* men used all their endeavours with the king *the* to destroy us. The council sat three days upon this affair, but the king, his brother, the general, and some others, were not altogether of that opinion. The general was for making each of us fight two *Corefians*, all with the same weapons, pretending that so the king would be rid of us, and none would have it to say, that the king had murder'd poor strangers. Some more charitable persons, who knew we were kept shut up, and ignorant of what was doing, gave us this intelligence privately: hereupon *Wettevee* told us, that if we liv'd three days, we should in all likelihood live long

HAMEL, enough after. Now the king's brother, 1653. who was president of the council, passing by our quarters, as he was going to it, and very near to us, we had the opportunity to cast our selves at his feet, and implore his favour, lying with our faces prostrate on the ground. This sight mov'd so much compassion in him, that for the future he sollicit'd our affair so earnestly, that we owe our lives only to the king and him. This giving offence to many persons, who might attempt other methods to destroy us; for the preventing their wicked designs, and to avoid our appearing before the tartars, it was thought fit to banish us into the province of *Tbillado*, where we were to be allow'd fifty pounds of rice a month, at the king's cost. Accordingly, we departed from *Sior in March*, on horses provided for us, our acquaintance bearing us company as far as the river, which is a league from the city. There we took our last leave of *Wettevree*; for from that day to this, we have never seen nor heard talk of him. We pass'd through all the same towns we had seen in our way to the court, and coming to lye at *Jeam*, we set out the next morning, and about noon arriv'd at a great town call'd *Dusfong*, or *Tbillapening*, commanded by a large citadel opposite to it. The *Penigse*, who is chief in the absence of the governour, resides there, and has the title of colonel of the province. To him the sergeant that had the charge of us, deliver'd us with the king's letters. He was immediately sent away to go fetch our three companions that had been sent away the year before, who were twelve leagues off, where the vice-admiral commanded. We were all lodg'd together in a publick-house, and three days after, those that were absent being brought to us, we were again together thirty-three of us, the miserable remains of our shipwreck.

Their im-  
ployment. In *April* they brought us some hides that had been left behind at *Quelpaert*, from which place we were but eighteen leagues, they not being worth sending to *Sior*. We fitted our selves the best we could, and laid up some small provisions in our new habitation. The only business we were charg'd with, was to pull up the grass that grew in the square before the castle twice a month, and to keep it clean.

This year 1657, our governour being accus'd of some misdemeanours, was forc'd to go to court to clear himself, where it is reported he was in danger of his life. But being well belov'd by the people, and favour'd by the great ones on account of his family, which was one of the noblest in the kingdom, he came off so well, that his honours were increas'd. He was very good to us, as well as to the natives. In *Februa-*

ry came a governour very unlike the other; for, besides that he found us more work, he would oblige us to go three leagues off to the mountain to fetch wood, which his predecessor had caus'd to be brought home to us gratis. But God be prais'd, an apoplexy deliver'd us from him in *September* following, which no body was sorry for, so little was he lik'd.

In *November* came a new governour, who took so little care of us, that when we ask'd him for cloaths, or any things else, he answer'd, the king had given him no orders as to that point, that he was only oblig'd to furnish our allowance of rice, and for other wants it was our business to provide as we thought fit. Our cloaths being now worn out with carrying of wood, and the cold beginning to pinch us, we resolv'd to cast off shame among those people, and to beg, making our advantage of their curiosity, which led them to ask us a thousand questions. Accordingly, that we might get something to cloath us, and not be forc'd to run half a league for a handful of salt, we presented a petition to the governour for his leave to beg, representing that we could not possibly get our living any longer by carrying wood, because we were naked, and our labour would yield us nothing but a little salt and rice; therefore we humbly pray'd, he would permit us to go abroad in our turns. He granted it; and we made such good use of this favour, that in a short time we were provided against the cold.

At the beginning of the year 1658, the governour was call'd away, and his successor afflicted us with new crosses. He forbid us going abroad, and told us, that if we would work for him, he would give each of us three pieces of cotton-cloath. After having long consider'd upon his offers, which would not set us above other wants, especially in a scarce year as that was, and knowing we should wear out more cloaths in his service than he would give us, we with all imaginable respect presented to him, that he ought not to require that of us; after which an accident happen'd, which oblig'd him to consent to our demands. Those people are so much afraid of a fever, that the only thoughts of it terrifies them, and some of us being then under that disease, he consented that we should beg in companies, provided we were not absent above a fortnight or three weeks, and that we neither went towards the court, nor *Japan*. The other half of us that remain'd at home, he order'd should look to the sick, and take care to pull up the grass in the square.

In *April* this year, the king dy'd, and his son succeed'd him with the consent of the great *Cham*. However, we went on in our trade,

we went on in our  
trade,

traue, and particularly among their religi-  
ous men, who are very charitable and  
grateful, for the pleasure we did them in  
giving an account of our adventures, and  
shewing them the customs of other coun-  
tries. They were so much pleas'd to hear  
us, that they could have spent days and  
nights in our company.

The next governour that came in the  
year 1660, was so kind to us, that he of-  
ten declar'd, if it were in his power, he  
would send us back into our country, or at  
least to some place where there were coun-  
try-men of ours. He granted us a confir-  
mation of the liberty of going abroad  
without any restraint. This year happen'd  
such a drought, that all sorts of provisions  
were very scarce. The following year 1661,  
was yet more miserable, abundance of peo-  
ple were famish'd to death, and the roads  
were full of robbers. The king vigo-  
rously pursu'd them, and by that means  
prevented many robberies and murders.  
He also order'd the dead bodies found in  
the fields, to be buried. Acorns, pine-  
apples, and other wild fruit, were all the  
support of the people, and the famine was  
so great, that villages were plunder'd, and  
some of the king's stores broke open, and  
none punish'd for it, because those disor-  
ders were committed by the slaves of great  
men, and this calamity lasted all the year  
1662. The next year 1663, felt some  
share of it ; for either the poor had not  
sow'd, or else they had no crop ; however,  
that was remedy'd by the plentiful harvest  
in other places that were water'd by rivers,  
or lay near bogs, otherwise the country had  
been utterly destroy'd. The place where  
we were being no longer able to furnish us,  
the governour writ about it to the intend-  
ant of the province, who answer'd, that  
the king having appointed our subsistence  
to be furnish'd there, he could not remove  
us to another place without an order from  
his majesty. About the end of February,  
the governour pursuant to the orders he had  
receiv'd from court, dispers'd us into three  
towns, twelve he sent to *Sayfiano*, five to  
*Siunfchien*, and as many to *Namman*, for  
we were but twenty-two at this time. This  
parting was very grievous to us, it being  
a great satisfaction to be all together in a  
place, where we were at our ease, and had  
good provisions ; whereas it was to be fear'd  
they might send us to some place that still  
labour'd under the hardships of famine.  
This our sorrow was turn'd into joy, for  
this alteration was the occasion of our get-  
ting away, as will appear in the sequel. A-  
bout the beginning of March, after tak-  
ing leave of our governour, and returning  
him abundance of thanks for his favours,  
we set out from thence afoot, carrying the  
sick and what baggage we had, on the

horses allow'd us. Those that were going  
to *Sayfiano*, and to *Siunfchien*, went the  
same road with us, and we lay all in the  
same town the first and second night.  
The third day we came to *Siunfchien*,  
where we left five of our companions. The  
next night we lay in a country-house, and  
setting out early in the morning, came a-  
bout nine to *Sayfiano*, where those that con-  
ducted us deliver'd us to the governour, or  
admiral of the province of *Tballado*, who  
resides there. He presently order'd us lodg-  
ing, and such furniture as was necessary,  
and the same allowance we had enjoy'd till  
then. This seem'd to us to be a very good  
worthy Lord. Two days after our com-  
ing, he went away to court, and three days  
after his departure, came another to succeed  
him, who prov'd our scourge ; for he would  
not suffer us to be far from him, and left  
us expos'd to all hardships of the summer  
and winter. The greatest favour he granted  
us, was leave to go cut wood fit to make  
arrows for his men, whose only employ-  
ment is continually shooting with the bow.  
The great men striving who shall keep the  
ablest archers. He put many more hard-  
ships upon us, but God gave us our revenge.  
Winter drawing on, and the town we were  
in not having furnish'd us with necessaries  
against the cold, we represented to the go-  
vernour in what a good condition our com-  
panions were in the other towns, and hum-  
bly pray'd he would vouchsafe to permit  
us to go seek out for something to defend  
us against the cold. He gave us leave to  
be absent three days, upon condition the  
one half of us should remain with him,  
whilst the other half was abroad. This  
liberty was very beneficial to us, because  
the great men, who had compassion on us,  
favour'd our sallies, and we were some-  
times allow'd to be a month abroad. What-  
soever we got was brought and put in  
common with those that remain'd in the  
city. This continu'd till the governour's  
departure, who was sent for by the king to  
come to court. At his arrival there, he  
declar'd him general of his army, an em-  
ployment always possess'd by the second  
man in the kingdom. His successor eas'd  
us of all our burdens that had been im-  
pos'd on us, and order'd we should be as  
well treated as our companions were in the  
other towns. Thus we were only oblig'd  
to pass muster twice a month, to keep our  
house in our turns, and to ask when we  
would go abroad, or at least to give the  
secretary notice, that, if occasion were, they  
might know where to find us. We gave  
God thanks for having deliver'd us from  
such a wicked man, and sending such a  
good one. This man, besides the favours  
already mention'd, often treated us, and  
civilly condoling our misfortune, ask'd,  
why,

HAMEL.  
1653.

Famine.

The Dutch  
parted.

Corpan  
charitable

HAMEL, why, being so near the sea as we were, we <sup>1653.</sup> did not attempt to pass over that small sea which parted us from Japan? We answer'd, we durst not venture upon such a thing contrary to the king's will; and besides, we knew not the way, and had no vessel. To this he reply'd, there were barques enough along the sea-coast. We rejoind'd, they did not belong to us, and that if we miss'd our aim, we should be punish'd as thieves and deserters. The governor laugh'd at our scruple, not imagining we talk'd after that manner only to prevent their being jealous of us, and that all our thoughts day and night were employ'd in contriving how to seize a barque, and that our enemies had obstructed our buying one till that time. Now we receiv'd the news, that our late governor had not enjoy'd his new honour above six months, before he was summon'd to answer before the king for his misdemeanours. He was accus'd of having put to death several persons, as well nobles as commoners, on very slight occasions. He was condemn'd to receive four-score and ten strokes of a cudgel on his shin-bones, and to be banish'd for ever.

Comets.

Superstition.

About the latter end of the year a blazing-star appear'd, and after that two at once; the first was seen in the south-east for about two months, the other in the south-west, but their tails were opposite against one another. The court was so much alarm'd at it, that the king caus'd all the guards to be doubled in all his ports, and aboard his ships. He also caus'd provisions to be carry'd into his strong hold, and store of ammunition. He made all his forces, both horse and foot, exercise every day, and expected nothing less than an invasion from some of his neighbours; inso-much that he forbid making any fire at night in those houses that might be seen from the sea. The common sort spent all they had, keeping only as much as would serve them poorly to subsist with rice, because they had seen the same signs in the heavens when the *Tartars* came to over-run their country. They also remember'd that some such thing had appear'd, before the *Japanese* declar'd war against them. Wherever we were, they ask'd us, what we judg'd were the consequences of comets in our country. We told them, it denoted some signal judgment of God to follow, and generally the plague, war, or famine, and sometimes all three. Having had experience of it, they agreed with our opinion. We liv'd this and the ensuing year 1665, enough at our ease, using all our endeavours to make our selves masters of a barque, but without success. Sometimes we row'd in a little boat, which served us to get our living along the shore, and sometimes to round

some small islands, to see whether nothing would fall out to our purpose, and which might forward our escape. Our companions that were in the two other towns, came every now and then to see us, and we repay'd their visits often, or seldomer, according as it pleas'd our governor, for some were more favourable than others. Yet we were patient under the greatest severities, thinking it a great mercy that God granted us our health, and a subsistence during that long captivity. The following year 1666, we lost our protector and good friend; for his time expiring, the king honour'd him with a better employment. It is incredible how much good he did to all sorts of people indifferently during his two years government; and accordingly he was entirely beloved both in the city and country, and the king and nobility had a great esteem for his wisdom and good behaviour. Whilst he was in his post, he repaired publick structures, cleared the coasts, and maintained and increased the marine forces. The king was so well pleas'd at these actions of his, that he preferred him to the prime dignities at court. We were without a governor for three days after his departure, for it is enough, if he that quits has his place supply'd the third day by his successor; these three days being allowed the new governor, that by the advice of some diviner, he may choose a happy minute to enter upon his government. As soon as install'd, he thought it not enough to use us with all the severity the banish'd governor had done, but would oblige us continually to mould clay, which we refused to do, alledging that his Dutch predecessor had not impos'd any such labour upon us; that our allowance being scarce enough to keep us alive, it was but reasonable to allow us what time we had to spare from our own affairs, to get something to cloath us, and supply our other wants; that the king had not sent us to work, or if we must be so us'd, it were better for us to quit his allowance, and desire to be sent to Japan, or some other place, where there were any of our nation. All the answer was, ordering us to be gone, threatening he would find a way to make us comply. But he was luckily prevented; for but few days after, he being in a very pretty vessel, some fire accidentally fell into the powder, and blew up the prow, killing five men. Here it must be observ'd, that those people keep the powder in a powder-room before the mast. The governor believing he could conceal that accident, gave no account of it to the intendant of the province; but he was mistaken, for the fire was seen by one of the spies the king keeps on the coasts, and even in the heart

heart of the country, to be inform'd of all that happens. This spy having acquaint- ed the intendunt with it, he sent an account of it up to court, whither the governour was immediately summon'd, and by sentence of the judges receiv'd fourscore and ten strokes on his shin-bones, and was banished for ever. Thus in July, we had another governour, who behaving himself towards us in all re- spects as the last had done, requir'd of us every day an hundred fathom of mat. We gave him to understand that was impossible to be done, and made the same remon- strances to him as he had done to his prede- cessors. This mov'd him no more than it had done them; for he told us, that if we were not fit for that sort of work, he would find other employment for us, which he had done, but that he fell sick. His rigidness made us conclude, that our misfortunes were beyond redress, because new officers rather add new burdens, than take off those that are already laid on. Thus, besides our own affairs, we were oblig'd to pull up the grafts in the square of *Penigle*, and then to go cut, and bring home wood fit for arrows. These considerations made us resolve to take the advantage of our ty- rant's indisposition, and to get a barque at any rate whatsoever, choosing rather to hazard all than to groan any longer in capti- vity among idolaters, and bear with all sorts of wrongs they would offer us. For the compassing of our design we decreed to make use of a *Corefian* our neighbour, who was very familiar with us, and whom we had often reliev'd in his distress. We propos'd to him to buy, or cause a barque to be bought for us, pretending we want- ed it to go beg cotton in the neighbouring islands, promising him a good share when we came again. He perform'd what he was instructed with, bargaining very bold- ly for a fisherman's barque, and we pre- sently gave him the money to pay for it. The seller perceiving it was for us, would have gone from his bargain, at the insti- gation of some that told him, it was to make our escape, and if we did so, he would be put to death. This was really true; but we offering to pay double the value, he consented, making more account of the present pr. 31 than of the mischief that might ensue. As soon as the two *Co- refians* were gone, we immediately furnish'd the barque with sails, an anchor, rigging, oars, and all things we thought necessary, in order to set out at the first quarter of the moon, that being the fittest season. We kept two of our companions, whom their good fortune had brought to visit us, and who wanted not much courting; and under- standing that *John Peter of Uries*, an able sailor, was at *Sunfchien*, we went to desire

him to come to us, telling him all things *HAMEL* were in a readiness. The messenger mil- 1653.  
fing of him at *Sunfchien*, went to look for him at *Namman*, which is sixteen leagues farther, and brought him away, having travell'd above fifty long leagues in four days. The day and hour being appointed *Their de-* to depart, which was the 4th of *September*; *parture*, as the moon was setting, though our neigh- bours had conceiv'd some jealousie; yet we forbore not at night, after eating a bit of what we had, to creep along under the city walls to carry the rest of our provisions, be- ing rice, pots of water, and a frying-pan. The moon being down, no body saw us. The first thing we did, we went over into a little island, which was within cannon- shot, where we fill'd a cask, we found in the barque, with fresh water. Thence, with- out making any noise, we made our way before the vessels belonging to the city, and just opposite to the king's frigates, making out as far as we could into the channel. The calm which had continu'd till then, ceasing, there started up a fair gale, which invited us to hoist sail, as we did, heartily calling upon God to assist us, and resigning our selves up to him. On the 5th of *September* in the morning, when we were almost out of the channel of the island, a fisherman hail'd us, but we would not answer, fearing it might be some ad- vanced guard to the men of war that lye theareabouts. At sun-rising the wind fell, which oblig'd us to lower our sails and row, to get farther off and prevent being dis- cover'd. About noon the weather began to freshen, and at night we spread our sail, directing our course by guess south-east. The wind growing fresh at night, we cleared the point of *Corea*, and were no longer apprehensive of being pursued, and the wind holding all night we made much way.

The sixth day in the morning we found our selves very near the first of the islands of *Japan*; and the same gale still favour- ing us, we came without knowing it, be- fore the island of *Firando*, where we durst *Island of* not put in, because none of us had ever been *Firando*. at *Japan*, and we were nacquainted with the road. Besides, the *Corefians* had often told us, there were no isles to coast along in the way to *Nangasaki*. We therefore pass'd on to come up with an island that lay farther off, which appear'd to us very small and near to us, and accordingly we left it astern that night.

The seventh day we held on our course with a cold wind, and uncertain weather, running along abundance of islands, which seem'd to us to be numberless; and being possess'd there were no islands to be left be- hind, we endeavour'd to get above them.

HAMEL, At night we thought to have touch'd at a small island, and would have rid it out at anchor there, but the sky seem'd to look stormy; but we perceiv'd such abundance of fires all about, that we resolv'd to continue under sail, going before the wind, which was very cold.

The 8th, in the morning, we found our selves in the same place, whence we set forward at night, which we attributed to the force of some current. Hereupon we resolv'd to stand out to sea, but we had scarce sail'd two leagues before there started up a contrary wind, and blew so hard, that it forced us in all haste to seek the shelter of the land; and the weather still growing more boisterous every moment, after crossing a bay, we came to an anchor about noon, without knowing what country we were in. Whilst we were dressing some small matter to eat, the natives pass'd backwards and forwards close by us, without saying any thing, or making any stay. About evening, the wind being somewhat fallen, we saw a barque with six men in it, who had each of them two knives at their girdle. They row'd close by us, and landed a man opposite to the place where we were. This made us weigh and set sail as fast as we could, making use of our oars at the same time, to get out of the bay as soon as possible, and gain the open sea. But that barque prevented us, for setting out in pursuit of ours, it soon overtook us. True it is, if we would have made use of our long bamboos, we could easily have prevented their coming aboard us; but seeing several other barques set out from the shore full of men, who by the description we had heard of them, must be *Japonesse* we troubled our selves no farther. They hailing us, and asking us by signs, whicher we would go? We let fly the colours with the arms of *Orange*, which we had provided for that purpose, crying, *Holland, Nangasacki*. Hereupon they made signs to us to strike our sail and go ashore, which we presently did. They carry'd one of our men into their barque, and plac'd the rest in order before one of their pagods.

Being come to an anchor, and having plac'd barques about ours to guard it, they took another of our men, and carry'd him to the first they had drawn out, asking them several questions, but neither understood the other. Our arrival alarm'd all the coast, and there was not a man to be seen, but was arm'd with two swords; but what satisfy'd us was, that they endeavour'd to shew us *Nangasacki*, and seem'd to tell us there were some of our nation there. At night a great barque that brought the third man in dignity of the isle of *Gotto*, came aboard us. That gentleman perceiv-

ing we were *Hollanders*, gave us to understand by signs, that we had fix ships at *Nangasacki*, where he hop'd to be with us in four or five days, if we desir'd it. He signify'd to us that we were in the island of *Gotto*, subject to the emperor; and to satisfy his curiosity, desiring to know whence we came, we had a great deal of trouble to give him to understand that we came from *Corta*, and that it was thirteen years since we had been shipwreck'd on an island belonging to that kingdom; that we desir'd nothing so earnestly at present, as to get to *Nangasacki*, to some of our country-men, and that to gratify this our inclination we had expos'd our selves in a poor barque, in a sea unknown to us, where we had sail'd forty leagues without a compass, to reach *Japan*, not regarding all the *Corefians* had said to persuade us that the *Japonesse* put all these strangers that came into their country to cruel deaths.

We continu'd the three following days well guarded in the same place aboard our barque, whither they brought us water, wood, flesh, and gave us a mat to cover us from the rain, which fell in great abundance all that time.

On the 12th, they furnish'd us with provisions to go to *Nangasacki*, and that same night we anchor'd on the other side of the island, where we spent the night.

On the 13th, that gentleman we mention'd before weigh'd anchor, being attended by two large barques, and two little ones, he carry'd some letters from the emperor, and some goods. Our two companions were in one of those great barques, and did not come to us again till we were at *Nangasacki*. About evening we saw the bay of that city, and at midnight anchor'd before it, where we found five ships of ours. Several inhabitants of *Gotto*, and even some of the chief men, presented, and did us many kindnesses, without taking any thing of us.

On the 14th we were all carry'd ashore, where the companies interpreters receiv'd us. When they had writ down all the answers we made to their several questions, they carry'd us to the governor's house, and about noon we were brought before him. When we had satisfy'd his curiosity, he much commended our action, in overcoming so many dangers and difficulties to recover our liberty. Then he order'd the interpreters to conduct us to our commandant, *Min Heer William Volguers*, who receiv'd us very kindly. *Min Heer Nicholas le Roy*, his deputy, was also very friendly, and so was all the nation in general. When we went thence they caus'd us to be habited after our own fashion.

On the first of *October*, *Min Heer Volguers* left the island, and on the 23d fail'd out of the bay with seven ships. The governor of *Nangafaki*, who would have kept us a year, caus'd us to be brought before him on the 25th of the month, and after examining us over again, restored us to the company's director, who lodg'd us in his own house, whence we fail'd some days after for *Batavia*. Where we arriv'd on the 20th of *November*, and at our landing deliver'd our journal to the general, who, after a very favourable reception, promis'd to put us aboard the ships that were to sail from thence on the 28th of *December*. These ships, after some storms, arriv'd at *Amsterdam* on the 20th of *July* 1668. where we return'd thanks to God for having deliver'd us from a captivity of thirteen years, and twenty eight days, beseeching him to have mercy on our poor companions, who were left behind. Here follow the names of those that return'd home, and of those that were left in *Corea*.

The names of those that return'd from *Corea*.

*John* of *Utrecht*.

## The description of the kingdom of COREA.

**Situation.** THE kingdom known to us by the name of *Corea*, and by the natives call'd *Tiozenconk*, and sometimes *Caoli*, reaches from 34 to 44 degrees of north latitude, being about one hundred and fifty leagues in length from north to south, and about seventy-five in breadth from east to west; therefore the *Corefians* represent it in the shape of a long square, like a playing card: nevertheless it has several points of land which run far out into the sea.

**Division.** 'Tis divided into eight provinces, containing three hundred and sixty cities and towns, without reckoning the forts and castles, which are all on the mountains.

**Coasts.** This kingdom is very dangerous and difficult for strangers, who are unacquainted with its coasts, to land, because 'tis much enclos'd with rocks and sands. Towards the south-east 'tis very near *Japan*, there being but twenty-five or twenty-six leagues distance betwixt the town of *Poufsan* in *Corea* and that of *Otsaco* in *Japan*. Betwixt them is the island *Suisima*, which the *Corefians* call *Taymutta*: it formerly belong'd to them, but they exchang'd it for that of *Quelpaert*, in a treaty of peace concluded with the *Japonefe*.

**Bounds.** On the west this kingdom is divided from *China* by the bay of *Nanking*, but is join'd to it on the north by a long and high mountain, which is all that hinders *Corea*'s

being an island. On the north-east it is bounded by the vast ocean, where there's every year a great number of whales taken, Fishery. some of 'em with the *French* and *Dutch* harping-irons, those people using to follow that fishery. There are abundance of herrings also catch'd there in *December*, *January*, *February*, and *March*. Those taken the two first of these months are as large as ours in *Holland*; but what they catch afterwards are smaller, and like those in *Holland* call'd *frying herrings*, which are eaten in *March* and *April*. Hence we infer, that there's a passage above *Corea*, *Japan*, and *Tartary*, which answers to the straits of *Weigats*: for this reason we often ask'd of the *Corefian* seamen, who use the north-east sea, what lands were beyond them, and they all told us, they believ'd there was nothing that way but a boundless ocean.

Those that go from *Corea* to *China* embark in the uttermost part of the bay; for the way by land is too troublesome, by reason of the difficulty there is in passing the mountain, especially in winter, because of the excessive cold; and in summer, because of the many wild beasts. 'Tis easy to pass over on the north side in winter, the bay being generally froze hard enough to bear. The cold is so intense in *Corea*, that in the year 1662, we being in the monasteries

Cold.

HAMEL,  
1653.

nafteries on the mountains, there fell such a wonderful quantity of snow, that they made ways under it to go from house to house; and to go upon it, they wear small boards like little battledores under their feet, which hinders their sinking, and yet is no obstruction to going up or down. This we forgot to insert in the journal. By reason of this excessive cold, those who live on the northern coast feed only upon barley, and that none of the best, for no rice or cotton can grow there: those that are best to pass there, have their meal brought from the south. The poorer sort there have no clothes but what are made of hemp and pitiful skins; but, to make amends, the root *Nisy* grows there, which they give to the *Tartar* for their tribute, and drive a great trade with it to *China* and *Japan*. The rest of the country is fruitful, and produces all things necessary to support life, especially rice, and other sorts of grain. They have hemp, cotton, and silk-worms; but they know not how to work the silk. There is also silver, lead, tygers skins, and the *Nisy*-root, not to speak of beasts, and fowl, and several other things. They have store of horses and cows, and make use of oxen to till the land, and of horses to travel and carry goods from place to place. There are also bears, deer, wild boars, swine, dogs, cats, and several other creatures. We never saw any elephants there but alligators or crocodiles of several sizes, which keep in the rivers: their back is mulquet proof, but the skin of their belly is very soft. Some of 'em are eighteen or twenty ells long, their head large, the snout like a hog, the mouth and throat from ear to ear, the eye sharp but very small, the teeth white and strong, placed like the teeth of a comb. When they eat, they only move the upper jaw. Their backbone has sixty joints; on their feet are long claws or talons, their tail is as long as the body; they eat either fish or flesh, and are great lovers of man's flesh. The *Corejians* often told us, that three children were once found in the belly of one of these crocodiles. Besides these, there are abundance of serpents and venomous creatures. As for fowl, they have swans, geese, ducks, herons, storks, eagles, falcons, kites, pigeons, woodcocks, magpies, daws, larks, lapwings, pheasants, hens, and plenty of 'em all, as well as other sorts not known in *Europe*.

**Absolute monarchy,** *Corea* is subject to a king, whose power is absolute (tho' he pays an acknowledgment to the *Tartar*) and he disposes of all things as he pleases, without asking any body's advice. There are no lords of peculiar places, that is, who are proprietors of towns, islands, or villages, and all the

great mens revenues arise out of those estates they hold during pleasure, and from the great number of their slaves, for we have known those that had two or three hundred; so that the lands and employments the king bestows on any man, revert to him after his death.

For martial affairs, the king keeps abundance of soldiers in his capital city, who have no other employment than to keep guard about his person, and to attend him when he goes abroad. All the provinces are oblig'd, once in seven years, to send all their freemen to keep guard about the king for two months; so that, during that year, 'tis constantly under arms, to send all the men in their turns to court. Each province has its general, who has four or five colonels under him, and each of these as many captains depending on them, and each of these is governor of some town or strong hold; inasmuch that there's not a village but where at least a corporal commands, who has tithing-men, or officers over ten men, under him. These corporals are oblig'd, once a year, to deliver to their captains a list of what people are under their jurisdiction, and by this means the king knows how many men he may reckon upon when he has need. Their horse wear cuirasses, head-pieces, and swords, as also bows and arrows, and whips like ours, only that theirs have small iron points. The foot, as well as they, wear a corselet, a head-piece, a sword, and musquet or half-pike. The officers carry nothing but bows and arrows. The soldiers are oblig'd to provide fifty charges of powder and ball at their own cost. Every town in its turn furnishes also a number of religious men, drawn out within its own liberties, to guard and maintain the forts and castles at their own expence, these being in narrow passes, or on the sides of mountains. They are counted the best soldiers, and obey officers chosen out of their own corps, who observe the same discipline as the other. Thus the king knows to a man how many are fit to serve him; those that are sixty years of age are discharg'd from duty, and their children supply their places. The number of freemen who are net in the king's service, and have not been, together with the slaves, makes about half the people in the country. If a freeman lies with a woman-slave, or a man-slave with a freewoman, the children born of them are slaves; and those whose father and mother are both slaves, belong to the mother's master. *Corea* being almost encompass'd on all sides by the sea, every town is to maintain a ship ready rigg'd, and provided with all necessaries. Their ships have generally two masts, and thirty or thirty-two oars, to each of which there

there are five or six men, so that each of this sort of galleys carries about three hundred men for rowing and fight. They carry some small pieces of cannon, and abundance of artificial fire-works. For this reason every province has its admiral, who views these vessels once a year, and gives an account of what he finds, to the high admiral, who sometimes is present at these reviews. If any of the admirals, or the officers under them, commits a fault, he is punish'd with banishment, or death, as in the year 1666, we saw our governor punish'd, who had the command of seventeen vessels, for not acquainting the king that the powder had taken fire, and blown up five men.

**Council.** The chief officers by sea and land, who make up the king's council, meet every day at court, and serve him in all things that occur, without having power to oblige him to any thing. They must wait till their advice is ask'd, before they give it, and till they are appointed to manage any business, before they must meddle with it. These people have the first places about the king, and live and die in those employments, or till fourscore years of age, provided they commit no crime that renders 'em unworthy to continue. The same is practis'd in other inferior employments at court, which no man quits, unless it be to rise. The governors of places, and subaltern officers, are remov'd every three years, and very few of 'em serve out their time, because they are for the most part accus'd of some misdemeanors during their administration. The king keeps spies in all places, to inform him of every man's behaviour, which is the reason why many are often punish'd with death, or perpetual banishment.

**Revenue.** The king's revenue for maintenance of his house and forces, arises out of the duties paid for all things the country produces, or that are brought by sea; to this purpose, in all towns and villages there are store-houses, to keep the tythe; for the farmers, who are generally of the common sort, take the tythe of all things upon the spot in harvest time, before any thing is carried away. The great men live upon their revenues, as has been said before; and those that have employments live upon the allowance the king gives 'em, to be receiv'd out of the revenues of the places where they reside, assigning what is rais'd in the country for the sea and land forces. Besides this tythe, those men who are not list'd are to work three days in a year, at whatsoever business the country will put 'em upon. Every soldier and trooper has every year three pieces of cloth given him to cloath him, which in all are worth a pistole, which is part of the pay of the troops that are in the capi-

VOL. IV.

tal of the kingdom. This is what is rais'd on the people, who know no other duties or taxes.

**Justice** is severely executed among the *Corefians*, and particularly upon criminals. He that rebels against the king is destroy'd, with all his race, his houses are thrown down, and no man does ever rebuild 'em, and all his goods forfeited, and sometimes given to some private person. When the king has once made a decree, if any man is so presumptuous as to make any objection to it, nothing can protect him from severe punishment; as we have often seen it executed. Among other particulars, I remember that the king being inform'd that his brother's wife made great curiosities at needle-work, he desir'd of her, that she would embroider him a vest; but that prince's bearing him a mortal hatred in her heart, she stich'd in betwixt the lining and the outside some charms and characters, of such nature, that the king could enjoy no pleasure, nor take any rest, whilst he had that garment on. After he had long studied to find what might be the cause of it, at last he guess'd at it; he had the vest ripp'd, and found out the cause of his trouble and uneasiness. There was not much time spent in trying that wretched woman; the king condemn'd her to be shut up in a room, the floor whereof was of brass, and order'd a great fire to be lighted under it, the heat whereof tormented her till she died. The news of this sentence being spread abroad thro' all the provinces, a near kinsman of this unhappy woman, who was governor of a town, and in good esteem at court for his birth and good qualities, ventur'd to write to the king, representing, that a woman who had been so highly honour'd as to marry his majesty's brother, ought not to die so cruel a death, and, that more favour should be shewn to that sex. The king, incens'd at this courtier's boldness, sent for him immediately, and after causing twenty strokes to be given him on his shin-bones, order'd his head to be cut off. This crime, and those I shall speak of next, are only personal, and do not involve the whole family in the punishment. If a woman kills her husband, she's buried alive up to her shoulders, in a highway that is much frequented, and by her is laid an axe, with which all that pass by, and are not noble, are oblig'd to give her a stroke on the head till she's dead. The judges of the town where this happens are flogged for a while; the governor is taken away, and 'tis made subordinate to another government, or, at best, only a private gentleman is left to command in it. The same penalty is inflict'd on such towns as mutiny against their governors, or send false com-

plaints

HAMEL.  
1653.  
Justice.

**HAMEL** 1653. *plaints against them to court. The man that kills his wife, and proves he had cause to do, as, for catching her in adultery, or any other heinous fault, is in no danger for so doing: if the woman so kill'd was a slave, the penalty is, to pay three times her value to the owner. Slaves that kill their masters are cruelly tormented to death; but they look upon it as nothing for a master to kill his slave, tho' it be upon a slight account. Thus they punish murder. After they have long trampled upon the criminal, they pour vinegar on the putrify'd carcase, which they then pour down the offender's throat thro' a funnel, and when he is full, they beat him on the belly with cudgels till he bursts. Thieves are trampled to death; and tho' this be a dreadful punishment, yet the *Corefians* are much addicted to stealing. If a single man is found a-bed with a married woman, he is stripp'd naked to a little pair of drawers, then daubing his face with lime, they run an arrow thro' each ear, and fasten a little drum on his back, which they beat at all the cross streets, to expose him to shame: this punishment ends in forty or fifty strokes of a cudgel on the man's bare buttocks, but the woman receives 'em with drawers on. The men are naturally v-ry amorous, and so jealous, that they seldom, and with much difficulty, allow their best friends to see their wives. If a married man be taken lying with another man's wife, he is to suffer death, and chiefly among persons in high place; and the criminal's father, if living, or else his nearest relation, must be the executioner. The offender is to chuse what death he will die; but generally the men desire to be run thro' the back; and the women, to have their throat cut. Those who by a time appointed do not pay what they owe to the king, or private persons, are beaten twice or thrice a month on the shin-bones, which is done till they can find means to discharge the debt: if they die before they have satisfied the creditor, their nearest relations are bound to pay for them, or suffer the same punishment; so that neither the king nor private persons ever lose what is due to them. The slightest punishment in that country is, to be bastinado'd on the bare buttocks, or on the calfs of the legs; and they look upon it as no disgrace, because 'tis very common, and they are often liable to it for only speaking one word amiss. Inferior governors and subordinate judges may not condemn any man to death without acquainting the governor of the province. No man can try prisoners of state without the king be first inform'd. As concerning their punishments, this is the manner how they bastinado on the shin-bones: they tie the criminal's feet together*

on a little bench four fingers broad, and laying such another under his hams, to which they are fast bound, they strike betwixt these two bindings with a flick as long as a man's arm, somewhat round on the one side, and flat on the other, two inches broad, and about the thickness of a crown-piece. This sort of laths are generally of oak or alder, wherewith they must not give above thirty strokes at one time, and then two or three hours after they repeat 'em, till the whole number be given according to the sentence. When the offender is to be beaten on the soles of the feet, he is made to sit down on the ground, then having bound his feet together by the great toes, they rest 'em on a piece of wood they have betwixt their legs, and beat 'em with a cudgel as thick as a man's arm, and three or four foot long, giving as many strokes as the judge has order'd. The bastinadoing on the buttocks is thus; the men being stripp'd, they make 'em lie on the ground with their faces down, and bind 'em to a little bench. The women have a pair of wet drawers left on, and in this posture they beat them with a larger and longer lath than those before mention'd. An hundred strokes are equivalent to death, and many die of them, and some even before they have receiv'd fifty. When any are adjudg'd to be beaten on the calfs of the legs, 'tis done with rods or wands as thick as a man's thumb. This punishment is common to women and young apprentices. Whilst all these sorts of punishments are inflicting, the criminals cry so lamentably, that the spectators seem to suffer no less than the offenders.

As for religion, the *Corefians* have scarce any. The common sort make some odd grimaces before the idols, but pay them little respect; and the great ones honour 'em much less, because they think themselves to be something more than an idol. To prove this, when any of their kindred or friends dies, they all appear to honour the dead man at the offering the priest makes before his image, and frequently travelling thirty or forty leagues to be present at this ceremony, whether to express their gratitude to some great man, or to shew the esteem they have for some learned religious man, and that they preserve the memory of him. On festivals the people repair to the temple, and every one lights a bit of sweet-wood; then putting it into a vessel for that purpose, they go offer it to the idol, and placing it before him, make a low bow, and depart. This is their worship. For their belief, they are of opinion that he who lives well shall be rewarded, and he who lives ill shall be punish'd. Beyond this, they know nothing of

belief, they are  
lives well shall be  
lives ill shall be  
they know nothing  
of

of preaching, or of mysteries, and therefore they have no disputes of religion, all be-  
lieving and practising the same thing  
throughout the kingdom. The religious  
men offer perfumes before an idol twice a  
day, and on festivals; all the religious of a  
house make a noise with drums, batons,  
and kettles. The monasteries and temples,  
which the kingdom swarms with, are for  
the mo<sup>t</sup> part on the mountains, each un-  
der the liberty of some town. There are  
monasteries of five or six hundred religious  
men, and at least four thousand of them  
within the liberties of some towns. They  
are divided into companies of ten, twenty,  
and sometimes thirty, and the eldest go-  
verns; and if any one does not do his duty,  
he may cause the others to punish him  
with twenty or thirty strokes on the but-  
tocks; but if the offence be heinous, they  
deliver him up to the governor of the town  
they belong to. It being lawful for any  
man to become a religious, all the country  
of *Corea* is full of them; and the more,  
because they can quit this profession when  
they please: however, generally speaking,  
these religious men are not much more re-  
spected than the slaves, because of the great  
taxes they are oblig'd to pay, and the work  
they are forced to do. Their superiors are  
in great esteem, especially when they are  
learned, for then they are equal with the  
great men of the country, and are call'd  
*the king's religious men*, wearing their order  
over their clothes: they have the power of  
judging as subaltern officers, and make  
their visits on horseback, being very well  
receiv'd and entertain'd in all places. They  
must eat nothing that has had life: they  
shave their heads and beards, and are for-  
bidd conversing with women. If any of 'em  
breaks these rules, they give him seventy  
or eighty strokes on the buttocks, and ban-  
nish him the monastery. When they are  
first shav'd, or soon after, they give 'em a  
mark on the arm, which never wears off;  
and by that those are known who have  
once been religious men. They work for  
their living, or use some trade; some go a  
begging, and all of 'em have some small  
allowance from the governor. They al-  
ways keep little children in their houses,  
whom they very carefully teach to read and  
write. If these children will be shav'd,  
they keep 'em in the service, and have  
all that they can earn till the master dies,  
which makes them fr<sup>e</sup>, and heirs to all  
their goods; for this reason they are oblig'd  
to wear mourning for them, as for their  
father, in return for all the pains they have  
taken to instruct and bring them up. The  
monasteries and temples are built at the  
publick charge, every one contributing pro-  
portionably to what he's worth. There is

still another sort of people like these reli-  
gious men, as well in regard of their absti-  
nence as their serving the idols, but they  
are not shorn, and may marry. They be-  
lieve, by tradition, that once all mankind  
had but one language, but that the design  
of building a tower to go up to heaven  
caus'd the confusion of tongues. The no-  
bles frequent the monasteries very much, to  
divert themselves there with common wo-  
men, or others they carry with 'em, be-  
cause they are generally deliciously seated,  
and very pleasant for prospect and fine gar-  
dens, so that they might better be call'd  
pleasure-houses than temples; which is to  
be understood of the common monasteries,  
where the religious men love to drink hard.  
In our time there were two monasteries of  
religious women in the city of *Sior*; in one  
of 'em there were none but women of qua-  
lity; in the other, maids of the common  
fort. They were all shorn, and observ'd  
the same rules and duties as the men. The  
king and great men maintain'd 'em; but  
three or four years since, the king now reign-  
ing gave 'em leave to marry.

Having spoke of the government and  
ecclesiastical affairs, I'll now descend to pri-  
vate matters. The houses of the *Coréans*  
of quality are stately, but those of the com-  
mon sort very mean; nor are they allow'd  
to build as they please. No man can cover  
his house with tiles, unless he have leave to  
do so; for which reason most of 'em are  
thatch'd with straw or reeds. They are  
parted from one another by a wall, or elie  
by a row of stakes or palisades. They are  
built with wooden posts or pillars, with the  
interval betwixt 'em fill'd up with stone up  
to the first story; the rest of the structure is  
all wood daub'd without, and cover'd on  
the inside with white paper glew'd on.  
The floors are all vaulted, and in winter  
they make a fire underneath, so that they  
are always as warm as a stove; the floor is  
cover'd with oil'd paper. Their houses are  
small, but one story high, and a garret  
over it, where they lay up their provisions.  
The nobility have always an apartment for-  
wards, where they receive their friends, and  
lodge their acquaintance; and there they  
divert themselves, there being generally be-  
fore their houses a large square, or bas-  
court, with a fountain or fish-pond, and a  
garden with cover'd walks. The women's  
apartment is in the most retired part of the  
house, that no body may see 'em. Trade-  
men, and the chief townsmen, generally  
have a store-house adjoining to their man-  
sion-house, where they keep their goods and  
treat their friends with tobacco and arrack.  
There are virtuous women among them,  
who are allow'd the liberty of seeing peo-  
ple, and going into company, and to teasts,  
but

1653. **HAMEL** but they sit by themselves, and opposite to their husbands. They have scarce any more household-goods than are absolutely necessary. There are in the country abundance of taverns and pleasure-houses, to which the *Corefians* resort, to see common women dance, sing, and play upon musical instrument. In summer they take this recreation in cool groves, under close shady trees. They have no particular houses to entertain passengers and travellers, but he who travels goes and sits down, where night overtakes him, near the pales of the first house he comes at, where, tho' it be not a great man's house, they bring him boil'd rice and dress'd meat enough for his supper. When he goes from thence, he may stop at another house, and at several; yet on the great road to *Sior* there are houses, where those that travel on publick affairs have lodging and diet on the publick account.

**Marriages** Kindred are not allow'd to marry within the fourth degree. They make no love, because they are married at eight or ten years of age; and the young maids, from that time, live in their father-in-law's house, unless they be only daughters: they live in the husband's father's house till they have learnt to get their living, or to govern their family. The day a man marries he mounts on horseback, attended by his friends, and having rode about the town, he stops at his bride's door, where he's very well received by the kindred, who take the bride and carry her to his house, where the marriage is consummated without any other ceremony. Tho' a woman has bore her husband many children, 'tis in his power to put her away when he pleases, and to take another; but the woman has not the same privilege, unless she can get it by law. A man may keep as many women as he can maintain, and repair to them at all times, without scandal; but at home he keeps only his wife, the others are about the town, or in houses apart from his; yet the noblemen have two or three women besides their wife in the house; however, there's but one that rules, and has the management of all things; the others have each a distinct apartment, whither the master of the house goes when he pleases. To say the truth, they make no great account of their wives, and use 'em little better than slaves, turning 'em away for the least faults, and sometimes on bare pretences, and then they force 'em to take their children, who those poor wretches are bound to maintain. This liberty of putting away the mother and children, is a means to make the country very populous.

**Education** The nobility, and all freemen in general, take great care of the education of their

children, and put 'em very young to learn to read and write, to which that nation is much addicted. They use no manner of rigour in their method of teaching, but manage all by fair means, giving their scholars an idea of learning, and of the worth of their ancestors, and telling them how honourable those are, who, by this means, have rais'd themselves to great fortunes, which breeds emulation, and makes them studious. 'Tis wonderful to see how they improve by these means, and how they expound the writings they give 'em to read, wherein all their learning consists. Besides this private study, there is in every town a house where the nobility, according to ancient custom, of which they are very tenacious, take care to assemble the youth, to make them read the history of the country, and the condemnations of great men, who have been put to death for their crimes. To perfect them in their learning, there are assemblies kept yearly, in two or three towns of each province, where the scholars appear to get employments, either by the pen, or by the sword. The governors of towns send able deputies thither, to examine them, and chuse the best qualified; and, according to the report made to them, they write to the king. The greatest men in the kingdom are there, whether they are in post or not. Their employments are bestow'd on those that are thought worthy, and the king orders their commissions to be issued out. The old officers, who till then have only had civil or military commissions, at this time use all their endeavours to be employ'd in both professions, to increase their revenue. The aspiring to these honours is often the ruin of the candidates, because of the presents they make, and treats they give, to gain reputation, and obtain votes. Some there are also that die by the way, and most of 'em are satisfied with getting the title of the employ they aim at, thinking it honour enough to have been design'd for a post.

Parents are very indulgent to their children, and, in return, are much respected by <sup>and chuse</sup> them. They depend upon one another's good behaviour, and if one of 'em withdraws after an ill action, the other does the like. 'Tis otherwise with the slaves, who have little care of their children, because they know they will be taken from 'em as soon as they are able to work, or do any business. When a freeman dies, his children <sup>Mourning</sup> mourn three years, and during all that time they live as austere as the religious men, are not capable of any employment, and if any of 'em is in a post, he must quit it. 'Tis not lawful for them, during that time, to lie with their wives; and if they should have any children born during the

mourning.

mourning, they would not be accounted legitimate. 'Tis not permitted them to be in a passion, or to fight, much less to be drunk. The mourning they wear is a long hempen robe, without any thing under it, but a sort of sackcloth wove with a twisted thread almost as thick as the twine of a cable. On their hats, which are made of green reeds wove together, instead of a hat-band, they wear a hempen rope. They never go without a great cane or cudgel in their hand, which serves to distinguish who they are in mourning for, the cane denoting the father, and a stick the mother. During all this time, they never wash, and consequently look like *Mulattoes*.

As soon as one dies, his kindred run about the streets shrieking, and tearing their hair; then they take special care to bury him honourably in some part of a mountain shewn them by a fortune-teller. They use two coffins for every dead body, being two or three fingers thick, shut close, and put one within 't'other to keep out the water, painting and adorning them as every one is able. They generally bury their dead in spring and autumn. As for those that die in summer, they put them into a thatch'd hut rais'd upon four stakes, where they leave them till rice-harvest is over. When they intend to bury 'em, they bring 'em back into the house, and shut up in their coffins with 'em their clothes and some jewels. In the morning, at break of day, they set out with the body, after a good repast and making merry all the night. The bearers sing, and keep time as they go, whilst the kindred make the air ring with their cries. Three days after, the kindred and friends of the party deceas'd return to the grave, where they make some offerings, and then they eat together, and are very merry. The meaner sort only make a grave five or six foot deep, but the great men are put into stone tombs rais'd on a statue of the same substance; at the bottom whereof is the name carv'd, with the qualifications of the party there buried, mentioning what employments he enjoy'd. Every full-moon they cut down the grass that grows on the grave, and offer new rice there; that's their greatest festival next to the new year. They reckon by moons, and every three years they add one, so that the third year has thirteen, whereas the other two have but twelve moons each. They have conjurers, diviners, or sooth-sayers, who assure them whether the dead are at rest or not, and whether the place where they are buried is proper for them, in which point they are so superstitious, that it often happens they will remove them two or three times. When the children have fully performed the duty

VOL. IV.

they owe to the father and mother by means of this tedious ceremony, if they have left any estate, the eldest son takes possession of the house that belongs to him, with all the lands depending on it. The rest is divided among the other sons, and we never heard that the daughters had any share, because the women carry nothing to their husbands but their cloaths. When a father is fourscore years of age, he declares himself incapable of managing his estate, and resigns it up to his children, who maintain their father, and always pay him a great deal of respect. When the eldest has taken possession of the estate, he builds a house at the publick expence for his father and mother, where he lodges and maintains them.

The *Corejians* are very much addicted to stealing, and so apt to cheat and lye, that there is no trusting of them. They think they have done a good action when they have over-reach'd a man, and therefore fraud is not infamous among them; yet if a man can prove that he has been cheated in a bargain of horses, cows, or any other thing whatsoever, he may be righted tho' it be three or four months after. Nevertheless they are silly and credulous, and we might have made them believe any thing we would, because they are great lovers of strangers, but chiefly the religious men. They are an effeminate people, and shew very little courage and resolution when they are put to it. At least we were told so by several credible persons, who were witnesses to the havoc the emperor of *Japan* made in their country when he slew their king; not to mention what *Wettevee* so often told us about the irruption of the *Tartar*, who coming over upon the ice, possess'd himself of the kingdom. He assur'd us, as one that had been an eye-witness to the whole, that more *Corejians* dy'd in the woods, whither they fled, than were kill'd by the enemy. They are not asham'd of cowardise, and lament the misfortune of those that must fight. They have often been repuls'd with loss when they have attempted to plunder some *European* vessel that has been cast on their coast, being bound for *Japan*. They abhor blood, and fly when they meet with any. They are much afraid of the sick, and particularly those that have contagious distempers, and therefore they presently remove them, whether they are in the town or country, and put them into little straw hovels in the middle of the fields. There no body talks to them, but only those that are to look after them, who give notice to passengers to keep off; and when the sick man has no friends to take care of him, the others rather let him die than they will come near him.

7 M

HAMEL. him. When there is a plague in one town, 1653. or village, the avenues to it are shut up with a hedge of briars and brambles, and they lay some on the tops of the houses, where there are any sick, that all people may know it. They might when they are sick, make use of the simples that grow in their country, but the people are not acquainted with them, and almost all the physicians are employ'd by the great ones; so that the poor, who cannot be at that charge, make use of blind men and conjurers, in whom they once repos'd such great confidence, that they follow'd them every where, cross rivers and rocks, and particularly into the temples of the idols, where they call'd upon the devils. But this custom was abolish'd by the king's order in the year 1662.

Before the *Tartar* subdu'd this kingdom, it was full of luxury and debauchery, the *Corejians* whole business being eating and drinking, and giving themselves up to all lewdness. But now the *Tartars* and *Japoneſe* tyrannize over them, they have enough to do to live when a year proves bad, because of the heavy tribute they pay, and particularly to the *Tartar*, who comes three times a year to receive it. They believe there are but twelve kingdoms or countries in the whole world, which once were all subject, and pay'd tribute, to the emperor of *China*; but that they have all made themselves free since the *Tartar* conquer'd *China*, he not being able to subdue them. They call the *Tartar*, *Tiekſe*, and *Orankay*, and our country *Nampankoug*, which is the name the *Japoneſe* give to *Portugal*, and therefore not knowing us they give us the same name, having learnt it within these fifty or sixty years, since when the *Japoneſe* taught them to plant tobacco, to dress and make use of it, for till then it was unknown to them, and they telling them the seed of it came from *Nampankoug*, they often call tobacco *Nampankoy*. They take so much at present, that the very children practise it at four or five years of age, and there are very few men or women among them that do not smoke. When first brought them, they brought it for its weight in silver, and for that reason they look'd upon *Nampankoug* as one of the best countries in the world. Their writings give an account, that there are fourscore and four thousand several countries; but most of them do not believe it, and they say, if that were so every little island and sand must pass for a country; it being impossible, say they, for the sun to light so many in a day. When we nam'd some countries to them, they laugh'd at us, affirming, we only talk'd of some town or village; their geographical knowledge of the coasts reaching no

farther than *Siam*, by reason of the little traffick they have with strangers farther from them. They have scarce any trade, but only with the *Japoneſe*, and with the people of the island of *Ceusima*, who have a store-house in the south-west part of the town of *Pouſan*. They supply *Corea* with pepper, sweet-wood, alum, buffler's horns, goats and buck-skins, and other commodities, which we and the *Chineſe* sell in *Japan*. In exchange, they take the product and manufactures of the country. The *Corejians* have also some trade at *Peking*, and in the northern parts of *China*, but it is very chargeable, because they only go thither by land, and on horse-back. None but the rich merchants of *Sur* trade to *Peking*, and are always three months at least on the way. This whole trade is in linnen, or cotton-cloth. The great ones, and chief merchants buy and pay for all with money, but the meaner sort deals only with rice and other commodities by way of barter.

There is but one sort of weight and measure throughout the kingdom, but the traders abuse it very much, notwithstanding all precautions and orders of the governors. They know no money but their casis, and those pass only on the frontiers of *China*. They pay silver by weight in little ingots, like those we bring from *Japan*.

Their language, their way of writing, and their arithmetick, are very hard to learn. They have many words to express the same thing, and they sometimes talk fast, and sometimes slow, especially their learned men, and great lords. They use three several sorts of writing, the first and chiefest like that of *China* and *Japan*, which they use for printing their books, and for all publick affairs. The second is like the common writing among us. The great men and governors use it, to answer petitions, and make notes on letters of advice, or the like; the commonalty cannot read this writing. The third is more unpolish'd, and serves women and the common sort. It is easier to write in this character than the others, names and things never before heard of being noted down with very curious fine pencils. They have abundance of old books, both printed and manuscript, so choicely kept that none but the king's brother is trusted with them. Copies of them with cuts are kept in several towns, that in case of fire they may not be quite lost. Their almanacks are made in *China*, they themselves wanting skill to make them. They print with boards or wooden cuts, and lay one cut to each side of the paper, and so strike off a leaf. They cast accounts with little long sticks, as we do with counters. They know not how to keep

Manner

ing abro

Writing

Printing

Arithme

tick

keep books of accounts or shop-books, but when they buy any thing, they set down the price under it, and write on it what they made of it, and so find what profit or loss.

Manner  
of the  
king's go-  
ing abroad

When the king goes abroad, he is attended by all the nobility of the court, wearing the badge of his order, or piece of embroidery before and behind, on a garment of black silk, with a very broad scarf, a great body of soldiers following in good order. Before him go men on horse-back, and others on foot, some of them carrying colours and banners, and the others playing on several warlike instruments. They are follow'd by the life-guards, which are made up of the chief burghers of the town. The king is in the middle, carry'd under a very rich gold canopy, and proceeds with such silence, that the least noise is not heard. Just before him goes a secretary of state, or some other great officer, with a little box, into which he puts all the petitions and memorials private persons present upon the end of a long cane, or which they hang along the walls or pails, so that they cannot see who prefers them. Those that are appointed to gather them, bring them to the secretary, who puts them into the little box, and when the king returns into his palace, they are all laid before him to decide what is to be done, which he performs, and his orders are executed out of hand, no body presuming to contradict them. All the doors and win-

dows of the houses in the streets through which the king passes, are shut, and no body does presume to open the least cranny of them, much less look over the wall, or over the pails. When the king passes by the great men or soldiers, they must turn their backs to him, without daring to look, or so much as cough. Therefore upon these occasions, most of the soldiers put little sticks into their mouths, that they may not be accus'd of making a noise. When the *Tartar's* ambassador comes, the king going in person with all his court out of town to receive him, waits upon him to his lodgings, and in all places every body does him as much or more honour than to the king. All sorts of musicians, dancers, and vaulters, go before him, striving who shall divert him most. During the whole time the *Tartar* is at court, all the streets from his lodging to the palace are lin'd with soldiers; who stand within ten or twelve foot one of the other. There are two or three men who have no other employment but to pick up notes thrown out of the *Tartar's* window to be carry'd to the king, who desires to know what the ambassador is doing at all times. To conclude, that prince studies all ways to please him, endeavouring by all manner of civility to make him sensible of the respect he bears the great *Cham*, that he may make a favourable report concerning him to his master.

*A Voyage from Spain to Paraquaria :*

Perform'd by the Reverend Fathers,

*Anthony Sepp and Anthony Behme,*

Both German JESUITS;

The first of Tyrol upon the river Eth, the other of Bavaria.

Containing a description of all the remarkable things, and the inhabitants, as well as of the missionaries residing in that country.

Taken from the letters of the said *Anthony Sepp*, and publish'd by his own brother *Gabriel Sepp*.

---

Translated from the HIGH DUTCH Original, Printed at  
NURENBERG, 1697.

---

Advertisement to the Reader.

**T**HE reverend fathers Anthony Sepp and Anthony Behme, with several other zealous Jesuits, being inflamed with a holy zeal for the propagating of the catholick faith in far distant countries; resolved with a great deal of cheerfulness to leave their native country. And travelling into Spain, took upon them the holy function of missionaries, for the conversion of the infidels, and instruction of the already converted Indians in Paraquaria, a province of the western America. After their arrival at Buenos Ayres, the said father Sepp having thought fit to send an account of this voyage, together with a description of that country, its inhabitants, manners, government, &c. in two letters sent into Germany; the same were thought absolutely worthy to be publish'd, for the many remarkable things contained therein, and scarce known before in these parts.

## An Account of a Voyage from Spain to Paraquaria, &c.

### C H A P. I.

*An account of father Anthony Sepp, of the society of Jesus, his voyage out of Spain to Paraquaria, and his arrival at Buenos Ayres; with a short description of that place, and its inhabitants. Dated at Buenos Ayres in Paraquaria, upon the river call'd Rio de la Plata in America, 15th of April, being the holy Easter-day, 1691.*

**W**E embark'd the 17th of January, on St. Anthony's day, at Cadiz, and arriving the 6th of April at Buenos Ayres, were receiv'd there with such demonstrations of joy as is scarce to be express'd; because the inhabitants of this place (which is no bigger than a country town) had not seen any ships from Spain for three years last past, whereby they were reduced to that extremity, that they had scarce a shirt left to shift themselves with; so that our vessels fold a yard of linnen cloth at twenty dollars, and twenty-five dollars, &c. a vast profit indeed, it being computed that at the rate they fold their commodities of iron, copper, linnen cloth, &c. they were worth at least twelve millions of Reals.

Concerning my other sufferings in this voyage, I will write more at large another time; I will only tell you, that without God's peculiar mercy, out of forty missionaries that were aboard these vessels, not half would have reach'd the American shore, as being altogether unacquainted with such harsh diet as our covetous captain was pleas'd to afford us, which was very hard biscuit full of maggots, because it had been baked two years before; about a pint of ill-scented and corrupted water a day, and a small quantity of flesh; but so full of maggots that, without the utmost necessity, we could not so much as have look'd upon, much less have eaten it.

I being the eldest of the missionaries, had the advantage of a cabin, of about six foot long and three broad; but the rest of the missionaries were forced to take up their quarters in the fore-castle of the ship, expos'd to the injuries of the weather and air, and, for an additional plague, were constantly incommoded with the stench of the hens-dung, which were kept thereabouts, and of which ten commonly died in a day;

not to mention what other hardships we were expos'd to, our clothes being all tatter'd and torn, and it being part of our daily employment to keep our selves tolerably free from vermin. After all these trials of our patience, we arriv'd in America, at which I could not refrain from tears, and upon my knees gave thanks to almighty God, for his deliverance from so many dangers and troubles.

Thus much of our voyage. I will now give a brief account of Paraquaria and Buenos Ayres (reserving a more perfect description thereof for another occasion.) Buenos Ayres is a small town, seated upon Rio de la Plata (the Plate River) which at its mouth, where it exonerates it self into the sea, is at least sixty German miles broad, and consequently resembles rather the sea than a river; its water is accounted very wholesome, and, to promote digestion, we drank every day of it, even after eating much fruit, without the least detriment. Their thatch'd houses, or rather huts of clay, have no more than one floor, and scarce ever last above seven years. However, about five years ago, our fathers have found a way of burning of lime, and making of tiles, wherewith they have cover'd their college, and are building now a steeple of brick, and hereafter intend to build also the church and the college of the same materials.

Hereabouts are no trees, such as our elms, firs, or such-like, fit for fuel, but whole woods of peach, almond, and fig-trees, the wood whercof is used in the kitchen. These they propagate by putting only the kernels into the ground, which grow up to admiration, and produce fruit the first year. I gather'd, this very day, some figs from a tree, the trunk whereof was bigger than I could grasp with both arms. The grounds are here so rich of pasturage, that you shall see thirteen thousand or fifteen thousand

SEPP. 1691. oxen feeding together; so that when you want a fat ox, you have no more to do than to go only into the field, throw a rope about the horns, bring him home and kill him for your use. Our college sold once twenty thousand oxen at a time, for twelve thousand crowns. They are very tall, and generally white, and valued only for their hides, all the rest, except perhaps the tongue, being left generally a prey to the birds and wild dogs, which flock together sometimes to the number of three or four thousand, and, if they meet with nothing else, do great mischief, and devour the calves, which are as big here as a moderate heifer with us.

Of partridges they have such prodigious quantities, that you may kill 'em with your cane or stick as you walk along, they being as tame and as large as our pullets. Their bread is made of the best wheat, as white as snow, but not salted, salt being very scarce among these *Indians*, and consequently but rarely used.

The inhabitants hereabouts, as well *Indians* as *Spaniards*, are *Roman Catholics*. The first live for the most part upon beef, which they eat without either bread or salt, and half raw. They go into the field, and having thrown the rope about an ox's neck, they ham-string with a knife, then they kill him by thrusting a knife into the neck-joint, cut off the head, and take out the entrails, all which they throw away as useless; and this they do in less than half a quarter of an hour's time. In the mean while that their comrades are employ'd in making a fire, these cut off large slices from the ox's ribs, or wherever they like it best, and putting them upon wooden sticks, toast 'em a little over the fire, and so devour 'em before they are scarce heated through. Sometimes they lay a whole quarter of an ox to the fire, but cut it off and eat it whilst 'tis on the spit. Thus have I seen two of these *Indians* devour an ox in two hours time (I mean the flesh, for they throw away the head, feet, and entrails) so that they seem to contend in this point for the superiority with *Caligula*, *Manimus*, *Apicius*, and *Tripbo*, famous gluttons among the ancients, the last of which kill'd an ox with his fist only, and eat him alone afterwards the same day.

The better to digest so vast a quantity of half-raw meat, some throw themselves immediately after into cold water stark naked, to retain the natural heat within their entrails, to promote digestion. Others, on the other hand, lie upon the ground with their stomachs downwards in the hot sand; here they sleep till they think they have well enough digested their last meal, and then go to work again as before. This gluttony produces worms in their bowels, progenerated from the vast quantity of raw and indigested meat, so that they seldom attain to the fiftieth year of their age.

As for the rest of the inhabitants of *Paraguay*, they are very good christians, and acknowledge no other superiors but the missionaries, whom they reverence like fathers, as they are indeed oblig'd to them for every thing, their education, cloathing, and food. They are very apt to imitate any thing that is laid before 'em; I have seen some writing of theirs as exact as the best print. They make clocks and trumpets, not inferior to any in *Germany*; but value musick above every thing else. When I shew'd 'em some of my compositions and musical instruments I brought along with me out of *Europe* (tho' I am but an indifferent musician) they were ready to adore me. At the time of our arrival we were met by about sixty *Indians*, playing upon their pipes and *American* horns, one of 'em keeping the time by the motion of a kind of a flag, after a very ridiculous manner. I presented these musicians with some toys, such as looking-glasses, needles, fish-hooks, glass-beads, *Agnus Dei's*, small pictures, &c. which they valued beyond gold and silver. But my paper beginning to fail me, I will only tell you, that I, with twenty missionaries more, are to leave *Buenos Ayres* before long, in order to go deeper into the country, into divers cantons, of which there are twenty-four in this province, each of 'em having five thousand, some eight or nine thousand, others fifteen thousand inhabitants, each under the tuition of two missionaries, who are to provide not only for their souls, but also for their bodies, by allotting each family their due share of meat, bread, flower, &c. without which they would devour all at once. No more at this time. I recommend my self, &c.

CHAP. II.

A particular description of father Anthony Sepp's voyage out of Spain into Paraquaria; taken out of his second letter dated in the canton of Japegu, in the province of Paraquaria, on the 24th of June, 1691.

The JOURNAL.

IT having pleas'd the almighty God to make me an unworthy instrument in the conversion and instruction of the pagans of America, he was pleas'd, thro' his mercy, to conduct me thro' many tribulations and dangers, from Cadiz to Buenos Ayres, where I arriv'd safely on the 6th of April, 1691. I left Trent the 9th of July, 1689, and travel'd thence to Genoa, not without great danger from the Banditti; thence embarking for Cadiz, I arriv'd there the 11th of September, being forced to stay a whole year at Seville for the departure of the ships bound for Buenos Ayres. I re-embark'd again on the 17th of January 1691, at Cadiz, for the prosecution of our intended voyage thither. Aboard these ships were forty-four missionaries of divers nations, Spaniards, Italians, Flemings, Sicilians, Sardinians, Genoese, Milanese, Romans, Bohemians, and Austrians. I was a native of Tyrol, and my companion father Anthony Adam Behme a Bavarian, of whose extraordinary zeal in his new mission, for the conversion of a certain nation call'd Yares, wherein he underwent great hardships, and was likely to have offer'd up his blood for the glory of Christ, by the hands of a pagan Barbarian, who had infallibly kill'd him, had his bloody design not been prevented by a certain new-converted Indian, belonging to my flock. I say, of all this I shall have occasion to say more hereafter.

Our squadron consisted only of three ships, of betwixt fifty and sixty guns each. The Capitaina, or commodore's vessel, call'd *De Sanctissima Trinitate*, commanded by Don Antonio de Retana; the *Almiranta de Christo Nazareno*, by Don Antonio Gonzalez, and a pink, call'd *Matre Dolorosa*, commanded by a certain *Biscayne*, as were indeed the other two commanders. We embark'd aboard the *Almiranta*, in company of the three governors of Buenos Ayres, *Assumption*, and *Chili*, with their ladies and families, besides divers factors, merchants, barbers, negro slaves, two hundred soldiers, one hundred seamen, and others; but before we enter'd the great Atlantick ocean, all the fathers missionaries went over to the *Matre Dolorosa*, where the captain allow'd me no other place to lie in than a narrow cabin about five foot long, and not above

two and a half broad; and my beloved companions place, I mean father Anthony Behme and another Austrian father's, were so short, that all that while they were not able to lie streight in it: some other fathers, who were not quite so tall as he, would have chang'd places with him, but he would not put the least inconvenience upon them to ease himself. There was a little window to let in the air, but this being shut for the most part, to keep out the sea-waves, we spent our time in darkness; besides which, the scent of the water in the ship was so nauseous to us, that we were ready to be suffocated with it; and were, on the other hand, no less pester'd with thousands of mice and rats, some whereof were not much less than cats, and made a most terrible noise. The smell of the onions and garlic, and of stinking tobacco, of about six hundred pullets, two hundred and eighty sheep, and one hundred and fifty hogs, which were not far from our quarters, were no small addition to the rest of our troubles. To add to our affliction, we had for our diet nothing but stinking meat, and biscuits full of maggots, the first having been salted a year, and the last baked two years before our departure, and kept by the captain. His covetousness was in some measure punish'd by the loss he sustain'd daily in his poultry and sheep, of the first of which died six or eight a day; and a pestiferous contagion reigning among the hogs aboard, most of them were thrown overboard. How often have we been glad to catch the rain-water, sent us from heaven, in sheets, hats, and vessels, with a great deal of thankfulness? I will not mention here the trouble and vexation we endur'd from the vermin; how often I have been glad to make use of the cables instead of a pillow, to patch my torn clothes, wash my own linnen, and suchlike other inconveniences, these being but trifles in comparison of the rest of our sufferings: the best was, that all this was in some measure recompens'd by a prosperous gale and voyage, which brought us, without any sinister accident, to our desir'd port.

The 18th of January, being still in sight of Cadiz, the fathers of the *Jesuits* college there came aboard us, to bid us adieu. We were not a little delighted with the vast

num-

SEPP.  
1691.

number of small vessels, some of which came often aboard us, to sell us some fruits and other refreshments, whilst others passing in sight of us, wish'd the captain, governors, and us a happy voyage, in their usual sea-language, such as *Dios Cavelleros*, adieu gentlemen; a *Dios buen viage*, adieu, a good voyage; *buen passage*, a happy passage; *Vent in poppa*, a fair wind; *Mar bonanza*, a quiet sea, &c. We answer'd them with our drums and trumpets, and the fire of our cannon and small arms.

Being got out of sight of *Cadiz* the 19th, I observ'd the body of the sun exactly at its setting, and that of the moon exactly to appear much larger than ever I had observ'd it in *Germany*. The 20th we made 10 leagues with a fair wind. The 21st, 22d, and 24th of *January*, a brisk north wind carried us directly within thirty leagues of the *Canaries*, or *Insula fortunata*, which lie one hundred leagues from *Cadiz*. The 25th, being the day of the conversion of *St. Paul*, the sky began to be darken'd with clouds about midnight, which was soon after follow'd by so terrible a tempest, that the captain and whole ship's crew cry'd out *Misericordia, misericordia*, giving all over for lost; however, it lasted not long, the fury of the tempest being somewhat allay'd by break of day, and the clouds soon after dispers'd by the sun-beams. We receiv'd no other damage in this terrible tempest, accompany'd with thunder and lightning (a most terrible and dismal thing at sea) than that one of our ships had her mast brought by the board, which our captain wisely prevented in ours, by furling its sails in good time; one of the best remedies to divert the fury of this otherwise irresistible element.

Our procurator had brought along with him a *sanctified bell*, as we call it, and *Kaloke* by the *Americans*, unto which they attribute this virtue, that as far as its sound reaches, no thunder or lightning can do any mischief; for which reason we took care to have it rung at this time of danger. The original of its virtue must be traced as far as *Mexico*, where, they say, was formerly a bell of a vast bulk, which, as often as it lightned and thunder'd, rung of it self, and as far as the sound thereof reach'd, no thunderbolt was ever known to fall: afterwards 'twas thought fit to cast many bells of the metal of this great bell, which are given as a singular present to persons of quality; and ours is one of the same kind, every *Procurator* who goes from the *Indies* to *Rome* having such a bell allow'd him, to protect him in his voyage.

The 26th of *January*, having pretty well refitted our ship, we prosecuted our voyage, the *Capitaine* leading the van, which was

follow'd by the *Amirante*, but the pink being heavy laden, and pretty much damaged in the last tempest, remain'd behind for six or seven, and sometimes eight leagues, yet within sight. Thus we continued our course the 27th, 28th, and 29th. The 30th, by break of day, a seaman placed on the main-topfail-mast cry'd with a great deal of joy, *Cavelleros, terra, terra, Land, land, gentlemen*; it being a constant custom aboard those ships, for him that keeps watch on the main-topfail-mast to look about him continually with a perspective-glass, and at the sight of land, or any ships, to give notice thereof to the ship's crew, who, if they prove ships, set up a red flag, and discharge as many great guns as there are ships seen: the same is done by all the other ships of the same squadron, with such exactness, that if a captain fails in this point, he's oblig'd to pay a considerable fine.

The 30th of *January*, as we told you before, we discover'd land, which prov'd the high and famous rock call'd the *Peak of Teneriffe*, which appear'd all bare, without any trees, and cover'd on the top with snow. This *Peak* is well known to the mathematicians in their observations. The 31st, coming to the noted *Canary* isles, at 28 degrees, and seven degr. from *Cadiz*, we pass'd betwixt the isles of *Teneriffe* and *Palma*, the first to the left, and the other to the right of us, there being seven of 'em in all, but *Teneriffe* and *Palma* are only well peopled, where the *Franciscans* have a stately convent; and the *Canary* sack is prefer'd by the *Spaniards* before all other wines: they are also famous for a certain kind of singing-birds, call'd from thence *Canary-birds*. In the isle of *Palma* that brave father *Ignatius Azebedius* obtain'd the glory of martyrdom, with thirty of his companions.

*February* the 1st, we proceeded in our voyage with a brisk gale, which lasted all that night. The 2d, being *Candlemas-day*, a certain father, a *Fleming* by birth, made his last vow. We celebrated this day with a consort of musick, but the boisterousness of the sea not permitting me to play on the theorbo, we were forced to be contented with the harmony of the trumpets, and the thundering of our great cannon, which were discharg'd upon this occasion. The same day a certain negro-slave, belonging to the governor *Don Augustin de Robles*, was also initiated with the holy baptism. The 3d, we reach'd the *Tropick of Cancer*, sufficiently known by its excessive heat, which generally reigns there; but we happening to be blest with a cool north wind at that time, found it as pleasant as the most delightful spring-season in *Europe*.

The

The 4th, abundance of flying fish fol-  
lowed our ship for a considerable time in  
the air, till at last they betook themselves  
to the water again. The seamen, for di-  
version sake, ty'd a strong thread on a cane,  
with a hook at the end, and a white fea-  
ther instead of the floating wood; the fly-  
ing fish mistaking the same for whiteings,  
and snapping at them with much eagerness,  
were thus catch'd by the hook.

The 5th of *February* being the feast of  
the *Japoneſe* martyrs, a novice entred him-  
self into our society, and made the usual  
vow; and the missionaries took the holy  
sacrament.

The 6th we pass'd with a prosperous  
gale the *Heſperides Iſle*, or isles of *Cape*  
*Verde*, so call'd from their constant verdure,  
which continues throughout the whole year,  
notwithstanding their situation, under the  
*Torrid* zone. It is an unwholesome place,  
by reason of the venomous vapours which  
arise from the many pools and fens; some  
years before eight missionaries, with some  
soldiers and seamen, went ashore here,  
and eating too greedily of the coco-nuts,  
water-melons, and oranges that grow here,  
paid for it with their lives; for which rea-  
son strict orders were given, that no body  
should go ashore here. We happen'd to  
have aboard us certain negroes, that were  
natives of this country, two of which I in-  
structed at the same time to sound the  
trumpet. These told me divers old stories  
of their country, viz. That they had a  
*Negro* bishop among them, and divers ca-  
nons that were likewise *Negro*s, and also  
many *Negro* priests; but that the fathers  
of the *Jesuits* college (belonging to the  
*Portuguese*) were *Blacks*. This he told us  
because the white colour was in no great  
esteem there, the greatest blackness being  
accounted the greatest beauty among them.  
This day we observed in our garden (which  
we had brought out of *Spain* to transplant  
into *Paraquaria*) the *Narcisse*-flower to  
blossom, and a *Muscadine* vine begin to bud.  
The *Jessamine* continuing still in blossom.

The 7th, 8th, 9th, 10th, 11th and  
12th, we sail'd forward very briskly, and  
found our selves at 6 deg. on this side the  
line, or *Equator*, the north-star and *Ursa*  
*Major* being scarce any further observable  
to us. The 13th, 14th, and 15th, we  
saw divers sea monsters, and among the  
rest a certain large fish flying near the ship,  
like an eagle. Our ship's crew catch'd an-  
other fish not unlike a wolf in his head,  
ears and hair, but the body like a fish.  
After dinner, the seamen being in a merry  
vein, threw out a chain, at the end of  
which was fasten'd a leaver weighing at  
least six pound weight. A sudden rejoicing  
being heard among the ship's crew, the go-

VOL. IV.

vernors, the ladies, missionaries and mer-  
chants came running upon the deck to see  
what the matter was, when they found that  
eight of the stoutest seamen were drawing  
a certain large fish into the ship not unlike  
an ox.

The governor of *Buenos Ayres* having a  
mind to give us a diversion, order'd the  
captain to call his three great dogs he had  
brought away with him, which being  
done, they were not very forward to ap-  
proach this sea monster till being set on  
they at last ventur'd, when this sea ox de-  
fended himself so well by striking with his  
tail at the dogs, and sometimes wounding  
them with his teeth, that they were forced  
to give it over; and the cabin-boys and  
some seamen came with their weapons to  
make an end of him, which they did ac-  
cordingly, boil'd and eat him; we had our  
share also, which I and father *Bebme* lik'd  
very well. There was a thing very obser-  
vable in this sea monster. That to his skin  
all over his body adher'd vast numbers of  
small fish, which were his young ones,  
but such fish as being sensible of their ene-  
my who press'd upon them, had fasten'd  
themselves there to avoid his fury. Nothing  
is more common than to see the dolphins  
play in the *Atlantic* sea.

The 16th we began the nine days  
prayers in remembrance of the *Indian* apo-  
stle *St. Francis Xavierius*. The 17th, 18th,  
and 19th, the heavens blessed us with ve-  
ry seasonable showers of rain, to our no  
small refreshment, our water aboard the  
ship beginning already to taste very ill,  
and what was worse, we had no more than  
two small measures allow'd of it a day;  
you may be sure that every body was bu-  
sied enough in catching what water they  
could in sheets, table-cloths and hats, and  
you might see the poor soldiers and seamen  
catch it in their shoes; and it was plea-  
sant to see even those few failers that  
were left, to open their wells, and to catch  
the rain-drops with a great deal of eage-  
rness.

The 20th we perceiv'd divers small fires,  
like *Ignes fatui*, the reason whereof is not  
so easily to be found out at sea as on land.  
The 21st we came within a league of the  
*Equinoctial* line, which was pass'd by the  
22d of *February* early in the morning.  
We were not a little surpris'd to find the  
air so temperate and delightful, like the  
spring season; whereas commonly by rea-  
son of the nearness of the sun, the heat is  
very excessive under the line. Ships are of-  
ten becalmed for sixty or seventy days, and  
every thing seems to change its nature:  
the water putrefies, flesh stinks, fleas, lice,  
and other vermin dye: the scent of spices  
and balsams vanish, and abundance of peo-

7 O

ple

SEPT. 1691. ple are pestered with a kind of vermin in the posterior parts, which, if not taken care of in time, prove mortal; lemon-juice is the best remedy against them. A distemper and remedy perhaps not much known to some *European* physicians. Some of our missionaries began to be infested with them, but were timely cured. My companion father *Bebme* was troubled with the tooth-ach, but no sooner we were pass'd the line, but it ceased. I for my part was very well during the whole voyage, being not in the least troubled with vomiting, as I was in the *Mediterranean* sea in my voyage from *Genoa* to *Cadiz*, but was extremely hungry and could have eat heartily, had I known where to come at it, the salt vapours of the sea being extraordinary good to create an appetite and to help digestion.

We were not unmindful that among our friends in *Europe*, this was the *Merry Thursday* as they call it, which they spend in feasting, but we found that our *African* almanack did not agree with theirs, our pots and dishes being quite empty. Father *Bebme* and I were got into the acquaintance of divers *Dutch* and *Hamborough* merchants at *Cadiz*, who, though *Lutherans*, invited us often to dinner, and shew'd us many other civilities; among them Mr. *Buermaster*, a *Hamborough* merchant, was very kind to us, and at parting presented us with two *Muscovite* hams, telling us that he believed they might stand us in good stead in our voyage, which proved true enough, we having preserved them hitherto for the last extremity; but being more unwilling not to let pass the *Merry Thursday* unremember'd, we invited all the *Bobemian*, *Flemming*, *Austrian*, and some *Italian* missionaries to partake of our hams, which they did, and we eat them merrily, though without bread, wine or water; to add to our mirth, I play'd several tunes upon the *Theorbe*, and father *Bebme* and I diverted them with some pleasant tunes upon the flagelet.

The 23d and 24th the night wind continuing, we were advanced a degree to the south side of the line; it being *St. Matthew's* day, all the missionaries, brothers and novices, took the sacrament. The same morning hearing a more than ordinary noise upon the deck, and enquiring the reason thereof, I was answer'd, that they had seen *St. Thelmus* on the top of the mast. You must know that this *St. Thelmus* a *Dominican* being accounted a patron of seafaringmen, is revered by them every morning and evening. Now it often happening that certain fiery meteors appear at sea like the *Ignes fatui* by land; the ignorant seamen cry out immediately *St. Thel-*

*mus*, falling upon their knees, and saying certain ejaculations to divert the danger of an approaching tempest, which they say is portended by the appearance of *St. Thelmus*; though in all our voyage to *Buenos Ayres* we met with no considerable danger, nor lost as much as one man at sea; whereas not long ago in a voyage to the *Philippine* islands, the squadron that went from *Cadiz*, threw above five hundred dead carcasses over board with a cannon ball ty'd to their bodies, under the discharge of one great piece of artillery, the usual ceremony at burials at sea.

The 25th and 26th we met with very unconstant weather, sometimes it rain'd, sometimes it thunder'd and lighten'd, and not long after perhaps the fun rejoiced us again for a small time with her pleasant fun beams; a thing very common betwixt the *Tropics*, especially within two degrees on both sides of the line; whereas beyond the *Tropics* the sea is generally so easie and free from tempests, that the *Spaniards* have given it the name of *Mar de las Danas*, or the *Lady's sea*.

And upon this occasion I ought not to be unmindful of my promise, made in my letter from *Seville* to the fathers of our society, concerning the needle of the compass, viz. To give them a true account whether the needle of the compass under the line, does change from the north where it stood before, to the other north pole on that side, after they are pass'd the equator. Concerning which I will tell you, that according to my own and father *Bebme's*, and divers other missionaries observations, that the needle does not in the least change its positions, and shews the north as well here in *Paraguaria* as in *Europe*, the whole difference being not real, but only in respect of our own acceptions; for what they call the south in *Europe*, is the north with us here; and as the south wind is the warmest with them, so is it the coldest here. The north wind is cold in *Europe* and warm here. The heart of our winter is about midsummer, yet without frost or snow, a thing so little known among these *Indians*, that they can't tell whether it be black or white: and in *December* and *January*, when all is cover'd with snow and ice in several parts of *Europe*, we enjoy here the most delightful fruits of the summer. In short, he that call'd *America* the world turn'd topsie turvey, was not much in the wrong of it.

But we must return to our voyage. The 27th of *February* at 2 deg. of southern latitude, we began our voyage not with *Muscovy* hams as we had done the *Thursday* before, but with stinking beef and water; yet we were merry with this slender fare.

After

After dinner I visited the sick, and gave them some almonds and some confited aniseeds, which I had brought along with me from *Cadix* for my own use. After I had made them a short sermon upon *Patience*, I presented to them the image of our lady of *Ottingen*, which they kiss'd with a great deal of devotion.

The 28th of *February* we began our lent. Father *Anthony Paru* our superior, a *Spaniard* by birth, a person who for his gravity and whole behaviour resembled *St. Xaverius*, and most of the *Spanish* missionaries, brothers and novices had been continually troubled (ever since their coming from *Cadix*) with the sea distemper or vomiting; which not only continued but increased daily; the reason whereof I attribute to nothing else, than that this was the first time of their going to sea, which being plainly observable in those missionaries that were aboard us, that came from *Germany*, the *Netherlands* and *Italy*, and had pass'd over the *Mediterranean* into *Spain*, were not so much afflicted with it. Our greatest trouble was, that we had nothing wherewith to comfort them, for our pullets were all dead as well as the sheep, and there remained twelve hogs, so lean and tough, and the biscuit so full of maggots, that they were very unfit food for a sick stomach. The ship's crew had a kind of hard black biscuit, such as they feed the galley slaves with aboard the galleys; these being without maggots, father *Anthony Bebbe* and I eat them with the same satisfaction now as if they had been the best *French* bread. How often did we wish at this time for the scraps which we had seen in our college under the table?

The 1st of *March* we began to perceive the tempests and sudden hurricanes which had pester'd us so frequently about 3 deg. in latitude of the line, betwixt the two *Tropics* to change remarkably; the weather being much more settled, towards the evening we saw an entire rainbow quite across the sky, resembling our rainbows, except that we perceiv'd more of the blew mix'd with the other colours.

The 2d of *March* we sail'd along the coast of *Parnambuco* in *Brazil*, where father *Anthony Vierra* one of our society, a *Portuguese* by birth, and formerly chaplain to queen *Christine* of *Sweden*, lives in the *Jesuits* college. The same night *Don Antonio Gonzalez* captain of *Almiranta* evacuated a stone as big as a pigeon's egg. The 3d at sun-set a strange *Indian* bird settled upon our mast, accounted a sign that we were within 30 leagues of the shoar of *Brazil*, because the birds seldom venture further at sea, where they have no trees by the way to rest upon. His tail was like that of a

dragon's, the wings no bigger than those of *SEPP*. an ordinary cock; the head like that of a turkey, and the bill like that of a snipe. The governor of *Buenos Ayres* let fly at it with his fusée, but the shot not being strong enough to penetrate through the feathers, he escaped with life.

The 4th being the first *Sunday* in *Lent*, we had a sermon, which we continued for eight days successively, where the governors and ladies were always present. The 5th we found our selves at 8 deg. towards the *Tropic* of *Capricorn*, and though we had the sun *Vertical* (because it made not the least shadow about noon) we were not troubled with any excess of heat. The 6th, 7th, and 8th, nothing of moment happened, except that now and then we were refresh'd with a welcome shower of rain. The 9th, the *Tropic* of *Capricorn* began to shew his horns, but was no less favourable to us than the *Cancer*, we being not molested with heat. The 10th proved a very clear star-light night, and among other stars we then observed the *Pole Star* or *Polus Antarcticus*, the *Peacock*, the *Apis Indica*, the *Chameleon*, *Nubacula Major* and *Minor*, with several other stars, not to be met with in our celestial globe, as being as much unknown to the *European Astronomers*, as divers places and rivers are to the geographers, and therefore left out in their maps.

The 11th, we saw some sea pigeons, four of which settled on our masts; we kill'd two of them, and they were not unlike our pigeons. The 12th being the day of *Canonization* of *St. Ignatius* and *Xaverius*, we received the blessed sacrament. I visited the sick, and presented them with what refreshments I had. The 13th at one a clock in the afternoon, we pass'd the *Tropic* of *Capricorn*, 23 deg. from the *Equinoctial* line, and by entering the *Temperate* zone, advanced toward the river of *la Plata*.

Much might be said of the *Temperate* zone, were it not beyond my purpose: I will only tell you that it has got its name from its most excellent temperature of air, being neither too hot nor too cold, neither too moist nor dry; of which we found the happy effects, all our sick beginning to mend from this time, except the lately baptized *Negro* who continued very ill; I offered him the image of our lady of *Ottingen*, exhorting him to trust to her goodness for relief, which he did, and kiss'd it with a great deal of satisfaction; and recovered not long after. The 14th being becalmed we catch'd several fish, very different from ours in *Europe*. In the belly of one they found a whole waistcoat, in another an arm of a man. I spent the greatest part of this day in instructing four *Negro* boys belonging to the governor of *Buenos Ayres* to found

SEPP. found the trumpet, which cost me no small pains; however before the end of my voyage they had learn'd to sound about six or seven tunes.

The 15th, *Don Antonio de Retano*, captain of the *Capitana*, came aboard us to give our captain a visit, which was return'd afterwards by our captain. They saluted one another every time with eight cannon shot. In the evening I explain'd to some of the *Negro* women certain points of the christian religion, giving them an account of certain miracles perform'd by our lady of *Otingen*, the image whereof I shew'd them; they kiss'd and reverenc'd it, and finding them very desirous to keep it, I presented them with some others, of which father *Bebme* and I had caus'd several hundred to be made of earth at *Seville*; they valued this present above all the gold and silver I could have given them.

The 16th and 17th the wind being somewhat slacken'd, we divert'd our selves again with fishing, and one of the cabin-boys laying unadvisedly hold of the fish, he fasten'd his teeth into his hand, and held so fast, that his teeth could not be disengag'd till they cut of the head. The 18th being the 3d Sunday in *Lent*, we were alarm'd with a cannon shot, but having sent a boat to the *Capitana* to learn the reason, we found that it was only the usual ceremony made at the burial of a deceased seaman, whom they had thrown over-board with a bullet ty'd to his neck. The only person who lost his life in the whole voyage, he being not very well before we left *Cadiz*. The baptized *Negro* begins to mend every day; of which I desire an account may be sent to the reverend fathers, jesuits, *Philip Seuch* preacher, and *Joseph Adelman*, two great admirers of this image; as also to the masters of the *Tertian* scholars, and to all our companions, especially to father *Felik Jueger*; to satisfy them that our lady of *Otingen* does not cease to perform miracles, even among the *Indians* in *America*. For the image which I have caus'd to be set up in our church, they reverence and present with a deal of devotions: nay, a certain *Indian* painter has drawn two, no ill copies after it, which I have presented to father *Bebme*, who does wonders with them among the *Barbarians* call'd *Taros*; for such as are baptized reverence them with bended knees, make the sign of the cross before them, nay bring their young babes to the chapel (made of straw and clay) where one of them stands in order to kiss this holy image; all which, together with the indefatigable care of the said father *Anthony Bebme* (of which more hereafter) I look upon as a happy preface of the entire conversion of

these *Barbarians*; whose ease I desire may be recommended to the fervent prayers of those of our society in *Europe*, who thereby will have a share in those blessings that attend the office of a missionary.

But we must return to our ships. The 19th being the feast of *St. Joseph* the foster father of our Saviour, I did read mass and attended all the fathers, brothers and novices at dinner, it being my turn so to do. A little before sun-set the dogs began to bark and play very merrily, beyond what we ever observed them to do before; the captain told us that it was an infallible sign that we were not far from land, which the dogs by their quick scent could discover at a great distance; we soon found that he was not deceived in his guess, because soon after we got sight of the isle of *St. Thomas* on the coast of *Brasil*. The 20th our *Muscadine* vines in our little garden aboard us, began for to cast their leaves. The 21st being *St. Benedict's* day, I said mass instead of another father, whose turn it was; in which, as well as in every mass that ever I said, I bid them adieu. Constantly included in my prayers *Rudo*, father *Alphonso*, and my sister *Mary Beneditta*, with all the brothers and sisters in their respective convents; I desired to be remembered to them. The same evening I preached to the ship's crew, *Negros* and other passengers, my pulpit being only some cables wrapt together; and the seats of the auditors, the anchors belonging to the ship. I enlarg'd upon the life of the holy father *Benedict*, concluding with a moral exhortation to follow his holy footsteps. After sermon I told them several remarkable things of the two monasteries of *St. Mary's Hill*, and of the *Holy Crois of Loben*, of their original and situation upon high rocks, of their several rules and discipline; and how I had a brother in one and a sister in the other of these convents; who I was sure would offer their daily prayers for my safe passage over the wide sea. Tho' I speak to them in *Spanish*, in which I am not very perfect, yet they did hear me with the same attention as if I had been born a *Spaniard*; and I always found that when I spoke to the *Indians* concerning *Germany*, and such like far distant places, they were as attentive to it as the *Europeans* when they hear of the *Indian* affairs.

The 22d they catch'd a fish weighing no less than ninety pound weight. It was of a green colour, with gold colour'd spots, the flesh was very sweet and mellow. The 23d we were forced to laver, by reason of the contrary winds, so that we could not make above half a degree that day, tho' at that rate of sailing there goes sometimes twenty four nay thirty leagues to a degree, where-

case I desire may  
fervent prayers of  
ropes, who thereby  
blessings that at-  
tary.

y, by reason of the  
we could not make  
day, tho' at that  
s sometimes twenty  
o a degree, where-

as otherwise it is reckoned no more than  
fifteen. The 24th being St. Gabriel's day,  
we received the communion again, and the  
25th being the day of the Annunciation of  
our lady, it was celebrated with four mas-  
ses, the discharge of all our cannon, and  
by displaying all our ensigns and flags, and  
a comfort of our musical instruments, viz.  
The pipe, *Theorbe*, trumpets, drums and  
hautboys. The ship's crew danc'd in the  
evening to a drum and pipe. Soon after  
divers herons and birds of prey flying over  
our ship, we look'd upon them as certain  
messengers that we were not very far from  
the shoar, to the no small satisfaction of us  
all. Nothing can be more natural for men,  
than to long for that element which has gi-  
ven them life and being. I spent part of  
the evening in giving good instructions to  
the *Negros* aboard us, and in exercising the  
young ones at the trumpet, who began by  
degrees to found some few tunes. The *Ca-  
pitana* gave us the signal by a cannon shot,  
and sent us word by a boat that they had  
found the bottom, and found seventy fa-  
thom water; for whenever any ships ap-  
proach the shoar, they are sure to found  
the bottom by a certain piece of lead dip'd  
in suet or white wax, fastened to a rope of  
many fathoms long, which as soon as it  
touches the bottom, they draw up again,  
and by the colour of the earth that sticks to  
it, whether the ground be earthy, rocky  
or sandy, the last being the best for ancho-  
rage. We discovered at the same time a  
remarkable difference in the colour of the  
sea-water, which appear'd not quite so blew  
as before.

The 26th we had a favourable gale,  
which made the whole ship's crew, but e-  
specially us missionaries, full of hopes to  
reach the desired shoar before long. The  
27th the *Capitana* gave us the usual signal  
with a cannon shot and the white flag, that  
they had seen land; the *Almirante* did the  
same soon after, and was follow'd by the  
*Pink*. Our explorer on the top-mast dis-  
covered the land without the help of a pro-  
spective glass, to the right hand of us to-  
wards *Brasil*, immediately after break of  
day, as it is incredible with what joy every  
body climb'd, some upon ladders, others  
in the masts, to take part in so agreeable  
sight; some were cleaning their prospec-  
tive glasses, whilst others were endeavouring  
to discover it with their eyes; among these  
was father *Bebme*, who being very quick-  
sighted, cry'd out about noon, *Land, Land*  
*good Fishers*, and not long after every body  
had a plain sight of that so long wish'd for  
continent of *America*; which made us fall  
on our knees to offer our thanks to God Al-  
mighty for his mercy, in bringing us so  
near to the desired port.

VOL. IV.

We found the depth here of about 30 SEPP.  
fathom, at 24 deg. of southern lat. and 1691.

26 min. about 7 or 8 leagues from the  
mouth of the river de la Plata. At the same  
time we saw two clouds in the south, very  
high in the hemisphere, which we had first  
discover'd, and consequently kept sight of  
ever since we approached the line, but only  
just above the horizon. Our captain told  
us that these two clouds were the surest  
guides to ships bound for *Paraquaria*, and  
I remember that as soon as the captain saw  
them, before we pass'd the line, he told us,  
be joyful good fathers, here are our infalli-  
ble guides, these two clouds will shew us  
the way to *Paraquaria*, and rest as soon as  
we come there. Which in effect proved  
true, not that these clouds did drive before  
us, but they standing vertical over *Para-  
quaria*, and being in sight of us, we had  
no more to do than to steer our course di-  
rectly towards them. We saw in those sou-  
thern parts divers new stars, such as *Derado*,  
*Xipbias*, call'd the *Gold Fish*, *Noah's Dove*,  
the *Paradise Bird*, the *Phoenix*, the *Pica*  
*Brasilica*, *Indus Sagittiferus*, with divers o-  
thers.

The 28th of February we advanced to  
the mouth of the river, which at the en-  
trance is no less than seventy leagues over;  
and were told that the river of the *Amazons*  
in *Brasil* was much broader than this. We  
had much ado to find the right channel,  
and were fain to take in most of our sails,  
for fear of touching upon the sands. The  
water continued salt, as I found by experi-  
ence, but the colour was changed from blew  
and green, into a whitish colour not unlike  
the rivulets. After much rain, to the right  
of us, we had the cape of St. Mary, where  
we could plainly see the tower, built by the  
*Spaniards* after the discovery of *Paraqua-  
ria*. Then we pass'd by the isle call'd *De*  
*los Lobos*, from the vast number of sea-  
wolves which are seen hereabouts. We saw  
a great number of them with heads like  
dogs, and hair on their backs instead of  
scales, and they howled like our wolves.  
But we came not in sight of the cape St.  
*Anthony*.

Thence we had still sixty leagues to *Bue-  
nos Ayres*, which was at 38 deg. southern  
latitude, just as *Cadiz* at 35 deg. of nor-  
thern latitude. We saw hereabouts vast  
quantities of white wild pigeons. About  
noon we came to the isle *Meldonato*; and a  
rumour being spread in *Spain*, that the *Por-  
tuguese* had taken the post and fortified  
themselves in that island, the governor of  
*Buenos Ayres* (pursuant to his orders received  
from his catholick majesty) went ashore in  
the said island with some gentlemen and  
soldiers, to know the truth thereof; they  
took a view of the whole island, and found

7 P

neither

SEPP. neither men nor the footsteps of men, much  
1691. less any houses or fortifications; but prodigious numbers of fat oxen, cows, calves and horses, the grass being so high, that it almost covered the cattle, notwithstanding they were very large. They kill'd an ox, which they brought along with them besides several other things; but the ox was so big that they were forced to cut him into quarters before they could carry him into the long-boat.

They brought also along with them divers sorts of flowers, of which they had made garlands and put them on their hats. The governor, after his return aboard the ship, told us, that near the shore, upon a rock, there stood a wooden cross, set up doubtless by the Spaniards, as a token that they were the discoverers of it. The flowers they brought along with them were not unlike some of our European flowers. One had some resemblance to our gilliflower, another to our saffron, and another to that of our wild sage. But what surprized me most, was a certain flower (such a one as I never met with before in my life) having a thorny crown, a lance, 3 nails, and the characters of ropes upon its leaves; which for that reason I gave the name of the passion-flower. After this day we always came to anchor at night, not daring to sail in the night time for fear of missing the channel, which has on both sides most dangerous sand-banks, thinking our selves much more safe than in the open seas. We all rested very well, and the 30th by break of day weighed our anchor, and with all the sail we could make pass'd by the *isle de los Flores*, to call'd from its abundance of flowers. I spent part of the day in instructing a Negro boy who was afterwards baptized at Buenos Ayres.

April 5th, I found by that water where-with I wash'd my face, that it had very little of the brackish taste left, which put us in hopes that we might drink fresh water by noon, which happen'd accordingly; and it would have done one's heart good to see how every body did run to satiate himself with the most delightful draught of fresh water, which went down with more pleasure at that time, than the best of wines could have done at another, notwithstanding it was not very clear. We found twenty fathom water.

April 2d, I told you before that this river is full of sand banks, to avoid which four men were constantly employed to sound the depth by the plumb, and, according as they found the earth, which stuck to the bottom of it, either sandy, clay or marly, they cry'd at every turn, 20 *fathom, clay ground*; 18 *fathom, sand*; so that by the special care of our captain, we pass'd on

very happily without striking upon the sand banks.

April 3d, a large bird of prey settling upon the mast of our ship, the governor of Buenos Ayres shot a bullet into his carcase, which was too strong for his stomach to digest; he had most terrible large claws. Soon after we catch'd a pretty small bird with our hands. It was of a sky-blew colour all over the body except the head, where it had a red tuft; it made not the least noise when it was catch'd, and was presented to the governor's son. The same day the captains dispatch'd *Don Pietro de Castro*, in a yacht to Buenos Ayres, to give notice of our arrival.

The 4th, we were within twenty leagues of Buenos Ayres, yet could not see it; we spent that day in clearing the ships, put up our flags, covered the galleries with scarlet cloth, and opened the port-holes for the cannon, to give the usual salute at our arrival in the port. The governors, merchants, factors, passengers, soldiers, and in short all the ship's crew, even to the cabin-boys, put on their best apparel, to make the best appearance they were able at their arrival in the harbour; among which the equipage of the governor of Buenos Ayres, and the ladies, together with the flags, ensigns and ornaments of the vessels, made a most glorious shew, the last appearing upon the water like so many triumphant castles. The poor missionaries were the only persons, who in their habits had not the least share in all these preparations, their cloaths being very old, especially mine, and those of father *Bebme*, who being made a year before the rest, were so tatter'd that they would not hold a stitch; and therefore wore our night-gowns over them.

The 5th immediately after sun-rising, we got sight of the so much desired port of Buenos Ayres, as the Spaniards call it, from its most excellent temperature of the air, throughout the whole year. Towards evening we saw two boats, with two pair of oars each, to make the best of their way towards us: In one was the son of the governor of the place, accompany'd with three of the chief officers, to welcome the new governor, and in the other the *Procurator*, or chief of our society in *Paraguay*, to do the like to the missionaries aboard, and to regale us with divers sorts of provisions and refreshments; or, to speak in plain terms, to feed the hungry. The father procurator brought along with him four sheep and two calves, but we refusing to eat flesh in lent, bestowed the same upon the hungry soldiers; of American fruits they brought us musk-melons, apples, melons and water-melons, call'd *Sandias* by the Spaniards, some onions and garlick, twenty whea-

whea-

wheaten loaves of the best sort, a small barrel with the best honey, a basket of sweet-meats, preserv'd lemons and citrons, &c. all which how welcome it was to our hungry stomachs we will give you leave to guess; the other boats having brought also such like refreshments for the governours and ladies, they were no less pleas'd with them than we, after so tedious and troublesome a voyage.

The 6th of *April* we arriv'd happily in the port *Buenos Ayres*; where all that day nothing was to be heard but the thunder of our cannon, the noise of our trumpets, drums and pipes: Here they saw our flags and ensigns display'd, on the shoar several companies of horse and foot, a vast number of *Indians* with their musical instruments, abundance of negroes to bid us welcome; and to render our arrival the more conspicuous, many of the *Indians* came running

with full speed, and thronging through the SEPP.  
crowd to kiss our hands, so that I could not refrain from tears, but upon my knees implor'd God's mercy to assist me in my intended design of bringing many of these innocent people to the knowledge of the gospel: Thus surrounded by a vast multitude of these *Americans*, and accompanied by the father provincial *Gregory de Gresco*, and the rest of our society, we pass'd from the gate straightways to the church, where we sung the *Te Deum* with a great deal of devotion, the bells ringing all the while all over the town. Thus having given you the best account I could of this voyage, pursuant to my promise at our departure, I will now proceed to our journey from *Buenos Ayres*, into the cantons of the *Indians*; in hopes that you will, in consideration of the weight of the matter, pardon the unpoliteness of the stile.

### C H A P. III.

*An account of another voyage performed by father Anthony Sepp, May 1691. from Buenos Ayres, for 200 leagues up the river Uruguay, to the cantons of the Indians.*

**B**UT before I embark, a second time, I think it not amiss to give you a short description of *Buenos Ayres*, not questioning but tho' the same has been done more at large before by other historians; yet what comes from the hand of a friend, who lives upon the spot, will be look'd upon as more sure and acceptable, than what comes from strangers, that have been no eye-witnesses of what they publish to the world. Being arriv'd the 6th of *April* 1691. (as we told you before) at *Buenos Ayres*, our father provincial thought it highly necessary, that the forty four missionaries, which had endured so much hardship in so long a voyage, should have a month allowed them for the recovery of their strength, which was much impaired by so many fatigues, some being so much alter'd in their complexions, that they appear'd as meagre and pale as death it self.

His first care was, to endear himself to us by all imaginary acts of charity; he provided food and drink, clothed and received us with all the marks of kindness and liberality in his college, where we did not want any thing the place afforded; as on the other hand such of our missionaries as were able employ'd the approaching holy week in hearing confession, and giving absolution to the *Spaniards* living at *Buenos Ayres*, no *Indians* being permitted to inhabit the town; for the old college here (tho' next to that of *Corduba* in *Tucuman*, the biggest of these parts) consisting only of

eight fathers and one brother, including the father provincial and his deputy, had their hands full, in the daily performance of their duty.

This province exceeds in bigness all *Germany*, the *Netherlands*, *France* and *Italy* taken together, not in the number of cities, for such it has none; not in colleges, for of these there are no more than eighty, and in them only a hundred and sixty persons, but in its vast extent, and the great distance of our colleges from one another, some of which are a hundred, two hundred, three hundred, nay five hundred or six hundred leagues asunder. There is one continu'd plain of two hundred leagues betwixt *Buenos Ayres* and *Corduba* in *Tucuman*; in these two hundred leagues you see not so much as one tree; yet nothing but the best pasturage in the world; full of fine cattle, such as oxen, cows, calves and horses, all which, as they belong to the first that catches them (there being neither village, nor house, nay not so much as a shepherd's hut to be seen in the whole plain) so you may take them by thousands, and dispose of them at pleasure. But we must not venture too far into this spacious field, for fear of losing our little town of *Buenos Ayres*; which has no more than two streets built crosswise; it lies at 35 deg. towards the *Antarctic Pole* (of southern latitude) as *Cadiz* in *Spain* stands at 35 deg. towards the *Arctic Pole* (of northern latitude:) it is a very healthful place, as its name intimates; under the government of a *Spa-*

SEPP. a *Spanish* governour, which is changed every five years. It has four convents, viz. of the *Franciscans*, *Dominicans*, *Trinitarians* and *Jesuits*; who all live here in a great deal of poverty, by reason of the great scarcity of many things requisite for the conveniency of human life. The houses and churches here are not built of brick, but clay, not above one story high; and this is not for want of stone, but of lime and mortar; the burning of which has been but lately set up here, as well as the making of tiles and bricks some years before. They have since that time began to build a steeple of brick, which is near half finished, and intend soon to begin a new church of the same materials. The jesuits themselves are the architects, and the workmen, certain *Indians* sent thither from the cantons in the country. The college, and some few houses are also covered with tiles, but the rest only with stone.

The castle it self, where the governour resides, is only of clay, surrounded with an earthen wall, and a deep trench, defended only by nine hundred *Spaniards*; tho' in case of necessity, thirty thousand *Indian* horse might be arm'd out of the several cantons, and these not unskillful in the use of fire-arms and swords, in which they are instructed by the missionaries, as also how to draw up into squadrons and battalions, and to act both offensively and defensively, as well as the *Europeans*. Not to speak here of their own arms, as bows, arrows, slings, &c.

The ecclesiastical government here is composed of one bishop only, and three canons, whose revenues in all do not amount to above three thousand crowns *per Annum*; which, according to a true computation, does not amount beyond half the sum, considering that silver is cheaper here than iron; for you may sell a two-penny knife here for a crown; an ordinary hat, such as you buy in *Germany*, for two shillings for ten or twelve crowns; a gun of about ten or twelve shillings price, for thirty crowns, and so in proportion; because these things are often not to be bought for any money here.

On the other hand provisions are dog cheap; an ox, or rather to speak more properly, a fat cow (for they don't value the flesh of oxen) they buy for two *Reales de Plata*, or ten or twelve pence, a good horse for two shillings and for less, because I have seen two good horses given for a knife not worth six pence in *Germany*, and a good ox for a few needles; but of this more hereafter.

About *Buenos Ayres* you see whole woods of peach-trees, neither have they any other fuel, but the wood of almond and

peach-trees; these they propagate by putting only the kernels into the ground, which bear fruit the next year. But chestnuts and hazelnut-trees will not thrive so well here. They tell you an odd story in *Spain*, concerning the origin of the peach-trees, viz. That when the *African* moors invaded *Spain*, they brought along with them vast quantities of peach-stones to plant in *Spain*, the fruit whereof being poisonous in *Africa*, they did not question but it would have the same effect in *Spain*; by which means they hoped to root out the *Spaniards*; but that, contrary to expectation, the said fruit proving quite otherwise in the *Spanish* soil, the *Spanish* missionaries brought abundance of these stones into *Paraguaria*, where they were planted, and propagated to a prodigious number: This country also produces the most delicious black and white figs; I remember that a poor negro, a slave belonging to the college, went in the *Easter* ... days along with me into a wood, where he got upon a tree, and gathered me as many as he pleased; I offer'd him a *Spanish* half-penny for his pains, which he refused, till I forced him to take it, wherewith he think himself as rich as *Cresus*, he returned me a thousand thanks, and told me, that if I would but give him the least notice, he would fetch me as many figs as I pleased.

All this while, our chief recreation consisted in giving them an account of the affairs of *Europe*, especially concerning the *Hungarian* war, the siege and relief of *Vienna*, the taking of *Buda* and *Belgrade*, the conquest of *Transilvania*, and such like; sometimes the discourse would run upon the actions of *Lewis XIV.* king of *France*, sometimes about the divisions raised by father *Fontaine* in that kingdom; all which being novelties to them, they were extremely pleased with our discourse.

But the father *Provincial*, and the father *Procurator Ignatius de Trios* (who has brought this letter as far as *Rome*) not thus satisfied, would needs have me make a trial of my skill in music; so that to satisfy their curiosity, I was forced to play before them upon the great *Theorbe* which I had bought at *Augsburgh*, and upon the lesser *Theorbe* bought at *Genoa*; at which they seem'd much surpriz'd: Father *Anthony Belme*, and I, gave them also a consort of the flute, upon the violin, and a little stroke upon the trumpet *Marine*, which I got made at *Cadiz*; all which they were much delighted with, tho' I must confess my self but a very indifferent artist.

I made also a present of certain thebes and other trifles, to the provincial and his deputy, and gave to the rest of the fathers a few earthen images of our lady, which were received and valued by them beyond gold

or

or silver: For it is to be observed, that in this country the smallest present of this kind is fit for a provincial, who will think himself as much obliged upon such an account, as if in *Europe* you presented him with a piece of the best miniature; the reason whereof is, that the merchants that traffick into these parts, thinking it not for their purpose to trouble themselves with the selling of pictures, images and beads, the same are scarce ever brought hither but by the missionaries, and consequently highly valued by the inhabitants: Father *Bebme*, my companion, did in like manner give them sufficient proofs of his liberty; he presented that father provincial with a wooden cross, on which were no less than seven sun-dials neatly done, and to the rest of the fathers he gave some lesser crosses, which he had bought at *Caliz* and *Seville*.

By such like presents, tho' of little intrinsic value, we so gain'd upon the affection of the college, that they began to be very inquisitive of what part of *Germany* we were, and would often wonder what was the reason that they had not hitherto had so much as one missionary out of *Germany* in those parts; which was indeed no more than the truth. I told them that the only reason I knew of, was, That there being but few *Jesuits* colleges in that part of *Germany* which is immediately subject to the emperor, they could furnish but few missionaries. Unto which they reply'd, That the whole empire being subject in some measure to that emperor, and the *Spaniards* making no difference betwixt the nations of the several provinces of *Germany* (provided they were not of the *French* faction, a nation ever hated by them,) and that there was at that time a most strict alliance betwixt the emperor and the house of *Bavaria* by the marriage of that prince with the emperor's daughter, they could scarce conceive how so many colleges could not furnish some missionaries for the *Indies*.

I had no other answer to make, than that my first alledged reason, being an opinion generally received in *Germany*, I had taken all possible pains to undeceive them, in that point since my departure thence, and that I had written to my friends from *Seville*, that they were in an error as to this point: A *Bavarian*, *Suabian*, *Swiss* or *Palatin* missionary being as well qualified for that station, as a native of *Tyrol* or *Vienna* itself; which has been sufficiently verified since, by the trust reposed in father *Anthony Bebmé* (tho' a *Bavarian*) by the superior of our order. Unto which we might add, that since our coming thither, the natives seem to be more fond of us than the rest. But we must return to our story. After we had rested our selves for a month at *Buenos Ayres*,

VOL. IV.

the father provincial sent most of the missionaries lately come from *Spain* to *Cordoba* 1691. in *Tucuman*, for the convenience of their studies, most of them being but novices, and the rest students of philosophy and divinity. But the most of the missionaries as they were no *Spaniards*, and most of them arrived to a good age, he dispatch'd to the several cantons upon the river *Parana* and *Vinguas*, deeper into the country. We pass'd up the river in the following manner.

Three hundred *Indian* christians were appointed, with certain vessels, to carry us up the stream; but, before we embark'd, 'twill be requisite to give you a description of these vessels, which are call'd *Canoes* by the *Spaniards*. They take the trunks of two large trees, about seventy or eighty foot long, and three or four foot diameter; these two trees they fasten together, like our float-woods, yet at the distance of a pace from one another; this interstice they fill up with canes of about twelve foot in length and two foot in depth, and upon it erect a certain hut of small canes and straw, sufficient to contain conveniently enough two or three persons; the sides are commonly of straw or cane, cover'd with the same, over which they lay an ox's hide: on one side it has a little window, and on t'other the door, made likewise of an ox's hide. In these huts the missionaries divert themselves during the voyage, with as much satisfaction as if they were in a palace, and perform the same religious exercises as if they were in one of their colleges, without the least interruption, the *Indians* rowing very orderly, without the least noise, so that you shall scarce hear 'em speak a word all day long.

We embark'd in these canoes (two or three in each) the 1st of *May*, 1691, about two or three leagues from *Buenos Ayres*, because the missionaries are always careful not to let the *Indian* christians come as far as to that place, where these simple people would be soon corrupted and infected with the vices of the *Spaniards*. Thus we were row'd up the stream by twenty-four men in each canoe, and soon after pass'd by several islands on both sides of us, very delightful for the vast number of their palm, laurel, lemon and citron-trees, surpassing in natural beauty all the gardens of *Europe*, nothing being so much to be lamented as that all these islands (of which there are no less than sixty) which might serve princes for gardens, should be uninhabited, and be receptacles only for wild beasts.

Of fishes, and those of a delicious taste (but having not the least resemblance to ours, except some few small ones) this river affords such vast quantities, that you need no hook nor rod to take 'em, but only to hold

SEPP. hold out both your hands; nay, they'll leap  
1691. into your boat, where you may catch 'em  
with ease.

After we had for eight days row'd up the stream of the *Rio de Plata*, which henceforward is call'd *Rio Paraguay* (*Rio* signifying in Spanish as much as a river) we left *Rio negro*, i. e. the black River, to our right, and *Rio Terzera* on the left, and afterwards quitting likewise the river *Paraguay* (which has given its name to *Paraguayria*) enter'd the river *Uruguay* to the right, having its course three hundred leagues thence towards the side of *Brasil*. Upon this river, viz. two hundred leagues from *Buenos Ayres*, are seated fourteen of the Indian cantons, and twelve more upon the river *Parana*, deeper in the country on the right hand, whereof father *Scheerer* having publish'd a map, I will accordingly direct your way by the time.

First therefore, look for *Buenos Ayres*, and leaving the cape of *St. Mary* to the right, follow the track of the river upon which it lies, where you'll meet with another river, not named there, which is the river *Uruguay*, about the same bigness with the *Danube* near *Vienna*, upon which I now live in the first canton, from whence I writ this letter. Here you'll find in the map *St. Nicholas*, higher up *St. Xavier*, and still higher *St. Sacramentum*, *St. Joseph*, &c. Where is to be observ'd, that father *Scheerer* being not able to insert all the names, by reason of the narrow compass of the map, he mentions *St. Nicholas* in the first place, upon the river *Uruguay*, whereas 'tis the seventh in order; for *Yapay*, where I live, is the first; next, *Misiss Paraguaría*; seven leagues thence *Sorubí*, then *de Santa Cruz*, and twenty leagues further *St. Thomas*, from *St. Thomas of Borja*, now to that *Ayofoli*, *La Concepcion*, and so forth.

The 15th of May we took a walk along the banks of the river and adjacent woods: we found near the river-side abundance of fine Stones, which, if polish'd, would resemble our precious stones: we also saw a kind of vessel, naturally baked by the sun, of sand, and as bright within as if it had been glaz'd by a potter. In these the Indians keep their drink in the hottest season, and hanging it in the night-time in the air, it keeps the water as cool as if it had been set in ice. We also found here divers pieces half wood half stone, and divers pieces of citron-peel and flesh petrify'd, which seem to shew a petrifying quality in this river.

The 20th, a considerable number of *Barbarians* approaching our vessel, we sent our interpreter to know what their business was. They told us, that they had brought twenty horses to sell; so we landed, and having

ask'd the price of the horses, we produced our needles, knives, fish hooks, tobacco, bread, and the powder of certain leaves of a tree growing in *Paraguayria*, which they look upon as extraordinary wholesome, and put it in their drink (of which more anon.) These trifles, which in all cost not above a crown, were chang'd for twenty horses; and they were besides so well pleas'd with their bargain, that they went away whistling, a certain sign of their satisfaction.

He that was their chieftain, and is commonly a forester (whom they call *Carizque*) was clad only in a doe's skin, hanging down from his shoulders; the rest had on by a piece of skin wrapp'd about the middle, hanging down before as far as to the knees; the boys and girls were stark naked; upon the head they have nothing but long black hair, as strong as horse hair; in their ears they have holes, in which they hang either fish bones, shining like the mother of pearl, or a colour'd feather ty'd to a thread; the boys and girls had likewise white fish-bones or feathers, which they wore on their chins, in holes made for that purpose; they also wore feathers of divers colours ty'd in a string round their necks. The men are much of the same size as the Europeans, but not quite so tall, with thick legs and large joints; their faces scarce differ from one another, being rather round than oval, but flat, and of an olive colour. They were arm'd each with a bow, and a whole handful of arrows, these being accounted the most courageous, and most addicted to foreery among these *Barbarians*; and these are the same *Yares*, for the conversion of whom father *Anthony Belme* was sent thither, and lives among them to this day, not without great difficulty and danger, they having more than once attempted his life.

Some of the most robust among 'em had several deep scars on their bodies; these wounds they give themselves in their tender age, without the least repining, and wear 'em afterwards as a mark of their courage. The women appear more like devils than rational creatures; their hair hangs loose over their fore-heads, the rest, twisted in several locks, covering their backs to the hips; their faces are full of wrinkles, with their arms, shoulders, and breasts naked; their ornaments about the neck, hands, and arms are certain fish-bones, made like scales of mother of pearl, or large scales of fish. The wife of the *Carizque* wears a triple crown, like the popes, made of straw; their children they wrap, as soon as they're born, in a tyger's skin, give 'em suck only for a short time, and afterwards feed 'em with half-raw meat, out of which they suck the juice.

The

les, we produce

The

The men have a custom, at the death of their nearest kindred, to cut off a finger every time off the left hand ; and if one of their daughters dies (provided the be hand some) they make a feast, and drink round out of the skull.

The 23d, we went ashore again, to purchase some meat of these *Barbarians* ; not above eighteen paces from the bank side we saw their huts of straw, without any roofs, fix'd upon the bare ground, an men household stuff consisted in a few tompons hollow'd out, which they use as we do our copper and earthen vessels, and a few sticks instead of spits ; their bed was a tyger or ox hide spread upon the ground, except that their *Cazique* had a net fallen'd at some distance from the ground, on two trees, for his bed, the better to secure himself against the wild beasts and serpents. There being a considerable number of us, they began at our approach to quake for fear like an ash leaf ; but no soon'r did they see us produce our needles, fish hooks, and bread, but they did run towards us with open arms, and we exchange'd for as much fat cows flesh for our three hundred *Indians*, and as much veal for our own use, as we had occasion for all that time.

In the mean while having cast my eye upon a little innocent boy that had taken hold of me, and considering with my self what pity 'twas that so innocent a babe should be left among these *Barbarians*, and in time become a sacrifice to the devil, I told the father, that if he would consent to the sale of the child, I would cloath him, and take care of him as long as I liv'd. He consented ; so my next addressee were to the mother, whom I tempted with bread, needles, and tobacco, to part with the child, but she answering me, that she had a peculiar kindness for this child, but would consent to let me have one of the rest, I pitch'd upon a girl, which she seem'd pretty well satisfied with ; but when she saw me produce the needles, tobacco, &c. her heart began to fail, and her natural inclination overcoming all other considerations, she recall'd the bargain, so that I was fain to rest satisfied, but, however, made her a small present of some trinkets, to engage her against another occasion.

The 24th, after I had said mass, father *Anthony Behme* and I erected a wooden cross upon a hovel near the bank side, with this inscription, *Germania* ; to intimate that we were not without hopes of settling one time or other the gospel here ; and tho' some of our company could not forbear to smile at it, and said among themselves, *They are indeed good simple Germans*, yet were we not altogether deceiv'd in our hopes, for within the year God was pleas'd to bless the

endeavours of father *Anthony Behme*, that St. not far from this place he erected a kind of canton for the converted *Indians*, with a small chapel dedicated to St. *Joachim*, as we shall see more at large anon.

The 24th of May, the meat which we had bought of the *Indians* being almost consumed, we mounted the twenty horses we had purchas'd, and riding for about half an hour into the country, over the most fertile meadows in the world, met with abundance of fat cattle, whereof we took six of the fattest cows, and four calves, which we kill'd upon the spot, and having thrown away the entrails, head, and feet, cut 'em into quarters, and so carried 'em to our boats. 'Tis almost incredible how nimble the *Indians* are in catching, killing, and quartering these beasts, but they are no less nimble in eating 'em, without salt or bread, and more than half raw, a custom not easily to be abolish'd among them, tho' I have often attempted it ; for I remember that several times I have sent some meat boil'd after our way to some *Indians* that were sick, which they receiv'd thankfully, but afterwards gave it to the dogs, and return'd to their own diet.

The 25th, we saw coming down the river a boat like ours, which afterwards proved to belong to father *Joseph Seravia*, a missionary of the canton of St. *Guces* : he had twenty musicians with him, who welcom'd us with their instruments in the name of all the rest of the canton ; he also presented us with ninety white loaves, two small barrels of honey, pickl'd peaches, lemons, citrons, apples, water melons, and suchlike *Americian* fruits, which came in very good time, ours being most spent before. This was the first missionary we met with, being an ancient person, and very venerable for his grey hairs, and the service he had done in taking care of eight thousand souls, without a companion : 'twas upon this score that he was ravish'd, to hear that forty-four missionaries were lately arriv'd from *Spain*, not questioning but that he should soon have an associate ; which happen'd accordingly.

Just before night I agreed with the said father to sing our Lady's *Litany* among the *Barbarians*, which I did accordingly, and could scarce refrain from tears when I saw some of the *Indian* children that came along with him to sing with a great deal of joy to the praise of the Mother of God. We continued to do the same every night before we went to rest, and were infinitely pleas'd, to see even the *Barbarians* flock to us, and to hear us with a great deal of attention and decency.

The 26th we came to a certain cataract or water fall in the river *Uruguay*, where the

water

SEPP- water rushes with such violence from the rocks, that we were forced to take our boats to pieces with incredible difficulty, the trees which compos'd them being sixty or seventy foot long, and three in diameter; notwithstanding which they carried them, and all the other materials, over these narrow rocks in less than six hours, and soon set 'em together again in the same manner as we have describ'd 'em before.

This cataract, and the ridge of rocks over which the water passes, seems by providence to be fix'd here for the singular advantage of the poor *Indians*, against the avarice of the *Spaniards*, who meet here

with their *ne plus ultra*, as not being able to go further with their ships; which is the reason that hitherto they have been confined to *Buenos Ayres*, and never been able to settle in these cantons, which were otherwise sufficiently inviting to them, by reason of the vast profit they would draw from thence. And happy 'tis for the poor *Indians*, who being a simple nation, would otherwise be soon infected with the vices of the *Spaniards*, who, besides this, would make them their slaves, they making not the least account whether they are *Christians* or *Pagans*, but treat 'em promiscuously, rather like dogs than men.

#### CHAP. IV.

*Containing an account of the arrival of father Anthony Sepp, and father Anthony Behme, in Jajegu, the first canton of the Indians; dedicat'd to the three wise men from the east: and of the troubles and other difficulties attending the office of a missionary in these cantons.*

AFTER we had happily pass'd the before-mention'd cataract, we continued our voyage for some time still against the current, till at last, the 1st of June (just a month after we left *Buenos Ayres*) we began to come within sight of *Jajegu*, the first canton upon this river, dedicated to the three wise men of the east, at 26 degr. and 7 from *Buenos Ayres*. As we were infinitely rejoic'd at so agreeable a sight, we express'd our satisfaction by covering our straw huts with the green branches of trees, and adorning the doors with such lemons and citrons as we had left. We drew up our squadron of boats into a half-moon, and by the sound of our drums and hautboys (of which each boat had one) gave notice to all the adjacent cantons of the converted *Indians* (the houses, churches, and steeples made a most glorious shew in so desolate a country) of our approach before they could see us.

We advanced in the same order June the 2d, directly opposite to the first canton, and were no sooner espied by the inhabitants, but they express'd their joy, by their usual acclamations; *Jepuan! Jepuan!* You may guess how pleasing a sight it was to us, to see the people in vast numbers leave their huts, some on horseback, some on foot, others with their bows and arrows, others almost without their cloths to flock to the river side, not excepted even the boys and girls, and aged persons, who all would partake of these demonstrations of joy at our arrival.

But what not a little surprized us, was, that among all this crowd, we saw not as much as one *Indian* woman kind above se-

ven years of age; some thought them less curious, others attributed their absence upon this solemn occasion, either to fear or modesty; but found our selves extremely mistaken in our guess, when we were told that they were all repaired to church to return thanks to GOD for his mercy, in protecting the missionaries in their voyage hither; but we will leave them to their devotion and return to the river, where the father *Procurator* and father *Superior* strove to out-do the *Indians* in all the demonstrations of the most sincere joy and satisfaction that could be imagin'd. They had sent two well equip'd boats like galleys to meet us, lined on both sides with firelocks; these two made a mock engagement, discharging their muskets briskly at one another, under the sound of drums, trumpets and hautboys, whilst some *Indians* diverted us with wrestling together in the water, till at last winding about, they gave us a triple salvo and joyn'd with ours.

On the river side we saw the father *Procurator*, and father *Superior* at the head of two troops of horse, and as many companies of foot, all *Indians*, but clad after the *Spanish* fashion, and arm'd with cymetars, muskets, bows, arrows, slings, &c. Four ensigns did their utmost in shewing us their skill in managing their colours; as four trumpets, and some hautboys animated the people, and saluted us at our landing. We had no sooner set foot a shore, but embracing one another, we march'd in good order through a green triumphal arch towards the church, being follow'd by some thousands of converted *Indians*, where being welcom'd by the ringing of the bells, and

and entering the church with a singular gravity and devotion, we found the *Indian* women still at their prayers, and that with so much fervency, that not one among 'em stir'd as much as her head, or cast her eyes at us as we came into the church.

We began the *Laudate Dominum omnes gentes*, which being done the *Corregedor* or chief of the *Indians* receiv'd us in the name of the whole nation with a short but very good speech, the like did one of the *Indian* women; and that very elegantly, if we may credit what the father *Superiour* (who is well versed in the *Paraquarian* language) assured us.

Thus we spent that day and the next following in mirth and Jollity. In the evening we were invited to see four different dances. The first was performed by eight ho's, managing their pikes or lances with great dexterity whilst they danced. The second was by two fencing-masters. The third by six seamen. And the fourth by six boys on horseback. All these were *Indians*, but clad after the *Spanish* mode, and that with so much curiosity, that they might

have not been ashamed to appear before *SEPT.* persons of the first rank in *Europe*. They afterwards gave us the diversion of a kind of a tournament on horseback; it being then night, they had illuminated the place with ox horns fill'd with suet, they having neither oyl nor wax here.

The 3d of *June* being *Whit-Sunday*, all the missionaries said the first mass in the *Indian* church here; returning their most humble thanks to *God Almighty*, for having made them his instruments in the conversion and instruction of these poor *Indians*, and imploring his mercy to enable them to go through with so great a work, especially in the attaining of the language of the natives; among which that of the *Paraquarians* is the chiefest, having for the rest not the least resemblance to the *Spanish*, *German* or *Latin*; being a peculiar language, as may be seen by the enclosed table, containing the *Pater Noster* and *Ave Mary* in the *Latin*, *Spanish* and *Paraquarian* languages, with some few rules for the reading of it, as it was copied by an *Indian*.

The same day the father *Superiour* did allot to each of the new missionaries his place. My lot was to stay in the first canton, call'd *Japaya*, dedicated to the *Three Wise Men of the East*, the patrons of Ger-

many, and the city of *Cologne*. Father *Anthony Beñme* was sent to *S. Michael*, a hundred leagues from hence. The two *Bobemian* missionaries one to *St. Anne*, and the other to *Ad reductionem Corporis Christi*, one hundred

hundred and twenty-one leagues from hence, the rest to other places, but all using the same language. And upon this occasion I cannot but give some account of the present condition of our cantons (call'd by us *reductions*, because they were reduced to the catholick faith by the missionaries) or districts or towns, which you please.

Of these there are in all twenty-six, each of which is provided with two missionaries if possible, though of late years by reason of the slow supplies of missionaries from *Spain*, they have been faind to be contented often with one; sometimes they have also a brother for an assistant. Each of these cantons contains generally three thousand, four thousand, five thousand, six thousand, and sometimes a greater number of souls. All such as are capable of receiving the communion, come to confession at least four times a year; besides which the missionary must baptize the children, give the extreme unction to dying persons, pray with them, and last of all bury them: his business is also to marry such as intend to enter into the matrimonial state, after they have been three times proclaimed in the church; to catechise the children; to say the *Ave Mary* and *Litany* daily before the old ones, who are so simple and forgetful, that if you should neglect them but one day, they would not know how to make the sign of the cross. Every *Sunday* and *Friday* the missionary is oblig'd to preach and say high Mass; during *Lent* he must give them a kind of sermon three times a week, and take care of the processions. All this would be passable enough were it not that at the same time they must act the part of a clerk, they must take care of the church ornaments and plate, and keep it clean, unless they will have it brought to the altar nasty and dirty; these poor wretches being not capable of managing these things.

Every missionary besides his ecclesiastical function, is also under an absolute necessity here of acting the part of a Steward, not only for himself, but likewise for all the *Indians* under his jurisdiction. To be short, he must be cook, nurse, doctor, architect, gardener, weaver, smith, painter, baker, potter, tile-maker, and every thing, that may be, or is necessary in any common-wealth: This may seem incredible to some people, but is nevertheless the naked truth, the *Indians* being naturally so stupid, that unless, as for instance, I don't my self bring what quantity of salt I think fit into the kitchen, and plainly shew my *Indian* cook, how much of it he must put into such a pot, and how much into another, he would certainly put it all (though never so much) in one, and leave the rest

unseasoned; and all the remedy you have, *Supp.* is, that if you cannot eat it, he will, and 1691. tell you afterwards, he could find no fault in it; nay, what is more, if I expect to have my victuals dress'd any ways cleanly, I must take care to have the vessels brought every day into my chamber, and look into them my self before they are us'd, without which you would certainly be poisoned with nastiness.

Next to my apartment I have a garden divided into several partitions, one whereof is my flower-garden, another my physick-garden (for they know not what a physician or apothecary is) another my kitchen-garden, beside an orchard and vineyard. In the kitchen-garden grow all the year round, divers sorts of saler herbs, endive, curl'd and not curl'd, cichory-roots, parsnips, turnips, spinage, radishes, cabbages, carrots, beet-roots, parley, anise-seed, fennel-seed, coriander-seed, melons, cucumbers, and divers sorts of *Indian* roots; in my physick garden I have mint, rue, rosemary, pimpinel, sweet-marjoram, &c. my flower-garden produces white lillies, *Indian* lillies, yellow and blew viols, poppies, and many sorts of *Indian* flowers.

In my orchard I have apple and pear trees, and haseel-nut-trees, but these two last will bear no fruit here, tho' they grow very lofty; peaches, pomegranates, sweet and sour lemons, sweet and sour citrons, vaninceys, and divers other *Indian* fruits.

My vineyard has so many vines, that sometimes it may produce five hundred large casks of wine in one year, but this year I have scarce had grapes enough for my table; the reason is, the vast multitude of pismires, wasps, wild pigeons, and other birds, which have devoured all, tho' I have constantly kept eight *Indian* boys on purpose to cleanse them of the pismires; add to this the north wind, which has blown continually all this year; a slender recompence for the pains I have taken, in pruning, shaving, and attending the vines; but patience.

However these frequent miscarriages in the vines, make the vine here a dear commodity, a cask being sold sometimes for twenty or thirty crowns, a great price for such an unwholesome wine as this, which is not to be preserv'd without a great deal of lime, without which it would turn to vinegar in a little time; this makes us use the wine very sparingly, and sometimes not a drop in six months, it being sometimes so scarce that we shall not have enough for the communion table.

The missionary is also obliged to be both physician and apothecary, and both order and administer vomits, purges, venisections, or what else seems to be requisite for the

The best of all is, that these *Indians* are not subject to many distempers; the worms are their chiefest plague, occasioned by the vast quantity of half raw meat, they eat daily, which being ill digested corrupts in the bowels, and generates worms, and these the *Bloody Flux*, which puts an end to their lives, especially if it happen to be cold weather, of which these *Indians* are extremely sensible; tho' their coldest season, even in *June* is scarce so cold as with us in *April*. To remedy this evil, nothing is more proper, than to give a vomit made of tobacco leaves, all bitter things being at mortal enmity with the worms; after the vomit we take some cows milk, into this we squeeze the juice of a four lemon, put some rue and mint into it, after all is well mix'd, squeeze and strain the liquor from it, and so give it the patient.

Scarce any other distemper is known here, except that now and then the spotted fever

reigns among them, which about four years ago carried off above two thousand persons only in our canton; providence, as it seems, having thought fit not to afflict with many distempers a wretched nation that is destitute of all sorts of remedies. For cinnamon, nutmegs, mace, saffron, ginger, cloves, rice, antimony, theriaca and mithridate, as well as other medicinal herbs and compositions, are not as much as known here; nay, even salt is a very scarce commodity with us, especially if our usual supplies from *Spain* happen to fail: Hence it is that the *Indians* use no salt with their meat or in their bread, tho' they else are very eager after it, and will have it if they can come at it. For my part, I find that custom may bring a man to any thing, for I begin to love their bread tolerably well, and find no great difference betwixt that and ours, viz. *Huaco* in their nicest cook. Most of their cantons are seated upon an ascent, for the convenience of carrying off the rains and other waters into the river in which they lie; which is much of the same bigness with the *Danube*, and the water thereof so wholesome, that you may drink of it as much as you please, even after melons, peaches, figs, &c. without receiving the least harm.

#### C H A P. V.

##### *Description of the Cantons or Towns inhabited by the converted Indians in Paraquaria.*

THESE cantons, as we told you just now, are generally seated upon an ascent near the rivers *Uruguay* and *Paraka*, some of which contain 700 or 800, others 1000 families and above so that comprehending father and mother with all their children (which are very numerous) you may safely reckon 6000, 7000 or 8000 souls to a canton. Near the church of each canton is a square market-place four hundred foot long, and as many broad, the rest being divided into streets like our towns in *Europe*; but the houses are very different, being no more than huts erected upon the bare ground, the sides whereof are only of clay, and the roofs covered with straw, except some few that of late years have been covered with tiles: windows and chimneys are not in use among them; hence they are constantly so full of smoak, that I have been in danger of losing my eyes by it, when I have been frequently visiting the sick. These huts are not divided into chambers, kitchens, or other apartments, all these being comprehended in one room, their cellar being a hollow pumpkin in which they keep their water for drinking: Those that value themselves above the rest, make use of a net

fastened to two trees instead of a bed; but the poorer sort are contented with a tyger's skin or ox-hide spread upon the ground, without pillars or bolsters, instead of which they make use of a stone or piece of wood. Their kitchen furniture consists of two or three pots or pans; the hand serves instead of a spoon, the teeth in lieu of knives, the five fingers for forks; their drinking vessel is a silver pumpkin, the fire-hearth is under the bed, there they fasten the net at night, then make a spit of the next stick they meet with; and whilst their meat is a roasting they eat it off continually in slices; tho' some only hold it a little over the flame, and so eat it without farther ceremony.

The door of these huts is of an ox-hide, about six spans high and three broad; this brings you into the place where father, mother, sisters and brothers, children and grand-children pig all together in one room; besides, three or four dogs, and as many cats; whence you may guess what a scent there must arise from such a mixture in so narrow a compass, which strikes the nostrils of the poor missionaries, when they come to do their duty among them, beyond what can be imagined or expressed, for all which

ch about four years

naries, when they  
ong them, beyond  
expressed, for all  
which

which they have no other comfort than to see these poor innocent wretches expire, with all the signs of an entire resignation that can be imagin'd: It is rarely to be seen, that during their distempers, they discover the least symptoms of impatience, no sighs after their wives and children, no desires after treasures, nor troubles how to pay their debts, no regret of leaving their friends; for as they scarce ever take care of these things in their life-time, so they seldom disturb their rest when they are to leave this world.

When a virgin has attained the fourteenth year of age, and a boy sixteen, they are marriageable, and we seldom stay longer, for fear of worse consequences; it having been found by experience, that when the maidens and young men continue in a single state for any considerable time, they have found means to pair themselves. The objection, which in other places is made against such young marriages, takes no place here, where there is no dispute about dowry or settlements, or which way they will maintain themselves; all this they leave to God Almighty, and our care, they never applying themselves to any trade or profession. So that upon marriage it is the missionary who provides the hut, it is he who provides the wedding cloaths, viz. five yards of coarse woollen stuff for each; a bed they never want, ox's hides being cheap enough; and the wedding dinner is made with a fat cow, which is likewise presented by the missionary.

Their marriage agreement consists only in two articles, viz. The woman promises to fetch what water the husband wants from the river, in lieu of which he engages to furnish the kitchen with fuel. We allow them no music nor dancing at their weddings, but so soon as they are married, and have heard mass, the bridegroom goes his way, and the bride hers; and if the missionary has presented them with a fat cow, a little salt, and a few loaves, they invite the parents to dinner, and so make the best cheer they can. There is one thing peculiar in their marriages, viz. that here the man does not woo the woman, but on the contrary the woman the man; in this case the maid comes to the missionary, and says, *Pay*, i. e. father (for so they call us) I have an inclination to marry such or such a one, if you will be pleased to give your consent; whereupon the missionary sending for the person, says, my son (for so we call them) such or such a one is desirous to be marry'd to you, are you contented the should? Unto which if he replies yes (as they seldom do otherwise) then the match is made, and wants nothing but the priest's blessing.

VOL. IV.

Let us now take a view of the churches. SEPP. Each canton has a very handsome lofty built church and steeple, with four or five bells; one, and sometimes two organs, a high altar richly gilt, besides two or four side altars; a richly gilt pulpit, divers painted images, done by the *Indians*, and that tolerably well; eight, ten, and sometimes more silver candlesticks; three, four or five silver chalices; three or four pair of silver offering-vessels; three silver crosses, and a large silver *Giborium*. The chalices are not gilt here, but of the natural colour of silver, as they use them in *Spain*; all the *Antependia*, and other ornaments belonging both to the altar and the priest's vestments, are as rich and neatly kept as in *Europe*.

Every Saturday we sing the litany of our lady, and every Sunday a sermon, and high mass, when our musicians entertain the congregation with their music, which they begin to perform tolerably well.

I don't question but that several of our friends, such as father *Glete*, and my two brothers *Paul* and *Gabriel Sepp*, when they hear you read this passage will be apt to ask you, who is it that composes these psalms, litanies, hymns and masses; who is it that has taught the *Indians* to sing, who to play on the organs, and to sound the trumpets and hautboys? Unto which I answer, that the same missionaries, who taught these poor wretches the rudiments of the christian religion, to say Our Father, to bake bread, to paint, cast bells, organs and trumpets, and to make clock-works; the same, I say, have instructed them in music; which was first introduced here by some *Netherland* fathers, who with incredible labour taught these indocible people to sing, and composed certain pieces, not according to art, but such as their natural inclination led them to: The same was improved afterwards, by a certain *Spanish* missionary, but after the old way, without a base, without measure; of double or triple notes, they know not the least; nay even not the *Spaniards* themselves to this day, as I observed whilst I was at *Cadix* and *Seville*. Thus I saw my self obliged to begin with them, quite after another and new method, and to teach old grey-hair'd fellows, the *Ut*, *Re*, *Mi*, *Sol*, *La* again. By which means I have (tho' with incredible labour) instructed six trumpets (of whom each canton has four) four organists, three theorbists, thirty hautboys, and fifty voices (besides other instruments) to play and sing most of my compositions; which has got me such a reputation with the other missionaries, that they send continually to me some of their flocks, with presents of honey, preserves, and fruit, to court my friendship, and to have them instructed in music; and, to speak with-

SEPP. out vanity, has purchased me the singular  
1691. esteem of the *Indians*.

Upon this occasion I can't but intreat you, dear fathers *Ignatius* and *Paul*, and other friends who have been formerly my school-fellows, to have pity of a poor missionary at so vast a distance, and of so many musicians under my care; to send me over some mission pieces, which I desire should be no other than *Vesperæ*, *Missa*, *Breves*, *Breviores*, *Brevissima*, as also the *Litany* of the composition of Mr. *Melchior Glettle*, director of the mission in the cathedral of *Augsburg*; and these I don't desire to be new ones, but others, tho' half torn, will serve my purpose as well; for I intend to have them copy'd by the *Indians*, which they do very well, and with great exactness, all the books we send to the other cantons being transcrib'd by them.

In requital of this kindness, I will oblige my self and sixty missionaries besides, that we will pay sixty masses for him, who will be at the charge of buying them, and twenty more for him who will take the trouble to send them; tho' as to the refunding of the money there is no great difficulty; for whatever is laid out upon this account is therein fully repaid by our father *Procurator* here to the father *Procurator* at *Munich*; which had I known it before I left *Germany*, I would have provided my self with several things in *Germany* for my and the other missionaries use, which will stand us in great stead now in *Paraguaria*, and would not have amounted to above ten or fifteen crowns there; a slender addition to the sum of eighty thousand crowns bestowed upon that mission, whereof I was an unworthy member. I must confess that my father *Procurator* here, has given me several reprimands upon this account, which however is not so much to be imputed to my neglect, as want of knowledge in the state of affairs here. As for the direction, you need send them only to *Genoa* or *Rome*, but best of all to the father *Procurator* in *Rome*, who will take care to send it to the *Procurator* of *Paraguaria*, or the father *Procurator* of the *Indies*; but if any of our society in *Germany* should come this way as missionaries, it were so much the better, and they might bring divers other useful things along with them.

But I have dwelt too long among the musicians, it is time to return to the description of our *Canton*.

The 2d of June 1691, as I told you, I arrived at *Japegu*, after a voyage of a month from *Buenos Ayres*, upon the river *Uruguay*, being no less than two hundred leagues. *Japegu* is the first of the twenty six converted *Cantons*, seated at 29 degrees upon an ascent of a hill near the river *Uruguay*;

a place which seems by nature chosen, for its situation, for the delight of the inhabitants: To the east it has the before-mentioned pleasant *Uruguay*, the waters whereof excel for clearness and wholesomeness all the rivers of *Europe*; being cleansed and purified by the roots of an incredible number of trees, which for four hundred leagues together stand on both sides, upon the very brink of its banks; as likewise by the vast quantity of gravel and pebble stones, over which it carries its silver stream; for which reason it is our constant table drink, and we use it in great quantity, even after the eating of melons, cucumbers, figs, peaches, and such like fruits, without any harm.

This river produces a vast store of fish, which the *Indians* catch sometimes with their hands only; and for want of fish-hooks (which are very dear here) they catch them with a large nail bent at the end. Among all the fish I ever saw here, I met but with one *European* kind call'd *Bocado* by the *Spaniards*, but they are larger here, dark, yellow and well tasted: As for *Carps*, *Pikes*, *Eels*, *Gudgeons*, *Flounders*, and such like *European* fishes, they are not to be seen in this river; but many very delicious fish of the *Indian* kind, among which the *King's Fish* is one of the choicest, tho' but small, and taken only in winter; it has no bones.

Abundance of most delightful islands are to be seen in this river; there lies one directly opposite to our *Canton*, infinitely pleasant for its woods and trees, which afford a most agreeable shade, and the ground produces the best kind of melons, it being not above a stone's cast from the shore; I often divert my self here with my disciples, to take the cool air, and with a set of musicians. The situation of this little isle is so extraordinary pleasant, that the best painter in *Europe* would have work enough to make an exact draught thereof.

On the other three sides, viz. to the south-west and north, this *Canton* is surrounded with the most fruitful pasture fields in the world, of a vast extent, and stor'd with an incredible number of cattle. Stables are things unknown here, as much as the mowing of grass, or making hay, because the cattle feed all the year round up to the knees in grass, without being watched; theft being either not understood, or at least not practis'd among these *Indians*. So that if I have occasion for milk, I have no more to do than to send my boy into the fields, who milks one of the cows, and brings me as much milk: as I desire in a hollow'd pompion; as the cooks in the kitchen use scollop shells instead of ladles.

The worst is, that these fields are infested with vast numbers of *Tygers*, which come sometimes in whole troops,  
and

by nature cho-

nd my boy into  
f the cows, and  
as I desire in a  
e cooks in the  
stead of ladies.  
e fields are in-  
ers of Tygers,  
n whole troops,  
and

and devour the calves, but seldom the ox-  
en and cows, because they will often make  
their party good with them, and their flesh  
is not so tender; but if the *Tyger* happen  
to catch an ox alone, he leaps upon his  
back, and points him in the first joint of  
the neck, and afterwards tears it open with  
his claws; when he has a mind to a calf,  
he watches it, as it lies upon the ground,  
and advancing softly, bites off the head at  
once, and sucks out the blood through the  
neck.

The *Tygers* are not only very hurtful to  
the cattle, but also very dreadful to the in-  
habitant, who know of no other enemy  
but this; they seldom are far from their  
own *Canton*, except when they travel with  
the missionaries; upon which occasion they  
defend themselves against the fury of the  
*Tyger*, by making a wood fire all round the  
place where they rest either by day or  
night, by which means they keep off the  
*Tyger*, who dreads nothing more than fire.  
But if they happen to fall asleep, and the  
fire goes out, the *Tyger* will be sure to  
watch his opportunity, and lay hold of him  
that comes next to him, as it happen'd to  
a poor *Indian*, who among the rest conduct-  
ed me hither from *Buenos Ayres*; and a  
boy belonging to father *Anthony Behme* had  
likewise not long ago the misfortune to be  
seiz'd upon by a *Tyger* (though not many  
paces from his hut) who tore his flesh to  
that degree, that his life was despair'd of,  
but by the singular care of father *Behme*,  
he escap'd with life.

The *Tygers* will sometimes come over  
the very fences of the gardens, and thence  
into the houses; I remember that one time  
a *Tyger* got into one of the *Indian* huts,  
where there were only some very young  
children playing together, the father and  
mother being abroad in the field; the in-  
nocent babes taking it for a great dog,  
laid their hands upon the *Tyger's* head, and  
courted him as they would have done a  
dog, at which the *Tyger*, wagging his tail,  
went away without doing the least harm to  
the children, making the best of his way  
over the fence, and crossing the field, for fear  
of meeting with some of the old *Indians*,  
who are dexterous, beyond what can be im-  
agined, in killing even the fiercest *Tygers*,  
which these creatures being sensible of, sel-  
dom attack any of them, unless it be by  
surprize, and from behind.

A brother of our society walking one  
day in my garden with nothing but a stick  
in his hand, a *Tyger*, which got near the  
fence, attack'd him, and as these creatures  
are very nimble, leap'd sometimes behind,  
endeavouring to lay hold of him with his  
paws, but the brother defended himself so

well with his stick, that the *Tyger*, begin-  
ning to despair of the victory, thought fit  
to make off again over the fence. Such  
like accidents are frequent here, and it is  
very remarkable, that it was never known  
that either a father missionary, or a bro-  
ther, was hurt here either by a *Tyger*, or a  
ny kind of serpents, of which there are  
many here.

Venison we have also in great plenty,  
such as deer, harts, wild boars, goats and  
gembs; but the *Indians* seldom eat the  
flesh, and catch them only for their skins  
fame. Among the wild fowl we abound  
especially in partridges and wild pigeons;  
the first are so numerous and tame that you  
may knock them down with a stick, so  
that my boys bring them home sometimes  
by dozens: and the pigeons are easily  
catch'd by snares, which I have shewn the  
*Indians* how to lay, they being naturally  
too simple to think upon any thing of that  
nature, but used to be contented to shoot  
at them with their arrows: these they catch  
as often as they please; so that if another  
missionary comes this way, I can soon ac-  
commodate him with a pigeon roasted or  
boiled, with a fallet dress'd with honey in-  
stead of oil and vinegar (both which we  
want here) and a bottle of our most deli-  
cious river water; this was the entertain-  
ment I gave lately to our friend father  
*Anthony Behme*, as he pass'd this way in his  
journey to his mission.

Oxen, cows, calves and horses are here  
in such prodigious quantities, that in some  
places the fields are covered with them, as  
far as your eye-sight will reach; and that  
of the best kind, which having no proprie-  
tor, are dog-cheap here, as wanting only to  
be fetch'd, in which the *Indians* are very  
expert; and when they have brought a  
cow to the missionary ready kill'd, he  
gives each his share twice a day: For a  
little inconsiderable knife you may buy or  
exchange a very good horse, a bridle (if  
the bit be of iron) being valu'd here be-  
yond three horses, they don't shoo their  
horses here, partly by reason of the softness  
of the ground without gravel, being all o-  
ver covered with grass, partly by reason of  
the scarcity of *Iron*, a good *European*  
horse-shoo being worth six horses here.

Some of our *Canton* did not long ago tra-  
vel two days journey deep into the country,  
to fetch provisions for the use of our *Can-  
ton* for this year; within less than two  
months they brought together fifty thou-  
sand cows, and might have brought one  
hundred thousand, if we had wanted so  
many; what I have said of this *Canton* is  
to be understood of all the rest, being twen-  
ty six in all; all the trouble is in keeping  
to

SEPP.  
1691.

SEPP. so vast a number of cattle together, whist they are bringing of them hither, in which these *Indians* are also very well versed.

Hence the reader may judge of the immense quantities of cattle in the fields of *Paraguaria*: the three ships, wherewith we came from *Spain*, carried back, at their return, no less than thirty thousand ox-hides, which stood them in no more than the charge of killing, each piece of which they sell again in *Spain* for six crowns; and among all these there was not one cow's skin. Thus the *Spaniards* have also their gold mines in these parts, though gold and silver is a thing unknown here, all their dealing being by way of exchange, and the bargain soon made; for our *Indian* will tell your merchants, for so many yards of linen cloth I will procure you so many oxen and cows; for your knife you shall have my horse.

These parts of the *Indies* are not destitute of silver mines, viz. in the mountains of *Potosi*, but they are 600 leagues deeper into the country; notwithstanding which, what silver is brought from thence, is valued below the rate of iron, woollen and linen cloth, hats, stockings, needles, knives, fish-hooks, bras and tin vessels, &c. all which are brought to *Buenos Ayres* from *Spain*, but sometimes not above once in eight years. Formerly they used also to bring tiles; but since we have begun to make some of our own, I have no less than fix long fleets in my *Canton*, the huts whereof are covered with tiles.

A missionary in these parts must submit to all functions, the *Indians* being so stupid, that they are not capable of undertaking the most frivolous thing, without a plain direction. Whence it came, that it was a question among the first missionaries sent hither, whether these people were capable of receiving the sacrament or not.

But as stupid as they are at inventing, so happy they are in imitating, provided you give them a model; thus if you show one of the *Indian* women a piece of bone-lace, she will unrip some part of it with a needle, and will make another after it, with so much exactness, that you shall not know one from the other. We have two organs, one brought from *Europe*, the other made here so exactly after the first, that I myself could scarce discern the difference. I have a *Missal* printed at *Antwerp*, which is imitated in writing by an *Indian*, with that nicety, that they are scarce distinguishable. We have trumpets and watches made here, not inferior to those of *Nuremberg* and *Augsburg*, and some pictures, excellently well copy'd. In short, they will imitate any thing very nicely, provided they have the model constant-

ly before their eyes, without which they cannot advance one step, their intellects being so stupid, that they can't form to themselves in the least any idea of a thing, unless it be before them.

But we must return to the fruitfulness of this country. They abound likewise in cocks and hens, pigs, lambs, goats and sheep; the *Canton* of *St. Thomas* had a few years ago, no less than forty thousand sheep; and there is scarce a *Canton* but what has three or four thousand horses. The mules are here prefer'd before horses; for a horse, if dear, you may purchase for the value of a crown in tobacco, needles, knives, fish-hooks, &c. But they will not let the *Spaniards* at *Buenos Ayres* and *Sancta Fe*, have a good mule under fourteen crown pieces, though among themselves they dispose of them at half the value. One sheep, lamb, or kid is worth three oxen or cows here, by reason of their wool; they have also whole fields full of cotton, but no hemp or flax, which makes an ell of linen here to be sold at three, four, and more crowns. The *Albe* which I officiate in at *Esater*, being of *Cambrick*, edged with bone-lace, stands me at *Buenos Ayres* in above one hundred and twenty crowns. Hats used also to be excessive dear here, before one of our missionaries shew'd the way of making them to these *Indians*.

The grounds are very fertile here, and produce a hundred-fold crop, though they are miserably manured, and scarce ever dunged. They sow nothing but *Turkey* wheat, which they pound to meal in a mortar (mills being not known here) this they either boil with their meat in water (but without salt) or else they make certain cakes of them, which they toast upon the coals, they having no baking ovens. If I happen to give a piece of our white bread to an *Indian*, they rejoice at it beyond what can be imagined, and they will give two or three horses for such a loaf; which they might have cheap enough, were it not for their own laziness; for *America* being bigger than all the other three parts of the world, and no propriety here in land, they might have as much of it as they please; whereas now they will not cultivate but a few rods each, for their own use, and this they are scarce brought to without blows.

Their plow is not of iron (which is too scarce here) but only of wood, which does not reach above three inches deep into the ground, which is sufficient to bring forth a plentiful crop; the missionary of a *canton* has commonly above forty or fifty acres sow'd with wheat, whereof he gives now and then two or three measures to some of the *Indians* for seed, but they commonly put it in their belly instead of the ground.

It

It may be truly said of these *Indians*, that they follow our Saviour's rule, *not to be concern'd for the next day*; for, if I happen to allot a cow to a family, enough to serve 'em three or four days, they will often eat her in one, and come the next morning for more, so that we are forced to give to the father, mother, son, and daughter, and to the young children, to each his piece of flesh of five, six, seven, nay, eight pound, and that twice a day; for if they had it at once, they would eat it all at noon, and want more by night; for they are so voracious, that the mother will snatch the meat from her child, and eat all that comes in sight of 'em; for which reason each missionary has a great barn, into which he forces them to lay up a certain proportion of corn, which he gives 'em back at seed-time: notwithstanding which, they sometimes deceive the missionary, or rather themselves. 'Tis to be observ'd that their seed-time is in *June* or *July*, when the missionary allots each *Indian* two or three oxen to plough withal. One of these *Indians*, after a quarter of an hour's ploughing, began to grow weary of the sport, and finding himself and his wife very hungry, they agreed to kill one of the oxen, which they did accordingly; and having quarter'd the ox (as they usually do) they put 'em on a wooden spit, and (for want of other fuel) made a good fire with the plough, throwing into it some of the fuel to encrease the flame, and to dispatch the work, roasted and eat them. The missionary perceiving the smoke in the field, began shrewdly to suspect the truth, and making the best of his way to the field, he soon saw by the bones that he had not been mistaken in his guess: he fell a chiding the *Indian*, who gave no other answer, but that he, being both tired and hungry, had made bold with the ox, begging the good father to give him another; which he was glad to do, unless he would see him and his family want bread all the year after. Suchlike things often happen to the missionaries, these *Indians* being naturally so lazy, that often (unless compel'd thereunto by blows) they'll not carry in their *Turky* wheat after 'tis ripe.

You wonder perhaps which way they can be compel'd by blows; this is done in the same manner as we do our children, only that, instead of birch, we make use of a scourge: this is perform'd by some *Indian* or other, who gives the delinquent twenty-four or more strokes, according to the missionary's order. This correction they take very patiently, without any curling or swearing, nay, without making the least noise; and, if they happen to make any exclamations, 'tis by the name of *Jesu Maria*.

VOL. IV.

The correction being over, they kiss the missionary's hand, and return him thanks into the bargain; their love and respect being such towards their missionaries, that they take every thing without the least regret at their hands; which being imprinted in them from their tender age, they can never shake off afterwards.

Perhaps you may be curious to know in what dress the missionaries appear here. Their leather shoes are fasten'd with a leather bottom, without heels; and their stockings are likewise made of black sheep-leather. Our cassock is black, and made after the same fashion as we wear in *Germany*, except that it is not open before, but has a seam down to the bottom, without lining, pockets, or border; made out of black linnen cloth. The gown (which we use likewise in the house) is chequer brown, with long hanging-sleeves reaching to the ground. The novices wear altogether brown cloaths, with a leathern girdle about the waist: we don't carry our beads on the girdle, but hanging down from about them, in the same manner as all the *Indians* of both sexes wear it. Our shirts are of callico; for the rest, the same as in *Germany*. Upon the head we wear a kind of bonnet, as you have seen 'em represented in the plays for the high-priests of *China*. We keep our heads and beards shav'd, and the priestly coronet (which the *Indians* make for me after a certain model) is something bigger than ours. Whenever I go abroad to visit the sick, or to administer baptism or the holy sacrament in the huts of the *Indians*, I carry a cross instead of a cane, which for that purpose stands always ready at the door of my apartment, wherewith I have kill'd many a serpent, and other vermin, without receiving the least detriment. Before I conclude, I'll give you likewise a short account of our daily transactions, which are so troublesome, that what is perform'd here, by one or two missionaries, would be sufficient to employ seven or eight in another place, there being seven or eight thousand souls to be provided for by his care, both in spiritual and temporal matters, the eldest of 'em being as ignorant as children in matters relating to the providing for their families, which is the perpetual care of a missionary.

Every morning, an hour before break of day, one of my boys awakens me, and sets up a candle, we having no oil for lamps, the *Venerable* in the church being supply'd with tallow. After I have dress'd my self, I salute the blessed sacrament, and perform my private devotions at church; then I go to confession, if there be two missionaries in one place, and the bell rings to the  *Ave Mary* and the holy mass: this done, I pray

7 T

a quar-

SEPP. a quarter of an hour in private, and afterwards sit to hear confession every day : then I instruct the children in the catechism, visit the sick, and, if occasion requires, hear their confession, administer them the holy communion and extreme unction, and, if it be not too late, proper medicines ; and as scarce a day passes but that one or other dies, I have daily burials. After the sick, I visit the several offices ; first the school, where boys are instructed in reading and writing, and the girls in spinning and needle-work : I also visit my musicians, the fencers, trumpets, hautboys, &c. Some days I instruct certain young *Indians* in dancing, who are made use of at certain feasts, where they are richly attir'd, and dance in the church, as 'tis practis'd in *Spain*, the simple *Indians* being extremely taken with these ornaments in our religion, which raise in them an high esteem and affection. After these, I go among the workmen of divers sorts, to the brick and tile-makers, the bakers, smiths, joiners, carpenters, painters, but above all, the butchers, who kill betwixt fifteen and twenty oxen every day.

If I have any spare time, I take a turn in the garden : about half an hour before ten a-clock, I take care that the sick have their dish with milk and white bread, and perhaps some meat, to be carried to 'em by their nurses. About half an hour before eleven the boy rings the bell to the *Examen Conscientiæ*, when I lock my self into my room for a quarter of an hour, and afterwards go to dinner.

One of the best-taught of my boys reads a chapter in *Latin* out of the bible, and a passage out of the saints *Legend* in *Spanish* ; another reads to me the *Martyrologium* appointed for each day, whilst six others attend, bring and carry what's desir'd, and are ready at a wink : after dinner I give each of 'em a piece of white bread, and upon holidays perhaps some cake, or a piece of patty, which they receive with a great deal of thankfulness. If there happen to be two missionaries in one canton,

they spend an hour after dinner in discourse. Half an hour after twelve the *Litany* of *All-saints* is said in the church, and what spare-time is left after that, till two, I bestow in what I please, such as making of images, composing some musick-pieces, &c. About two a-clock the bell rings, to summon every body to his usual employment ; then I again visit the sick, and supply 'em with what they stand in need of : at four a-clock we have prayers, and afterwards say the *Litany* ; then we bury the dead, which happens daily : about seven a-clock I go to supper, and spend an hour after to divert my self ; after which I come again to the *Examen Conscientiæ*, and, having prepar'd my self for the next day's meditation, go to rest, which is however frequently interrupted by the urgent necessity of the sick, unto whom I must administer the sacrament.

Every *Sunday* and *Friday* there's a sermon, and high-mass said ; on every holiday *Prima Vespera* ; every *Sunday*, at three a-clock, I baptize infants ; of these I have christen'd several hundreds in a little time, some of which are dead, others alive. Every *Monday* I marry such of the *Indians* as desire it, and this very day I have married no less than eight couple. Each first day of the month we say mass for the deceas'd *Indians*, and remember the saints placed in that month. The number of penitents is so great here, and of the fathers confessors so small, that we hear confession, and give absolution all the month. But the paper beginning to fail, I'll recommend my self and my flock to the most fervent prayers of my dearest friends and countrymen. The whole preceding treatise being a faithful abstract of such letters as my brother *Anthony Sepp*, of the society of *Jesús*, has transmitted to me from *Paraguay* into *Germany*, I thought fit to publish, for the glory of *God*, and the general benefit of mankind, promising, that whatever hereafter shall be sent to me from thence, thought worthy the publick view, shall be communicated by the press.

### Advertisement concerning the fragment of the discovery of the islands of Salomon.

LITTLE can be said relating to this fragment of the discovery of the islands of *Salomon*, the thing being so short, that the reader may soon satisfy himself in viewing the whole. I don't find any account who the author was ; and tho' doubtless the relation must be taken from some of the discoverers, yet the methodiser of it was

certainly none of them, because he all along speaks in the third person, as one no way concern'd. If we may be allow'd to guess, 'tis likely the account was given, or left behind, by one *Quiros*, whom at the latter end he brings in making interest to the viceroy of *Peru*, to be furnish'd with ships and necessaries to continue that enterprize, and

shewing reasons that induce him to it. The time of making this discovery was in the year 1595; for the relation tells us that the arrival at *Manila* was in February 96, without naming the century, which we know could not be the 17th: besides that, it speaks of an *Indian* they found, who had been pilot to Sir *Thomas Candish*, who was in the south sea not long before. The description is of some few islands in the south sea, small in compass, but well inhabited,

whereof yet they had not any perfect know-ledge, as having only touch'd at some of 'em, and seen others at a distance. Then follow some particulars of the islands call'd *De los Ladrones*, and the *Indians* inhabiting them: the rest is only their sufferings and distress till they arriv'd at *Manila*. And, lastly, some reasons given by one *Quiros*, for going again upon the same discovery. For more particulars I must refer the reader to the fragment it self.

Discovery of the island of Salomon.

Immer-  
sation.

— making as if they would throw them; others cast stones with slings; one of these wounded a soldier after it had hit the side of the ship: our men would have fired their musquets, but the powder would not take, because it had rain'd. 'Twas worth observing with what noise and cries the *Indians* came on, and how, when they saw aim taken at 'em, some hung by the canoes, others slunk behind their companions. The desperate old fellow was shot with a bullet in the forehead, and dropp'd down dead, and eight or nine with him, and some being wounded, the rest began to stand, the ships continuing still under sail. Three *Indians* came out hollowing in a canoe; one of 'em had a green bough and something white in his hand, which was look'd upon as a signal of peace. 'Twas thought they would have had 'em go to their harbour, but they did not, and they went away leaving some cocons.

Descrip-  
on of four  
islands.

This island seems to be about ten leagues in compass: that part they saw of it is clear and open, high and mountainous along the shore. The port is on the south side; 'tis in the latitude of 10 degrees, and a thousand leagues distant from *Lima*: 'tis very populous, for, besides those that came out in the canoes, the shore and rocks were throng'd. *Mindana* knew it not, and being convinc'd of it, said, those were none of the islands he came to find out, but a new discovery. A small distance from this they saw three more; the first of 'em the *Adelantado* call'd *St. Peter*: 'tis about ten leagues north and by west off the *Magdalen*; they knew not whether inhabited or not, because they did not approach it: the extent of it about four leagues, very woody, level, and not high. Another was discover'd, which they call'd *La Dominica*: it lies north-west of that of *St. Peter*, is about fifteen leagues in compass, about five distant from the other, and lies north-east and south-west. It appear'd pleasant, having fine plains and hills, on which appear'd tokens of much wood: it seem'd to be well peopled. The other, which was call'd

*St. Christina*, lies south of *La Dominica*, and, to appearance, was nine leagues in extent: 'tis but a little above a league from *La Dominica*, the chanel clean and soundable. The *Adelantado* call'd all the islands together *Las Marquesas*, or the *Marchionesses*, in honour of the *marquis de Canete*, and as an acknowledgment of the many favours receiv'd of him in the dispatch of his business. They sail'd backwards and forwards, seeking a port in the island *Dominica*. Several canoes with *Indians* came out, some darker colour'd than others, and by their cries seem'd to desire the same the others had done: among them was a comely old man, who had a green bough, and something white in one hand: he was calling just as they tack'd about, and believing the ships were going off, he began to cry out the louder: he made signs even with his hair, pointing to the land with them, and with his finger. The *Adelantado* was inclinable to go thither, but it could not be done, because 'twas east, and the wind blew fresh from that point; besides that there was no safe harbour to come to an anchor in, th' the frigate sought it close to the land. Here, he said, there was abundance more people, whom they had seen from the ship; and added, that an *Indian* came Their aboard, who with much ease lifted up a strength: calf by the ear. Four handsome *Indians* were got aboard the commodore, and having been there a while, one of 'em snatch'd up a curious bitch, and giving a shout, they all boldly leap'd into the sea, and swam away with her to their canoes. The next They dis- day, being the feast of *St. James the Apo-* cover- stle, the general again sent the colonel with twenty men in the long-boat to fetch water, or find out a harbour, in the island of *St. Christina*. He went, and being come to an anchor in a port, landed with his men in good order, and drum beating. He went round a town, the *Indians* never offering to stir: then he halted, and call'd to them, and about three hundred came to him. Our men drew a line on the ground, making signs to them that they must not come over

over it; and asking water of 'em, they brought it in cocos, with some fruit. The *Indian* women came out, and the soldiers affirm'd that many of 'em were extraordinary beautiful, and made no difficulty of sitting down by them. The colonel bid the *Indians* go fill some jars of water, they made signs for our men to carry 'em, but at the same time fled with four of 'em, for which reason they were cannonaded. On the 28th of July the *Adelantado* came to an anchor in a port the colonel had found, and landing, carried his wife, and most of the men, to hear the first mass said by the vicar, at which the *Indians* present were kneeling, very silent and attentive, quietly doing all they saw the *Christians* do. A beautiful *Indian* woman sat down near the lady *Elizabeth* to fan her, and she seeing her hair so very fair, endeavour'd to have some of it cut off, but seeing she avoided it, they forbore, for fear of angering her. The general, in his majesty's name, took possession of all four islands, view'd the town, sow'd *Indian* wheat before the natives, and having convers'd with them amicably, went aboard, leaving the colonel ashore with all the soldiers. No sooner was *Mindana* gone, but they fell together by the ears; such are the consequences of ill government. The *Indians* threw abundance of stones and darts, which hurt one soldier in the foot, but did no more harm; that done, they fled to the woods with their wives and children: our men pursued firing at 'em till they got into the shelter of the trees. They went up to the tops of three high hills, where they entrenched. Morning and evening they all at once made a regular harmonious noise, which echoed in the dales: then they hollow'd to one another, shew'd an inclination to do mischief, throwing darts and stones, but to no purpose. The colonel placed guards upon three several avenues, to secure the town and shore, where the women were diverting themselves, and the men taking in wood and water for the ships. The *Indians* perceiving how little harm their weapons did, and the great loss they sustain'd from the fire-arms, endeavour'd to come to an accommodation. This they made appear, because when the soldiers went over their lands, they came out lovingly to meet 'em, offering 'em clusters of plantans, and other sorts of fruit. They seem'd to miss the conveniency of their houses, for by signs they enquir'd when they would be gone. Some of 'em came to the guards, bringing such as they had to eat, which they gave freely, especially one good likely *Indian*, with whom the chaplain contracted great friendship, and they call'd one another comrades: he taught him to bless himself, and say *Jesus, Mary*.

Amity  
with the  
*Indians*.

They fall  
at variance

Reconcil'd  
again.

In the same manner the others convers'd with their new friends: every one had one, whom he fought out when he came, and would sit down with him. They ask'd of one another by signs how they call'd the heaven, earth, sea, sun, moon, and stars, and other things they saw, and they seem'd to be pleas'd in their answers. The last words they said at parting were, *Friends, friends, comrades*. The *Indian* we said was friend to the chaplain came to the guard, and was carried aboard, that the general might see him: he went merrily along, saying, *Friends*. The *Adelantado* receiv'd him with much kindness and affection, offer'd him sweet-meats and wine, but he neither eat nor drank. He began to take notice of the cattle, and to appearance gave them names; observ'd the ship, rigging, masts and sails, went down under deck, and noted all things with more curiosity than could be expected from an *Indian*. They desired him to say *Jesus*, which he did, and seem'd well pleas'd. Then he press'd to be set ashore, and he was so friendly, that when he understood the ships were about departing, he express'd sorrow, and would have gone away with them. The island *St. Christina* is well peopled, somewhat high, has vales and hollows, where the *Indians* dwell: the port they call'd *De la Madre de Dios* is, of the *Mother of God*. 'Tis on the coast in 9 degrees and a half of latitude, shelter'd from all winds: the shape of it is like a horse-shoe, the neck or entrance very narrow; at the mouth there's thirty fathom water clear of sands, twenty-four in the middle of the harbour, and twelve close to the shore: a rock on the south side upright next the sea, serves for a land-mark to it; at the top of all is a sharp cliff, besides others there are, and on the north side a hollow. There appear out at sea five several groves facing the harbour, and a ridge of hills, which divides two strands, with a spring of excellent water, which falls from the height of a man and a half, as thick as one's wrist, and by it a brook as good as that, running close to a little town of the *Indians*, so that the spring, brook, and town are together on the shore, at the foot of the hill on the north side: on the south side there are some houses among trees, and on the east some rocks and cliffs, whence the brook flows. Most of the *Indians* in this island did not seem to be so white as those in the island call'd the *Magdalen*; they use the same language, the same sort of weapons and canoes, which serve them near at hand. Their town is like two sides of a square, the one north and south, the other east and west, with the avenues well pav'd; the rest like an open place encompass'd with thick trees; they are

*Indian*  
boat

Fruit of  
several  
sorts.

are built like double galleries, the floor higher than the street; abundance of people seem'd to lie in each of 'em, because there were many beds: some had low doors, others had all the front open: they are made of timber interwoven with great canes, whose hollow is as big as a man's arm, and they're above an ell long in the joint. They affirm, the women have most beautiful faces, delicate hands, a good shape and slender waist, many of 'em far exceeding the most accomplish'd women at Lima. They were white enough, from the breast downwards clad with a sort of tunicks curiously wove of delicate fine palm-tree leaves. At a distance from the town was an oracle, or place of worship, palisadoed about; and the entrance on the west side, almost in the middle of it, a house with the door to the north, in which were some misshapen wooden figures, and some eatable things offer'd there; among the rest a hog, which the soldiers took down, and being about to take away other things, the Indians hinder'd 'em, making signs that they should not touch 'em, and shewing that they had a respect for that house and figures.

Indian boats.

Without the town they had some *Piraguas*, a sort of boats, long, and handsomely wrought out of one piece of wood, with a sort of keel, head and stern, rais'd with boards fast bound with ropes they make 'of the cocos; each of 'em will carry betwixt thirty and forty men to row. Being ask'd by signs what use they put them to, they gave to understand they went in them to other parts. They work 'em with little hatchets they make of fish-bones and nails, or rather fish-shells, and sharpen 'em on great stones for the purpose. The constitution, health, strength, and corpulency of those people shews the goodness of the air they live in: clothes could be well born with day or night, the sun was not very troublesome, some great rains fell; there was never any dew, but a dry air, inasmuch that whatsoever they left wet over-night on the ground was dry in the morning, without being hung and laid out, but it is not known whether 'twere so all the year. There were swine and hens like those in Spain. The trees we mention'd were in the square, bore a sort of fruit as big as a boy's head; its colour when ripe is a light green, and a very deep green when four: the shell is mark'd with cross streaks like a pineapple; its shape is not altogether round, but is somewhat sharper at t'other end than at the stalk: from the end there runs in as 'twere a plug or core, and from that there spread several webs: it has neither stone nor kernel, nor any thing to throw away, but only the shell, and that is thin; the rest is a solid mass, with little juice in it

Fruit of several sorts.

when ripe, and less when green: abundance of 'em were eaten ripe and green, and they are so delicious, that the men call'd 'em white meat, a dainty *Spanish* dish made of the brawn of fowls; 'twas look'd upon as wholesome, and very nourishing. The leaves the tree bears are very large, and sharp-pointed, like the *Papayas*. There is another sort of fruit enclos'd in prickles like chefnuts, but its kernel is as big as six *Spanish* chefnuts, and tastes much like them; they are shaped like a plain heart. There are walnuts about the bigness of ours, and much like 'em in taste; their shell is very hard, and all of a piece, without any joyning; the kernel is not interwoven with the shell, but so loose that, when crack'd, it drops out whole: they eat and carried away a great many, and at last found it was oily. On the shore they saw *Spanish* pompions sow'd, and among them some flowers, beautiful to the eye, but without any scent. Nothing can be said of the inland, because no body went up it; but, by what they saw, the soldiers affirm'd all the groves were of fruit-trees. Whilst the general was in the island, he had the galliot refitted, because one day before it came to an anchor 'twas foul of the commodore's bolt-sprit, and in great danger. He order'd wood and water to be taken in, the ships to be made ready, and the men to come aboard. Before they set sail, he erected three crosses in several places, and carried another on a tree, with the day and year when 'twas done. On the 5th of *August* they weigh'd, and sail'd away in quest of the islands they were to discover. They held their course west and by south, the wind at south, and veering to east-south-east, running, by their reckoning, four hundred leagues east and by south, and west and by north. After three or four days sail, the *Adelantado* said, they should that day see the land they sought. All the men were pleas'd with this news, but tho' they look'd out, they saw none in many days after; which discourag'd the soldiers, for the longer they were out, the shorter their water and provisions grew, having been extravagant upon hearing the land was nigh. Irresolution and despair began to prevail, and few were untainted; nor is it to be admir'd, for such undertakings require men inur'd to sufferings, and patient in 'em.

The discovery of several islands.

On Sunday the 20th of *August*, after running four hundred leagues, at break of day the ships found themselves near four little low islands, the shores sandy, and cover'd with abundance of palm and other trees. The extent of 'em all four seem'd to be eight leagues, little more or less. They stand almost square, close to one another:

Discover four islands.

on the east side of them lie certain banks of sand, south-west and north-east, for which reason there's no coming at 'em on that side. In the channel that runs to the south-west there appears a cape. The general call'd them *St. Bernard's* islands, because discover'd on his day. They would have endeavour'd to find a harbour, but at the request of a vicar it was not done. It was not known whether they were inhabited, though those in the galliot said they had seen two canoes, but it was only a fancy. They are in the latitude of 10 deg. and 20 min. south, their longitude 1400 leagues from *Lima*.

Hold on  
their  
course.

Having left these islands the wind held always at south-east, and sometimes there fell short but heavy showers of rain. The clouds were thick and of several colours, appearing in various shapes, and many hours were spent in observing them. Sometimes they were settled so, that it was a whole day before they dispers'd, which made them jealous they were near land, being towards that part that was unknown. They held on their course westward, that is, west-north-west, and west-south-west, always keeping in such latitude as the *Adelantado* directed, which was never to exceed twelve deg. nor be under eight, so that they kept bewixt ten and eleven. On *Tuesday* the 29th of *August*, they saw a little low island, quite round full of trees, and hemm'd in along the shore with ridges of rocks above the water. Its compass was about a league, the latitude 10 deg. 40 min. the distance from *Lima* 1535 leagues. It was call'd the *Solitary* island, because it stood alone. The *Adelantado* order'd the two small vessels to seek some harbour, to take in wood and water, the vice-admiral being in great want. They came to an anchor in ten fathom water, and hail'd the admiral to stand to sea, because all the shoar was full of great rocks, which were to be seen. Sailing over them and sounding as they went, sometimes they found ten fathom water, and sometimes found no ground with one hundred. It was frightful to see the ship over so many rocks. All diligence was us'd to get out to open sea, as they did.

The admiral bore patiently with all the men's muttering and despair, endeavouring what he could to prevent any publick, or private sins, he study'd the peace of all persons, giving a good example, with his beads in his hand at all times. Every day he cauled the *Salve Regina* to be said before an image of our blessed lady of solitude. He had even-song sung solemnly, and kept holy-days, putting out the colours and sounding warlike instruments, reproving those that swore, charg'd the sol-

diers to exercise their arms, and every afternoon review'd them, to put his hand to every thing that was to be done aboard the ship, though it were the most laborious work. On the 7th of *September* they sail'd before the wind, which was a stiff gale at south-east, under a topsail reefed, due west. The sky appear'd very thick ahead, for which reason the master pilot sent out the galliot and frigate ahead, one in sight of the other and of the galeon. He order'd 'em, if they discover'd land, or shoals, or any thing else to give notice of, they should make a signal with two lights, and he would answer in the same manner, but fear prevailing they fell astern. Thus they sail'd in dread, under such apprehensions as that night suggest'd. About nine the vice-admiral came up, and about eleven, on the larboard-side, they discover'd a great thick cloud, covering all the horizon on that side. They that were upon the watch doubted whether it was land, but were soon undeceiv'd by a heavy shower of rain that fell presently after. As soon as it was over they plainly discover'd land, from which the admiral was not above a league. Being assur'd it was land, they proclaim'd it with the usual joy, and all came out to see it. The galeon took in her sails, and lying athwart the land, made signs to the other ships, only two answer'd, the other was not seen. Day appear'd and discover'd towards the south-west, a point of land, plain, large and black, being cover'd with trees, and looking about they could not find the vice-admiral, which was a great trouble to all the men. Day-light also discover'd a high hill like a sugar-loaf, all smooth; and another little hill towards the south-east, which appear'd to be three leagues in compass, and is eight from the island. It has no harbour, nor any other place to land, being all rocky and bare without trees, or any thing green, but a dry colour'd earth and stones. There are some clefts in it, particularly two on the west side, out of which and the very top of the hill, there gushes out much fire and sparkles, with a great noise. It had a very handsome head, which, a few days after the ships got into harbour, broke off and flew with so terrible an earthquake, that though the anchoring place was ten leagues off, it was heard, to the great terror of the men, and made the ship shake. From that time forwards there were great thunder-claps within it every now and then, and for the most part when it gulch'd out fire, after which there came out such quantities of thick smoke, as seem'd to ascend up to the heavens, and then follow'd a rumbling noise. The admiral order'd the frigate to sail round the fiery mountain, to see whether

ther the vice-admiral, happening to fall to the other side of it, lay there under shelter, ordering him to come away to the island they had discover'd. Being pretty near it there came out a small boat with a sail, and after it a squadron of fifty more. The people in them hallow'd and made signs with their hands, as if they hail'd the ship, who did the same, but not without apprehension. When the vessels came close, it appear'd to the men in them were coal black, and some a little clearer, all of them with curl'd hair, some white, some fair, and of other colours, it being certainly dy'd; half the head shorn, and with other distinctions, their teeth colour'd red. They were all naked save their privities, which were cover'd with a sort of soft stuffs. Most of them were stain'd with a dye blacker than themselves, and others with other colours. There were streaks to be seen on their faces and bodies, their arms were several times wound about with black withes, and about their necks many strings of small beads of bone, ebony and fishes teeth. About several parts of them hung abundance of some little and some big plates or flat pieces of mother of pearl. The canoes were small, and some of them link'd two and two together. Their weapons were bows and arrows with sharp points of burnt wood. Others were pointed with bearded bones, and some with feathers; the points seem'd to be infected with the juice of some herb, but not very hurtful. They had also stones, *Macanas*, which are their swords made of a heavy sort of wood, darts of hard wood with three rows of beards, and the spear part above a span in length. A-crofs them like shoulder belts, hung budgets of palm-tree-leaves well made, full of biscuit, which they made of roots, all of them were eating of it as they came, and freely gave part. As soon as the *Adelantado* saw the colour of their skins, he concluded they were the people he look'd for, saying, *This is such an island, or such a land.* He spoke to them in the language he learnt the first voyage, but they neither understood him, nor he them. They stop'd to view the vessels, and went about them as if they had been chattering. No persuasions could prevail with them to come aboard, but having talk'd to one another they stood all to their arms, a tall, old, lean *Indian* who was fore-most, seeming to persuade them so to do. They presently bent their bows to let fly, the old man talk'd to them, and they clap'd themselves down again; they gave the word about, and could not resolve what they were to do. At length they concluded, and giving a shout let fly many arrows, which stuck in the sails,

and other parts of the ships, but did no harm. Upon this the soldiers who were in a readiness, had orders to fire upon them. One was kill'd, many wounded, and the rest fled in great consternation. They cruiz'd up and down seeking a harbour, which they all were impatient for, having suffer'd much, and believed they should be eas'd of all their troubles, if they could but land. The Vice-admiral return'd without finding the vice-admiral, which increas'd their sorrow and apprehensions. The three ships came to an anchor at the mouth of a bay, under the shelter of certain flats. The anchors were a-peak, and the water flowing about ten at night, the galeon drag'd hers with very great danger of being a-ground on the sands. The admiral ran out to encourage his men, who were in great disorder and confusion, the danger being at hand, and the night making it more dreadful. At last the anchors were weigh'd, and letting fly the sails, the ship with much difficulty got out to sea. At break of day the *Adelantado* went aboard the galliot to seek out a port. The master pilot found one, tho' small, lying north-west of the burning mountain, shelter'd from the south-west wind, with twelve fathom water, a town, river, ballast, wood and a good airy place. It being then late, they came to an anchor at one of the points that jetted into the sea, a sergeant with twelve musketers went ashore to secure the port. The *Indians* belonging to a town that was hard by, came out and play'd them so violently with their arrows, that they were forced to take shelter in a single house they found. The ship fir'd two guns, which put them to flight, the boat going off to fetch the men. All that night they ply'd it out at sea, and the next day, the *Adelantado* found a still harbour, shelter'd against all winds. There they came to an anchor in fifteen fathom water, the bottom owfy near to the land, where was a river and towns, which sound-ed all night with the noise of dancing and musick after their manner, beating sticks one against another, and tabors. Abundance of *Indians* came to see the ships and men. Most of them had red flowers on their *Indians* heads and in their noses. With much per-  
suasion some of them came aboard the admiral, leaving their arms in the canoes. Among the rest came aboard a handsome body'd man, and of a good aspect, a brown complexion, lean and somewhat grey-hair'd. He seem'd to be about sixty years of age, on his head he had some blue, yellow, and red feathers, in his hands a bow and arrows pointed with bone curiously wrought. On his sides were two *Indians* of better quality than the rest. This they found was some person of note among them,

A burning  
island.

*Indians*

board.

them, as well by the difference of his garb, as by the respect the rest paid him. He enquir'd by signs, who was chief of the new comers. The *Adelantado* receiv'd him with great demonstrations of affection, and taking him by the hand, signify'd that he was commander. The *Indian* said his name was *Malope*, the *Adelantado* answer'd his was *Mindana*: *Malope* understood it, and answer'd, applying the name he had heard to himself, that he would be call'd *Mindana*, and the general should take the name of *Malope*. Having made this exchange he seem'd very well pleas'd, and when they call'd him *Malope*, would signify it must not be so, but *Mindana*, and pointed to the *Adelantado*, saying he was *Malope*. He also said he was call'd *Taurique*, this name seeming to import as much as *Cacique*, or commander. *Alvaro de Mindana* put a shirt on him, and gave him some other things of small value. The soldiers gave the other *Indians* feathers, little bells, glass-beads, bits of silk and cotton, and cards, all which they hung about their necks. They taught them to say *Friends*, *Friends*, crossing their hands and embracing one another in token of peace. They presently learnt, and practis'd it often. They shew'd them looking-glasses, shav'd their heads and beards, and par'd the nails of their hands and feet, at which they were much pleas'd, earnestly begging the razors and cut-throats. They also endeavour'd to see what was under the cloaths, and being satisfis'd, did the same monkey tricks, like those in the first islands. This lasted four days, they going backwards and forwards, and giving such as they had to eat. One day *Malope* came, as he did very frequently, expressing the most friendship of any, his town being near to the place where the ships lay at anchor. Fifty canoes joyn'd him, all of them with their arms hid in them, expecting their *Malope*, who was a-

board the admiral; and because a soldier took up a musket, he went away to his boats, no persuasions being of force to prevail with him to stay, but got him to shoar, follow'd by all his people. There was another number of people on the shoar, by whom he was receiv'd with great demonstrations of joy, and they seem'd to consult together: that same afternoon the *Indians* remov'd all they had into some houses near the shoar, to *Malope's* town. At night they made great fires on the other side the bay, which lasted almost till morning. It was look'd upon as a signal of war, which was confirm'd by the jealousy the canoes had caus'd that day, running hastily from one town to another, as it were to make ready, or carry advice of some matter.

Next morning the galliot sent its boat ashoar for water, which was at hand, and as they were supping it, some *Indians* who lay in ambush fell upon the men, shooting and shooting their arrows, following them to the boat, where the musketeers firing on them they halted. The wounded men were taken care of, and the general immediately ordered the colonel to land and do them all the harm he could with fire and sword. The *Indians* made a stand, and five being kill'd, the rest fled. The *Spaniards* went off without loss, having cut down some palm-trees, and burnt houses and canoes.

This same day the *Adelantado* sent captain *Laurence* in the frigate with twenty sailors and soldiers, in quest of the vice-admiral: He had orders to sail about that part of the island they had not yet seen, till he was at the place, where night came upon them, when they discover'd the land, and that when he was there he should sail away from west to north-west, which was the course the vice-admiral could stand, to miss that the admiral took, and to observe what he could discover in his way. He also order'd the colonel to be ready with forty men, to go in the morning early, as he did, to certain huts that were near a hill, to take revenge on the *Indians*, for shooting at his men, and to endeavour by the harm he did to them to prevent greater mischief. He came to the place without being discover'd by the natives, secur'd the avenues, beset their houses, and set fire to them, attacking even that were in them. They seeing themselves hard set by the fire and enemy, made as brave a defence as they could, but being overpower'd ran desperately upon the *Spaniards* weapons, without valuing their lives. Six were kill'd, and the seventh made his escape much wounded. The colonel went off with his men, among whom seven were wounded with arrows.

The *Spaniards* burn and spoil.

After noon *Malope* came down to the shoar, for the towns and canoes that had been burnt were his, and with a loud voice call'd the *Adelantado* by the name of *Malope*, and striking his breast, call'd himself *Mindana*. Then he embrac'd himself, and complain'd, pointing to the harm they had done him, making signs that they were not his men, but the *Indians* on the other side of the bay that had shot our men, and bending their bow, gave to understand, that they should all joyn in taking revenge, and he would be aiding to it. The *Adelantado* call'd him, being desirous to appease him, but he came not till next day, when much friendship was express'd on both sides.

On *S. Matthew's* day they set sail from their harbour to another larger and more con-

convenient, which they found half a league  
higher within the same bay. As they were  
sailing towards it, captain *Laurence* return'd,  
and brought an account, that as he sail'd a-  
bout the island according to his orders, he  
found in the same line north and south as  
the bay lay, another not inferior to it, bet-  
ter peopled, and more full of canoes. He  
also said, he had seen beyond that two o-  
ther little islands near the great one, both  
of them very well peopled; and that eight  
leagues to the south-west they discover'd  
another island, that seem'd to be no less than  
30 many leagues in compass, and that nine  
or ten leagues west north-west of the place,  
where night overtook them; when they dis-  
cover'd land, he had found three islands inha-  
bitated by *Mulattoes* of a clearer sort of com-  
plexion, and full of palm-trees, with abun-  
dant ridges of rocks, running west north-  
west, and channels betwixt them, which they  
did not see the end of; and to conclude, that  
they met with no footsteps of the ship they  
sought after. The ships came to an anchor  
in the second port, the *Indians* thereabouts  
making great outcries all the night long,  
as if they had sported or scoffed, very of-  
ten plainly repeating the word *Amigos*, that  
is, friends. In the morning about five hun-  
dred *Indians* came to the nearest shore,  
showing abundance of arrows, and casting  
darts and stones at the vessels, but perceiv-  
ing they fell short, many of them ran into  
the water breast high, and others swam,  
coming up to close, still shooting, that hav-  
ing got hold of the buoys they were mak-  
ing to land with them.

The *Adelantado* perceiving their boldness,  
commanded captain *Laurence* to go out  
with fifteen men in the boat to engage them.  
Those that carry'd bucklers cover'd them  
that fir'd and row'd; yet they shot two,  
and had hurt more but for that defence,  
some of the bucklers being struck through.  
The *Indians* fought scatter'd and running,  
but with such resolution, as made it appear  
the *Spaniards* had met with men that would  
defend what they had. This lasted as long  
as they were not sensible of the harm our  
fire-arms did, but being unobserv'd by the  
death of two or three, and the wounding  
of others, they left the shore, carrying  
away their dead and wounded men.

Next day the colonel being a-shore he  
propos'd to his men to unwood a place near  
a great spring, in order to build a town  
there. All of them did not like the place,  
believing it would be unhealthy. There-  
fore some of those that were marry'd went  
aboard to acquaint the admiral with the co-  
lonel's design, and desire him to go ashore  
and give orders that they might settle in  
one of the towns belonging to the *Indians*,  
for that the houses being built, and the

VOL. IV.

ground about it beaten, it must be fitter  
than the place pitch'd upon. The *Adelan-*  
*tado* landed, held a council, and most of  
the soldiers being

Here it  
breaks off

and to be  
given again

miraculously. *Indians* came off from the  
islands in their boats, some with sails, and  
some without. Not being able to get over  
the rocks, they got out upon them, and from  
thence made signs with their hands to  
come to them. In the afternoon one *Indi-*  
*an* alone in a small canoe came out at the  
end of the flats, made to the windward,  
keeping at a great distance, and therefore  
it could not be discern'd whether he had any  
beard, the islands of the bearded men be-  
ing thereabouts. He seem'd to be a well  
shaped man, naked, and had long hair  
hanging loose. He pointed to the place  
from whence he came, and pulling a white  
thing he brought in pieces, eat it, then  
turn'd up coco-shells as if he drank. They  
call'd him, but he would not come. This  
island is in six large degrees of north lati-  
tude, is almost round, about thirty leagues  
in compass, and not very high, it is well  
wooded, and on the sides of the hills there  
are abundance of roses, and much till'd  
land. Three leagues almost west of it are  
four bare islands, and a great many more  
close to it, all of them hemm'd in with  
rocks. This seem'd to be clearer on the  
south side.

They held on their course north north-  
west, and on Monday the 1st of January  
found themselves in fourteen degrees of la-  
titude. They steer'd away due west. The  
wind was large and blew fresh, and on  
Wednesday the 3d of the same month at break  
of day, they had sight of two of the islands <sup>The i-</sup>  
<sup>lands De</sup> *de los Ladrones*, which they fought after. <sup>los La-</sup>  
One of them was *Guam*, and the other <sup>drones.</sup> *Serpana*. They sail'd along between them,  
lying north-east and south-west, thro' a chan-  
nel ten leagues in length, which lies close to  
*Guam*. Here a man fell overboard as he  
was trimming the top-sail; there was but one  
sitting line in all the ship, and some body  
had put it over just where the man happen-  
ed to fall, he laid hold of it, and was sav'd,  
giving thanks to God for so great a delive-  
rance. It will be an excuse for giving some  
lines in this book to things of small moment,  
to say as the ancients did, that little things  
have, I know not what that is divine, which  
tho' all men perceive, yet none can com-  
prehend. Therefore it is, they often draw  
the attention of those who see or hear them  
in such manner that they take a liking to  
them without any other recommendation

7 X

or

or encomium. Such a one is the description of countries, habits and manners of the natives, tho' he that is curious, when he meets with it, may reckon it among the most material of that sort, as well on account of the pleasure its variety produces, as for the instruction and benefit reap'd by it.

*Guam one of those islands.*

The ship being in sight of *Guam*, abundance of canoes began to come off to it. These are small boats, made of a certain wood as light as cork; only one *Indian* goes in one of 'em; and tho' it has a mast, sail, yard, tackles, halliards, and helm, he steers with one hand, and with 'other hoists, lowers, and trims his sail, having one of the tacks fasten'd to each foot, and so veers out, or hauls to, as occasion serves. Both ends are heads, and as soon as the sail is split round, they make way without bringing about the vessel. They are very swift, and when a wave breaks, and fills it full of water, the man casts himself into the water like a fish, overturns the boat, and so clears it of all the water: the boat being clear, he gets in at one side. Being come to shore, he takes his vessel on his back, and leans it against a tree, on which he has his habitation, like a bird, living upon the fish he takes: thus he lives, tho' barbarously, yet happy in being a stranger to the fall of court favourites, and to the favours of the world, such as wealth, honour, and preferences, imaginary blessings and chimerical delights. Many of those boats came to the ship's side with such fruit as the country produced, as cocos, plantanes, comboys, and sweet canes, besides several sorts of sea-fish, which they catch with their hands among the cliffs of the rocks, without any other tackling, inasmuch that no fish is safe from their nimbleness, but the *Cayman* or crocodile, the shark and *Caella*: these they worship as deities, and, on account of the harm they do them, and the dread they have of 'em, they offer to them part of the product of the earth in the nature of tithes. They lay the offering in a canoe, turning it to sea under sail without any body in it, by which means it soon oversets and sinks. The people of these islands are of a dark complexion; neither men nor women wear any clothes, but they are mighty hairy, large limb'd, very strong, and their skin so hard that they run naked and bare-leg'd thro' thorns and briars, and over rocks and stones as swift as stags. They use no sort of money, despise gold and silver, for which reason strangers could not deal with them, but by bartering for iron, which they value since they have known the *Spaniards*, seeing it cut down trees, and hew timber. They chiefly covet axes and knives, because those they used before were made of pebbles and

*Superstitions of those islands.*

flints, wherewith they made their boats and other things. Several times, when seamen and soldiers went ashore upon these islands for fresh water, they found, as has been said, houses of these *Indians* built upon trees: there were also some huts upon the shore, and sailors, thro' covetousness, having often search'd both of 'em, found nothing but oziers across 'em, on which many leg-bones and skulls of men were strung: these are bones of their fore-fathers, which such brutal people worship as gods, because they know no other, except the sun, moon, alligators, and sharks, in whom they suppose the souls of the departed to be. In order to give dead bodies honourable burial, they flea 'em, and, burning the flesh, put the ashes of it into a jar of *Tuba* (a sort of wine they make of the coco-tree) and shaking it about, drink it off among 'em: they only save the bones for the kindred to hang about their houses, and keep their friends always near 'em: as long as they live they lament their dead upon certain days and nights, at hours appointed; to this purpose there are abundance of mourners to be hired, but they mourn for one another either for interest, or out of friendship. He that has lamented for his neighbour is to be pay'd when he has occasion, either by coming in person to mourn, or hiring one to do it. They observe these obsequies, which are pleasant enough, for they eat and drink plentifully; they last about a week at a time, the business of the day being drunkenness, and weeping of the night: every one mourns an hour in his turn, and amidst his tears relates the life and brave actions of him or them he bewails: he relates his infant behaviour, and so on as he grew up, describing particularly his stature, shape, good qualities, valour, and all that may be for the honour of the dead person: if any thing in his relation be comical, he bursts out a laughing as heartily as he wept before, all that are present laughing out so loud that they cannot hear one another. When the laughing fit is over, after talking and drinking awhile, for this they never omit, the lamentation begins again: on the other side, when they hint at any sorrowful passage, all the standers-by shriek as loud as they can, and there uses to be two hundred of 'em together.

In the year 1668, two companies going over to the *Philippine Islands*, one of them commanded by *John Lopez de Aguirre*, and the other by *Laurence Chacon*; it happen'd that some men going ashore upon this island of *Guam* for fresh water and some fruit, a *Spaniard* of about twenty years of age went up from the shore to seek some fruit, and entering into a grove, found a little savage about

two companies going A notable  
lands, one of them accident,  
*Lopez de Aguirre*, and  
*Chacon* ; it happen'd  
shore upon this island  
er and some fruit, a  
ty years of age went  
seek some fruit, and  
found a little savage  
about

about fourteen years of age : the stranger  
seeing such a boy naked, and without any  
weapon, was not afraid tho' he was unarm'd  
himself, not desiring to go far from his  
companions. The islander drew near, and  
embracing the foldier, fawn'd upon, and  
seem'd to shew friendship, as if he were  
very glad to see him : then he shew'd him  
where there were plantains, and so they  
continued some time without any jealousy  
on the *Spaniard's* side. When they were a  
good distance from the guard, the savage  
again embraced the foldier, and was carry-  
ing him away with much ease under his  
arm into the thick of the wood, holding so  
fast that he could not break loose, neither  
durst he call out to his companions, for fear  
the savage should make the more haste, and  
because he carried him away laughing, and  
as 'twere in jest. As they kept along in  
the same path among the trees, there hap-  
pen'd to come towards 'em four *Spaniards*,  
who had gone up the wood to find some-  
thing to shoot ; they all stood, hearing the  
noise the barbarian made among the bushes,  
and presenting their pieces that way they  
heard the noise, as supposing 'twas some  
deer or buffalo. They were much surpriz'd  
to see the two men, and that their country-  
man struggled to get loose. The savage  
seeing them, let him go, and run and hid  
himself in the wood, the prisoner remain-  
ing among his friends, by whom and his  
captain he was reprov'd, for going away  
from the rest alone, and without arms.  
Five years after this accident, *D. Martin*  
*Enriquez*, viceroy of Mexico, order'd *John*  
*Lopez de Aguirre*, as he pass'd by these  
islands, to carry away with him one or  
more savage boys, to be instructed in the  
faith, and learn *Spanish*, that when they  
return'd to their native country they might  
serve as interpreters, and teach the natives  
the faith and language. The captain used  
all his endeavours, and could get only one  
savage youth, whom he carried with him to  
*Manila*, where he was baptiz'd ; it happen'd  
by good luck to be the same we spoke of  
above ; and he talking one day with the  
same foldier, they remember'd one another,  
and were afterwards great friends. After  
repeating the whole passage, he own'd his  
design was, when he had got him to his  
cottage, to suck his brains, drink up his  
flesh reduced to ashes, and adorn his house  
with his bones.

The discov-  
erers in  
diretly,  
put into  
cape *Spiri-*  
tu Santo.

The ship holding on its course towards  
the *Philippine* islands, left the islands of *los*  
*Ladrones* astern, without touching at them,  
tho' it had need enough, having no tackle  
to launch the boat, or ship it again. She  
sail'd on due west till upon *Friday* the 12th  
of *January*, when they found 13 degrees  
of north latitude. The master or pilot ha-

ving never been in those parts, sail'd upon  
information, without any certain rule, seek-  
ing cape *Spiritu Santo*, or of the *Holy Ghost*,  
which is the first part of the *Philippine*  
islands. On *Sunday*, at break of day, they  
discover'd the top of a high hill ; they all  
rejoic'd, as if they were already arriv'd at  
a place of certain rest : most of the men  
were so spent they could hardly stand upon  
their legs, and so thin that they look'd like  
death it self, so that it was become a say-  
ing among 'em, that they would carry off  
nothing but the bare skeletons well propp'd up.  
Abundance of rocks, and other frightful  
discoveries, every moment interrupted their  
joy, being hourly in imminent danger of  
their lives, they lost sight of the hill by rea-  
son of the fog, their sorrow encreas'd, and  
they began again to mutter against the  
master or pilot, whose fair speeches avail'd  
him little, no more than his skill. They  
discover'd the land again where it made a  
cape : it being somewhat to windward, they  
put a bonnet upon the sail, and lay as close  
to the wind as possibly they could, intend-  
ing to run along the shore, founding all the  
way, and ready to drop anchor when they  
found conveniency, and do as they thought  
most expedient. They hoisted the main-  
yard, but the halliards giving way, it came  
by the board, and the men, who were be-  
fore out of heart, so entirely despair'd that  
they would not look to save themselves :  
at last good words, and certain flats they  
discover'd to leeward, prevailing, the yard  
was hoisted and fix'd to the mast, with  
ropes to stay it. The ropes broke, and  
the yard came by the board again : good  
words were of as much use as hands to hoist  
it again. The sea had run high that night,  
and did so still, and the ship sailing hard  
upon the wind, it rack'd her so much that  
almost all the tackling gave way, but espe-  
cially that belonging to the fore-mast, inso-  
much that it had only one of the ropes of  
the shrouds left on each side, and look'd so  
naked, as if it would have spent it self the  
very next time the ship beat, but it was  
good and strong. The ship and men were  
much in the same condition, and it pleas'd  
God to look down upon them in his merc-  
cy, and to order it so, that as they were  
standing in for a bay, the wind came about  
large, so that they got into it thro' a chan-  
nel inclos'd with rocks at the mouth of the  
same bay. By this time three *Indians* came  
in a boat to view the ship, and took their  
post to windward, without speaking one  
word. Aboard the ship there was a fol-  
dier that spoke the language of the *Philip-  
pine* islands, tho' pretending to know some-  
thing of the voyage, he had like to have  
been the ruin of all the crew. He spoke  
to them in that language, and the *Indians*  
being

being satisfied the ship belong'd to christians, drew near and went aboard, to shew the anchoring-place they were looking after. They came to an anchor in the midst of the bay, in fourteen fathom water. One of these *Indians* spoke several languages, and another of 'em, as he said, was the same Sir *Thomas Candish* carried away with him when he sail'd that way, to shew him the channels amidst those islands. Being ask'd what land that was, they said 'twas cape *Espiritu Santo*, or of the *Holy Ghost*; and, that the port and bay was call'd of *Cobas*. This account gave new life to those who an hour before look'd upon themselves as dead men, which made many express their inward joy with outward tears. The *Indians* went away to their town, and others came in their place, one of them carrying a long rod of justice, which, together with a cross they saw on the shore, convinc'd the men they were christians and friends. They brought fowls, swine, palm-tree-wine, abundance of cocos, plantanes, sweet canes, papayas, roots, water in pipes, wood, and all such relief as people in that distress stood in need of. All was bought for rials, knives, glass beads, which they value above silver, so that for three nights and three days the fire in the cookroom was never out; nor did they cease cooking and baking, minding nothing but eating. This excess was very prejudicial to the sick, for being us'd to eat very little, and now using no moderation, three or four of 'em died of it. In this bay, which lies in 12 degr. and 35 min. of north latitude, they continued a fortnight; at length, after much debate about sailing, without refitting the ship, they set forward on the 29th of *January*: at five in the afternoon the island of *St. Bernardine* was far astern of 'em. Night overtaking them near another call'd *Capul*, they met with furious eddies and currents which brought the ship quite about, and had she not answer'd the helm well, must have run ashore. Next day some *Indians* came out in boats they call *Barakays*, from a port call'd *Nibalon*, in the island *Luzon*, bringing abundance of fowl, swine, and fruit, but little was purchas'd, because there was little left to give for it. They sail'd on, keeping the island in view amidst many others, at night by guess, and passing thro' several places, in which afterwards skilful pilots admir'd they had not been all lost, there being abundance of flats that way, but they never saw any, so that it was *God's* providence preserv'd them. On *Thursday* the 1st of *February*, being come to the place they call *Galban*, the governers sent her two brothers, with seven men more in the boat, on pretence they were going ashore for provisions: they

They put  
to sea

*Manila*.

waited its return all day, but it came not, being gone to *Manila*, fifteen leagues distant from that place, over a narrow neck of land the island makes there, to give advice of the ship's coming. Next morning, about break of day, the ship appear'd enclos'd amidst islands, seeing no way to get out, without its boat, and very bare of provisions, what they got at the last port being spent. They saw a great many *Indian* boats, but they all fled from the ship, tho' they made signs to 'em, because that not being the season when the ships use to go from *New Spain*, they took that to be an *English* ship. The trouble hunger caus'd was increas'd by seeing no way for the ship to get out. Thus they mov'd every way as much as the calm would permit, and at last discover'd a narrow chanel, about a stone's throw over: the wind freshening astern, they struck into it, and running between the island they call *Cajá* and that of *Luzon*, close under a point call'd *Azufrá*, or *Sulphur*, they got out into more searoom, being a large bay call'd *Bomben*. By this time they discover'd two *Caracoas*, which are large *Indian* boats; forty *Indians* row'd in each of 'em, twenty on a side, with long scoops: they made a sign to the headmost of them with a small flag; it stood off, and would not stay: they stood right upon the other, which, fearing to be foul, came to, and drew aboard with a rope they threw over to it. They ask'd the master whence he came, and whither he was bound; he answer'd, from *Manila*, which was twenty leagues from that place, and was bound for *Cebu*, the first town the *Spaniards* built in those parts, and is a hundred leagues distant from *Manila*. They ask'd for an *Indian* pilot, the ship being that night to pass over the flats they call of *Tulei*; 'twas agreed he should have three pieces of eight for his pains. The night was spent very watchfully, and in the morning they discover'd the mouth of the bay, drawing near to it close under the land of the island of *Fortune*. The wind was not fair, the mouth of it lying west, and the breeze coming from the north-east. At the mouth of the bay is an island call'd port, but *Marivelez*, where there's usually a *Spaniard* stands sentinel, with some *Indians* to row, and swift boats, to go see what ships come in, and carry quick advice to the governor of *Manila*. There's also a small mount or rock lying north and south with *Marivelez*, which they call *El Frayle*, or, the *Friar*. These two islands make three small channels, and they began to tack, to get in at that which lies between *Marivelez* and *el Frayle*. The ship having none but the two mainsails, and the men being spent with labour, they advanc'd little or nothing, and sometimes

times fell off considerably. Thus they spent three days tired to death, and in despair, to see that for want of fetching up that island, they were depriv'd of the satisfaction of coming to rest at *Manila*. They were still in pain, expecting every tide, reckoning when 'twould be flood to carry 'em in, but that being irregular, the hour never came. The sailors bid the master or pilot run the ship aground, for they had labour'd sufficiently; perhaps 'twas because they saw land on both sides, and the smoak of *Manila*. They did the work of the ship as if it had been rather a compliment than a duty; all their aim was to run aground, alledging, that since they were so near a christian country, 'twas better the ship should be lost alone, than so many men in her. The water and provisions were now quite spent, and all they had too much of was, the brisk contrary gale: this made the master express more concern to the seamen, and therefore he bid them take notice that all the coast was inaccessible, and the sea ran high; besides that they had no boat, nor provisions, but many sick men, that, in the weak condition they were in, 'twas impossible they could hold out many hours, much less days: he said, 'twas a shame it should be said of them, that they had endeavour'd to save themselves, because they were strongest, and could swim. He encourag'd them, saying, they had brought that ship from such remote parts, through seas never cut by ship, and therefore they that had so bravely endured the most, ought not now to boggle at the least. He declared it was not to be borne, that they should lose the honour of so strange a voyage at the very entrance of the port, from whence they were observ'd. He added, that had they brought the ship well-condition'd, full of provisions, the men in health and well paid, they had deserved very little commendations; but all things being quite otherwise, they now merited the greatest praise. By this time they discover'd a *Barangay* making all possible speed towards the ship: when near, they discover'd four *Spaniards* in it, and eight *Indians* that row'd: one of them was the sentinel at *Marivelez*, whose name was *Alonso Albarran*; he came with the governor's master of the household, sent by him with two soldiers, to condole with the lady *Elizabeth* for her misfortune, bringing a letter containing many honourable offers. The sight of the four *Spaniards* raised the hearts of those disconsolate men, as may well be imagin'd considering their circumstances: they were handed up, and most lovingly receiv'd. They went about carefully viewing all the men, and seeing so many sick, so many with sores, so ragged,

VOL. IV.

poor, and distressed, only said, *God* be prais'd, *God* be prais'd. *Albarran* went down betwixt decks to see the hospital, and when the sick women saw him, they cry'd out, *What do you bring us to eat, for we are ready to run mad with hunger and thirst?* He comforted them with hopes of fresh provisions that were a coming, and so went out upon deck astonish'd at what he had seen. At length *God* sent 'em all blessings together, that tack the ship made up with *Marivelez*, whence the lady *Elizabeth* sent a soldier with her answer to the letter she receiv'd from the governor, and he went away in the *Barangay*. Soon after they discover'd another, in which came the chief *Acaide* of that coast, with the governor's brothers, bringing a great deal of new bread, wine, and fruit, given them in *Manila*. As 'twas dividing, the greatest persons did some actions unbecoming them, but, who can forbear in a time of so much want? Next day there came a good large boat loaden with fowl, calves, hogs, bread, wine, and greens: 'twas brought by *James Diaz Marmolejo*, by the governor's order; 'twas divided bountifully among all the people.

They get  
into the  
harbour.

The ship drew nearer to the harbour still upon the tack: one *Pinao*, mate to one of the king's ships, came to help with a boat full of seamen, all clad in silks of several colours; the captain of the port was on the shore with his colours flying, and all the feasting-men drawn up at their arms. As soon as the anchor was dropt, they saluted the royal standard with all the cannon and small arms; the ship answer'd the best it could, and came to an anchor on the 11th of *February*, 1696, in their desired port of *Cabite*, two leagues south-west of the city *Manila*, the capital of the *Philippine* islands, in 14 degrees and a half of north latitude, with fifty persons less than they brought from *Santa Cruz*, who all died by the way. The ship being at an anchor, other persons came aboard, who charitably brought so much bread and flesh, that now there was to spare. Next day, in the morning, a colonel came from the governor *D. Luy's Perez de las Marinas*, a rigid or alderman from the common-council of the town, and a clergyman from the chapter of the great church, to receive the lady *Elizabeth*. They presently carried her off to the king's house at the port, saluting her again as she landed; after dinner, they carried her to the city, where she made her entrance by night, and was receiv'd with flambeaux. The sick people being taken out of the ship, were convey'd to the hospital, the widows to the houses of persons of note, and all of them afterwards married to their satisfaction: those that were recovering,

7 Y

and

the rest of the soldiers, were quarter'd in private houses, and those that were married went to house-keeping; so that they were all of 'em lovingly receiv'd and entertain'd by the charitable inhabitants of *Manila*. Soon after ten died, and four betook themselves to religious orders. The frigate never came home; there was an account that it had been found with all its sails abroad, the people dead, the vessel rotten and run ashore. The galliot arriv'd at an island call'd *Mindanao*, in 10 degrees of latitude.

What became of the galliot.

As they sail'd without knowing what way to take among those islands, they were reduced to such want, that they went ashore upon a small island call'd *Camanguin*, where they kill'd and eat a dog they found. They accidentally met some *Indians*, who directed 'em to the harbour, where there were fathers of the society of *Jesús*, and they sent 'em to the corregidor or governor of those parts: he sent five of 'em prisoners to *Manila*, the captain having made his complaint to him that they had mutiny'd, with a letter to Dr. *Anthony de Morga*, lieutenant-general of that government, in which were these words: *Here arriv'd a galliot, whose captain was as impertinent as his discourse: I ask'd him whence he came, and he told me, that he had been with the Adelantado Alvaro de Mindana, who sail'd with four ships from Peru, to make the islands of Salomon. This one arriv'd here, and bearing his majesty's colours, I receiv'd it, as was proper. If the others happen to go thither, you will have a better account of this affair.* The soldiers were not prosecuted, as was said, only because the captain with his galliot forsook the great ship.

This was the end of that prodigious voyage; if I have been too tedious in giving an account of it, the strangeness of it may be my excuse, since neither that of *Ulysses*, nor that of *Gama*, were equal to it, and yet both of 'em deserv'd poems compos'd by those two most noble poets the *Greek* and the *Portuguese*: but because it might seem superfluous to have said so much of an undertaking to appearance unfortunate, 'twill be fit to give an account of the benefit accruing from it, and shew what future advantage heaven was pleas'd should be the consequence of the present loss, to the greater honour and glory of God and of the viceroy, his instrument.

One of the discoverers returns to Peru. *Quiros*, after waiting upon the lady *Elizabeth* from *Manila* to *Mexico*, where he stay'd at that time, went away to *Lima*, where he made interest with *D. Luis de Velasco*, the marquis's successor in the government of *Peru*, to be furnish'd by him with ships, men, and other necessaries to continue the discovery they had begun, and, as he said, to plough up the waters of the

unknown sea, and seek out the undiscover'd lands under the *Antarctic* pole, the center of that horizon. He presented two memorials, containing the motives that inclined him to this undertaking, expressing himself much to this effect:

That part of the moon which is darkened when she's eclips'd, being the part of a circle, proves that the body of earth and water which causes it, is round: about this body is an imaginary line, long, without breadth or depth, which encompasses and divides it into two equal parts, one whereof is call'd the *north*, t'other the *south*: at this equinoctial line commence the degrees, reckoning from 1 to 90, which is the furthest extent of latitude towards either of the poles. Towards the north all is already discover'd to 70 degrees; the remainder from thence to 90, tho' 'twere discover'd, seems uninhabitable, because of the extrem cold, the inequality of the day and night, and other inconveniences. 'Tis well known, that in several parts already sufficiently discover'd the people live in caves, and use much art to support life against the hardships of the weather. Towards the south there are discoveries, as far as 55 degrees beyond the strait of *Magellan*, and to 35, the latitude of the *Cape of Good-hope*, or somewhat above 40, which ships make to weather it. These two points of land, with their coasts and the coasts opposite to them, are already fully known; it now remains to discover the remaining part parallel with this, and in less latitude westwards, up to 90 degrees, to know whether 'tis land or water, or what quantity of each. The *Adelantado, Alvaro de Mindana*, as he was sailing in the year 1695, towards the islands of *Salomon*, which he sail'd lay between 7 and 12 degrees of south latitude, and fifteen hundred leagues from the city of *De los Reyes*, found four small islands together, inhabited by so good a sort of people, that none of those yet discover'd can equal them, but are, for the most part, ill-look'd *Indians*, indifferently shap'd, and dark complexion'd, such as we see in *Peru*, the *Firm-land*, *New Spain*, *Nicaragua*, the *Philippine* islands, and other parts. These islands are between 9 and 10 degrees of latitude, a thousand leagues distant from the city *De los Reyes*, six hundred and fifty from the nearest coast of *New Spain*, and a thousand from *New Guinea*. The usual breezes there are easterly, for which reason to return from them to *Peru*, or *New Spain*, a ship must run upon a bowling, north or south, to meet without the tropicks those they call general winds; and to this purpose 'tis requisite to have proper instruments for navigation, and substantial vessels, two things besides many others very necessary, which those people are destitute

tute of. These, and many other reasons that may be alledg'd, make it appear that they could never have any commerce with those two provinces above-mention'd, nor much less with *New Guinea*, or the *Philippine* islands, because there's no sailing from those parts to the said islands, by reason the wind is west, and quite contrary to them. From the four islands no other land was discover'd. The vessels the inhabitants use are for short voyages, and therefore 'twas consider'd which way 'twas possible for them to get to far-distant parts; and the most likely way is, that when they sail from a place whence no other land can be discover'd, they make their observations, and take aim by that land they leave behind, till by degrees they lose sight of it; and when they have lost that, then they have a view of the other part they are bound to; for whensoever sight is lost both of the land they come from, and that they go to, there is then an absolute necessity of understanding at least the sea-compass, which they have not. I will say nothing of contrary winds, currents, and other things, which may put them from their course: this appears more plain, in that the most experienced pilots, furnish'd with all those necessities these people want, when they have been three or four days out of sight of land, cannot positively assign where they are: therefore, generally speaking, it must be said, those *Indians* instruments of navigation are no other but their eyes, or their guess, at small distances. As to what might be objected, that they take aim by the sun, moon, and stars; the answer is, that the sun cannot be seen at night; the mutability of the moon is well known, and, in

short, neither sun, moon, nor stars are always visible, nor are they fix'd in one same place, or free from clouds: yet tho' all these things were as they are not, their voyages must still be but short, as has been said. And tho' it be true, that the most ignorant may in their vessels go from a small island to a large continent, so it be near at hand, since if they miss of one part, they will hit upon another, yet it is not therefore to be granted that they can without art seek small and far-distant islands from large or lesser countries. Among those *Indians* there were some that drew towards *Mulattoes*, which difference in colour argues some commerce with other people: besides, those four islands being but small, 'tis to be observ'd, that great ones are scarce able to contain men who are always looking out for another, where they may live more at ease; and they leave 'em, either because they cannot agree, or because they will not be subject to their rulers, or else because they would rule themselves. It may therefore be rationally believ'd, that towards the south-east, south, and south-west, quite away westward, there are other islands one after another, or a continent running along till it joins with *New Guinea*, or comes near the *Philippine* islands, or the south coast of the strait of *Magellan*, for otherwise we know of no parts whence people could go to inhabit those islands, unless 'twere miraculously. Whether it run the one, or the other, or both ways, 'tis likely there are abundance of islands, or a large continent, being the *Antipodes* to the best part of *Europe*, *Asia*, and *Africa*, where, between the latitudes of 20 and 60 degrees, God made men so useful.

# THE P R E F A C E.

THE author having design'd this for a history of his order; has fill'd a considerable part of it with the lives, particular actions, preaching and teaching of his brethren the Jesuits, and inserted abundance of miracles and other pious matter, which is not the subject of this present work, nor likely to be at all acceptable to the reader; who in a book of travels, will expect to meet with nothing but what is propbane history, description, strange manners, customs and superstitions, surprizing accidents, discoveries, conquests, and such things as are usual in books of this nature. Such care has been therefore taken, that his expectation may be answer'd according to the nature of the work, and therefore those religious narrations are either quite left out, or, if any thing be said of them, it is so concise as may be no way tedious, but rather afford something of variety, and serve to make a connection, lest breaking off too abruptly in some places, we should altogether lose the order and method of the author. But he having dispos'd things so as that the delivery of the affairs of his society, may appear to be the principal part of his undertaking, has not therefore digested the others to the best advantage for a reader that looks only for travels, who therefore may think all things are not so regularly recited as might have been; which is here endeavour'd in some measure to be rectified, by joining some accounts, which in him lie far sever'd, that so all confusion might be avoided. And lest any one should object here is too much mention made of the Jesuits and their actions, it is to be observ'd they are the main subject of the history; and that with good reason. For whereas in all other discoveries, we see the whole relation lies upon commanders and soldiers, who conquer'd those nations found out by force of arms: here, on the contrary, and which is very well worth our curious observation, we see vast provinces converted to christianity, and only brought under the dominion of the kings of Spain by a few religious men, arm'd only with the sword of the gospel; and yet these same preachers are brought in here no more than necessity absolutely requires, they being the great discoverers of those far extended countries we treat of, and founders of towns; so that these things cannot possibly be deliver'd without mentioning those who were the prime actors: but the thing will justify it self. As for the truth of the relation, I see little reason to call it in question, since the author could have no inducement to forge any part of it, as being a religion: man, who valu'd his reputation, and could propose to himself no benefit or advantage by falsehood. Nor could he easily be impos'd upon, having liv'd twenty five years in those countries, during which time he must have seen much, and learnt more from persons of credit and authors above blemish. Now to give a more particular account of what is done, as to the translation, several matters as was hinted before, which in the original lie far asunder, are here for the better understanding of them brought together. The first twenty one sections run exactly with the author, neither adding nor diminishing, because so far he proceeds upon the account of those countries, not interrupting it with any spiritual matter. At chapter twenty two he begins to enter upon the subject of the Jesuits coming into those parts, where we reduce many chapters into a few lines each, till some matters altogether spiritual occurring; there are chapters quite left out, till we meet with more temporal affairs. This same method is continued throughout the whole work, sometimes delivering whole chapters, oftner reducing them into less compass, by leaving out those things which are not historical, and sometimes wholly omitting chapters, which contain nothing but the particular lives of some of those fathers, or miracles, and such things from the purpose. The original is divided into chapters and books, which method is not follow'd here for the reasons already set down. In fine, the whole work is diverting, full of variety and new, for of those parts we have had but very imperfect accounts before, and such peaceable conquests as are here found we do not meet with in any other travels.

## The History of Paraguay, Tucuman, and the adajcent Provinces in South America.

TECHO.  
The intro-  
duction.

**A**MERICA is divided into the northern and the southern. South America is shut in between two seas, has a considerable part of its shoars inhabited by the *Peruvians* and *Brasilians*, neither of them stretching far into the inland, unless where the desire of gold or silver, or the goodness of the soil has drawn the *Spaniards* on the one side, and the *Portuguese* on the other. All the land between *Brasil* and *Peru*, and consequently between the *Atlantick* and *Pacifick* oceans, being a vast extent down to the straits of *Magellan*, as for the most part comprehended under the names of *Chili*, *Tucuman*, *Paraguay*, and some other provinces included in them. This new world divid'd like the old into two vast peninsulas, and only knit together by a small isthmus, was in the last age but one brought under a foreign dominion to its own unspeakable advantage; for upon this occasion, through the special goodness of God, and great care and expence of the catholic kings, wherever the *Spanish* dominion extends, the christian faith is propagated. For if there be any nations that have not yet own'd Christ, the king of *Spain* is no way to be blam'd for it, but all the fault is to be imputed either to the obstinacy of those *Barbarians*, or, as is usual in all parts, to the ill behaviour of some private persons. Others will speak of what relates to the rest of *America*, but I being commanded by my superiors, to write the affairs of the society in those vast southern regions of *Paraguay*, *Tucuman* and *Chili*, which in the year 1607 were made one province of the said society, will first give an account of the first coming of the *Spaniards* into those countries; of the towns founded by them; of the first preaching of christianity; and afterwards proceed to such other actions, as happen'd in process of time upon further discovery of those parts, chiefly as to temporal affairs, yet not so as altogether to forget the spiritual. Th' I shall endeavour to perform with that truth and sincerity, that becomes a religious man. And thou, my God, the author of all good, without invoking whom a religious person ought not to enter upon any work, assist me in this undertaking, as thou hast done so

many heroes of our society in propagating the faith, whose steps I have follow'd in that great work, tho' not so worthily, for the space of twenty five years. Do thou, fountain of eternal wisdom, correct my stile, which so many years use of a barbarous language has corrupted; and guide me, that I may make the best choice of the vast mass of matter that lies before me, and worthily deliver that to posterity, which shall be to thy greater honour and glory.

*Pizarro* having carry'd the war into south America, and the *Spaniards* under his command, gaping after the vast wealth of the *Incas*, kings of those parts, having possess'd themselves of a large tract of land along the *Pacifick* ocean, commonly call'd the south sea: several persons persuad'd themselves there might be a shorter and less dangerous way found along the coasts of the *Atlantick* or north sea, to *Peru*, which was then reported to abound in gold and silver. The first I can find, that propos'd the discovery of this way, was *Martin de Sousa*, who govern'd *Brasil* for king *John II.* of *Portugal*, and divided it into provinces, and was ambitious to vie with the *Spaniards* in discovering new countries that might increase his master's dominions. To this purpose he sent *Alexius Garcia* a man of undaunted resolution, with his son, and three *Portuguese*, and a considerable attendance of *Indians*, from the southern part of *Brasil*, to pierce as far as possibly he could into the inland of *America*. He having travell'd three hundred leagues by land, and coming into the country about the river *Paraguay*, being well vers'd in the language of the *Indians*, and knowing how to deal with them, prevail'd with about two hundred of the people of *Paraguay* to follow him as their captain; with whom, in martial manner he made his way to the borders of *Peru*, whilst the *Inga* was still living, and there by plundering gather'd a vast quantity of wrought and unwrought silver. Being loaded with this booty, he sent away two of his *Portuguese* companions to *Brasil* for succours, and returning to *Paraguay*, was cruelly murder'd by the *Barbarians*, who spar'd his son because of his tender years. The father's memory will

find, that propos'd  
way, was Martin de  
Brasil for king John  
vided it into provin-  
to eye with the Spa-  
new countries that  
ter's dominions. To  
Alexius Garcia a man  
on, with his son, and  
a considerable atten-  
the southern part of  
as possibly he could  
America. He having  
red leagues by land,  
country about the ri-  
well vers'd in the lan-  
and knowing how to  
rail'd with about two  
e of Paraguay to fol-  
tain; with whom, in  
made his way to the  
list the Inga was still  
plundering gather'd a  
ught and unwrought  
with this booty, he  
Portuguese compani-  
purs, and returning to  
lly murder'd by the  
d his son because of  
father's memory will  
live

live for ever, because he durst with so small  
a company traverse almost all the land be-  
tween the two seas that encompass fouth A-  
merica, travelling unknown ways, where no  
European had been before, and through  
fier: and warlike nations, shewing that no-  
thing is impracticable to those, who prefer  
fame and the benefit of posterity before  
their own lives. His companions returning  
to Brazil, and besides the account they gave  
of the friendship contracted with the peo-  
ple of Paraguay, and the wealth of the  
Inga, producing pieces of gold and silver,  
as undoubted proofs of the truth of their  
assertions. All the Portuguese were over-  
joyc'd, and eager upon repeating that ex-  
pedition. Hereupon sixty Portuguese, and  
a good number of Brasilians under the com-  
mand of George Sedenio, were sent to the  
assistance of Alexius Garcia, whom they  
thought to be still alive. When they were  
come near the river Paraguay, the Indians  
who were guilty of the murder of Garcia,  
fearing revenge, refus'd them provisions,  
and soon after fell upon them, killing their  
commander and putting the rest to flight.  
Those that escap'd were by the Paranesian  
Indians taken into their boats, which  
were rotten and worm-eaten, and being in  
the middle of the river, the Indians pull'd  
off the clay they use instead of pitch, by  
which means the boats sunk, drowning all  
the Portuguese, the Paranesians, who were  
naked and good swimmers, getting safe to  
shoar. This the expectation of the Portu-  
guese was disappointed, either thro' the  
rashness of Sedenio or treachery of the Bar-  
barians, God reserving Paraguay and the  
adjacent countries for the king of Spain.

3. Not long after, Sebastian Gavot a  
man skilful in navigation, who had disco-  
ver'd Virginia for the king of England, of-  
fer'd his service to the emperor Charles V.  
promising to find a short way to Peru south  
of Brasil, or else to discover the inland of  
south America. The proposal was pleasing  
to the emperor, then fill'd with the expecta-  
tion of subduing vast dominions, and seek-  
ing all means to secure the best provinces of  
that new world. He therefore order'd four  
ships to be immediately fitted out with three  
hundred men aboard, and gave the com-  
mand of them to Gavot, who, in the year  
1530, crossing the Atlantick ocean, put into  
the mouth of Rio de la Plata, or the river of  
Plate (the mouth and coasts whereof had  
been discover'd fifteen years before by John  
de Solis a Spaniard, and four years after re-  
view'd by Magellan) and sail'd up it, till  
he came to an anchor, where the river Ur-  
vaica falls into that of Plate. Thence he  
sent Alvaro Ronon to discover up the river  
Urvaica, who, the third day after he left him,  
lost his ship upon the sands, and was him-  
self slain with most of his men. Gavot hav-

ing built the fort of the Holy Gbo? at the TCHO.  
mouth of the river Carcaranna, which falls  
into that of Plate, sail'd a hundred and fifty  
leagues up this last river, till he came to the  
place where Paraguay joins it with a mighty  
stream, and advancing forty leagues up it,  
after conquering the Indians that oppos'd  
him, came to that place, where he said  
Alexius Garcia the Portuguese was robb'd  
and kill'd by the people of Paraguay.  
There, as he pry'd into all things, finding  
many utensils of plate in the huts of the  
Indians, and not knowing any thing of  
Garcia's travels and death, thinking them  
to be natural riches of the country, he ha-  
stily bought all up of the Indians, and, as  
if he had now done the business he came  
about, having fortify'd the fort of the Holy  
Gbo?, or Espiritu Santo, and leaving Nuno  
de Lara in it with one hundred and twenty  
men, he hastied back into Spain.

After Gavot was gone, Nuno de Lara The Indi-  
contracting friendship with the neighbour- ans con-  
ing people, made a shift to maintain him- spire to  
self, till Mangora, chief of the Timbushians, destroy the  
reforting often to the Spanish fort on account  
of trade, fell in love with a beautiful wo-  
man, Lucy de Miranda, that was the wo-  
man's name, and Sebastian Hurtado her  
husband, both born at Ezija in Andalusia,  
were not ignorant of the Barbarians wicked  
design, and therefore the modestly confining  
her self before her husband, receiv'd the In-  
dians presents after such a manner, as suf-  
ficiently evinc'd he did not design them as  
an earnest of any base affection. However  
Mangora try'd all ways to enjoy her, and  
therefore pretending much kindness, earn-  
estly invited Sebastian Hurtado to go into  
his lands to divert him with his wife, where  
he should be respected and presented by his  
people. But Hurtado valuing his wife's ho-  
nour above all he could hope to gain, ex-  
cus'd himself to the Barbarian, pleading the  
rigour of military discipline, which forbid  
such liberty, and directed much watchful-  
ness to be observ'd among strangers. Man-  
gora inrag'd at this disappointment, drew  
his brother Siripus to his party, and re-  
solv'd to destroy all the Spaniards, that he  
might debauch one woman. Nor was it  
long before an opportunity offer'd, for un-  
derstanding that Nuno de Lara, governor of  
the port, had sent Ruiz Masquera and Se-  
bastian Garcia husband to Lucy de Miranda,  
with forty men into the neighbouring is-  
lands, to bring in provisions, Mangora  
hastily drew together four thousand arm'd  
Indians, and laid them in ambush to wait  
his orders in the morasses near the Spanish  
fort. This done he conducts thirty young  
men loaded with provisions into the fort,  
as he had done at other times, and bestow-  
ing what he brought with great dissimula-  
tion, feasted among the Spaniards till late at  
night.

Great  
was the  
fishion of  
the river  
of Plate  
in Para-  
guay, for  
the king  
of Spain.

THE  
Espiritu-  
santo fort  
built.

**T**HENO. night. Then most of them being asleep, having order'd his men what every one was to do, he fir'd the magazines, slew the centinels, threw down the gates, and letting in his men, fell upon the *Spaniards* either asleep or in a consternation. Many of them were struck through with darts, before they knew of any design against them; others, as ignorant of the treachery, were butcher'd as they ran to put out the fire; some few, forcing their way through the *Barbarians* into the parade of the fort, made a mighty slaughter of them. Among them *Nuno de Lara*, tho' he had receiv'd many wounds, seeing *Mangora* the contriver of the mischief proud of his success, made his way, and being incens'd at his treachery, run him through, so often repeating his strokes as he lay, till he was assur'd of his being dead, and not so satisfi'd slew several others of the chief men; but being surrounded by many he fell down dead upon *Mangora*, all his men oppress'd by the multitude undergoing the same fate. *Lucy de Miranda*, the cause of this misfortune, with four *Spanish* women and as many boys, whom their age or sex reserv'd for greater sufferings, surviv'd the slaughter. Which being over, *Siripus*, who had inherited his brother's lusts, allowing his men all the other booty and prisoners, taking none but *Lucy de Miranda* to himself, and left no means unessay'd to overcome her constancy, calling her sovereign lady of a numerous people, and wife of a powerful lord, whereas he had lost a husband that was destitute of all things. But nothing so much perplex'd the worthy lady, as being belov'd by the *Barbarian*, and she blam'd her sex for having sav'd her life, and her beauty, which had made her belov'd above the rest, so that she could not so much as afford her new master a good look. After some days spent between the *Indian* courting, and *Lucy* refusing, some parties that were abroad, brought in *Sebastian Hurtado* her husband. He returning from the islands and perceiving the destruction of the fort and slaughter of his country-men, guessing at the occasion of it, deliver'd himself up to the *Timbucian* guards, to be conducted to his wife. As soon as *Siripus* saw him, being enrag'd with jealousy, he order'd him to be taken away and shot to death, which had been accordingly done, but that his wife interceded for him, and the *Barbarian* granted her his life upon the condition that they should for the future abstain from the marriage bed, otherwise both should die. Having accepted of the condition, for some time they only allow'd their eyes the liberty of enjoyment, tho' they liv'd together; till at last *Siripus* surpriz'd them in conjugal embraces, his old wife being the informer.

A faithful couple murder'd.

Then being intrag'd above measure, he order'd *Lucy* to be burnt, who being dragged from her husband's arms to the pile, having recommended her self to God, perisht in the flames. Her husband *Sebastian*, like the faint of his name, being bound to a tree, was shot to death with arrows. 'Tis to be hop'd the two faithful comforts, having purg'd all guilty guilt, were receiv'd into the mansions.

The forty *Spaniards*, whom we menti-<sup>40 Spaniards</sup> on'd before to have gone out under the command of *Mosquera*, to get provisions, having bewail'd the misfortune of their companions and fort, and burying the bodies, not knowing how better to bestow themselves, sail'd over to the next part of *Brasil*, where they built a strong little fort, in 25 deg. of south latitude. Having made friendship with the natives they sow'd the land, and one *Edward Perez* a *Portuguese*, being by his king banish'd to *Brasil* with a numerous family, had encreas'd their number, when *Martin Alfonso de Sousa*, governor of the southern coast of *Brasil*, sent a messenger to order *Perez* to retire to that part of *Brasil* to which he was banish'd; and to require *Mosquera* and his men, if they design'd to live peaceably there, to take the oath of allegiance to the king of *Portugal*, in whose dominions they were settled. *Mosquera* answer'd, that there was still a controversy depending between their kings, about the division of the *Indies*, which did not belong to them to decide, but that he and his companion's intention, was to keep that part they had possess'd themselves of, for their sovereign *Charles V.* Soon after a *French* ship accidentally putting into the island *Cananea*, opposite to the port where *Mosquera* had settled, put the *Spaniards* in the mind of getting some arms, and supplying their wants. Having therefore taken two hundred *Indians* to their assistance, they went out in the dead of the night in canoes, and surprizing the *French*, brought them ashore, after taking their ship and arms from them. This done, understanding that the *Portuguese* were marching against them, they carried four pieces of cannon from the ship to their little fort, and preparing all things for their defence, laid an ambush in a little wood that was between them and the shore, keeping the rest of the men close in the fort. The *Portuguese*, to the number of eighty, follow'd by a multitude of *Indians*, suspecting nothing of the ambush, nor thinking of the cannon; but despising the small number of the *Spaniards*, march'd very disorderly as if they went to punish a parcel of thieves. But as soon as they had pass'd the ambush, and came up to the trench, the *Spaniards* fir'd with guns, and at the same time those that lay in the <sup>Rout the</sup> *Portu-* wood, <sup>gun</sup> *gave*.

wood, &c.

wood, attack'd them in the rear, which  
putting them into confusion, those in the  
fort fall'd out, and having drove them in-  
to a close place, slew them at pleasure. Af-  
ter the slaughter, going aboard their vessels  
with the *Indians* their confederates, they  
fall'd to the *Portuguese* town of *S. Vincent*,  
which they plunder'd, and return'd immedi-  
ately to their own little town loaded with  
booty, in which expedition some *Portuguese*  
of their own accord sided with the *Spani-*  
ards. This was the first fight I know of that  
happen'd between the catholic *Europeans*  
in *America*. Not long after *Mosquera* and  
his companions, no ways able to cope with  
the forces of *Brasil*, and fearing revenge,  
went away to the island of *S. Catharine*,  
lying in 28 deg. of south latitude, to inha-  
bit there, till being afterwards recruited,  
they might return to the river of *Plate*.

In the mean while *Sebastian Gavot* return-  
ed into *Spain*, and spread abroad the fame  
of what he had found, saying, the coun-  
tries about the river *Paraguay* were not  
scorch'd with the violent heat of the sun  
like *Brasil*, nor subject to violent cold like  
those parts more southward, but enjoy'd a  
temperate air: That the vast coasts of *Pa-*  
*rana* were inhabited by vast numbers of peo-  
ple fit for service: That there was much  
more variety of fish and wild beasts, than  
in any part of *Europe*: And then shewing  
the pieces of gold and silver, and many u-  
tensils made of those metals, which he had  
purchas'd of the people of *Paraguay* that  
murder'd *Alexius Garcia*, and fallily believ-  
ed to be the natural wealth of that river;  
he by these means made so powerful an im-  
pression in the minds of the *Spaniards*, that  
many made interest to be sent into that  
country. From that time the river *Parana*,  
on account of *Gavot's* silver, or the hope  
of much silver to be found there, was call-  
ed, the river of *Plate*, a name rather spe-  
cious than true. *Gavot* having made the  
same report to *Charles V.* it was decreed  
in council, that a numerous colony should be  
sent into that part of *America*. Two thou-  
sand two hundred men were rais'd, besides  
sailors, and shipp'd under the command of  
*Peter Mendoza*, a man of the first quality,  
the emperor's sewer, and now made gover-  
nor of the rivers of *Plate* and *Paraguay*.  
The chief men among them, whom cove-  
tousness had mov'd to undertake this expe-  
dition, where *James Mendoza*, the gover-  
nor's brother, *Francis Mendoza*, once stew-  
ard to *Maximilian* king of the *Romans*,  
*Charles Dubrin* foster-brother to the empe-  
ror *Charles* the fifth, *John Ojorio* comman-  
der of the fleet, nobly born, and renown'd  
in the wars of *Italy*, *Luis Perez*, brother to  
*S. Teresa*, *Bernard* a *Genoese* captain, for-  
merly in great esteem with *Doria*, *James*

VOL. IV.

*Ramua*, a *Flemming*, not to mention the *Techo-*  
*Guzmans*, *Riberas*, *Rocas*, *Bracamontes*,  
*Manriques*, *Aguillars*, *Lucanes*, *Ayolas*,  
*Iralas*, and other noble persons, so very  
numerous, that there were thirty two heirs  
of noble families and estates, reckon'd a-  
board that fleet. All these sailing from  
*Cadiz* in the year 1535, when they had cut  
the line, were parted and drove to several  
places, *James Mendoza*, the governor's  
brother, after the tempest was over, arriv'd  
safe in the river of *Plate* with a few ships.  
The governor with the rest put into the port  
of *Rio de Janeiro* in *Brasil*, where whilst he  
lay for a wind, he caus'd *John Ojorio* his  
lieutenant, a man much envy'd for his bra-  
very and courtely, to be stabb'd, without  
any tryal, being wrongfully accus'd of am-  
bitious practices, for that he was reported  
to have insinuated that in a short time he  
should command in chief; which action  
was so resented, that many stay'd behind  
in *Brasil* and others conspir'd to desert their  
governor. But before the conspiracy could  
come to a head, he left *Brasil*, and joy'n'd  
his brother *James Mendoza*, who was then  
in the river of *Plate*, buikling flat bottom-  
ed vessels to cross the rivers, and hearing of  
the murder of *Ojorio*, is reported to have  
said, he was afraid, lest the whole fleet  
should incur some judgment for his bro-  
ther's wicked action.

The governor having thus got all his *Buenos*  
strength together, order'd the fleet to make  
over to the other side of the river, where  
landing *Sancho del Campo* his kinsman, be-  
gan to encourage the men to settle, com-  
mending the goodness of the air, which  
gave occasion to call the town there built  
*Buenos Ayres*, it being 50 leagues from the  
mouth of the river, almost in 35 degrees  
of south latitude, directly opposite to the  
*Cape of Good Hope*, and put under the pro-  
tection of the virgin *Mary*. As they were  
carrying on their work, the natives fell up-  
on them, slew some they had drawn into an  
ambush, and kept the rest within their fort.  
This mov'd the governor to send his bro-  
ther *James Mendoza* with as many men, as  
he thought fit, to check those inhospitable  
people. He taking three hundred foot,  
and some horse of the prime nobility, the  
day after he set out, came to a place,  
where out of a vast lake there ran a brook,  
on the further bank whereof about three  
thousand *Indians* were drawn up in order of  
battle. A council of war being held, most  
were of opinion, that they ought to expect  
the enemy, whom they might easily des-  
troy in the passage of the water. But  
*James Mendoza* was for attacking them im-  
mediately, and commanded the foot to  
pass the ford, on whom the *Indians* fell  
with such fury, that they had neither lei-  
sure

8 A

**W**hen the Indians fired their muskets which had taken wet, nor to put themselves into any order. However there was a great slaughter made of the *Indians*, till *Baribulomew Bracamont*, and *Paraferna Ribera* commanders of the foot, being overpower'd by the multitude, were kill'd. Then many of the foot being slain, some few horses that durst fall upon the *Indians*, were contemn'd by them; for the horses being weak after the voyage, and under no command, as having not been back'd a long time, expos'd the riders to the enemies darts, who were thereupon easily struck down, or put to flight. *John Manrique* a noble horseman fighting among the foremost, was kill'd, and *James Mendoza* going to revenge his death, though well seconded by *Ramiro de Guzman*, was knock'd down with a stone, and slain by the enemy. The commander being slain, the rest fled, and the *Barbarians*, according to their custom, cut off the heads of those they had kill'd carrying and tossing them about by the hair, in an insolent boasting manner. Two hundred and fifty *Spaniards* were lost in the action and pursuit; a great number, considering how few they were in all. *Lucano* a horseman, who had receiv'd many wounds, falling down dead on the bank of an inconsiderable river, left his name to it, which continues to this day. It is reported, that many of the contrivers of the murder of *Olorio* dy'd in that fight, to shew what fate they are to expect who follow violent counsels. The news of the slaughter being brought to the governor, it is not easy to express how much he was troubled at the loss of his brother, and to many men of note. His grief was increas'd by the death of *Medrane* a noble horseman, murdered as was suspected in revenge for the death of *Olorio* in the fort, and the murderer never known.

**T**errible famine at Buenos Ayres. After these disasters, the provisions they brought being spent, there follow'd such a terrible famine, that many fed upon man's flesh, and other things not to be nam'd; nay there were those that eat their dead brother's bowels, and gnaw'd carcases on the gibbets to the bones; for the cruelty of the barbarous people, the fear of wild beasts, and severity of the commanders suffer'd none to go out of the works. Yet there was a woman, who weighing the misery of famine, chose rather to expose herself to the inhumanity of the *Indians* and wild beasts, than suffer the torture of hunger; and therefore stealing out, she wander'd a long time about the fields, till at night she went into a cave, where finding a lioness ready to whelp, she renew'd the ancient example, and had the boldness to play the midwife, much to her own advantage,

for the lioness laying aside her fierceness, fairly divided her prey among her young ones, and her midwife, till she fell into the hands of the *Barbarians*, and being after many accidents redeem'd by the *Spaniards*, was brought again to the fort. But being there condemn'd for her rashness, and disobedience, she was expos'd without the works, to be devour'd by wild beasts, where she must have perish'd, had not God in his providence so order'd it, that the lioness she help'd to whelp, came up to her first, and defended her innocent midwife against the rest. This being observ'd, lest men should seem more savage than wild beasts, she was let loose and pardoned, and liv'd many years after, an unquestion'd witness of these wonderful accidents. Her name was *Maldoneda*. Who this severe judge was, the governor having been a short time absent, is not known. Certain it is, there was such rigour us'd, that a soldier lost his ears for stealing a lettuce, and another was publicly disgraced for a cabbage. For when the integrity of discipline and justice exercis'd in *Europe*, was still in force among the new planters; and would to God it had continu'd in their posterity, to punish heinous crimes daily committed on account there is no fear of punishment to deter them. The governor quite discourag'd with his ill success, having every where made inquiry after *Garcos*' silver, the nature of the adjacent countries, and the hopes of building cities, and finding all things far short of expectation, repenting him of his expedition built the fort of *Corpus Christi* in the territory of the *Tymbusians*, brought *Mosquera* and his companions from the island where we left them near *Brasil*, and caus'd a ship to be fitted out with expedition, which done, having appointed *Francis Ruiz* governor of *Buenos Ayres*, and *John de Oyola* of *Guipuscoa* his own lieutenant, or deputy governor, he set sail for *Europe*. But this voyage proving tedious, and the small provision he had, being spent, he was reduced to eat all filthy things, and at last dy'd miserably with several of his companions, who all ran mad after eating of a bitch that was big with puppies. It is reported that many of those *Mendoza* carry'd with him to this expedition, had serv'd under *Bourbon* at the siege of *Rome*, whence returning through shame of that scandalous service, they went away to this part of *America*, where God's judgments follow'd them.

In the mean while *John Oyola* the deputy governor, running up into *Paraguay* with some ships, the same way, that *Garcos* had gone before, and being inform'd there was to the south-west, a country abounding in gold and silver, which might be

gone to, partly by land and partly by wa-  
ter, resolv'd to go thither. Ad his depar-  
ture, he order'd *Dominick Irala*, whom he  
left as his lieutenant, to expect his return  
in six months in the upper part of *Para-  
guay*, and if he return'd not in that time,  
to be at his own disposal. During *Oyola's*  
absence, *Salazar* and *Gonzalo Mendoza* sail-  
ing from *Buenos Ayres* to *Paraguay* for pro-  
visions, contracted friendship with the peo-  
ple call'd *Guaranians*; and found a fit  
place to erect a fort, whereupon they two  
parting, *Mendoza* built the fort call'd by  
the name of the *Assumption*, in the same  
place where it still continues, being the  
metropolis of the province of *Paraguay*,  
*Salazar* going at the same time to bring a-  
way the wretched soldiers almost starv'd to  
death, from the port of *Buenos Ayres*.  
Whilst they sail'd backwards and forwards,  
the barbarous *Indians* of *Caracara*, who  
hated the *Spaniards*, dissembling their ma-  
lice, fraudulently desir'd *Avarado* governor  
of the fort of *Corpus Christi*, to assist them  
against another barbarous people. *Ava-  
rado* suspecting no design, readily sent them  
fifty *Spaniards* commanded by *Alonso de*  
*Figueras*, who being come into a little  
wood adjoining to the town of *Caracara*,  
were enclos'd on all sides; and every man  
kill'd. In this heat the *Barbarians* haste away  
in great numbers to the fort of *Corpus*  
*Christi*, then much weaken'd with the los-  
of that part of the garrison, and made se-  
veral attempts to break in. It must cer-  
tainly have been lost, had not God in his  
providence order'd that *Ramua*, a *Mem-  
ning*, who had the command as to mar-  
tial affairs, should touch upon that coast,  
and guessing how the matter went, fir'd  
from two ships, which oblig'd the *Indians*  
after losing many of their men, to quit  
their enterprise. The *Indians* that were  
taken said, that during the fight they saw  
the likeness of a man over the fort of *Cor-  
pus Christi*, clad in white, dazzling their  
eyes with his brightness, and threatening  
with a sword, which made many of their  
men drop down with fright. This hap-  
pening on St. Blas's day, the *Spaniards*  
concluded it to be he that appear'd, and  
therefore the planters of *Paraguay* reckon  
him as one of their patrons. About the  
same time *Dominick Irala* sailing on the  
river *Paraguay*, had like to have perish'd  
by the treachery of the *Paraguans*, for a-  
bout four hundred of them appearing on  
the shoar opposite to him, and tending to  
desire there might be an interview and trade  
between them, upon condition both sides  
should come unarm'd; *Irala* accepting of  
the condition, order'd his men to lay aside  
their weapons, whereupon the *Barbarians*  
suddenly attack'd them, and they must

have perish'd had not the *Spaniards* run to  
their arms, and stood upon their guard.  
Whilst they fought a-shoar, the ships were  
beset by other *Indians*, and the fight con-  
tinu'd doubtful for a considerable time,  
both by land and water, till the cannon  
firing from the ships sunk the small vessels  
of the natives, and gave the victory to the  
*Spaniards*, both in the ships and a-shoar.  
Of the *Spaniards* forty were wounded, and  
two kill'd, besides *Caravajal* a brave man,  
who dy'd within three days of his wounds.  
Of the enemies many were kill'd, with their  
commander, the rest fled, where a vast  
multitude expected them. Eight months  
were now pass'd, since *Irala* had been wait-  
ing for *Oyola's* return, and he began to  
consider, whether he should yet stay long-  
er, or go off to avoid the danger that  
threaten'd, from famine and from the ene-  
mies. Whilst he was thus divided with  
himself, on a sudden he heard the voice of an  
*Indian* on the opposite shoar, who ask'd to  
be carry'd aboard, which being done, the  
tears flowing from his eyes show'd he  
brought dismal news, and being order'd  
to declare the cause of his sorrow, fetch-  
ing a deep sigh, he said he had been an  
eye-witness of the death of *Oyola*. *Irala*  
inquiring after the particulars, he deliver'd  
himself to this effect. *John Oyola*, said he,  
with whom I went of my own accord,  
leaving *Paraguay*, travers'd all that vast  
tract of land that lies between this place and  
the borders of *Peru*, and gather'd a great  
mass of gold and silver among the *Samo-  
cocians* and *Sivococians*, who dwell near the  
mountains of *Peru*, which he brought back  
into *Paraguay*, but in his return the *Paia-  
guans*, the worst of men, and counterfeit-  
ing a readiness to do any service, at first  
freely offer'd him their assistance and pro-  
visions, till they thought he and his com-  
pany might be cut off with safety. Having  
therefore observ'd what guards the *Spani-  
ards* kept at night, the chief of the nation  
appointed several to cut off every one, and  
in the dead of night they all at once set  
upon and butcher'd them. *Oyola* alone, I  
know not by what Accident, fled, and hid  
himself among the reeds in a neighbouring  
marsh, whence being dragg'd out, he pay'd  
for delaying his death by the cruelty of it,  
being inhumanly murder'd in the market-  
place of the town, amidst the clamours of  
the bloody *Paiguans*. Thus not one *Spani-  
ard* escap'd. Being an *Indian* I sav'd my  
life, for by that means I was deliver'd from  
their hands, and escap'd to bring you the  
news of so great a slaughter. These mis-  
fortunes taught the *Spaniards* how little  
confidence was to be repos'd in the *Indians*,  
for the most stupid people have a sort of  
craft, which is the more dangerous, becaus-  
least

and his  
men.

**TECHO** least suspected. The marsh to which *Oyola* fled for safety, retains his name to this day. *Irala* chosen governor, being left at his own disposal, after the death of *Oyola*, sail'd down the river with his company to the new fort of the *Assumption*; and the *Spaniards* met in council there from all parts, having read the emperor *Charles* the Vth's commission, newly brought out of *Spain*, with some recruits, and a few priests, by *Antony Cabrera*, by which the inhabitants of the river of *Plate* and *Paraguay*, were authorized to choose their governor, in case the former dying had appointed none; they all unanimously pitch'd upon *Dominick Irala* for their governor. Nor was he unfit for the employment; for besides his birth, he had many good civil and military qualities to recommend him; inasmuch that he had the principal honour of having brought under that new province. Before the assembly for the election broke up, the new governor put it to them, whether they did not think fit for a while to abandon the fort of *Buenos Ayres*, then infested with famine and plague, and to build a new town on the shoar of the river *Paraguay*, where they then were, to contain all the *Spaniards*, that their forces being united they might be the stronger. Some of the members were of opinion, that not only the fort of *Buenos Ayres* ought to be maintain'd, but several other colonies to be sent out, that the *Spanish* dominion might be spread abroad; saying, it was below them to confine so many brave men in a nook, when they had such a vast country before them, and that they did not doubt, that was the emperor's design, in order to cut off all other nations any passage to *Peru*, whither they would easily make their way, unless the shoars of those vast rivers were beset with many towns; and that the small number of the *Spaniards* was no objection, they being enough to curb the multitude of *Barbarians*. This was in general the opinion of those, who aiming at commands, desir'd there should be many governments. But the wiser fort, preferring the publick good before their own advancement, alledg'd, that though experience shew'd the *Spaniards* wanted neither for courage nor conduct, yet the *Indians* were not without craft and resolution, as was sufficiently evinced by the fresh dismal examples of *Ramon, Lara, Mendoza, Figueroa* and *Oyola*, which ought to weigh more than the opinions of a few, who would have the men disperfed, only to make the more governments. The governor being a prudent man, discourf'd concerning both opinions, as if he had been inclinable to each. For he said, it were to be wish'd, they could hem in those

vast countries with many garrisons, but that considering the present posture of affairs it did not seem so convenient. Nor would the emperor think otherwise, if he were present, and therefore, that the building of many towns was put off for a while, not absolutely rejected. That in erecting a new common-wealth, the head was to be secur'd before the other members. Therefore he thought fit the fort of *Buenos Ayres* should be abandon'd for a time, and a town built on the banks of the river *Paraguay*, where they then were; which being once well settled, it would be no difficult matter to send out colonies, and secure them against the attempts of the natives and foreigners. The resolution of building a town prevailing, *James de Alvea* was sent with three ships to the port of *Buenos Ayres*, to bring the men thence, whose number he found increas'd by the arrival of a *Genoese* ship, which having in vain attempted to pass the streight of *Magellan*, put in there by chance, the men choosing rather to joyn themselves to the colony on the river of *Plate*, than to hazard themselves again in an unknown sea. Thus both sailors and landmen joyning with the garrison of *Buenos Ayres*, sail'd up to *Paraguay*, whence it came that the families of the *Trochi, Aquinates*, and *Rezi*, were propagated in this part of *America*. Having gather'd all his people, *Irala* the governor, muster'd them, and what is wonderful in so short a time, of so many *Europeans* there were scarce six hundred men left, the rest being all miserably consum'd by war, famine, plague, and the cruelty of the *Indians*. To shew us the great mischiefs that attend the search after wealth, which is the incentive of all evil.

After the muster, all things began to proceed regularly, the ground near the fort was mark'd out for building of houses and churches, and publick structures erected, magistrates appointed; to be short, in the year 1538. the city of the *Assumption*, afterwards the metropolis of the province, was begun to be built, in 25 degrees of south latitude, two hundred and forty leagues from the sea, and forty from the mouth of the river *Paraguay*; it was as the time would permit well secur'd against any attempts of the enemy, and still continues to this day. The river *Paraguay*, on whose banks the new city was seated, is reckon'd among the chiefest of that new world. It runs three hundred leagues from its source, receiving several other great rivers, and carrying a channel fit for great ships, before it falls into the *Parana*, by which it is swallow'd up two hundred leagues from the sea, and both together make the river of *Plate*. There is one thing very remarkable in their

conjunction, which is, that tho' they run down the same channel, yet for several miles each preserves its own natural colour, as if *Parana* scorn'd to mix its crystalline waters with the troubled stream of *Paraguay*; or as if *Paraguay* resented the loss of its kingly name; for *Paraguay* signifies the crown'd river, so call'd because the natives on each side of it wear coronets made of the feathers of birds, of wonderful fine colours, which that country abounds in. Nor is there more variety in the feathers of the birds, than in the languages and manners of the people that live scatter'd in the woods and plains about *Paraguay*. Among them all the *Guaranians* were the most rational, and aptest to be civiliz'd, and easily submitted to the *Spaniards*, being first persuad- ed to be friends, then to be hir'd as servants, and lastly to own the sovereignty of the catholic king.

About the end of lent, in the year 1539. the governor thought fit to make a procession in honour of the passion of our Saviour, inviting the inhabitants of all the villages far and near to it, that they might begin to have some notion or opinion of our religion. The *Indians*, already provoked by the unusual service they perform'd, looking upon this otherwise than it was design'd, conspir- ed together to destroy the *Spaniards* upon the procession day, and, to take away all jealousy of any rebellion, brought no arms but their bows and arrows, thinking the *Spaniards*, who were unarm'd, naked, and ready to discipline themselves, would be easily slaughter'd by their multitude. It is reported there were eight thousand conspir- ators in the town, and the *Spaniards* sus- pecting no treason, were taking their disci- pline or scourges to lash themselves. The images to be carry'd were brought out, when an *Indian* woman, who knew of the design, being mov'd to compassion, pri- vately went to her master *Salazer*, and said to him, master I pity you, because you are this day design'd for slaughter. *Salazer* was surpriz'd at these words of his servant, and having by fair means got the whole man- ner of the contrivance from her, went a- way to the governor and acquainted him with it. He having no leisure to consult, or take any other method, gave out he had receiv'd intelligence that the *Japirons*, late- ly revolted from the *Spaniards*, were in arms, and almost at the gates. The alarm was given, and the *Spaniards* laying aside their scourges, took up their swords and fire-arms; then the governor, as if he would have made use of the conspirators against the common enemy, sends for the heads of them to his house, where they were all put into fetters and parted; then hav-

VOL. IV.

ing forced them to a concession, hangs up the chief of them. The rest, as if they had been thunder-struck, were quite dispirited, and so far from daring to attempt what they had design'd, that they humbly sued for pardon, promising fidelity for the future. The governor having taken off the heads of the conspiracy, spared the multitude, which so gain'd the hearts of those *Indians*, that from that time, as the *European* wo- men fail'd, they willingly gave their filters and daughters to the *Spaniards*; on which wives they got such a numerous offspring, that some fresh supplies coming out of *Spain*, in a few years they were able to send out new colonies, dividing that vast pro- vince into several territories, all of them subject to *Paraguay*.

In the mean while the emperor *Charles Alvar* the fifth, having receiv'd the news of the death of *James Mendoza*, and the ill success of affairs at the river of *Plate*, and being of a spirit that ever struggled against adver- sity, he resolv'd to send thither another go- vernor, with a supply of planters. Several aspiring to the command, *Alvar Nunez Cabeza de Vaca* carried it, on account of the great merits of his ancestors. For his grand-father *Peter de Vera*, had subdu'd the *Canary* islands for king *Ferdinand*, and govern'd them; in which employment he behav'd himself with such integrity, that having spent his own estate, he was reduc- ed to such distress, that he gave his two sons in pawn to a *Moor*, for a sum of money to support his dignity and maintain his govern- ment, and the king afterwards redeem'd them. One of these was father to this *Al- var* we now speak of; who being in his youth educated in his father's and grand- father's virtues, going over into *Florida* under *Pamphilo de Narvaez*, to be the king's trea- surer there, was shipwreck'd on the coast of *America*, and fell into the hands of the *Indians*; and authors of the first rank tell us, he was so virtuous, that during his ten years captivity among the people of *Mexi- co*, he wrought several miracles invoking the blessed trinity. This man being ap- pointed governor, embark'd seven hun- dred men besides women and children up- on five ships, and sailing from *Cadiz* with a fair wind, when he came to 28 degrees of south latitude, landed in that part of *America* with five hundred men, and send- ing the women and children with the rest by sea, travell'd himself by land, almost the same way *Alexius Garcia* had gone be- fore, for 300 leagues, discovering the coun- try, and in the year 1541, happily arriv'd at the city of the *Assumption*, and what is most remarkable, he lost not one soul in all that voyage and journey by sea and land.

8 B

TECHO. land. As soon as he had taken possession of his command, he sent *Dominick Irala*, the late governor, with three hundred chosen men, ordering him to run up the river *Paraguay* as far as possibly he could towards the west, having agreed in *Spain* with *Vaca de Castro*, governor of *Peru*, that they would use all their endeavours to make that way easy, and fit to be frequented, that *Peru* and *Paraguay* might supply and support one another. *Dominick Irala* pursuing his orders, ran two hundred and fifty leagues up the river in his vessels, and returning, acquainted the governor, that he was of opinion *Peru* might be gone to that way. This affair being laid aside for a while, the governor sent messengers to the barbarous people living upon the banks of the river *Ipana*, to desire them to restore the son of *Alexius Garcia*. The *Ipanensians* having murder'd all the messengers but one, sent the governor word again, that they would never have any peace with him, but if he would revenge the death of his messengers, they were ready for war. The governor, provok'd by this answer, appointed *Alonso Riquelme*, his nephew, to go with three hundred *Spaniards* and a thousand *Indian* confederates, to reduce those inhospitable barbarians: a battle was fought, in which four thousand of the *Ipanensians* were slain, and three thousand taken; of the *Spaniards* four, of the confederate *Indians* a hundred and fifty were kill'd. This victory, obtain'd on the eve of the feast of *S. James* the apostle, patron of *Spain*, induced other people to submit themselves to the *Spaniards*.

After the expedition against the *Ipanensians*, the governor resolving to open the way to *Peru* in person, and at the same time observe what places were proper to plant colonies, and find out the mines of rich metals, took aboard his ships four hundred *Spaniards*, attracted by the hopes of enriching themselves, and extending their dominion. By the way he punish'd the murderers of *Oyola*; and having sail'd two hundred and fifty leagues up the river, came to an island wonderful for the delightfulness and fruitfulness of the soil, its length thirty miles, the breadth, except just at the point, nine. How much this island charm'd the first discoverers, appears by their calling it *Paradise*. It enjoys an equal temperature of weather all the year, and would incline to be hot, did there not daily, at a certain hour, rise a fine westerly breeze, and were not the natural heat of the *Torrid* zone moderated by the moisture of the river, and many springs gushing out, and forming considerable brooks. There is vast plenty of fruit growing wild, yet so various and excellently well tasted, that tho'

wild, they are scarce inferior to the produce of the best gardens in *Europe*. The natives, call'd *Aurecones* because their ears are bored, observe no seasons for sowing; they use a drink made of honey. For game there's such plenty, they rather take it as it comes in their way than seek after it: and for fish, there's greater store than of wild beasts. The people unacquainted with war, and likewise with fraud, and loving to strangers, far exceed all the others lately discover'd in goodness of temper, inasmuch that they seem to have deriv'd their goodness and affability from the very nature of the place. The fleet continued there a long time, which was of ill consequence; for the old soldiers, allur'd by the deliciousness of the place, began to fall at variance with their commander. What is it, said they, we seek amidst so many dangers, and in these barbarous countries? we have now been toils'd about these ten years, without seeing any thing but deep morasses, uncouth mountains, fierce nations, new diseases, and the death of our companions; let us at last grow wise upon our own and other mens experience, and ceasing to seek after uncertainties, make use of what we have: let young men seek after gold, let us rest our ancient bodies in this place, where there's plenty of servants and provisions. This was chiefly urg'd by the old soldiers; the young ones, tho' they had not parted with their desire of gold, yet were of opinion that a colony ought to be settled in that island, whence there would be an easier and safer passage to *Peru*, than from the city of the *Assumption*. Hereupon they all together repair to the governor, desiring he would grant their request, and order the foundations of a town to be laid in that place. The governor, nothing shaken in his resolution, spoke to them thus: *What's the meaning, fellow soldiers, that like children you are taken with apples, desiring, or not understanding, the value of gold? How come you to be so infatuated, as to prefer a little honey before the present hope of wealth? Did we come thro' the vast ocean to seek land or gold? Who would forsake the pleasures of Spain, his dear friends, and native country, and run so many hazards, to come and eat his fill of fish, fruit, and venison among a barbarous people? But these are your private concerns. 'Tis my duty, who am governor, and yours, who are soldiers, to grow old in the service of the publick, having engaged our lives and fortunes to serve our king and country. I will not disband my self, nor do I think it becomes Spaniards so to do: we must seek for gold. Having spoke these words, he gave order for all to be in a readiness; and the ships to make over to the continent, where leaving a guard with the ships, he travel'd*

rior to the produce of *Europe*. The natives, because their ears are for sowing; they have money. For game they rather take it as than seek after it: water store than of the unacquainted with fraud, and loving all the others late of temper, info have deriv'd their from the very nature the fleet continued which was of ill confederations, allur'd by the force, began to fall at command. What is amidst so many dangerous countries? we about these ten years, but deep morasses, fierce nations, new of our companions; upon our own and, and ceasing to seek like life of what we seek after gold, let bodies in this place, of servants and provi-ly urg'd by the old ones, tho' they had desire of gold, yet a colony ought to be whence there would passage to *Peru*, than *Assumption*. Hereupon pair to the governor, ant their request, and of a town to be laid governor, nothing that spoke to them thus: *Yellow soldiers, that like with apples, despising, the value of gold? How staid, as to prefer a present hope of wealth? vast ocean to seek land? forsake the pleasures of, and native country, eds, to come and eat his pension among a barbarians are your private content who am governor, and, to grow old in this serving engaged our lives our king and country. self, nor do I think it do: we must seek for these words, he gave in a readiness; and the to the continent, where the ships, he travel'd away*

A monster.

The governor sent a Spaniard and clear'd there,

away by land to the northward. As they march'd along in good order, many of those inland nations came voluntarily to offer peace and provisions. Some small dispute there was with a few of 'em. When they were come near to the borders of *Peru*, the fore-runners gave advice, that a vast multitude of people was flocking out of a great town, and seem'd to be about five thousand men. The governor had scarce drawn up his, before the *Indians* appear'd, who being frighted at the strange presence of the *Europeans*, and noise of the musquets, betook themselves speedily to flight without engaging, leaving the *Spaniards* an empty town of eight thousand houses. The houses of this town differ'd not from the rest of the country, but in the middle of a great market-place or square there was a round tower made of vast pieces of timber, the top of it being pyramidal, and cover'd with palm-tree bark: within it was a serpent of an extraordinary bulk, kept upon a religious, or rather superstitious account, and fed with the bodies of men slain in war. The Devil was reported to give answers by this monster, like the ancient oracles: 'twas twenty-five foot long, and as thick about as an ox; the eyes were very little and sparkling, tho' in a very thick short head; two rows of teeth stuck out of the jaws like sickles; the tail was smooth; the rest of the body cover'd with scales like large platters. The soldiers were astonish'd at the sight of the monster, especially when, being enrag'd with the bullets, it made a hideous roaring, and shook the place with beating its tail. The monster being kill'd, discord, which is worse than any monster, arose between the governor and the king's receivers, because he would not consent that the fifth part of the booty taken by the soldiers should be paid into the treasury, alledging, that it was not customary, nor becoming the king, to receive a part of such inconsiderable things, gain'd with so much peril: but they still insisting upon it, and requiring every fifth deer or fish taken to be deliver'd them for the king, tho' the governor offer'd to make good, out of his own pay, what it should amount to, in case the matter were decided for the king; yet the contention ran so high that, much against his will, they were all forced to return to the city of the *Assumption*, without compassing what they went about: there, at the instigation of the king's receivers, who pretended misgovernment, he was in a tumultuous manner seiz'd by about two hundred of the townsmen, who had conspir'd together, and sent prisoner to *Spain*, with the chief of his accusers: but the emperor having heard both parties, not only clear'd,

but gave him a pension of two thousand crowns a year, and he liv'd with honour to a good old age in the council at *Seville*. His accusers fared otherwise; for, being cast into irons by the emperor, and order'd to clear themselves, they died miserably before judgment was given, one of 'em for fear, and another mad, the supreme judge preventing the emperor's sentence.

The emperor keeping *Alvar Nunez* in *Isla go Spain*, made *John de Sanabria* governor of *Paraguay*, who dying before he set sail, his son was order'd to go in the same post, with a supply of four hundred *Spaniards*; but he being kept in *Spain* by other business, at last the government was by the emperor again confer'd on *Dominick Irala*: he being abroad upon discovery, *Francis Mendoza* being convicted of having used unlawful means to make himself governor, was condemn'd to lose his head; and confess'd on the scaffold that he had formerly murder'd his chaplain and wife in *Spain*, upon very groundless jealousies, upon that very day he was then himself to suffer. Thus, giving glory to God, he shew'd there's no avoiding divine vengeance by flying from one country to another. *Irala's* successors were *Francis Vergara* and *John Ortiz Sarate*, who, in the year 1572, brought five hundred *Spaniards* to *Paraguay*, and under whom the race of the *Spaniards* being grown up, many colonies were planted in the province. I'll describe the situation of 'em, as far as concerns the work I have in hand, without observing the order of their foundation.

The province of *Paraguay* was so call'd from the river of that name, and, before 'twas divided into two governments, by taking *Tucuman* from it, contain'd all that track of land which, lying between *Brasil* and *Peru*, runs beyond the mouth of the river *Plata*, a vast extent along the *Atlantic* ocean. 'Tis easie to guess at the largeness by the two rivers *Paraguay* and *Parana*, running almost three hundred leagues each thro' mighty provinces, and receiving into them many other rivers, before they mix their waters; but where they meet two hundred leagues from the sea, they make the river of *Plata*, which falls into the sea thro' a mouth eighty leagues in breadth. The city of *Buenos Ayres* is built fifty leagues above the mouth of the river, in the same place where we gave an account *Peter Mendoza* erected the fort of the same name. The city of *S. Fe*, or *S. Faith*, built almost eighty leagues higher, near the same shore, is very commodious to those that sail backwards and forwards. Much about the same distance is another small town call'd *Corrientes*, built upon the conflux of the *Paraguay* and *Parana*, but far

Corrientes.

**TECHO.** inferior to the dignity of those two rivers. Then running up the *Parana* above a hundred leagues, after passing over a vast precipice, is *Guairana*, a province joining to *Brasil*, formerly famous for two little *Spanish* towns, call'd *Villarica* and *Guaira*. Upon the upper part of the *Paraguay* is *Xeres*, and another *Villarica*, small towns, built only to join *Paraguay* on that side to the further provinces. Lastly, the city of the *Conception*, built upon the marshes of the red river, which falls into *Parana*, was for a long time of great use to curb the neighbouring fierce nations. But as for the inhabitants of the city of *Assumption*, the metropolis of the province of *Paraguay*, and those of the other towns here mention'd, I would have them look'd upon as the race of most noble families, and seed of the best names in *Spain*; for perhaps no province in *America* had such a number of persons of birth and quality to plant in it; yet the nature of the place has much lessen'd that nobility, as affording no wealth to support the grandeur of those families: 'tis plain, no part of that new world did so much deceive the expectation of the *Europeans*; for *Paraguay* is quite a stranger to gold, silver, and jewels: nor do the natives dig any iron, wherein that country abounds; and as yet the *Spaniards*, except only the inhabitants of *Buenos Ayres* and *S. Fe*, by reason of their trade with *Peru*, know any thing of money, but live still by exchange of commodities, after the manner of antiquity. There are but few places where they make wine, or sow corn, the prime men seldom

feating bread, or drinking wine. They make bread and drink of *Indian* wheat: all other dainties they seek in fishing, hunting, and shooting, tho' at present their herds of black cattle being encreas'd, they are not sparing of them. For a long time sugar and cotton, both produced in small quantities, were their chiefest wealth, till the leaves of certain trees growing in marshy grounds, commonly call'd the herb of *Paraguay*, began to be in esteem: these leaves they dry at the fire and reduce to powder, then mixing it with warm water, the *Spaniards* and *Indians*, both men and women, drink of it several times a day, and vomiting it up with all they have eaten, they find it creates an appetite. Many things are reported concerning the virtue of this powder or herb; for, they say, if you cannot sleep, it will compose you to it; if you are lethargick, it drives away sleep; if you are hungry, it satisfies; if your meat does not digest, it causes an appetite; it refreshes after weariness, and drives away melancholy, and several diseases. Those who once use themselves to it cannot easily leave it, for they affirm their strength fails 'em when

they want it, and can't live long; and so great slaves are they to this slender diet, that they'll almost sell themselves rather than want wherewithal to purchase it. The wiser sort, tho' moderately used it strengthens and brings other advantages, will hardly ever make use of it; and if immoderately used, it causes drunkenness, and breeds distempers, as too much wine does; yet this vice has not only over-run *Paraguay*, but *Tucuman*, *Chili*, and *Pern*, and is near coming over into *Europe*, this herb of *Paraguay* being valued among the precious commodities of *America*. At first the *Spaniards* in *Paraguay* were well pleas'd with their cotton garments and liquor made of honey, but afterwards trade enhancing the value of this herb, covetousness and luxury encreas'd, to feed both which the *Indians* began to be more enslav'd to make this powder: labour made their numbers decrease, and that made the *Spaniards* poor again; to shew us, that very often the same methods we take to gather wealth serve to impoverish us. Thus much of the foundation of the colonies of *Paraguay* and the river of *Plata*.

The kingdom of *Chili* joining to *Peru*, <sup>Town and conquest of</sup> *Chili*, and running along on the same coast, lies between the *pacifick*, or south-sea, and a continual ridge of mountains parallel to it, from 28 to almost 44 degrees of south latitude, being but thirty leagues in breadth, and sometimes less. The first I know of that invaded this kingdom, was *James Almagro*, with four hundred *Spaniards*, and the son of the *Inga* of *Peru* that was slain, follow'd by a crowd of *Indians*. This was in the year 1536; and the success did not answer his expectation; for, having scarce discover'd the vale of *Coquimba*, he return'd before he had done any thing into *Peru*, to govern one part whereof he was appointed by the emperor *Charles* the fifth. Not long after, *Peter de Valdivia* breaking into that kingdom with some *Spanish* forces, subdued all the whole country, planting several colonies. He built the metropolis, call'd *Santiago*, or *S. James*, afterwards beautified with stately structures after the *European* manner, twenty-five leagues from the sea, in 34 degrees of south latitude. The city <sup>Santiago</sup> *Imperial* he seated in almost 38 degrees of south latitude; which place, *Lipsius* says, was so call'd because the *Spaniards* there found eagles with two heads carv'd, in several houses, and over the doors, as they are drawn in the imperial standards; whence he would infer, that this new world was perhaps formerly known to other nations; but, in my opinion, this is a groundless conjecture, for *Charles* the fifth's eagles had been carried about in *America* for several years before the city *Imperial* was built, which

 Imperial was built,  
 which

which the people of *Chili*, trading with  
 those of *Peru*, might have seen. *Valdivia*  
 founded a city of his own name in the lati-  
 tude of 40 degrees, and in a soil abounding  
 in pure gold, not far from the sea, as also  
*Villarica* up the inland. *Coquimbo*, or *Sere-  
 na*, in the valley of *Coquimbo*, and *Angol*,  
 between *Imperial* and the *Concepcion*, another  
 new town, were also built by him. The  
 kingdom of *Chili* being thus secur'd  
 by building of colonies, the natives of the  
 valleys of *Arauco* and *Puren*, much irritated  
 by being immoderately kept to dig gold,  
 conspir'd together, under the conduct of  
*Cautipica*, and made a miserable slaughter  
 of *Peter Valdivia* and a great number of  
*Spaniards*: and the *Spanish* historians relate  
 a cruel action of an *Indian*, who pour'd  
 melted gold into *Valdivia*'s mouth, bidding  
 him glut himself with gold, since he so  
 much thirsted after it. *Francis Villagra*,  
 successor to *Valdivia*, to revenge his coun-  
 trymen, waged war successfully a long while,  
 till his forces were at last overthrown by  
 the *Indians*. The consequence of *Villagra*'s  
 misfortune was, the abandoning of some  
 new colonies, the *Indians* refusing to under-  
 go such labour as they were unled to.  
 After *Villagra*, *D. Garcia Hurtado de Men-  
 doza*, son to the marquis de *Canete* viceroy  
 of *Peru*, went governor, into *Chili*, with  
 considerable *Spanish* forces, and several pic-  
 ces of cannon, which struck such a terror  
 into the *Indians*, that many of 'em submit-  
 ted themselves: those of *Arauco* and *Tuca-  
 pelan* holding out, were overthrown in bat-  
 tle, and *Cautipica*, the murderer of *Valdivia*,  
 kill'd. *Mendoza* restor'd the cities *Valdivia*  
 and *Imperial*, destroy'd by the *Indians*: he  
 built the town of *Ojorno*, in about 41 de-  
 grees of latitude, and gave it to the chief  
 of his men he had brought out of *Peru*,  
 dividing the country about it among 'em:  
 he also built by his lieutenant the city of  
 his own name, afterwards head of two other  
 towns in the province of *Cuico*, or *Chicuto*,  
 which is a limb of the kingdom of *Chili*  
 beyond the mountains. At length leaving  
 the government of the kingdom to *Roderick  
 Quiroga*, knight of the order of *Santiago*,  
 he return'd with great honour to *Peru*,  
 which he govern'd some time after as vice-  
 roy. *Roderick Quiroga* having govern'd  
 the kingdom with various success in contin-  
 ual troubles, left it to the management  
 of *Alphonso de Sotomayor*, in the year 1579:  
 he having built the fort of *St. Ildephonso*  
 in the vale of *Arauco*, in some measure  
 curb'd those people, us'd to rebel at plea-  
 sure, inasmuch that *Martin Loiola*, his suc-  
 cessor, receiv'd a kingdom to govern in  
 some measure peaceable and renown'd, for  
 twelve *Spanish* cities there were in it. What  
 actions the *Spaniards* perform'd in so many

VOL. IV.

years war with a resolute nation, does not *Techo*.  
 belong to me to relate, 'tis enough for my  
 purpose to mention those things that con-  
 duce to the understanding of the history I  
 have in hand.

This I must add further, that nothing  
 can be more pleasant and delightful, or bet-  
 ter furnish'd with all that's requisite for a  
 luxurious life, than is the kingdom of *Chili*.  
 It abounds in all sorts of fruits, and produc-  
 es on its pleasant hills, banks of rivers,  
 charming plains, and sides of springs, most  
 of those that are dispers'd thro' *Europe* and  
*America*. There's such plenty of milk and  
 wool, as is possible for sheep and cows to  
 afford in plentiful pasture: it yields as much  
 honey, wheat, and generous wine, as serves  
 for his own use: the strawberries and apples  
 growing about wild are wonderful sweet:  
 the wholsomeness and delicacy of the drink-  
 ing-water, which runs thro' veins of gold,  
 is in great esteem among the frugal *Span-  
 iards*, tho' I cannot deny but the veins of  
 gold themselves are much more valuable to  
 most of the *Spaniards*. No thunder is heard  
 throughout the year; lightening, stormy  
 winds, and suchlike storms are not known.  
 The whole country produces no poisonous  
 creature, or hurtful wild beast; only sud-  
 den earthquakes sometimes terrific men  
 lull'd asleep with long intervals of undisturb'd  
 happiness; nor is there any thing  
 that so much awes the planters, whom the  
 deliciousness of the country, and plenty of  
 all things, for the most part rather inclines  
 to luxury than piety. Throughout all *West  
 America*, scarce any gold is more valued  
 than that of *Chili*, in digging whereof, if  
 the *Spaniards* had at first us'd justice and  
 moderation, and submitted their avarice to  
 the laws of the catholic kings, they might  
 have continued long happy; but when the  
 kingdom of *Chili* was brought under by  
 building colonies in all parts, private men,  
 in opposition to the catholic kings edicts,  
 began to oppress the natives, whence en-  
 sued continual wars, and the wars were fol-  
 low'd by so notable a depopulating of the  
 country, that there scarce remains any  
 thing of the splendor of that most happy  
 kingdom but the name.

*Tucuman* lying in the middle between *Tucuman*,  
*Paraguay* and *Chili*, on the east partly bor-  
 ders upon *Paraguay*, and partly upon the  
 river of *Plate* on the west; 'tis bounded by  
 the mountains of *Peru*; on the south it  
 borders on vast plains running as far as the  
 straits of *Magellan*, and on the north is  
 shut in by most fierce nations. 'Tis all  
 within the *Temperate* zone, except some  
 part that runs out into the *Torrid*; and,  
 what is most wonderful, that part is subject  
 to immoderate cold, as being full of high  
 mountains, and therefore nobly confutes all

8 C

the

**TECHO.** the ancient notions of the *Torrid* zone ; but *Tucuman* being about three hundred leagues in length, but varying much in breadth, and ending somewhat like a cone, is, generally speaking, inhabited by four sorts of people. The most southern live in the plains, and on craggy mountains, without any habitation, feed upon what they kill, and carry about mats, to serve 'em instead of houses or tents : the northern people live in the marshes, and feed upon fish. Both nations are equally fierce, the southern are the tallest, the northern the more brutal. Bones of giants have been found there above four times as tall as other men, tho' now there are scarce any to be found that exceed eight foot. Others born to darkness, denying themselves the enjoyment of the air, bury themselves all their life-time in caves they make under-ground. The last sort live in small villages about the plains and mountains, after a more plentiful and polite manner, by reason of their nearness to, and trade with *Peru*. They're almost all alike given to sloth and idleness : they make little use of brags and silver, which are not wanting among 'em : I dare rather affirm they have no gold, than that the *Europeans* have neglected to search after it. These people make use of sheep to carry their burdens, which for shape may be compar'd to camels, colts, &c. they are of a great strength, but their wool much finer than ours, of which they make all sorts of garments, much resembling silk. There are also lions, like those of *Africa* in shape, but not so large or noble natur'd, for they are not bigger than a mastiff, scarce so strong or fierce, have no manes, and are terrible only for their roaring ; but the tygers are fiercer than in any other country. The chief rivers in *Tucuman* are two, the one call'd *Dulce*, or *sweet* ; the other *Salado*, or *salt*, from the taste of their waters : both of 'em, tho' many waters fall into them, are rather like brooks than rivers, and not capable of carrying little boats, but only at certain places. Next to these is *Carcarañal*, and some others of note, which having run a short course, as if they were ashamed of their littleness, are either swallow'd up by the earth, or lost in lakes. Some of these petrify sticks and bones, and cause great swellings under the skins of men and beasts like large bladders, which are dissolv'd by the waters of other rivers. The scarcity of rivers is sufficiently made amends for, by the multitude of springs gushing from the woods, and mountains, and lakes in the plains, which was the cause that most of *Tucuman* was formerly well peopled : 'tis very well known, some hundred thousands of natives were found by the first *Spanish* planters, in provinces of no

great extent. That part which lay next to *Peru* was subject to the *Incas* ; the rest, divided into little parties, were under several *Caciques*, less remarkable for their manners than for their variety of languages. 'Twas very rare that two or three of these small parties combin'd to repel their enemies, which was a great help to the *Spaniards* towards subduing them, for they scarce ever consulted the publick good.

The first I know of that discover'd *Tucuman*, was one *Cesar*, a soldier belonging to *Sebastian Gavot*, who in the year 1530 undertaking to find out the way from the river of *Plate* to *Peru*, attended by only three companies, travelling with wonderful courage and success over countries then unknown, and over vast rocks, and morasses, and traversing all *Tucuman*, the borders of the kingdom of *Chili*, and greatest part of *Peru*, at length arriv'd at the city of *Cusco*, at such time as *Francis Pizarro* having taken *Atabaliba* the *Inga* in the marshes of *Cacamarca*, kept him in chains in order to put him to death. In this journey he travel'd two thousand leagues : but because there are many fabulous accounts spread abroad concerning the countries discover'd by that soldier, which, tho' it be an age since, insatiate the minds of some people, who believe that in south *America* there's a country call'd of the *Cesars*, from this *Cesar*, not yet found out, but abounding in gold and silver, and remarkable for multitudes of men and political government ; I shall forbear speaking any more of him, being resolv'd not to tread in an uncertain by-path whilst I have a known sure road to go upon. The year after, whilst *Peter Mendoza* was building the castle of *Buenos Ayres* upon the banks of the river of *Plate*, two other soldiers with incredible boldness, travelling thro' *Tucuman* to *Peru*, fill'd their countrymen with the hopes of a vast empire : therefore, in the year 1540, after *James Amagra* the younger was defeated at *Chupas*, the viceroy *Vaca de Castro*, after pacifying *Peru*, giving new provinces as a reward to those that had serv'd well, *Tucuman* fell to the lot of *John Rojas*, who crossing the mountains of *Peru* with two hundred *Spaniards*, and coming to a battle with the *Indians*, was kill'd in the very borders of his province by a poison'd arrow. After his death, his men taking *Francis Mendoza* for their commander, march'd thro' *Tucuman* to the river of *Plate*, and arriv'd where *Gavot* had built a fort, at the mouth of the river *Carcarañal*. *Mendoza* designing to go thence up the river, to join the inhabitants of the town of *Assumption*, he was stabb'd by his own men, who mutiny'd, refusing to follow him, and return'd the same way they came. In the year 1549, after

after Pizarro was defeated, John Nunez Prada, by the authority of Peter Gasca, the viceroy, seven of Mendez's soldiers or murderers advising and accompanying him, he gather'd, upon the hopes of mighty suc- cess, a company of brave Spaniards, and piercing into the heart of Tucuman, built the town of S. Michael on the banks of the river Escaua, which was first translated to the valley Calchaquima, then to another place, and soon after destroy'd. He also erected crosses in several places, ordering they should be a sanctuary to all that fled to 'em; whence it follow'd that the hea- thens set up crosses in their villages, and began to give 'em that respect which after- wards became a religious worship. He in- vited the Indians to embrace the catholic faith, and submit themselves to the king of Spain, by the means of Gaspar Caravi- gal and Alonso Trueno, Merzenarian Friars. Lastly, coming to a battle with Francis Villagra, who was leading recruits from Peru to Chili thro' Tucuman, upon a dispute about jurisdiction, he was taken by him, and was set at liberty and restor'd to his command, upon condition that Tucuman, for the future, should be subject to the go- vernor of Chili, and the governors to be appointed by him. Accordingly, in the year 1553, Francis de Aguirre was sent out of Chili with two hundred Spaniards, by Peter Valdivia, then governor there, de- stroying the town of S. Michael, built the city of Santiago, or S. James, afterwards the metropolis of Tucuman and a bishop's see, upon the banks of the river Dulce, or the sweet river, and in 28 degrees of south latitude. Roderick de Palos succeeded Francis de Aguirre, and did nothing remarkable. But in the year 1558, D. Garcia Hurtado de Mendoza, son to the marquis de Canete, viceroy of Peru, and himself governor of Chili, gave the government of Tucuman to John Gomez Zarita, who building the city of London, curb'd the Calchaquines, and other barbarous Indians. He rebuilt the city of S. Michael, subdued the Diaguitas grown unruly, and the Indians opposite to Rio Roxo, or the red river, as also most of the inhabitants of the valleys of Famatina, Sanagasta, and Catamarca. By his com- mand Julian Sedeno built the fort of Cor- dova, which in some measure brought the Calchaquines under obedience: then he foun- ded the banks of the river Salado and others, spreading the terror of the Spanish name so, that in the territory of Santiago only there were eighty thousand subject Indians muste- red. In short, he was so successful against the Indians, that as a reward the viceroy of Peru gave him the absolute command of Tucuman, delivering it from any subjection to the kingdom of Chili. But about that

time, viz. in the year 1561, Gregory Casta- TENO. neda, sent by the governor of Peru with a body of men to govern Tucuman, having routed Zarita, sent him away to Peru; whence it follow'd that the town of Canete and castle of Cordova being destroy'd, most of the Indians revolted: which being known, the viceroy of Peru, in the year 1563, sent Francis de Aguirre with a considerable force into Tucuman, by whose valour and conduct many of the Indians were again brought under subjection, the town of Esteco built, and all things in some measure re-establish'd, till he embroiling himself in several affairs, was call'd back into Peru. Afterwards se- veral other colonies were founded or restor'd throughout Tucuman by the succeeding go- vernor's coming with fresh supplies out of Peru; whereof, the rest being destroy'd ei- ther by war or their ill situation, there now remain standing, besides Santiago the me- tropolis, Cordova, the city of S. Michael, Towns in Salta or Lerma, Xuxui or S. Salvador, Rioja, Tucuman. Esteco, or Nuestra Señora de Talavera, Lon- don, and a few small garrisons, to which the people of several nations divided into provinces are subject, being for the most part brought under the dominion of the catholics, by the valour and conduct of the Spaniards, not without the expence of blood.

When I come to speak of particular Concern- places, or of the propagating of the chri- ing the- stian faith in them by the society of Jesus, antiquity I shall then, as they occur, give an account of the be- by what sorts of people that vast tract of fore men- tion'd pro- land here spoken of is inhabited; of their vices, form, religion, manners, and language; of the soil, climate, and irrational creatures; as also of rarities, and secrets in nature: but 'twill not be to my purpose to enquire whe- ther that part of America was known to the ancients. Cicero, in his dream, dividing the globe of the earth into two habitable parts, places one in the north, and t'other in the south, which he calls *Antichora* from the opposite pole. Pomponius Mela calls the part of the earth opposite to the old world *Antichora*, and the inhabitants of it *Antichorones*. Besides, the words of Arius, the orator in Seneca are well known, who affirms there are fruitful lands in the ocean, and another world and other shores beyond the ocean. Clement, disciple to S. Peter, speaks of the ocean, and worlds beyond it; whence some will infer, that this part of the world had been formerly heard of and seen. But many enquire whence that new world was peopled, with more curiosity than cer- tainty. Lipsius, following Aristotle's con- jectures, thinks the Africans sail'd thither. Ferdinand Oviedo will have the islands Hesperides so call'd of Hesperus king of Spain, and, that they and the continent of America were

**TECHO.** were peopled by *Spaniards*. Others affirm, the *Americans* are the race of the *Jews* carried into captivity by *Salmanazar*, and placed in countries till then not inhabited, after a progress of eighteen months. Many believe they were carried thither by storm, being *Chinese*, sailing on the pacifick or south sea, or other more northern people: I'll not pretend to decide the controversy, but allowing the possibility of each opinion, own I am a stranger to the certainty of the fact. *Lipsius*, *Acosta*, *Pineda*, *Solorzano*, and other learned men, may be seen, who, after searching all the records of antiquity, shew much erudition, but nothing of certainty concerning the affairs of *America*. I know the memory of a deluge is preserv'd among these people, but whether 'tis to be understood of the universal flood, or of the inundation of some particular provinces, as of that of *Ogyges* in *Acbaia*, or *Deucalion's* in *Thessaly*, I leave to others to decide: I therefore leave it to others to discourse upon *Plato's Atlantis*, the reasons of the deluge, *Solomon's Ophir*, the transmigration of animals, and much more to that purpose; for I am willing to lay aside conjectures and fables, having enough of truth to treat of.

The care  
of the kings  
of Spain  
have had  
of the In-  
dies.

*Peru*, and the southern provinces of *America*, seem to me like another *Ophir* to the emperor *Charles V.*, who, like *David*, fought the battles of our Lord; and his son king *Philip II.*, following the example of *Solomon*, built the noble temple of *S. Lawrence*, call'd the *Escorial*. But, to come to my business, the emperor *Charles V.*, the same year the metropolis of *Paraguay* was built, sent over some priests; and in the year 1553 the first bishop of *Paraguay*, furnishing him nobly with all things for the service of the church: afterwards bishopricks were erected, collegiate churches founded, and seminaries built in the kingdom of *Chili*, in *Tucuman*, and the port of *Buenos Ayres*, by the authority of the catholic kings, and at their expence. Besides, throughout their vast dominions, their generosity has maintain'd priests, founded religious houses, and the viceroys, governors of provinces and towns, and the courts and councils, have always been strictly charg'd, that, forbearing to oppress the *Indians*, they should make the conversion of those people their principal study. In this particular the society of *Jesuit* has spread the light of the gospel thro' *Chili*, *Tucuman*, and *Paraguay*, whereof I am to give an account.

The society  
call'd  
into *Tucuman*.

At first the condition of religion was miserable, there being only a few priests, ignorant of the *Indian* tongues, and consequently the bishops had but little help. Several *Spanish* towns having no body to

administer the sacraments, liv'd after a very dissolute manner; for tho' the *Spaniards* are naturally frugal, yet plenty and abundance of servants, and women, had so debauch'd 'em that they lamented their own misery, seeing many live and die without any spiritual assistance, besides the infinite numbers of *Indians* who were destitute of all instruction. At length the reverend *F. Francis Victoria*, bishop of *Tucuman*, of the order of *S. Dominick*, a man renowned for piety of life and conversation, thought of calling in the *Jesuits*, and, in order to it, writ to *F. Joseph Archieta*, provincial of them in *Brasil*, and to *F. John Atienza*, provincial of *Peru*, desiring they would send some priests to his assistance.

In compliance with his just request, the *Jesuits* at provincial of *Peru*, sent *F. Francis Angelo Salta* and *Alonso Barfena*, priests, and *John de Vel. Efteco*, *lagas*, a lay-brother, in the year 1586. These setting out from *Potosi*, and passing the mountains that part *Peru* from *Tucuman*, were receiv'd at *Salta*, a *Spanish* town built three years before, with incredible joy; for till then there was no priest in that town. The city *Efteco* is fifty leagues from *Salta*, whither they resorted to supply the want there was of priests. They both knew the language of *Quechua*, and *Burfena* had learnt somewhat of that of *Torocote*, by which means they began to instruct the *Indians*, till having spent a month in this last place, they were call'd away by the bishop of *Tucuman* to *Santiago*, the capital of the province.

The fathers we receiv'd out of the town, they re- and conducted to it by the governor and pair to all the people with the greatest pomp, *Santiago*. came at so good a time into the province of *Tucuman*, that there were then in it, besides the bishop, only five priests and a few religious men, who labour'd as much as in 'em lay, but few of 'em could speak the *Indian* language. The town of *Santiago* consisted of five hundred *Spanish* families, but in the territory about it there had been eighty thousand bow-men muster'd, besides women and children, whereof, tho' many were destroy'd by the common calamities of the *Indies*, a vast multitude still remain'd without any to instruct 'em till the fathers came. To work the more powerfully on the natives, they apply'd themselves in the first place to reform the lives of the *Spaniards*, wherein they had extraordinary success; and then applying themselves to the heathens, instructed some converts chosn out from the multitude, whom they employ'd to help teach the others, who came in mighty crowds to be catechis'd. How many thousands were baptis'd is not known, for no account was kept, but great numbers resorted to confession, and confined them-

themselves to one wife, contrary to their former custom.

*F. Alonso Barfena* was sent by the bishop with the lay-brother, to the city of *Efteco*, to preach to the infidels dispers'd in fifty villages belonging to the territory of that town, where they spent nine months, undergoing vast labours and toils, during which time six thousand six hundred *Indians* were baptiz'd and instructed, and many thousands lawfully marry'd, which done by order of the bishop, they return'd to *Santiago*.

Immediately both the fathers without any respite, were sent to the territory of *Cordova*, one hundred leagues distant from *Santiago*, built sixteen years before. It was hard to instruct the *Indians* there, because of the great variety of languages; yet five hundred of those in the town were baptiz'd, and three hundred without in the space of a month, besides four hundred converts brought to lawful wedlock. This done, they return'd to meet others of the society that were coming from *Brasil*.

The provincial of *Brasil* having receiv'd the bishop of *Tucuman*'s letter, sent five fathers in the year 1587, who, after many dangers escap'd, arriv'd safe at *Cordova*, where two of them, dissatisfy'd that they had been fetch'd out of *Portuguese* province to a place where the *Spanish* fathers of *Peru* were before, return'd back to *Brasil*, the other three stay'd with the *Spaniards*, where they altogether labour'd in the conversion of souls incessantly, baptizing many thousands, and marrying no less number. But father *Barfena* who was to teach the *Brasil* fathers the language, falling sick, they went away to the city of the *Assumption* the capital of *Paraguay*, where having labour'd with the same success as they had before in *Tucuman*, two of them travell'd through into the province of *Guaira*, baptizing and instructing many thousands. It is here to be observ'd speaking of these several parts, that about *Cordova* the *Indians* live in caves they dig under ground, no roof appearing above it, for they are altogether in the earth, and distant from one another as rabbits in a warren.

Thirty leagues from the town of *Villari-*ca in the province of *Guaira*, are a people call'd *Irirabat*, being not above one thousand men, who liv'd dispers'd upon hunting, a fierce nation and hard to be reduced by force.

Thus far the translation has follow'd the original pretty close, but must here, as is observ'd in the preface, omit all things which only relate to the *Jesuits*, and therefore only a few words shall be added out

VOL. IV.

of the first book which have something *Tochte*. historical. Those, these and the last mention'd seem to come in some disorder.

*John Ramirez de Vilasco* governor of *Tucuman*, went out with *Spanish* and *Indian* forces to reduce the *Calchaguines* who had revolted. They being a fierce and warlike *Fierce In-* people, had possess'd themselves of the tops *doms sub-* and cliffs of the mountains, lying there ready to roul down vast stones upon the *Spaniards* as they march'd up the narrow paths to them. Father *Barfena*, ordering the *Spaniards* to halt, durst go up alone, and by the force of his eloquence, so far prevail'd with those obstinate people, that they submitted themselves to the *Spaniards*. In the year 1590, two other fathers came out of *Peru*, one of which with another of those that had been in *Tucuman* before, went to preach upon the *Rio Roxo*, or *Red River*. This river has its springs in the *Red river* mountains of *Peru*, and being come down into the plain, swells with the winter rains, overflows every year the country for eight leagues about, except where it finds hills, which it converts into islands, all which multitude of waters, gently flow into the river of *Plata*, a little below the great river *Paraguay*. Not far from it on the banks of a lake, thirty leagues from the river's mouth, the *Spaniards* built the town of the *Conception*, to the end an infinite multitude of *Indians* might by de-city.

grees be civiliz'd. This city is ninety leagues from *Santiago* the metropolis of *Tucuman*, all over a vast plain, without any water but what it receives from the clouds. The people about this city the *Spaniards* call *Frontones*, because they make the fore-*Frontones* parts of their heads bald to have high fore-*their man-* heads. At their girdle hangs a club, and quiver or bunch of arrows. They carry a staff set with the jaw-bones of fishes, with their teeth like saws, their bodies naked, and painted to look more terrible. Being full of factions, they are continually at war among themselves about the limits of their lands. They fix the bodies of the enemies they kill, in rows to the trunks of trees for a terror, that the borderers may not dare to go over the hunt in their liberties. Their houses being made of mats, are easily remov'd at pleasure. They do not apply themselves to tillage, but live upon what they shoot and fish, and have one good quality, which is, that they keep to one woman. Almost every faction has a several language, so that there are eight several tongues spoke on both sides of the red river.

The nation of the *Mataranians* is much *Matara-* more docible than any of its neighbours. *Alonso de Vera*, founder and governor of the town of the *Conception*, took them from

8 D

living

**T**he living dispers'd after their barbarous manner, and brought them together into a town, causing many of them to be baptiz'd, but still they continu'd very ignorant of the principles of christianity. The place of their habitation was very wretched, for they had no water to drink, but what was muddy and stunk, being only the rain that fell gather'd in ditches cut for that purpose. All their food was *Indian* wheat and pumpions. Yet here the fathers preach'd and taught with such success, that in the whole town there was not one heathen left, nor any but liv'd as a christian to the best of his knowledge and capacity. In the year 1593, the *Jesuits* began to preach in *Cbili*; they that desire may see their actions in our author.

Revolt of  
*Cbili*.

The go-  
vernor  
kill'd.

Several  
*Spanish*  
towns de-  
stroy'd.

Having given an account in number 17, of the towns built in *Cbili* by the *Spaniards*, and a description of that country in number 18, let us now look back to see many of those colonies destroy'd, and the *Spaniards* almost expell'd that country. They had, as has been said, built twelve towns at convenient distances, which seem'd to have secur'd the possession of that kingdom, where they found great quantities of the purest gold, and abusing the plenty and deliciousness of the country, liv'd in debauchery and lewdness. Vice produceth sloth and security, which gave occasion to the *Indians* to revolt, and in a great measure to compass their design of extirpating the *Spaniards*. This happen'd about the year 1598, when *Martin de Loiola* being governor of the kingdom, lying abroad in the fields in tents within no works, and attended by a very small guard, was set upon by the barbarous *Cbilenians*, and kill'd; which was no sooner done, but they drew all the rest of the country to join with them, and exercise all manner of cruelties upon their enemies. The *Indians* might easily have been quell'd at first, had any good advice been taken; but what could be expected where there was no head? Besides, the suddenness of the misfortune took away all time to consult, or prepare for war, the *Indians* every where falling upon and slaughtering them in confusion. The mischief began by the *Spanish* soldiers abandoning their town of *Millapoa* in a consternation; next follow'd *Angil* and *Cbilla*, two neighbouring towns, first plunder'd by the *Indians* and then burnt; only one hundred and fifty *Spaniards* with the women and children saved themselves from the fire and slaughter in the work cast up in haste, where they, with true *Spanish* bravery, several times repuls'd eight thousand natives that besieg'd them, till at length they got off with safety. The city *Imperial* was a whole year besieg'd, so that the inhabi-

tants having spent all their provisions, and being drove to eat unwholesome food not fit to be nam'd, it bred infections among them, which made such havoc, that many more dy'd of sickness than by the enemies weapons. In this distress they patch'd up a boat, in which they sent messengers to demand succours. Accordingly the governor came from the city of the *Conception*, with forces to rescue the inhabitants and carry them away in safety. But the city was left to be destroy'd by the natives, who fail'd not to exercise their fury on the houses, being disappointed of the people. The town of *Valdivia* far'd not so well, for it perish'd with all its inhabitants. When the *Indians* had glutted their rage with slaughter, they sav'd four hundred women and maids belonging to the town, to debauch and make slaves of; this turn of fortune making them servants to those very people they had before kept under. The gold of *Valdivia* is counted the best in *America*, and there the enemies most exerted their cruelty; that, where avarice had most predominated in seeking after gold, there the judgment might fall the heavier. The town of *Oforno* follow'd the same fate, but the inhabitants sav'd their lives in a work they had thrown up in haste, and some forces coming to their relief, were carry'd off in safety. It was here remarkable, that a nun of the order of the poor *Clares*, being taken by an *Indian* who would have deserv'd her, she us'd such powerful arguments to defend her virginity, that he kept her a whole year in his house among his other women, with the greatest respect imaginable, till he found an opportunity to convey her to the next *Spanish* garrison, and some time after fled himself to the *Spaniards*, among whom he became a christian, living many years in a very pious manner. The revolt ran through the whole kingdom; the enemy, after destroying the *Spanish* towns, being absolute masters for above an hundred leagues. The metropolis or city of *Santiago* was not out of danger, but had certainly fallen under the prevailing rage of the *Indians*, but that the magistrates, being inform'd of the conspiracy, prevented the execution among them, by the punishment of the conspirators. Thus a bloody war broke out between the two nations, which might have been more fatal to the *Spaniards*, had not the catholic king soon after sent over *Alfonso Ribera* famous for his good service in the low countries, who, entering upon the government, erected many forts after the manner of *Flanders* in the enemies territories, whence making excursions, he rescu'd several *Spaniards* who defended themselves in small works, and baffled the designs of the enemy. In

*Cordova  
city built.*

In the year 1573, *Jerome Cabrera*, a gentleman of *Cordova* in *Spain*, founded the city of *Cordova* in a plain, at the foot of vast mountains, a hundred and twenty leagues from the port of *Buenos Ayres*. It does not rain there in winter, but in summer there are thick mists and rains enough to make the land in some measure fruitful. When the city was first built, there were reckoned to be sixty thousand archers in its territory, of which number only eight thousand continu'd in subjection to the *Spaniards*. In the year 1600, the rest were either dead, or being fond of their liberty and ancient way of living, had revolted from the *Spaniards*. In this place the *Jesuits* were at first coldly receiv'd, but soon after all the town vy'd to serve and honour them, building them a church, and allowing them a monastery, which was afterwards the head of the province. Hence the fathers set out to preach to the people call'd *Diaguítas*, where whole towns were converted without any difficulty, only one considerable place objecting, that they would not cut off their long hair, as usually converts did, nor take the ornament of feathers they wore on their heads when they went into the church; but being inform'd their hair was no obstruction, provided they forbore superstitious practices, they all readily submitted themselves. Other places at the same time freely offer'd to part with their long hair, which was held in such an account among them, sending to invite the fathers to come to them, going out to meet them, and clearing the roads they were to come for three leagues in length. All the heathens were baptiz'd in these towns, and inquiry being made after their ancient worship, it appear'd that the whole nation ador'd the sun, and in honour of him sprinkled bunches of feathers stuck up in their houses with the blood of beasts. They believ'd the souls of their *Casiques* when they were dead became planets, and those of the common sort and beasts, lesser stars. A temple they had dedicated to the sun, which these people, at the command of the fathers, destroy'd, burning all that was in it; and crosses were erected wherefoever such temples had stood. In the midst of this success the deputy governor of *Tucuman*'s son, who was with the fathers, presuming upon their protection, order'd a number of servants to be gather'd out of the valley, which so exasperated that people, believing that religion only a cloak to enslave them, that the fathers were in great danger of being murder'd, and forc'd to haste away whilst they had time to save their lives.

*New go-  
vernor in  
Chili.*

Let us again look back into the kingdom of *Chili*, where we left *Alonso Ribera* pacifying that country, by building many

forts to curb the natives; and the success *Techo*, would doubtless have answer'd expectation, had he not been unreasonably put out of the government, when he had gain'd more reputation for his military exploits, than any governor before him. But, as he rais'd the reputation of the *Spaniards* among the *Chileans*, by his courage and conduct; so he lost himself by confiding too much in his own merits. For notwithstanding governors, by the laws of *Spain*, are forbid marrying wives of those provinces they have in charge, lest affinity should make them partial and corrupt; yet *Alonso Ribera* presum'd to marry a noble-woman in *Chili*.

Whereupon the king of *Spain* (tho' he was very serviceable) took away his government, lest the example might be of ill consequence, but so moderated his punishment, that by the next letters he was appointed governor of *Tucuman*, a post little inferior to that of *Chili*. After him *Alonso Garcia Ramon* obtain'd the government, who when he set out from *Lima*, took *F. Luis Valdivia* along with him, in hopes by his means to pacify the kingdom of *Chili*. After escaping fire and tempest at sea, they at length arriv'd at the port of the *Conception*, the residence of the *Conception* governors of *Chili*, small for number of build-  
city.

ings and inhabitants, and built along the shore of the *Pacifick* or south-sea. Its territory towards the metropolis of the kingdom extends it self largely, and grows straight on that side towards the revolted *Indians*, that space *Ribera* and other governors had secur'd by erecting forts at due distances, the garrisons whereof with much difficulty kept the *Indians* under. As soon as the new governour arriv'd, he caus'd the king's proclamation for a general pardon to be publish'd, inviting all that were in rebellion to return to their duty. That done, he set out to visit the forts and villages of *Indians* that continu'd in subjection to the *Spaniards*, either of their own free will or by force, yet the minds of them all were so alienated, that they might well be accounted enemies, and therefore tho' they had the name of friends, no man went among them but what carry'd a guard of soldiers, for there is little confidence to be repos'd in them whom only fear binds to you. The governor was attended by the king's troops; but *Luis Valdivia* was a better security than many arm'd men, because the *Indians* were inform'd, and found by experience, that *Valdivia* had always protected them from the insolencies of the soldiers, and being made slaves. For this reason, wherefoever he went, the prime men of the country flock'd about him, calling him their father, protector, and only safety of their bodies and souls; and *Valdivia*, laying hold of that favourable opportunity, gain'd all he cou'd to christianity,

**T**ENO anity, and the subjection of the catholic king. Twenty Caciques were met in the fort, they call'd *Levo*, where hearing *Valdivia* discourse of the immortality of the soul, and other mysteries of faith, they all desir'd to become christians. All the children were baptiz'd, the men put off till trial was made of the truth of their call. About forty Caciques of the *Tucapelán* faction liv'd about *Paica* a Spanish fort, of whom it was hard to judge whether they ought to be counted friends or enemies, nothing being friendly in them but the name. The governor, thinking open enemies less dangerous than false friends, threatened them with war; but *Valdivia* interpos'd, and prevail'd with the *Tucapeláns* to enter sincerely into unity with the *Spaniards*. War breaking out in other parts, he ventur'd

A Jesuit undertakes to make peace.

with five soldiers among those people, and was honourably receiv'd by the Caciques, where beginning to discourse of the end of good and bad men, one of the *Indians* interrupted him, asking, *Who taught him that doctrine?* *Valdivia* answering, *It was deliver'd by the Son of God?* Then said the heathen, *Your God had a wife, if he begot a Son.* This led him to make such a discourse on the mysteries of the blessed trinity and incarnation, that the infidels were much taken and surpriz'd. After this they ask'd, *How drunkenness could be a sin, since sleep was innocent, and that provok'd man to sleep?* Which being answer'd by telling them, *That drunkenness depriv'd man of his reason, and therefore was more prejudicial than if it took off a limb?* They next put the question, *Why it was forbid to have many wives?* To which *Valdivia* answer'd by asking, *Why women were not allow'd many husbands?* Then they alledging customs against the one and for the other, he shew'd them that custom neither made any thing lawful or unlawful, and with many other reasons and arguments satisfy'd their curiosity. Thus they spent the greatest part of the night in discourse, till about break of day twenty Caciques came from the remoter villages, whom *Valdivia* embracing and discoursing upon the king's pardon and former kindnesses pass'd between them, very much inclin'd to his party. Among the last comers, one *Avila* a Cacique had great authority, who understanding that *Valdivia* affirm'd the God of the christians was the only Creator of all things, in a great rage cry'd out, *He would*

*Pillán* the *Chilenian* God: never allow *Pillán* the God of the *Chilenians*, to be deny'd the power of creating. *Valdivia* inquiring concerning this imaginary deity, *Avila* told him, *That his God did, after death, translate the chief men of the nation, and soldiers of known bravery, to places where there was dancing and drinking, there to live happy for ever. That the blood of noble men slain in battle,*

*was placed about the sun, and chang'd into red clouds, which sometimes adorn the rising sun; but that the common sort and poor people receiv'd no reward from their God. What an unjust God is yours,* said *Valdivia*, *to be so kind to wicked men, and take so little notice of the innocent; for it is plain that many of your nobles and brave soldiers are guilty of much greater crimes than the common sort.* As they were discoursing, some of the *Spaniards* told him, *They suspected treachery design'd against them;* whereupon he withdrew, and slip'd away to the next Spanish garrison. This jealousy prov'd groundless, for those same Caciques came to *Valdivia*, assuring him, *Indians:* *The whole nation was much concern'd that he should suspect them, and promising, if he would go with them to the inland parts of the kingdom, they would be mediators of peace, and guard him.* *Valdivia* accepted of their offer, and travelling over uncouth mountains, bogs and other inaccessible places, at last came to the place where the enemies leaders were assembled to confer together. There the king of *Spain's* pardon, the manner of settling a lasting peace with the *Spaniards*, the propagating of christianity, and other points, were so handled, that it plainly appear'd those people would easily embrace the christian religion, and submit to the king, provided their grievances were redress'd. Three commanders of the *Indians*, not far from the place where this conference was held, engag'd to submit to the *Spaniards*, and several other *Indians* being reconcil'd, *Valdivia* return'd to his people.

At this time there happen'd an accident <sup>A notable accident,</sup> worth relating. After the southern towns of the kingdom of *Chili* were destroy'd, as has been mention'd, several Spanish families remain'd in slavery among the *Indians*, of which number was one *Heredia*, a man of some account, happy in this that he had with him his wife *Marcella* *Grajal* a worthy woman, and two sons grown up to man's estate, and his master was not unkind, as requiring nothing of them but a certain quantity of their made wine, which they carefully perform'd, for fear of being put upon worse labour. It happen'd that *Heredia* falling out with his master, as they were drinking, had very ill language given him, which he not being able to endure, kill'd his master upon the spot. This done he fled, and tho' pursu'd, made his escape, whereto the *Indians* were so inrag'd, that they fell upon his eldest son, and without giving ear to the mother's prayers, or minding her tears, burnt him alive. The mother, with her other son, terrify'd at this sight, fled as soon as it was evening; and to avoid being taken, travell'd by night, retiring to caves in the day, and feeding on such herbs as they found by the way.

A fleet of the *Juits*.

way. After three days they came into a wood, near a little village, almost spent, and expecting to perish by hunger, or at the hands of the *Indians*. A woman of the country going out for wood, found them both, and, mov'd by *Marcella's* tears, promis'd to assist them, provided they were not discover'd by the other women that came on the same account. To prevent such discovery she left them hid in a ditch cover'd with leaves, and returning to bring them some meat, at last fled with them her self, through by-ways, and after three days more, they all arriv'd safe at *Arauco*, a considerable garrison of the *Spaniards*, where the *Indian* woman embraced christianity, and was charitably provided for. *F. Valdivia* having labour'd incessantly to restore peace, and finding that the enslaving of the *Indians* was the cause of all the calamities that beset the country, and that he was not able to remedy that disorder, he apply'd himself to the viceroy of *Peru*, who finding his authority not sufficient to redress the evil, sent him into *Spain*, to the king to procure the abolition of that abuse.

We now come unto the third book of our author, which he begins with the first entering of the *Jesuits* into the kingdom of *Peru* 1568, who prosper'd so well that about the end of the fifteenth century, that province was grown too great to be manag'd by one provincial. Wherefore it was resolv'd to divide it, and in order to it *F. James Torres* was sent to *Rome* to the general, for him to settle that affair, who contrary to what they had contriv'd and design'd in *America*, united the provinces of *Tucuman*, *Paraguay* and *Chili*, into one province independent of *Peru*, and committed the care of it to the said *F. James Torres* as provincial, in the year 1607. This father in his journey through *Spain*, waiting upon the duke of *Lerma*, and being with him at a window, the duke told him that but a few days before it happen'd they threw a whelp, or young puppy, out of that window into the yard below, which was beset with cages, where lions were kept and let out to walk and feed. As soon as the puppy fell it fawn'd upon and wagg'd its tail to one of the fiercest lions, which was taken with it, and carry'd it to his den, cherishing, feeding and protecting it from the other lions, as long as it kept close to the said lion, as if it had been his own whelp, till some time after the puppy venturing out into the yard along, was torn in pieces by the other lions, which as soon as he that had protected it perceiv'd, he leap'd out of his den, and in revenge tore to pieces those that had kill'd the whelp. Then one lion coming out after another, they never gave over fighting till they were

all destroy'd. This remarkable passage I *Tacno* thought worth inserting, tho' it may seem from our present purpose. *F. James Torres* being come into *Peru*, had fifteen companions, most of them men of note, assign'd him for the erecting of his new province, twelve of which were priests, and had all their charges thither defray'd at the expence of his catholic majesty, one half travelling all the way by land, the rest going by sea into *Chili*. The new provincial and his company were every where receiv'd with great honour and affection, every town inviting them to continue and settle there. He visited all the province of *Tucuman*, and from the city of *Cordova* set out to hold a chapter or congregation at *Santiago*, the metropolis of *Chili*. The way thither is a vast cross a plain an hundred leagues in breadth, after which follow the mountains, which rising first in the isthmus of *Panama*, divide the kingdoms of *New-Granada* and *Quito*, and running along the length of *Peru* and *Chili*, to the straits of *Magellan*, like the *Apennine* mountains, divide them from the rest of *America*, and are so high, that the very birds with difficulty fly over them. Some passes there are to go out of *Tucuman* and *Paraguay* to *Peru*, not immediately high, and easy enough; but out of *Tucuman* into *Chili*, there is only one way, and that never passable but in summer, being impassable the rest of the year, because of the intolerable cold, deep snows, and rapid streams of water. *Tapu*, the *Hannibal* of that new world, and second of the *Incas*, leading an army out of *Peru* into *Chili*, is said to have found out or made this way; which is not a little dangerous at the usual season of travelling through, being only a very narrow path shut in on the one side by craggy rocks, and bounded on the other by most frightful precipices, and it often happens that beasts slipping fall down with their riders an unmeasurable depth. Being come to the top of these mountains, which is above the clouds, tho' below all be burnt up with the immoderate heat of the sun, yet there the cold is so intense, and the air so sharp, that very often it parches the skin off those parts which are naked. And very often the continual shining of the snow, which here has a sharper reflection than in other places, blinds people for the present, or causes a violent smarting in the eyes. There are also abundance of *Iguis Fatui* or *Iguis Fæ Will* i'th *Vipers*, playing about, so that they seem to fall upon travellers, and be hid in their cloaths, which terrifies those that are unacquainted with them. The natives attribute these fires to the devil's endeavouring by that means to frighten travellers; but others, better vers'd in philosophical speculations, suppose them to be the mat-

**TACHO.** ter of thunder and lightning, which being every where hemm'd in with cold, and as it were fetter'd, for fear of its enemy, naturally flies to the bodies of animals, in which is something of their natural quality. Whatsoever it is, several persons faint away with it; but what is most to be admir'd, deer, goats, hares, and such like creatures run upon the tops of these mountains covered with snow, as safe, as if they were in the pleasantest fields; and to give you to understand, that nature has surrounded all things of the greatest value with mighty difficulties, the *Guanacos*, creatures which carry the *Bezoar* stone, live most upon these mountains.

*Bezoar stone.*

*Description of Buenos Ayres.* The fathers having held their congregation, *F. John Romero* was sent through *Tucuman*, to the port of *Buenos Ayres*, to be ship'd off for *Europe*, and to found a monastery in his way at that port, which gives us occasion to treat of it. The fort of *Buenos Ayres* was twice built by the first planters of the river of *Plata*, and their numbers being wasted by plague and other misfortunes, twice destroy'd; till the affairs of *Tucuman* and *Paraguay* prospering, in regard to the nature of the soil, the nearness of the river, abounding in fish, and that there was an easy passage through that continent to *Pern*, *Chili*, and *Paraguay*, these reasons mov'd *John Garay* lieutenant to *John Ortiz Zarate* the governor, after routing the natives in the year 1580, to build in the same place where the fort had stood, a city famous for carrying the same name, and for its port, and increasing to this day under the tutelage of the most blessed trinity. This port, though by the laws it be forbid to trade to it, is yet resorted to by several ships from *Europe*, *Africa* and *Brasil*, on pretence of being put in there by storm, or for fear of pirates. The chief commodity this port affords is hides, and beef dry'd in the sun; for the country abounds in pasture, and has excellent meadows for feeding of beefs and horses, whereof there are such vast multitudes, that all the country lying beyond the 34th degree of latitude, as far as the mountains of *Chili* and borders of *Tucuman*, swarms with herds of wild cattle and horses, belonging to no certain owner, all that vast number being multiply'd out of two horses and five mares carry'd out of *Europe*. In these fields there are great numbers of ostriches and wild goats. There is also plenty of a little sort of creatures, less than a hare, not unlike it in shape, but of much more variety of colours, and brighter; nothing in nature is more curious, or seems more delightful to man. It is as tame as beautiful, for it follows upon those it meets, and courts them to make much of it. Yet such is the ma-

*Vast increase of cattle.*

lignity of this beautiful fox, as the *Spaniards* call it, that after all this courtship, when least suspected, it sprinkles them that handle it with its urine, which has such an intolerable stink, that it can neither be wash'd nor wore out with time, but utterly spoils the garment so sprinkled with it. Thus we see there is no rest to be repos'd in fawning beauty, which at last will exhale some damp, and infect those that enjoy it with a stench scarce to be wash'd away with the waters of many tears. There are also other sorts of beasts; but I must speak of the manners of the men, inhabiting those vast plains scatter'd about, and in a wandering manner. That they were vastly numerous, appears by their encountering two thousand *Spaniards*, when the new fort was first built, and destroying many of them; for besides their number, their weapons and gigantic stature were a terror to the first planters, the people towards the streights of *Magellan*, being taller by the head and shoulders, and sometimes by half body than the *Europeans*, wherefore they are often call'd giants. To shew their strength, they thrust their arrows down their throat into their stomachs, and take them out a considerable time after. In fight they fasten stones bigger than a man's fist to a long rope, and having swung them about some time, let them fly with a great force, not as is us'd with a sling, for they let go rope and all. Wherever they hit, they shatter the bones to splinters, and at one stroke knock down man and horse; but whether they are fled up the country for fear of the *Spaniards*, or have been otherwise destroy'd, there are very few to be seen at present in that great extent of land, and those live scatter'd about without villages or houses, feeding upon herbs, and what they kill, being cloath'd in skins, and lying on the ground, both men and women. Nor have they any other shelter against the rain or heat, more than the wild beasts, unless they cover themselves with some little hay; wherever night takes them there they lye, always roving, and always at home. They have little knowledge of God, and consequently think not of worshipping him; yet after death they say they return to the Creator of all things. They celebrate the birth of their children with abundance of tears, saying when they are born they begin to dye. At the funerals of their kindred, instead of tears they shed abundance of blood. They carefully keep the bones of their relations; nor is there any affront they revenge with so much war and slaughter, as for upbraiding of them that the bones of their ancestors have been lost for want of looking after. They honour their dead *Caesars* by killing their slaves, believing

*Manners of the Indians.*

The of C

Valour of the Indians.

ing them to be sent after their masters to serve them. Very few of these *Indians* had been converted since the first coming of the *Spaniards*, and therefore the society could not be well employ'd there, either in regard of them, or of the planters, or of the seamen or traders repairing thither out of *Peru*, *Chili*, *Tucumán*, and *Paraguay*.

The State  
of *Chili*.

After the *Indians* of the valley of *Arauco* had murder'd the governor *Martin Loiola*, and destroy'd the towns in the south of *Chili*, a bloody war ensu'd between the two nations, and the kingdom of *Chili* was divided into two parts; one of which lying towards the south, beyond 37 deg. of latitude, as far as the straits of *Magellan*, and the richest in gold mines, is inhabited by the revolted natives; the other lying next to *Peru* and *Tucumán* is wholly subject to the *Spaniards*. But several ports have been built within the borders of those barbarous people to curb their fury, the chief of which is *Arauco*, seated in a valley of the same name, not far from the sea, in 36 degrees of south latitude, with a garrison of 500 *Spaniards*, and a convenient number of *Indians*. The other forts built in the province of *Jumbeline*, near the river *Bibio*, were defended by six hundred *Spaniards* and *Indian* soldiers. All the country about those forts was inhabited by abundance of heathens living in small villages, and subject to the *Spaniards*, either by force, or of their own accord. Both natives and *Europeans* liv'd dissolute lives, for generally the best of men did not go over to those remote parts; but if any had been good among them, they were corrupted by ill company, or the country it self; for the plenty and delights of the kingdom of *Chili*, are a great snare to those that desire to live voluptuously. The *Indians* were superstitious, obstinate, and refus'd to embrace christianity, or converse with the *Spaniards*, for fear of being oblig'd to work. To remedy these disorders, the society sent three fathers into these parts, whose actions since we do not intend to give an account of, we will proceed to speak of the place. The port of *Arauco*, as was said above, is seated in a valley or plain of the same name, from which not only those that inhabit it, but all the other revolted *Indians* of *Chili* are call'd *Araucans*, as all the people of the united provinces are call'd *Hollanders*, or those of the *Spanish* provinces *Flemmings*, taking their names from the principal towns.

Valour of  
the *Araucans*.

These *Araucans* have made themselves famous throughout the world, being inferior to none of the *Indians* for valour, for they have these many years oppos'd the *Spaniards* to assert their liberty, and still hold out in their full vigour, to the vast expence of the kings of *Spain*; exercising the *Spanish* troops

in those parts, that they may be always *Techo*. enur'd to war, to keep under those vast dominions they possess. The plain of *Arauco*, which is almost twenty leagues square, when first the *Spaniards* enter'd it was inhabited by the following numbers of *Indians*. *Tucupellan* commanded three thousand men, besides women and children; *Ongol* four thousand; *Caicutienpec* three thousand; *Paicave* three thousand; *Millarapuc* four thousand; *Levo*, *Pure*, and *Limaia* each six thousand; *Levopia* and *Geleno* one thousand; besides other *Caciques* who had smaller numbers. But the chief of them all was *Petuguitu* lord of six thousand *Indians*. Of all which number, when the *Jesuits* came into that valley, which was in the year 1608. there were scarce two thousand, as *Horatius Becchius*, one of them, testifies. But out of the plain, beyond the river *Bibio*, there was a far greater multitude kept under by the *Spaniards*, either thro' fear or affection. What the number of the enemies might be, could never be understood, none agreeing in their accounts. The whole nation is of a strong constitution of body, and what is wonderful, fit for war, or country labour, tho' addicted to a thousand vices. Whatever weapon every one chooses in his infancy he is oblig'd to use all his life-time, and forbid any other, lest by changing their arms, they prove expert at none. Being all divided into small parties, when an enemy invades them, the heads consult together whether they shall be for war or peace. A decree once made after three days consultation, fastening all the while, like the ancient *Gauls*, is inviolable. Those that perform any notable exploits, are prefer'd to commands, the rest of the soldiers are maintain'd at the publick charge. *Lipinus* tells us in his political examples, that the *Araucans* us'd to choose their leaders only by their strength of body, trying it with a great log of timber, which he that could carry the longest, was thought fit to undergo the burden of government. But this folly is laid aside; for at present being continually train'd in war by the *Spaniards*, they choose their commanders by the experience they have of their valour and conduct. Tho' the *Spaniards*, before the revolt, had spread their colonies throughout all the kingdom, yet very few of the natives were converted. One obstacle there was from the *Europeans*, viz. that the avarice of private men enslaving them, and the ill example of their lives, created an aversion to christianity. On the *Indians* side there were many; first their living dispersed in the mountains for fear of the war, and not in towns, the multiplicity of concubines they keep, the authority of the *Caciques* against whose will there is no persuading of their subjects; their wicked custom of revealing

Their  
manners.

Obstacles  
to their  
conversion.

**T**ETCHO, velling to such a degree, that they would invite the country round about, and two or three thousand of them meet at a feast, where they committed all lewdness and debauchery; their fond opinion that baptism was mortal, occasion'd by the custom us'd at first to allow it to few till they were near death, because of their intolerable vices, the confusion of continual war, the great number of wizards or negromancers among them, and their stupidity, occasion'd by their natural indulg'd vices. For the better preaching of the gospel to these people, at the instigation of the fathers, the governor drew the inhabitants of abundance of villages, into large towns, where much good was done upon them, till the *Spaniards* again oppressing them they slipt away and dispers'd as they were before.

and of  
S. Mary.

Island of  
Chiloe.

Opposite to the shore of *Arauco*, at fifteen miles distance is the small island of S. Mary. The inhabitants ador'd a God they call'd *Yucuebu*, had general meetings at certain times, which they call'd *Requets*, where, after much debauchery, they made priests, consulted the devil, and perform'd many detestable ceremonies; *Chiloe* an appendix of the kingdom of *Chili*, is an island opposite to the southermost part of the said kingdom, fifty leagues in length, and seven in breadth, in the shape of an arm bow'd, contrary to what geographers formerly represented, who made it square. The south part of it is parted from the continent by a very narrow sea, and the continent itself, as if loath to part with the island, makes a bay to receive it. All the country is uneven, mountainous, woody and marthy, subject to extraordinary cold, lying all beyond forty three degrees of south latitude. The summer season is interrupted by such cold storms, that it is scarce to be distinguish'd from winter. The frosty winds and little warmth in autumn hinder the fruit from ripening. If you turn up the earth a span deep, you presently come to a red sand, so mighty dry that it destroys any seed, and yet the woods produce such tall trees, that *Ovalle* with good authority tells us, several lengths of boards are cut out of them. The soil being unfit for ploughing, was formerly planted. This unfruitfulness of the air and land, makes them think they have a good crop, when they have five for one of an insipid sort of roots. On the north end of this island, some few *Spaniards* that escap'd, being the remains of those towns destroy'd by the *Araucans* when they revolted, built a little town call'd *Castro*, which the *English* pirates plunder'd in the year 1600, when it was but just built, after which scarce thirty inhabitants were left. In another of the neighbouring islands, which we shall soon

describe, they erected a fort, kept by a garri-son of eighty *Spaniards*, who being in want of all things, are often burdesome to the poor natives. Most of the people live upon what the sea casts afloat, and therefore before the coming of the *Spaniards*, only the coast was inhabited; but since, for fear of oppression, the islanders betake themselves to the inland, and hide themselves in the inaccessible parts of mountains, living in miserable want on pretence of liberty. They wear about their waist a sort of net-work made of shells, all the rest of their bodies being naked. When the island was first discover'd there were reckon'd in it fifteen thousand families. One only ship sails thither in a year, sent by the governor of *Chili* to supply the *Spaniards*; all the rest of the year they see none. In those islands they use boats made of three boards, sew'd together with a thick cord, and caulk'd with the bark of trees steep'd in water. There is no going in these boats, which they call *Pyraguas*, without great danger. But the peril is yet greater from the revolted *Chilenians*, who live all along that coast opposite to the island. So that considering the danger of the sea, the climate and nature of the soil, and the poverty of the natives and *Spaniards*, it is not only the farthest part subdu'd, but the miserablest of all that new world.

About the island *Chiloe*, lye forty small islands, not very well peopled, and at a small distance from one another, discovering the high tops of their woods, which look like so many bands of arm'd men placed about to guard the chief island. The sight is pleasant, did not the sudden storms rising there disturb this satisfaction, for it is very dangerous to sail upon the *Archipelagus* of *Chiloe* amidst all those islands. The natives live after the same manner as those of the great island, and follow the same customs, the soil being alike, but that being less conversant with men, they are more stupid. After the revolted *Chilenians* had destroy'd the towns on the continent, eighty *Spaniards* built a fort and settled upon one of these islands. Most of these islands are miserably dispeopled, and the reason the natives give for their being so few, is because they are stole away by pirates, contrary to the known laws, and carry'd over to the continent, as slaves. All the islands are subject to the governor of *Chiloe*.

Because we have often occasion to speak of the oppression of the *Indians*, vulgarly call'd *Personal Service*, it will be proper in this place to inform the reader with the nature of it, and to shew how much it was to the advancement of christianity and the honour of the kings of *Spain*, that it was

absolutely abolish'd and taken away. It is the ancient practice in America to reward such Spaniards as have serv'd well by making them chiefs of a greater or lesser number of Indians subdu'd by war, or that have voluntarily submitted. This custom, introduced soon after the discovery of the Indies, continues till this day. The design of their catholick majesties was, that the Indians should pay some acknowledgment to these men, according to the nature of the place, instead of the tribute due to themselves. This thing was prudently contriv'd by the kings, if the Spaniards who are lords over Indians, and call'd *Encomenderos*, had made use of their authority with any moderation, and it would have prov'd much more profitable both to the crown and private persons. But many of them abusing that limited power given them by the king, and not satisfi'd with their yearly contributions, oblig'd the Indians to serve them in person, with their wives and children, which they call'd *Personal Service*, and the nature of it was such, that those who were forced to it, could get nothing, or fly any thing was their own. They were carry'd from their own villages to serve their masters in their country or city houses, without any wages. Nay very often, upon some frivolous pretence they were sold away. For this reason a great part of the Indians of *Cbili* had revolted, as had the *Calchaquines* in the province of *Tucuman*, and other nations about *Paraguay*. Whensoever the Indians were exhorted to embrace christianity, they stood out obstinately, alledging it was the way to lose their liberty; and even those that had been converted fled to recover it, hiding themselves in mountains, and bogs rather than live in slavery. Whole provinces suffer'd under this calamity, for though the emperor *Charles* the fifth, and king *Philip* the second, sent repeated orders to suppress the personal service, yet some governors for their own interest suppress'd them, and others were not able to oppose the avarice of the Spaniards, who obstinately stood up for it. *Philip* the third repeated what his fore-fathers had done, putting out another edict for suppressing it. The first that obey'd were the *Jesuits*, who dismiss'd all the Indians given them by several persons, allowing them a competent reward for the time they had serv'd them. Some few conscientious persons follow'd their example, the rest became their enemies, refusing to quit those advantages they made by enslaving the Indians, though never so unjustly.

*Cuito*, or *Chicuito* is an inland dependance of the kingdom of *Cbili*, at the foot of the mountains, on the side of *Tucuman*, seated,

VOL. IV.

as it were, without the walls of the king-*Techo*. dom, two hundred leagues in length, the breadth uncertain. There are in it three small towns, thinly inhabited, the chief whereof is *Mendoza*, seated close to the pass of the mountains that leads into *Cbili*, and built by *Peter Castello*, famous for taking *Pizarro's* standard in the civil wars of *Peru*. The name it had from *D. Hurtado de Mendoza* marquis of *Canete* viceroy of *Peru*. The copper of this place is in good esteem. The whole country is famous for nothing so much as for fruitfulness, caused by the melting of the snow in summer on the tops of the neighbouring mountains, and convey'd down at pleasure in trenches to the plain below, which produces such abundance of corn, wine, and other fruits, that it supplies the neighbouring countries. The days in summer are cut very short by the continu'd ridge of mountains, rising up to the skies so close by, which a few hours after noon hide the sun, and are impassable either way, unless when the spring is well advanced, even at which time there is danger in passing them. Yet the natives were forced to travel that way almost naked every year, without regard to sex or age, to serve in the further parts of the kingdom; where many lost their limbs, and others perish'd with cold, besides many other hardships imposed on them, without any care of their souls. The Indians of this province live either in marshes, or in the plains, wandering without any certain place of abode, carrying about mats which are all the houses they have. They feed for the most part upon what they kill, they fish, and make bread of the roots of rushes growing in the marshes, dy'd in the sun. They also dig holes in the ground with small mouths like coney-burroughs, to live in. It is usual among them, like the *Jews*, to sell their daughters, and the husbands make use of those they buy, as slaves, and wives. See more of them at number 65.

The town of *St. Michael* contended long of the with that of *Santiago*, about which should town of be metropolis of *Tucuman*; for the former *S. Michael*. of them was founded in the year 1550 by *John Nunnez Prada*, three years before the latter; but having been destroy'd by an inundation, not many months after it was built, and the town of *Santiago* successfully rais'd out of its ruins, the superiority remained with this last, and the honour of antiquity, with the other. In the year 1564, *Diego de Villaroel*, nephew to *Francis de Aguirre*, governor of *Tucuman*, rebuilt the town of *S. Michael* in a more lasting manner than it was before, by order of king *Philip* the second. After it was thus rebuilt *Gualah* the most powerful Indian in those

8 F

parts

**TECHO.** parts assaulted it, slaughter'd a great number of the inhabitants, set fire to it, and had utterly destroy'd it, but that they say the apostles St. Simon and Jude, whose festival it was, terrify'd the Barbarians with terrible lights, so that they were put to flight, *Gualan* slain, and those apostles ever since have been receiv'd as patrons of the city. Since then it has stood many assaults of the *Calchaquine Indians* without ever being shaken. Its situation is adjoining to those mountains, which run through all south *America*, cutting it in two by a continu'd ridge from north to south. All about it, the tops of mountains, the bottoms of valleys, and the plains are beautify'd with country houses, farms and woods, abounding in all sorts even of *European* fruit; and there is such abundance of all other sorts of fruits of the earth, that the first planters call'd the territory about St. Michael's town the *Land of Promise*. But this most delightful country, like the garden of the *Hesperides*, instead of a dragon, has cruel tygers, which often devour men and beasts; that we may adore the wonderful providence of God, which every where gives prosperity and allay of trouble, lest too much felicity should make man forgetful of his misery. Formerly the natives exercis'd themselves in warlike manner, to destroy these tygers, and they that kill'd most, which was made appear by producing their green skins, were honour'd and preferred above the rest. The *Indians* kill them after this manner. They hold a thick truncheon by both ends, and as the tyger comes up to them, give it her to fasten on; and the nature of them is such, that they never quit that they first seize. When it has fasten'd on the truncheon with teeth and talons, the hunter, turning it about, overthrows the tyger, which done, before it can recover its feet he strikes it into the belly, and bowels it. The *Spaniards* inhabiting the town of S. Michael, being of peaceable dispositions, are more addicted to gallantry than arms, unless provok'd. They are well dispos'd to piety, and love and honour their pastors, which made them ambitious of entertaining the *Jesuits*, whom they receiv'd with great affection, and built their church at the publick expence. The society had formerly been all over the valley of the *Calchaquines*, a part of this country, where they gain'd few souls, by reason of the barbarity of the people, yet all was quiet till the *Spaniards*, during the peace, baptiz'd many of them without any examination, and then, on pretence of causing them to be instructed in christianity, sent them away by force into slavery. These wrongs provoking the *Indians*, the war broke out between them and the *Spaniards*,

and spread throughout all *Tucuman*, and the *Spaniards* themselves being then at variance, it was fear'd the *Indians* might make use of that advantage to destroy them; when the fathers of the society offer'd their service to procure an accommodation with the natives. Two were sent, and so well receiv'd by those people, that in a very few days they converted great numbers, erected eleven chappels in so many villages of the *Indians*, and concluded a peace between them and the *Spaniards*, upon condition no wrong should be done for the future.

*Guaira* is a large country, part of the province of *Paraguay*, bordering on *Brasil* of *Guaira*. eastward, and shut in by the river *Parana* on the west. Its breadth from the plains of the *Urwaicans* in the south, to the woods and inaccessible marshes in the north, is not certainly known, but reaches a vast extent of ground. This country lying for the most part under the tropick of *Capricorn*, is by reason of its immoderate heat and moisture, no less fruitful of provisions than of diseases, the very same causes producing plenty, and fevers. It is much fitter to be the habitation of wild beasts, and serpents than of men. Yet if we may credit *Guzman*, when the *Spaniards* first came into *America*, there were three hundred thousands *Indians* in this country, who liv'd for the most part about the river *Huiba*, *Tibaxiva*, *Paranapana*, *Pirapo* and *Parana*. The ruins of abundance of villages, caus'd by sickness, and driving away of the *Indians*, which appear thick and almost contiguous, make this account credible, tho' at this time scarce the fifth part of that number remains. The inhabitants of two little *Spanish* towns are the posterity of those, who being sent into *Paraguay*, settled in this part about the year 1550. The whole nation lives miserably, having no bread but what is made of the root *Mandioza*, or any flesh to eat but that of wild beasts. They kill abundance of elks, whose hoofs are reported to be good against the heart-burning. This province is famous for a sort of stones, which nature, after a wonderful manner, produces in an oval stone-case, about the bigness of a man's head. These stone-cases lying underground, when they come to a certain maturity, fly like bombs in pieces, about the air, with much noise, and scatter about abundance of very beautiful stones; for they are bright, some of the colour of amethysts, others violet colour, some a grass green, some like glass, some red, and some sharp like diamonds; in fine, such is their beautiful variety, that to see the lustre of the stones one would take those cases for caskets of jewels. But these stones are of no more value than our *Bristol* stones; but before this was known, the new planters of the province

all Tucuman, and being then at various times might make destroy them; when they'd their service with the nation to well receiv'd a very few days, erected eleven villages of the Indians between them in condition no wrong done.

Province of Guaira. The province of Guaira, lying on the river Parana from the plains of the north, is not a vast extent lying for the sick of Capricorn, great heat and moisture, more provisions than of causes producing much fitter to be cast, and serpents may credit Guaira first came into a hundred thousands to liv'd for the most part, *Tibaxiva, Parana*. The ruins of caus'd by sickness, Indians, which contiguous, make at this time scarce remains. The Spanish towns are being sent into part about the year on lives miserably, that is made of the flesh to eat but that kill abundance of. This province is Curious, produces in stones, bigness of a man's lies lying under a certain maples, about the and scatter about beautiful stones; for the colour of amethyst, some a grass some red, and some fine, such is their the lustre of the se cases for caskets nes are of no more es; but before this anters of the province

vince of Guaira, are reported to have abandon'd their colony, after gathering a great quantity of these stones, with a design to return into Spain, hoping to make estates of them. But being stopp'd by the way, they were sufficiently laugh'd at, as they well deserv'd. There are here abundance of trees that yield balsam. The woods produce various sorts of berries and other fruits, as does the rest of Paraguay. The most remarkable among the flowers, is that they call *Granadillo*, which represents the instruments of our Saviour's passion, and of it comes a fruit about the bigness of a common egg, most delicious, when the rind is taken off, so that it is an excellent emblem for the mediation of our Saviour's passion, which after the first appearance is wonderful delighting. Next to this the *Cuembe* is a great dainty, being long and sharpish at both ends, and pretty large; when the rind or shell is broke there appear yellowish kernels, like those of a pomegranate, which are good to eat. The fruit is perfectly sweet, unless you chew a very small seed there is within those kernels; for when that is broke it causes a sharp pain in the jaws. An excellent emblem of human pleasure, which yields gall, under the appearance of honey, when close follow'd. The same seed if it falls upon the tops of trees whose bark is rotten, will send down a sort of winding fibres, like ropes, to the earth, which being fed by the moisture of the ground, take root, and run up again like the ivy, producing abundance of fruit. There are also abundance of dates, not so sweet as those of *Africa*; yet they make a sort of wine of them, and pottage, and eat the pith of the palm instead of bread, for want of better. Among their wild cattle, the swine are famous, because, contrary to the nature of all other creatures, their naval is on their backs, which if you do not cut off, as soon as ever the beast is kill'd, it all corrupts immediately. There is vast abundance and variety of bees, but never to be brought to the house, their wax can never be made white; the honey is generally good, and fit to make methaglin. The snakes are here more mischievous than elsewhere, and there being no remedy against them, they destroy many men. Some there are, which darting themselves off the trees, twist themselves about the bodies of men or beasts, and unless immediately cut in pieces, soon kill any creature, and devour it by degrees. These snakes when they happen to gorge themselves, lay their bellies to the sun, which corrupting together with what they have eaten, they find themselves restor'd to their former strength. Another sort of them lye retching their vast jaws on the banks of rivers, casting out foam, which

deludes the fishes, whom they thus allure and devour. Lastly, another sort springing from marshes or lakes, catch at a certain sort of birds, which defending themselves, when they find themselves hurt, presently eat a sort of herb call'd *Macagua*, from which the birds themselves take their name, as an antidote, and, as soon as well, return to fight. The battle is pleasant to behold, for the *Macaguas* make use of their wings as bucklers, their beaks as a weapon, and the snakes lie intrench'd in water, securing themselves by their winding motion, so that they do not easily kill, nor are they soon kill'd. The province of Guaira has little in it remarkable, besides what has been here mention'd, which are common to the neighbouring countries, and monks and tygers. There was very little christianity in this country even among the Spaniards, till the Jesuits came among them. From the mountains of Brazil, there runs down into this country the river *Paranapan*, almost as great as the *Paraguay*, and falling into the river *Parana*, after it has receiv'd the *Tibaxiva*, *Pirapus*, *Ilangua*, and other lesser streams. Both sides of it are cover'd with great variety of trees, but the natives value the cedars most, which are so tall and of such a vast bulk, that there are vessels made out of single trunks of them hollow'd, which carry twenty oars. The Jesuits sail'd up this river, till they came to the place where the *Pirapus* falls into it, where they gather'd the natives, and built a town, which they call'd *Our Lady of Loreto*, and four miles from that another, to which they gave the name of their father *St. Ignatius*; a third call'd *Liberaca*; and a fourth, the name whereof we have not. These places being built, the Spaniards resorted thither to carry away Indians for their service, but the fathers oppos'd 'em; and the king's visitor happening at that time to come into the country, they obtain'd an order of him to secure the inhabitants of those places from all molestation from the Spaniards. This was the original of the towns of *Loreto* and *St. Ignatius*, which continue to this day, and have been the occasion of building eleven more in that province of Guaira.

About the same time that the Jesuits labour'd, as above, to bring the Indians of Guaira into towns, that they might be the better instructed, which was in the year 1610, those people, that inhabited the country between the city of the Assumption and the river *Parana*, opposite to the *Paraguay*, who till then had oppos'd the Spaniards, began to shew themselves much more tractable than before; for *Arapizanduvius*, a man in great authority among them, went to *Ferdinand Arias*, governor of Paraguay, pro-

Loreto and  
St. Ignatius  
towns.

The people  
of Parana.

**W**ECHO. promising, *If they might have priests sent among them, he with his confederate Caciques, would build a town, and submit to the king of Spain.* The governor, overjoy'd at this offer, went directly to the bishop, to demand of him priests to bring those people to the faith and obedience of the catholic king: the bishop refus'd to send any, because those *Indians* were mortal enemies to the *Spaniards*, and were cannibals, and could by no persuasions be prevail'd upon to alter his resolution. *F. James Torres*, provincial of the *Jesuits*, finding the bishop not to be mov'd, sent *F. Marcellus Lorenzana*, then rector of the *Assumption*, and the only one he had that could speak the language, with his companion *Francis Martin*: these having travel'd thirty leagues into the country, passing the marshes with incredible difficulty, stay'd in the first village of the *Indians* they came at, where they gather'd the people of all the neighbouring country, and mark'd out a place for building a town, labouring day and night to bring those barbarians to the worship of the true God; but it was a work of time and much patience, to change the manners of those harden'd heathens. These *Indians* follow'd their debaucheries in the new town at certain seasons, painting their naked bodies to look the more terrible, and spending two or three days and nights together without sleep, in drinking, laughing, and roaring, after such an extravagant manner that the fathers did not question but they should one time or other perish at their hands in these drunken fits. Nothing but patience could conquer this perverse custom, which at length in some measure prevail'd, and many of 'em sued to be baptis'd, which was not granted 'em till after good trial of their forsaking their barbarous manners. It happen'd that the fame of so many persons being baptis'd spreading abroad, a *Paranian* woman, with her daughter, stole privately from her husband to get an opportunity to be admitted to the christian religion; the *Indian*, enraged at his wife's flight, and laying all the blame on the priest, stirr'd up his country people to take arms to revenge his quarrel. Being got together, they first vented their fury on the *Mahomas*, friends to the *Spaniards*, and having made a great slaughter of them, drove away a great number of captives, to make their inhuman feasts of man's flesh. *F. Lorenzana* hearing of it, sent in the name of the *Spaniards* to complain of that action, and demand the restitution of the prisoners.

They answer'd, *They had already eaten a good number of those Mahomas, and were fattening up the rest for slaughter; threatening the father, and sending him word, It would be a merry day when they had his skull*

*to drink out of.* This was a sufficient declaration of war, and therefore the converts taking up arms for their pastor, chose *Aniagara* for their commander, which discover'd the pride and arrogance of that nation; for *Aniagara* being a man in great repute among his people, and puff'd up with his election, spoke to them in this haughty manner: *You had good reason, gentlemen, to chuse me for your commander; who am well known far and near to be singularly brave: me all the country about fears and loves, for my noble exploits in war; for, who has so often routed the enemy but Aniagara? who has baffled their designs but Aniagara? who has brought away the spoils of their commanders but Aniagara? Aniagara is my name, equally lov'd and dreaded by my enemies; for tho' I have overcome many, yet after the victory I have us'd such moderation, as to kill none of the prisoners, being no less famous for my mercy when action's over, than for my bravery in war.* This speech was receiv'd with great applause. Soon after a company of *Spaniards*, with three hundred of their confederate *Indians*, came to their assistance, and *Aniagara* joining them, they all march'd into *Parana*, where they routed a thousand *Indians* without the loss of a man. This done, the *Spaniards* return'd home, *F. Lorenzana* refusing to go of *S. Ignatius* with 'em as they desir'd, but chusing to remain expos'd to any dangers among his converts. His followers encreasing, he built the town and church in a more convenient place, and gave it the title of *S. Ignatius*; but the *Paranians* being enrag'd by their last defeat, and the hatred to christianity inflaming their rage, studied the ruin of the new town, and joining in far greater numbers than before, their bodies painted after their barbarous manner, pass'd the river, and plunder'd the country about the town. The news hereof being brought, 'tis hard to express what a dread seiz'd all men, for the *Spaniards* were gone, and the enemy more numerous than the townsmen. *F. Lorenzana* prepar'd his people for fight and death, performing all the duties of a good pastor, and his converts offer'd themselves to stand by him. In the mean while their spies brought an account, that the enemy, in a pannick fear, had retir'd into their own country. 'Twas remarkable at this time, that *F. Francis*, of *S. Martin*, companion to *F. Lorenzana*, as so terrified with the news of the approach of the barbarians, that he ran distracted, but afterwards recover'd.

At the same time the society sent missionaries among the *Guaicureans*, of whose manners we'll here give a short account. This nation is divided into two parts, the one call'd *Guaicuru*, t'other *Guaicuruti*: both

the society sent mis-  
 reans, of whose man-  
 short account. This dispers'd.  
 two parts, the one  
 er Guaicuruli: both  
 of

of 'em live on the banks of the river *Para-*  
*guay*, opposite to the city of the *Assumption*,  
 towards the king-dom of *Peru*, dispers'd  
 about, without any settled habitation; but  
 they are most numerous about that part  
 where the river *Pikomayo*, which comes out  
 of the mountains of *Peru* and falls into the  
 sea. They carry about their towns at plea-  
 sure, having no houses but mats, which  
 they set up where they think fit, like pens  
 for sheep. They undertake sowing, but  
 will not addict themselves to it, but live  
 by fishing and hunting. They use them-  
 selves, from their very infancy, to eat all  
 manner of venomous creatures, and feed on  
 worms, snakes, tygers, and lions, with-  
 out any hurt. The women are cover'd af-  
 ter a barbarous, but modest manner. The  
 men, to look the more terrible, daub rather  
 than paint all one side of their bodies, from  
 head to foot, with stinking colours: instead  
 of a beard, they fasten a stone a finger  
 long to their chin; anoint their hair with  
 a bituminous matter. make themselves bald  
 by art, pull up all other hairs about their  
 body, and make themselves monstrous by  
 scarrifying their faces, making deformity  
 the standard of valour. Their chief de-  
 light is drunkenness and war; but they go  
 thro' cruel trials to attain to the title and  
 dignity of soldiers; for those that aspire to  
 this honour are to testifie their courage to  
 the rest by enduring most hideous tortures,  
 boring their legs, thighs, tongues, and  
 other parts of their bodies with an arrow,  
 and if they flinch, or complain the least,  
 amidst their sufferings, they're excluded the  
 honour; which that they may be the surer  
 of obtaining, the very children use to run  
 thorns and briars into their flesh for sport  
 and pastime. All their youth they practise  
 running, inure themselves to labour, and  
 are train'd in their way of fighting. They  
 pay a greater honour to their commander  
 than any of the other *Indians*, receiving  
 what he spits in their hands, standing about  
 him when he eats, observing his least mo-  
 tions, and clearing the ways for him:  
 drunkenness, or the desire of satisfying  
 their natural cruelty, is often the cause of  
 war among 'em: they are continually en-  
 gaged against the *Cbiriguans*, *Alipons*,  
*Frontons*, and other nations like themselves  
 in manners. Of the prisoners taken in war,  
 they sell or kill all that are grown up to  
 man's estate; the younger fry they breed  
 up after their own way. They love dark  
 nights to fight in, having no force but in  
 the fury of their onset, not knowing how  
 to stand together in bodies. Having done  
 mischief by night, they retire to their lurk-  
 ing places, over horrid marshes and bogs,  
 all scatter'd about like tygers, thus, keep-  
 ing many spies abroad, they not only op-

Their way  
 of war.

pos'd the *Spaniards* during almost a whole *TECHO*  
 century, but very often made great slaugh-  
 ter of 'em, continuing in their ancient super-  
 stitions. They pester'd the city of the *As-*  
*sumption* from its foundation, committing  
 robberies and murders, and wasted all the  
 places about it with continual excursions.  
 They carried away the sister of *Ferdinand*  
*Arias* the governor, and several other *Span-*  
*ish* women, into miserable thralldom. In  
 fine, they did a thousand mischiefs without  
 scarce receiving any, being no less dreadful  
 in peace than war. They were defended  
 and born out in the savage way by the  
 marshes of the country, many rivers not to  
 be forded, thick woods, and bogs full of  
 reeds, where they hid themselves, and by  
 the multitude of vast snakes bred by the  
 heat of the sun in that wet soil. This First intro-  
 country, tho' separated from the city of *duc*  
 the *Assumption* only by the river *Paraguay*, *ty*.  
 had not as yet been visited by any priest,  
 because of the barbarity of the people;  
 however, *F. James Torres*, provincial of the  
*Jesuits*, ventur'd to send thither *F. Roch Gon-*  
*zales* and *F. Vincent Griffins*. They pass'd  
 the *Paraguay*, and having travel'd three  
 days over the marshes, were carried before  
 the commander of the *Guaicureans* as spies,  
 but he finding to the contrary, defended  
 them from any violence. Being ignorant  
 of the language, they were forced to make  
 use of a converted *Indian* interpreter, all  
 whose words they diligently set down, to  
 learn the language; which those ignorant  
 heathens observing, they concluded they  
 had mark'd down the roads, their strength,  
 and other circumstances, to bring the *Span-*  
*iards* upon them, for which reason they  
 had resolv'd to murder them; and had  
 done it, but that *F. Gonzales*, by the help  
 of his paper, recited to 'em, in their own  
 language, those mysteries of our faith which  
 he had taught them by the interpreter;  
 whereat they were so well pleas'd, that the  
 commander order'd a cottage of mats to  
 be set up for them, and became better in-  
 clined towards christianity. After spend-  
 ing a month there, the fathers propos'd  
 the building of a town, which the *Indians*  
 (who love novelty) easily consented to: be-  
 sides, their captain, upon the publick faith  
 given him, ventur'd himself with *F. Roch*  
*Gonzales* into the town of the *Assumption*;  
 and returning from thence, the provincial  
 went with him, being carried over rivers in  
 a sort of boat made of a hide, and over  
 marshes on the backs of *Indians*: at length  
 he came to the place appointed for the  
 town, where the scatter'd *Indians* were ga-  
 ther'd, and set up their huts of mats. The  
 fathers liv'd among them in a miserable  
 manner, feeding upon every thing as they  
 did, except venomous creatures. 'Twas  
 8 G very

**TECHO.** very difficult to curb the vices of those barbarians, for 'twas terrible to hear their drunken cries at night. In the day they would perform some hellish ceremonies, and many lewd lascivious actions, in the face of the sun. In fine, the fathers labour'd there long with little success, for all those nations of *Indians* which do not sow, nor dwell in settled places, are more vicious, barbarous, and obstinate than the others, and less fit to receive the faith.

The provincial having done such good service about the town of the *Assumption*, sail'd down the rivers *Paraguay* and *Plata*, to the port of *Buenos Ayres*, where arriv'd nineteen fathers out of *Spain*. sent by his catholic majesty to propagate the faith in those parts, with orders that all so employ'd should be maintain'd at his cost. About the same time *Ferdinand Arias*, late governor of *Paraguay*, prevail'd with the provincial to settle some fathers in the town of *Santa Fe*, eighty leagues above the port of *Buenos Ayres*. This town was built by

Town and country about *Santa Fe*.

Their manners.

*John Garay*, not long before that of *Buenos Ayres* was rebuilt, upon the banks of the river *Quilonisa*, just where it falls into the river of *Plata*, for the convenience of ships coming out of *Europe*. The *Indians* often fell upon the new planters, but without success. 'Twas formerly very remarkable among the other customs of the natives, that the women were not allow'd to paint their bodies with a clay colour till they had tasted human flesh. If they had not prisoners taken in war, they would cut the dead bodies of their own people in pieces, and give 'em to the young maids to eat. They planted trees over the graves of their ancestors, and adorn'd 'em with ostrich feathers, and met there at certain times to lament. Before the coming of the *Spaniards*, they liv'd upon fishing and hunting, but afterwards the herds of black cattle multiply'd so fast, that they serv'd not only to feed the natives, but in some measure to enrich the *Spaniards*. It appears upon computation, that from the year 1611 till 1613, a million of oxen were drove from the country about *Santa Fe* into the kingdom of *Peru*, which have yielded a prodigious profit. This is all that was remarkable concerning the town of *Santa Fe*, besides the hopes of bringing those barbarians to the faith of Christ; for on that side next *Paraguay*, runs the plain of *Calchaquina*, almost an hundred leagues along the river of *Plata*, and is inhabited by most inhuman people. In this town the fathers settled a small house, and *Ferdinand Arias*, the late governor, with his maiden daughters, carried earth upon their shoulders at the building of the church.

A college at *Cordova*.

The fathers had now more work upon their hands than 'twas possible for them to

go through, by reason of the great multitudes of infidels, and vast extent of the country; besides, many places desir'd they would settle among them, but they were too few to fix in every part. Their chief seat was at *Cordova*, where they settled a college and noviceship, chusing rather to breed up their young religious there, than in *Chili*, the delights of which country might render them less able to undergo the toils they were to be expos'd to. Many thousands of infidels were converted in the country about this town, whence the provincial went over the mountains to *Chili*, and in the metropolis of that kingdom, at the request of the magistrates, founded a college for the education of youths, under the care of the fathers. The provincial returning into *Tucuman*, *Luis Quinones*, governor of the province, sent to acquaint him, That certain straggling soldiers having kill'd some Caciques of the *Diaguitas*, those people were again revolted; and desir'd he would send some fathers to pacifie 'em. *John Darius* and *James Baroa* were appointed to manage that affair, who passing thro' *Aconguinea*, betwixt the cities of *S. Michael* and *London*, and the places adjoining to the wood of *Joncavil*, converted abundance of infidels. They entering the territories of the *Diaguitas*, the success answer'd their expectation, those people freely condescending to their proposals, and they on their side engaging to have them secur'd against all outrages of the soldiers. Thus they visited the *Guassans*, *Malleans*, *Haacaffes*, and *Andalgas*, inhabitants of small towns, baptizing five hundred of 'em. Those fathers we mention'd before, that had been among the *Guaicureans*, having met with very little success, were about to be recall'd, but the commander of those people desiring they might be continued, and delivering up his son, then twelve years old, to be bred a christian, they were continued, in hopes of bringing those barbarians to more civility: in the mean while the fathers in *Guaira* and *Parana* continued indefatigable in their labours, in the latter of which provinces they found the natives so wild, and unfit for the yoke of Christ, that they thought fit to forbear for some time, till by degrees they could by fair means and good offices reclaim and bring 'em to something of humanity: in the first their endeavours sometimes seem'd to answer expectation, but then, on a sudden, those unsettled infidels would slip away from the towns to their usual lurking-places, and fall to their ancient practices, seizing upon such other *Indians* as they could come at, to sell 'em for slaves, and spending whole nights celebrating their victories, and performing many superstitious acts. *F. Romero*, one of the

Another in *Chili*.

*F. Romero*, one of  
the

the missioners there, enquiring into their  
religion, found that they ador'd the moon  
and the constellation call'd *Charles Waine*,  
and had no other worship. During these  
transactions, father *Valdivia* had been in  
*Spain*, to solicit for the *Indians* of *Chili*;  
and having obtain'd all he went about, re-  
turn'd into that kingdom, where he pre-  
sently had a conference with fifty *Umes*  
(so they call their great men) and after a  
short time concluded a peace with the *Lei-*  
*cureans* and *Pureneans*, *Ulablame*, one of  
the principal *Indians*, answering for the rest.  
He pres'd to have some women belonging  
to *Aganamon*, another prime leader of those  
revolted people, restor'd to him, they be-  
ing then prisoners: 'twas granted that a  
daughter, who was an infidel, should be  
return'd, but for his concubines, and ano-  
ther daughter, who were become christians,  
he could not prevail. Peace being settled,  
*Ulablame* took three fathers along with him,  
to persuade the remoter *Indians* to submit  
themselves; but when they came to his  
town call'd *Leicura*, *Aganamon*, dissatisfied  
with what had been done, enter'd the said  
town by force, killing some *Umes* that had  
been for the peace, and railing at the *Je-*  
*suits*, because his women had been detain'd,  
first dash'd out their brains with clubs, and  
then hew'd their dead bodies with other  
weapons. Thus died *Martin de Aranda*,  
*Horatius Becbius*, and *James de Montalva*,  
for refusing to restore the infidel his concu-  
bines. After this murder, most of the *In-*  
*dians* fell from the peace, many factions,  
tho' wholly innocent, fearing they might  
suffer among the guilty; yet eight thou-  
sand *Caracatans* continued friends to the  
*Spaniards*. Because we do not pretend to  
write the actions of the fathers, but only  
what is historical, or relating to the de-  
scription of those countries, we have pass'd  
by the greatest part of the fourth book, ac-  
cording as our author divides his work,  
only relating what is to our purpose, and  
omitting all that relates only to the society.  
All we can add out of the said fourth book  
is, that about fifty leagues from the city of  
the *Assumption*, up the river, is an *Indian*  
town call'd *Guaramba*, consisting of about  
nine hundred families, part christians and  
part infidels, and remarkable for nothing  
but being very unhealthy; and about ten  
miles from it are two others of about three  
hundred families each; the names of 'em  
are *Pitave* and *Nirgua*.

Country of  
*Parana*. Tho' somewhat has been said before  
concerning the people of *Parana*, that re-  
lating only to such as live between the town  
of the *Assumption* and the river of that  
name, we must in this place add something  
of that country in general. The river *Pa-*  
*rana* runs five hundred leagues, as has been

said above, before it falls into the ocean, *Teciro*,  
thro' a mouth eighty leagues in breadth,  
and has not undervel'dly the name of *Pa-*  
*rana* given it, as representing the greatness  
and majesty of a sea in moist parts. This  
makes me dissent from *Joseph d'Acosta* and  
others, who reckon the river *Maranbaa* the  
greatest in *America*; tho' the same *Acosta*  
affirms the mouth of *Maranbaa* is but thirty  
leagues wide. The *Parana*, as well as the *Wood con-*  
*Silaro* in *Naples*, has the occult quality of *verted into*  
converting wood into stone, so that 'tis fre-  
quent to see sticks, as far as they lie under  
water, petrify'd. *Ferdinand Arias*, the go-  
vernor, set up a pillar thus metamorphos'd  
or converted, in the porch of his house:  
besides, it every where breeds fishes of a  
vast bulk; and *F. Ruiz* affirms he has seen  
some thicker than an ox towards *Guaira*.  
'Tis frequent to see sea-wolves swimming  
in shoals, lifting up their heads above wa-  
ter when a man whistles, and then ducking  
again, as if they sported. The *Capibara*,  
an amphibious creature, is often kill'd by  
people as they sail along. In the middle of  
the river *Parana* lies an island eighteen  
leagues in compass, all round very high,  
and encompass'd with lofty rocks, so that  
'tis inaccessible, unless in some places, where  
the land is a little lower, but those parts  
beset with many dangerous whirl-pools.  
This place was formerly the refuge and  
fortress of the *Poanensians*, against incur-  
sions of the *Spaniards*, for which reason the  
inhabitants, besides their natural fierceness,  
were of a warlike disposition. Both the  
shores, as well where they are plain and  
open as where they are wooded, produce a  
great multitude of beasts and birds: there  
are every where great flocks of birds and  
parrots, but these last are three times as big  
as those of *Asia*, and their feathers so beau-  
tified with variety of colours, that the na-  
tives formerly, for their sightliness, ador'd  
'em as gods; but they're only commenda-  
ble for their colours, as never learning to worship'd  
talk. That sort of bears is very remarkable  
ble which are call'd *ant-bears*, because of  
their eating those insects; their head is ve-  
ry long, the snout twice as long as a swine's,  
and sharper, out of which they draw a  
tongue like a spear, as 'twere out of a  
scabbard, and thrust it into the ant-hills,  
and draw it back with a great booty of  
ants sticking to it. These ants, which are  
as big as the top of one's finger, being  
toasted over the fire, are reckon'd by the  
natives and *Spaniards* as dainty food. For-  
merly there were no great towns upon the  
*Parana*, but the people liv'd dispers'd in vil-  
lages. Both sides of the river, running a  
vast extent, are inhabited by several na-  
tions, all, except the *Guairanians*, as like  
one another in manners and barbarity as  
they

TECHO. they are remarkable for diversity of languages. Among 'em all, I think those very remarkable who feed upon a certain sort of earth, dry'd at the fire, and then dipp'd in the fat of fish; so that there is little cause to admire they should think so little of heaven, who find so great a relish in earth. That part of the *Parana* which is next the ocean, for the space of two hundred leagues from the mouth, is by the *Spaniards* call'd the *River of Plate*, the reasons given for this name varying; for some will have it to be so call'd from *Gavot's* plate, as was observ'd in its place; others, from the first planters seeing the natives on the shores as they sail'd along in their ships cover'd with white shells, which at a distance glitter'd like silver. Some will have this name given it because the lakes and rivers, on whose banks the silver-mills are set at work in the province call'd *Los Cbarcas*, in *Peru*, roul down, after a prodigious long run, a great quantity of good silver oar among the dross there wash'd away, which quantity is so vast, that those who know how to judge of metals guess there have been forty millions of silver so carried away by the rivers *Tarajia* and *Picalmayo*, from the first working in the mountains of *Potosi* till the year 1611. And for quick-silver, us'd in the working of the plate, the quantity is so great, as serves to poison the waters of those rivers for a vast space, so that they breed no fish, that venomous mineral destroying all living creatures: but it is a folly to assign this for the reason of calling the river of *Plate* by that name, because 'twas certainly so call'd before the mountains of *Potosi* were known to the *Spaniards*. Whatever the reason of the name is, the *Parana*, as far as 'tis call'd the river of *Plate*, that is, till the *Paraguay* falls into it, has three *Spanish* towns on it, which in some measure keep the *Indians* about the shore in subjection. Towards its source, for almost the space of two hundred leagues, it runs thro' *Guaira*, and other countries in a manner subdued by the *Spaniards*. That part of *Parana* which lies between *Guaira* and the river of *Plate*, and is opposite to the *Paraguay* for almost an hundred leagues, still holding out, chose rather to be harass'd by war than to submit to a foreign yoke. Those people baffled the forces of *Ferdinand Arias*, a brave commander, and other governors, tho' they consisted of considerable numbers of *Spaniards*, and the choice of their confederate *Indians*. They almost ruin'd the *Spanish* town of *S. John*, seated on the conflux of the rivers *Parana* and *Paraguay*, by their continual excursions. They often invaded and terrified the converts made by the *Jesuits* at the town of *S. Ignatius*. There

Fierceness  
of the peo-  
ple of *Pa-  
rana*.

was no going out of *Tucuman* into *Paraguay* without a guard, the *Paranenians* lying upon all the roads, and killing and robbing all they met. But none so cruel as those, who having been converted, were fallen off; for they being incens'd by the service the *Europeans* requir'd of 'em, continually set the people of *Parana* against their masters; so that, for several reasons, the name of the *Paranenians* was equally terrible to the *Spaniards* and their *Indian* confederates. No priest had been among them as yet, that is in the year 1615, except only *Roch Gonzales*, who ventur'd among 'em two years before, with no other weapon but the cross, being sent by *Marcellus Lorenzana*, having made way to this mission by founding the first town fifteen leagues from the river. This same year 1615, the same *Roch Gonzales*, after travelling some time thro' an uncouth country by land, came to a lake call'd *Appuen*, running into the *Parana*, and call'd by the *Spaniards* *S. Anne*. About it dwelt abundance of infidels, with whom he so far prevail'd, that they desir'd him to mark them out ground to build a town, which he did, and converted many families; but the *Franciscan* fathers, who had preach'd there before, demanding to have that part left to them which they first took in hand to instruct, he freely quitted it to them, being sensible there was work enough elsewhere for the society. *F. Gonzales* went up the river by boat, tho' much oppos'd by the *Indians*, who would not hearken to his proposals, about thirty leagues, and came to *Iiapua*, where four *Caciques* resided with a considerable number of their followers, who after some difficulty submitted, promising to erect a new town in that place provided the society would promise to settle among them: he thereupon hastened away to the town of the *Assumption*, to negotiate the finding of some fathers to settle there. As soon as he was gone, the *Paranenians* on the upper part of the river, being wrought upon by an apostate, made war upon the *Iiapuans*, for having entertain'd *F. Gonzales*, and attempted to pull down a great cross he had set up, but were oppos'd by the *Iiapuans*, who, tho' still heathens, stood about it and repuls'd 'em, tho' much more numerous.

*James Marino Negron*, governor of *Paraguay*, and the river of *Plate*, being dead, *Francis Gonzales de Santa Cruz*, brother to *F. Roch Gonzales*, was deputy governor till the king should appoint another. He thinking 'twould be an honour to him that the province of *Parana*, so often attempted without any success, should be reduced during the time of his government, and by means of his brother, having conferr'd with

with F. Marcellus Lorenzana the rector, granted a patent in the fullest manner he could, by which he permitted the society to build as many towns as they thought fit upon the rivers Parana and Uruaica, to appoint magistrates, and erect churches. F. Lorenzana provided all necessaries for building a new town, and so they dismiss'd F. Gonzales, who return'd to Itapua, where he arriv'd upon Christmas-Eve. Itapua is a place equally distant from the mouth of the river Paraguay and the borders of Guairara, being about sixty leagues from each, and standing high on the south side of the Parana; a lake that runs into the river makes a port before it. There were Indians enough in the country about, to make a handsome town. The Itapuan Caciques, who had gain'd renown by defending the cross, gave F. Gonzales, when he return'd, a house made of mud and straw, after the Indian manner. He having fitted up one part of 'a for a chapel, what by his own means, and the assistance of some Indians his emissaries, drew a considerable number of the neighbouring people to come and join with the Itapuans. F. James Boroa being come to keep F. Gonzales company, after he had been there four months alone, they both joyfully mark'd out the ground for the new town, built a house, and church big enough to contain the multitude, made huts for the Indians, whom they persuaded more by their example than words, brought clay and straw, cut timber, and made it fit for the work, being in such want of provisions, that they accounted an insipid sort of wild thistles, and bread made of the pith of trees, as dainties; they using to make some pottage of a sort of herbs which only the parrots were wont to eat before, those people in a harmless way of jesting call'd the fathers parrots. The church being built, the dedication was celebrated in the best manner they could; and a picture of the blessed Virgin being set up therein, not only the said church, but the town, took the name of the Annunciation, under which name it continues to this day. By the contrivance of the devil, 'twas soon given out, that the fathers were no priests, but spies in disguise, to betray the people, under a shew of religion, to the Spaniards; and, that they brought the plague with their pictures and books. These things alienated many of the Indians from them, till being by degrees undeceiv'd, they became more familiar with the fathers. Having built this town and the other we mention'd before, call'd S. Anne, on the lake Appuen, which he left to the Franciscans, F. Gonzales return'd to the city of the Assumption, where having given an account of all he had done to Ferdinand Arias, who

VOL. IV.

was again appointed governor of ParaguayTucuman. and the river of Plate, he endeavour'd to dissuade him from going into those parts, as yet but in vain. The governor therefore, having sent the father before to dispose the Indians to receive him, set forwards with fifty Spanish soldiers. Being come to the river Parana, he cross'd it in small vessels provided by F. Gonzales, and when they arriv'd at Itapua, made great rejoicing, the governor saying to his men, *Let us give God thanks on our knees, that by virtue of the cross alone we now tread that ground, which neither my sword, nor the valour of the Spaniards, could conquer in so many years.* Then having appointed commanders of the Indians, and charg'd them to be respectful to the fathers, he set out from the port of Itapua the same day he came thither, covering his fear with the pretence of business, because the report went, that the inhabitants up the river were alarm'd at his coming, and their boats began to appear. As he was sailing down the river, about three hundred Indians appear'd on the steep banks arm'd with clubs and darts, and had certainly attack'd the governor, but that Gonzales, by his authority, with-held their commander: his name was Tabacambius, who being ask'd by the governor to accept of a general's staff, in his catholick majesty's name, by which he might be known to be commander of the Paransians, haughtily answer'd, *He had been their commander before, and should be so still, without a staff.*

All the country that lies between the Of the river Maranon, otherwise call'd of the Ana-Guairazones and the Parana, which are above a thousand leagues distant from one another, makes almost one half of South America, all which country the Guairanians inhabit; and, not so satisfied, passing these bounds, possess all that lies between Paraguay, Parana, and the borders of Peru. But within that compass there are several other nations to be found, differing from the Guairanians in language and manners, and whom they out of their natural pride call slaves: with them they have continual bloody wars, fattening the prisoners they take, and eating 'em. At these feasts they take new names to express their warlike exploits. They live in little scatter'd villages, which are under the command of Caciques, known either for their noble descent or popular elocution. In time of war they chuse a general of known valour; but know nothing of regular troops, keeping their ranks, foreseeing dangers, chusing a proper time or ground, improving opportunities, or laying up provisions. For the most part they fight as chance offers the occasion, being hot the first onset, but cowardly if suffer'd

8 H

TO

**TACHO.** to cool. In fight they use clubs and arrows, and make their bodies hideous with dismal colours before they engage. They make no use of lime, stone, or tiles; but build houses of clay and straw, either round or long, and for the most part so large that one of 'em makes a village. Matrimony is at will, for every one has as many wives or concubines as he can keep or get. The *Caciques* claim a right to the handsomest maids in their village, whom they easily give up to be deflower'd by their followers or friends. To have to do with their daughters-in-law is frequent, and no shame to put away wives, or be cast off by them, 'Tis look'd upon as a great crime to turn any stranger whatsoever out of doors. They entertain their guests with weeping, and long praises of their ancestors, but their sorrow ends in laughing and feasting. They cover their nakedness with a very short garment made of shells or feathers put together, the rest of their body is naked. They sow *Indian* wheat, and several sorts of pumpions, beans, and roots. When any person, particularly those of any note, among them dies, 'tis not to be express'd what horrid howling the women make in all parts, swelling their cheeks, they by fits give hideous shrieks; they sometimes cast themselves headlong from high places, tear their hair, batter their fore-heads, turn the dead bodies, embrace and talk to 'em, bow their sides, open their hands, lay the carcases into great pots, and, believing the souls are buried with the bodies, cover the faces of the dead with concave dishes, that the souls may not be stifled, to shew they had the same master, who pray'd that the earth might lie light upon those they lov'd. They adore no God, but are addicted to the superstitions of wizards and such impostors. Their manner of conjuring varies according to the several countries; but they almost all agree in giving the greatest honour to those forcerers who are most familiar with the devil. Those that aspire to the knowledge of their magick arts are to mortify themselves with most severe fastings and other afflictions, which whilst they are performing they live alone, naked, and without washings, in dark and remote places, eating nothing but a sort of pepper and *Indian* wheat roasted, affecting to look ghastly, with their hair uncomb'd and clotted, their nails grown to a shameful length, and other filthy circumstances, and bring down their bodies with other rigorous practices, till having almost lost their strength and senses with fasting, they call upon the devil and see him. 'Tis their business to do mischief, by darting bones, coals, and hairs undiscover'd, which things being depriv'd by their charms, and piercing the bodies

of men, make them waste away, and sometimes die, unless he that did the mischief, take the cause out of the parts so affected. There's another sort of magicians, who do no harm, and only boast of their familiarity with the devil, and pretending they can discover secrets and things done a great way off, to them that ask, which they learn of the hellish fiends. In some countries, if a woman will be a witch, she must pretend to chastity, for if once she proves with child, she's no longer respected. The devil never appears to these conjurers without a hideous and frightful noise. There's also a sort of forcerers who pretend to physick; 'tis also their business to talk much, lye without measure, and for the most part do nothing: they suck the sick bodies, and pretend to spit out some corrupt substance, as if they had suck'd out the cause of the distemper. The whole nation minds dreams Superstitious, and superstitious observations to a madness. They think the touch of an owl will make them lazy, because that bird among them does not lie much, nor build a nest. If a woman eat a double ear of millet, she believes she shall be deliver'd of twins. They exercise a young maid, the first time she has her courses, after a strange manner; she's put into the hands of a lusty brawny woman to be thus exercis'd; she's forced to abstain from eating flesh till her hair before, cut off, grows down to her ears. 'Tis a crime for her to look upon men; if she happens to see parrots, they think she will be talkative ever after; she's made to sweep the house, to carry water, walking apace without stepping out of the way, to pound corn in a mortar, never to be idle, and to do all the business of a good housewife. This exercise of theirs *John Rbo* reckons among their many virtues. In short, they are of opinion the young girl will behave her self all the rest of her life as she does about the time of her first courses. Women with child abstain from almost all sorts of food; they eat no elk, lest the child should be born with a swollen nose; if they eat small birds, they fancy they shall bring forth a small child. They are forbid eating any of those creatures whose qualities they fantastically imagine may hurt their children. The laws the men are to observe when their wives are with child are these; not to kill any wild beast, not to make arrows, clubs, or handles to any other instruments; to abstain from eating flesh fifteen days after the wife is brought to bed; to unbend the bow; not to lay snares for birds; to lie at home idle, and fasting till the infant's navel-string be cut: if they do any thing to the contrary, they must expect some great mischief will follow. When the new-born babe happens

to be sick, the kindred, men and women, ab-  
stain from such diet as they believe would  
hurt the infant, if it eat of it. As soon as  
the children are born, they give them names  
agreeable to the beauty and imperfections  
of the body. If it be black or swarthy,  
they call it crow; if it have a hoarse cry,  
frog. I omit much more of the same  
stamp, lest it nauseate the reader. Yet it  
is found by experience that this nation, not-  
withstanding this folly and barbarity, if it  
be well taught, is more apt than any other  
people of *America* to embrace and retain  
the christian faith, and to learn mechanic  
trades, and a good measure of civility.

Error of  
the Guai-  
curians.

Many following chapters affording but  
little matter to our purpose, we will only  
collect out of them, what may be worth  
relating, giving this advertisement of it,  
that the reader may find many short re-  
lations put together, which have no particular  
connection among themselves. The fathers  
of the society preaching among the *Guai-  
curians* were not so successful, as in other  
parts, those *Indians* looking upon baptism  
as mortal to whosoever receiv'd it. The  
cause of the error was, that by reason of  
their many vices this sacrament was not  
granted them till they were in the utmost  
extremity, and therefore most of them that  
receiv'd it, immediately dy'd; which those  
infidels imagin'd to be the effect of bap-  
tism. But time and experience undeceiving  
them, they afterwards came in more freely  
to embrace the faith. It happen'd that a  
sorceress among them lying desperately sick,  
and having try'd all the arts of their im-  
pofors for her cure, and been supply'd during  
the time of her sickness with some better  
sort of sustenance by the fathers, overcome  
by their charity, turn'd off her *Indian* charm-  
er, and desir'd to be baptiz'd. As the fa-  
ther was about complying with her desires,  
a multitude of *Indians* flock'd about him,  
begging he would not bestow that favour  
on the worst of women, who was us'd to  
do much mischief; for if he should, accord-  
ing to his custom, bury her in the chappel,  
she would turn into a tyger and destroy all  
about her; and therefore it was better to  
carry out her carcase when she was dead,  
into some remote solitary place, lest she  
should do more harm dead, than she had  
done alive. This they said, because the  
*Guai-curians* are of opinion, that the souls  
of wicked persons transmigrate into wild  
beasts, which are mischievous in propor-  
tion as they were when living. But the fa-  
ther undeceiving them, baptiz'd her, shewing  
that the virtue of baptism was such, when  
rightly apply'd, as to make the blackest  
souls brighter than the sun, and send them  
into eternal bliss. At *Cordova*, in the pro-  
vince of *Tucuman*, about the year 1516, a

monastery of nuns was founded by *Eleanor Texedo*,  
which was the first in those parts. She  
design'd them for *Dominicans*, and ac-  
cordingly they wore that habit, and the  
monastery was erected under the invocation  
of *S. Catherine of Siena*, but there being  
none of the order to begin it, nor any book in  
use of the rule, they follow'd that of *S. Teresa*,  
with some little alteration, which afterwards  
bred great contests; for some would have  
it that their vows were void, because they  
were design'd for *Dominicans*, and follow'd  
the *Carmelite* rule, besides other circumstan-  
ces that made them a confus'd sort of an  
order; but after much debate the thing was  
refer'd to pope *Paul* the fifth, who order'd  
the present nuns should remain for the pre-  
sent as they were, under the rule they had  
taken their vows to; but for the future o-  
thers admitted should be reduc'd to the rule  
of *S. Dominick*, and so the monastery con-  
tinued as had been at first design'd.

Great hopes were conceiv'd of advanc-  
ing the faith, throughout the province of *Jaguapua*,  
by the faith, throughout the province of *Jaguapua*,  
*Parana*, and introducing it into that of  
*Urvaig* or *Urvaica*, when the governor  
*Ferdinand Arias* had like to disturb all, by  
designing a conquest on the latter of those  
places, from which all the persuasions of  
the fathers could never divert him, till the  
*Spaniards* refusing to follow him in that  
dangerous and unprofitable expedition, ob-  
lig'd him to alter his resolution. *F. Gon-  
zales* being eas'd of this fear, which would  
have alarm'd the *Indians*, and utterly de-  
stroy'd all that had been done for their con-  
version, went away to a place the *Indians*  
call *Jaguapua*, where he persuaded a good  
number of the scatter'd natives to come to-  
gether and settle. *Tamboaiens*, Cacique of  
an island opposite to *Jaguapua*, increas'd  
the number of those people, and by his ex-  
ample many more flock'd thither out of  
the woods, who all together built a town,  
*F. Gonzales* marking out the ground for  
them. *Jaguapua* is about four leagues from  
the town of *Itapua*, and twelve from that  
of *S. Ignatius*; and therefore there being no  
fathers to settle at *Jaguapua*, those of the  
other two places took it by turns to go over  
thither to instruct the *Indians*, where they  
made very many converts. At this time  
*Arapizanduvius* the *Indian* commander of  
the town of *S. Ignatius*, taking some dis-  
gust at the fathers, gather'd a number of  
malecontents, and stirring up the *Paranen-  
sian* infidels, went away to join *Tabacam-  
bius*, who, we said before, had refus'd to ac-  
cept of the general's staff from the gover-  
nor of *Paraguay*. These two great men re-  
tiring into a peninsula made by the river  
and a lake, call'd by the natives *Ma-  
racanais*, struck a terror into the new towns  
of *Parana*, and the fathers were much  
afraid

**TECHO.** afraid lest they should by their great authority draw many converts to abandon the faith. Therefore *F. John de Sales*, before they were settled in their designs, ventur'd to go from the town of *S. Ignatius* to them, to persuade them to peace, where he had doubtless been kill'd, had not an old woman put them in mind that the *Spaniards* would revenge his death, which made the infidels hold their hands; and the father taking that opportunity to speak to them boldly, his words had such force, that *Arapizandureus* immediately beg'd pardon, and drawing together his followers, forsook *Tabacambis*, returning to the town of *S. Ignatius*. At the same time *F. Joseph Cataldinus* attended by a small parcel of converted *Guaicanians*, ventur'd through the country among the *Pirapocansians*, among whom he spent ten months, and having converted seven hundred of them, caus'd them to remove out of their woods, and build a town not far from that of *Loreto*. Very little good was done among the *Guaicanians*, their obstinacy and stupidity prevailing above all the labours of the fathers, and therefore many advis'd they should be given over; but father *Peter Romero*, who had spent some years among them, and brought them to live together in a town, was for overcoming them with christian patience and kindness. The plague raging among them, they all dispers'd and fled to the woods, many of them that had taken the infection dying by the way. *F. Romero* never ceas'd following them, and prevail'd with some few at the last gasp to receive baptism, and when the virulency of the plague was over, brought back those that had escap'd it to the town. They abusing that health they had been restor'd to, according to their natural inclination, presently engag'd in unjust wars, making slaves of the prisoners they took, spending the nights in hideous cries, giving up themselves to drunkenness, and celebrating their new moon festivals with superstitious madness. This year 1617, *F. John de Viana*, who had been sent procurator to *Rome*, arriv'd at the port of *Buenos Ayres* with thirty seven fathers he gather'd by the general's order, for a supply to the province of *Paraguay*. This addition made the province so flourishing, that the provincial now settled nine colleges in it, and seeking which way he might enlarge either among the *Spaniards* or *Indians*, soon found an opportunity, the *Spaniards* of *Essecho* and the *Calchaquina Indians* admitting the fathers to settle among them. *Essecho*, otherwise call'd *Nuestra Senora de Talavera*, is a small town, very conveniently seated for the relief of those that travel out of *Peru*, to the river of *Plate* and *Paraguay*, through *Tucuman*,

37 Jesuits arrive at Buenos Ayres.

Essecho town.

and it had increas'd beyond all the other cities of *Tucuman*, but that the unwholesomeness of the air, which is hot and moist, obstructed its thriving. This place being in want of priests, made provision for and receiv'd five of the fathers.

The valley of *Calchaquina* above-menti-<sup>Valley of</sup> on'd running thirty leagues in length, from north to south is but of a small breadth,<sup>nd.</sup> and almost enclos'd on both sides by the high ridges of mountains that make the borders of *Peru* and *Chili*; the two angles of it look, the one towards *Salta*, the other towards *London*, two small towns of *Tucuman*. Many monuments of the conquest make it still appear, that the inhabitants of this valley were formerly subject to the *Ingas* kings of *Peru*; and those people, to this day, have a veneration for the very name of the *Ingas*. It is most certain, there are mines of rich metals in this valley, but as yet they could not be discover'd, those *Indians*, for fear of being forced to dig, concealing the gold and silver, which have been the cause of so much mischief. It is reported, that in the night there is a sort of creature seen there, which casts a mighty light from its head, and many are of opinion that light is caus'd by a carbuncle; but as yet this creature could never be taken or kill'd, because it suddenly baffles all the designs of men, leaving them in the dark by clouding that light. The natives of this valley, ever obstinate from the first coming of the *Spaniards* of *Tucuman*, have defended themselves and their families with such resolution, that the women have been seen to force their husbands back to fight, driving them with fire-brands, when they saw them give way or fly; and when their strength has fail'd them, rage still prevailing, rather than fall into the hands of their enemies, they have either run upon their swords, or cast themselves headlong from the tops of mountains. *Alonso Barfena* had formerly pacify'd these people, which peace they had often broke at pleasure without regard to articles, either running into open rebellion, or doing harm under shew of a false peace. During those intervals of peace, such as they were, some fathers of the society made several excursions among them, wherein they found much more difficulty than success. But these excursions for a short time<sup>Father goes to reside there.</sup> turning to no account, it was believ'd their obstinacy might be overcome by continually inculcating the doctrine to them, or at least it would be some curb to their frequent revolts. Therefore *F. James Torres* having this year 1617 obtain'd an allowance of six hundred pitoles a year from the viceroy of *Peru*, for the support of the society, he resolv'd to fix two constant seats of the society

ple.

society in this valley, and accordingly sent four fathers with full power from the governor and bishop, to build towns and churches, and do all other things for the well governing of those people as they should think fit. The *Indians* were willing enough to entertain the fathers, not so much for the sake of religion, as because their numbers being much diminish'd during the late wars, they now thought themselves superior to the *Spaniards*, and therefore were glad to have an honourable opportunity offer'd them of putting an end to the war. For this reason the principal men went out to meet the fathers, offering their assistance towards building of their houses; and having carry'd the fathers about the neighbouring villages, diligently built a chappel in a convenient place, with cells made of mud and straw. This place in gratitude to cardinal *Ferdinand Borromeus*, was dedicated to *S. Charles Borromeus*. After some time *Christopher Torres*, who was superior of that mission, leaving two fathers there, went away with a companion to the further part of the valley, where he settled another mansion, under the invocation of the blessed virgin *Mary*, the *Indians* assisting as the others had done. From these two seats they were in continual motion over all the valley, endeavouring to propagate the faith, but with very little success, the customs of those barbarous people being too opposite to christian religion, and therefore it will be proper in this place once for all to give an account of their manners. It was suspected that these *Catebaquines* were descended from the *Jews*, because at the first coming of the *Spaniards* among them, many of them had the names of *David* and *Solomon*; besides, the eldest among them affirm'd, that their forefathers us'd to circumcise themselves. It was also a custom among them to raise seed to their dead brothers; and their garments hanging down to the ground gather'd up with a girdle, shews something of a *Jewish* custom. This conjecture is confirm'd by the opinion of *Joseph d'Acosta*, and other writers, who affirm the *Americans* to be descended from the *Jews*. The whole nation, like the *Jews*, is superstitious even to madness. They frequently adore trees adorn'd with feathers, so that what was said formerly of the synagogue may be well apply'd to them. *Thou dost fall down under every flourishing tree*. They worship the sun as their prime God, the thunder and lightning as next to him. They pay an honour to heaps of stones, which are the monuments of their ancestors, which is a further instance of their *Jewish* extraction. They give much honour to sorcerers, whom they use as physicians and priests, being most notable impostors. These men live in solitary hermita-

Vol. IV.

ges, conversing with the devil, or at least *Techo*, pretending so to do. It is the duty of these priests to bring up others to their hellish practices. They practise all sorts of extravagancies with these novices, and are as mad and abominable in these their filthy debaucheries, as can possibly be imagin'd from the worst of men, inflam'd with continual drunkenness and rage. When they are heated with wine, they fall upon one another in a riotous manner to revenge past injuries, battering one another's heads with their bows. In these drunken frays, it is an everlasting shame to shun a stroke, or put it by with the hand; but it is reckon'd the greatest honour to receive several wounds, to shed much blood, and to have their faces made hideous. In the heat of their madness, the priest muttering many words, consecrates the skull of a hind, stuck full of arrows, to the sun, praying for a good harvest; this done, he delivers the skull to another, who receiving it, becomes head of the next mad revels. Thus the prime men of the nation giving the token round, spend their lives in raving mirth. At their sacrifices they are daub'd with the blood of beasts by the forcerer. But they are never so mad as at their funerals. All the kindred and friends repair to the dying man's house to drink together day and night, as long as the distemper lasts. They encompass the sick man's bed with abundance of arrows stuck into the ground, that death may not dare to approach for fear of them. As soon as the party is dead, they bewail him with the loudest cries they are able, place all sorts of meat and wine about the dead body, which is seated on a chair, make fires, and burn a sort of leaves instead of frankincense. To move compassion, both men and women shew the dead persons goods to the multitude; whilst others, dancing and leaping after a distracted manner, clap meat to the mouth of the dead carcase, as if it were to eat it, and then swallow it themselves. Having spent eight days in these and such like follies, they bury the body, casting into the same grave with him, his dogs, arms, horses, and other goods, besides abundance of garments offer'd by his friends. This done, they burn the house he died in, that death may never return thither again. Having spent a whole year in mourning, they celebrate the anniversary with the same ceremonies. Instead of mourning cloaths, they paint their bodies black. That nothing may be done amiss, they make use of a master of the ceremonies. They believe no body dies a natural, but all violent deaths, which error makes them always full of jealousies and fighting; the devil, to promote war, sometimes whether truly or falsely laying their deaths at some persons

doors

**TECHO.** doors by the mouths of their forcerers. They think the souls of their friends after death are converted into stars, whose brightness is proportionable to the high post they had in this world, or the brave actions they perform'd. On festival days they make themselves crowns of feathers of several colours. Their hair, which reaches down to the waist, they wreath with ribbons like women.

**Garments.** Their arms are cover'd as high as the elbow with silver or copper plates, which is useful for shooting with their bows, and some ornament to them. The chief men of the nation wear a silver or copper ring within a diamond or coronet of some other matter about their heads. Youths are forbid having to do with women, till they are emancipated or made free by their forcerers. Maidens wear cloaths of several colours, which, when they have lost their maidenheads, are chang'd into one colour only. The factions among them are almost continually destroying one another in warlike manner. The women are most powerful to reconcile the two jarring parties, and produce peace, those most barbarous people easily granting any thing at the request of those that bore and suckled them. It was reported there were at this time about thirty thousand natives living in abundance of villages; but I find even those that went to instruct that nation differ about the number. But this they all agree in, that the *Calchaquines* are easily induc'd to imbrace the christian faith, as they are afterwards ready without any cause to renounce it. Not one of those, who had been formerly baptiz'd, liv'd at this time like a christian, but resided promiscuously among the heathens, following the customs of their forefathers. For which reason the fathers agreed, that for the future none should be baptiz'd, but at the point of death, or after several years trial. Infants were more easily admitted to baptism. Because the ancient deprav'd customs of the *Indians* were to be abolish'd, before the laws of christianity could be introduced, therefore the fathers spared no labour, but, without regarding the danger of death, cast down idols wherefoever they came, exclaim'd against their funeral rites, and hindred there being performed about any body that had been baptiz'd. Besides, they took much pains to dissuade many from the opinion they held that nothing was a sin, and therefore they had no need of confession. But tho' the fathers gain'd few proselytes among that perverse people, yet it was a comfort to them that they often baptiz'd dying infants, and sometimes others grown up, and kept that nation from revolting openly against the *Spaniards*, and warring among themselves. Besides the usual allowance

Women  
peace-makers,

for the subsistence of the fathers, the king sent bells and church-stuff for both those mansion-houses.

We now enter upon the sixth book of our author, and find nothing in his two ment of a first chapters, but little excursions of the *Jesuits*, and therefore wholly omitted; in the third we find this following account of a *Brazilian* impostor, who repaired to the town of *Loreto* in the province of *Guaira* attended by a man-servant and a woman. All the way he came this forcerer had practised his frauds, and as soon as he arriv'd at *Loreto*, the residence of *F. Cataldimus*, he there gather'd the multitude by the river side, and putting on a garment of feathers us'd by forcerers, and shaking a sort of rattle made of a goat's skull, crying after a mad manner, he proclaim'd himself absolute lord of death, seed and harvest, that all things were subject to his power; that he could destroy all things with his breath, and create them again; that he was three in persons, and but one God. For, said the blasphemous wretch, *I begot my companion* (that was his man) *with the splendor of my face, and this young woman proceeded from us both, whom we equally love, making use of her by turns.* This monster of a man astonish'd those ignorant people, and he, the more to terrify them, roar'd after a hideous manner, that he would make a mighty slaughter, and presuming to rave before *F. Cataldimus*, shaking his rattle, skipping, repeating his blasphemies against the blessed trinity, and declaring, if they durst attempt any thing against him, he would destroy their converts and their priests. The father justly provoked, order'd those that were next to seize him, and being deliver'd to the officers, the sham God was well whip'd; and tho' he cry'd out after a few stripes, that he was no God, nor any thing different from any other vile fellow; that all his divinity was vanish'd, and he had no power in his breath; yet the lusty converts who had him in hand left not off, till they had given him an hundred lashes by tale, the boys laughing and making sport at him. The two following days he was again publicly scourg'd, that he might three times abjure his being God three in persons. This punishment brought him to a right understanding; for his man and woman being detain'd at *Loreto*, he was banish'd the province for a time, which being expir'd he return'd and became a christian. This happen'd about the year 1618, at *Plague*, which time a raging plague ran through all the province of *Guaira*, which abundance of the new converts believing would be less contagious if they were dispers'd, they fled in shoals from the new towns, into their ancient woods, so that the last of the three towns

towns erected in that province was utterly ruin'd. The heathens, to whom some of them fled, endeavour'd to persuade them quite to abandon the towns, and restore themselves to their ancient liberty; adding threats to their persuasions, and declaring there was nothing they so earnestly desir'd, as to have one merry bout at drinking out of a priest's skull. However, when the plague abated, the fathers, with the assistance of the most faithful of the converts, began to gather up those that had surviv'd out of the woods and marshes, some travelling one way, and some another; and having brought together all the converts, they by continual labour drew a great number of infidels, which more than made amends for what the plague had destroy'd. The converts, who were continually searching out the wild Indians between the rivers Parana and Huibao, light upon a sort of men more fierce than generally the Guairanians are. Many of these had fastened three or five little stones in their lips, which stuck out, and made them look hideous. They liv'd in cottages not so high as themselves. All their food was dates, the pith of the palm-trees, some little venison and roots. Having no iron, they supply'd that want with sharp stones and bones fix'd to long wooden handles. They had no name to express God, but worship'd the thunder as their only Deity. The fathers brought seventy three of these men at one time to inhabit the town; but being us'd to feed upon such things as grew naturally, and to live in shady woods, they all but dy'd within a year, having been first baptiz'd. About this time some of the planters of Brazil that went about to take Indians, came to the new towns of Guaira, reporting they had cross'd a vast country as far as the river Marannon, and telling many wonderful things they had seen, which, their authority not being very good, we shall not impose upon the reader, as not becoming the authority of this history. Among other things, they said they had found some memory among those people of S. Thomas his having preach'd there, of which, because I find some account from better hands, I will here say something.

F. Joseph Cataldinus, and Simon Maceta being employ'd about reducing the people about the river Parapana to live in towns, Maracana, a powerful man among those Indians, and several other heathens, told them, *They had a tradition from their ancestors, That St. Thomas (whom they call Zume Bralli, as the Guairians do in their language) formerly travel'd thro' Guairania, and prophes'd to those country people, that it would come to pass in process of time, that all their nation should be reduc'd to two towns, by men*

carrying crosses in their hands; which they Techo. said was fulfill'd, by building the towns of Loreto and St. Ignatius. Seven years after, the same F. Cataldinus preaching the gospel to the Pirapoensians, and after him other fathers in several parts of Guaira, found the same memory and prophecy of St. Thomas still preserv'd; which is confirm'd by part of a letter written by F. Emanuel Nobrega, visitor of Brazil, in the year 1552, whose words are these. *The natives (says he) that Account is, the Brasilians, have some knowledge of St. Thomas, and have it deliver'd down to them by their ancestors, that he travel'd this way, and affirm his footsteps are still to be seen near a certain river, which that I might be more certain of, I went my self, and with my own eyes bebold the impression of four feet and the toes made pretty deep, which are sometimes cover'd by the swelling water. They report those impressions were made as St. Thomas fled from his persecutors, who would have kill'd him, and that the river divided it self, through the midst of which he pass'd without wetting his feet, and went away to India. They also recount, that the arrows shot at him, return'd back upon those that shot them; that the woods through which he pass'd made way for him; and be promis'd he would some time return to visit those countries. Thus far Nobrega. Nor is what Orlandinus relates in his history of the society unlike this. There is a path still to be seen by such as travel out of Brazil to Guaira, to which the natives have given the name of St. Thomas, believing the apostle travel'd that way. This path continues much the same all the year about, the grass growing on it but low, and quite different from the adjoining fields, which are very full of grass, and looks like a way made by art; which the fathers teaching in Guaira affirm, *They have often seen, but never without astonishment. Besides, near the metropolis of Paraguay, in Paraguay, there is a sharp rock, having a small flat space at the top, on which there is still the prints of mens feet in the stone, and the natives affirm, That from thence the apostle St. Thomas us'd to preach the law of God to the multitude resorting to him from all parts; adding, That he taught them to plant the Mandioca, of which they make their sort of wooden meal. Laurence Grado, bishop of Paraguay, and afterwards of Cusco, as also Francis Alfaro of the king's council, affirm, They found footsteps of the same apostle in the province of Misqua. The Peruvians in Peru, shew a seamless garment of an unknown stuff, found among the ashes of a burning mountain, a pair of shoes of a most fragrant smell. As James Alvarez de Paz affirms, Prints of feet upon stone with exotic characters, and a path through the reeds on the marsh of Titicaca, are still plain to be discern'd.**

**TECHO.** *cern'd.* And men of authority are of opinion all these things belong to St. Thomas the apostle, because of the memory there is of him among the *Indians*, who call him *Tume*. *Torribius*, archbishop of *Lima*, renowned for sanctity of life, caus'd that rock on which the prints of a man's feet are, to be enclos'd with a chappel; and before the coming of the *Spaniards*, *Colla Tupa*, tutor to *Guarcar Inga* in his youth, caus'd that rock to be worship'd. In the province of the *Cachensians*, there are rocks still to be seen scorch'd with fire from heaven, sent down to punish the people's attempting to kill a certain man that taught the law of God; which man the *Collas*, another people of *Peru*, held in such veneration, that they call'd him the Son of the universal Creator. But nothing makes so much for my purpose, as the cross at *Carabuco*, famous through all *Peru*. *Carabuco* is a small town of convert *Indians*, upon the lake of *Titiaca*, under which, upon information receiv'd from the *Indians*, *Sarmiento*, curate of the place, after much digging, found a cross, soon after famous for working many miracles; among which one very remarkable is, its growing up again as fast as bits of it are cut out to satisfy people's devotion. It is a receiv'd opinion that this cross was formerly erected at *Carabuco*, by St. Thomas the apostle. The devils at the same time declaring, they would give no answers by their oracles, till it was taken away, and therefore the *Indians* cast it into the adjoining lake, which they having often repeated, and finding it still swimming on the water, and that no fire would consume it; at last they dug deep under that lake *Titiaca*, and bury'd it, laying a vast heap of earth upon it. The signs of their having in vain attempted to burn it, are still visible upon it. But there being no such wood as this cross of *Carabuco* is made of, to be found either in *Peru* or the adjacent countries, *Anthony Ruiz* guesses the apostle carry'd it through the provinces of *Guaira* and *Paraguay* out of *Brazil*, where, he says, there are many trees of that sort, which he hath seen himself. But if any body should object the weight of it, which is above three horse loads, they may as well refuse to give credit to *Ossorius*, who affirms, That at *Malepur* or *Meliapor*, a town in *Cambela*, where the apostle's tomb is to be seen, they to this day shew a piece of timber miraculously brought thither, which is so vastly big, that a great number of oxen, or, as *Atendeza* says, several yoke of elephants cannot stir it out of the place where it is. If any man make a question, which way the apostle sail'd into *America*, let him read *Nawarcha's Asiatick epistle*, where he proves that might be done without any miracle.

I am not ignorant how many stories of St. Thomas's travels are counted as apocrypha; for as it is certain the found of the apostles was spread throughout the earth, so it is doubtful which way every one went. Therefore I rather relate than affirm what has been here said, lest by omitting it, I seem to contradict the opinions of grave men; or by asserting to deliver conjectures for certain truth. Let us proceed to what is better known.

The fathers sent to convert and instruct the *Chiloe*, on the coast of *Chili*, before spoken of, built among those islands eighty little chapels, and spent the whole year sailing from one to another to assist those poor people. The fathers *Melchior Vanegas* and *John Baptist Ferrufin*, sent thither by the provincial *F. James Torres*, were by him order'd to enquire diligently into the manners of the *Cbumians* and *Huillans*, inhabiting near the straits of *Magellan*, and to send him an account if there was any hope of propagating the gospel among them. *Delco*, the chief man among the *Cbumians*, satisfied their desires. He being used to come from his country to the islands of *Chiloe* on account of trade, trafficking with the *Spaniards*, found the precious stone of the gospel, and having taken the name of *Peter* in baptism, desir'd nothing so ardently, as that his son might receive the same grace. He repairing to the fathers, then busy among the islands upon this account, gave 'em very great comfort. He brought along with him in five vessels, besides his own family, a numerous train, and one well skill'd in the language of *Chiloe*, who serv'd for his interpreter; and after a courteous reception, being ask'd concerning the manners of the *Cbumians* and *Huillans*, he deliver'd himself to the fathers to this effect; 'Three days' journey (said he) from the *Archipelago* of *Chiloe* is *Gautana*, the first island of the *Cbumians*; all the way thither is thro' a sea subject to continual storms, which is not very dangerous to the islanders, who by continual practice are perfectly acquainted with the sea and winds; but if strangers go thither, the hazard of being cast away is almost inevitable, by reason of the shoals and narrow channels. The whole nation lives partly on the continent of *America*, and partly in an infinite number of islands not far distant from the shore, but these so thinly peopled, that none among 'em, except *Gautana*, contains above three or four families. The soil is all barren, stony, and wild, scarce bearing any grain. The trees, as to greenness, are much more dismal than those of *Chiloe*. The natives live upon fish and what the sea casts up, the women diving

Their Food.

'diving to the bottom, and soon after  
 'coming up with great store of fish in  
 'baskets hanging about their necks; their  
 'greatest want is fresh water. They press  
 'an oil out of sea-wolves, which they drink,  
 'and know of no other wine or delicate  
 'liquor. Having drank a great deal of  
 'that oil, and gorg'd themselves with eat-  
 'ing unreasonably of fish, they vomit it  
 'up, and so celebrate their bacchanals with  
 'motions like drunken men, that they may  
 'not seem to be outdone by the neigh-  
 'bouring nations, whose drunken feasts are  
 'their principal merriment. Yet at pre-  
 'sent the *Indian* wheat, of which drink is  
 'made, grows indifferently well in the  
 'island of *Guatana*, my native country.  
 'The natives are for the most part red-  
 'hair'd, of an olive-colour complexion,  
 'and of a mild disposition. In the remo-  
 'te islands they breed dogs with long hair  
 'and manes, whom they trim, and of their  
 'hair make garments, so short, that they  
 'cover nothing but the shoulders and  
 'breast, covering their nakedness with sea-  
 'weeds, or leaves of a vast bigness grow-  
 'ing in the sea, and harden'd in the sun.  
 '*Delco* deliver'd himself much to this pur-  
 'pose; 'The condition of the *Huillans*, who  
 'are near the stright of *Magellan*, is much  
 'more miserable, and their disposition  
 'more barbarous. They live in almost  
 '50 degr. of south latitude, in a very cold  
 'climate, and stark naked, build moveable  
 'huts of the barks of trees, in the shape of  
 'a cone or sugar-loaf, eat nothing dress'd,  
 'and nothing but raw fish and oysters.  
 'Their skin's almost black, and their hair  
 'so harsh and upright, that it looks more  
 'like a bush than man's hair. Their num-  
 'ber is small, and they give no other rea-  
 'son for it, but that the nature of the  
 'country, and the incursions of their ene-  
 'mies, suffer them not to encrease, for the  
 '*Chunians* hunt after the *Huillans* as if they  
 'were wild beasts, and either keep 'em as  
 'slaves, or sell 'em in the islands of *Chiloé*,  
 'or else give 'em away; and they are  
 'still happier in slavery than in their own  
 'country. They rather make a noise than  
 'talk. They're of no use in the world  
 'before being transported. They learn  
 'the language of *Chiloé* but to drive the  
 'birds from their corn-fields, like scare-  
 'crows, being equally fit to fright and to  
 'be frighted.' By the help of the inter-  
 'preter, *John Baptis Ferrufu* in two days  
 'time translated the ten commandments,  
 'some principal prayers, and the *Confiteor*, in-  
 'to the *Chunian* language, so successfully,  
 'that the poor *Indians* were besides them-  
 'selves for joy. *Delco* earnestly begg'd his  
 'son might be baptiz'd, but he being not  
 'sufficiently instructed, and the *Chunians*  
 'Vol. IV.

oblig'd to return home, 'twas put off till *TECHO*.  
 another opportunity, those people most  
 humbly entreating the fathers to go along  
 with them, which could not be granted, to  
 the great sorrow of those distress'd converts,  
 who had no other comfort, but that *F. Mel-*  
*chior Vanegas* promis'd he would let slip no  
 opportunity of procuring the health of their  
 souls. Yet, for ten years following, those  
 nations had no help but what some few of  
 'em receiv'd, who came to the islands of  
*Chiloé*. Till this year 1619, the afore-  
 mention'd *F. Melchior Vanegas* and *Mat-*  
*thew Stephanus*, with great danger and trou-  
 ble sail'd over to the island *Guatana*, where  
*Delco*, being inform'd of their coming,  
 had built a chappel after the manner  
 of those of *Chiloé*. and gather'd as many  
 of his people as he could, that they might  
 be baptiz'd and receiv'd into the number of  
 the faithful. Thence they pass'd over to  
 the continent and other islands, where they  
 found abundance very desirous of learning  
 the christian doctrine; yet baptiz'd only  
 two hundred and twelve, because they could  
 not be longer absent from their own pro-  
 vince.

Let us return from the south sea towards *Uruguay*  
 the *Atlantick* and *Brasil*. The river *Urui-*  
*ca* of the first magnitude, rising out of a  
 small spring in the mountains of *Brasil*,  
 carries but a small stream for a long way  
 and without any considerable name, till  
 having swallow'd many streams and consi-  
 derable rivers on both sides, and by that  
 means increas'd its store, it becomes equal  
 to, if not greater than the *Paraguay*, and  
 falls into the river of *Plata*, a little above  
 the port of *Buenos Ayres*, where losing its  
 name and channel, as it were for a punish-  
 ment of its presumption, it is hurry'd away  
 into the sea. For when it has once left  
*Brazil* running directly up the inland, it  
 gives a turn and runs continually parallel  
 to the river *Parana*, not much inferior to it  
 for greatness. Great stones and rocks lying  
 in it at certain distances, make it incapable  
 of ships of burden; but when it has re-  
 ceiv'd the winter floods from the rains and  
 other rivers, swelling over its shoals, vast  
 rocks and both banks, unless where con-  
 fined by mighty topping shores, it spreads  
 its waters like a sea. It runs two hundred  
 leagues from its source with a mighty noise,  
 being streighten'd by continual ridges of  
 rocks and woods, till having with much  
 struggling rid itself of those troublesome ob-  
 stacles, it glides more gently along the plains.  
 The woods, which abound in monkeys,  
 tygers, parrots and other sorts of creatures,  
 differ but little from those of *Parana*. For-  
 merly nothing was to be seen in the fields,  
 but ostriches, lions and several sorts of  
 goats and deer; at present all that vast ex-  
 tent

**TECHO.** tent of land on both sides the river is pasture, cover'd by an infinite number of cows and horses; as if these beasts had succeeded in the place of men, who formerly in great multitudes inhabited these plains, but are now very thin considering the largeness of the country. The province *Urvaica*, so call'd from the river of that name, reaches as far in length as the river. On the east it has *Brazil* and the *Atlantick* ocean, on the west *Parana*, on the north *Guaira*, and on the south the river of *Plata*; and is divided into several provinces distinguish'd by as many barbarous languages. Among them all the *Guaranians* far excel the rest, both in number and aptness to be civiliz'd and become christians. The first *European* I can find that attempted to discover this province, was *Ramon* or *Raimund*, sent thither by *Garot* the discoverer of south *America* for the emperor *Charles V.* in the year 1526. He sailing up the river in a frigate, was slain in battle by the *Charras* a most fierce people, with many of his companions. Afterwards, in the year 1557, an hundred and twenty *Spaniards* were sent by the governor *Martin Irala*, to build a town near the mouth of the river *Urvaica*. But the very first year of their settling there, the natives tir'd them out with such continual attacks, that they were forc'd to abandon the colony. As they were sailing back to *Paraguay*, a most dismal accident befel them; for many of them being gone ashore at noon to dine, the high bank on which they sat, on a sudden opening and sinking under them, drew those persons that were dining, after it into the river, making so great a commotion in the water, that one of the ships being overset, stuck its mast in the bottom of the river, not one of those that went out to dine escaping. But the ship recovering, brought up a woman alive after she had been many fathom under water. About the year 1610, the governor *Ferdinand Arias* made his way with some *Spanish* troops to the province of *Urvaica*; but hearing of the great multitudes of natives there were in those parts, retir'd ingloriously without doing any thing; for the *Barbarians* had secur'd themselves by spreading the terror of their name far and near, inasmuch that the *Spaniards*, as covetous as they were to make themselves masters of those vast countries, so famous for the fruitfulness of the soil, plenty of pasture, and conveniency of their rivers; yet despair'd of ever subduing the *Urvaicans* by force of arms. This great work was resolv'd to be perform'd by the preaching the gospel, and the first that attempted it was *F. Robt Gonzalez*. Whilst he and *F. James Boroa* were teaching the law of *GOD* upon the river *Parana*, some of the *Urvaicans*, attracted

First discoverers of  
*Urvaica*.

by the fame of the new religion, came several times to the new town of *Iapua*, under pretence of trade, and were there courteously entertain'd by the fathers, hoping the christian faith might be propagated in their country. The small number of preachers obstructed it for a long while, till the provincial *Peter Onate* being re-inforced, appointed *F. Robt Gonzalez* for this great work. He set out attended by a small number of converts, and having travel'd through dismal places as far as the brook *Aracula*, which runs into the river *Urvaica*, found there a great number of *Indians*, who had notice of their coming by their spies, and were there naked, arm'd with clubs and bows, haughtily commanding him to proceed no farther, because it would certainly cost him his life. His companions terrify'd by their threats left him, but he lay in a wood all night with only two boys that serv'd at mass, and the next morning *Quaracipucutius*, a *Cacique* of note came to him, promising his protection against his country people. By his solicitation several *Caciques* met, and resolv'd to hear the father, who having declar'd to them the cause of his coming, so far prevail'd, that *Niezza*, the most powerful of all the *Caciques*, invited him to his village. The river *Urvaica* was two leagues from this village, whither he went with *Niezza*, and gathering a multitude of *Indians*, set up a cross of a mighty bigness on the bank of it, teaching those people to pay a devout veneration to it, for having expounded the mystery of the redemption, and thereupon kiss'd the cross, all the heathens fell down and worship'd it. There is a place a league distant from the river *Urvaica*, call'd *Ibitiragua*, where several of the *Caciques* assembling upon the day of the conception of the virgin *Mary*, *F. Gonzalez* mark'd out the ground for a town, to which he gave the name of the *Conception*, and abundance of *Indians* from all parts resorted to inhabit it; so that it afterwards became the metropolis of the province of *Urvaica*. Some *Indians* beyond, and others upon the river, at first threaten'd the new town, but were soon appeas'd by *F. Gonzalez*. He by the provincial's order, set out with a few converts to discover all the river down to the port of *Buenos Ayres*, which the *Indians* beyond the river being inform'd of, and imagining he went to bring in the *Spaniards*, now he was acquainted with their country, they pursu'd with a resolution to murder him, but he let them pass by in a dark night, and return'd to the town of the *Conception* without daring to proceed further. Being disappointed of this design, he apply'd himself to build another town, which, that it might be done with less danger of his life, he caus'd the converts

General  
hunting.

converts to appoint a general hunting, as they call it, to which the *Urvaicans* dwelling in all the neighbouring plains were invited. The manner of those general huntings is thus. The *Indian* hunters beset a large field, encompassing it with their multitude; then upon a signal given, they contract, drawing equally into a less circumference towards the center, whither all the ostriches and wild beasts retire for fear of the men; having shut them up into a very narrow compals, they give a shout for joy, and fall to slaughtering the game which they dress and feast together: The *Indians* us'd to resort to this sport from far and near. *F. Gonzalez*, under pretence of seeing this sport, hop'd to gain an opportunity of finding a fit place to build a town, and become acquainted with the heathens. Both these things he perform'd, yet could not for the present attempt the erecting of the town. Besides, at his return from the hunting, he found the plague in the new town of the *Conception*, which made the converts disperse, and found him and his companions work enough to follow them into the woods and plains, that they might not die without help. After the plague follow'd famine, which was so sharp, that what had escap'd before, fled to remote places, eating any filthy food they met with. The forerers gave out, this punishment was for embracing the christian faith; and the *Paranenians* were not wanting to blow the coals, but still the patience and resolution of the fathers prevail'd, and they brought back the *Indians*, and restor'd the town.

In the year 1620, the provinces of *Paraguay* and the river of *Plata*, which, till then, had been subject to one governor and one bishop, were divided into two several governments and bishopricks; the river *Parana* being the boundary of both their jurisdictions. The first new governor of the river of *Plata*, brought over with him from *Lisbon*, contrary to the known laws, a considerable quantity of merchants goods, whereof information being given at court, the king sent over a judge with power to examine the matter. The town of *Buenos Ayres* favour'd the governor, and contriv'd to expell the judge, who, at the same time, happen'd to offend the fathers at that port, whereupon some crafty friends of the governor, advis'd the rector to appoint a judge conservator to assert his and the society's right: The rector, who was a plain harmless man, took their advice, and appointed a judge over the king's judge: This person so appointed, being set on by the governor's emissaries, gave sentence against the king's judge for the wrong done to the society, and sent him back by force into *Spain*: The king's council in *Spain* com-

plain'd of this affront to the general of the *Techo*, *Jesuits*, who, besides other religious punishments inflicted in private, declar'd the rector for ever incapable of the fourth vow of the order, and of any dignity or preferment in it. The king, on the other side, sent one of the council of *Peru* to punish the abettors of that insolence, who is said to have fin'd them in eighty thousand pistoles: Discord at this time, like a plague, ran through the whole province, and particularly the towns of *Sancta Fe* and the *Assumption*. About the same time a *Spaniard* being abroad in the field, was set upon by a tyger, which had broke through a wring of *Indians*, and with much difficulty escap'd alive, but much torn; which accident was very remarkable, because it is the nature of tygers ever to assault the meanest creature of first: Thus, if it meets a man on horse-back with a dog, it first falls upon the dog, then the horse, and last of all the man; nay, it goes further, and makes choice of men, so that if it meet an *Indian*, a *Black*, and an *European* together, the *Indian* is first attack'd, then the *Black*, and next the *European*: Even among *Spaniards* it makes a distinction, and picks out those first that have most mixture of *Indian* blood. This section be-  
mixture of *Indian* blood. This section be-  
ing compos'd of several matters, as they of the  
occur'd in the author; tho' we have else-  
where treated of the *Guaicureans*, we will  
here insert the manner of their performing  
the funeral exequies. *F. Joseph Oregias* had  
baptiz'd their chief commander, who was  
always a friend to the society, but would  
never be reconcil'd to christianity till a lit-  
tle before his death: Whilst the father was  
burying the body after the christian manner,  
the *Indians* made a dismal howling lamen-  
tation, and rending and breaking into pie-  
ces all his garments, ensigns, garlands,  
bow, and all his other goods, scatter'd  
them abroad in the air: Some blooded  
themselves at the calves of their legs in  
great abundance, others express'd their grief  
by mad motions, killing all the dogs, par-  
rots, and other creatures their commander  
delighted in; and had certainly murder'd  
and thrust into his grave, a woman and her  
son to serve him, as they fancy'd, in the  
other world, had not *F. Oregias*, by his  
authority, prevented it: His son, *James*  
*Francis*, succeeded him in the command,  
who being a christian, gave great hopes of  
propagating the faith; but the fierceness of  
the people disappointed that expectation,  
and very few were gain'd the following  
years.

Tho' it may seem something foreign to  
our purpose, yet because our author thought  
fit to insert it, and the curious reader may  
for variety sake be pleas'd with an argu-  
ment concerning a nice point in matter of reli-  
gion.

**T**ACHO. religion ; I have resolv'd not to omit a controversy that arose about baptism, and 'twas whether the baptism of the Blacks brought from *Angola* was valid or not ; some being of opinion, that the said Blacks newly brought over, ought to be baptiz'd conditionally, others denying it : Those who were against rebaptizing, argu'd thus. That it was not allowable to call in question what the prelates on that coast of *Africk*, which was subject to the catholick king, did in relation to conferring of sacraments : That if scruples were started on that account, the ignorant Blacks throughout *America*, seeing their countrymen rebaptiz'd, will never rest till the same were granted them. That to prevent an evil which might very rarely happen, there would be a snare laid to an innumerable multitude. That it was not deny'd, there might sometimes be defects in the baptism of those people, but for the most part they were not such as touch'd the validity of it. That even among hereticks, baptism was not duly administred ; and yet it was rare that hereticks converted were ever rebaptiz'd. That the baptism of the Blacks had never been call'd in question for so many years past, and therefore such an innovation, tho' never so much palliated under the shew of religion, would be suspicious. This they said that oppos'd it ; the other party alledg'd, that it would be no reflection on the prelates of the coast of *Africk*, if those defects which they desir'd to correct, but could not, were rectify'd in any other part of the world. That it was not to be call'd a niceness or scruple to secure the salvation of so many souls, which was otherwise dubious. That the Blacks, who had once been examin'd, would easily be pacify'd. That it was improper to instance the baptism of hereticks, who rarely do any thing to invalidate it ; but yet in those things wherein they err'd, the errors were cautiously to be rectify'd ; but as for the point of innovation urg'd by the other part, it did not at all make to the purpose, because it is certain, there daily arise disputes started by ingenious persons upon several matters, which, as circumstances vary, alter from the former state they were in. Thus they argued on both sides, but the time of starting this doubt, and cause of it, was as follows. In the year 1605, *F. James Torres*, who was then laying the foundation of the province of *Quito*, observing that many thousand Blacks were every year brought out of *Africk* unto *America*, by the way of the port of *Carthagena*, he committed the care of them to *F. Alonso de Sandoval*, who afterwards compos'd a very useful book, about restoring the Blacks to a state of salvation, and dedicated it to the

fame *F. James Torres*. He often enquiring after African traders, after what manner the Blacks were baptiz'd at *Loanda*, and finding by several years experience, how ignorant most of them were of the mysteries of christianity, thought he would do a very good work, in composing a small book, and directing it to the archbishop of *Seville*, shewing it was his opinion, that the baptism of most Blacks brought out of *Africk* into *Europe* and *America* was void for want of catechizing them ; and that therefore they ought not to be admitted to other sacraments, till they were conditionally baptiz'd. The book pleas'd the archbishop, who caus'd it to be examin'd by learned men, not only of the society, but of oth<sup>r</sup> orders, who all were of *Sandoval*'s opinion. By their consent the archbishop pass'd a decree, ordering all Blacks brought into his diocese, without exception, to be examin'd by able men ; and those that they had any scruple about to be conditionally baptiz'd. The bishops of *Mexico* and *New Granada* soon follow'd his example, and appointed examiners of the Blacks in the sea-port towns. The news hereof being brought into *Tucuman*, *F. James Torres* labour'd to introduce that examination there, with much opposition from the adverse party. Whilst the controversy was depending, he receiv'd letters from *F. Jerome Bogado*, rector of the college of the society of *Angola*, whom *F. Torres* had sent to consult upon the matter, the very words were these. *F. James Torres*, Your reverence is in the right in questioning the baptism of the Blacks sent out of *Africk* into other parts ; for, in my opinion, they are not baptiz'd, and ought, at least, to be conditionally re-baptiz'd, because they receive baptism without being scarce catechiz'd : For the day before they sail, they are carry'd in troops to the vicar ; by whom, being ask'd all together, whether they desire to be made christians ? and a few words more said to them, they are baptiz'd, and have christian names given them, before they understand what faith they embrace. I have often charg'd the vicar generals with this great neglect, in the presence of the bishops, but to no purpose ; for though at first, when they have been check'd, they are more careful of their duty, yet they soon relapse into their former negligence, and serve those poor wretches after an undue manner. The bishop thinks he had sufficiently clear'd his conscience, if he lays some punishment upon the vicars that are accus'd of such neglect. Thus *F. Bogado*. When these letters were read, the controversy ceas'd, and all the fathers apply'd themselves to the relief of that miserable nation. This may suffice, as to the matter of the baptism of Blacks, which I thought worthy to be inserted, being a curious point which may give the reader satisfaction.

The

Town of  
Corpus  
Christi.

The plague continued to rage in the province of *Parana*, in the year 1622, yet the fathers supply'd the places of those that dyed in their town, with new converts brought out of the woods, and were so successful as to build a new town. The *Indians* are fifteen leagues distant from the *Iapuan*s up the river, and had been earnestly solicited by *F. Gonzalez* for some years, to join with the *Iapuan*s, but either the natural fierceness, or the natural love of their country, had still made them refuse; yet, at this time, they became so well inclin'd to christianity, that, of their own accord, they asked for fathers to be sent among them. *F. James Boroa* and *F. Peter Romero* went and found all things to their mind; so that very few opposing it, they apply'd themselves to build a new town, upon the banks of the river *Inian*, which falls into the *Parana*, giving it the name of *Corpus Christi*, under which it flourishes to this day. Not far from it are the rivers *Tibiapo*, *Pirapo*, and *Caapibari*, whence many inhabitants have been drawn to the new town, and in the year 1670, there were computed five thousand souls to have been baptiz'd there: About the same time this new town was built, a number of wild *Indians*, of the province of *Ibitaranbeta* in *Brazil*, came to the woods of the town of *Loreto* in *Guaira*, to fetch wood to make their arrows; some few of which nation had been among the converts at *Loreto*, and told them that their country swarm'd in men. *F. Cataldinus* laid hold of this opportunity, in hopes of converting those people; and having, by means of their converts, entertain'd many of them lovingly in his town, desir'd he would take them along with them, to teach them the christian religion. *Nambabaius* their *Cacique*, said he was willing enough to do it, but that he fear'd it might cost them both their lives. The father being willing to expose himself to the danger, went along with him, and they travel'd a month up the river *Tibisica*, but as soon as they came near the borders of *Ibitirambeta*, the *Cacique Nambabaius* stole away before the people knew of his bringing the father: He thinking it a rashness to go on, sent two youths to invite the *Caciques* of *Ibitirambeta* to come to him, but they with threats prevail'd with one of those youths to marry among them, tho' he was marry'd before, and renounce christianity; the other, rather than comply, suffered himself to be cut in pieces and eaten by them. Whilst these things were doing, *F. Francis Vasquez*, who had been sent procurator into *Europe*, arriv'd at the port of *Buenos Ayres*, with a supply of twenty one fathers. There *F. John Vas* had taught sixteen converts musick, which play'd and

sang so well, that they gave extraordinary satisfaction. These new fathers brought over the catholic king's, and pope *Gregory* the 15th's letters patents for erecting universities in the province, and accordingly, the city *Cordova* in the province of *Tucuman*, and that of *Santiago* or *S. James*, in the kingdom of *Chili*, had that honour conferred on them. There were now in this province of the society, eleven colleges, two residences, one novitiate, and thirteen small houses among the *Indians*, and in them a hundred and ninety fathers.

*Nicolas Durandus*, the new provincial Town of of the *Jesuits*, in the year 1623, erected a college of the society at *Salta*, a small *Spanish* town, built in the year 1582, not far from the borders of *Peru*, and at the very entrance of the valley of *Calchaquana*, to curb that barbarous nation, by *Ferdinand of Lerma*, governor of the province of *Tucuman*. The town furnish'd all necessaries for building the house and church; and the provincial perceiving the fathers, who had been sent into the valley six years before, and settled there, did reap no fruit worthy of their labours, call'd them away, thinking it enough for the present, if they made some excursions at times from the town of *Salta*. The news being brought into those southern parts, that *S. Ignatius Loiola*, and *S. Francis Xavierius* had been canoniz'd the year before, there was extraordinary rejoicing in most costly manner, not only in the *Spanish* cities, but even in the *Indian* towns. The pleasantest sight, for a pleasant its novelty, was in the town of the *Assumption*, where a number of *Urvaican* boys, lately made christians, and brought thither by *F. Roch. Gonzalez*, were divided into two troops, the one in the *Indian*, the other in the christian habit, and represented a battle, dancing very dexterously to the musick: The *Indians* distinguishable by the variety of their feathers, were arm'd with clubs and bows, the christians with long crosses. It was diverting to see them sometimes all mix'd, and then presently parted; sometimes fiercely attacking one another; sometimes falling into two ranks, and then mixing again, as if they would destroy one another: After they had thus fought a considerable time, the christians got the day, and the musick following to another tune, they led the *Indians* as their prisoners, and presented them to their bishop and governor, to express the became subjects to the church and catholic king. At this solemnity *Quiracipucius* a *Cacique*, and twenty three more *Urvaicans*, brought to the feast by *F. Gonzalez*, were baptiz'd. Soon after, a controversy arising between the society and bishop of *Paraguay*, he sent complaints against them into *Spain*, and

**TECHO.** took from them their schools in the town of the *Assumption*, but it was not long before he was reduc'd to restore them, and be reconcil'd. The governor of the river of *Plate* had desir'd of the last provincial, to send *F. Peter Romero*, who was skilful in managing the *Indians* upon the river *Urvaica*. **The Tavo-co,** to try whether the *Tarofians* might be brought under, and a new town built at the mouth of the said river. Tho' the mouth of the river *Urvaica* be not far from *Buenos Ayres*, yet no body had dar'd to venture up it, the numerous *Indians* on both sides, all of them fierce people, and speaking several languages, having refus'd all commerce with strangers. Among them all, the *Tarofians* and *Charuans* were most obstinate in adhering to their ancient customs; living dispers'd, utterly strangers to husbandry, and any form of government; and so very barbarous, that they cut off a joint of a finger at the death of every one of their kindred, so that there are several of them who have nothing left but the bare palm of their hand. Before the coming of the *Spaniards* they liv'd upon ostriches, other fowl, venison and fish: At present, they ride about the plains, there being vast herds of oxen and horses: They feed, for the most part, on beef half raw, generally use slings, and are so expert at them, that they often hit birds flying, and knock down the largest beasts. *F. Romero* ventur'd among them attended only by one *Spaniard* and a few *Indians* that row'd: Wheresoever they went, they met fierce men, with their bodies anointed, their hair hanging below their shoulders, their limbs deformed with much pricking of them, and formidable for their hideous voices. These being exhorted to embrace religion and civility, positively refus'd admitting any alteration of their ancient manners. Nevertheless the father proceeded till he came to the first villages of the *Guaranians*, an hundred leagues distant from the mouth of the river *Urvaica*, and was very desirous to make his way through, to that part of the province *Urvaica*, where *F. Gonzalez*, four years before, had founded the town of the *Conception*; but the *Indians* would not permit, threatening immediate death if he did not turn back. Therefore finding none of those people ripe for the gospel, he return'd to the port of *Buenos Ayres*, to give an account of what he had seen to his provincial, and the king's governor.

**The Guai-cureans** instructed, The provincial immediately sent him back to the *Guai-cureans*, two hundred leagues up the river of *Plate* and *Parana*, where he employ'd all his talent with his companion in reducing that nation; but the barbarity of those people frustrated the labours of those fathers. Three months af-

ter his arrival there, the commander of the *Guai-cureans*, and his mother, attended by a great number of *Indians*, met the provincial, then going and visiting the college of *Assumption*, entreating him to afford their people his preference. The manner of inviting him was thus; there went before a woman singing and expressing the desires of the nation in tune, declaring in many words, how acceptable and beneficial it would be to that miserable nation to enjoy his presence; when her song was ended, the whole company, with confus'd cries desiring the same thing, oblig'd the provincial to cross the *Paraguay*, and repair to the place where the *Guai-cureans* had set up the cottages of mats, about the chappel of the society, in the form of a town: The provincial articul'd with the commander, that in case he would have the fathers stay amongst them, they should settle in the town, and forbear unjust wars; because it was not fit that those, who had so many years since put themselves into the hands of the society, should be no way civiliz'd. They, in appearance, submitting to the conditions, receiv'd some gifts from the provincial; yet very little credit was given to their promises, because many years experience had shewn, that they would not stay long in a place, their inclinations to war being such, that they change their habitation every year almost, to find out new enemies. When they return from war, they bring home to their wives in triumphant manner, the skulls of their enemies slain; which skulls the women on festival days, bring out in great pomp, with the commendation of the people, as it were to insult over their enemies. Nay, they are sometimes so mad, as to contend with the elements. When a storm arises, and there is much thunder or wind, they all go out in troops, as it were to battle, shaking their clubs in the air, shooting flights of arrows that way from whence the lightning comes; and believing this shew of resolution hinders the spirits or devils, whom they look upon as the causers of all tempests, from doing any mischief. They have also some festivals in which they represent battles. There is no time of so much joy among them, as when the north winds begin to blow in that hemisphere; for then, without any regard of age or condition, they fill the air with cries, beating one another with their fists, computing the year would prove plentiful, or otherwise, according to their madnefs. Therefore the provincial, tho' he had but small hopes of converting those people, left the fathers there to try the utmost, who continu'd three years longer, and then utterly abandon'd the place, when they had been in it sixteen years, without reaping any fruit among those

A town  
built a-  
mong the  
Ibitirambetans.

those hardened barbarians, but only the baptizing some infants, and a very few at men's estate, at the point of death. At the same time the plague raging through the province of *Parana*, made mighty havoc in the new towns of the converted *Indians*, but more especially at *Yaguapua*, where the fathers had been eight years gathering a considerable number of *Indians*, and bringing them into the church. Here the distemper was so virulent, that after the greater part of the inhabitants had perished, those few that remained went away, some to *Iapua*, and some to other places. As soon as the infection ceased, the fathers, with infinite labour, search'd all the woods, mountains and marshes, to bring fresh supplies of inhabitants to the towns. Having mention'd the town of *Iapua*, I will not omit a more than manful act of a woman of that place. A cruel tyger had seiz'd a boy of ten years of age in the presence of the father and mother, and close by them, which the fierce beast made away with, throwing the child over its shoulder, as the fox does with a fowl. The father, astonish'd at the accident, fled, but the mother, whose love was tenderer, forgetting the danger, ran after the tyger, and recovering the boy, brought him back to her husband, that fierce creature never attempting to oppose her; the husband ever after confessing, his wife had more courage than he.

Something was said before of the *Ibitirambetans*, concerning whom we will add what remains in this place. Tho' the attempt made before upon them prov'd unsuccessful, this did not discourage the fathers *Anthony Ruiz*, *Joseph Cataldinus*, and *James Salazar* from making another effort to bring them over to the flock of Christ. The whole province of *Guaira* is divided into two parts, the woody and the champain. The woody had been under the direction of the fathers for several years. But as yet they could not get into the champain, because of the inhumanity of the people, who cruelly devour strangers, and resolutely defend themselves against any foreign invasion. *Ibitirambeta* is a wooded mountain, which separates these two parts of *Guaira*, so call'd by the natives, because at a distance it looks like a man's head, with a rock sticking out of the chin, instead of a beard. About this mountain were abundance of villages of heathens, which being brought together would make a populous town, and be a good step towards the champain country. A year before this, as was mention'd above, the inhabitants of this mountain, cruelly slew the youth sent them by *F. Cataldinus*, and had roasted and eaten several of the people of the woody country at their feasts; for they reckon man's flesh their greatest

dainty. When the fathers, after passing *Tecno*, the rocks and precipices of the river *Tibaxi*, come near to their borders, the converts attending them begin to be seiz'd with fear, and chiefly because *Taitetus*, a man famous for cruelty among the *Ibitirambetans*, had met a little before, and assur'd *F. Ruiz* that if he durst proceed he would meet with many enemies. Yet some offer'd to hazard themselves in carrying a message to those people. But the fathers *Ruiz* and *Cataldinus* leaving *F. James Salazar* to look to the boats, with orders if they were kill'd to fly down the river, went on themselves with a few *Indian* converts by land. Having wandered a long while, without knowing the way through the woods, they at last met with a man more like a painted devil than an *Indian*, who acting the part of an angel, undertook to introduce the fathers into his village, provided they would let him go before, to dispose them to receive their guests favourably; assuring them it would be very dangerous to go without he made way for them. The fathers thinking it safer to stand the brunt of coming upon those people suddenly, than to give them time to consult together, follow'd the *Indian* guide close at the heels, and that same day boldly enter'd the first village of the *Ibitirambetans*, the people whereof, tho' they forbore acting any cruelty, yet shewing their mistrust, declar'd they would not allow the fathers to stay among them, lest after them should follow the rovers that went about to carry the *Indians* into captivity. As they were in this condition, the *Cacique* of another village promising *F. Ruiz* his protection, gave some hopes of success. Having therefore call'd away *F. Salazar* from the river, they mark'd out the ground for a town, fell to build a church, and abundance of people flocking thither from the neighbourhood, order'd a form of government. As they were thus employ'd, news was brought, that several factions had conspir'd together, and particularly those that the year before slew the youth sent by the fathers, all unanimously agreeing, that the strangers were to be made away, lest they should bring some mischief upon the province; and that they would taste whether the flesh of priests differ'd in taste from that of other men. The enemy being within less than a mile of the town, *F. Ruiz* came to *F. Cataldinus*, then busy about building the church, to acquaint him with the danger, who answer'd, *As the will of heaven is, so let it be*; and went on with his work. The enemy being told of this resolution of the fathers, went off without attempting any thing, fearing some great misfortune might befall them, seeing those strangers make so small account of death. This storm

**Techo.** storm being blown over, there ensu'd such a calm, that they had leisure to build the town in peace, and dedicate it to S. *Francis Xavierius*. Not only the neighbouring people, but even those that before had been enemies, and others from remoter parts resorting to inhabit this town, it came to contain fifteen hundred families. Here *F. Castaldinus* was left alone, and so continu'd a year among those barbarous people.

*Taiaboa's territories.* The other two fathers *Ruiz* and *Salazar* undertook a new dangerous expedition into the lands of *Taiaboa*, whereof I find the following account. *Huibius*, a river in *Guaira*, falling into the *Parana*, under the tropick of *Capricorn*, has on its banks *Villarica*, a little *Spanish* city, thirty leagues from its mouth, and eight *Indian* towns not far from it, and under its jurisdiction. Above this town the river falling from a precipice hinders any vessels going farther up. This precipice was a boundary and entrenchment to *Taiaboa*, and his confederate

*Canibals.* *Caciques*. All this nation is so barbarously greedy of human flesh, that when they want enemies, they inhumanly kill and eat their own people. Some of them wean their children with man's flesh, and make the heads of their arrows of men's bones, making the monuments of their brutality the instruments of fresh cruelty. Which makes me admire *Ranfonierius* should write, that in this part of *Guaira*, there are no tygers or wild beasts, whereas there are almost as many wild beasts as natives; for the old saying fits no nation so exactly, viz. *Man plays the wolf with man*.

The reason why this country took its name from *Taiaboa*, was, because he being the most powerful of all the neighbouring *Caciques*, was by his people call'd the *Great*. Take this account of him. Some years before this we now write of, an *European* commander, famous for his hatred to the *Indians*, coming from the metropolis of *Paraguay* to *Villarica* with a power, pretending friendship, sent to invite *Taiaboa* to come to him, promising him much courtesy and some presents. Upon publick faith given, *Taiaboa*, and three other powerful *Caciques*, come to *Villarica*, full of hopes of what they were to receive, but there instead of gifts, they met with threats, stripes and bonds; that commander terrifying them with death and tortures, if they did not bring a number of *Indians* to *Villarica*, to be made slaves. Three of the four *Caciques*, rather than betray their people, starv'd themselves to death in prison. *Taiaboa* alone escaping with his fetters into his territories, for the future was so strict in hindring any resort to his territories, that he not only kept off the *Spaniards*, but tore to pieces and devour'd the *Indians* sent to him at several times to

settle peace. The *Spaniards* have often invaded him, but never came off without much loss; insomuch that there were no further thoughts of subduing them. Thus flood *Taiaboa*, when *F. Ruiz* entertain'd thoughts of converting those people. When his design was known, every body affirm'd he went in great danger of his life; but he set out and travell'd eight days difficult journey, with *F. Salazar*, a resolute man, to the borders of *Taiaboa*, and leaving his companion in the towns about *Villarica*, he pass'd over the precipice, and got to the first village of *Taiaboa's* party; and perceiving how great the danger was, those menacing *Indians* flocking about from all parts, he prepar'd himself and fifteen converts that attended him, for death. As he was so employ'd, the *Canibals* and forcerers gather'd about him, to whom he declar'd the cause of his coming, which was to teach them the way to heaven through *Jesus Christ*, and how to avoid eternal torments. Scarce had he spoke those words, when the *Indians* gave him the lye, declaring him guilty of death for denouncing eternal torments to them, and were just ready to fall upon him. *John Guirains*, a convert persuaded him to fly, which, as they did, the arrows flew about them so thick, that seven were immediately kill'd, and *Guirains* perceiving they all aim'd at the father, who could not fly so well as the rest, clasp'd his gown and cap on him himself, that the *Indians* might mistake him for the priest, and aim at him. Thus they both escap'd into a wood, with seven more of their companions, whence with great sorrow they made their way through the bushes and brambles, down to the river, and there found a boat two old men had brought from a village that was in amity, hearing of the danger they were in. This boat carry'd him down the river to the towns about *Villarica*, where he found *F. Salazar*. In the mean while, the *Canibals* having divided the booty *F. Ruiz* left behind him, made a feast of the bodies of the convert *Indians*, nothing troubling them, but that they had mis'd of the priest's flesh, and could not drink about in his skull. *F. Salazar* was left in those towns of converts about *Villarica*, that being near at hand, he might endeavour by kindness to win *Taiaboa's* people, but nothing succeeded for a year and a half. *F. Ruiz* went away to the town of St. *Xaverius*, which he found much encreas'd by a great number of converts; and having afterwards been to give an account of his actions to the provincial, return'd into the province of *Guaira*, where, attempting to reduce the *Tucuhians*, he found the success answerable to his expectation. The people lay in the mid-way between the old towns of *Guaira*, and the new colony

colony of St. Xavierius. It was therefore very convenient to settle a new colony among the Tucumans, that there might be a direct way and commerce between the aforesaid towns and colony, because before, the way was very troublesome, being far about, and along the rocky river *Tibariva*, besides the danger of leaving barbarous enemies behind. The Cacique of the first village the fathers came to, offer'd them that place to build the town, but that being unhealthy, they chose another, to which two hundred families immediately resorted out of the neighbourhood, and soon after six villages came over to it entire. The church and town had the name of S. *Joseph* given them. Having settled this town, and left F. *Simon Maceta* in it to instruct the people, F. *Ruiz* undertook to open a way through the woods and mountains, to the colony of S. *Xaverius*, and tho' he met with almost insuperable difficulties and hardships, being several days without water, and forced to suck the moisture of a certain branch that runs up the trees like a rope, for drink, and feed upon leaves, he at length prevail'd, and got safe to the town, to which he had made this new road. I have follow'd F. *Ruiz* in all these travels to come to the conclusion of what we are to say of *Taisoba*, with whom we began this section, and am now drawing near to bring them together that the relation may not be dismembred, as it is in our author, who has divided it too much for the conveniency of the reader. *Suruba*, a Cacique in great authority, had been the main obstacle for a long time to the conversion of the *Taitensians*, a people of the territory of *Nvajingua*, opposite to the plains of *Guaira*, he being an obstinate follower of the customs of his fore-fathers, and a profess'd enemy to christianity. He, tho' his people were well inclin'd to the faith, kept them from any communication with F. *Ruiz*, because he was resolv'd to have no town built within his liberty. This *Suruba*, attended by several Caciques and their followers, all enemies to the Spaniards, went into the lands of the great *Taisoba*, to gather the herb of *Paraguay*, in which they take great delight, and whereof an account has been given before. Among them was *Pindovius*, a powerful man among his people, who the year before lay in wait for F. *Ruiz*, to have eat him, and afterwards would have had him come to erect a town in his territories. *Taisoba* the great, dissembling his hatred to strangers, gave them free passage through his lands, to gather the herb, but laying an ambush for them as they return'd, slew *Suruba*, and all his company, securing their bodies to make a feast. Only *Pindovius* making the best use of his weapons, broke thro' a company of

bow-men, with three followers, and made *Treno* his escape. *Suruba* being thus taken off, *Pindovius* considering to what a peaceable condition the *Ibitirambetans* were reduc'd by the society, from their former confusions and disorders, but erecting the town of S. *Xaverius*, and that he had enemies whom he could not withstand, unless he join'd the christians, sent three Caciques of his faction to F. *Ruiz*, to desire in his name he would come and build a town. The inhabitants of the town of S. *Xaverius* hearing of it, severely reprimanded his messengers, hindring them from the speech of the father, alledging that was one of *Pindovius* his usual frauds, to draw the fathers to him, that he might devour them. Yet F. *Ruiz* taking the messengers apart, promis'd to go with them in three days, notwithstanding any thing that might threaten. They thank'd him for giving credit to them, rather than to those that gave so ill a character of them, and promis'd, they would be as zealous in protecting him and his, as the *Ibitirambetans* had been. After the three days F. *Ruiz* and his companion set forward, and the fourth day of their journey came to the place of *Pindovius* his residence, by whom they were receiv'd with triumphal arches made of boughs, amidst the noise of drums and trumpets, and throng of people flocking from all parts, and so conducted to a chappel built for them. *Pindovius* promis'd to use all his endeavour to gather inhabitants for a populous town, he gave the fathers a house that was fortified with a trench and palisadoes, against the attempts of a certain Cacique, who had taken and eaten *Pindovius* his own mother, as *Pindovius* had done by several of his friends; and not long before the coming of the fathers, that enemy had taken three boys in *Pindovius* his party and roasted them, and kill'd some Indian women, whose bodies *Pindovius* recover'd, and among the rest one that was shor through, having life left, was baptiz'd and recover'd. The place pitch'd upon to build the town, was a field very commodious by reason of the river running along it, and abundance of fir trees close by. There a cross was erected, and the names of many *Incarnati-* saints being put into an urn, they drew to build. give a name to the town, and missing *All Saints*, took out *The Incarnation*, as the place is still call'd, which soon contain'd fifteen hundred families.

F. *Christopher Mendoza* was left in the new town of the *Incarnation*, F. *Ruiz* repairing to other parts. Whilst he was absent, the Indians of the plain rose in arms against *Pindovius*, for having receiv'd the society, resolving to kill F. *Mendoza*, and destroy the town. Having gather'd their forces,

o M

they

VOL. IV.

The Tucumans, and the new colony

TECHO. they sent a youth to discover the strength of *Pindovius*. This youth being taken was put to the rack to discover the designs of the enemy, which still he resolutely refus'd to have any knowledge of, till *F. Mendoza* taking up his breviary to say his office, he believing that book discover'd all secrets to the *Europeans*, of his own accord reveal'd all that could not be extorted from him before, declaring that the enemy desir'd nothing more than to gorge themselves with the flesh of the priests, and had resolv'd to ruin the town, and slaughter all its inhabitants. Upon this intelligence *Pindovius* led out his men with all expedition against the enemy; but their being disappointed by their spy, fearing some treachery, retir'd to their own lands. But to return to the great *Taiacoba*, from whom the continued series of these affairs have diverted us, he being now somewhat mollified by the fame of the society, sent two of his sons in a disguise with the *Cacique Maendius* to the town of *S. Xaverius*, to discover whether all was true that was reported of the society. They having liv'd conceal'd some days in the town, were at last discover'd by a servant of theirs to *F. Francis Diastanius*, who then had charge of the *Ibitrambetans*. The father hoping that opportunity might serve to oblige *Taiacoba*, sent for the two youths, and *Maendius* in an honourable manner, and asked what was the design of their coming; who ingenuously answer'd, they came as spies to pry into the manners of the christian priests and their converts. Next he ask'd, how they lik'd the religion? To which they unanimously reply'd, they lik'd it well, and would persuade *Taiacoba* to admit christianity in his dominions. This done, they were handsomely clad and sent back. *F. Ruiz* being inform'd hereof by letter, hasten'd to the town of *S. Xaverius*. *Taiacoba* hearing of his approach, went out to the borders of his territories to meet him with a great retinue, and embracing him with great demonstrations of joy, said, *Behold me here, O father, receive me as your son, and instruct me what I am to do.* His wife, in no less obliging a manner, set before him her three little children, whom *F. Ruiz* lovingly imbracing, wonderfully oblig'd both the parents. For nothing so much takes with the *Indians*, as to see their children belov'd by strangers. Being conducted through arches made of boughs, with great noise of trumpets, into *Taiacoba's* lands; his first care was to chuse a place to build a town, and having pitch'd upon it near the river *Huibao*, with the assistance of three hundred *Indians* he erected a cross, laid the foundation of a church, mark'd out the plot for the town, created magistrates in the name of his catholic majesty, gave the chief command to *Taiacoba*, appointed

*Taiacoba*  
reconcil'd.

his eldest son captain of the forces, honour'd the other *Caciques* with several titles, baptiz'd twenty-eight small children of *Taiacoba's* by several wives, and gave hopes to those that were grown to mens estate, that they should be receiv'd into the number of the faithful, as soon as they had learnt the rudiments of christianity. The forcerers, enrag'd at this success, stirr'd up all the neighbouring people against *Taiacoba*, who setting out gave strict command that no harm should be done to *F. Ruiz*, their design being to take him alive, and kill him with solemnity at a feast. *Taiacoba* and his confederate *Caciques* being much inferior to the enemy in number, and sensible of their danger, went late at night to *F. Ruiz* desiring to be baptiz'd, and promising, *If that favour were granted them, to dye manfully in defence of the faith.* The father considering the present circumstances, instructed them the best he could for that short time, and made them all christians. Before break of day, the enemy, having divided their troops into four parts, attack'd *Taiacoba's* forces. At the first onset several of the enemies and two of ours fell, many on both sides, and among them *Taiacoba's* son being wounded, and his whole party put to flight. *F. Ruiz* order'd *Taiacoba* to stay in the place design'd to build the town, with the *Cacique Piragatua*, till they could have an opportunity of retrieving that misfortune. The people of *Villavica* hearing of what had happen'd, sent five hundred converts well armed against those revolted *Indians*. There coming to a battle, and being overpowered by the multitude of the enemies, were forced to secure themselves within passadoes. Where the fight being renew'd, they must have perish'd, had not *F. Ruiz* advis'd them to receive all the enemies arrows without shooting any, because both sides make use of the enemies arrows, and when they have none left they certainly fly. By this means our men having receiv'd all their arrows without any harm, soon put them to flight, which done they return'd home. It happen'd in this expedition that our men, having put the enemies to flight, brought away a pot full of flesh, whereof *F. Ruiz's* hunger pressing, and believing it to be venison, eat a little, but was struck with horror, when at the bottom of the pot they found a mans head and hands, and above all when it was found to be the flesh of his own clerk, who being taken in the former flight, had been reserv'd for a solemn entertainment. Concerning the ceremonies of their feasts of human flesh, because we have often occasion to mention them, take this short account. The men-eaters of the province of *Villavica* led any prisoner they took in war to their village, allowing him all man-

manner of dainties they could think of, that he being fatted, might fatten others with his flesh. During the fattening time, it was a crime to refuse him any thing he had a mind to. On the day before the slaughter was to be, the inhabitants of the village calling in the neighbours on all sides, made a mighty appearance. First went a great number of armed men two and two, and women in the same manner; one maid in the midst of the procession richly adorn'd with feathers and garments, carry'd a club, the instrument of their cruelty, and a fine dish; and another dress'd like her, a crown or garland for the intended victim. Lusty brawny women led the prisoner, bound about the middle with slack ropes and his arms loose, throwing sticks and stones at all about him. If the prisoner happen'd to hurt any body, all the multitude applauded his valour and dexterity, with great shouts and acclamations. The procession of the eve being ended, they spent the night in confuse noise, dancing and drunkenness; cramming the prisoner with meat and drink. In the morning they led him in the same manner as the day before to the place of slaughter, where having repeated all the same follies, the prisoner being crown'd by some powerful *Cacique* and curiously adorn'd, was knock'd down with the club. When down all there present struck him, leaving their old names and taking new ones, and even the little children having names given them by their mothers, were forced to strike the body with their hands. When it appear'd he was dead, all the company broke out into immoderate laughter, and danced about before the inhuman feast. Then they boil the carcase, cut in pieces and eat it, sending some pieces to the neighbouring villages, that they might taste and take new names. This barbarity was look'd upon as a glorious death, and therefore very few prisoners made their escape, though they might easily do it. Things not being yet ripe for building the town, because the enemies were too powerful and the friends but few; *F. Ruiz* retir'd from thence to visit the other parts of *Guaira*. Having perform'd that duty, he return'd with greater resolution, and though all people dissuaded him, alledging, *He would infallibly be devour'd by the barbarous Indians*, nothing could alter him. He therefore sent before *Nicolas Taiaboa*, with orders to gather all the force he could to oppose the enemies, whilst he had recourse to God for aid. About the same time an hundred of the bloodiest of those *Indians* who had formerly eaten the seven converts that attend'd *F. Ruiz*, came and submitted themselves to him; and news was brought that seven *Caciques*, who were mortal enemies to Chris-

tianity, had been beaten to death with clubs **TECHO** in the woods, and many others of that stamp slain in the same place, yet it could never be known who had made all that slaughter. So many obstacles being remov'd, *F. Ruiz* set forward, and within a few days was met by *Taiaboa* and *Piraguatia*, with whom he went to the place design'd to build the town, where he found **Town of** very few *Indians*, because the followers of the **Seven** *Taiaboa* and *Paraguatia*, understanding that **Archangels built:** other *Indians* had again conspir'd against them, durst not assemble. *Guiravera* a *Cacique* was the most inveterate of cannibals, who now threaten'd *F. Ruiz* should not escape him, and therefore call'd together all the *Caciques* of his faction, who agreed to put his design in execution, which was thus disappointed. Among the rest was *Avarundio*, who, in the former attempt against *F. Ruiz*, commanded their forces; him *Guiravera* upon some suspicion murder'd with his own hand, and lay'd him before the rest to be eaten, designing to make a feast of all his followers. Accordingly *Cheacabie* another *Cacique*, who had formerly promised his concubines to treat them with *F. Ruiz's* legs, was shot thro'. These murders bred discord, and so the enemies forces were divided, and *Taiaboa's* party so considerably increas'd, that of eighty *Caciques* there were in that part of the country, sixty favour'd Christianity with *Taiaboa*. *F. Ruiz* encourag'd by this success, fell to work on building the new town, gave it the name of the *Seven Archangels*, and settled the form of government. There he baptiz'd five hundred persons, before he left that populous town to the charge of *F. Peter Spinoja* to go himself into the plain, where we shall speak of him again hereafter.

Though some account has been given before at number forty, of the province of **Of the** *Cuio* or *Chicuito*, we will here add a fur- **people of** *Cuio* of **Chicuito.** ther relation our author gives out of a letter of *F. Dominick Gonzalez*, rector of the college of *Mendoza*, the capital of that province, who labour'd much for the conversion of those people, and writing to the provincial, speaks thus of them. *The Indians (says he) among whom I have been, inviting one another from several villages, have often solemn revellings. I saw the places of their mad drunken meetings, which the lord of the village and master of the feasts encloses with straw, making them round with gaps at certain distances, and in bigness proportionable to the number of the guests. There all the men pass three or four days in dancing and singing, without sleeping. The women are not to come within these inclosures, only when they bring their husbands wine, which they do with their eyes shut, and their face turn'd away; if through any neglect they look upon the men when they are revelling in that*

**W**TECHO that ring, the punishment is death; which law is so rigorous, that neither the husband forgives his wife, nor the father his daughter. The reason they give for this superstitious cruelty, is that they have found by experience, as they pretend, that some of the revellers dye presently, and sometimes are openly kill'd by the devil, if they are seen by women in that enclosure. The devil before call'd upon, is present at these dances, and the way of raising of him is thus. An old fellow standing in the midst of the dancers, beats a drum till he visibly appears with a mighty noise, in the shape of a man, dog or fox. When come, the devil does not refuse to drink; then having made a speech to the company, the parents offer their children to him, whom he marks as his, drawing blood from them with his nails. At other times, those that desire to devote their children to the devil, carry them to certain old men appointed for that purpose, who tear the children's skins with their nails, and pierce their heads with a sharp bone till they bleed plentifully, the blood which runs they receive in their hands and scatter it in the air, believing the children consecrated by this ceremony. Having thus blooded them, they make them fast in some retir'd place remote from all other company, by which misery they pretend they become strong. All the nation adores the sun, moon and morning star, hoping for all health and prosperity from them. Thus F. Gonzalez of the people of the province of Cuio or Chicuito.

Let us look back a little into the province of the *Nativity* built. The town of Parana, where some attempts had been made to introduce christianity among those people, inhabiting on the banks of the upper part of the river; yet at length some of the Caciques had been so far oblig'd by frequent courtesies, that it was believ'd there might be a probability of building a town. F. James Boroa and Claudius Ruiz undertook this work in the year 1624, setting forwards in March, with a company of select converts. The mouth of the river Acarai is thirty leagues from the town of Corpus Christi, whence they set out. About that river dwelt several Caciques, one of whom of his own accord assign'd a place in his liberty to build the town. The report whereof being spread abroad, drew many Caciques thither to confer, who departed so as was believ'd they had been gain'd over to the faith. The fathers therefore built a sort of chappel for present use, and gave the new town the name of the *Nativity* of the Virgin Mary, taking all possible care to attract all the neighbouring people to come to inhabit there. F. Claudius Ruiz was left there alone, and endur'd very much, there being scarce a man in the town but what fell sick; as soon as they recover'd, he drew over the inhabitants of two villages. But his main design was upon Qua-

racipacatus an apostate, who hearing the father was coming to him, assembled the neighbouring Caciques to murder him; but the father wrought so powerfully upon him by his words, that he furnish'd him provisions, and some time after joyn'd the other converts. At this time and others the fathers brought several *Indians* to his town, but they, out of their natural laziness, neglecting to build their houses, were so frighten'd by a tyger that us'd to come into the town at nights, that they fell to work in their own defence, and with wonderful celerity built substantial habitations to defend them from danger. Soon after the tyger was taken in a gin. This place was long subject to be so infested by tygers, and had another plague, which was a multitude of gnats breeding in that low hot Ground, that day and night were a continual torment to the inhabitants, yet the town prosper'd and continues to this day. Jaguapinus a Cacique of this province of Paragua, was a great hindrance to the progress of christianity, and persuaded the heathens of Urvaica, to build a larger town near to that of the *Conception*, to the end they might with united forces make war on the christians, and obstruct their increase. The converts of Parana having notice of his design, drew together and fell upon his town, where they took him, and sent him into banishment; which prov'd a double advantage to the towns of Parana and Urvaica; for Jaguapinus became a christian with all his followers, and afterwards many more towns were built. Yet A famous amidst all this prosperity, no little trouble was rais'd by one John Quaracius a wicked forcerer, famous for many villanies, who being born in the province of Guaira came into that of Parana, suffering himself to be baptiz'd, that he might, being the less suspected, do most harm. He travelling into several countries, spread every where his damnable superstitions, endeavouring to dissuade all he could from embracing christianity. In the town of the *Assumption*, being convicted of heinous crimes, he was condemn'd to be hang'd, but sav'd by some indiscreet persons, and banish'd to the town of Santa Fe. Making his escape from thence up the river Parana, he privately got into the town of the *Itatinensians*, subject to the *Franciscan* fathers. Being a crafty fellow he persuaded the people to conceal him, and by insinuating discourses prevail'd with those credulous *Indians*, to repair to him in great numbers at night. The doctrine this night-doctor taught, was this. ' That they should take heed of the christians and their priests, who were devoted to the ruin of the *Indians*. That they persuaded the converts to confession, that they might

 e to the Franciscan  
 fellow he persuad-  
 al him, and by in-  
 ail'd with those cre-  
 dit to him in great  
 doctrine this night-  
 his. That they  
 the christians and  
 re devoted to the  
 That they persuad-  
 confession, that they  
 might

might make an ill use of the knowledge  
 of their sins. That the salt they use in  
 baptism, was a sure poison sooner or la-  
 ter to infect the bodies of infants or men.  
 That the holy oyls serv'd only to cause  
 deformity. That the christian priests  
 forbid the having of many wives malici-  
 ously, lest the Indians multiplying too  
 fast, should be too hard for the Spaniards.  
 That therefore he, by the power he had  
 in him, commanded them all not to be  
 satisfy'd with one wife for the future, but  
 to keep as many as they could get.  
 Live (said he) and drink after your ancient  
 manner, making merry with dancing and  
 drunkenness; celebrating the memory of our  
 ancestors. Give no honour to the images of  
 Saints, but look upon me as your only deity. If  
 you do otherwise, I will deliver you up to be  
 swallow'd by the Parana, transform'd into  
 frogs and toads. To these blasphemous  
 doctrines, he added a leud example. For  
 besides keeping seven concubines constant-  
 ly to satiate his lust, he would have to do  
 with any others at pleasure. Having thus  
 done much harm by words and example,  
 in a short time he so perverted the Itali-  
 nensians, that they look'd not like the same  
 people. For instead of respecting, they  
 revild the priests. Instead of frequenting  
 the sacraments, they were fallen to  
 their former vices so openly, that a revolt  
 of the whole town was fear'd. F. John  
 Gamarra, a Franciscan, well skill'd in the  
 Indian language, and in the way of ma-  
 naging those people, was then chief there,  
 who inquiring into the cause of this sudden  
 change, was a long time before he could  
 make any discovery, till at last a boy made  
 some discovery. For having a particular  
 kindness for him, and asking him, Whether  
 he lov'd him? The boy answer'd, Indeed I  
 love you father, but John Quaracius lies pri-  
 vately in tosen, whom I love better than you.  
 Quaracius's name was well known, and  
 therefore having heard this account, he  
 made no question but that was the cause of  
 all the mischief. But he being more earnest  
 in that business than was proper, Quaracius  
 making his escape with his concubines up  
 the river Parana, got away into Maracana,  
 the refuge of wicked men for many years.  
 Then making some looses from thence,  
 spreading his venom in all parts, he infest-  
 ed our converts, and fill'd to the villages of  
 the upper Parana, to persuade the infidels  
 not to embrace the faith. F. Gonzalez ob-  
 serving the change in the converts, and  
 not knowing the cause whence that mischief  
 proceeded, having receiv'd letters from F.  
 Gamarra, giving an account of Quaracius's  
 escape, gather'd a company of the most  
 faithful of the converts, and with them hat-  
 ted to Maracana, but before he could get

Vol. IV.

thither, the impostor had betaken himself to his lurking places in the marshes, where-  
 with he was well acquainted, and would  
 never have been drawn thence, had not  
 one of his concubines betray'd him. When  
 found, the converts bound him fast, and  
 after shewing him in the town of Iltana,  
 conducting him down the Parana, and up  
 the Paraguay to the city of the Assumption,  
 where he was hang'd, and so deliver'd the  
 provinces of Parana and Urvaica from im-  
 minent danger.

About this time, that is, the year 1625  
 or 26, the kingdom of Chili which had  
 been a part of the Jesuits province of Pa-  
 raguay, by reason of the vast extent of  
 the said province, and the vast mountains  
 which part those dominions, and are pass-  
 able but at certain times in the year, was di-  
 vided and made a vice-province, subject  
 to that of Peru, which I mention here,  
 because this history treating only of the  
 father's province of Paraguay, we shall  
 for the future have no more occasion to  
 speak of the said kingdom of Chili. Up-  
 on this separation, all the fathers born in  
 that kingdom retiring to it, there began  
 to be a want in Paraguay, to remedy  
 which Gaspar Sabrino was sent procurator  
 to Rome, to bring new supplies out of Eu-  
 rope. There we will leave him and return  
 to F. James Boroa, who being chosen re-  
 ctor of the college in the city of the Assum-  
 ption, beg'd of the provincial, that be-  
 fore he enter'd upon that dignity, he might  
 have leave once more to try to bring the  
 Iguazuans, a people bordering on Parana,  
 among whom he had been before with im-  
 minent danger of his life, to build a town  
 and embrace the faith; which having ob-  
 tain'd, he set forward with all necessaries  
 for his design. Iguazu, which signifies  
 great river, falls into the Parana with a  
 mighty noise, at an almost equal distance  
 from the town of Itagua and borders on  
 the province of Parana, in about twenty-  
 four degrees of south latitude. A craggy River I.  
 rock lying quite athwart the river four miles  
 above its mouth, renders it innavigable,  
 and rolls down from a great height such  
 a vast quantity of water, that the noise of  
 its falling is heard three leagues off, and  
 the violence of its dashing, forms as it  
 were a cloud ever visible from the Pa-  
 rana. This precipice had till this time  
 been as a bulwark, to secure them against  
 all foreigners. The whole nation differs  
 in nothing from the rest of the Guaraniens.  
 Before the coming of the Jesuits among  
 them, the women went naked. They  
 reckon'd it dainty diet to feed on the flesh  
 of their enemies. No Spaniard had hi-  
 therto been among them, nor was there a-  
 ny hopes of entring by force of arms.

8 N

Three

**T**ECNO. Three years before this *F. James Boroa*, attempting with a few converts to introduce christian religion among them, was forced to retire by the natives in arms. Two years after having pass'd the same precipice, and gain'd the good will of some *Caciques*, he was again expell'd by *Taupá*, the most powerful of the *Iguazuans*, and return'd to *Paraná* with small hopes of reducing those people. But being of a spirit that still struggled against all difficulties, he again went upon the same expedition better provided than before, with *F. Claudius Ruier* for his companion. Their design being known, the *Iguazuans*, according to their custom, held a consultation at a solemn feast, to debate, whether the preachers of a new law ought to be admitted. That the business might be perform'd with the greater solemnity, they with horrid ceremonies kill'd a youth they had prisoner, dress'd, and eat him. What is wonderful, amidst these abominations, when the matter was put to the vote, they all unanimously agreed, that *F. James Boroa* was to be admitted, because from the time they had resisted him, God had punish'd them with famine and pestilence; most of those, who were the chief cause of expelling him, being taken off by the plague. As soon therefore as they heard that the father had set out of *Acará*, they sent boats to the precipice, which, when he had pass'd, they receiv'd him in their first village with extraordinary demonstrations of kindness. The following days *Taupá* himself, and other *Caciques*, came very readily to submit themselves. Several strove to have the new town built where their villages stood, but the fathers without regard to private interest, chose the most convenient place for the publick. A great cross was erected, and the plat being mark'd out, abundance of people from all the neighbouring parts, destroying their villages, came to settle there. The new colony was call'd *S. Mary Major of Iguazu*. After four months the *Cacique Paravera*, at the instance of *Taupá*, brought over two hundred families to the town; after whom, none refus'd to embrace christianity, so that a hundred and fifty men and women were baptiz'd on the feast of the *Assumption*, and above five hundred of all sorts within a few days after, all the rest coming in by degrees, to the number of eight thousand six hundred, at the time when the author resided there. The house and church were five months building; during which time the fathers dwelt and taught under mats; living so poorly, that insipid roots were their chief dainties; for the country of *Iguazu* being all woody, has not pasture for cattle; and the river being shut up by the precipice, has no fish, so that all the people feed on snails,

and some inconsiderable fruits of the earth.

*F. Roch Gonzalez* was no less successful upon the river *Urvaica*. He had been confin'd for seven years to the town of the *Conception*, built by himself, not being able to set his foot beyond the river, because of the obstinacy and jealousy of the *Indians*; but many obstacles being now remov'd, passing the *Urvaica* with a few converts, he went as far as the place where the small river *Piratin* falls into it. Having found a place fit to build on, two leagues from thence on the banks of the said river, he summon'd the neighbouring people to a conference, and having gain'd their affections, on the day of the *Invention* of the cross, he erecteth one, and laid the foundation of a town, which, in honour of his provincial, *Nicolas Durand*, he call'd *S. Nicolas*; and the *Indians* resorting to it, in a short time it grew populous, so that above seven thousand were baptiz'd in a few years. In the mean while, *Luis de Cespedes*, governor of the province of *Rio de la Plata*, thinking it would gain him reputation, and be a matter of merit with the king of *Spain*, if the province of *Urvaica* were reduced to admit of towns, during his government, us'd all possible means to open a way from the port of *Buenos Ayres*, to the town of the *Conception*, founded by *F. Gonzalez*. But despairing of ever subduing such vast nations by force of arms, he concluded the only way to compass it, was to encourage the society, with supplies from the king to continue that expedition. To this purpose, having purchased the friendship of the inhabitants, he prevail'd with *Ferdinand de Sa*, a *Spaniard*, well acquainted with the language and temper of the *Indians*, partly by his authority, and partly by hopes of reward, to venture to sail up the river *Urvaica* a hundred and fifty leagues, and carry his letters to *F. Gonzalez*, then in the town of the *Conception*. *Ferdinand de Sa*, escaping many dangers, perform'd the journey, and delivered the letters to *F. Gonzalez*, by which the governor signify'd, that it would be a great service to God and the king, if he would discover along the river *Urvaica*, and come down to him to the port of *Buenos Ayres*, that they might consult about the best means of reducing the province of *Urvaica*. *F. Gonzalez* rejoicing that the means was offer'd him of doing that, which he had so earnestly desir'd; taking along with him the boldest of the inhabitants of the *Conception*, and their commander *James Niez*, set out with *Ferdinand de Sa*. By the way he persuaded four hundred *Indians*, that came to meet him in warlike manner, to return peaceably to their homes. Where-soever he went, the people along the shores, remarka-

remarkable for the diversity of langua-  
 ges, and barbarity, ran to have a view  
 of him. In twenty five days he came to  
 the port of *Buenos Ayres*, to the great joy of  
 the governor, who, understanding that the  
 chief of the *Urvaican* converted came along  
 with him, thought it might be an endeavour  
 to insill into those ignorant people, a re-  
 spect for the catholick king and *Spaniards*.  
 To this purpose, on the day appointed, he  
 march'd out with all the prime men, and  
 a good number of horse: Next him fol-  
 low'd his eldest son, captain of a troop of  
 horse, and another son that was captain of  
 foot, exercising their men, the cannon in  
 the mean while roaring from the walls.  
 Thus were the *Indians*, astonish'd at that  
 terrible noise, conducted in state, first to the  
 governour's, and then to the bishop's pa-  
 lace; and the governour having kiss'd his  
 hand, and speaking to him some time on  
 his knees, taught those strangers what re-  
 spect was paid to prelates. Then *James*  
*Nieza*, in the behalf of all his people, took  
 an oath that he and they would be subject  
 to the catholick king, and obedient to his  
 governours; and take care that none should  
 obstruct the executions of his majesty's  
 commands; and begg'd that they might  
 not be oblig'd to serve private men, or be  
 govern'd by any but the fathers of the so-  
 ciety. The conditions being granted, and  
 homage receiv'd for the province of *Urva-*  
*ica*, the governor appointed *James Nieza*  
 commander over his people, and having  
 presented him with his own coat, and se-  
 veral other things, advis'd him to continue  
 faithful to the catholick king, as he had  
 sworn, and be obedient to the fathers. The  
 bishops did the same, and then gave the  
 fathers full authority in spirituals, as the  
 governour did in temporals; delivering,  
 at the same time, to *F. Gonzalez*, bells,  
 church-stuff, and other necessities at the  
 king's expence; and knowing there might  
 be more towns erected, besides the two al-  
 ready built on the banks of the river *Urva-*  
*ica*, if there were fathers to supply them, he  
 sent *F. Michael Ampuero* back with *F. Gon-*  
*zalez*, and writ to the catholick king, ex-  
 tolling the proceedings of the society, and  
 begging that thirty of them might be sent  
 to serve the province of *Urvaica*; which  
 letters were of good effect at *Madrid*, for  
 obtaining the fathers that came two years  
 after to *Paraguay* with *F. Gaspar Sobrono*.  
*James de Vega*, a rich *Portuguese*, gave con-  
 siderably towards priestly vestments, and  
 other church-stuff, and promised to send  
 for all sorts of iron tools for the service of  
 the new towns, which he afterwards per-  
 form'd, and was of great use. Having  
 spent ten days in concluding these important  
 affairs, *F. Gonzalez* return'd the same way

to the place whence he came; and having *Trecho*  
 again viewed the shores of the river *Urva-*  
*ica*, found there was little hopes of founding  
 any town, for an hundred leagues from the  
 port of *Buenos Ayres*, because the natives  
 were of that sort of people, who, wandering  
 about all their life time, would not be  
 brought to till the land, or settle in one  
 place. Beyond that, he encourag'd the  
*Japevians* to build a town; and twenty  
 leagues further, prevail'd with the *Jagua-*  
*raians* to do the same, whereof we shall  
 soon give an account. This done, he re-  
 turn'd to the town of the *Concepcion*.

This was the posture of the province of *Two*  
*Urvaica*, when the provincial *F. Nicholas* <sup>ways from</sup>  
*Durant*, having resign'd the kingdom of <sup>*Tucuman*</sup>  
*Chili*, resolv'd upon visiting *Guaira*, where <sup>to *Guaira*.</sup>  
 no provincial as yet had been. There were  
 two ways out of *Tucuman* into *Guaira*; the  
 one had been used for many years past,  
 which was up the rivers of *Plate* and *Para-*  
*guay*, and the rest by land. But his was  
 much about, and almost five hundred leagues  
 in length; besides, that it was infested by  
 the *Paiguans*, the most inhumane of the  
*Indians*, and famous for the slaughter of  
 many travellers. The other way was much  
 shorter, which was sailing up the *Parana*,  
 and had never been attempted before the  
 society erected the towns above spoken of,  
 for fear of the infidels; and because of a  
 vast precipice running quite athwart the *Pa-*  
*rana*, near the borders of *Guaira*. Most  
 of those people being now brought into  
 towns, the provincial hoped he might take  
 that way. *F. Anthony Ruiz* being inform-  
 ed of the provincial's design, sent several  
 messengers one after another, to discover  
 that new way; the last of whom making  
 his way through into *Tucuman*, satisfy'd  
 the provincial, that he might go up the ri-  
 ver to *Guaira* with very little danger. He  
 set forward from *Cordova*, and travell'd six-  
 ty leagues to the college of the town of *St.*  
*Fe*; thence a hundred and fifty leagues to  
*Itapua* on the river, and fifteen further to  
*Corpus Christi* town, and so thirty more to  
 the new colony of *S. Mary Major of Iguaçu*,  
 wherein were already two thousand inhabi-  
 tants. He held on his course to *Acarai*,  
 and thence towards the precipice, which  
 was forty leagues further. Drawing near <sup>The won-</sup>  
 the precipice, he began to be sensible of the dreadful pre-  
 force of the water that fell; the little ves- <sup>tipice of</sup>  
 sel that carried him being much batter'd; <sup>*Guaira*.</sup>  
 and another in which were *F. Martin Ma-*  
*rinus*, and *Mendiola*, priests going to assist in  
*Guaira*, beaten to pieces against a rock, but  
 the passengers saved. This oblig'd them  
 to travel by land. *F. Anthony Ruiz* had  
 laid bridges over the clefts of the precipice,  
 and open'd a way through the impassable  
 parts of the woods; yet they were forced  
 very

**TECHO.** very often to lay planks over from rock to rock, going over them in great danger of their lives, if their feet had slipped, being sure to fall a vast depth into the rowling waters. Very many fabulous stories have been made concerning this precipice, which I will not take notice of. Most certain it is, that many have lost their lives, being dashed by the falling waters against the rocks; and I know not whether there be any thing in the world more wonderful of that kind; at least, in *America*, there is nothing more dreadful, or more spoken of; for a little above the precipice, the river *Parana*, which is two leagues over, draws into so narrow a compass, that the breadth is not above a stone's throw. When it is at this narrowness, it tumbles most impetuously from a prodigious height, down a descent of twelve leagues, the sloping channel being full of hideous rocks, against which the water violently beating, flies up a wonderful height. In many places the channel is obstructed by mighty rocks; but as soon as the waters, thus slopt, get a head again, they make most dreadful whirlpools. In other places, the falling waters, after making their efforts against the rocks, slip away out of sight through private passages, and having been long conceal'd, piercing through the rocks, break out again at the bottom of them, and spread abroad with a high noise, as if it were out of inexhaustible springs. In fine, so great is the violence of the waters, tumbling headlong down that inclining channel, that there is a continual foam of an iron-colour for all the twelve leagues the descent lasts, which being reflected upon by the sun, dazes the eyes of those that behold it. The noise of the waters falling and beating against the rocks, is plainly heard four leagues off. Not far from the foot of the precipice, the water seems desirous to rest in a smoother bed; and having made, as it were, a sea, looks more like a standing pool than a *Cataract*. But that calm is mischievous, for almost every hour there arises a great noise from the bottom, the cause unknown, and throws up the water many cubits high, perpetually giving warning, that there is no confidence to be repos'd in its counterfeit stillness, which every now and then grows boisterous to the destruction of many. There are fishes there of a prodigious bulk. *F. Anthony Ruiz* affirms, he has seen one as big as an ox, swimming with half its body above water. It is reported, as a most certain truth, that an *Indian* was swallow'd by one of these fishes, and afterwards cast up whole on the shore. They spent six days with unspeakable toil in climbing the mountain; for tho' the way, if it were streight, would be but twelve leagues, yet the many windings make

it almost double. Besides, it is all along an uncooth rocky shore, divided by lakes, brooks, woods and scorching sands. No part of the world would be hotter, did not the woods at small distances make a shade; and yet that very thickness of the trees, which does not give free passage to the air, is very tiresome to travellers. Where they were to lie at night, the *Indians* set up a little cottage, the walls and roofs whereof were made of leaves, orderly placed, which being bound together with roots instead of cords, kept out the rain.

When they came to the top of the precipice, *F. Peter Spinsa* met the provincial <sup>The provincial's</sup> with boats from sixty leagues further up the province of *Guaira*, and entertain'd him and his company with a plentiful provision of the country fruit; this meeting at the top of the precipice, being in some measure, an emblem of those, who, ascending with much difficulty to the pitch of virtue, taste there the sweet fruits of their past labours. Two leagues beyond the precipice, the chief men of *Cuidad real* came out to meet the provincial, receiving him with the greater honour, because, till that time, no bishop, governor, or provincial had been in *Guaira*. After the reception, they desir'd of him that he would erect a college in the city, which he could not grant, because of the small number of fathers, but promis'd he would appoint some to take care of the city, and to see the *Indians* perform'd their two months service, according to the king's order, and suffer'd no further oppression. Thence he went to *Loreto*, where the converts, to honour his coming, represented a fight among themselves on the river, which was all cover'd with boats, re-sounding with musical voices and instruments. The church he found adorn'd with such curious inventions, that he declar'd, he thought them a sufficient reward of all his labours. The town of *St. Ignatius*, entertain'd him with no less tokens or affections; and he departing from it, left the river *Parana* on his left hand, and went up the *Tibaxiva*, which being very shallow in many places, he had much ado to make thirty leagues in fifteen days, to come to the town of *St. Xavierius*, containing fifteen hundred families, under the direction of *F. Francis Dianianus*. Hence he sent *F. Christopher Torriano* some days journey by land to *Villarica*, to restore the residence of the society in that city, that it might be a check to some who oppress'd the *Indians*, and assist them in their spiritual concern. In his return upon the river *Tibaxiva*, the vessel that carry'd him was cast away, and many things lost. Wheresoever he went, he bestow'd shirts, hooks, pins, needles and glass beads among the *Indians*; inasmuch, that he is said to have spent to the

the value of two thousand pieces of eight among the *Guaicureans*; which liberality was not ill bestow'd, for the fame of the great father's gifts (as they call'd him) gain'd the hearts of abundance of the infidels, and encourag'd the converts. At his departure, he order'd *F. Antony Ruiz* to build three towns more among the *Inianians*, and in the countries of *Taiaba*, and the *Coronadas*. When he came down the precipice of *Guaia*, he went to see a vast rock, which by contraries they call *Pena pobre*, or the poor rock. This rock is of several colours, and so bright, that the sun beams striking upon it are reflected, as it were from a glass; which makes the ignorant multitude believe it to be all of some rich metal, if not of gold; but they are deceiv'd, for it is known to be meer stone, so rub'd and polish'd with the sand of several colours drove by the wind, that it looks at a distance like glass. It is reported that thirty Spanish boats were formerly lost going near to view this rock. Thence the provincial proceeding through the province of *Parana*, drew away the two fathers that were among the *Guaicureans*, there being no hopes of the conversion of those people, tho' the society had been sixteen years settled among them. At *Itapua* the inhabitants petition'd the provincial, that he would suffer the blessed sacrament to be placed in their church, and the best instructed among them to receive it, which he granted, whereupon they kept a festival with such solemnity, that the nicest Europeans who beheld it were struck with admiration. Let us return a little to the province of *Urvaica*, which not long since we left in a good posture towards being reduced.

The too hasty eagerness of the governor of the province of *Rio de la Plata* bred much disorder and confusion there. This governor sent from the port of *Buenos Ayres*, *Ferdinand de Sa*, *Peter Bravo*, and *Paiva*, all Spaniards, to be corregidors or governors of the new towns the fathers had or should erect for the king of Spain. *F. Gonzalez*, tho' he foresaw the ill consequence of that unreasonable resolution, yet not daring to withstand the king's governor's commands, permitted *Ferdinand de Sa* to act as corregidor in the town of the *Conception*; *Paiva* he sent to the *Jaguaraitians*; and *Peter Bravo* to the *Japevians*, people of *Urvaica*, who had desir'd of the society to be gather'd into towns: but it was not long before this precipitate project did much harm; for tho', out of respect to the fathers, the converts for some time bore with the strange governors, yet it soon appear'd that could not be lasting, which was tolerated so much against inclination: for the news being spread abroad, the *Ila-*

*puans*, a people of *Parana*, sent a messenger to threaten the *Ibitiraguans* with war if they did not cast off the yoke of that foreign governor; and the infidels inhabiting the opposite shore of *Urvaica* gathering into a body, fell upon a party of *Ibitiraguans*, and plundering them, sent 'em home with many reproaches, and a declaration of war. *Ferdinand de Sa*, by his imperious carriage, added fuel to the fire, provoking the people, not us'd to be under command, by his threats and arbitrary practices, and by giving a box on the ear to a youth who had powerful relations, for not obeying his orders immediately. The *Ibitiraguans*, impatient to be upbraided and provok'd by this action of *Ferdinand de Sa*, besides some jealousy of his lust, ran to arms in a tumultuous manner, beset the fathers house, and demanded to have the new governor to be deliver'd to them to suffer death; and had done it, but that *F. James de Alfaro* interposing his authority, in some measure appeas'd 'em; but *Ferdinand de Sa* durst not go out of the House, or presume to exercise any command. Not long before this happen'd, *F. Gonzalez* had got together as many of the *Jaguaraitians* as were sufficient for a handsome town, which they had begun to build. *Paiva* coming thither, had with his threats so incens'd those people, that *Potirava*, a powerful Cacique, contriv'd to kill him; and had done it, but that *Tabaca*, the Indian commander of the new town, obstructed it. *Potirava* being disappointed of his design, for fear of being punish'd, fled to his ancient lurking places, drawing along after him about a thousand of the inhabitants of the town. *Paiva* for fear hid himself in the woods. Upon this news the provincial, with some companions, hastened to the province of *Urvaica*: as he came into the town of the *Conception*, the chief men of the town flock'd about him, rather demanding in a tumultuous manner than entreating, that he should interpose his authority, unless he would have the church perish there; for the *Urvaicans* were all agreed, *That the faith could not be propagated among them, if any other governors came among 'em but those of the society, under whom they would obey all the king's commands.* The provincial having heard their complaints, deserr'd giving them an answer till the next day, when he told 'em, *'Twas not in his power to displace the corregidors sent by the king's governor-general, but that he would send one of the fathers to him, and did not question but he would remove the causes of their troubles.* The people were satisfied with his answer, and he presently sent *F. Michael Ampuero* down the river *Urvaica*, to the port of *Buenos Ayres*, who obtain'd of the governor not only the removal of those corregidors, but

**TECHO.** new supplies for the support of the fathers in that province. The provincial then continuing his visitation, proceeded to the town of *S. Nicholas*, on the river *Piratin*, and thence to the *Japevians*, where he forwarded the building of a town already begun, and call'd *Los Reyes*, or *the three Kings*, which made way to the conversion of the *Jarosians*, *Membaguas*, *Cbaruas*, *Guenoas*, and other fierce nations till then untouch'd, which hope is since much advanc'd by the building of the town of *S. Andrew* among those people. Here let us leave these people ending this section, to proceed upon other variety of matter.

**Ibicut, or Purification town built.** The river *Ibicut* falls into the *Urvaica* an hundred leagues from the town of *Buenos Ayres*, on the opposite side among the people call'd *Japevians*. It was requisite to bring the people down to the banks to the faith of Christ, in order to open a way to those other nations that inhabit the great continent between the river *Urvaica* and the *Atlantick* ocean. To this purpose *F. Gonzalez*, with great danger of his life, venturing up the river *Ibicut* in a boat, with only a few *Indians* to row, ran forty leagues, till he came into the country of *Tabaca*, a powerful *Cacique*, by whom being friendly receiv'd, he found the beginning of his attempt easier than he had imagin'd; for *Tabaca* having heard the doctrine of Christ, took upon him to gather as many infidels as would suffice to make a considerable town. The father thus assist'd, presently erected a cross, built a chapel to serve for the present, and mark'd out the plan of a town, to which he solemnly gave the title of the *Purification*, otherwise call'd *Ibicut*: which done, he return'd to the river *Urvaica*, promising to send them a priest with all possible speed, to reside there. When he was gone, the people further up the country conspir'd, and thinking he was still there, came arm'd in great numbers to sacrifice him and demolish the new town. At first onset they threw down the cross, burnt the chapel, threatned the supporters of the new religion with death, and destroy'd all they found. The news being brought to *F. Gonzalez*, he set out with *F. Romero*, contrary to the advice of all the *Japevians*, who affirm'd he was running to most certain death. Having ran up the river *Ibicut* twenty leagues, his spies told him, he could not possibly escape if he advanc'd: nevertheless sending *F. Romero* back, he ventur'd alone with only a few men that row'd, to the place where the town had been destroy'd. There he was inform'd by *Tabaca* and the neighbouring *Caciques*, that the thing had been done in their absence, and that tho' they had been there, they could not have oppos'd such a

multitude of enemies. The father having sent for some of the *Caciques* of the upper country, by his authority and rewards prevail'd with them, tho' much against their wills, to convey him into the country of the *Japevians*, to retrieve what had been lost. Being there, as he was examining all things, and disposing the *Indians* to build a town, news was brought that the further people were marching in great numbers to kill him. The *Caciques* his friends gave some check at first to their advance, but being press'd by too great a number, and almost lost, *F. Gonzalez* made use of his wits to shun this threatening danger, fetching out a great book and a saw he carried with him to cut down timber. The enemy's spies being terrified at the sight of those things, ran back to acquaint their people, That *F. Gonzalez* brought along with him an iron instrument full of teeth, which he said could with great ease cut in pieces an infinite number of men; and, that he talk'd with a parcel of leaves put together, which certainly were able to destroy whole armies. The *Indians* hearing this account, being very apprehensive of the power of books, and not knowing the power of the saw, were struck with a panick fear, and fled. *F. Gonzalez* finding matters were not yet ripe there for his design, return'd to *Urvaica*: but it was not long before an opportunity offer'd to attempt it again, for the chief of the *Piratinians* inform'd him, that above the river *Piratin* there was a place call'd *Casapamin*, very commodious to build a town, and that the people thereabouts (if 'twere put to 'em) would easily be brought to embrace the faith. Upon this hope *F. Gonzalez* taking *F. Romero* along with him, enter'd the borders of the *Casapaminians*, whereof about two hundred met him in arms, threatening in case he did not retire; but these very men being persuaded by the fathers, promoted their design, encouraging their country people to embrace the faith, so that *F. Gonzalez* laid the foundation of a town, calling it the *Purification*, as he had done the first time, the care whereof he committed to *F. Romero*, under whom it prosper'd so well, that there were three thousand souls reckon'd in it the first year, and above seven thousand had been baptiz'd when the author was there. The country of *Iguazu* was now miserably afflicted with famine, the fathers in the town of *S. Mary Major* being reduced to extremity, and the *Indians* for the most part dispersing, of whom *F. Ruiz* afterwards, with much difficulty, gather'd four hundred. A tyger having tore to pieces a young girl that lay in the woods, *F. Ruiz* laid a snare for and catch'd it that same night, which gain'd him much reputation among

Indians of  
the plains.

among the *Indians*, and thereupon many of them return'd to the town: but their natural fierceness prevailing, they broke out into war with some neighbouring people their enemies, and having taken a number of prisoners, slew some, and design'd to butcher the rest, and would have relaps'd into eating of man's flesh, had not F. Ruiz boldly seiz'd the promoters of it, and forced 'em to release the prisoners. Yet many hundreds there, and in other parts, were converted by degrees, and became religious christians. At this same time F. Maceta founded the town of S. Paul among the *Indians*, a people lying between the town of the *Conception* and the lands of the great *Taiacoba*. The *Cacique Guiravera*, a great man-eater and forcerer, used all possible means to obstruct the encrease of this town, which nevertheless in a short time grew to four thousand inhabitants. But we may have occasion to speak more of this matter hereafter.

About this same time the *Indians* of the plains, so call'd because they inhabit the vast champaign country above the town of the *Incarnation*, found the fathers new employment. They are also call'd *Coronados* and *Cacelludos*, that is, *crown'd* and *bairy*, because both men and women wear their hair down to their shoulders, but the top of the head stay'd round, like religious men. These people seem'd to have excluded all hopes of being brought to civility ever since, as was said before; they attempted to destroy the town of the *Incarnation*, and murder F. Maceta, yet now they began to be better inclin'd, upon this account: the *Tupiza*, a people of *Brazil* (of whose fierceness *Orlandinus*, in his history of the society, makes mention) breaking into the territory of the town of S. Xavierius in great numbers, were driving away some converts into slavery, which were recover'd by the industry of the *Jesuits*. Another company of them had made prisoners some townsmen of the *Incarnation*, whom F. Mendoza refus'd pursuing the robbers with *Pindovius* and a parcel of converts. And being further inform'd, that a village of the *Coronados* had been plunder'd by the same people, and many carry'd away, he surpriz'd them, and recovering the booty and prisoners, sent them back well reprimand'd into *Brazil*. The *Coronados*, oblig'd by this kindness and some gifts he bestow'd on them, were dispos'd, promising, To send their country people to the fathers to be inform'd in matters of religion, which they perform'd. Not long after, ten *Caciques* of the *Coronados*, mov'd to it by *Taiacoba's* example, sent to desire of the fathers some one to instruct them in the christian doctrine. Hereupon F. Ruiz halting out of

the country of *Taiacoba* to the town of the *TECHO*. *Incarnation*, took F. Diaslanius with him, and set out towards the *Coronados*. When they had travell'd eight days over rocks and marshes attended by thirty converts, they met some of the *Coronados*, who told him, That *Guabair*, a powerful *Cacique*, bearing of their coming, had drawn over several villages to his party, and by common consent lay in wait for them in the next wood, where they would undoubtedly all perish if they presum'd to advance. That they themselves had been summon'd to have a hand in that business, but being mindful of the kindness receiv'd from the society, were come a By-way to give them intelligence. The fathers thanking them, consulted whether it was safe to proceed, and finding it was not, turn'd back and put off that expedition till the next year.

It is time we should say something of the Province of *Chagua*, under which name is comprehended all that part of *Paraguay* *Tucuman* and *Rio de la Plata*, under the jurisdiction of the bishop of *Santa Cruz*, or the holy cross, in the mountains, and the archbishop of *Chagua*, which is a vast extent of land. It is divided into several parcels by rivers rising in the mountains of *Peru*, and falling (after a run of many leagues) either into mighty lakes, or into the rivers *Paraguay* and *la Plata*. Since the first coming of the *Spaniards* into those parts, abundance of the natives of *Tucuman* and *Peru* retir'd thither for fear of those new guests, as appears by those that still use the language call'd *Amarra*, proper to the *Peruvians*. The most noted nations among them are the *Tamirivians*, formerly inhabiting one hundred eighty eight villages, the *Tent*, *Mataguais*, *Agois*, *Mosobies*, *Japitilag*, *Churumatans*, *Tonocotas*, *Abipones*, and several other factions of *Indians*, differing more in languages than customs. There is no supream power among them, they are subject to *Caciques* like the other barbarous people, whose power extends not beyond a house or village. Every particular person among 'em, superstitiously chooses a fish for his patron and protector, and worship it so religiously all their life-time, that they will rather starve than eat any of that species. They are continually at war with their neighbours, being more dreadful to strangers for their cruelty than valour. Some governors have endeavour'd to open a way through these people into *Peru*; but that road has been forsaken, because those barbarians have at several times murder'd many *Spaniards* in their way from *Paraguay* to *Peru*, till in the year 1628. *Martin de Ledesma*, governor of *Tucuman*, conceiv'd some hopes of performing what had been in

**TECHO**, in vain attempted before by subduing the province of *Chagua*, by the way of *Xuxui*, the last town under his government, near the borders of *Peru*. Having therefore rais'd a body of men, he writ to *F. Durand* the provincial, earnestly intreating him, To assign some Priests to preach the Gospel. The provincial well knowing that soldiers commit many insolencies when they enter upon new conquests, lest he should render the society odious to those *Indians*, answer'd, He would send fathers into the province of *Chagua*, when he could see any hope of settling there. But when he understood that the governor with his *Spaniards* forces had pierced into the province of *Chagua*, and having built a castle, lay'd the foundations of a town, in that part where the river *Lobo* runs through the most fertile soil, and most frequented by *Indians*, he then sent *F. Gaspar Oforio* to look to the spiritual welfare of both *Spaniards* and *Indians*. He being a comely and sweet temper'd man, soon won the affections of all men. Several *Caciques* of sundry fictions resorted to him, with whom he agreed, that they should sell timber in three places to build as many new towns, after the manner of the people of *Parana*. These were reported to be above fifty thousand, whose language he endeavour'd to make himself master of. There were reckon'd thirty thousand of the language of the *Mataguais*. Nor did he neglect the tongues of the *Tobas*, *Mocovias*, and *Zapitalaguas*, very numerous nations, as well because many of them desir'd to become christians, as because there were hopes of making a way through them to many other populous nations. He also study'd the language of the *Churumates*, so call'd perhaps, because they often use this syllable *Chu, Chu, Martin Ledesma*, the governor being gone to found another town on the banks of the river *Soletano*, *F. Oforio* stay'd among the *Tobas* to mark out the plan of another town; whence he writ to the provincial, acquainting him, that three towns might be founded in the territories of the *Tobas*, *Mocovias*, and *Zapitalaguas*, if there were fathers enough. He added, that the *Indians* up the country were so tall, that he could scarce reach their heads with his hand. The first year the *Spaniards* sowing, found the soil fit to bear all sorts of *European* grain, and what pleas'd them best, the *Indians* were reported to conceal mines of gold and silver. Yet there were some, who fear'd these easy beginnings would end unhappily, through the avarice of the new planters. At this time *F. Gaspar Sobrino* who had been sent procurator to *Rome*, return'd to the port of *Buenos Ayres*, bringing with him forty-two fathers to be dis-

pers'd through that vast continent, to carry on the work so well begun. They were receiv'd with great joy, and the more for having narrowly escap'd being taken by pirates, who appear'd in the river of *Plata*, presently after their landing, and were known to be *Dutch*, who to poison the people, and excite them to rebellion, left on the shoar under a chest, a parcel of *Spanish* books but printed in *Holland*, tending only to follow their example in falling off from their obedience to their lawful king. But of this enough, for we must confine our selves to affairs of the *Indies*.

There *F. Gonzalez* traversing the province of *Urvaica*, endeavour'd to find employment for the new-come fathers, the news of whose arrival was spread abroad. First, he made his way into the woods of the *Caaroans*, knowing that the inhabitants of them were in some measure dispos'd to receive the faith, by the example of their neighbours, and persuasions of *F. Romero*. Sixty *Caciques* dwelt in these woods, most of whom he perswaded to sow their grain not far from one another, in hopes of building a town; and promising them one of the society should come speedily to instruct them in the christian faith, he went away to the *Jivians* through the country of the *Piratinians*. The *Jivius* more like a brook than a river, having fallen down some easy descents from its source, runs directly into the *Urvaica*, a little above the *Uitiraguans*. On both its banks and the adjacent plains there are woods, inhabited at that time by about five hundred families and their *Caciques*. The chief among them was *Niezuvius*, who by his nimble tongue and forcery, he prevail'd with all the neighbouring people to follow him as their leader. He was a fierce, but crafty man, cunningly flattering strangers, that he might have them in his power. Abundance of *Indians* offended at our converts, had fled from the town of *S. Xavierius* and other places, to that monster of a man, allur'd by a licentious way of living; all whom *Niezuvius* kept about him and maintain'd, requiring them all to worship him, as a God. His disposition was naturally fit for any fraud or villany. This man must have prov'd very troublesome to the affairs of the converts, had he persisted in his wickedness; therefore *F. Gonzalez* putting in execution the design he had long entertain'd of going to him, made no account of the man's cruelty, or the danger of deserters and renegadoes that lay in wait, and appearing unexpectedly before *Niezuvius*, prevail'd so far by his eloquence that the inveterate enemy seem'd to be reduced the first encounter. Therefore the more to oblige him, he brought him to the

the

the next town of *St. Nicholas*, where he was conducted to the church with great state. This fhew of honour fo far inclin'd him to the fociety and christian religion, that returning home he built a houfe and church for the priests that were to come, and brought over many of the neighbour- ing *Caciques* to follow his example. This was a difficult province, and requir'd a prudent and refolute man; for it was fear- ed, that *Niezuvius*, who was fo eafily brought over, might foon relapse, being known to be much given to forcery, to affect divine honour, and even at that time to keep a great company of concubines. *F. John Castillo* was left there, and *F. Gonzalez* going away to the river *Tabatio*, which runs into the *Uruguai*, found that another town might be erected on its banks, as was afterwards done, and therefore he promifed the *Tabatians* an instructor, as foon as there were fathers enough. Then hearing that ten fathers were coming up the *Parana*, he went to meet them, and hav- ing detain'd and difperfed them, returned through the territories of the *Jivians* and *Caafapaminians*, into the country of the *Caarans*. This country lies about ten leagues from the river *Uruguai* towards the inland, nothing unlike to the other parts lately civiliz'd, but that it feems to be fomething more populous; nor would it be any thing more remarkable than its neigh- bouring people, but for having fignaliz'd it felf in a bafe action, and afterwards in making amends for it. One great caufe of reducing this country to christianity be- fore any other, was its bordering on the lands of the *Caafapaminians*, as thofe do on the *Jivians*, and thefe on the *Piratini- ans*, who are parted from the *Bitiraguans* only by the river *Uruguai*; and it was hop'd, that thefe people, among whom the fathers had founded towns, being fo linked together, would eafily defend them- felves againft their enemies, and make the paffage eafie to thefe lands which lie be- tween the river *Uruguai* and the *Atlantick* fea. *F. Gonzalez* being come with the *Caciques* to the place appointed, erected a crofs, mark'd out the ground for the church and town, to take the name of *All- Saints*, appointed magiftrates, baptiz'd infants, intructed the men and women, and began vigorously to carry on their work. As things were thus going on pro- fperoufly, *Potirava*, a bold man, fit for any mischief, who had fled from the town of *S. Xaverius*, being harden'd in his old fuperftitions, went privately to *Niezuvius*, and telling him he would foon be no bet- ter than a flave to the *Jefuits*, and muft quit all his concubines, eafily ftirred him up to confpire the death of the fathers.

VOL. IV.

Having drawn his people to confent to the murder, he fent the *Cacique Cuniaragua* to carry the defign among the *Caarans*, di- recting him to put the *Caciques Caarupe* and *Caabure* upon murdering *F. Gonzalez* and *F. Rodriguez*, which done, they were to go to execute the fame upon *F. Romero*, whilft he put to death *F. Castillo* and other fathers, about the river *Piratin*. All things were difpofed as *Niezuvius* had order'd, fo that *F. Gonzalez* having call'd together the *Indians* to hang a bell, that was to call them to be catechized, they were all ready, but upon another defign, for *Caarupe* had underhand commanded them to be privately arm'd, and make no difcovery, till he gave the fignal to *Mirangoa*, who was to execute the murder. They were all thus afsembled, and *F. Gonzalez* ftooping to put the rope into the ring of the bell, *Caarupe* thinking that a fit opportunity to ftrike, made the fign to *Mirangoa*, who, with all his force, ftruck the father on the head with a club that had a great ftone fixed at the end, and at one blow knock- ed out his brains and left him dead, yet another feconding, the head was quite bruifed to mafh. Then all the company gave great fhouts of joy, which alarmed father *Rodriguez*, who was at his prayers in a cottage near by. As he was coming out, the cruel executioners befet his door, and in the fame manner with their clubs batter'd him to death. When they were both dead, a continual cry followed, but not all of a piece, fome rejoicing at the murder, others (for they had not all con- fented) expreffing their grief, in doleful la- mentations. The barbarians not yet fatis- fied, cut the trunk of *F. Rodriguez* his body from the limbs, mangling them with many wounds, dragging them about the church, and at laft burnt them and the church together, tearing and breaking all that belong'd to it. Then fending an ac- count of what they had done to *Niezuvius*, they all fell to feaft together, where, as they were boafing of this action, as if it had been fome honourable enterprize, an ancient *Indian*, father-in-law to *Guarobius*, a great admirer of the fociety, though not yet baptiz'd, had the courage to reprimand them for their infolence, whereupon they all furiously fell upon, and tore him to pie- ces. Two youths, who ferv'd *F. Gonzalez* at the altar, being taken, it was confulted whether they fhould deftroy them, but their advice prevailed who would have 'em fent home, left it might be a provocation to the *Indians* of *Parana* to make war up- on them. Thefe being accordingly fent home, difcover'd the whole manner of the fllaughter.

S P

The

**TECHO.** The next day, being nothing more fedate after their night's sleep, they repaired in throngs to the place of the murder, where finding the fire had not consumed the trunks of the bodies, they kindled the fire again, and cast them in. Whilst they were thus employed, one of the youths, we said they had sent away home, passing in his way through the territories of the *Caafapaminians*, acquainted *F. Romero* with the slaughter of his brethren; which being spread abroad, those people, according to the custom of their country, first kept a doleful silence, and then broke out into dismal shrieks, to express their sorrow, till their grief turning into anger, they ask'd leave of the father to revenge the murder. He dissuaded them from seeking revenge, but said he should look upon it as a great testimony of their affection, if they durst bring away their dead bodies. *Membacaba*, a man in repute among his people, immediately chose about two hundred out of all the multitude, and ordering them to arm themselves, set forward with speed, and came the same day to the place where the mischief had been done, where they took the bodies half burnt, and return'd with them in despite of their enemies, and put them in a coffin, as the time would permit. Not long after, the wicked *Caarupe* came unexpected upon the *Caafapaminians* with three hundred armed men, to sacrifice *F. Romero*, whom, because he liv'd single, in scorn he call'd the old woman. The townsmen, according to their custom, were abroad in the fields about their country affairs, so that there were but ten young men in town, who being led by an old man, went out with their bows and arrows against that great number, and behaved themselves so gallantly, that they stop'd them, till the *Caafapaminians* flocking out of the fields, put them all to flight, killing some, without the loss of a man. *F. Romero* himself appearing on horseback with two converts, contributed much towards gaining this victory, and so daunted the enemy, that they durst never make a second attempt. Before these things were done; that is, the next day after the slaughter of the two fathers, *Niezurivius* having receiv'd the news of their death, and rejoicing at the bloody fact, put on his garment of feathers, and all the other ornaments us'd in their prophane ceremonies; and ordering one of his concubines to be dress'd after the same manner, call'd all his people about him; it was night when they all met, and he making use of the darkness, for all lights were put out, after rattling some strange words in his throat, and making a hideous noise with an empty calabash; at last when he had fill'd all the company with horror, declar'd to

A brave  
action.

them that *F. Castillo* was to be taken off. They all consented, resolving to manage it dexterously, lest he should make his escape, and therefore they took along with them some infidels that were come to be instructed in christianity. At break of day they *F. Castillo* came to *F. Castillo*, then at his prayers, desir'd him to admit those who desir'd to be inroll'd in the catalogue of christians, and to bestow some small present on them, according to custom. The father receiv'd them with all possible affection, but as he was busy, and suspecting nothing, they fell upon, buffeted, and threw him down. *If it be for these little things I bestow*, said he, *that you exercise your cruelty on me, take all, and keep me as your slave*. They answer'd, it was his death, and of all the fathers throughout *Parana* and *Uruica*, which they sought; and to make short, they bound him with a long rope, and thus dragg'd him half naked out of the town, over briars and stones, scoffing at him and shouting. By the way they hew'd his face, pierc'd his body with arrows, a slave of *Niezurivius* every foot cruelly battering his belly with a club. At last they cover'd his head, all deform'd with blood and mud, under a heap of stones, casting the body into the woods to be devour'd by tygers; which done, they return'd to give *Niezurivius* an account of their exploits. He putting on *F. Castillo's* priestly vestments, and over them the old garment of a forcerer, assembling his people, told them; they had no cause to fear their fields would lie waste; that they might now safely, after the manner of their ancestors, keep as many wives as they pleas'd, and again bestow divine honours on him. Then causing the children that had been baptiz'd, to be brought to him, as if he could take off the baptism, wash'd their heads with hot water, scouring their tongues with sand, and scraping them with a shell, to wipe away the exorcis'd salt that had been laid upon them. Having perform'd many more extravagant ceremonies, he burnt the church, and order'd his men to be ready to march the next day, to kill the two fathers that were among the *Piratinians*. The news of their design came thither before them, and the fathers prepar'd themselves for death; the *Indians*, in the mean while, tho' few in number, because most were abroad in the fields, making ready to defend their teachers; hearing that the enemy was very near, and numerous, the converts forced the fathers to fly into the woods, and the rebels, being too numerous for the *Piratinians*, broke into the town of *S. Nicolas*, seeking the fathers, and exercising their cruelty against the houses and goods, till the *Piratinians*, that were abroad, could be call'd home, and then renewing

Courage  
of the Ibi-  
raquians.

In the mean while, *F. Alfonso de Aragon*,  
and *F. Francis Clavijo*, were forced to fly  
in great distress to the town of the *Concep-  
tion*, among the *Ibitiraquians*, whither the  
news was already brought of *Niezuvius's*  
cruelty; and *F. James de Alfonso* had call'd  
together the chief men of the town to con-  
sult what was to be done. Their com-  
mander, *Nicolas Nanguir*, deliver'd him-  
self thus. *Nothing will do, father, but to  
make use of our weapons with expedition; the  
enemies designs must be speedily prevented,  
lest they run us down while we lose time in de-  
bating. I would have you entertain that opi-  
nion of me and my followers, that we will  
not return to see our wives and friends, till  
having repuls'd the enemy, we revenge the  
death of our dear masters with much blood of  
theirs.* This said, he order'd two hundred  
of his best men to arm and follow him,  
whom he led into the territories of the *Pi-  
ratinians*, thinking it enough if he put a stop  
to the progress of the enemy, till supplies  
could come from further parts. The news  
of the murder of the fathers being spread  
into other towns, caus'd great sorrow and  
consternation, which was increas'd by a re-  
port spread by the enemy, That the inha-  
bitants of all places had conspir'd to slaugh-  
ter their teachers. But when a further ac-  
count came of the death of *F. Castillo*, and  
that *Niezuvius* was stirring up the Indians  
towards the *Atlantick* ocean to war, that he  
might overpower the converts, the terror  
was beyond measure. Therefore express'es  
were sent to the *Spanish* cities, and *Indian*  
towns far and near, to make known the  
numbers of the enemy, how few there were  
to oppose them, and how great the danger  
was. In the mean while, a company of  
soldiers was sent to the *Caasapaminians*  
to bring away father *Romero*, who was next to  
the enemy; but the *Caasapaminians* declar-  
ed they could not part with him, unless he  
would have all the converts return to their  
scatter'd habitations, being forsaken by their  
pastor; but if he stay'd, they would defend  
him from any harm at the expence of their  
own blood. It was necessary to comply  
with their request, for fear of doing wrong  
to such well-deserving people. Whilst these  
things were transacting, three spies were ta-  
ken, and it appear'd they were some of the  
murderers, and came to draw over *Quara-  
cupacatus*, the chief *Cacique* among the *Ibi-  
tiraquians*, to *Niezuvius's* party, on ac-  
count they were kindred. *Quaracupacatus*  
was then present with his men, and being  
ask'd by *F. James de Alfaro*, what he would  
have done with those kinsmen? Answer'd,

There ought to be enquiry made into their *Tucuman*  
actions, and if they were guilty, no notice  
to be taken of their consanguinity; for,  
that from that time, he would look upon  
no man, who was an enemy to religion, as  
his relation. *F. Alfaro*, to try the man, or-  
der'd the chief of the spies to lay down his  
arms, but he refusing, stepp'd back, clap-  
ping an arrow to his bow, and pointing at  
the father, being ready to let fly, had not  
the company seiz'd and bound him. Eight  
hundred men were now got together, with  
which force it was thought fit to set out  
against *Niezuvius*, who was not well provid-  
ed, and the *Tivians* scatter'd about the  
country. Only two men were found in the  
town of the *Tivians*, one of which had like  
to have been kill'd by a zealous convert,  
had not the father prevented him. The  
next morning our men came in sight of the  
enemy, of whom they demanded, if they  
desir'd peace, to have *Niezuvius*, and all  
that were guilty of the murder, deliver'd  
up to them; but receiv'd no other answer  
but by arrows. Thus incens'd, they fell  
on with such fury, that in a moment, they  
routed the enemy, killing many of them,  
with the loss of only three kill'd, and  
about thirty wounded. *Niezuvius* fly-  
ing before the fight, got over the river  
*Urucua*, in a boat made of branches of  
trees, and lay conceal'd, and roving in se-  
veral places, till some years after, falling  
into the hands of robbers, he suffer'd the  
punishment due to his guilt; being long  
formidable under his misfortunes, becau-  
se his condition was not known. His scatter-  
ed houses, being as many as his concubines,  
were all burnt.

Tivians  
routed

Having thus, in some measure, reveng-  
ed a just quarrel, *Niezugurius* leading back  
the conquerors into the *Piratinian* territo-  
ries, found new succours were there assem-  
bled. *F. Emanuel Cabral Apolino*, a noble  
*Portuguese*, had, at his own cost, brought  
a company of *Spaniards* by publick autho-  
rity, from the city of *St. John*, eighty  
leagues distant; and from the *Indian* towns  
subject to the *Franciscans*, *F. Gregory de*  
*Ojuna*, a godly man, had sent two hun-  
dred converts; and *F. John Gamarra*,  
worthy of eternal honour, as many more.  
*Arapisanduvius* and other *Caciques*, had  
brought a considerable number of converts  
from other colonies. These things were  
much forwarded by *F. James Boroa*, re-  
ctor of the *Assumption*, who having unsuccess-  
fully try'd the *Spaniards* in *Paraguay*, drew  
some men together himself, and came with  
great speed to join the *Piratinians*, becau-  
se he acted for the provincial, who was then  
absent. In *December*, *Emanuel Cabral*, who  
commanded in chief, led the forces to the  
territories of the *Caasapaminians*, where *F.*

*Romero*

A general  
Confirma-  
tion.

**TECHO.** Romero was in danger. It was a providence that he was so expeditious; for the next day after his arrival, the *Caaroan* murderers, to the number of five hundred, knowing nothing of our forces, enter'd the borders of the *Caajupaminians*, and were now at hand, threatening the town, when our troops marching out unexpectedly, struck such a terror into the rebels, especially at the sight of the *Spanish* horse, that after the first onset, they never stay'd for a second, but betook themselves to the next woods, *Cabrael* on the one side, and *Nien-gurius* on the other, making a greater slaughter of them. Many fled, and fifty were taken, among whom were the *Caciques*, *Caabure* and *Caarupe*, with others of the murderers. The next day they marched, and made themselves masters of the town of the *Caaroans*, where a consult was held about the punishment of offenders. The multitude was for punishing all, the wiser sort for taking off the heads of the rebellion, and the society for no blood. *Cabrael* order'd it so, as to endeavour to please all, for having given sentence of death against them all, he pick'd out only twelve of the number, by their example to shew what all had deserv'd. *Caabure* and *Caarupe* were hang'd first, and then *Mwangou* in the same place where he had murder'd *F. Gonzalez*. *Potirava*, the author of the conspiracy, having absconded for some time with *Araguira*, the murderer of *F. Castillo*, they were both deliver'd up by the heathens, and put to death. They all desir'd to be baptiz'd before they dy'd, except *Caabure*, who dy'd blaspheming. After punishing the criminals, the bodies of the fathers were taken up, and carry'd in a very honourable manner to the town of the *Conception*, where they were receiv'd in solemn procession. First went the victorious forces leading their prisoners, then the children of the town, next the women, after them the men, and lastly, the chiefs of the nation, attended by variety of musick. On both sides of the biers, were fathers who had resorted thither from all parts. The people had adorn'd the way with triumphal arches, lighted bone-fires, and many other demonstrations of joy. In the church the bodies were placed in an honourable tomb, and *F. Boroa* made their funeral oration. Thus ended the rebellion of those *Indians*, whom we must leave to give an account of others.

Of the *Gualachetus*, where the fathers *Ruiz* and *Diaslanus* venturing upon the *Gualachet*, met with unexpected success. The country of the *Gualachet*, who are also called *Guanianes*, lies between the lands of *Taiaoba*, and the territories of *Umaica* and *Ignasu*, running out as far as the sea towards *Brazil*. All

this nation differs from the *Guaranians* both in customs and manners, and is for the most part at war with them. It would be far more populous, did not the inhabitants continually destroy one another; for when they are heated with their drink made of honey, in their circular drinking meetings, their pleasure turning into madness, they fall upon one another with whatsoever weapons come next to hand, with such fury, that many are desperately wounded, or kill'd, in the height of their drunkenness. These festivals coming about very often, must needs lessen the number of the people. Besides, their numerous forcerers increase the number of the dead, killing many with their charms and poison. They frequently converse with the devil, and live rather upon hunting than upon tillage, dwelling in small villages, not far distant from one another. No body had been among them as yet to preach the gospel; but the borderers came to the iron mines, where a few *Spaniards* wrought, not far from the river *Piqueri*, which falls into the *Parana*. The *Gualachet* hearing the news, that the great *Taiaoba*, with whom they had been at war, had forsaken his barbarous manner of living, and was become a christian, sent several messengers to *F. Ruiz*, to acquaint him that the people of several villages were willing to live together in a great town. *F. Ruiz* was then in the colony of the *Incarnation*, with *F. Diaslanus*, and taking him for his companion, he went away to *Villarica*. From thence, there were two ways to the *Gualachet*; the one by the iron mines, which was five days journey; the other about, up the river *Huibaio*, through the lands of *Taiaoba* and the *Indians* of the plains, who were always at war. *F. Ruiz* took the former, *F. Diaslanus* the latter, but with very great danger, because no man had as yet ventur'd through those lands, which were much infested with forcerers, and this father was the first that got through that way. When he enter'd the country of the *Gualachet*, the sixth day of his journey through the desert, he met with greater danger, being met first with two companies of men-eaters, and afterwards by a greater number, from whom escaping through special providence, he at length came to a part of the country of the *Gualachet*, then infested with the plague, where he baptiz'd abundance of infants, and some men and women, after instructing them by the help of an interpreter. *F. Ruiz* taking the direct road, as was said, came upon the borders of *Gualachet*, the fifth day after he set out of *Villarica*, baptizing very many, because the plague rag'd in those parts. As he was thus employ'd, messengers came to him from the *Chiquitos*, beyond the river *Pique*. The

ri, desiring to have one of the society sent to instruct them, and make out the plain for a town; whom he dismissed, promising to send a priest as soon as they had gathered a sufficient number for a town. Having spent eight months in baptizing those that were infested with the plague; at length the fathers, Ruiz and Diastanius, met in a convenient place to build a town, which was the residence of Cobe a Cacique, father of five sons, each of which was chief of a village. Besides them, many other little villages were willing to join. The Indians therefore assembling in great numbers, a cross was erected, and the foundation of a town laid, which was call'd the Conception. Curito, the most powerful of the Gualaches, renowned among both Spaniards and Indians, being invited by F. Ruiz, came to him with an hundred followers, promising he would either erect a town in his own lands, or join the people of the Conception. The first of these proposals was approved of, and he sent home with hopes; the Spaniards admiring that a word from the fathers should be of more force than their arms, with which they had despair'd of reducing the great Curito. After he was gone, because the way to the country of Tiaoba was not straight, and through the lands of warlike Indians, F. Ruiz, with incredible labour, open'd another through impenetrable woods, which was but four days journey. F. Diastanius left in charge with the new town, reducing the language of the Gualaches to grammar rules, and committing the elements of christianity to writing, made things easy for those that were to succeed him there in the care of souls. Besides, he gain'd the affections of those people by his skill in mechanics, and especially in smiths work, which he had learnt of himself, and most necessary where there was great want of iron tools. Yet the converts were not very numerous, because of these Indians inclination to drunkenness, and other barbarous customs.

F. Ruiz being come into the lands of Tiaoba, thro' that way he had made himself, bent all his thought upon gaining of the Cacique Guiravera, who did all he could to obstruct the founding of any new towns, and endeavour'd to destroy those already founded: and indeed 'twas no indifferent conquest to reduce him; for Guiravera was the chief of all the man-eaters and forcerers in the province of Guaira, look'd upon by the people far and near as a destroyer of human race, for his greediness of man's flesh, and made it his principal study to contrive to have F. Maceta, who had drawn over many of his heathens, fall into his snares: besides, he had declar'd to all the Caciques, who for fear of his power and forcey adher'd to him, that the greatest service they could do him, would be to seize

VOL. IV.

F. Ruiz, and serve him up roasted for him to eat. This cruelty was attended by pride, which made the monster stile himself the high-priest, and commander of all Guaira: and such was his madness, that he assum'd an air of divinity, employing all his power in obstructing people from becoming christians. The fathers study'd all means to reduce or appease this inveterate enemy, and found 'twas something more than a human act to gain, a man who was reported to be familiar with the devil, who laid the way to be taken in his own snare; for Guiravera using to receive oracles from dead bodies, the devil speaking, according to Pythagoras his opinion of the transmigration of souls, is said to have told him, that the soul of Quaracitus, who in former times had been look'd upon as a god, was gone into the body of F. Ruiz, and had transferr'd all his divinity thither. Which being spread abroad, F. Ruiz, among the heathens, was generally reputed to be a god, and the true image of Quaracitus. Which, in process of time, prov'd beneficial to the christian religion; for Guiravera being very eager to see F. Ruiz, whom he took for Quaracitus come to life again, after several messengers sent forward and backward, set out to see him in great state, attended by two hundred Indians. Being come near the town of St. Paul, among the Inianians, he sent in a man to fix the conditions of the interview; but being impatient of delay, enter'd the town after him, proclaiming in a hideous voice, that contrary to his dignity he had vouchsafed at present to tread the ground, to see the foreign priests. Going on with this sort of discourse, he found the fathers sitting in the market-place, and was by them desir'd to sit down upon a low bench. He with insupportable pride order'd his men to cover the bench and ground his feet were to rest on with their garments; then sitting down, and looking more calm, he saluted the fathers after the country manner. They return'd the salutation; and having endeavour'd to introduce some discourse of religion, finding him very uneasy, they put it off to a proper season, and so they parted. But knowing that nothing so much gain'd the hearts of the Indians as feasting, they kill'd two oxen; and having made a plentiful Banquet their exordium or introduction, F. Ruiz finding Guiravera very suspicious of treachery, among many other things he said, ended his speech to him in this manner: *You have no cause, Guiravera, said he, to apprehend any treachery from those who desire nothing so much as to die for the glory of God; you see our innocence is our defence, suspecting nothing, tho' unarm'd amidst your arm'd guards, and only studying to entertain those who are reported to covet nothing so much as to catch and devour*

8 Q

ut.

**TECHO.** *us.* Our only care being to gain souls, we have never been known to hurt the body, it being our only study to bring all men to worship one only God; trusting in this hope, we despise all dangers: but be not deceiv'd, Guiravera, with the false glittering of an empty name, for you and I are mortal: I arrogate nothing from the impostures of your false oracle; nor do I allow you that divinity you vainly boast of. You and I were made of dust, and to dust we shall return; this was our original, and this will be our end: alay thy pride therefore, dust and ashes, and learn what distance there is between a vile clod of earth and the universal Creator. Why do you boast of having created the world, who have hitherto behav'd your self as if you had been born to be a plague to it? You are not the creator, but destroyer of men; not the bestower of dignities, but a base slave to vice; not the joy of human race, but its devourer, still gorg'd with bodies of men, and gaping after more. You are not the maker of the universe, but an empty product of the devil's: yet believe, God is always so merciful, that he's ready, if they repent, to pardon the transgressors of his laws. Honour this God, unless you will rather chuse to endure his punishments for ever. Return home for the present, we soon will follow you. The barbarian becoming much more complying, made shew as if he approv'd of what was said, but it plainly appear'd he only temporiz'd and counterfeited. Several of the *Caciques* that came with him shew'd an inclination to embrace christianity privately, affirming, if the fathers would come into their country, that many of *Guiravera's* followers would quit him to embrace the true religion. *F. Ruiz*, knowing that the people were all led by their *Caciques* and forcerers, and that all things would be easie when they were gain'd, to oblige *Guiravera*, gave him a rod, such as the *Spanish* Magistrates carry, in the name of his catholick majesty, and caus'd him to be honourably conducted about the town by four hundred arm'd converts, by which means he seem'd to be somewhat oblig'd. After his departure, the fathers consulted about settling a colony in his lands whatever the danger might be. Whilst *F. Ruiz* was upon this design, letters were brought, giving an account that the town of the *Incarnation* was infested by the *Mamelucs*, and therefore putting off the business of *Guiravera*, he hasten'd away to oppose them.

Invasions  
of Mamelucs.

Some companies of *Mamelucs* (of whom we shall give a full account hereafter) had pass'd the river *Tibaxiva*, near the town of *S. Xaverius*, and encamping near the colonies of converts, struck a terror into all the province of *Guaira*; for, besides a multitude of infidels, they had drove away into captivity several converts, whercof *F. Men-*

*doza* complaining, they made a meer jest of what he said. *F. Ruiz* being come, and expecting no civility among robbers, order'd a thousand converts to take up arms in their own defence, and sent two fathers to try those rovers, who kill'd one that went with 'em, and wounded one of those fathers; yet they proceeded, threatening to raise all the province against them, and boldly unbinding the prisoners, carried 'em back to *F. Ruiz*. The robbers still seem'd inclin'd to give battle, tho' *F. Ruiz*, in the name of the catholick king, conjur'd them to peace: however, at last they drew back from the towns of the converts, shewing as if they would be satisfied with driving away the infidels, and forbear infesting the converts; yet it was fear'd, and the event shew'd there was no truth in their pretences, to the ruin of the province; as we shall see in its place. New fathers coming in the midst of the troubles out of *Europe*, found matter to exercise their patience and charity; for the *Coronados* Indians inhabiting the plains, who had been attempted a year and half before without any success, sent now to *F. Mendoza*, residing in the town of the *Incarnation*, to desire they might have priests sent 'em, and towns founded; which they were the more earnest for, when the report was spread abroad, that only those were to be led away captives who would not submit to be instructed by the society. *F. Ruiz* taking *F. Mendoza* with him, went, and found all things in a great forwardness. *Ibitiruna* is a very craggy mountain, three days journey from the town of the *Incarnation*, the inhabitants of which mountain being commanded to demolish their villages, which lay scatter'd up and down, and to build a town in the place appointed, readily perform'd it. In the mean while *F. Mendoza* sent to the *Ibiangués*, a people opposite to the sea, to build a town there, finding they were all dispers'd for fear of the *Mamelucs*, brought an hundred families he could gather, to add to the new town of *Town of S. Michael*, so that there were two thousand souls in it. This place being settled, *F. Ruiz*, at the request of *Pataguiris*, a *Cacique* of note, went a day's journey further, and gathering Indians, laid the foundation of another town, under the invocation of *S. Anthony* the hermit, so many inhabitants resorting to it, that in two months it contain'd two thousand five hundred souls. The fathers were no less successful in the lands of *Taiaaba*, for *F. Diastantius* being sent by *F. Ruiz* from the town of the *Conception*, to look to the colony of the *Archangels* for some time, several *Caciques* of *Guiravera's* faction resorted to him, requesting so earnestly to have a town built, that there was no refusing of 'em. half-

half-way between the towns of *Archangel* and *S. Paul*, which the *Indians* call the burying-place of *S. Thomas*, having receiv'd by tradition from their ancestors, that the said apostle of the *Indies* passing thro' those countries, buried a great multitude he had baptiz'd in that place. This spot being very commodious, and encompass'd by abundance of villages of infidels, was chosen by *F. Diastanius* to build a town on, and a cross erected; and, what is wonderful, those very men who had contriv'd to murder *F. Ruiz*, and were counted the cruellest of man-eaters, came voluntarily into it. Besides four hundred families that came in of their own accord at first, *F. Diastanius* gather'd four hundred more in the woods and mountains, and call'd it the town of *S. Thomas*. But the plague raging at this time throughout the province of *Guaira*, found the fathers a great deal of employment; but the dread of the infolency of the robbers was more grievous than the distemper, for 'twas now fear'd they had lost all respect to the fathers, and would fall openly upon the converts. The jealousy was encreas'd by the arrival of the new governor of *Paraguay*, who coming thro' *Brasil* the same way the robbers came, and being an enemy to the society, was fear'd would furnish a fearful subject for history.

*Niezuvius*  
persecuted in  
vain.

The province of *Uruguay* was not well settled after the troubles rais'd by the murderers of the fathers, and 'twas much fear'd that *Niezuvius* being still alive, might elsewhere gather new forces, and do the more mischief, because the converts were grown confident of their own strength after their late victory. Hereupon the *Ibitiraguans* calling in succours from all parts, set out a fleet of an hundred boats, with which they ran up the river *Parana*, to the place where *Niezuvius* was thought to be contriving an insurrection. They search'd all the woods to no effect, till they heard he was fled an hundred leagues further. This done, they return'd home without any success, but the baptizing of two old men they found dying in the woods. The territory of *Iguazu* was no better settled. All the heathen inhabitants of the town of *S. Mary Major* had been warn'd, that if they intended to be instructed for baptism, they must put away all their women but one, whom they were to take to wife. Many, who had so much grace, obey'd, the rest fearing they should be compel'd to it, fled up the river into the woods, and sowing in remote places, built a village after their ancient manner, renouncing christianity. *F. Ruiz* sent after them: those he thought the sincerest of the converts, to tell 'em, *It should be no disgrace to them if they would return in time.*

Distur-  
bance in  
*Iguazu*.

These messengers, pleas'd with imaginary liberty, changing their mind, grew more mischievous than those they were sent to, for they not only persuaded those that were fled to stay abroad, but undertook to draw the rest from the town; and 'twas fear'd they might by their ill example debauch other converts, and trouble all the province of *Parana*. To prevent this mischief, after mature deliberation, the fathers *Ruiz* and *Bacha* went to the place where the deserters were, attended by a company of trusty converts, and coming at a time when the men were gone a hunting and to cut wood, with the assistance of the *Caciques* that came along with them, they set fire to the huts, and began to drive the women and children to the town. The deserters returning at night, and suspecting by the fire how the matter stood, for the sake of their wives and children, came and submitted themselves to the fathers, who commending them for returning, instead of blaming their desertion, restor'd 'em to the town, where they continued without ever relapsing, to the great joy of the whole province, most of 'em soon after embracing christianity, quitting their concubines, and marrying lawful wives. Yet the plague ceas'd not to rage throughout the province of *Parana*, and therefore, because the town of *Corpus Christi* seem'd to be seated in an unhealthy place, as drawing the vapours from the river with the rising sun, it was remov'd to a better seat. Next, all the fathers apply'd themselves to repair the damages sustain'd by the revolt of *Niezuvius's* faction. This design was not a little forward by the repentance of the *Caa. ran* murderers, which they were easily brought to by *Tambataius*, a prisoner sent back to them. To testify their penitence, they sent a piece of *F. Gonzalez's* chalice to the fathers, entreating them to come and restore all things to the same posture they were in before; whereupon *F. Romero* and *F. Alfaro* prepar'd to repair to them, notwithstanding the converts us'd all arguments to dissuade 'em; and being upon the spot, erected a cross, and finding sufficient encouragement to undertake the building of a town, return'd in safety. Soon after, *F. Vasquez*, the new provincial, coming out of the province of *Tucuman* to visit those of *Uruguay* and *Parana*, resolv'd to go thither himself well attended to gain the greater reputation. The chief of the *Guarobans*, follow'd by a multitude of people, came out to meet him unarm'd, in whose name *Guarobanus*, who had continued faithful, spoke to him after this manner: *We lay our arms at your feet, great father, being ready to obey all your commands, provided you do not impose it as a punishment of our crime, to be depriv'd of the society: this is the request* of

*Guarobans*  
submit.

**TECHO.** *of all my countrymen, and they have chose me, who am innocent, for their advocate, that the guilty may the more easily obtain pardon.*

This did, they fell down at the provincial's feet, begging of him not to forsake them, *F. Romero* being their interpreter. The women and children, by dismal motions, interceded for their husbands and parents. The provincial return'd a most affectionate answer, laying all the blame on *Niezuvius*, and calling them to embrace him, whereat they all burst out into tears. The next day the provincial baptiz'd several infants, set at liberty some prisoners taken when *Niezuvius* was defeated, bestow'd some garments among the *Caciques*, and appointing *Guarabaius* their commander in the name of the catholic king, went away to the river *Urvaica*. Soon after *F. Oregius* came from the metropolis of *Paraguay*, to take charge of the *Caaroans*, restor'd the town, and baptiz'd many men, women, and children. After the *Caaroans* were settled, *Tuca*, a powerful *Cacique* in that part where the river *Tabatius* falls into the *Urvaica*, seven leagues from the colony of the *Ibitiraquans* eastward, requested of *F. Boroa* that he would send some father to him to build a town. This father hatted thither, and building a little cottage to serve for house and chapel, began to instruct the multitude that repair'd to him. As he was thus employ'd, a great number of naked painted *Indians* came upon him from the neighbouring mountains, but he soon appeas'd 'em with some small gifts, and they went off without doing any harm. Notwithstanding this and other dangers, he gather'd a sufficient number to lay the foundation of a town, in which he was much assisted by a converted *Indian* woman, who running thro' the woods, persuaded many to repair to hear him. Thus soon after a town was built there, under the invocation of *S. Xaverius*, because the *Jaguaitians*, being but a very small number, had left theirs of that name, and were gone elsewhere. Next the *Acaraguaians*, another people on the *Urvaica*, sent to desire fathers might be sent them, but this could not be granted for the present, because there were not enough to supply all parts.

In *Guaira* the fathers having in some measure reconcil'd *Guiravera*, thought it would be for the glory of God to expose themselves to danger, endeavour'd to found a new town in his lands: to this purpose *F. Ruiz* and *F. Maceta*, banishing all fear, went into his territories, by whom they were at first courteously receiv'd, many *Caciques* favouring them, and chose a place to erect a town, which they call *Jesus and Mary*, so many resorting to it from all parts as sufficiently evin'd the general approbation of that undertaking. *F. Maceta* was

left there to carry on the work, and people flocking in great numbers, *Guiravera*, who could not bear to be forsaken by his followers, came attended by some *Caciques* to *F. Maceta*, demanding that long white vestment he wore at mass to be given him, speaking very reproachful words against the virgin *Mary* and the society. *Guiravera's* companions advis'd the father to rid himself of that troublesome man at so easie a rate, but he knowing by experience that giving way to those heathens was an encouragement to them to crave more, boldly refus'd to give it, and laying hold of a little trunk or box the vestments were in, declar'd he would die before he would part with it. *Guiravera* and his company were so daunted at his resolution that they turn'd pale, and had not a word to say; whereupon the father altering his note, spoketo 'em in a loving manner, promising them all favour if they would desist from their enterprise. In the mean while *Guiravera's* aunt and other *Caciques* came in, encouraging the father, and engaging to secure him against any violence. This storm being blown over, a short calm ensued. *Guiravera*, possess'd by evil spirits, was at times put into such a ferment, that he foam'd, his eyes sparkled, and his hair stood an end, till his concubines, by stroaking and caressing, had brought him to himself. In one of these fits, without any provocation, he ran into the middle of the market-place at midnight, waking all the townsmen, and crying out he was a god, and, that there was a man in town whom he must presently devour; but some other *Caciques* coming to him, frighted him out of that raging madness. During the peaceable intervals, the work was carried on so prosperously, that in a short time fifty powerful *Caciques* had engag'd to come in, who would have brought above two thousand others with 'em, besides an infinite number of women and children, so that this would soon be the biggest of all the *Indian* towns. *Guiravera* again conspir'd with a *Cacique* call'd *Apemond*, to murder *F. Maceta*, but the design was timely discover'd, and they disappointed; whereupon *F. Diastanius* coming with a good company of converts to the relief of *F. Maceta*, reprimanded *Guiravera* severely, so that he submitted and begg'd pardon. He was pardon'd, but, to keep him a little under, another commander of the town was chosen, with equal power to him, which did good for some time, he endeavouring not to be outdone in good deeds by his companion. But vice cannot lie long hid under the cloak of virtue; for *Guiravera*, when his fear was over, fell to his old practices, threatening the father by signs, tho' he forbore words. 'Twas his custom, when he

design'd to be most outrageous, to hang three plates about his neck before his breast; when he would rave in a less degree, he hung but two; and only one when 'twas to be a common madness. *F. Maceta* declar'd, *He had good reason to suspect that one of the plates was a patent, such as priests use at the altar.* After many strugglings between 'em, *Guiravera* was baptiz'd by the name of *Paul*; but tho' he had been a *Saul* in persecuting, he prov'd not a *Paul* in repentance, for he's reported to have fallen again to eating of man's flesh, and so to be kill'd by robbers; yet his being baptiz'd did this good, that none of his followers refus'd to follow his example. Thus much of *Guiravera*, that devourer of mankind, and terror of the converts and fathers.

*luks.*

Christianity now daily increas'd, and it was to be hoped that all the province of *Guaira* would soon embrace the true religion; when the devil envying this success, either by himself or by his agents the *Mamaluks*, contriv'd the destruction of the new colonies built in *Guaira* by the fathers of the society. The *Mamaluks* being the prime actors in this tragedy, it seems but reasonable we should give an account of their original, country, manners, and allies, that we may afterwards go on without interruption in the relation of their over-running a most flourishing province, so that there was scarce any hope of restoring it, and their plundering other countries. *Brazil*, a vast province of the new world, extends northward as far as the line, and southward to the bounds of the government of the river of *Plate*. It lies all along the sea-coast, and no where runs far up into the country. The kings of *Portugal*, at several times, possess'd themselves of this country, planting colonies in it, and *Afonso de Sousa*, by order of King *John III.* divided it into several governments, and then built the town of *S. Vincent*, in about 25 deg. of south latitude, fortifying it with a castle and tower, in a place where a small bay is shut in by two islands, which serve as ramparts to it. In one of the islands he built another town under the invocation of *All Saints*, that the one might be a defence to the other. From these two towns some colonies were sent up the country, one of which is call'd *Piratinga*. Two years before the death of *S. Ignatius*, *Emanuel Nobrega*, the first provincial of *Brazil*, gave it the name of *S. Paul*, because he came into *Piratinga* on the festival of that apostle. Tho' all the fathers of the society, who founded a college there, labour'd with great applause, yet *F. Anchieta* excell'd 'em all for his wonderful actions and innocence of life; and the *European* planters for a long time preserv'd their native honour, till the *Euro-*

VOL. IV.

pean women failing, they began to mix *Tacnois* with that barbarous race, and corrupted the noble *Portuguese* blood. This mixture, in process of time, running through 'em all, and bad sons succeeding good fathers, and worse grandsons, the sons that generous *Portuguese* bred being so often mix'd, degenerated, so that there nothing remain'd among the posterity of those first renown'd conquerors of *Brazil* but their names. The *Portuguese* disclaiming to call this generation by their name (as *Orlandinus*, in his history of the society, observes) gave 'em the barbarous name of *Mamaluks*; that since they are like them in nothing else, they may not be alike in name. This deprav'd race was increas'd by the addition of worse companions, who resorted to them in great numbers from other places, being invited by liberty and the good disposition of the place: for *Piratinga*, as to situation and fruitfulness of the soil, furnishes such as desire to live wickedly and daintily, with necessities and safety. 'Tis fifteen leagues from the ocean, and a little south from the tropick of *Capricorn*. Being therefore in a temperate climate, it produces most things necessary for life, so that it not only furnishes it self, but the rest of *Brazil*, which is so luxuriant by reason of the great heat and moisture, with plenty of corn and cattle. It produces sugar, and is said not to want gold mines. There's but one way thither from the ports upon the ocean, which is over craggy mountains, and very difficult to pass, and so narrow that a very few may keep out any numbers. This fertility of the soil, and inaccessibleness of the place, draws many who are forced to fly for their crimes, or desire to commit 'em, to fly thither out of *Europe* and *Brazil*. Thus men of several nations, and guilty of all crimes, having found out a place suitable to their inclination, and joining in amity with the *Mamaluks*, began to treat the *Indians* after a far different manner from the first generous *Portugals*, who first planted colonies in *Brazil*. The first, and a singular proof of their villanies, as I find it, *Tupiniques*, upon the *Tupinagues*. These people dwelt on both the banks of the river *Aniambi*, which rising out of the cold mountains, and running a long race thro' the province of *Guaira*, falls into the *Parana*: they were computed to be thirty thousand archers, living in three hundred villages; but they destroyed all that nation in six years war, that there scarce remains any token of that multitude, except the ruins of the villages. The *Tupiniques* war with the *Tupinagues* being at an end, they enter'd the territories of the *Tupinagues* inhabiting both sides of the river *Tetico*, in the year 1589, after having spread their terror thro' the neighbouring countries, and

8 R

for

**T**ENHO, for seven years drove all before 'em; after which follow'd the five years desolation along the river *Parababa*, which falls into the springs of that of the *Amazons*.—King *Philip* abhorring the cruelty of these robbers, set out an edict, which was only the renewing the laws of the emperor *Charles V.* and the kings of *Portugal*, forbidding the *Indians* being made slaves on any pretence whatsoever. The governors and magistrates of *Brazil*, and even those of the town of *Piratininga*, endeavour'd to have the king's commands observ'd; but the *Mamelucs*, breaking thro' all ancient and modern laws, were still more wickedly bent upon the destruction of the *Indians*; yet, lest they should seem openly to violate the laws, they had always specious pretences, and such as seem'd to carry a zeal of the king's service for what they did, palliating their villany under a shew of justice. Thus, under a colour of going to the gold mines found up the inland, they often broke out in great numbers from the towns of *Piratininga*, *S. Vincent*, and the *Saints*, and drove away an infinite number of *Indians* into slavery. But what is most preposterous, they perform all acts of devotion before they set out upon these expeditions, which last three or four years, as if heaven could hear the prayers of miscreants, and give a blessing to villainies; and what is most provoking, these wretches call their robberies *Apostolick Excursions*, saying, they go to ferret the *Indians* out of their lurking holes, to bring 'em to civility and the christian religion. I could give a particular account, having the authentick relations by me, of the persons, times, and places; I could shew how cruelly they wasted whole provinces, who the commanders of the robbers were, and what particular places they utterly destroy'd; but I shall express it more briefly by saying, that all the vast tract of land, from the river *Murannon* to 30 degr. of south latitude, up the inland, suffer'd by their continual excursions. There remain'd a part of *Guaira*, and some other countries famous for the labours of the society in them, which have they plunder'd or damag'd I am now about to set down as acted in several years.

*Don de Céspedes*, a man nobly descended, arriv'd from *Spain* in *Brazil*, in the year 1629, to proceed to *Paraguay*, having obtain'd the government of that province of the king. There are two ways from *Brazil* to *Paraguay*, the one by land, the other by sea; the way by land was absolutely forbid by the king, to prevent the oppression of the *Indians*; yet the new governor thought fit to go by land, alledging he had the king's dispensation. Being at *Piratinunga*, he set out at such time as nine hun-

dred *Mamelucs*, and two thousand two hundred *Tupins* (these are fierce *Indians*, in league with the *Mamelucs*) were preparing to enter *Guaira* to plunder. Their commander in chief was *Antony Raposo*; other men, infamous for enslaving the *Indians*, were captains under him. The governor setting out of *Piratininga* in an ill season, having travel'd some days by land, made the rest of his journey into *Guaira* on the river. Being honourably entertain'd at *Loreto* by *F. Ruiz*, all the return he made was ill language; and having consulted about providing against the *Mamelucs*, he fix'd upon nothing. Tho' he could not but commend the labours of the society, he could never be brought to order supplies to oppose the robbers, declaring he was not strong enough for 'em; but it appears he was faulty in that particular, and therefore, some time after, was fined by the council of *Spain*. In the mean while the troops of the *Mamelucs* drove the lands of the infidels not far from the towns of the converts, attempting nothing upon the converts of the society; yet the fathers did not doubt there was fire hid under those deceitful ashes, which soon broke out into a dreadful conflagration, for 'twas plain that the robbers only wanted a pretence to fall on. The *Cacique Taturana* was the innocent cause of this mischief; he had been once taken by *Simon Alvarez*, a *Mameluc*, but having made his escape with his men, fled to the town of *S. Antony*. This being known, *Simon Alvarez*, commander of one of the troops of *Mamelucs*, demands *Taturana* of *F. Mola*, director of the town of *S. Antony*, who answering, that *Taturana* was free by nature, and therefore could not, contrary to the laws of nature, put him into chains, who had fortunately deliver'd himself. The rover was enraged, and consulting with *Antony Raposo*, chief commander of the *Mamelucs*, order'd his company to arms, resolving in revenge to destroy the whole colony of *S. Antony*. *F. Mola*, on the other side, not questioning he should be attack'd, baptiz'd all the infants in the town. The next day a numerous company of *Mamelucs*, under the command of *Simon Alvarez*, assaults the town, plunders it, spares none, cuts off such as oppose him, secures the prime men, drives away the weak multitude, robs *F. Mola* of all he had, tho' he used all means to move those robbers to commiseration; but finding no humanity among 'em, and despairing of defending the bodies, apply'd himself to procure the health of the souls of those poor people, baptizing, instructing, and otherwise helping them, as occasion would permit in that short time, and this not without danger of his life, one of these miscreants aiming to kill him, had not another of the

the gang obstructed him. About two thousand five hundred *Indians* are said to have been taken at this invasion by the robbers; the shepherd was left without his flock, lamenting the loss of his dear children in *God*, whom he saw drove away like sheep before his face, without hopes of redress. Nor was the sorrow of those poor captives less, who still look'd about to see whether there was any possibility of making their escape; and some having found means of compassing it, made their way to *F. Mola*. To these were added some others, who had hid themselves from the robbers, all whom as he was leading to the town of the *Incarnation*, he was again in danger of being kill'd; for several of 'em changing their minds, began to mutiny, accusing *F. Mola* of treachery, and affirming he dealt underhand with the robbers; whereupon they were ready to fall upon him, but that he commemorating the day, he and others of the society had expos'd themselves to for their sakes, diverted 'em for that time, with the assistance of some sincere converts. But the danger was accidentally doubled; for a great number of gentiles, altogether ignorant of the mischief done the day before, coming to the town of *S. Antony* with a design to embrace christianity, finding it abandon'd and strew'd with dead bodies, grew enraged, and dispersing into several companies, fought about for the fathers, as betrayers of their country; but *F. Mola* was got safe to the *Incarnation*, *F. Pastor* having come out to meet and relieve him.

*S. Michael.* The news of the invasion being brought to the town of *S. Michael*, oblig'd *F. Mendoza* and *F. Vanfack*, who resided there, to provide the best they could against it; and because 'twas unsafe to remain in the town, endeavour'd to persuade the inhabitants to fly with them to the town of the *Incarnation*, where, with joint forces, they might oppose the robbers. Many taking the advice, follow'd *F. Vanfack*, and were met and reliev'd by the fathers and converts of the *Incarnation*. Having secur'd them, *F. Vanfack* return'd to the town of *S. Michael*, and persuaded the rest, for fear of the enemy, who were now near, to hide themselves in the woods: he himself stay'd in the town with two youths, to the great danger of his life, for many of the *Indians* were full of jealousies, and some were reported to design against his life; whereupon some converts venturing from the *Incarnation* to defend him, fell into the hands of the *Mamalués*, and were carried away into slavery, notwithstanding he went to demand 'em. Soon after, *Antony Vucado*, captain of another band of *Mamalués*, envying the plunder of the town of *S. Antony*, without any

other provocation, enter'd the town of *Techo*. *S. Michael*, and finding it abandon'd, in a rage search'd all the country for four leagues about, making all slaves that he could meet with. These two towns being destroy'd, there could be no opportunity of attending the conversion of the *Cacivans*, a numerous nation, that desir'd the assistance of the society. In the mean while great numbers fled for protection to the town of *Jesu Maria*, but in vain, for neither could this place avoid the fury of those miscreants. *Emanuel Morato*, captain of a band of those thieves, being inform'd of the multitude there was in the town of *Jesu Maria*, taking some detachments out of the other companies of rovers, and two thousand of the *Tupus* their auxiliaries, in march appear'd before the town of *Jesu Maria*. The chief men of the town going out a little way to discover whether those were profest'd enemies, were presently seiz'd and bound. *F. Maceta* perceiving they acted in a hostile manner, went out to 'em with a crucifix in his hand, and an *Albe* or surplice on, to try whether any respect would be given to his priestly function, but they scorn'd him, calling him fool, and deceiver of the *Indians*. The new-made christians surrounded their father, expressing their affection the best they could, in words or tears; among them *Curuba*, a powerful *Cacique*, complaining to him with a filial confidence of the violence offer'd him, was shot thro' the body with a bullet by one of the robbers. *F. Maceta*, provok'd at this villany, severely reprimanded that wretch, who drawing his sword, threatened to kill him, but was diverted from it. *Curuba* in the mean while wallow'd in his blood, and having not been before baptiz'd, was there at his death made a christian. *Grimazera*, with the rest of the principal men, had their hands bound behind 'em, and were drove away like sheep. *F. Spingosa*, hearing of the danger *F. Maceta* was in, came with some hundreds of *Indians* by night to his assistance, and had like to break his neck off a rock, of which fall he lay three hours as if he had been dead, recovering afterwards with much difficulty. Three hundred more converts came with *F. Dielmanius* on the same account from the town of *S. Thomas*. All the good these succours did, was only to receive some few that made their escape from the hindermost troops, for the robbers were gone off in time. *F. Maceta* went away with *F. Dielmanius*, who advis'd him to pursue the robbers, that if he could not move 'em by entreaty, he might force the prey from 'em in *Brasil*, by the assistance of the magistrates. This being resolv'd on, *F. Maceta* and *F. Vanfackius*, who had been robb'd of

And that  
of Jesu  
Maria

then

Тасно. their flocks, follow'd the robbers thro' a vast defart, and soon overtook 'em. The *Mamaluks*, divided into companies as they were, drove a numerous multitude of captives before 'em; and, that none might escape, had secur'd the *Caciques* with fetters link'd to a long chain; the rest were put forward with their hands bound. *F. Maceta* ran among these poor wretches, embracing them, and begging of their keepers for his children in Christ, but they scoff'd at him, saying he was mad; and yet he desisted not till he had mollify'd one of those thieves, and rescued some few of the *Indians*. Encourag'd with this success, he went to another company, where with much entreaty he obtain'd liberty for eight, one of whom was the famous *Cacique Guiraveira*, and with him his wife. He try'd others, but with no success, for cruelty once hardened, is not to be mov'd by any entreaties; therefore, left the rovers should repent 'em, the fathers sent back the *Indians* they had deliver'd with those that carried their portable altar into *Guaira*. After which they follow'd the thieves thro' a vast tract of land, attended by three companions, and feeding on berries or other wild fruit that grew in the woods, with imminent danger of their lives. The *Mamaluks* march'd slowly lest the prisoners should faint by the way if they drove 'em hard, yet very often some dropt, being either spent with sickness or hunger, or failing thro' age or weakness, whom the fathers having prepar'd for death, were oblig'd to leave in the wilderness expos'd to wild beasts, that they might give the same assistance to others. There 'twas frequent to see young men loaded with their mothers, mothers with their children, sons with their fathers, wives with their husbands, and husbands supporting the wives who had their infants in their arms. If any one attempted to make his escape, he was cruelly whipp'd: nor was it permitted any man, if his father or mother dropp'd by the way, to stay behind with them, but whatsoever one sunk, there he must dye alone. Parents were dragg'd away from their dying children, and sisters drove away from closing the eyes of expiring brothers; and, the mothers dying, infants perish'd for want of suck. At length having overcome the difficulties of that tedious journey, they came to *Piratininga*, or the town of *S. Paul*, where the fathers were lovingly entertain'd in the college of their order. The *Mamaluks* returning after an expedition of nine months with one thousand five hundred captives, divided the prey among themselves, owning they never made a better booty.

The two fathers having made their complaint to the judge of *Rio de Janeiro* in *Brasil*, of the *Mamaluks* plundering their three towns, and driving away all the people, and demanding to have the prisoners restor'd, were answer'd, *That we had no power to determine those capital cases, which were all refer'd to the governor general of Brasil*. Upon this they set sail from *Rio de Janeiro* with the provincial of the order, to *Baia de todos los Santos*, the residence of the governor. Where, having made their complaint, they obtain'd an order for all the prisoners to be restor'd to them, and a judge was appointed to go force them from the *Mamaluks*. But this was more specious than effectual, and the governor well enough knew it; for it was plain that so villainous a cause was not manag'd with that severity it ought to be; and it was plain that those robbers ought not to be dealt with by form of law, but force of arms. The connivance was universal, for the miserable captives were sold throughout all *Brasil* as slaves, and many of the principal men bought of them, that so more being concern'd there might be the less hopes of redress. But *James de Vega*, a noble Portuguese, perceiving the business was protracted, without any hopes of success, offer'd *F. Maceta* as much money as would bear his charges into *Spain*, to sollicite this affair before the king, but it being reported that the *Mamaluks* prepar'd for another invasion into *Guaira*, the fathers thought better to return thither with all speed. Having recover'd but twelve of the prisoners at *Rio de Janeiro*, they went away to *Piratininga*, carrying a child of four years of age on their backs up a mountain two leagues to the top. Being come to *Piratininga*, the *Mamaluks* in a tumultuous manner obstructed their entering the college, and, carrying them to another house, detain'd them till the rector of the college deliver'd them by force of intreaties. The judge, sent by the governor of *Brasil*, was in danger of his life, one of those villains firing at him; and some of those miscreants were heard to say, *They would rather renounce their baptism than suffer the governor's order to be put in execution*. Thus the judge, despairing of doing any good, return'd from whence he came. The fathers, after many affronts put upon them, set out of *Piratininga* with a very small number they had rescu'd out of so many thousands; and being plentifully furnish'd with provisions for their journey by the fathers of the college, sail'd down the river *Anambi* into the *Parana*, and out of that into the *Parapana*, returning home after a whole year's toils to little purpose.

Troubles in Guaira The province of Guaira having suffer'd so much by the incursion of the Mamalucos, was no less rent by jealousies and fears; for many of the converts thought they were gather'd into towns by the fathers, that they might be the better betray'd to those barbarous enemies, giving out, there was no faith to be given to those who had so often affirm'd, That the Mamalucos would only infect those who did not become christians, and submit to the king of Spain. That dis- nial experience had taught them, they spar'd none; and considering what had happen'd, there was less danger in the woods than in towns, for, since the coming of the fathers, more had perish'd in one day, than in many years before. This and much more they alleg'd, and their suspi- cion was increas'd by a report spread abroad, that the wild infidels in the woods had made a notable slaughter of the Mamalucos. The fathers on the other side vindicated themselves, repeating the extraordinary kindnesses they had at all times done that nation, insinuating that they had protect'd the Indians at the expence of their own re- putation and goods. That they had prevail'd with the Spaniards of Villarica not to oppress the natives. That they had obtain'd several laws to be enacted by the catholick king in favour of the Indians; and much more to this purpose; besides all the particular actions of every father in particular, wherein they had serv'd them at the expence of their unspeakable toils, and hazard of their lives. The Indians in- rag'd with misfortunes would hear no reason, but became ungovernable, looking upon all these allegations no better than so many snares. When Guiravera, who had been deliver'd from captivity, as was said above, returning home, and finding the so- ciety traduced, ran among the people, shewing with what danger and trouble F. Macceta had deliver'd him; and how he travell'd into Brazil to secure them against further invasions. This fresh example prevail'd above reason, and Guiravera shew- ing himself in all parts, in some measure took off the false imputation. Yet there was no less trouble at Villarica, for some of the citizens there had the confidence to seize those for their own use, who escap'd the Mamalucos at the town of St. Anthony, which the fathers took care to expose, lest it should produce new troubles. But the most deplorable thing of all was, that the governor neglected in this time of distress to relieve Guaira, a principal part of his province. After the governor departed the province, F. Diasianus discover'd a practice that would have prov'd very per- nicious, which I will set down in this place to divert the reader amidst the relation of

VOL. IV.

so many calamities. About one thousand Tecno- five hundred families of inhabitants of the town of the Incarnation, had been so well instructed by F. Mendoza, that they differ'd but little from the ancient converts. But amidst these confusions of war spoken of, the devil set up certain forcerers, who had such influence over them, that they could not endure to come to church, or do any other act of christianity, but look'd like quite another people than they were; and seem'd to have return'd to their former barbarity. F. Diasianus being much concern'd at this change, and having long endeavour'd to find out the cause, when he least expected had it discover'd to him by a youth he had bred at home. He told him, It was all the work of the force- rers, who had seduced most of the inhabi- tants; and built two temples on the tops of the mountains, for men, women and children to resort to. That the devil gave answers, as the oracles us'd to do, through the bones of dead forcerers placed there, to honour which they had appointed priests and priestesses. That even those who had charge of catechising others, were infected, and debauch'd others; and that all sorts of sacrileges were commit- ted there. That the men there making extri- vagant motions, like mad men, fought predictions of what was to come. And the wo- men with dishevel'd hair, set the perpetual fire in honour of the devil. That it was reckon'd a crime to touch the bones of the force- rers, which they pretended had again taken flesh. That they resorted thither on sundays and holy days, to be out of the way of at- tending the christian devotions. The fathers having consulted together, went out two one way and two another, to burn the tem- ples and burn the authors of this mischief. F. Diasianus and his companion coming about break of day unexpected to one of the temples, found all things agreeable to the information given, for it was large, and the forcerers bones were in a private part of a hammack hanging by two pillars, and wrap'd up in blankets and adorn'd with feathers of several colours, and worship'd with extraordinary ceremony. Without it were several little huts, in which those that were newly admitted to the religion fasted and revell'd; from the roof hung an infi- nite number of offerings made to the devil, who on his part distracted his worshippers with monstrous lies. Having examin'd all things, they set fire to the temple and all that was in it, and to all the little ho- vels about it, which done they return'd home. F. Ruiz and F. Mendoza under- standing, the way they went, that the bones were carried out of that temple, pursu'd and brought them back, burning all toge- ther as the others had done. The next

S S

day

**T**ICHO. day the fathers gather'd the *Indians*, and checking them severely for relapsing into this superstition, soon brought them all to repentance. This done, the fathers apply'd themselves to repair the damages caus'd by the *Mamaluks*, and *F. Cataldinus* built a town among the *Gualaches*, five days journey from that of the *Conception*, which was the 13th they had founded in the province of *Guaira*, and call'd it the town of *St. Peter*.

*Jesu Maria town rebuilt.*

*Town of S. Paul plunder'd.*

The fathers searching the woods, gather'd those that had fled for fear of the *Mamaluks*, and with the assistance of *Guiravera*, who, as has been said, was return'd from *Brazil*, drew such multitudes as was sufficient to rebuild the town of *Jesu Maria* in the same place it was before, where it was accordingly begun; but *F. Maceta* coming from *Brazil* with the news of the obstinacy of the *Mamaluks*, it was, for more safety, remov'd to a place near the precipice of *Huibaí*. Thus was the province of *Guaira* beginning to be restor'd, when the dismal news was brought, that the *Mamaluks* had destroy'd the town of *S. Paul*, and drove all the inhabitants away into captivity. The inhabitants of the *Incarnation* hearing of the destruction of *S. Paul*, fled some of them to the town of *S. Xaverius*, and some to *Huibaí*. Thus one town was destroy'd by the barbarity of the robbers, and another only by the dread of them, without any hopes of being restor'd. *F. Ruiz* halting from among the *Gualaches*, to remedy these misfortunes, could find no better expedient, than to gather the remains of the inhabitants of both towns, and to send them toward *Villarica*, where the track of *S. Thomas* remains, there to build a new town. But this was running them into fresh disasters, for other stealers of *Indians* lying in wait for booty, seized all they could for their own use, and drove them a vast way into *Paraguay*. *F. Ruiz* sent *F. Suarez*, and *F. Racionero* to complain thereof at *Villarica*, and finding no redress, but that new danger threaten'd from the *Mamaluks*, he sent away *F. Diasianus* into *Paraguay*, to acquaint the governor with the whole matter, and beg some assistance to support the sinking province. The governor having heard the account *F. Diasianus* gave of the invasion of the *Mamaluks*, the destruction of the towns, and destruction of the province of *Guaira*, was as much intrag'd as if some affront had been offer'd him, and told the father, he was well assur'd by letters from *Villarica*, that the fears of the fathers were groundless, and that the society magnify'd every thing to misrepresent him. But *F. Diasianus*, lest the conniving at this behaviour might afterwards be a reflection on

the society, drew up a petition, and presented it to the governor before a publick notary, praying relief for the province of *Guaira*; but no answer being return'd, he hasted away to consult the provincial upon that point. At the same time *F. Asaro* was sent thither, because the same governor, had made a law, forbidding any person, without his leave, to go through the province of *Parana*, into that of *Guaira*, but through *Paraguay*, which is two hundred and fifty leagues about; and though the society represented the ill consequences of that law, which cut off the sending any timely supplies to those distressed people, yet they could not make him alter his resolution. *F. Vasquez*, the provincial, was extremely concern'd at these calamities, especially when he receiv'd further news from *Guaira*, that there were people there, who made slaves of those poor *Indians* who had escap'd out of the hands of the *Mamaluks*. These things mov'd the provincial to send *F. Diasianus* to the supreme council in *Peru*, and he himself went up the *Parana* to *Guaira*, to comfort the afflicted, and be an eye-witness of other calamities. But having stay'd so long in this province of *Guaira*, it will not be amiss to look back into the others, before we proceed upon the rest of its calamities.

About the end of the year 1630, and the beginning of the next, the province of the *Calchaquines* began to be infested with war, which might have been avoided, if the people had been satisfi'd when they were well. The *Spaniards* inhabiting the towns on the borders of the valley of the *Calchaquines*, had, some years ago, been offended at the society, for having settled in two places of the said valley, saying the respect they had for the fathers, hinder'd them from subduing those fierce people. The fathers, tho' they had long labour'd in vain to reduce the *Calchaquines*, yet thought they did christianity, and the publick, good service, in baptizing the children, and keeping that savage nation from plundering the rest of *Tucuman*. Yet for other reasons, as has been said before, the valley was forsaken. After which, the citizens of *Salta* and *Rioxa*, living in greater security than was convenient among faithless and offended people, till'd the lands as they used to do upon their borders; and *Urbina*, a rich man, was so bold as to build a stately country house like a castle, at the very entrance into the vale. But the fathers being once gone, as if all bands were broken, their ancient hatred prevailing, the barbarous *Indians* broke out, falling first on what was next at hand, and then further off. Then joining with their neighbours, they take *Urbina's* country house, and killing him,

him, with his wife and servants, carry'd a-  
way his daughters, who were afterwards re-  
cover'd by the citizens of Salta; destroying  
all the country houses of the Spaniards. The  
*Andalgales, Famentines, Andarales, Capa-  
res,* and other barbarous *Indians* in league  
with them, came into their assistance. The  
*Indians*, bred under the *Spaniards*, murder  
their masters, and force their way into the  
vale to recover their liberty. *Albornes*, go-  
vernour of *Tucuman*, elder brother to the  
cardinal of that name, falling upon the  
*Indians* before they could joyn their whole  
force, defeats them, and builds a fort at  
the entrance of the vale, but the enemy  
uniting, kill the commander of the fort  
and all his garrison that had ventur'd with-  
out their works, and taking the fort, de-  
stroy the city of *London*, killing many of  
the inhabitants, lay siege to *Rioja*, and  
strike a terror throughout all the province  
of *Tucuman*. This war lasted above ten  
years, and was not ended till the society re-  
turn'd to the vale.

Of the  
Cauaguas. In the province of *Parana*, an excursion  
was made from the town of *Acarai*, to  
bring over the *Caiaguas* to the faith of  
Christ. The nation of the *Caiaguas* is  
small, and the most savage of all the *Indi-  
ans*. They live scatter'd in woods between  
the rivers *Parana* and *Urubica*, whence they  
had the name given them; for *Caiagua*  
signifies a wood. They have a par-  
ticular language of their own, not easily to  
be comprehended; for in uttering their  
words, they seem rather to whistle, and to  
make a confus'd noise in their throats than  
to speak. They live in wretched huts,  
made of the boughs of trees, far distant  
from one another, without making any  
more provision for food than the wild beasts,  
for they neither mind husbandry nor trade.  
They kill both beasts and fish with their  
arrows; and for the most part feed on  
worms, snakes, mice, pismires, and such  
ready kind of food, and eat the flesh of  
tygers. The elks, which the *Spaniards*  
call great beasts, they fight with and eat.  
As for monkeys, they creep after them from  
tree to tree, as if they were monkeys them-  
selves, and it is the nature of those creatures  
to carry their young ones along with them,  
as they fly from one tree to another; so  
that if they happen to slip down, the inha-  
bitants catch and devour them. Wild ho-  
ney is one of their dainties, and they make  
a liquor of it, which warms and defends  
them against the cold. They are continu-  
ally at war with the tygers, nor can they  
give any other reason for their being so few,  
but that they are continually destroyed by  
those fierce creatures. They look upon  
madness as valour, and are unacquainted  
with any other endowments of the mind.

Many of them are deformed to a prodigy; *Techo*,  
as like monkeys as men, especially if you  
look upon their noses, which are more like  
snouts. They are generally hunch-back'd,  
and wry-neck'd; yet there are some a-  
mong them well shap'd, especially the wo-  
men, who being born and bred in the  
shade, are colour'd much like the *Europe-  
an* women. Both sexes have but very lit-  
tle use of reason, which they so deprave by  
their food, fierceness, and libertine life,  
that they differ but little in their ways  
from the very beasts. The women cover  
themselves from the waist to the knees with  
nettles, which they steep like flax, and  
combing them with their fingers, weave  
them together like nets. The men wear  
no cloaths but skins, which are so little, that  
most of their bodies are naked, and yet their  
skins are so hardened, that they creep like  
snakes, through briars and brambles with-  
out the least concern. If any of them are  
taken in war, it is harder to tame them  
than the wild beasts, for they will bite iron  
fetters, foaming all over like mad men;  
and even the children, when taken, can  
hardly be brought to be sociable and  
tame. If they are kept long bound, they  
soon starve themselves to death, like crea-  
tures that cannot live out of their element.  
There is another sort of warlike *Caiaguas*,  
whose military exploits are more like the  
follies of wild beasts, than the fighting of  
men. These falling out of their woods,  
surprize travellers as they lie asleep, and  
murder them; not out of any revenge or co-  
vetousness of what they have, but to eat their  
flesh, or satisfy their own cruel temper;  
which inhumanity they call war. They are  
so much concern'd to be overcome, that  
tho' sometimes they are spar'd by their en-  
emies, they will neither eat, nor suffer their  
wounds to be dress'd. The fathers in  
*Guaira* had at several times got some  
numbers of both these nations out of the  
woods, but most of them, as soon as they  
were shut up in the town, died like plants  
that grow in the shade and cannot bear the  
sun. The fathers of *Acarai* had done the  
same, and were desirous to find some expe-  
dient to provide for the salvation of those  
wretched creatures, with more safety to their  
bodies. *F. Alvarez*, with incredible la-  
bour and danger, made his way through  
almost impenetrable woods to these people,  
and having got eighteen of them together,  
he return'd to the town, where he instruct-  
ed them the best their stupidity would bear;  
and having baptiz'd them, they all died.  
The rest of the province of *Parana* was  
peaceable, and the heathens daily came o-  
ver, and were baptiz'd.

The province of *Urubica* was still more  
prosperous, and yielded a more plentiful  
harvelt,

TACHO.  
Town of  
Assump-  
tion built  
in Uruai-  
ca,

harvest, for above three thousand souls were there baptiz'd, a new town built, and the foundations of two others laid. The river *Acaragua* falls into the *Urvaica*, seven leagues above the colony of *St. Xavierius*. The provincial *Vasquez* had promised the people, dwelling on its banks, to send them a father, in hopes whereof, they had so gather'd their scatter'd houses, that they seem'd seriously to desire to be civiliz'd and become christians; and the society thought it a matter of great consequence to secure that post, which would open a way to the upper part of *Urvaica*, and obstruct *Niezuvius* from raising new troubles. *F. Romero* repairing thither, and finding three hundred and fifty families already assembled, and as many more ready to meet, erected a cross, appointed magistrates, and baptiz'd the children. *F. Altamarinus*, well skill'd in the Indian language, govern'd this new town, call'd the *Assumption*, twelve years, with such success, that four thousand two hundred were there baptiz'd. It was here I learnt to express my self in the language of *Guaira*; and having gain'd some skill in it, through God's great mercy, was able, tho' unworthy, to employ my little talent for twenty years through the towns of *Parana* and *Urvaica*. The infidels of the inland of *Urvaica* towards the south, were no less forward to ask for fathers, and particularly the *Caapians* and *Caasapans*, mov'd to it by *Apicabija*, and *Mbocarata*, the lords of those numerous nations. But *Ibapirius*, a fierce man, oppos'd their designs. He being grown famous by his skill in forcery among the heathen people about the river *Igai*, rais'd the neighbouring people, declaring he would revenge *Niezuvius* his quarrel, and crush the *Caapians* and *Caasapans*, that they might do no harm by their example. The multitude ran to arms, and march'd towards the *Caasapans*. This being known, the *Ibitirapans*, *Tabativians*, *Piratinians*, *Caasapanimians*, *Acaraguans*, and *Caarvans*, drew out their forces, left the new candidates to christianity should suffer, and meeting the enemy, put them to flight, and pursuing, overtook them again two days after, but they slipped away over the fords of the river *Igai*, before they could be engag'd. There *Ibapirius* recruiting his forces, making many more fires about the fields than were necessary for his men, to strike a terror, and putting on the vestments *F. Gonzalez* formerly us'd at the altar, with a piece of the chalice he had, carry'd himself as vainly as *Niezuvius* had done. Then affecting divinity, he threatened to destroy all those that follow'd the fathers. The converts, frighted at these things, had certainly fled, but *Alfonso Querrana*, a man of note among them, having

*Ibapirius*  
robbed.

spoken some words to encourage them, bid them follow him, and then with father *Romero*, tho' the season was cold, ran into the water up to the neck, where the ford was, the rest following his example, made their way over, attack'd and plunder'd *Ibapirius* his houses. Then marching with diligence, overtook, and routed the enemy. *Ibapirius* fled with such precipitation, that there was no hopes of reaching him. The conquerors alledging, it was requisite to hang some for a terror to others. *F. Romero* advised them to hang one of those that had been kill'd, which was accordingly done. *Cunamipita*, the promoter of this war, *Ibapirius* his son, and four of his concubines were taken, and afterwards became christians. *Ibapirius* himself, after he had lived some years in banishment, wandering about, desir'd to be carry'd to a town of Indian converts, but died by the way. *F. Romero*, before he dismissed his forces, mark'd out the ground for a town among the *Caasapaguans*, and being inform'd that *Apicabija* had gather'd a sufficient number, laid the foundations of another among the *Caapians*. The first of these towns was dedicated to *S. Peter and Paul*, the other to *S. Charles Borromeus*. Not long before, *F. Rua* sailing up the river *Ibicuit* from the town of *Japeire* to the province of *Jape*, invited the inhabitants of three villages to go with him to the colony of the *Three Kings*, then very thin of people. They all refus'd saying, *That if the society would build a town among them, they would all consent and become christians*; and the chief of them shewing that they and their neighbours could make a populous town, the father promis'd care should be taken of them, and return'd, priests being yet wanting to supply so many places. The plague now raging, destroy'd many hundred of *Indians*, who lying much dispers'd, because when towns were first built, the fathers gave them leave at times to return to their villages to sow, till there could be corn enough about the new colonies; the said fathers had an endless fatigue, continually running through woods, rivers and marshes, and over hills and mountains, to assist those that were infected. It being therefore impossible for so few to attend them all, some of the best of the converts were entrusted, after being well taught by the fathers to let blood, prescribe purges, bring the sick to town, and in case of necessity to baptize. *Vincent Japuias*, a *Cacique*, who formerly had a hand in the death of *F. Gonzalez*, was now one of the most zealous and diligent in performing all charitable offices to the sick, carrying them to the town, supplying the need, assisting those that were dying, instructing the ignorant, rebuking those that re-  
tained

The colonies of *S. Xavierius* and *S. Joseph* destroyed.

tained anything of their former superstitions, and doing all things that could be serviceable to body or soul; till the infection seiz'd him, and he dying happily, was succeeded in the employment by *Marcellus Maendius*, another *Cacique*, no less zealous. Some of the wild people, call'd *Caiguas* beforementioned, perceiving that the *Iguazans* their ancient enemies, troubled them no more since their conversion to christianity, ventured with a *Cacique* to the town of *S. Mary Major*, the people running to see them as if they had been monsters. They gave ear to what the fathers said to them by an interpreter, eat what was offer'd them, and felt the father's garments and shoes with admiration, thinking they had been born with hats and shoes; so very ignorant were those wild creatures. It was pleasant to see how they start'd at the ringing of the bell, as if it had been thunder, and to hear them ask, *How so little a thing could talk so loud*. But it was much pleasanter to see those barbarous men, only us'd to the noise of tygers, leap about when they heard the musick, and striv'd to imitate the converts, who danced to it. They return'd to their woods, giving some hopes they would come again, but tho' the fathers us'd all means to gain them, very few were converted. The bishop of *Paraguay*, visiting the province of *Parana*, was receiv'd in the towns with triumphal arches, and in the churches with musick; confirm'd many thousand converts, and applauded the labours of the fathers. All this joy was alloy'd by the coming of *Emanuel Correa*, a man of quality out of *Brazil*, with the news that vast numbers of *Mamaluc* and *Tupus*, were setting out to destroy the province of *Guaira*, the governor of *Paraguay* shewing no manner of concern at it; which draws me away, tho' with horror, to relate what happened there.

*F. Viquez* the provincial, after visiting the towns of *Parana*, went by the way of the famous precipice, before spoken of, into the province of *Guaira*; for tho' the governor of *Paraguay* had forbid going that way, the royal council of *Peru* had vacated his order. Proceeding up the rivers *Parana* and *Huibai* to *Villarica*, he there receiv'd the news that the town of *S. Xavierius* was besieg'd by the *Mamaluc*. Having therefore encourag'd the inhabitants of *Villarica* to defend the country; he went the shortest way with all the speed he could to succour those in distress. *F. Pastor*, who had charge of the town of *S. Xavierius*, hearing that the *Mamaluc* were driving the *Indians* from the further villages, ran out among them, and contemning all danger, prevail'd to have some few of the prisoners restor'd to him. But the next day those robbers exercis'd their cruelty upon

VOL. IV.

the houses nearest to the town. There the father thrust himself among them to save one of his converts, and the *Mamaluc* flocking about him, gave occasion to the *Indians* to think they had murder'd him, which prov'd advantageous to many, who upon that notion immediately fled to the old towns of the province. *F. Pastor* pick'd up three hundred, whom he delivered to *F. Suarez* to be convey'd to places of safety; the *Mamaluc*, in the mean while after their manner, securing their prisoners within an enclosure made of stakes, or palisadoes, or else fastening them in long chains. The inhabitants of *Villarica*, coming up at this time, fell upon the *Mamaluc*, but one of their men being wounded, and another kill'd, gave way, and could never be persuaded by the provincial to make another onset with them, to rescue the prisoners. *Pindovius*, captain of the colony of the *Nivatuquians*, which had been destroyed, drawing along with him a multitude of people, deliver'd himself up to the robbers, after which the town and church of *S. Xavierius* were destroyed, which had contained one thousand five hundred families, whereof scarce five hundred souls were sav'd, and sent down the *Tibaxiva* to the old town. Nor did the invasion stop here, for the colony of *S. Joseph* lying in the mid way between *S. Ignatius*, and *S. Xavierius*, was destroy'd with only the dread, the inhabitants running away for fear of the *Mamaluc*, or else falling into their hands. Because the remainders of so many towns destroyed might be burthensome to others, the provincial order'd a new town to be built near *Loreto*, that they might assist one another. Having thus order'd affairs, he hasten'd away to relieve other towns of the faction of *Taiaboa*; for there was a report, not altogether groundless, that the *Mamaluc* and *Tupus* were coming in great numbers to destroy the rest of *Guaira*. The society had erected three towns about the lands of *Taiaboa*, one of which call'd the *Archangels*, contained above a thousand families, that of *St. Thomas* eight hundred, *F. Maceta* had gather'd such a multitude in that of *Jesu Maria*, rebuilt by him, that it was little inferior to what it had been at first. The provincial being there, was again inform'd by their spies, that the *Mamaluc* were not far off; therefore calling all the fathers together, he consulted what was best to be done in that danger: They answer'd there were two ways of afflicting those people, which was either to encourage them to oppose their enemies, or lead them away to safer places; which latter advice the provincial inclining to, because the *Indians*, who were almost naked, and fought with arrows made of long reeds, which did

8 T

but

The colonies of *S. Xavierius* and *S. Joseph* destroyed.

**T**echo. but little execution upon the *Mamalucs*, who had coats stuff'd with cotton to resist them, could not, tho' more numerous, withstand those enemies, who had swords and fire-arms, he resolv'd the three aforesaid towns should be remov'd out of hand, near to the precipice of *Guaira*, that their great distance might be a defence to them, and in case of need, they might pass the precipice, and repair to the towns in *Parana*. Having so order'd affairs, he went away himself for that province, in great anxiety of mind for these calamities. No sooner was he gone, but news came that the enemy drove all the country before them, whereupon the project of removing was hastened. Accordingly the fathers took care to save all that could be carry'd away, and convey the inhabitants to the places appointed. *F. Ernotus* was sixty days marching with those committed to his charge, and brought all safe without the loss of one creature. The others met with greater difficulty; want of provisions, and the hardships of the way, prevail'd with many of the *Indians* to turn back to their native country. Of these, some were kill'd by the *Gualacbes*, and others made slaves. Three days after they were gone, the *Mamalucs* entering the lands of *Taiaoba*, found a greater booty than ever they did before; the people surrendering themselves of their own accord, and voluntarily running themselves into fetters, for fear of death. All those, who forsook the fathers, ran the same fortune. But the *Mamalucs*, not satisfy'd with so great a booty, understanding that great companies of the converts had been conveyed away, through the lands of the *Gualacbes*, they pursu'd them in several troops.

Towns of  
S. Peter  
and the  
Conception  
destroy'd.

The society had founded two towns in the country of the *Gualacbes*, the one call'd the *Conception*, and the other *S. Peter*. A troop of the *Mamalucs*, falling unexpected into the latter, bore down all before them, without any respect to the priests. The *Mamalucs* do not like the *Gualacbes* for slaves so well as the *Guarans*, because of their natural fierceness; and therefore passing them by, they made it their whole business to overtake the people of *Taiaoba*, that fled with the fathers. Thus the town of *St. Peter* was destroy'd, the inhabitants retiring to their lurking places, and the fathers, all the *Guarans* being taken from them, retiring to the river *Piquiri*. The town of the *Conception* fared no better; for tho' the *Mamalucs* did no harm there, but the carrying away of two women, the inhabitants were so intrigu'd at it, that they fell upon *F. Salazar*, plunder'd all he had, and forc'd him to fly through the woods to the other fathers. When such multitudes

of people, from so many towns as were destroy'd, met almost in the same place, provisions failing, and even the hopes of any, both the *Indians* and fathers were in a miserable condition, scarce keeping themselves alive with herbs, and wild fruits, and berries. Every one had the misfortune of another to bewail besides his own; fathers lamented their children, children their parents, husbands their wives, wives their husbands carry'd away by the robbers. The fathers, who were in care for all, agreed to sown in that place, till such time as other means could be found to relieve those people; tho' it was plain there could be no settling there, or in any other part of the province of *Guaira*, because no place was safe against the *Mamalucs*. *F. Ruiz*, who had been to attend the provincial to the precipice, returning to visit the distress'd *Indians*, received news that the *Mamalucs* infested the villages, under the jurisdiction of *Villarica*, on the river *Huibai*; and that fresh troops of robbers were coming from all parts of south *Brazil*, full of hopes of a mighty booty, to destroy all the towns of *Guaira*, and little cities of the *Spaniards*. Hereupon he made made all possible haste to the towns of *Loreto* and *S. Ignatius*, in the greater consternation, because *F. Salazar* writ to him, that a *Mamaluc* in the town of the *Conception*, being oblig'd to him for some former kindness, had assur'd him, that when they had plunder'd the country of *Taiaoba*, the robbers had resolv'd to fall upon the old towns of the converts; which the provincial foreseeing, had before his departure order'd a great number of boats to be built, which would be useful to remove when the enemy was near. The *Spaniards* of *Villarica*, having been in due form of law, requir'd to defend the country, and owning themselves too weak, *F. Ruiz* order'd the people of *Loreto* and *S. Ignatius* to make ready to remove. These two colonies built twenty years before this time, were by the industry of the fathers so improv'd, that they might compare with the best *Spanish* towns in those parts. The churches in them were more stately and better adorn'd than any in *Tucuman* or *Paraguay*. *F. Vaz* had brought up such choirs of musick in those places, that they differ but little from those in *Europe*; and the behaviour of the converts was scarce inferior to that of the most polite nations. There began to be a good increase of kine and other cattle, brought thither with much trouble by the society. There grew enough cotton and corn, not only to supply the natives, but to furnish the *Spaniards*. All these things, it was fear'd, would make the people averfe from removing, and the more, because they would consider the miseries that must attend

Colonies  
of *Loreto*  
and *S. Ig-*  
*natius* -  
bandon'd.

tend them in perpetual banishment. They had a journey of an hundred and thirty leagues to the place, whither they were to be conducted, nor was it likely that the women and children, sick and aged, who would soon feel the want of necessaries, could pass that vast precipice and solitude. But on the other side the enemy press'd, who, besides reducing them to miserable servitude, would bring their soul into danger. Finding themselves in this condition, they all unanimously promis'd, to follow the fathers whithersoever they pleas'd to lead them. Saying, *They would never forsake their teachers, and if any perish'd by the way, they should have the satisfaction of knowing they dy'd for the faith; and did not doubt but God would have a providential care over them.* F. Ruiz, not to slip this opportunity, orders all to make ready; accordingly all that could be carry'd away was put into boats, there call'd *Balsas*, and having laid in provisions, they set out much better pleas'd than such as are going into banishment us'd to do, running down the river *Parana*, never to see their country again. They went very slowly for fear of leaving any boats behind them for the enemy. Being out of the *Parana*, they held on their way on the *Parana*, against the will of the inhabitants of *Cuidad Real*, and came without any considerable loss near to the great precipice; where, on the further bank, all those *Indians* we said came from the other towns expected their coming. F. Maceta, an eye-witness, affirms, there departed from the town of *Loreto* nine hundred families, and eight hundred out of that of *S. Ignatius*; besides four hundred families that joined them from other parts. How many met in all at the precipice from all parts, I cannot affirm, because the fathers, who were present, differ in their accounts. This is certain, that it was an unspeakable grief to them to consider how many thousands of converts out of thirteen colonies, had been either drove away by the *Mamelucos*, or fled to their ancient lurking places; besides that there remain'd no hopes of ever being able to assist so many thousands of infidels as they left behind; or of recovering the scatter'd converts. But now they were to consider of passing the precipice, that the multitude might then be convey'd down the *Parana* to the place appointed, which was still twenty leagues off; lest these remains should fall into the hands of the *Mamelucos*. For news was brought that the robbers, three days after the departure of the inhabitants, came to the towns of *Loreto* and the *Conception*, and finding them abandon'd, in a rage had threatened further destruction. The difficulty was in finding boats for such a mul-

titude, after they were down the precipice; **Techo.** for there was no hope that of all that number of boats, any could escape shipwreck, if they were let run down from the top of the precipice to the pool at the bottom. Yet because they would try all experiments, they turn'd almost all the boats loose, after taking out their lading; which in a moment were shatter'd into chips and vanish'd, beating against the rocks, and being swallow'd by whirl pools. The next hope was to have boats brought to the foot of the precipice, from the towns of the converts in *Parana*; but they were therein disappointed in a great measure, the chief of the fathers of *Parana*, being at that time call'd away to the chapter at *Cordoba*. Therefore the best advice was, when they had march'd down the precipice to the plains, to build new boats.

For the better conveniency of their descending, F. Ruiz divided the multitude into troops, placing a father at the head of each, to lead, encourage and assist them. They all march'd loaded with their provisions, and other small utensils, meeting every now and then with brooks, to pass which they were forc'd to cut down trees and make some sort of bridges. Sometimes the steepness of the rocks, sometimes the hot burning sands, and sometimes impassable woods, obstructed their passage; which made not only the sick and aged, but the women loaded with their children, and healthy persons, faint by the way; wherefore any one fail'd, he was forsaken by the rest, the fathers not being able to relieve them, but only taking care of their souls. It is certain that a great number perish'd in the descent of that precipice, which I have describ'd before. That descent, if they went strait forward is but fourteen leagues, but they are forced to take so much compass, as makes it almost double that way. Having spent eight days in coming down, when they arriv'd at the plain, all fell to work at making of boats, which the *Indians* being us'd to make of trees hollow'd out; and there being no large timber at the foot of the precipice, they were forced to make boats of very small burden. The fathers of *Parana*, had with great labour, and the loss of many, sent a few boats laden with provisions to the foot of the precipice, to relieve the *Indians* after their march; but being so few among a multitude, they signify'd little. For these reasons all the multitude was divided into four parts. The first troop was order'd to march along the banks of the *Parana*, under the leading of F. *Spinosa*. Two others took their way through the woods up the country, on both sides, towards the towns of *Acurai* and *Iguazu*, under the conduct of F. *Con-*

*Con-*

**T**RENCHO, Iruera and F. Suarez. The last troop went down the river under F. Ruiz, and he not having vessels enough to carry so great a number, F. Maceta was order'd to stay at the foot of the precipice with the rest of the people, till the vessels could return from Acarai, and other conveniences be provided. F. Maceta and his company liv'd there three months upon wild fruits; and F. Salazar, liv'd four months on the other side among the rocks with six hundred Indians, in great want of all things; till F. Gallego came from the town of Iguazu to relieve them. But whether they went by land or water, abundance dy'd; some fainting with hunger, some with weariness and other misfortunes. Those on the river, the boats being small, and the furies great, were often overlet and many drowned. Many had made boats of canes, fifty foot long, and thicker than a man's leg, bound together, in which several were lost. One of these was stay'd, and dropt all it carry'd into the water, before the fathers; but all that were in it swam ashore, except one woman, who chose rather to be drown'd with her children, than quitting them to get off with the rest; but the other Indians sav'd both her and the infants. Another boat being swallow'd up by the river, all the men and women were sav'd, and eleven children lost. Those that surmounted all these dangers, were first reliev'd by the converts of the town of Iguazu and Acarai; nor is it easy to express how charitably the fathers and converts of Parana receiv'd and entertain'd so many thousand strangers, reducing themselves to extremest want to supply them. Before it was propos'd to build towns, the whole nation dispers'd itself among the colonies of Parana and Urvaica; which colonies, by reason of the ill crop the year afforded, being ill provided to supply the natives, involv'd themselves in wonderful calamities. It is well known that the inhabitants of the town of S. Ignatius on the river Paraguay, distributed two thirds of the provisions they had, in alms among the strangers. The Itapians bestow'd three thousand oxen among them. The inhabitants of Corpus Christi slaughter'd a great number of cattle to relieve them; and yet soon after plague and want destroy'd many of them. Six hundred were bury'd in the town of Acarai, in a short time after some thousands of these pilgrims came thither. Those that surviv'd having consumed all the food there was about the town; labour'd to protract life, dispers'd about the woods, killing what came in their way. F. Alvarez ranging the forests to take care of their souls, was reduced to such extremity, that he had nothing but the skin upon his bones, and look'd like a ghost, being just ready to eat

a pair of old shoes, he had softened by long boiling, when some small supply was sent him by the other fathers. The Iguazuans for four months maintain'd one thousand five hundred of those Guairaneans, for which they afterwards suffer'd famine. The plague soon after destroy'd five hundred of them. In the town of S. Mary Major, the tygers first flesh'd on the dead bodies, devour'd twenty Indian converts. The people of Urvaica, whither a part of these strangers were sent, were profusely bountiful to them; notwithstanding all which some dy'd of the plague and for want. To be brief, of the remains of thirteen towns of Guaira, scarce four thousand surviv'd the first year after their transmigration; all the rest either dying in the way, dispersing themselves about, or perishing by hunger or famine. When the pestilence was a little abated, F. Ruiz, gathering the survivors from all parts, apply'd himself to rebuild towns. The river Jabeoir is about half way between the towns of Itapua and Corpus Christi; on its banks, not far from the Parana, into which it falls, were laid the foundations of two towns, under the old names of Loreto and S. Ignatius. That the people might not perish with hunger whilst they were building; the fathers, out of the money the king allows them yearly, and what they could raise by sale of the goods of the towns destroy'd, bought ten thousand oxen; which, with some other helps, kept them from starving; and those transplanted colonies, through the industry of the fathers, began to regain some part of their former lustre. Hither were brought the remains of Guaira, where the fathers had spent twenty three years with incredible labour in reducing those people; having founded thirteen towns, besides the Spanish city of Villarica, which was also abandon'd. The province of Guaira, through their indefatigable labours was thus improving, and it was hop'd the whole would embrace christianity, and submit to the catholic king; when that plague of the Mamalucos, as has been said overthrow all, cutting off the hopes of any return thither; for after plundering the towns erected by the society, the robbers first ruin'd the villages under the jurisdiction of the Spanish city of Villarica, and then without any respect to the bishop of Paraguay, who came thither in person, overthrow that and the city of Guaira. Some of the Spaniards of Villarica were remov'd to the river Paraguay, and some took up among the Mamalucos. The two towns being settled, F. Ruiz was appointed to have charge of them: where we must leave him to look a little into the province of Urvaica, and some other parts.

When

Descripti-  
on of the  
province  
of *Tape*.

When *F. Romero* had made some pro- vision for the poor *Guairanians*, being strengthened by the accession of the fathers come from that province, he seriously ap- ply'd himself to propagate christianity be- yond the bounds of *Urvaica* in the province of *Tape*, wherein *G o d*'s special providence was visible, which, after the destruction of so many towns, furnish'd a new province for that of *Guaira*, which had been utterly ruin'd. Under the name of the province of *Tape* is comprehended a ridge of moun- tains running an hundred leagues from east to west, but the extremities of which moun- tains are eight days journey from the river *Urvaica*, and twice that distance from the *Atlantick* ocean. The vales below it are excellent pasture for cattle; the land will bear any grain, and is water'd by abun- dance of springs and brooks. In the marshy grounds, towards the sea, there is often found an amphibious creature very like a sheep, but that it has teeth and talons like a tyger, and is reported to be so fierce that it does not spare lions. Nor do the natives dread any creatures so much as these, which sometimes come out of the water in flocks, and do much mischief. There's no way to escape 'em but by speedily climbing of trees, and even that will not do sometimes, for those sheep either root up the trees, or stay so long about 'em, till fear or hunger makes the people drop off. If ever they happen to kill any of these creatures, which is very rare, they wear their skins; whence the *Guairans* call a garment *Ab*, taking its name from the beast, or giving the beast the name from the garment. These monsters really are in sheeps clothing, but are them- selves ravenous wolves. There's also a fa- mous white bird, which, tho' it have but a small body, has a voice that sounds like a bell, which therefore the natives call *Guirapo*, or the sounding bird. The woods pro- duce a low sort of palm-trees, not unlike the *Indian Juncos*, of the bark whereof they make bow-strings, stronger and finer than if they were made of silk. There's plenty of shining stones, which doubtless might be curiously polish'd if there were *European* artists. The tree *Ecapis*, which is also found in other parts, when the sun rises, weeps or sweats out a plentiful flower, which appears to be no dew, because the other trees about it are dry. This tree seems to put us in mind, that men should weep when the sun of prosperity shines on them. The people of the province of *Tape* differ not from the rest of the *Guairans*, either in customs or language, only they seem to be of a milder temper, and less vicious; and experience has taught, that no nation in south *America* sooner embraces christianity, or retains it more steadily. Loving their ancient liber-

ty, they were utter enemies to strangers, *TECU* and could not easily have been subdued by force of arms, had not the power of the cross prevail'd. They liv'd after the man- ner of the *Guairans*, in little villages, built either on the tops of mountains, or in woods, near to springs or brooks. Of all those villages, *Tape*, which gave name to the province, was the biggest. *F. Gonzales* had been there before his death, but, the people being not well dispos'd, retir'd with some danger. But, in the year 1631, *F. Ruiz* coming hither up the river *Ibrinit*, and *F. Romero* by land, they found, that by con- versing with the converts many of the peo- ple were become inclinable to the christian religion, and particularly *Guamica*, *Jabico*, *Cuniambo*, *Aracao*, and some other *Caciques*, earnestly entreated they might be furnish'd with teachers of the true law. Their re- quest was now granted this year 1632, be- cause the province of *Guaira* being ruin'd, the fathers that came from thence did not only know the language, but knew how to deal with the *Indians*, and were zealous to retrieve their late losses. *F. Romero* having sent two other fathers before, and follow- ing himself with two more, was honourably receiv'd there by *Guamica* and his confede- rate *Caciques*, and conducted to a house and church they had built for him. *F. Men- doza* and *F. Bernardes*, left there to take care of that new colony, within the space of a year gather'd seven hundred and fifty families. The town had the name of *S. Mi-* Town of *chael* given it, where above eight thousand S. Michael four hundred souls have been baptiz'd. In another part of the same province *F. Rome-* ro was receiv'd with abundance of bonfires, where there was also a fort of church ready built, and huts about it, to shew their readi- nesses to obey whatsoever the fathers should command, and in three months time twelve hundred families settled in that place. This And St. town had the name of *S. Thomas* given it, Thomas and was two days journey from that of *S. Michael*; in the mid space between both which places there were abundance of scat- ter'd *Indians*, who assembling of their own accord in a place call'd *liquatia*, built their houses in order as for a town, with a habitation and church for the fathers, send- ing some men to *F. Romero*, to desire he would not slight them any more than others, for they were resolv'd to become christians. *F. Romero* blessing *G o d* for this wonderful success, hasten'd to them, call'd the town *S. Joseph*, and promis'd to send 'em a priest. The same was done in another place call'd *Ararica*, on the top of a mountain, where six hundred families met together, and had the name of the *Nativity of the blessed Vir-* gin given it. Another town was erected near the wood *Ibitarana*, and call'd *S. Te-* reja

TECHO. *refa* ; of which more may be said hereafter.

Of the marriages of the Guairans.

Nothing bred more frequent troubles, and made the *Indians* fly from christianity, so much as the confining them to one wife ; which gives us occasion to say somewhat of a controversy that arose among the fathers concerning the marriages of the *Guairans*, not unworthy to be here mention'd, with the decision of it, because 'twas nice and curious. The chief men of this nation were wont to keep as many concubines as their lust inclin'd 'em to, or their authority could obtain among their people ; and 'twas a great discouragement to them to embrace christianity, when they were warn'd to be satisfied with one woman. This was in some measure heighten'd by the too austere nicety of some of the fathers, who would oblige these men to take to wife the first of their women. Others, without any scruple, allow'd the new converts to chuse any one they pleas'd of their women for a wife. These different opinions having continued and been maintained for some time, the decision of it was at length referred to the Pope, who was then Pope *Urban VIII.* and the whole controversy sent him in writing by *F. Lugo*, who was afterwards a cardinal, which, because it shews the barbarous practice of those people, and several particulars worth observing, I will set down at large ; his words are these : " *Most holy Father*, there arises a mighty difficulty in the conversion of the *Indians* of the province or kingdom of *Paraguay*, in the *West Indies*, on account that some of our missionaries will oblige them to take to wife, and stick to the first consort they had, during their infidelity ; for this nation, according to their barbarous custom, turn away at every foot their wives, if they may be so call'd, as we do our servants ; and this only because the wife is sick, and cannot dress the meat, or sew the garments, or look to the house, or because she grows old. Nay, very often a man takes not only one wife at once, but with her all her daughters, or sisters, if she has any, of which he afterwards bestows some on friends or servants, and then takes 'em again if the servants go away. Others leave their wives only because they remove to another place, and will not take 'em with 'em. For this reason many are of opinion there's no true matrimony among 'em, but that these are all concubines ; and therefore, when converted, they're allow'd to take a wife or husband that is baptiz'd. Others are scrupulous, and oblige these men to stick to their first wife, which causes many inconveniencies : first, because many, on this account, take

" an antipathy to baptism ; secondly, because they lye, saying, they had no other wife, and thus deceitfully marry another ; thirdly, because they pretend to return to their first wife, but in reality have another, and value not the first ; fourthly, because 'tis often a difficult matter to know which was the first, because amidst a multitude, they scarce remember which was the first ; and when they have found her, enquiry must be made again whether she had any husbands before ; and again, whether those men had any prior wives. Besides all this, they use no outward ceremony at these marriages, more than they do when they take a concubine for a week or a month ; so that very often there's no exterior sign to be found to express their giving consent to that marriage. Therefore, considering their practice and manner of proceeding, many learned and godly men are generally of opinion, that there's no true contract of matrimony among 'em. But, to remove all doubts and scruples, and to take away this mighty impediment to the conversion of that nation, we do humbly pray, that since, according to the judgment of learned men, the see apostolick can, upon urgent causes, annul the marriage of infidels, as your holiness has declar'd in your brief of the 20th of *October*, and again, in another of the same date, the 17th of *September*, in these words, *We observing that such marriages of infidels are not look'd upon as such, but that they may, in case of necessity, be dissolv'd*, &c. " And in this case the motives are very great, or rather an absolute necessity, for the conversion of those infidels ; we therefore pray as before, that your holiness will be pleas'd, in your apostolick goodness, to grant power to the provincial of the society of *Jesus*, that he and such of the society as are employ'd in the conversion of that nation, and are fit to be entrusted with it, may, when occasion offers, upon due examination, and there being a doubt of the validity of the marriage contracted in infidelity, or a great difficulty of discovering the truth, or of finding the first consort so parted from, that they may, I say, for the more ease of their conversion, or for the retaining of those already converted in the faith and obedience to the church, dispense with such converts, that after baptism they may contract a real marriage in the face of the church ; for by this means your holiness will open a way into the church for those infidels, which the devil endeavours to shut up, as our duty obliges us to hope of your holiness, whom *God bless*."

Pope

Provi-  
dential

Parag-  
uayan  
to mud

Pope Urban VIII, having consulted learned men upon that point, declar'd he did not believe there was any need of his special dispensation, there being the probable opinions of doctors on both sides; and therefore they should follow those opinions, which, according to the nature of the places and people they had to deal with, they found most favourable to them, still leaving learned men the liberty of believing according to their judgment. 'Twas therefore the general opinion of most of the fathers residing in these countries, that the marriages of these infidels were void, for the reasons above alledg'd; and, that the *Indians* converted might lawfully take any one woman that was baptiz'd to wife, and cast off the rest; yet this they always acted cautiously in, as the matter requir'd.

Province  
of *Itatina*.

The province of *Gudira* being totally overthrown, as has been said, some amends was made for it by the reduction of that of *Itatina*, whereof we will here give a perfect account. The mighty rivers *Paraguay* and *Parana*, as was declar'd in its place, run thro' large countries for above three hundred leagues from their source, before they join their waters. A long ridge of high mountains divides the land lying betwixt those two rivers, out of which mountains several rivers and brooks run down, some east to the *Parana*, and others west into the *Paraguay*, with this notable difference, that the waters flowing into the *Parana* running along high lands, preserve their original clearness, the mountains where they have their birth stretching themselves out with a gentle descent till they reach the banks of the *Parana*: but on the other side being in a manner upright, precipitate their waters into a low marshy ground, where drawing the mud along with 'em, they continually defile the *Paraguay*, and overflowing in several places with the said river, make a little sea; which makes some compare this winter-inundation with that of the *Nile*. In this low part lies the province of *Itatina*, upon the borders of the *Torrid* and *Temperate Zones*, extending from the 19th degr. of south latit. beyond the 22d. On the south its boundaries are the villages of *Indians* within the jurisdiction of the city of the *Assumption*, on the north the river *Bututeo* hems it in. The inhabitants differ but little in language and manners from *Paraguays* and *Uruguays*, being also alike in this, that they have small parties of different languages about 'em, with whom they formerly waged endless wars. They used to try their strength (as *Lipsius* writes of the *Chilenians*) by carrying a great piece of timber, which whoever could first run with to a place appointed, gain'd a reward or honour. The women deform, rather than

*Paraguay*  
river, why  
so muddy.

paint, their bodies, pricking their bodies in streaks, which they daub'd with a dirt-colour. They honour'd the funerals of their kindred by casting themselves from high places, and sometimes with lots of life. The rebounding balls of *Itatina*, made of the gum of trees, are famous all the world over, and, being toasted, are used for curing the flux. The whole nation, considering the great extent of ground, and variety of people, is not very numerous, the place, which is hot and moist, being naturally sickly, and consequently thin of inhabitants. Yet it was hoped, that when the province of *Itatina* was once subdu'd, the light of the gospel might be carried beyond the *Paraguay*, as far as *Peru* one way, and the other way to the lands about the river *Maranon*, all famous for multitudes of *Indians*. The provincial had, in the year 1631, order'd *F. Ruiz*, then residing in the province of *Gudira*, to repair thither, but he being busy about transplanting the colonies of that province, sent *F. Rancionieri* in his stead; who repairing to *Xerez*, a *Spanish* town on the borders of *Itatina*, after serving those inhabitants, went away into the lands of the infidels. At his first coming the *Indians* shew'd rather jealousy of him, than any affection; the reason of it was, because one *Acosta*, a *Portuguese* priest, having brought together many of the *Itatinians* into a town, on pretence of religion, endeavour'd to drive 'em away into *Brazil*, to make slaves of 'em; which he had wickedly perform'd, but that the *Indians* discover'd the fraud, put him to death, and now they fear'd lest *F. Rancionieri* should prove another *Acosta*. Their fear was increas'd by the indirect saying of an *European*, whether in jest or earnest; for meeting some *Itatinians* on the road, he told 'em, that all those who receiv'd *F. Rancionieri* should afterwards serve the *Spaniards*. To this was added the knavery of their forcerers, who gave out, that the stranger priest was come thither that he might gather the multitude in the churches he built, and burn 'em. The calmest among 'em taking up arms, as it war had been proclaim'd with the *Spaniards*, openly declar'd, that the peace could not be kept as long as *F. Rancionieri* was there, for he was the fore-runner of slavery and other calamities. But whether the misfortunes that fell upon some of his chief opposers, or some other providence, prevail'd with them, the *Itatinians* soon chang'd, so that they not only allow'd him free liberty of preaching, but invited him to their villages; and he, making use of his time, set out to view all the country. Some, for joy of his coming, went out to meet, and carried him home in their arms. Famine now raging, they liv'd upon the pith of palm-

trees

**T**he trees, call'd *Palmits*, ground into meal, and sometimes eat locusts. The father, by his discreet and religious behaviour, so gain'd the hearts of those people, that they were absolutely at his disposal; when three other fathers came to his assistance, and they all apply'd themselves to building of towns. The first there founded was call'd

Towns  
built, S.  
Joseph.

The An-  
gels.

Incarna-  
tion

*S. Joseph*, and put under the care of *F. Enartius*, who presently gather'd two hundred families. The second was the *Angels*, under *F. Martinez*, who gather'd the like number of families. The third the *Incarnation*, not far from the borders of the *Guarambarazans*, formerly famous for the labours of the society, whither *F. Vanjuck* drew five hundred families. Near to this town was a village, the chief whereof very opportunely order'd the father not to apply himself to any thing but instructing his people, for he would plentifully supply him with all necessities. The fourth town under the direction of *F. Rancionieri*, appointed by the provincial superior of this mission, was built in the lands of *Nianduabufavius*, who did not only boast himself to be lord of the *Itatinians*, but extending his imaginary power beyond the bounds of his country, pretended all the *Indians*, as far as the city of the *Assumption*, ought to be subject to him. It appear'd he was almost ador'd by the *Itatinians*. The *Spaniards* had, for many years, used endeavours to have a sight of him, but in vain; for, to deceive them, he always appointed another *Indian*, who represented his person. The same deceit he made use of towards *F. Rancionieri*, receiving him into his dominions by another who personated him, having strictly enjoin'd his people not to discover him to the stranger priest, till he had observ'd his life and conversation; he, in the mean while, having given another his ensigns of honour and attendance, went about like a private man. After four months spent in making this discovery, perceiving that the father truly favour'd the *Indians*, and that he alone, 'twas to be hoped, would protect them against their enemies, he took off his disguise, promising for the future to be favourable to him. Thus all things seem'd to favour the father, who baptiz'd many of *Nianduabufavius's* followers, and call'd the new town *S. Peter* and *Paul*, it being seated three leagues from the river *Paraguay*. On the opposite side of that river is the nation of the *Paiguas*, which, from the first coming of the *Spaniards*, had continued its ancient cruelty, infesting all the neighbourhood with rapine and slaughter, so that those people were accounted as bad as the *Guaiacureans*. Some converts, either of their own wicked inclination, or else provok'd by

S. Peter  
and S.  
Paul.

Paiguas.

hard usage, had fled to them at several times, and given 'em an account of the fathers, informing them, that they only sought the good of souls without any prejudice to the body; whereupon they resorted to *F. Rancionieri*, affirming they would build a town. As they said, they did, setting up their mats after the country fashion not far from the town of the *Apelles*, after the manner of a town; but being naturally fickle, they soon after slipped away to their old lurking places beyond the river *Paraguay*. The fathers in their four towns labour'd to convert those people with good success, not omitting to attend the *Spaniards* of *Xerez*, whom *F. Enartius* serv'd so diligently in the *Lent*, that they writ to the council and bishop of *Paraguay* to desire the society would settle among them. Besides, not far off were the *Guatians*, *Gualacians*, and other people of sundry languages, who seem'd inclinable to receive the light of the gospel, if there were any body to convey it to 'em. Beyond this province, in the lands towards the great river of the *Amazons*, there were pigmies, remarkable for the smallness of their stature; and *Amazones*, so call'd because living in war all their lives, they are reported every year, for a very short time, to call men from the neighbourhood to get 'em with child: besides, other nations, so numerous that *F. Rancionieri* writing to his superiors, affirm'd there might be many towns built at once up the country, if there were fathers to serve 'em. Thus considering the state of the province of *Itatina*, this alone with its neighbouring countries was sufficient to blot out the memory of the unfortunate *Guaira*. But another storm overturning the present state of affairs, and in a great measure eluding the hopes conceiv'd, will almost represent to us another *Guaira* in the province of *Itatina*.

For the fathers had not been long settled in their new towns, before they receiv'd the dismal news that the *Mamaluces* were broke into the province. They after destroying the province of *Guaira*, being join'd by a numerous company of the *Tupus*, took the same way the fathers had done into the country of *Xerez*, and joining with some other robbers, consulted about the means of plundering the new towns; which that they might do with less trouble, they sent messengers to *S. Joseph's* in the absence of *F. Enartius*, fraudulently to insinuate to the people there, that they were not come to plunder, or do any mischief, but to revenge the wrongs done to *F. Rancionieri*, by the *Indians* further up the country, that if they join'd their forces with them, it would oblige the society.

ty. The chief of the town innocently giving credit to the robbers, order'd his men to go out arm'd to take revenge, and led them directly to the *Mamaluc* camp; where when they came they were all disarm'd and bound; the women and children thus depriv'd of all defence being after this easily convey'd from off the town to the camp. *F. Enartius* returning, and finding the town empty with the tokens of the enemies fraud and cruelty, run to the *Mamaluc* camp, where, instead of any favour, he was threaten'd with death, which he slighting, they forced him from among them, giving him abusive language, tearing his cloaths, and treating him in an outrageous manner. Another party of *Mamalucs* invaded the colony of the *Angels*, but found it in a great measure abandon'd, for *F. Martinez* being inform'd of their coming, had taken care that most of the inhabitants should hide themselves in the woods; yet many were taken, the captain of those thieves having order'd the father to be bound, if he made any opposition. They drove those they found to their camp, whither *F. Martinez* following them, he was there confin'd three days, that they might carry no intelligence, or advise those in the woods. At the same time another company of these rovers plunder'd the lands of *Nianduabusevius*, where they deluded the people after this manner, in the absence of *F. Rancionieri*. Having drawn the chief of the nation to a conference, they gave out, that they were not come as enemies, but to gather the *Indians*, who liv'd scatter'd abroad, into a great town, for instructing them in religion, and if they would lend their helping hand, they should all live friendly together. The poor people deluded by this pretence came in crowds to them, whom the *Mamalucs* cruelly bound, secur'd *Nianduabusevius*, and appear'd as open enemies; but then prosecuting their deceitful villany, they told the principal men, they had no way to escape being made slaves, but by delivering up their people; who being produced, were perfidiously secur'd without releasing the *Caciques*. As *F. Rancionieri* having heard of the invasion, was hastening to assist his convert, he was met by about five hundred *Indians* of *Nianduabusevius* his faction, who were to be deliver'd to the robbers for him and other *Caciques*; which the father understanding, he encourag'd them to stand upon their defence; but before they could make head, the *Mamalucs* fell upon them, and did some harm. Seventy of them, who were arm'd, having join'd *F. Rancionieri* in the abandon'd town, bravely withstood thirty *Mamalucs*, and seventy *Tupus*. These towns being de-

VOL. IV.

stroy'd, the fathers flew to all parts, where they might relieve the captives, or scatter'd *Indians*. *F. Rancionieri* in vain begg'd of the *Mamalucs* for his flock; for they fearing lest the *Gualaches*, *Paiguas*, and *Spaniards* should unite to revenge the *Itatinians*, driving away about a thousand captives, hasten'd away to join the plunderers of the other towns. Before they departed the province of *Itatina*, *F. Enartius* going to them, by many intreaties obtain'd liberty for *Nianduabusevius*; and following after them, assisted many that made their escapes; among whom he found the chief of the town of *S. Joseph*, and sav'd him from some pursuing *Mamalucs*. Some of the *Tupus* in hatred to the *Mamalucs* deserted to *F. Enartius*, but the *Itatinians* suspecting some treachery, slew them all. The *Mamalucs* going off declar'd, they had met with no nation of *Indians* so brave as the *Itatinians*, and magnifying the dangers and difficulties of the ways, protest'd they would never return thither to plunder; like seamen, who in a storm vow they will never go to sea, but are always forsworn. All the *Caciques* of the *Itatinians* were drown'd in passing a river, they being all in a chain, and a sudden storm arising. The rest of the prisoners, provisions failing, were reduced with the *Mamalucs* to eat snakes, and other vermin. After the departure of the *Mamalucs*, *F. Rancionieri* sent *F. Martinez* to the city of the *Assumption* to demand supplies of the governor of *Paraguay*, and ask advice of the rector of the college. Which done, he travell'd to all parts of the province, very often in danger of his life; for the *Itatinians* grown jealous, kept in mind the words of some of the *Mamalucs*, who had the impudence to say they had been call'd in to plunder the province by the fathers. This so intrag'd them, that a company attempted to murder him, saying he was the forerunner of them, and they had come in the same way he did, yet by great providence he escap'd. The *Indian* villages every where smok'd, the inhabitants being hid, or running about like madmen; and because the *Mamalucs* had given out, that another troop of them was gone to destroy the villages of *Paraguay*, neither the fathers, nor the *Indians*, knew which way to turn themselves, yet by degrees these jealousies vanish'd, and things were in some measure restor'd. After all the mischief had been done, the governor of *Paraguay* sent two troops of *Spaniards* to defend the country; but they coming late, and the soldiers being eager to make slaves of the *Indians*, did more harm than good; for returning to the town of the *Assumption*, that they might with more freedom enslave

**T**echo. the *Indians*, they told the governor, he would do well to give the charge of the *Itatinians* to the clergy, and not to religious men. The governor was about embracing this ill-contriv'd advice, had not *F. Vazquez*, the provincial, interpos'd. Hereupon *F. Rancioneri*, who was come to the city of the *Assumption*, was sent with two other fathers, and full power to take care of his *Itatinians*. They with great labour, this year 1633, gathering those that had been dispers'd for fear of the robbers, and calling in other *Indians*, founded two towns, the first upon the river *Tepotho*, under the care of *F. Vaufluck*, the other an hundred leagues from the city of the *Assumption*, not far from the river *Paraguay*, under the direction of *F. Rancioneri* and *F. Enarthus*. To speak of the hardships they endur'd is needless, being much the same as we have mention'd on other accounts. All obstacles to the conversion of the *Indians* were remov'd by the catholic king's letters, wherein he declar'd all converts free from any service of private persons, and immediately tributary to himself. It was no small hindrance to the proceedings of *F. Rancioneri* that the *Paiguas* happen'd to report, that the *Spaniards* of *Paraguay* were about making war on the *Paiguas* and *Itatinians*. Which made such an impression on the *Indians*, under the fathers, that four hundred of them under the leading of *Mandubusevius* the elder, crossing the river *Paraguay*, fled away to the mountains that run out a vast length, and were by this means made pervers to the excursions of the fathers, who the following year brought back many of those people.

The fathers troubled by the governor and bishop.

The chief heads of the province of *Paraguay* who should have forwarded it, for a while stopp'd the speedy course of the advancing gospel. For the governor imprison'd a convert *Cacique* of the province of *Parana* and his followers, only because he had made some canoes, or boats of the body of a tree hollow'd out, less than he was order'd, adding scurvy words to his ill usage, threatening he would go with arm'd forces to the new town of *Parana*, and make all the converts of that country slaves to the *Spaniards*. This so incens'd those people, as yet not inur'd to subjection, that it was much to be fear'd they would have revolted, had not the authority of the fathers prevail'd. But the bishop provok'd them much more, for he forgetting the commendations he had given the society, studying his own private interest, conceiv'd that his revenue would be much greater, if the care of the new towns of *Parana* was taken from the *Jesuits*, and bestow'd upon the secular clergy, over whom his power was more absolute. Therefore pretending

some reasons for what he did, and particularly the converts under the fathers not paying the fourths and tithes, he interdicted all the fathers in the province of *Parana*. Both the governor and bishop would have proceeded further, had not *F. Romero*, superior of those fathers, halted to the city of the *Assumption*, an hundred leagues from where he was, to oppose them. The governor he soon persuaded not to oppress those people, and force them to revolt before they were well subdu'd; but he had more to do with the bishop, who stood obstinately to what he had undertaken. To convince him, he produced the grants of the catholic kings, and briefs of popes in favour of the society, by which it appear'd the bishop had no power to interdict them upon that account. Whilst the controversy was still depending, *F. Vazquez*, the provincial, coming to town opportunely, seconded *F. Romero*, and put by the bishop from attempting an innovation, by shewing him the king's repeated orders, forbidding any person whatsoever upon any pretence to molest the society in the care of their converts. The governor, who was before reconcil'd now also interposing, at length the bishop comply'd, and following *F. Romero* into *Parana*, again visited the new towns and confirm'd the converts. These troubles were follow'd by rumours of war, and the transmigration of two towns. *F. Contreras* had been seen by his superiors up the river *Parana*, to bring away the remaining people and goods of the ruin'd province of *Parana*. When he was pass'd the famous precipice, some *Mamelukes* met him, diligently inquiring about the towns of *Iguazu* and *Acarai* leat-towns of Iguazu and Acarai abandoned. ed on the river *Parana*, and telling him there were three troops of *Mamelukes*, with the booty they brought from the province of *Itatina*, not far off. This gave occasion to suspect another invasion, and therefore *F. Contreras* returning from whence he came, went himself with all speed to acquaint the inhabitants of *Iguazu* and *Acarai* with the danger, and sent letters of it to *F. Romero*, who sending messengers to all the towns of *Uruguay* and *Parana*, call'd together as many fathers as he could. Being altogether, they all unanimously agreed to expose their lives for their flock, and encourag'd the converts to take arms. In the mean while the *Acaraians*, upon fresh reports of the approach of the robbers, abandoning and burning their town, went away and joyn'd themselves to the inhabitants of *Iiapua* and *Corpus Christi*, some days journey distant from them, where they still continue, having laid aside all hopes of returning to their country. Hereupon *F. Romero* apply'd himself altogether to deli-

altogether to deli-

ver the *Iguazumans* from danger. It was manifest that town could not be secur'd but by removing it to another place; for besides that it was thirty leagues from any other colony of converts, there was an easy defect to it either by land or water, out of the province of *Guaira*. The transmigration being resolv'd on, the next debate was to what place it should be. There was a plain on the river *Urueica*, about half way between the towns of the *Concepcion* and *S. Xavierius*, fit to build a town in, but the way was round about, and fifty leagues in length, and the fathers were afraid, left, as a great part of the transmigrators out of the province of *Guaira* had perish'd by the way, the same might happen to the people of *Iguazu*; but the fear of the enemy soon took off this apprehension, reason pleading it was better a part should suffer than the whole. Besides, *F. Romero* render'd the matter easier, having order'd provisions to be furnish'd by the other towns, and gather'd boats from all parts, directing the fathers to attend the transplantation. Thus two thousand two hundred inhabitants of *Iguazu* were transplanted without any considerable damage, and building a town on the banks of *Urueica*, still retaining the name of *S. Mary Major*, they began to be reckon'd among the *Urueicans*. Many, as is usual in such cases, were against this removal, hiding themselves in the woods, whom the fathers and faithful converts at several times brought away. Afterwards the town was increas'd by the accession of many *Indians*, where I resided two years. The inhabitants of *Iguazu* being thus transplanted, there were ten towns then built by the society in the province of *Urueica*.

Yet as great as their success was there, still the province of *Tape* exceeded it, for in the town of *S. Michael* eight hundred forty four were baptiz'd, and in that of *S. Thomas* one thousand five hundred of adults; besides far greater numbers that were still instructing. About a day's journey from each of these towns, that is, half way between them, was a woody mountainous place call'd *Ilaquatia*, whose heathen inhabitants had left no stone unturn'd for the obtaining of one of the society. *F. Romero* had promis'd to fulfil their desires when the provincial came from the capital of *Paraguay*. They not satisfi'd with this promise, and understanding that the provincial was in the province of *Parana*, sent the chief of them to him, to desire he would not deny their request. But the provincial having been inform'd of their desires, had already sent away *F. Cataldinus* the first founder of the towns of *Guairá*, to lay the foundations of a town among them, which took the name of

*S. Joseph*. The *Inaguayan* meeting him, *Teco-*  
were wonderfully pleas'd, and laid aside  
the design of going to the provincial. *F. Catalinus*  
being come to the place, and  
having fitted a church and house for the  
fathers, lay'd the foundations of a town  
successfully, that at the first he found three  
hundred families all earnestly desirous  
to become christians. They daily flock'd  
to church at the ringing of the bell to be  
catechis'd, as well knowing it was in  
vain to ask baptism till they had learnt the  
rudiments of christianity. About the same  
time were laid the foundations of another  
town on the top of a high mountain call'd  
*Ararica*, which is reported to have hap-  
pen'd thus. *F. Alminca* residing among the  
*Guaroans*, and after him *F. Romero*, by  
some courtesies had gain'd the affection of  
*Cuniambo* brother to *Mboipea* a famous *Cacique*  
; who returning into his country per-  
suaded the people to call in the fathers. In  
order to obtain some of them, they of their  
own accord built a church and house for  
them, and sending frequent messengers to  
the fathers, seem'd rather to demand, than  
sue for a teacher of the true law; and they  
were so eager as to consult, whether in jest or  
earnest, about taking away forcibly one of  
the two that resided in the town of *S. Michael*  
; so hot was their desire to embrace christi-  
anity. The provincial hearing their request,  
sent thither *F. Alvarez* with power to found  
a town, and dedicate it to the *Nativity* of  
the blessed virgin. His first labour was to  
baptize nine hundred twenty seven chil-  
dren, the next to catechise those that were  
of age, and the third to fencile the woods  
to increase the other town; wherein he was  
so successful, that the first year it contain'd  
eight hundred families. Of these people  
among whom I liv'd three years, they be-  
ing remov'd to another place, the society  
to this time has baptiz'd nine thousand  
eight hundred. Nor did the fathers zeal  
stop here; for about the same time they  
pass'd beyond the river *Igai*, which divides  
the mountains of *Tape*, at the request of  
*Ilaparia*, a powerful *Cacique* in those parts,  
who coming to *F. Romero* and *F. Mendoza*,  
then in the town of *S. Michael*, assur'd  
them if they would go over the river *Igai*  
with him, they would find all things re-  
quisite for building a town. Both of them  
going thither, found much more than the  
*Cacique* had promis'd, for four hundred  
families forsaking their villages had flock'd  
together, shewing as forward a zeal as  
could have been expected from people  
who had been long intructed. A cross  
was set up in solemn manner, infants bap-  
tiz'd, and the town founded under the in-  
vocation of *S. Anne*. This place was com-  
mitted to *F. Martinez*, who had gain'd re-  
putation

**TACHO.** putation in the provinces of *Guaira* and *I-tatina*, and before the end of the year gather'd eight hundred families.

**Town of S. Teresa founded.**

Whilst these things were carrying on at the top of the mountains of *Tape*, two other towns were founded in the opposite part of those same mountains, concerning whose original, situation and progress, take this short account. About the springs of the river *Igai*, there are vast plains, divided at intervals by great woods. Among which woods were particularly those of *Ibitiruna*, *Ibitirabebo* and *Mondeca*, very full of pines, which trees, when they come to their full growth, are said to be a hundred and twenty foot high; and they are so very strait, that they seem rather made by art than nature. As they grow, they cast out their boughs at equal distances in the manner of garlands, which falling off by degrees of themselves, so as only the signs of them appear, leave knots behind them, so very hard, that when artificially wrought, they look more like bones than wood. The inhabitants of this country feed a considerable part of the year on very large pine-apples, which differ little in taste from the walnuts in *Europe*. Here is also found the herb of *Paraguay*, the delight of the *Indians*, and a vast number of wild boars and wild goats, so that with a little tillage the natives have enough at home to maintain them. *F. Romero* had made an excursion to these woods two years before, in hopes of reducing the people to the town of *S. Charles*, two days journey from thence; but finding the natives could not easily be drawn out of their native soil, which was very fruitful, he thought of founding a town. To this purpose *F. Mola*, by order of *F. Romero* the foregoing year, erected a cross in the lands of *Quarareo*, a powerful *Cacique*, which were opposite to those of *Ibitizuna*; from that time the said *Quarareo* and *Tupaminio*, the *Cacique* of the forest of *Mondeca*, us'd all their endeavours to obtain one of the society. *F. Ximenez*, sent thither to lay the foundation of a town, satisfy'd the desires of them both. At his coming *Quarareo* receiv'd him with an elegant speech, wherein he mention'd all the parts of his body, and affirm'd they were all so overwhelm'd with joy, that he could not express it. The plan for the town being mark'd out, abundance of *Indians* flock'd together with great alacrity to build the church and houses, insomuch that the cold frosty season did not move them to desert from their work. These children from their childhood stick long stones into their chins instead of beards, which custom the fathers condemning, alledging it was indecent to deform the bodies God had made by those unbecoming additions, the young lads pul-

ling out those stones cast them all into the fire, fearing lest that barbarous custom should be any obstacle to christianity. The women brought in their children to be baptiz'd, knowing the fathers would not forsake those whose spiritual fathers they were. Having laid these foundations, both the fathers were oblig'd to return to their charge of their towns in *Urvaica*, whence they came, till this year 1623. *F. Ximenez* was sent thither again with orders to remove the town to a nearer and more commodious place, which he soon did, having mark'd out a place for it in the lands of *Tupaminio*, to build which *Quarareo*, tho' very unwilling to leave his native mountains, resorted with his followers and great numbers of the neighbouring people.

This town, at the request of the governor of *Rio de la Plata*, was call'd *S. Teresa*, and put under the care of *F. Ximenez*, who with the assistance of his companion *F. Salas*, within the first year drew eight hundred families to it. At the same time *F. Romero* went away over the mountains of *Tape*, to the town of *S. Teresa*, to make the way fit for the provincial who was ancient, and coming thither. When he was past the mountains *Carvaio*, a powerful *Cacique* met him with some followers, acquainting him he was desirous to become a christian, and found a town, and would find inhabitants enough in the neighbourhood, if a priest were assign'd them. *F. Romero*, embracing him, blessed God, for that he inspir'd those barbarous people, of their own accord to seek salvation. Having view'd the place, and seeing the inclination of the *Indians*, he could not but grant his request; for besides his desire of the conversion of so many souls, it was very convenient to secure this place in the province. For the better uniting the town of *S. Teresa* with the other colonies planted upon the other ridge of the mountains, he erected a cross, baptized the infants, call'd the town *S. Joachim*, and, till a priest could be sent for, committed the care of it to *F. Ximenez*, who coming thither soon after from the pine groves, built a church for present use with the assistance of a multitude of people flocking in from all parts. Afterwards *F. Suarez* built a house and church fit to contain the multitude, and gather'd a sufficient number of *Indians*, to make a reasonable town. The provincial having now visited *Parana* and *Urvaica*, came to see the new towns of the province of *Tape*, and hurting his leg in the way to *S. Teresa*, was forced to be carry'd by *Indians*. Being past the mountains, other *Indians* came to him, desiring to have a priest to instruct them, and build a town, he gave them hopes, appointing *S. Cosmas* and *S. Damianus* their patrons, and went down

Town of S. Joachim founded.

Wick-  
pract

ant.

down the river of snakes to the *Ibicuit*. Another parcel of infidels that came to him upon the same account, he persuaded to join themselves to the *Tapevians*, as they afterwards did, there not being fathers enough for so many places. All the way he went he still gave something to the *Indians*, inasmuch that not one convert of so many thousands mis'd of some little gift. After his departure out of the province of *Tape*, the fathers founded another town under the invocation of *Jesus* and *Mary* in the furthest corner of the mountains of *Tape*. The place was call'd *Ibiticairain*, whither so many inhabitants resorted, that the first there were four thousand reckon'd under the care of *F. Mola*, a man of an excellent disposition, and notable for his art of managing the *Indians*. Thus in less than two years there were eight towns built by the society in the province of *Tape*, and places appointed for founding of others, which made sufficient amends for the loss of the province of *Guaiara*. About the latter end of the year 1633, *F. Vasquez*, the provincial, receiv'd orders from *Rome*, ordering him to resign that dignity to another, when he had held it five years with various success; for in his time eleven towns of *Guaiara* were destroyed, those of *Acarai* and *Iguazu* remov'd, the converts of *Urvaica* and *Parana* swept away by the plague, the province of *Cbagua* twice attempted in vain, and the towns of *Itatina* almost ruin'd in their first rise. On the contrary he was successful in restoring the town of the *Caaroans*, building others among the *Caajapaguacuans* and *Caapians*, those of the *Assumption* and *S. Xaverius*, eight in the province of *Tape*, and two in that of *Itatina*, besides opening the way to preach the gospel in other parts. He left to his successor nine colleges in the *Spanish* cities, and twenty five seats of the society in the *Indian* towns built by them.

We now enter upon the year 1634, under the new provincial *F. James Borea*, a man in great reputation of sanctity, for his austerity of life; he had formerly been servicable to the *Calchaquies* in the province of *Tucuman*, and the *Guarambareans* in that of *Paraguay*, reduc'd the *Indians* on the *Parana*, and the *Iguazians* to towns, and founded the colony of *S. Xaverius* on the river *Urvaica*. To make short, he was receiv'd with general approbation. His first action was to send out *F. Martinez* and *F. Valera* out for four months along the banks of the rivers *Dulce* and *Salado*, or the sweet and the salt, where they were successful, undeceiving many who deny'd the immortality of the soul, and therefore like atheists liv'd in all manner of lewdness; others who profanely dedicated the matter of their debauches to the devil, and others who had to do with *Incubus* spirits, or dealt with

forerers. The new provincial having visited all the province of *Tucuman*, being a journey of four hundred leagues, halted a way to the towns of the converts of *Parana*, to be a witness to the labours of the *Chiriguans* fathers, and order the expedition to the *Chiriguans*, a most fierce nation, concerning whose original take this short account. After the *Indians* of *Paraguay* had cruelly murder'd *Alexius Garcia* (before the coming of the *Spaniards*, as was related at the beginning of this work) in his return from the borders of *Peru*, joining in confederacy with the *Paranians*, either for fear of punishment, or for the liberty of plunder, they forsook their native soil, and went away to the same place where they had been with the said *Alexius Garcia*. Having appointed the time of transmigration, the *Paranians*, travelling along the country adjoining to the river *Picolmayo*, came to the mountains about the *Spanish* town call'd *Tarica*. The *Paraguayans*, taking another way, having travers'd a vast tract of land, settled in that place where the town of *S. Laurence* is seated, not far from the banks of the river *Guapaio*. Then consulting together, and fixing their villages on the tops of the mountains, they plunder'd all about them far and near so incessantly, that it is reported, these *Chiriguans*, of whose name I know not the original and etymology, in less than a year, either kill'd or drove away into captivity an hundred thousand *Indians*. For some time after their transmigration, it was a solemn feast among them to eat the bodies of the prisoners they took; but having afterwards settled an underhand trade with the *Europeans*, they forbore eating of man's flesh, taking prisoners to sell them as slaves. Yet they dealt after such manner, as not to forbear doing the *Spaniards* a mischief, if occasion offer'd, so that they had several battles with them, and they carried it so far, as publicly, and without any damage to defy *Francis de Toledo*, the viceroy of *Peru*; and they do not yet cease to infect *Tarifa*, *Pasmaia*, *Pilaia*, *Molina*, *Misca*, the towns of *Peru*, all the province of *Santa Cruz de la Sierra*, or the holy crosses in the mountains, and the borders of *Tucuman* and *Paraguay*. So that there is no nation in the inland of south *America*, more terrible to the *Spaniards*, or more destructive to the *Indians*, than these *Chiriguans*, encourag'd by the desire of gain, and enur'd to constant robbing. What is most to be admir'd, it is reported that only four thousand of them transplanted themselves at first; but in process of time having brought some prisoners to follow their course, and increas'd by procreation, they spread abroad beyond their mountains, and scatter'd the terror of their name far and near. Hitherto no endeavours had been

Wicked  
practices  
of Indi-  
ans.

TECHO. of any force to bring these people to christianity, the bishops of *Peru* had in vain try'd all expedients; *F. Ortega*, an excellent man, had in vain attempted thirty years before this to dispel their darkness by the light of the gospel; in vain had several others labour'd among them, so that they had been quite abandon'd for several years, as people altogether desperate. Till at this time, *F. Diaslanius* being solicitor the affairs of the society with the king's council in the town of *Chuguisaca*, some of these *Chiriguas* came to him, declaring their country people would easily be brought to embrace the faith, if there were any fathers that understood the *Guaran* language sent to them. Hereupon *F. Diaslanius* and another priest were sent by *F. Torres*, late provincial of *Paraguay*, who was in the same town, and had receiv'd a great sum of money of *Guzman*, a rich man, and the yearly allowance of five hundred pistoles for that mission; these I say were sent to try the temper of those people. The consequence of which expedition was that *F. Torres* writ to the general, to acquaint him, he thought it would be an advancement to christianity, if two fathers, well vers'd in the mission of *Paraguay*, were sent into *Peru*, to labour for the salvation of these *Chiriguas*. When the general's consent was obtain'd, and the approbation of *F. Durand*, provincial of *Peru*, as also of the king's council; *F. Boroa* the provincial hasten'd away to *Parana*, to choose out fathers fit for that expedition. *F. Alvarez* and *F. Martinez*, men renowned for their extraordinary labours, were pitch'd upon; who setting out from the towns of the province of *Tape*, travelled six hundred leagues, and came that same year they set out into the country of the *Chiriguas*, where for some years they labour'd much without any great success, as the annals of *Peru* will make appear.

Distances  
of Places.

The new provincial at this time set out from the college of the *Assumption*, to visit the towns of the provinces of *Parana*, *Urvaica* and *Tape*, whom I design to follow, to shew the distances from place to place, which is a matter of great consequence, and will at once insert whatever occurs that is memorable. The first town of *Parana* is thirty leagues from the city of the *Assumption*. Thence he travell'd twenty leagues to *Itapua*, and was receiv'd with great demonstrations of joy by the converts, many of whom he had formerly brought to the faith. Fifteen leagues above *Itapua*, is the colony of *Corpus Christi*, built by himself twelve years before, and therefore his reception was accordingly. Between *Itapua* and the colony of *Corpus Christi*, the provincial with no little compassion saw the small remains of the province of *Guaira* in two towns. Having visited the *Parana*,

he struck over to the first town of *Urvaica*, call'd the *Conception*, sixteen leagues distant. Three leagues from thence the *Iguazuans* lately remov'd thither, entertain'd him with joy, they having been first converted by him, and brought to live in a town, nine years before. Hence sailing up the river *Urvaica* to the town of *S. Xavierius*, he was shipwreck'd in that short passage of four leagues. His companions being parted from him by the storm, thought he was lost, because the stream carry'd him violently away, and therefore sail'd fast for his soul; but the next day they rejoiced at the news of his being safe, especially when they understood he must have perish'd, had not the *Iguazuans*, upon notice of his being wreck'd, with great danger of their own lives, struggled through the swelling waves to save him. He found two thousand inhabitants in the town of *S. Xavierius*, which he had founded himself. Thence he held on a whole day's sail to *Acaragua*, or the new colony of the *Assumption*. From this colony he travell'd sixteen leagues to the town of *S. Nicholas* in the province of *Piraina*, in building of the church of which place it was remarkable, that the mothers not satisfy'd with carrying earth themselves, made baskets for the sucking infants they had in their arms, that God Almighty might be favourable to them, since they wrought for his worship. One day's journey distant was the town of the *Purification* in the same province, where, against the coming of the provincial, *F. Dominicus* had introduced the custom of carrying the blessed sacrament in procession, which that it might be done with more decency in that poor country, the converts erected fifteen hundred arches of boughs and flowers, and made four altars of the same sort, in the four corners of the market, about which they hung all sorts of wild and tame creatures, which was much admir'd both by the other converts and infidels. Next he went to the town of the *Caaroans*, or of the martyrs of *Japan*, then to that of the apostles *S. Peter* and *S. Paul*, and then to that of *S. Charles*, all of them about a day's journey one from another. From this last he travell'd a day's journey to the town of *S. Teresa* on this side of the mountains. Thence to the colony of the visitation of the blessed virgin is eight leagues. The distance from it to *S. Joachim* I do not find, but that the place was a craggy mountain, beset with vast rocks, among which rocks and the thick woods the natives dwelt, and were to be drawn thence with great labour to be brought to a sociable life, and a very great number was so gain'd. The manner of burying here was to throw a great heap of stones on the body. The way was very bad from *S. Joachim's* to the town of *J. J.*

*Jesús Mary* beyond the mountains, which *F. Arenas* took great pains to mend, felling many trees, and removing abundance of great stones. From *S. Joachim's* the provincial went two day's journey over the mountains of *Tape*, to the town of *Jesús Mary*, built the year before by the fathers *Mola* and *Arena*. Two leagues from the town of *Jesús Mary*, was a place appointed for building a new town, whither some hundred families had resorted, desiring they might be allowed a priest. *Caraicure*, a heathen, sent by his country people to request this favour of the provincial, came fifty leagues to meet him, and would not desist till he order'd *F. Contreras* to go lay the foundations of a town accordingly, and to call it *S. Christopher*, which prosper'd better than any other colony, for within a year and a half four thousand six hundred *Indians* resorted to inhabit it. The colony of *S. Anne*, beyond the river *Igai*, was in a prosperous condition, being increas'd to eight hundred families. The provincial passing the river *Igai* proceeded to *Ararica*, or the colony of the nativity of the blessed virgin, less than a day's journey from *S. Anne*. The town of *S. Cosmus* and *Damianus* is but a few miles from *Ararica*, founded this year by *F. Formosus*, who gather'd to it out of the neighbouring woods a thousand families. Not far from it was the colony of *S. Michael*, then at a small distance that of *S. Joseph*, and lastly that of *S. Thomas*, the true distances between which places I do not find. The provincial having run through his visitation, sail'd away to the port of *Buenos Ayres*, whence he sent *F. Diastanius*, who had been four years soliciting the king's council of *Peru* in favour of the *Indians*, into the province of *Tape*, to take care of the town of *Jesús Mary* against the *Mamelucs*, for now the report ran, and not without reason, that the *Mamelucs* design'd to invade that province. *F. Romero*, giving an account of the actions of the fathers under his jurisdiction, says they baptis'd thirteen thousand eight hundred this year 1634; which was a small number in respect of the many that desir'd it, and could not be dispos'd and instructed for want of fathers, there being more harvest than labourers. For now in these beginnings, every single man of them was taken up in marking out the ground for the inhabitants, in building churches and houses for themselves, ordaining their civil government, inviting the infidels to the towns, receiving those that came in. One of plague to seek them out in their lurking places, assisting those that continu'd in the towns in all their wants, catechising, administering sacraments, comforting the afflicted, disappointing the artifices of the forerers, curing the sick, letting blood, pre-

paring medicines, dressing sores, tilling the *Techo* ground, and dressing their garden, so that adding to this their priestly duty, they had scarce time to eat or sleep. Nor was this all, for they labour'd under great want of bread, wine, and most necessities, were forced to accustom themselves to strange diet, and bear with the loathsome customs of those people, living always in miserable solitude, for it is rather a pain than any comfort to converse with barbarous men. And the *Spanish* towns, where things necessary for their cloathing were sold, were an hundred and fifty leagues off, whereby their sufferings were much the greater.

The two towns of the *Guairanians* after <sup>A sad accident.</sup> their transmigration were in great want of cloaths, because the fields and woods near the river *Parana*, were not proper for producing of cotton, the damps of the river destroying the flower before it was ripe. To supply this defect, *F. Ruiz* sent *F. Spinosa* with a choice company of converts to the town of *Santa Fe*, or *S. Faith*, an hundred and fifty leagues distant, to bring sheep through a vast desert. They were about half way when a dismal accident happen'd. A few days before, some *Spaniards* travelling that way, had offended the *Guajalabes*, a wandering sort of *Indians*, who being upon revenge, as soon as they perceiv'd a smok in the fields, near the *Parana*, and the footsteps of travellers, thinking they had been the same *Spaniards*, stole very gently to the place where *F. Spinosa* lay, as the custom is there, in the open air, and at first onset murder'd five of his converts. Next they fell upon the father himself, then awak'd, and asking what was the matter. As soon as they heard his voice, the *Indians* concluding he was one of the *Spaniards* they had resolv'd to kill, stripp'd, and then beat him till they thought he had been dead; but he coming a little to himself, and calling upon *Jesús Mary*, brought them on him again, and so they made an end of him. They tore off one of his arms and left the rest of his body to be devour'd by the tygers. When it was day, and they perceiv'd they had kill'd a priest, they are reported to have repented, it being said they only sought to destroy those *Spaniards* that had offended them; yet others affirm they knew he was a priest before they killed him. In the year 1635, the seminary the fathers had in the metropolis of *Tucuman* was dissolv'd, the canons of the church having writ to the king that it was useless, and thereupon the society quitted it. About the same time the college of the city of *Es-* Several *teco* was dissolv'd, the town being left almost pathless, desolate by the plague, and the goods of the society perishing for want of servants to look after them. The general sent or-

**TECHO.** ders that all the villages of *Indians* in the province of *Tucuman* should be visited at least once a year, which oblig'd the fathers of several colleges to make many excursions into the country, not without a considerable gain of souls. The provincial himself, to give a good example, travell'd thro' the plain by the port of *Buenos Ayres* an hundred and twenty leagues, inviting the troops of wandering *Indians* to embrace the faith and be civiliz'd, but without any great success. He held on his journey with three other priests, serving all the *Indians* in the villages between *Cordova* and the metropolis of the province of *Tucuman*, whence he went on in the same manner to the territories of *S. Michael*, *Salta* and *Rioja*. The fathers at *Salta* long exercis'd their function in private house, their college having been the last year, as was then mention'd, destroy'd by a flood, and another inundation now carrying away their house, they betook themselves to another out of town. *F. Herrera* this year made an excursion among the *Pullares*, but to little advantage, the war diverting them from any care either of soul or body. In the port of *Buenos Ayres*, the great employment of the society was to instruct and catechise the *Blacks* brought from *Angola*. Many things are here related concerning an image sweating in the port of *Santa Fe*, and other miraculous matters happening thereupon, which I omit here, as is done in all other places.

A conspiracy detected.

Some things remarkable happen'd in the province of *Urvaica*. Among the rest *Cbemombeus*, a wicked impostor, being call'd by some forcerers from the country near the sea to the town of *S. Xaverius*, gain'd great authority among the multitude by his voluble tongue, and prevail'd so far as to carry on a conspiracy for murdering *F. Cespedes*. Some of the townsmen had built him a large house without the town, where the plot was laid for the murder amidst drinking and dancing, and *Easter-Eve* was pitched upon to be the day, when they had perform'd the villany, but that a youth, bred under the fathers, discover'd the design which being known, the faithful converts, a little before *Cbemombeus* came with his arm'd followers, convey'd *F. Cespedes* away into a den in a rock. Whilst he in vain searches about for the prey, which had slipped out of his hands, the inhabitants of *S. Mary Major* having notice of what was doing, came to the father's assistance in great numbers, and having secur'd *Cbemombeus* and other conspirators, sent them away into banishment. *F. Cespedes* brought out of his concealment continu'd in the town of *S. Xaverius*, where he reckon'd above three thousand that had been made christians since the colony was founded. The plague devour'd

Plague.

five hundred of the converts of *Accragud*, whose places were fill'd up by great numbers of infidels soon after brought over to christianity. This plague extended to the province of *Piratinia*, where processions were made, the converts carrying great crosses to appease God. Nor was it less destructive among the *Caaroans*, where it swept away eight hundred and fifty two souls. About eighty converts of the town of the *Three Kings* of *Japeiva*, going out to gather in the cattle that stray'd about the plains, without any certain master, fell among certain fierce people, and fighting with them, lost half their number; and at the same time the plague carry'd off many more, so that in a short time the third part of the inhabitants was missing, yet the town was recruited by fresh *Indians* brought in. Having briefly mention'd these things in the province of *Urvaica*, let us now remove to

The province of *Tape*, where there is <sup>Excursion</sup> much matter worth relating. *F. Boroa*, the <sup>to the ri-</sup> provincial, at his going away into the province of *Tucuman*, had order'd excursions to be made into the countries of the heathens, towards the sea, as well to gain opportunities of founding new towns, as to invite those *Indians* to repair to the towns already built; as also to contract friendship with those people, to oppose the coming of the *Mamaluks* into the province of *Tape*, for there were many tokens of a new invasion. The first that went from the colony of *S. Teresa*, attended by a small, but faithful, company of converts, was *F. Ximenez*, whose chief design was to bring as many *Indians* as he could to the colony of the *Visitation*, which was begun to be built, but as yet wanted a priest. The fifth day after his setting out, he came to the river *Caapibaris*, and having sail'd on it two days, came to another call'd *Mbocariro*, and out of that in two days more came into the *Tebiquar*. Searching the rocks, woods, and forests along these rivers, he found many men desirous to embrace christianity, and was every where receiv'd with great joy, and conducted by the *Indians* from village to village. Sometimes he was met by thirty canoes at a time, all resounding with mirth and jollity, and the *Indians* desiring him to erect crosses, and build towns, where they would readily obey all his directions, so they were not oblig'd to quit their native soil; yet some consented to remove, whereof fifteen hundred went to the town of the *Visitation*, and three hundred to that of *S. Teresa*. Having spent twenty-five days in this expedition, *F. Ximenez* return'd home, having found that some towns might be built upon the river *Tebiquar*, if there were fathers to attend 'em. When he was at home, understanding that the heathens all about

about were much distress'd for want of provisions, he sow'd a vast tract of land, to the end that hunger might draw those people to him, to receive the nourishment of the soul, as well as that of the body; which succeeded accordingly, for great numbers came in to him. The plague raging at the same time, swept away above nine hundred souls; one thousand and thirty of all sorts were baptiz'd. *F. Suarez* travelling into those same parts, from the town of *S. Joachim*, over rocks and dismal places, having suffer'd much by hunger and weariness, brought a considerable number of infidels to the town; which he and *F. Arenes* practising afterwards by turns, they made that colony of *S. Joachim*, which was inconsiderable in its beginning, almost equal to any other for number of inhabitants. Amidst these successes, many things happen'd that caus'd dread and fear, and the fathers apprehensions were all of the *Mamaluks*; for there were several reports spread abroad in the towns of the converts concerning the designs of those robbers; for the better opposing of whom, *F. Romero* going away upon business, appointed *F. Mendoza* to be superior over the rest in the province of *Tape*, and to be watchful and ready to oppose those bloody villains. *F. Mendoza* accordingly provided the best he could for his defence, as soon as he came to the town of *Jesus Mary*. The *Mamaluks* had used, for many years past, to run along the coasts from the south parts of *Brazil* in small barques, to the mouth of the great river of the *Holy Ghost*, which is compos'd of the rivers of the province of *Tape*; then going some way up this river, they traded with the *Indians* along the shores, giving them iron tools, apparel, and other things for slaves. The *Indians*, allur'd by these commodities, sometimes sold their own countrymen seiz'd by force, or made irruptions up the country to take prisoners to sell. These were generally call'd the friends and confederates of the *Mamaluks*, who about this time had the boldness to drive away many out of the villages that were subject to the town of *Jesus Mary*. This being made known, who had made their escape out of captivity, struck a great terror into the *Indians* of the province, and perplex'd the fathers, as well knowing the *Mamaluks* would highly resent having their wicked trade obstructed by the fathers, and rather chuse to break out into open war, than be disappointed of buying slaves. Thus the alarm was given for all to stand upon their guard, but especially the townsmen of *Jesus Mary*, who, provok'd by the late wrong, took up arms, and march'd out that way their people were reported to be carried off. The fathers *Mendoza* and *Mola* went along

VOL. IV.

with them, and overtaking those robbers, took 'em, set the prisoners at liberty, and banish'd the takers to the river of *Parana*, that they might be out of the way of doing mischief for the future. This action was not only the cause of converting those thieves, but gain'd the hearts of the infidels all about, seeing the fathers took care to defend the *Indians*; and therefore they earnestly desir'd to have towns founded in their lands, or to remove themselves to those already built.

The principal care of the fathers was, to invite the people towards the sea to the faith, lest being deluded by the *Mamaluks*, they might unite their forces to ruin the province of *Tape*. Yet tho' *F. Mendoza* had taken as much care as could be to solicit 'em by messengers, and oblig'd many of 'em with gifts, yet many still persisted in their obstinacy; among whom *Jaguacaporuus*, look'd upon as a good man by the neighbouring people, relying on his allies, durst talk publicly of murdering the fathers. The business therefore not being so well manag'd by messengers, *F. Mendoza* travel'd several days journey to the river *Tebiquar*, to draw over the infidels to his side, endeavouring to persuade the people not to trust to the *Mamaluks*. After his return home, he set out towards the *Caaguas*, because 'twas fear'd the enemy might break in thro' their lands. *Caagua* is a populous country in the mid-way between the province of *Tape* and the *Atlantic* sea, as yet not enter'd by the *Europeans*, but design'd to be attempted as soon as there were priests to supply it. To this purpose the *Caaguas* that came to the province of *Tape* were kindly receiv'd by the fathers, and handsomely presented. It happen'd, about this time, many of them were come to the town of *Jesus Mary* to trade, with whom *F. Mendoza* easily prevail'd to take him along with 'em into their country. He took along with him a numerous train of converts to stand by him in case any violence was offer'd; and, after some days travel, entering the country of the *Indians*, where *Jaguacaporuus* resided, found many seemingly favourable, for they promis'd, by that time he return'd from the *Caaguas*, abundance of their people would be got together to receive the gospel. With this hope he proceeded to the *Caaguas*, where all things succeeded according to his desires, those people readily hearkening to the account he gave of the behaviour of the *Mamaluks*, and to the affairs of christianity: but whilst he was there employ'd, the *Indians* consider'd to kill him, at the instigation of *Tainubius*, a crafty man, and enemy to the christian religion. He had formerly endeavour'd to exclude the society of the province of *Tape*,

8 Z

and

**T**echo, and also he still endeavour'd to debauch the new converts, setting up for a deity; he was punish'd with one day's imprisonment by the procurement of *F. Mendoza*, in the town of *S. Michael*. Some time after, flying to the infidels, he used all his endeavours to oppose christianity; and now understanding *F. Mendoza* was gone to the people up the country, he gather'd the heads of the *Ibians*, and with many words persuaded them to murder him in his return.

The *Ibians* murder *F. Mendoza*.

They were easily persuaded, and sent to *Jaguacaporuus* to join with 'em. A day being appointed, the principal men, with their followers in arms, laid an ambush in a convenient place, which the father's company discovering, many of 'em fled to hide themselves; some few fought, but overpowered by numbers. The father mounting on horseback, for he had alighted to dine, rode about to strike a terror into the enemy, but endeavouring to baptize one of his catechumens that was desperately wounded, as he rode to fetch water, his horse stuck in a bog, where the enemy hemm'd him in, and gave him many wounds, till he fell off his horse almost dead. One of the *Indians* cut off his ear, to keep as a monument of his cruelty; but the weather being rainy, they soon betook themselves to the woods, thinking he had been dead, deferring the burning his body and cutting up his belly till the next day. When they were gone, he crept to another place, which surpriz'd them the next morning, but they soon found him by the track, and then exercised many barbarities on him till he died, almost cut and mangled in pieces. This done, they feasted on the bodies of two youths that used to attend the father. When the news of his death was spread abroad in the towns of the province of *Tape*, the converts were all inflam'd with the desire of revenge; those of *Jesus Mary* would have taken the field immediately, without expecting the assistance of other towns, had not *F. Mola* stopp'd 'em, protesting he would have no revenge; yet, soon after, fifteen hundred men of that and other towns assembling, could not be hinder'd from going to seek the body. As soon as they enter'd the territories of the *Ibians*, the enemy met 'em, forbidding them to proceed any further, shewing a part of *F. Mendoza's* garment in scorn, and behaving themselves so insolently, that they oblig'd the converts to come to a battle. At the first encounter the converts, being encompass'd by their enemies, receiv'd much harm, till gaining a better ground, they enclos'd the others, and killing many of them, obtain'd a glorious victory. Not one of the victors was kill'd, and all the wounded recover'd. Most of those who had a hand in the murder of

Punishment of the murderers.

the father were slain, and among them the ringleader of 'em all, *Tainubacus*. At the same time the inhabitants of the town of *S. Joseph*, upon the same provocation, pierced thro' almost impassable ways into the country of those murderers, and meeting with a great body of the enemy, overthrew them, taking many prisoners, three hundred whereof, afterwards, became converts.

After the death of *F. Mendoza*, new troubles ensued in the province of *Tape*; the first was caused by the cruelty of the forcerers devouring many children that were baptiz'd, and threatening ruin to the new towns. This mischief proceeded from the *Ibian* murderers, who not being sufficiently punish'd, and relying on their numbers, conceiv'd hopes of extirpating the christian religion. The ringleaders were three *Caciques*, who being skilful in their old impostures, held forth to the multitude in great houses, baptizing infants after a wicked manner, prophaning the priestly ceremonies, and commending their ancient practices with great applause of the people. Seven hundred *Indians* flock'd together from several parts, and among them twelve forcerers, one declaring himself a god, and threatening the converts with darkness when they should engage; another, that he would take the shape of a tyger to destroy them, and such-like follies. At first they dispers'd about the villages, eating all they took, without sparing the heathens, till fearing they should join with the christians to defend themselves, resolv'd to spare all that would suffer themselves to be baptiz'd by the forcerers. That this might be known, they sent out dancers, whose business 'tis to impose upon the people; these having wrought themselves into the villages subject to the town of *Jesus Mary*, so debauch'd many of the inhabitants, that the town began to grow thin, the fathers being still ignorant of the cause. *F. Diastanius*, sent to supply the place of *F. Mendoza*, having got information of the whole business, secur'd two notable forcerers, and expos'd 'em to publick shame, some converts of authority gathering their arm'd followers, repairing to the places where the dancers were doing all the mischief. When several of 'em were taken, news was brought that *Cemorseus* was drawing near with seven hundred men, and many of the converts of the town of *Jesus Mary* were in his interest. The sudden floods stopp'd the coming of the enemy till supplies could be brought from other towns. When five hundred men were got together, they pass'd the river, and fell upon one part of the enemy, killing many, and so pursuing their success to the other body, utterly routed them, obtaining a complete victory.

victory. Seven forcerers were kill'd, three taken, and two fled; many prisoners made here, afterwards became christians. Another trouble was rais'd by the governor of Paraguay, and citizens of the Assumption, who being still covetous of enslaving the Indians, pretended to bring all those of Pirana, and the remains of Guaira, under their danger; but the fathers of the society, and some of the Franciscans, oppos'd 'em so vigorously, that all their designs were disappointed; whereof I will not give more particulars, because 'tis a subject has been often mention'd. Some comfort amidst these adversities, was the arrival of F. Terricus with twenty fathers of the society, to recruit those parts, who were all presently dispers'd as was most for the publick good.

Mamaluces  
destroy the  
town of  
Jesus  
Mary.

F. Romero, who had been superior of the provinces of Parana, Urvaica, and Tape, having discharg'd that office, was appointed to take care of the town of Jesus Mary, which being much expos'd to the enemy, the converts had, by appointment of the governor of Paraguay, begun to throw up a work about it. Whilst they were thus employ'd, the Mamaluces with fifteen hundred Tupus, and a great number of heathens they had got together by force in the way, on a sudden invaded the place. Four hundred Indians oppos'd them with much bravery, the rest, as the custom is there, being abroad about tillage or hunting. The fathers appear'd every where, shunning no danger to assist those that were wounded. An Indian woman, call'd Mary, whom the author knew, habiting her self like a man, fought with a lance, kill'd a forward Tupu, check'd the enemy, and encourag'd her own party; but the enemy having the advantage in numbers and weapons, and firing the church where the women and children were, at last made themselves masters of the town upon certain conditions; yet they exercis'd their rage upon those that had surrender'd, without any regard to their articles, or to sex or age, burning the town, and killing many of the inhabitants. The town being taken, the robbers spreading about the neighbouring villages, drove all they could find into captivity, so that of such a numerous colony not the fourth part escap'd by flight. Of the enemy fifty-five were kill'd in the fight, besides the wounded. The fathers were detain'd four days, lest they should repair to other towns to advise the people what to do. Thus the town of Jesus Mary, where the fathers had baptiz'd five thousand fifty-seven, besides a greater number preparing for it, was destroy'd three years after 'twas built. The remains of it, remov'd to another place, are a doleful remembrance of that once

flourishing colony, to all that knew it, but Techo, especially to me, who had for several years, and still have, the care of them. Two That of leagues from the colony of Jesus Mary was S. Christo-pher.  
that of S. Christopher, very populous, tho' founded but two years before; whither when the news of the invasion was brought, F. Contreras, who had charge of the place, led away all he could to the town of S. Anne. No sooner were they in safety than the Mamaluces came into the empty town, and finding it abandon'd, presently fell to searching all the country round, plundering the houses, and driving away all the people they found. In the mean while F. Romero having gather'd sixteen hundred converts, of those that fled from the town of Jesus Mary, those of S. Anne and S. Christopher, and other places, he went with them to the town of S. Christopher, whither, four days after his arrival, came one hundred and twenty Mamaluces, the prime of their gang, with fifteen hundred Tupus, who coming to a battle, tho' at first they gave way, defeated, yet at last, by the advantage of their weapons, got the better. Many being thus carried away into slavery, F. Ruiz return'd with the remains to the town of S. Anne. This place then contain'd above three thousand souls, and was in a flourishing condition, but, being beyond the river Igai, lay expos'd to the enemy, and therefore it was propos'd to remove it. As they were consulting, F. Ruiz the superior came, and the general opinion was, that the remains of Jesus Mary and S. Christopher's, and the inhabitants of S. Anne, were all to be removed over the river Igai, so the town of the Nativity, that they might defend themselves with the river and the nearness of the other towns. This being done with great confusion, all the boats were brought together under the defence of a work cast up like a castle, that the converts flying over the river might be secured, and the robbers obstructed. Besides, this guard was placed in several places where the river was fordable, and ambuscades were placed beyond the river, in the neighbouring woods, whence the converts falling out by way of surprize on the straggling robbers, slew many of 'em without any loss. By this time those of the town of Jesus Mary that fled, spread the terror abroad, reporting much more than truth, saying, all the towns of the province of Tape were destroy'd, many of the fathers murder'd, and the enemy ready to invade Urvaica. F. Ruiz increas'd the dread, ordering the fathers of Urvaica to burn the towns, and retire to the Parana; which the Caasapaminians immediately perform'd, tho' the enemy was forty leagues from them. The Tapians and Caasapaguans were about doing the same, when or-  
ders

S. Anne's  
colony a-  
bandoned.

**TECHO.** ders came from *Boroa*, the provincial, that none should stir till he came to see what occasion there was for it. He heard the news of the invasion as he was travelling from the city of the *Assumption* to the *Parana*, and in his way met fifteen hundred *Caasapaminians*, who refusing to return to the town they had burnt, were recommended to the *Itapuan*s. A little further he met the *Caaroans*, whom he sent to the other colonies of *Parana*, till safe places could be appointed to rebuild their towns. He sent to desire assistance of the governor of *Paraguay*, but the answer was, that the *Mamaluc*s on another side had invaded the *Itatinians*, and 'twas not convenient to divide those small forces he had. The governor of the province of *Rio de la Plata* his son, who was commander of the forces, made other excuses; and the city of *S. John* refused any assistance. Having lost all hope of foreign helps, he hastened to the province of *Tape*, gather'd the scatter'd converts, order'd the bravest of all the *Indians* of several towns to be call'd out, with whom he ventur'd over the river *Igai*, that this shew might in some measure curb the insolency of the robbers; but they were gone with their booty, and he found nothing but ruins and dead bodies: he buried the dead, and sent a particular account of all to the king of *Spain*. Then he sent the people of the towns destroy'd into the lands of the *Caaroans* and *Caasapaminians*, with priests, there to be kept in the villages till things could be better order'd. 'Tis well known that at this time the *Mamaluc*s carried twenty-five thousand *Indians*, as well converts as heathens, into *Brazil*, to be sold for slaves, besides all that died by the way. Thus the fathers lost all hopes of doing any good beyond the river *Igai*, and began to dread further losses; which we shall soon have occasion to speak of.

Relief  
sought a-  
gainst the  
*Mama-  
luc*s,

The year 1637 being now advanc'd, the provincial chapter at *Cordova* made choice of *F. Diasianus* for procurator. The bishop of *Tucuman* at the same time writ to the fathers thus assembled, entreating them to take charge of the *Indians* of *Tucuman*, who wanted all spiritual assistance, giving the provincial ample powers for such as he should appoint. Besides, he writ to the king most honourably concerning the society, desiring forty of them might be sent to supply his diocese of *Tucuman*. In this same chapter *F. Ruiz*, who had been an eye-witness of the mischiefs done by the *Mamaluc*s, was order'd to go into *Spain*, to sollicite the king and his council, whilst the other went to *Rome*, to relieve the distressed province of *Paraguay* against those robbers. *F. Ruiz* arriv'd safe in *Spain* with *F. Diasianus*, where he found king *Philip*

the 4th very favourable to his pretensions: for, having appointed a committee of the councils of *Castile* and *Portugal* to consider of that affair, 'twas by his majesty and them enacted, that those eruptions of the *Mamaluc*s were contrary to the laws of *God* and of the kingdom, and a scandal to the christian religion, and therefore the punishment of them was committed to the inquisition, all the *Indians* by them taken to be set at liberty, and the *Mamaluc*s that took 'em to be look'd upon as guilty of high-treason, and accordingly to be punish'd with loss of life and goods. *F. Ruiz* further obtain'd, that all the *Indians* reduced by the industry of the society in the provinces of *Parana*, *Guaia*, *Urvaica*, and *Tape*, should be exempt from serving private persons, and only tributary to the king; and, that the new converts should not pay any thing till twenty years after they had been baptiz'd. At *Madrid* he printed a dictionary, grammar, and catechise, compos'd by himself in the *Guairanick* language, which was very useful. Having finish'd the business he came about, and being in his way to *Lisbon*, to set out for *America*, he receiv'd letters, giving him an account of another irruption of the *Mamaluc*s, the mutiny at *Rio de Janeiro*, the expulsion of the fathers at the town of *S. Paul*, and the driving away of our converts; whereof I shall speak in its place. Therefore returning to *Madrid*, he obtain'd more positive orders to the governors and magistrates to defend the converts; with which he sail'd for *Peru*. He was detain'd some years at *Lima*, to defend the society of *Paraguay* against its enemies.

After the departure of *F. Ruiz*, *F. Al-* Colony of  
*faro* was appointed superior of the provinces *S. Joacim* trans-  
of *Parana*, *Urvaica*, and *Tape*, where many  
disasters happen'd. The first was, the  
abandoning the town of *S. Joacim*, in the  
province of *Tape*, which was done with  
much difficulty, the *Indians* abhorring to  
be thus transplanted, many of 'em slipping  
away to other places than were design'd for  
'em, and some meditating the death of the  
fathers. At length the houses being fir'd,  
they all retir'd to other towns, and new  
troubles ensuing, could never rebuild a  
town, so that it quite ceas'd to be, the  
third year after its foundation. But the  
*Mamaluc*s invading the town of *S. Teresa*,  
was a much greater calamity. This town  
contain'd above four thousand inhabitants, destroy'd  
was still encreasing, and there was hope  
of founding several other colonies along  
the river *Tebiquar*, and others; when the  
*Mamaluc*s, with a great number of *Tupus*  
and other *Indians*, breaking into the place  
about the end of this year 1637, destroy'd  
all that had been gain'd with so much la-  
bour,

bour, and all hopes of future improvements.  
 The townsmen being inferior to the rob-  
 bers in number, arms and courage, for  
 the most part delivered themselves up.  
 Some few fled, others were bound, and o-  
 thers kept under my dread. Yet these  
 villains upon Christmas-day had the impu-  
 dence to go to church in a solemn manner,  
 and scoff at F. Ximenez who reprov'd  
 them. The small remains of this town  
 were added to the Itapuas, where they  
 still continue much improv'd. The new  
 founded town of the Visitation, was dissolv'd  
 with only the dread, and the inhabitants of  
 the other colonies of the province of Tape,  
 fearing the like fortune, either fled or pre-  
 par'd for their defence. The people of the  
 town of S. Anne, beyond the river Igai,  
 hearing that another company of Mama-  
 luc was near, without expecting the ad-  
 vice of the fathers, dispers'd themselves  
 whereforever fear, or love of liberty dicta-  
 ted. It was now frequent to rail at the so-  
 ciety, saying the fathers gather'd the peo-  
 ple into towns the better to betray them to  
 the Mamaluc ; and this opinion was confir-  
 m'd by those robbers, who told the con-  
 verts they held intelligence with the fathers,  
 so that many contriv'd to murder them.  
 F. Contreras had like to have been kill'd by  
 a Cacique enrag'd with this jealousy. The  
 Araricans plunder'd F. Alfaro and fled to  
 the woods, declaring they would rather  
 deliver themselves to the Mamaluc, than  
 be transplanted to Uruaica. Nor was the  
 province of Uruaica any quieter. The  
 Caasapaminians, who for fear of the war  
 had remov'd to the river Parana, having  
 no hopes of returning home, with the as-  
 sistance of the Itapuas, built a new town,  
 three leagues from Itapua, still retaining  
 the name of the Purification. The Caa-  
 roans, aided by the inhabitants of Loreto  
 and S. Ignatius, founded another town on  
 the same river. The Caasapaguacuans and  
 Caapians continuing to behave themselves  
 in a tumultuous manner, many of them be-  
 ing dispers'd, and many taken by the Ma-  
 maluc, put the fathers to much trouble ;  
 whose principal care it was to keep toge-  
 ther and cherish the remains of the towns  
 destroy'd the first irruption, the Indians be-  
 ing much distracted in their thoughts be-  
 twixt the love of their native soil and the  
 fear of slavery. Though they be the acti-  
 ons of several years, let us go on with the  
 Mamaluc, that the account of them may  
 not be too much dismembre'd.

Towns of  
 S. Charles,  
 and S. Pe-  
 ter and  
 Paul de-  
 stroy'd by  
 Mamaluc.  
 In January 1638, the dreadful news  
 was brought that great troops of Mama-  
 luc and Tupus were marching through the  
 lands of Caama and Caagua, and design'd,  
 when they had carry'd away the heathens,  
 to divide and attack the colonies of Uruai-

Vol. IV.

ca and Tape, and so proceed to destroy all Ticho.  
 the province of Parana. The alarm thus  
 given, F. Alfaro the superior in those parts,  
 encourag'd all the Indians to defend them-  
 selves, and having list'd men in every co-  
 lony, order'd the rendezvous at the town of  
 S. Peter and Paul, whither the enemy  
 seem'd bent, and where the men in a pan-  
 ick fear, abandoning the women and  
 children, were fled to the woods. This  
 being known, the troops of the other con-  
 verts not confiding in their own strength,  
 retir'd disorderly. The enemy in the mean  
 while drawing near, had certainly drove a-  
 way the women and children, but that F.  
 Alfaro getting them over the river in some  
 measure secur'd them. The robbers dis-  
 appointed of this booty, falling upon the  
 towns of S. Peter and Paul, and S. Charles,  
 and the villages about them, seiz'd many  
 Caapians and Caasapaguacuans, destroying  
 those two colonies. In seven years space  
 the society had baptiz'd four thousand three  
 hundred thirty seven souls in the town of  
 S. Charles, and five thousand eight hundred  
 forty five in that of S. Peter and Paul.  
 Scarce the third part of these numbers was  
 afterwards gather'd to settle in the other  
 towns. After destroying these towns, the  
 robbers bent their force against the lands  
 of the Caaroans and Caasapaminians. The  
 inhabitants of both those places had, dur-  
 ing the former invasion, transplanted them-  
 selves into Parana, whose towns had been  
 in some measure restor'd by the remains of  
 the colonies of the province of Tape, to  
 defend whom one thousand five hundred  
 armed converts were brought together from  
 several parts, and stood the enemy in the  
 lands of the Caaroans. Coming to a bat-  
 tle and many being wounded, and some  
 kill'd on both sides ; before the action was  
 over, some converts in a consternation, fled  
 as if the Mamaluc had got the day, and  
 as the custom is there, set fire to the town,  
 to signify they submitted themselves. The  
 women and children seeing the fire, and  
 knowing the cause of it, appear'd in a most  
 lamentable condition. The fight was dif-  
 mal, yet neither side got the victory, each  
 party after the fight retiring. The next  
 day the women and children were by the  
 fathers conducted away to the colony of the  
 Caasapaguacuans, six leagues distant, whi-  
 ther our men retiring, were opportunely  
 recruited by some hundreds of converts  
 from Parana, for the enemy appear'd soon  
 after. The converts perform'd their devo-  
 tions before they engag'd. Fifteen hun-  
 dred of them engag'd with such bravery,  
 that they soon drove their enemies into the  
 wood, taking some colours and a rich  
 booty. The Mamaluc, having secur'd  
 themselves there with palisadoes, put out  
 their

Defeat of  
 Adams.  
 luc.

**T**echo. their fires at night, and lay very still, that it might be thought they were gone. The converts deceiv'd by this false appearance, and thereupon presuming to go plunder their fort, pay'd for their rashness, for the robbers firing on them kill'd one of the principal men, and wounded others, the rest fled, and being seiz'd with a panick fear, could not be brought to face the enemy again. Most of them never stopp'd till they came into the territory of *Piratina*, the rest follow'd them by the advice of *F. Alfaro*. Of five towns built in the province of *Urvaica* beyond the river of that name, only that of *Piratina* was left standing, out of which *F. Alfaro* in very good time sent all the women and children over the river, for but a few days after news was brought that the *Mamaluks* seeking for more booty, still continu'd between the territories of the *Caafapaminians* and the *Caaroans*. Many of the converts, after the late fight, believing the enemy was gone away into *Brasil*, return'd to their towns, whom it was hard to call back; yet about a thousand *Indians* drawn together in haste gave the enemy a check, till more forces could be gather'd. The fight lasted five hours, with almost equal damage, about eighty being wounded on both sides, and some few kill'd. After the fight the enemies strew'd the way our men were to go with crows feet, which might have done harm, but that they were discover'd. Then they sent a woman gaudily dress'd to allure the chiefs of the converts, to go over to the *Mamaluks*, who was turn'd away with scorn. Before this *Cheomombeus*, that famous impostor, had gone over to the *Mamaluks*, drawing some converts with him, and to do them some signal service, now by their consent, pretended to desert, but being taken endeavouring to debauch some converts, he was put into irons, and afterwards truly repented. All frauds failing, the robbers fell again to open force, and drawing out their forces, furiously charg'd the right wing of the converts, which was led by *Nicholas Nienguirius*, a man no less skill'd in war than peace. They had been easily repuls'd, but that he who commanded the left wing, being offended at *Nienguirius* for having forced him to put away a concubine, refus'd to second him; so that *Nienguirius* being inferior to the robbers, was forced by this treachery to give way, and leave the victory to them. The enemy having taken the town of *S. Nicholas*, and not daring to pass the river, drove the prisoners into the territory of the *Caafapaminians*. Thus the colony of *Piratina*, remarkable for its stately church, and the number of converts, was drawn back over the river *Urvaica*, and forced to build

*S. Nicholas town abandoned.*

new houses a little below the town of *S. Xavierius*.

This done, the chiefs of *Parana* and *Ur-Mama-vaica* joining their forces, drew together the greatest army that had ever been there in the field, that they might either recover the booty, or oppose the enemy, if they durst attempt to cross the river *Urvaica*. Having cross'd the river, drift parties that came to the ruin of *Piratina*, found letters writ by *Mamaluks* in the church, full of virulentanders on the society. But the converts understanding the robbers were marching away for *Brasil*, ceas'd not to pursue till they overtook them. The first day they fought with indifferent success, still with greater loss on the enemies side than on ours. Fifteen hundred fresh men now brought by *F. Romero* encourag'd our men, and quite dismay'd the enemy. These having just rested themselves, fell furiously on the *Mamaluks*, who were ready to fly, doing much harm, and had utterly routed them, had they not defended themselves within their palisades set up before. The converts throwing up their works, drew them out to battle, in which the loss was equal on both sides, but the confusion greater on ours. But now eleven *Spaniards* sent two hundred leagues by the governor of *Buenos Ayres* coming up, the enemy quite desponded, for when they drew up four thousand five hundred converts in military order, the robbers were so astonish'd, that despairing of success, or so much as being able to escape, they humbly su'd to be allow'd to article. A conference being granted, *F. Alfaro* after severely reprimanding and making 'em swear they would never return nor send any of their gang to disturb the towns of the converts, sent them away unpunish'd, to the great regret of the converts. Other troops of *Mamaluks* were picking up the dispersion of the ruin'd towns, and threaten'd the others, but the provincial gathering other regiments of converts, repuls'd them and secur'd the province of *Tape* for that time. However those towns being sixty leagues from those of *Urvaica*, it was plain they could not continue there with any security, and therefore it was resolv'd to transplant them, and the place appointed for it was between the two rivers *Parana* and *Urvaica*, because they being but fourteen leagues distant from one another, would serve as vast trenches to secure the great multitudes of people in the several towns, who might draw together the easier to stand upon their own guard. Ten towns, as has been said, had been built in the province of *Tape*, whereof four being destroy'd, there remain'd six, which could not all be transplanted at once, abundance of the inhabitants planted.

habitants choosing rather to run the hazard of being made slaves, than forsake their native soil. The work was begun by some hundreds of people of the town of S. Cosmus and Damianus, who with great difficulty drew them over the mountains and river Urvaica to the Parana, where they rebuilt their own under the invocation of the same saints, between the colonies of Loreto and the Purification. The Araricans, or town of the Nativity of our Lady had been rebuilt between those of S. Mary Major and S. Xaverius, but many of the inhabitants had fled to the woods, whence they could not be drawn, till now become sensible of their danger they submitted themselves and went where the provincial order'd them. Of the townsmen of S. Anne dispers'd for fear of the Mamalucs, F. Contreras gather'd as many as built a town first on the river Urvaica, but afterwards on the Parana, where they still continue. The people of S. Joseph, were as obstinate as the rest against removing, but being at last wrought upon, had the woods of Parana, between the towns of Corpus Christi and S. Charles allotted them. In the mean while the inhabitants of S. Thomas, setting fire to their town, went away part by land, and part upon the rivers Ibiacit and Urvaica, under the conduct of F. Ernot and Bertot, and settled fourteen leagues below the town of the Conception, on the latter of the two last named rivers, where building their houses, they prov'd more fortunate than the others; for though at their first coming they were not assist'd by other colonies, yet in process of time they enjoy'd many conveniences the others wanted, because of the vast plains about them, fit either for pasture or tillage, so that at this time I am writing, after so many calamities, there are computed in this colony four thousand souls. The colony of S. Michael transmigrated as well as the rest, and in its new seat took the name of the Immaculate Conception. Thus above twelve thousand souls were brought with little loss through a barren solitude for sixty or seventy leagues to the places where they settled on the rivers Parana and Urvaica. Woods were cut down to make room for this multitude to sow, feed fetch'd at a great expence, cattle bought, houses and churches built, and all other necessities provided. After they were settled, the fathers passing the rivers that lay in the way, gather'd many thousands of converts and infidels that lay lurking in the woods, and brought them over to increase the aforesaid towns. All things being thus settled the Caciques of Parana and Urvaica sh'd to the provincial, begging he would for the future make some provision for the safety of so many

thousand souls, as were expos'd to the fury Ticho. of the enemy, unless they would allow 'em the use of fire arms. *For how can we, Five arms said they, who are naked, fight with those that are in armour, or have stuff'd Coats? How can we defend our selves with arrows of reeds, which scarce do any execution, when the enemies attack us with guns that sling bullets a vast distance? Let us have equal arms, and we will shew as much courage as our enemies, and make it appear we can as well defend our wives and children, as the Mamalucs hunt for slaves.* Thus the Indians pleaded, and the provincial thought there was reason enough to furnish them with weapons equal to the Mamalucs, who else would never desist till they had depopulated all south America, and it was much to be fear'd, lest if ever there was a war betwixt Spain and Portugal they might break into Peru. Having therefore receiv'd letters out of Spain from men of great note employ'd by the king, directing him to provide for the safety of those miserable people for the future, he us'd all possible means to get them fire arms; and though the governors and civil magistrates alledg'd that the use of fire arms had never been allow'd any Indians for fear of a rebellion, yet after weighing all circumstances, they all agreed with the provincial, and granted they should be allow'd fire arms. Which resolution the royal council of Peru, and afterwards the king himself, approv'd. Musquets were accordingly bought up and made, and granted to the converts, upon condition they should make use of them in time of war; but in peace, to avoid tumults, they should be lock'd up; which I find has been very useful in war, and it is certain the robbers have not since been so bold as before. Therefore to give every man his due, there is no doubt that the liberty of the people of Tape and Urvaica is in a great measure owing to F. Boroa, the provincial, but for whom the Indians would not have consented to be transplanted, nor had there been fire arms obtain'd to defend them for the future.

Let us after so many calamities and troubles look back into the province of Tucuman, where the fathers made excursions from their colleges to convert and instruct the scatter'd Indians, with success in the valley of Paspama, and in the villages subject to the jurisdiction of the city of London, late a barbarously rebuilt, but advancing further to a most barbarous nation, they made no improvement, for those people being wholly devoted to drunkennels and extravagant superstitions, would give no ear to better advice. It is the custom among them to hire women to commend their dead. They do not close

**TACHO**, close but open the eyes of their friends departed, lest they should miss their way to the other world, which abounds in delights. The same error makes them place their best goods and store of provision about the dead body, which they dress in its best apparel, and do not bury, but lay in an open grave on some high ground. They sprinkle the corn when it first comes up with the blood of beasts new kill'd to obtain fertility. By the persuasion of their forcerers, they think they shall dye presently, if they give ear to our priests, and therefore having this horror of them, it is no wonder the fathers could do no good among them. But *F. Ojorius*, in the year 1638, happily attempted the nation of the *Ocloias*. These people lye between the borders of *Peru* and *Tucuman*, within the precinct of the city of *Xuxui*. The *Franciscan* fathers had formerly preached among them, but for many years past they had been wholly abandon'd and left to their old customs. *Ochoa*, a powerful *Biscainer*, to whom the *Ocloias* had been given, as is the custom of the *Indians*, recommended them to *F. Ojorius* in hopes a way might be made through them to the province of *Xuxa*. He taking *F. Medina* along with him, travell'd over the mountains till they came to the *Ocloias*. Inquiring into their disposition, they found they were peaceably given, enemies to forcerers, and continu'd their native errors only for want of christian priests to undeceive them, and therefore it was plain they would all embrace christianity if instructed. Many were baptiz'd in *Sicaia*, the first village of them, and so in other places. *F. Ojorius* going on to the *Guiparas*, and *F. Medina* to the *Guarcontes*, found those *Indians* well inclined towards them, and so returned through the lands of the *Homoguacas*. *F. Ojorius* coming again to them with *F. Riparius*, they us'd all their endeavours to bring those scatter'd people to live together in one place, that they might be the better instructed in the faith. As soon as their design was known the neighbouring *Caciques* offering to remove, began to lay the foundations of a town eleven leagues from the city of *Xuxui*, and others resorting to them by degrees from further parts, having built a church, they placed their houses regularly, to the great satisfaction of the *Spaniards*. Thus six hundred *Ocloias* were baptiz'd and given in charge to *F. Medina*, who being about to proceed, the *Franciscans* interpos'd, alledging they had first preached the faith there, and consequently that province belong'd to them. The provincial, to avoid all controversy, resign'd the new built town to them. Yet *F. Ojorius* and *F. Riparius* having in vain attempted to make way through the province of the *Ocloias*, into

The Ocloias  
dis.

that of *Xuxa*, took another way through impenetrable woods. Such *Indians* as they met they endeavour'd to catechise, and gain their affections with some small gifts, as they did some of those the *Spaniards* call *Palomos*, and another fort known by the two names of *Labradillos* and *Pintadillos*. Their provisions falling short, they sent back *Sebastian Marcon*, a youth born in *Paraguay*, who desired to be admitted into the society, with some of the *Labradillos*, to fetch supplies from the city of *Xuxui*. They, the second day after they parted from the fathers, murder'd *Marcon*, and having eaten his flesh, as was report'd, took the skull along with them, and returned to the place where the fathers pass'd the night, to repeat their cruelty. That night they plunder'd their baggage, and the next morning murder'd the fathers, cutting off their heads, and carrying them away in trophy. The *Indians* that were then returning to *Xuxui* gave an account of their death.

The fathers in *Parana* and *Urvaica* were now employ'd in rebuilding the towns destroy'd, and discovering the designs of the robbers, and because they could not altogether confide in the converts, who were easily carry'd away with groundless fears, *F. Alfaro* so order'd it, that two fathers in their turns passing the river *Urvaica*, should observe the motions of the enemy, and bring to the towns the wandering *Indians* they could meet with. The fathers *Palermo* and *Vivero* being out upon this design, two young converts that attended them going too far, fell into the hands of the *Mamaluc*, by whom being found they lay among the prisoners, till they perform'd a notable exploit, which was, that at night, when all the robbers were asleep, they held their hands which were ty'd behind them so long to the fire, till the cords were burnt asunder, and being thus loos'd, they made their escape flying through by-ways fourteen leagues till they came to the fathers, and were very useful in discovering the designs of the *Mamaluc*. Not long before, *Peter Lugo*, governor of *Paraguay*, had receiv'd letters from the catholic king, signifying it was his will, that he should employ all his force in defence of the *Indians* reduced by the society, and infected by the *Mamaluc*, and it fell out opportunely that the said governor himself was taking a view of the convert's towns in the province of *Parana*. At the instance therefore of *F. Alfaro*, he drew together four thousand *Indians*, with his own *Spaniards*, and march'd with all speed into the territories of the *Caasapaminians*, where the enemy had settled. *F. Alfaro*, and some other of the society follow'd him, to encourage the men, and help those that were in danger of death, and they were

all in hopes the robbers might be easily routed, when a dismal accident happen'd. For *F. Aljara*, superior of the other fathers having advis'd them not to expose themselves rashly, and encourag'd the converts in some small skirmishes to defend themselves manfully, going out a little way from the camp to discover the *Mamaluks*, was shot dead by one of them, who lay in ambush. His death being known, the *Indians* fell furiously upon the enemy, and totally routed them. Many of the *Mamaluks* and *Tupus* were taken in this action. The governor having severely rebuk'd the *Mamaluks*, put them into the custody of the converts, till it should be determined what punishment was to be inflicted on them for so many villanies. The *Indian* prisoners were happy in that being deliver'd from bodily slavery, they were adopto into the liberty of the sons of God, being baptiz'd, and made equal in the new towns to their conquerors. The body of *F. Aljara*, was carry'd four day's journey to the town of the *Conception*, and there honourably buried. His death undeceiv'd many converts, who were still jealous that they were gather'd into towns, to be the better betray'd to the *Mamaluks*. The governor carry'd the *Mamaluks* taken fourcore leagues back to the city of the *Assumption*, and was blam'd for being afterwards too favourable to the worst of men; for tho' he sent them to the governor of the river of *Plate* to be punish'd, yet it came to pass that by favour those miscreants were suffer'd to slip away safe into their own country.

**Cavacava**  
lakes.

*F. Ruiz* succeeded *F. Alfaro* as superior of the *Jesuits* in those parts. He at the request of the governor of *Rio de la Plata*, lent *F. Romero* with a band of four hundred chosen converts to the lake of the *Caracas*, about an hundred leagues distant. The *Caracas*, *Capafacas* and *Menepes*, a fierce sort of people, being part heathens and wild, and part bred in the town of *S. Anne*, but fled thence and in open rebellion, dwelt about this lake, which is forty leagues in length ; and fallying thence upon travellers, either by land or on the river, carry'd away their booty into inaccessible lurking places, amidst the reeds and rushes ; and not long since had made an excursion and burnt the church of *S. Lucy* ; besides, the murderers of *F. Spinola* were retir'd thither. Long impunity made them bold to attempt any thing, because it was hard to come at them, the lake which runs to the *Parana* having but one entrance, choak'd up with mud and bushes, and the further part of it being full of floating islands, like those of *S. Omer* in the *Low-Countries*, which were dangerous for strangers, but a secure retreat for the natives. But the con-

verts encourag'd by *F. Romero*, broke *TECHO*, through all difficulties, and dragging those barbarians out of their faltnesses, killing some, forced the rest to submit. All the prisoners were deliver'd to *John Garay*, commander of the *Spaniards*, who highly commended the converts. This victory caus'd the town of *S. Lucy* to be in some measure restor'd, made the ways safe to travel, and secur'd the *Spanish* and *Indian* towns. The provincial, having visited the province of *Itatina*, cross'd the river *Pirapuis*, then much swell'd, in a boat made of canes, which are thicker than a man's leg, and being well knit together, cannot easily be sunk, but these being green when they receiv'd a weight, could scarce bear up above water, so that he was in great danger; but much more the next day crossing another river in a bull's hide, only fasten'd in a hollow form with hoops, which there the *Indians* use to carry passengers in over rivers, swimming about and bearing them up, but too many officiously flocking about it he was almost drown'd. He pass'd the river of *Xuxui* in a boat made of the barks of trees. Which things I have here mention'd to shew what sort of boats are us'd in those parts.

*F. Dianthianus* sent, as was said before, Favours procurator into *Europe*, having finish'd granted some business at *Madrid*, went on to *Rome*, the procurator, where he easily obtain'd leave of the general to gather supplies of fathers out of the provinces of *Rome*, *Naples*, *Milan*, *Sardinia*, the *Low Countries* and *Spain*. Pope *Urban* the eighth granted him a bull, allowing all the *Indians*, *Blacks*, and those of a mixt race, in *South America*, all the time between *Septuagesima* and the octave of *Corpus Christi* to perform the duty of receiving the blessed sacrament about *Easter*. And another, by which he excommunicated all such as upon any pretence whatsoever should enslave the *Indians*, whether christians or heathens. Many other favours he bestow'd on *F. Dianthianus*, who returning to *Madrid*, obtain'd of the king passage for thirty fathers at his majesty's expence. The king also put out an edict, by authority of his council of the *Indies*, forbidding the *Mamelukes* to insult the *Indians*, and ordering those so taken to be restor'd to their country and liberty, and the takers to be punish'd. Then gathering the *Spanish* fathers that were to go with him, he went away to *Lisbon*, where he found six, long since come thither out of the *Low Countries*, and they altogether sail'd on the eve of the *Purification*. By the way several of the fathers fell sick, and two dy'd. The weather proving very stormy, after being drove away almost as far as the cape of *Good Hope*, they were forced to stand for *Brazil*,

TECHO, and at length arriv'd in the port of *Rio de Janeiro*, where they were generously entertained by the governor of the province, and the fathers of the society. After the mutual ceremonies of the reception, *F. Diaſtanius* being intent upon his buſineſs, undertaking to proclaim the pope's bull againſt the enſlavers of the *Indians*, tho' he did all things regularly, brought much trouble upon himſelf. For when the bull was ſolemnly read in the church of the ſociety, the *Mamaluſes*, many of whom live in the territory of *Rio de Janeiro*, and their friends grew ſo inrag'd, that the fathers were in danger of their lives; theſe mutineers breaking open the college gates, and ruſhing into the court, giving the new converts very opprobrious language, and reſolving to murder them. Their chief rage was againſt *F. Diaſtanius*, who had procur'd the bull, and they had perhaps executed their bloody deſign, but that the governor drawing them artiſicially to the church, put ſome check to their fury by the holineſs of the place. The next day all the chief men and religious men meeting at the church of the *Carmelites*, the *Jefuits*, to lay the tumult, contented the *Mamaluſes* ſhould appeal to the pope againſt his bull, and thus the buſineſs was put up. Whiſt this was doing at *Rio de Janeiro*, it was much worſe at the town of *Santos*, where *Ferdinand Rodriguez*, vicar of the place had proclaim'd the ſame bull in the great church; no man preſuming to mutter againſt it, till a turbulent fellow promoting it, there was a conſpiracy carry'd on againſt the vicar. Having laid their deſign, one of the conſpirator's appeals to the king for the pope's bull, and the vicar excommunicating him, all the reſt fell upon him with their drawn ſwords, trampling on him, and exerciſing more barbarity than can be expreſs'd in the very church, the vicar ſtill perſiſting reſolute in maintaining the pope's authority. But they appealing, and requiring the vicar to allow of their appeal, he answer'd, he allowed of it, as far as in him was, and the laws would allow. When they demanded the bull to be deliver'd to them, he ſent them to the ſuperior of the *Jefuits*. The ſaid ſuperior, to give ſome check to the mutiny, put on the prieſtly veſtments, and coming out to a porch with the bleſſed ſacrament in his hands, warn'd them as they drew near, not to be the cauſe of their own ruin, and eternal infamy; and earneſtly requeſted them to be obedient to the vicar of the ſon of God for his ſake. Hereupon ſome falling on their knees, and others ſtanding, couſedly cry'd out, that they ador'd God preſent in the bleſſed ſacrament, but could not conſent to be wrongfully depriv'd of their goods by him, who defended the

of Santos.

pope's decrees. Others in a tumultuous manner requir'd to have the bull deliver'd to them, and having got it, and in vain requir'd the vicar to abſolve them from all cenſures, they went away to other religious men, ſome of whom being ignorant of the matter, declar'd they had not incur'd the cenſures of the bull, becauſe pope *Urban* expreſs'd it ſhould be publiſh'd, if there were no lawful impediment, and that the general diſlike was ſufficient impediment, but all this was palliating wicked deſigns, which nevertheleſs appear'd too bare-faced. Nothing was more frequent among the mutineers, than that the ſociety was to be expell'd the town, left by their favouring the *Indians*, they ſhould be reduced to beggary. The ſtorm was ſtill more violent againſt the fathers in the town of *S. Paul of Piratin-Paul*, that being the chief reſidence of the *Mamaluſes*; for over and above all the infolencies mention'd in the town of *Santos*, the fathers here were forced out of their college, and baniſh'd the town; ſome of whom reſorting to *Rio de Janeiro* gave an account of their uſage. But to give every man his due, the governor of *Rio de Janeiro* deſerves to be commended for his reſolution, in cauſing a fellow who had behaved himſelf inſolently before the bleſſed ſacrament, to be publicly whip'd, and a maſter of a veſſel to be puniſh'd for giving the news of the expulſion of the fathers of *S. Paul*, in a joyful inſulting manner. Many citizens were alſo praiſe-worthy for their reſolution in ſtanding by the fathers, and thoſe fathers in aſſerting the pope's bull, but none more commendable than the pope himſelf who granted it, and king *Philip* the IV. and his council, who ſent repeated orders to the governors to protect the *Indians*; and doubtleſs the *Mamaluſes* had been cruſh'd, but that the war breaking out between *Spain* and *Portugal*, diſappointed his majeſty's deſigns. About the end of this year 1640, the *Mamaluſes* contemning the king's edicts and pope's bulls, gather'd their forces to invade the converts, which made *F. Diaſtanius* haſte away from the port of *Rio de Janeiro*. The twentieth day after he ſet ſail he arriv'd at the port of *Buenos Ayres*, where the provincial receiv'd him and the new-comers with muſick of the converts, come two hundred leagues to that purpoſe. The fathers that came now were thirty three, all whom *F. Acosta*, the reſtor at *Rio de Janeiro*, maintain'd ſeven months at his own expence, and being deſir'd to give an account of the expence, that the province of *Paraguay* might refund it, he answer'd there had been ſix hundred pilloles ſpent, but that he would not accept of the leaſt return, expecting his reward from God. But having brought the fathers to *Paraguay*,

gray, let us return to those parts to see what was done there.

Peace being restor'd, as was mention'd in its place, between the people of the province of *Tucuman*, and those of the valley of *Calchaquima*, the *Spanish* governor prevail'd with the provincial to send two fathers thither to continue and improve the good correspondence. They attempted to pass through the country of the *Diaguilas*, but in vain, and were forced to return to the city of *S. Michael*, whence they took their way over vast mountains, and being courteously receiv'd by the principal men, travell'd over all the valley. This done, they returned to give the provincial an account of what they had done, who sent them back with orders to endeavour to build towns. At first those people receiv'd them with much affection, and built them a chapel for present use; but this kindness was not lasting, for some of the *Spaniards* of *Rioxa*, having fallen upon a village of the *Diaguilas*, the *Calchaquines* their next neighbours, soon took the alarm, saying, the war was declar'd, and consequently the fathers ought to be made away. They having obtain'd leave of their superior, went away to *Salta*, whence the provincial caus'd them to go back again, and the former jealousies being remov'd, they began to rebuild the town of *S. Charles* in the same place where it stood before, with hopes of its continuance. Yet the progress of christianity has not been very considerable, because those people mind nothing but their ancient superstitions. The boys, who under the care of the fathers seem to be good and pious, as soon as ever they return among their own people, fall immediately to the customs of their parents. The prime men endeavour to hinder the fathers learning their language. Thus little hopes appear'd of gaining many to the faith; yet those people permitted the fathers to erect crosses, build chapels, and exercise their function before them; and some of the *Caciques* have shewn them extraordinary civility, which is all yet gain'd, and so we must leave them, having no more to add concerning them.

The people call'd *Abipones* seem'd to afford copious matter for conversions, and therefore *F. Pastor*, rector of the college of *Espejo*, with a companion, undertook them this year 1641. He set out of the metropolis of the province of *Tucuman*, and travell'd through deserts, till he came into the territories of the *Indians* call'd *Matarans*, about eighty leagues distant from the place where he set out. The nation of the *Matarans* being addicted to drunkenness, us'd to have daily drinking bouts, the people inviting one another in their turns.

*Matarans*  
their cus-  
toms.

Besides these daily debauches, they had o-  
thers more solemn, which they call'd funeral drinkings, being dedicated to the ghosts of their departed ancestors; whose anniversary was celebrated by the heirs, with feasting, where the chief pleasure was drunkenness. When the guests were all come together, they presented him that treated with an ostrich, carry'd by a handsome young maid upon her head. If it happened that the anniversary of several dead persons was kept the same day, they kill'd and presented as many ostriches. Each person was oblig'd to make the master of the feast some particular present, upon condition he was to make a suitable return when they celebrated the anniversaries of their ancestors. There were scarce any bloodier quarrels among them, than what grew upon breach of this contract; the duty of performing whereof, did not only extend to those present, but to their children and grand-sons, it being hereditary. Having spent three days in the funeral feast, they forced themselves to weep for a whole hour, which was follow'd by laughing, dancing and drinking. But the worst was, that they follow'd those customs, and pretended to be christians, alledging they had receiv'd the faith from the fathers *Barfena* and *Agnasco*, and they had a curate, who baptiz'd the infants, and instructed children, but as soon as they were grown up they fell again to their ancient till customs. They all us'd the language of *Tonocota*, in which *F. Pastor's* companion was expert, who prevail'd with many of them to confess their sins, which was look'd upon as almost a miracle. Having staid a few days among the *Matarans*, they continu'd their journey towards the *Abipones*, still sixty leagues distant from them, the curate of the *Matarans*, their chief *Caciques*, and very many *Indians*, attending them; for tho' there were wars of long standing between them and the *Abipones*, they hop'd the fathers by their authority might produce a peace. No sooner were they out of the town but they fell into thick woods frightful for the many dens of wild beasts, the track of tygers and other things of that nature, every where threatening death. The prickly boughs of the trees sometimes lash'd their faces, and tore their garments. The greatest hardship was want of water, for tho' they were dry'd up with heat and weariness, there was none but rain water, which lay stinking in ditches, and was rather a plague to the nose, than any comfort to the mouth. About half way, the thickness of the woods and want of water was succeeded by lakes and marshes, caus'd for four leagues together by the overflowing of the *Red* river. The *Matarans*, discourag'd at the sight of so much water, would certainly have

**T**echo. have return'd, had not the fathers encourag'd them to proceed with good words and presents. Having pass'd the lakes, they had a better way through a plain, till they pitch'd their tent two leagues from *Abiponia*. The *Matarans*, considering here, they were going to put themselves into the hands of their enemies, without any retreat or house of succour, were by much ado stay'd by *F. Pastor*, who set out with his companion and two others to discover the best way to enter *Abiponia*. When he was a little advanced, a troop of two hundred *Abipones* on horseback came out and hem'd him in. They were naked, and the horses bare; the men tall, broad shoulder'd, shewing their inconstancy by the rowling of their eyes, and their fierceness by their long flying hair. When they levell'd their arrows at him, he spoke to them in the language of *Tonocota*, telling them it was his love to them brought him, without regard of life, for their good, and therefore advis'd them not to be guilty of a crime they might have afterwards cause to repent. The *Indians* thus appeas'd, threw down their arms, after their manner, to betoken peace, and saluted the father courteously. Being informed that another father of more worth was behind, the commander sent his son well attended to conduct him. At the first village he was receiv'd with several sorts of sports, the women shouting, and as they did so, often clapping their mouths with their hands. After the first salutation, they spread a hide on the ground for a carpet, in token of honour, and placed trunks of trees for seats. The fathers return'd their kindness, distributing hooks, pins, needles, and glass-beeds, which the *Abipones* valu'd above the richest metals. Then being invited to eat upon a table, not unlike their stools, they had such meat laid before them, as would soon qualify hunger; yet lest they should be offended that their meat was despis'd, the fathers did eat against stomach. The next day they erected a cross, and the father rector telling them he would stay among them, *Caliguila* the chief man of the nation carry'd them to his village, where they were joyfully receiv'd. Having told the cause of their coming, the same *Caliguila* promis'd for all the people, that they should not be hinder'd from baptizing the children, and building a church after the christian manner, provided the youth were not obliged to come to church morning and evening, which would render them unfit for war; but the father soon convinc'd him that it would be no prejudice to the youth, by the example of the *Spaniards*, who are never the less brave for resorting to church and school. *Caliguila*, so satisfy'd, desir'd at least that the boys might be permitted to go

into the church with their bows and arrows, and that they should not be punish'd, which was readily granted. Then they all desir'd, that if any *Caciques* should embrace the christian faith, it might be lawful to bury their bodies after the manner of their ancestors, on the tops of mountains near the tombs dedicated to their deities; but this could not be allow'd, as being superstitious. When the assembly broke up, a great cross was erected, and the christian doctrine explain'd, which some of the *Indians* in a very short time grew so perfect in, that the curate of the *Matarans* was for baptizing some of them underhand; which the rector perceiving, he sent him back to the place from whence he came. After his departure he built a church with clay and straw, began to write a dictionary of the language of the *Abipones*, instructed the youths, and there was hopes that a great multitude might be converted in a short time to the faith, when he was forced by the provincial's order to quit that undertaking. Thus the conversion of those people was put off for want of fathers, and therefore we will here in a few words set down the account *F. Pastor* gives of their manners. Generally the *Abipones* are of a large stature, well made, brawny and looking big. In summer they go naked, in winter cover'd with skins. About their necks hang their clubs, and quivers on their shoulders. They always carry a bow in the left, and a spear in the right hand, staining all their body with several colours like tygers, to be the more terrible; and look upon those as most honourable who make most holes in their bodies, and stick ostriches feathers in them; which they wear in their nostrils, lips and ears, as if they design'd to fly. A beard they look upon as dishonourable, and therefore pluck up the down that grows in their youth. They make themselves bald by way of ornament, and none may let his hair grow, but he that has kill'd an enemy in war or in duel. Manslaughter among them is the proof of their being soldiers, and no man is allow'd military ensigns till he has committed it. They have also their nobility and heroes, to which honour they are advanced by degrees of excessive cruelty; for he that desires to be accounted a hero, must give proof of his bravery by enduring most horrid tortures, piercing their legs, thighs, arms, tongues and other parts of their body not fit to be nam'd, and then tearing off the skin of all those parts with a rough stone. Five of the elders exercise this butchery on the candidate, who if he gives the least token of feeling the pain but by never so inconsiderable a motion, is not admitted into the order of noblemen. But if he carries himself resolutely in the torture, rowling himself

himself in his blood to denote his satisfacti-  
 on, then the ensigns of that honour are con-  
 fer'd on him. That they may be the secu-  
 rer of obtaining this honour, they enure  
 themselves from their infancy to prick and  
 flea their limbs after this manner, so that it  
 is frequent to see boys and youths run thorns  
 or briars through their tongues, lips, nos-  
 trils, ears or other parts; and forcing a sort  
 of laughter to conceal all sense of pain.  
 Thus much of the men. The women cloath  
 themselves below the bosom with coarse  
 nets, the rest of their bodies they paint or  
 adorn with stones set in it, particularly their  
 breasts and faces; making themselves bald,  
 shaving the hinder part of their heads with  
 razors of flint or reeds. When their *Ca-*  
*ciques* die, they all change their names, and  
 fast a whole month, howling most dismally  
 day and night. The manner of fasting a-  
 mong them is this; to eat no fish, but de-  
 vour as much flesh, and as often, as they  
 please: and the reason they give for it is,  
 that being used to war and robbery, whence  
 consequently they have no settled place of  
 abode, but live up and down wheresoever  
 they set up their mats after the manner of a  
 town, therefore they keep but two children,  
 one of which the father carries, and 't'other  
 the mother, that they may not fall into  
 the hands of their enemies; but if one or  
 both the children be grown up to be able  
 to follow them before another is born, then  
 they allow more to live. Many of their  
 old women are witches, and have frequent  
 converse with the devil: these would some-  
 times invite the fathers, using a motion  
 strange to other nations, often contracting  
 their hands turn'd upwards like claws or  
 hooks, and distorting their faces with wrin-  
 kled laughter, rattling something in their  
 throats, and whistling, for the *Abipones* un-  
 derstand one another by whistling; yet lit-  
 tle good was hoped when they call'd, de-  
 prav'd habits being as hard to be remov'd  
 in the mind as in the body. One of these  
 witches being press'd when she was dying to  
 be baptiz'd, as the only remedy against fall-  
 ing into the power of the devil for ever,  
 answer'd, *She did not fear the devil, having*  
*been long acquainted with him;* and so she  
 dy'd. The rest of 'em cordially entertain'd  
 the fathers, and, when they were returning  
 to *Especo*, bore 'em company in great num-  
 bers, under the conduct of *Caliguila*, for  
 thirty leagues, furnishing 'em continually  
 with what they kill'd, and desiring they  
 would not stay long away from 'em. The  
*Guamalucas* border on the *Abipones*, and  
 other nations that know nothing of christia-  
 nity.

Whilst the fathers were thus employ'd  
 in *Tucuman*, the province of *Urvaica* was  
 full of troubles; for news being brought  
 Vo L. IV.

that a great body of *Mamaluces* was in mo-  
 tion, no doubt was made but they design'd  
 against the converts of *Urvaica* and *Parana*.  
 All men were therefore order'd to be in  
 arms, and it was decreed, the forces of  
 both rivers must be join'd whatever it cost,  
 and the enemy drove out of their liberties  
 at the common expence, to put at once an  
 end to that continual war. To this pur-  
 pose four thousand *Indians* were chosen out  
 of all the towns, and arm'd as the time  
 would permit, some with slings, others with  
 bows after their ancient manner, and three  
 hundred of the chief had fire-arms given  
 'em. As soon as they had rendezvous'd at  
 the town *Mbororeo*, on the borders of *Ur-*  
*vaica*, they were order'd to prepare both  
 soul and body, their scouts bringing an ac-  
 count that the enemy was but one day's  
 journey from 'em, and had possess'd them-  
 selves of the river *Aaraguai*, which falls  
 into the *Urvaica*, with three hundred boats;  
 that they were 400 *Mamaluces*, in whom lay  
 the greatest strength, and two thousand seven  
 hundred *Tupus*. The enemy confiding in  
 their numbers, and encourag'd with assured  
 hope of a mighty booty, mov'd down the  
 river against our army, offering battle,  
 which was as readily accepted. The fight  
 was begun by the fortunate firing of a can-  
 non, which sunk three of the *Mamaluces*  
 boats, and then both the fleets engag'd.  
 The *Mamaluces* despairing of success on the  
 river, most of 'em landed, where our men  
 fought with no less success, and had totally  
 routed the enemy, but that night put an  
 end to the action. Another part of the ar-  
 my, in another place, came off without loss,  
 doing much harm to the robbers. At night  
 the retreat was sound'd, as well that the  
 converts might rest themselves, as to pre-  
 vent losing the victory obtain'd, by falling  
 to plunder in the dark. Only three of the  
 converts were kill'd that day. The next  
 morning, as soon as the light appear'd, they  
 were at arms again, and hemming in the  
*Mamaluces*, fell upon 'em on all sides, and  
 would certainly have made an end of 'em  
 in a small time, had not they, by favour  
 of a storm rising suddenly, retired into the  
 adjacent woods. After taking their camp,  
 our *Indians* still pursuing, overtook 'em as  
 they enter'd a small wood, a little before  
 night. Being there besieg'd, they became  
 rather desperate than courageous; yet our  
 men hunting them out thro' the thickets,  
 and over the rocks, overcame their rage  
 with wonderful bravery. They fought  
 every where hand to hand, for the place  
 would not allow 'em to do any execution  
 at a distance. The enemy's flight put an  
 end again to the battle at two in the after-  
 noon, the victors, thro' weariness, not be-  
 ing able to follow 'em. Of ours, three

g C

were

**T**TECHO, were kill'd and forty wounded; of the enemy's, a vast number, particularly of the *Tupus*, many of whom surviving the fight, came over to us, alledging as a reason for what they did the cruelty of the *Mamalués*, and their haughty government. The robbers being disappointed of their booty on the river *Urvaica*, when they had gather'd some strength after the fight, altering their design, divided their forces to fall upon the heathens, but this way of robbing was no more successful than that of open war; for those *Indians* who were the remains of the town of *S. Teresa*, about the river *Tebiquar*, whither they fled during the former depopulations, delivering themselves up to one company of *Mamalués*, unbound themselves in the night, and falling upon them, made a great slaughter; which done, they fled, and join'd the converts of *Parana*. At the same time another band of the thieves was utterly destroy'd by the heathens, and ten prime ringleaders of all mischief are reported to have been slaughter'd with their leader, by straggling parties. Another parcel of 'em, counterfeiting themselves to be of the faction of *Ignatius Abiacu*, captain of the *Mboresans*, enslav'd many who came in, taking them for friends. Those that went to take the *Caaguas* used much the same artifice; for, pretending there came fathers of the society with them, to teach the law of Christ, many *Indians* deliver'd themselves up, but the greater part defended themselves against force and fraud. Many of the *Mamalués* were cruelly handled by the *Gualaches*, the fiercest of all the *Indians*; for, when they fell into their hands, they tore off their beards and hair, and tore off the flesh from their arms and thighs to eat, mangling their bodies, and fixing their heads on poles upon the tops of their cottages, to terrify others: many of the *Gupuis* fared no better. 'Twas certainly reported from *Brazil*, that an hundred and twenty *Mamalués* perish'd in the fight and flight, and almost all the *Gupuis*. When our forces were dismiss'd, it being known that many, both infidels and christians, were dispers'd for fear of the *Mamalués*, and might be easily drawn to the town, if invited; and, that many of those taken before the fight had made escapes; the *Mboresan* converts making excursions by land and water, for two years together, brought in abundance of 'em. Among the few captives the *Mamalués* gather'd before the fight, and were driving to *Brazil*, a young maid, not above fourteen years of age, got into one only boat there happen'd to be on the river, and loosing it, was drove down by the stream; the robbers having no means to fetch her back, shot abundance

of arrows and bullets at her, but she making no account of them, and receiving no hurt, ran down the river till she fell among some of the *Mboresan Indians*, who conducted her safe to the town, where she was baptiz'd. Another about fourteen years of age, having been solicited to consent to lust of the robbers, and not knowing how to resist violence, knowing they were in great distress for want of provisions, pretended she could find excellent roots in the woods to supply them, if she were suffer'd to go; but as soon as she got thither she hid her self so safe that they could never find her, till she got safe to the town of the *Mboresans*. Two other sisters, the one of thirteen, t'other of ten years of age, after they had been drove an hundred leagues towards *Brazil*, made their escape with a youth their kinsman, and came safe to the same town above mention'd, where they found their father and mother. But we must not instance too many of these escapes, tho' strange, because the circumstances may be much alike. A powerful *Cacique* of *Urvaica*, who was a great enemy to christianity in general, and the society in particular, had contracted friendship with the robber, that he might be able to do mischief, and was so base as to deliver up many of his own people to those thieves. The *Mamalués*, the more to secure him to their interest, of their own authority, which was none at all, gave him the title of lord of all *Urvaica* and the adjacent rivers; and he, proud of his new authority, for some years did great harm in the lands of our converts, to the great benefit of the *Mamalués*. At length, displeas'd at the smallness of the reward of his treachery, he reounc'd their friendship, and fled with the faithfulst of his followers; but being taken by the *Mamalués*, and accus'd of being unfaithful to them, he in vain pleaded his services, and was by them put to death. Another *Cacique*, who in a boasting manner was used to threaten the fathers with death, and the first christian woman with his lust, declaring he would never give over till he had destroy'd all the towns of *Parana* and *Urvaica*, had his wife cruelly murder'd by the *Mamalués*, and he at the same time broke his leg in the woods. Some converts finding him out by his hideous cries, would certainly have made an end of him, had not the fathers obstructed, saying, it was the duty of christians to return good for evil. Thus he was not only sav'd, but carried to the town, where he became a christian. Here we will conclude with the *Mamalués*, whose barbarous villanies have afforded so much matter for this history.

Now

Reception  
of the  
provincial

Now the war is ended, to come to a more pleasing and peaceable subject; The provincial coming to make his visitation along the *Parana*, was met at the first town by two hundred boats full of converts from several colonies, representing a pleasant sight, whilst others on the shore congratulated his coming with vocal and instrumental music. All the towns receiv'd him with green arches, and extraordinary demonstrations of joy; he, on the other side, dismiss'd none without some gift, distributing among 'em glass beads, pins, needles, knives, iron tools, garments, and such other things as were acceptable. Being order'd by the general to act as visitor, as well as provincial, he regulated the affairs of twenty new towns built on the rivers *Parana* and *Uruguay*. Two fathers resided in each town, who, after the duties of their function, were attended by the chief men of the place, whom they directed how to manage their country affairs, what lands to till, whether they were to fish, hunt, or kill some cattle, and whatever else was to be done; for, in these beginnings, 'twas not lawful to go about any thing but what the founders approv'd of. Every year the fathers, by the king's authority, appointed magistrates, and gave them all honourable titles, to civilize those people by degrees; but these convert governors of towns could not do any thing of moment without the approbation of their instructors; and yet it is incredible how proud they were of that shadow of power, and of their officers rods. 'Twill not be to our purpose to reckon the many sufferings of the fathers to bring things to this posture, and therefore we'll pass on to other matters. In the year 1642, two fathers were sent out of the college of *Cordova*, to inspect a part of the seniority of that city, one of whom, when they came to that they call the fourth river, writ back to one of his friends concerning those people, in this manner: *The Indians, says he, dwelling on the banks of the fourth river border upon the Parparos, Guarparos, and Mendicinos. They are obstinate in adhering to the superstitions of their fore-fathers, and rather daub than paint their faces with strange colours, especially the widows and widowers. Things truly religious they abhor, and run over the christian prayers and ten commandments like parrots. Many of 'em have contracts with the devil: they make use of roots in their enchantments, to do all sorts of mischiefs: every village is under the care of an arch-forcerer, whose duty it is to visit the sick, out of whose bodies he counterfeits himself to suck the corrupt blood; and, that he may seem so to do, he beforehand puts some rotten matter into his mouth, which, when he has suck'd the affected parts, he spits*

Indians of  
the fourth  
river.

out, and so pretends the cause of the disease is removed. The whole nation is addicted to lust; the men use enchanting herbs to allure the women to their wicked designs. The women bore their nostrils, and other tender parts of their bodies, with sharp thorns as long as a finger, till they lose abundance of blood, which they receive into a dish, and with it paint the extremest parts of the skin of all the body, as our women do their faces, but especially the maids; and this tincture is so prevailing, that they scarce ever fail of compassing their lewd projects. The cruelty of these people is inhuman; the men often challenge one another, and the laws of duel are these: they fasten a stone ball cut into angles to a long rope, which the combatants roll about a long while; then they set foot to foot, and both hold down their bare heads, to receive the blows in their turns on their forehead, unless one be knock'd down the first stroke. He who strikes first is counted the more fearful and weaker, tho' sometimes at one forcing the antagonist is struck down. Thus they stand still a long while, like dunghill cocks, before they strike a stroke. The spectators applaud the victor with hideous shouts. If he that is hurt dresses the wound, he disgraces himself. They have another way of showing their courage, which is, to run an arrow thro' the skin of their bodies, and draw it out a great while after, as if it were a needle.

This is the account that father gives of those people, of whom many were converted, and forsook all their wicked customs. Another excursion was made by the fathers of *Rioja*, among the people call'd *Planos*, of whom there's little to be said in particular, but that they live on hills cover'd all the year with snow. The way to 'em is over vast mountains, and are miserably poor, scarce any of 'em having cottages to dwell in, but lying out in the open air, or at best in caves. Their spiritual wants were no less than the corporeal, for they had seen no priest in five years, but now afforded a plentiful harvest.

This year 1642 was very joyful throughout this southern province of *America*, made so by celebrating the first age, or hundredth year since the institution of the society. *Rome* kept it first by the magnificence of the *Barberines*; *Europe* the following year, and the new world the next after that; not with the majesty of *Rome*, the expence of *Spain*, the wit and vivacity of *France*, the plenty of *Germany*, or the ingenuity of the *Low-Countries*, but with no less devotion and good-will. *Cordova*, the metropolis of the province, began by keeping it eight days in most solemn manner. There were publick processions made, triumphal arches erected, and curious altars set up; the bishop of *Tucuman* preach'd in commendation of the society; a pillar was set up where four streets

Hundredth  
year of the  
society ce-  
lebrated.

**T**he streets met, on which was S. Ignatius darting fire out of a cane upon a hydra and a giant that were at some distance, to signify his conquest over heresy and paganism: plays were acted, the tower was set about with illuminations, and all manner of sports perform'd on horseback; but the most ingenious part was the orations and poems made in honour of the society. The port of *Buenos Ayres*, upon this occasion, outdid all it had ever done before, and to other parts, but these were all *Europeans*; yet the *Indians*, according to their ability, would not be behind them. The colony of S. *Xaverius*, on the river *Urvaica*, began, and entertain'd the fathers and principal men, invited thither from other towns, with variety of diversion: the festival commenc'd by singing vespers in musick, and making bonfires at night: the next day produced triumphal arches, abundance of altars, variety of dancing, and several exercises and representations: there were declamations both in *Latin* and the *Indian* language. In the afternoon the *Mbooreans*, who were guests there, acted a play, in which the *Mamaluces* making an irruption to rob, were shamefully routed and punish'd. Another colony, among many other extraordinary things, erected six hundred triumphal arches, and hung under 'em all sorts of things, in token of gratitude, to express they had receiv'd all goods from the society. The same was perform'd upon the river *Parana*, the converts expressing most singular affection towards their instructors: they made a general review of their forces, and danc'd after a military manner, bearing the letters of the name of S. Ignatius on their shields, compassing ingenious anagrams: at night a fight of boats upon the river by torch-light put an end to the solemnity. At the colony of the *Incarnation*, after a play, there appear'd in publick an old giant of a vast size, follow'd by an hundred boys in several colours, by their variety representing the duties of the society, and singing praises to the old giant. At a little distance they were met by a herd of an hundred oxen, and so pass'd on thro' an hundred triumphal arches to the church, on the porch whereof an hundred loaves were offer'd: on the high altar were an hundred lights, and before them an hundred praises of the society. Over the gates of the church were three statues; that in the middle representing the society; those on the sides wisdom and piety, with this inscription, *The society an hundred years old triumphs, under the conduct of piety attended by wisdom.* An excellent *Latin* oration gain'd the applause of all that heard it: then appear'd a vast triumphal chariot, on which sat the chief heroes of the society, with many other

particulars; the whole concluded in a play, and so ended the solemnity.

The college of the fathers at *Cordova* <sup>A rich chapel.</sup> was now enlarg'd, and such a private chapel finish'd in it as may vie with the best in *Europe*; 'tis all painted, the whole cover'd with excellent representations of saints, except at certain intervals, where pillars of jasper, and several sorts of marble, are represented to the life: under the pedestals of the pillars are turn'd seats; the roof, richly diversify'd with gold and costly colours, and a little arch'd, seems to be supported by architects, the art of *Perspective* imposing upon the eyes. The altar is very beautiful, and on it a throne all gilt, finely arch'd, and carv'd in the shape of a scallop, on which is seated an image of the blessed Virgin, made by an excellent *Spanish* carver. Under the image of our Lady lies the body of S. *Epimachus*, sent by pope *Urban VIII.* in a curious shrine: below that again, in a rich case, is a crucifix, which S. Ignatius held at the time of his death, given by the general of the society *F. Vitellesci*. Some fathers making excursions from this college into the province of *Tucuman*, said they met with old men, who had never been near a priest since the first coming of the *Spaniards*, but now hearing of the coming of these fathers, came out of their caves with long beards and hair, over-run with vermin, and almost wasted to nothing, yet more hideous for the corruption of their souls, being grown old in wickedness, and more like beasts than men; yet these confess'd their sins, and express'd repentance. Among the rest, they found one man an <sup>Barbarous</sup> hundred years of age, who, for want of <sup>old men,</sup> priests, had liv'd about eighty years without confession, and yet without being guilty of any grievous sin; for, contenting himself with his own wife, he had never coveted any other woman, or other mens goods. Being ask'd by one of the fathers, whether he knew there was a *God*, he answer'd in the affirmative. The question being put to him again, whether he us'd any sort of prayer to *God*, he reply'd, he knew no other manner of worship than putting his hands together, and holding 'em out towards heaven, now and then to cry *God! God!* and had never us'd or known any other form of prayer. Being desir'd to do it as he was wont, he readily clapt his hands together, and lifting up his eyes to heaven, call'd upon *God* several times with such a tenderness as drew tears from the fathers eyes. *F. Medina* was sent by the provincial from the college of the city of S. *Michael* in *Tucuman*, to try whether any progress could be made in the territory of *Chaguay*. The father being come to *Omaguaca*, sent one *Laurence*, an *Indian*, a man well

The *Mataguaias*.

well vers'd in business, to try the *Mataguaias*, thro' whose lands there was a short way into the province of *Chaguan*. These *Mataguaias* inhabit four towns *sic*, & to as many *Caciques*, whose power is almost equal. *Laurence* having deliver'd some presents to the chief of them from *F. Medina*, and declar'd the cause of his coming, was the cause that the other *Caciques* were call'd together to consult what was to be done: there 'twas decreed by unanimous consent, that the fathers were not only to be permitted, but entreated to come among them; that the shortest way should be found out, and the road to be mended; that therefore *Laurence* should return, and acquaint the father that his coming would be most acceptable to them, but they desir'd him only to stay till the floods were in, for then they would send him guides and provisions; and if the father would bring them some iron tools, 'twould be a great advantage. The resolution of the *Caciques* being known, all the people ran joyfully to express their satisfaction to *Laurence*. The old women and maids petition'd, that the father would obtain some supplies of clothes, to defend them against the cold, and make 'em appear more modestly. All things seem'd to promise success, and yet the design was then laid aside, for want of fathers to employ, the provincial by advice recalling *F. Medina*, and putting off this enterprize till fresh supplies were sent out of *Europe*, because at present 'twas thought fitter to continue the mission to the *Calchaquines*, of whom all that can be said has been deliver'd before.

A controversy about the consecration of *D. Bernardino de Cardenas*, bishop of *Paraguay*. He receiv'd the king's letters in *Peru*, acquainting him, that his majesty had conferr'd the said bishoprick on him, and expected only the pope's bull of confirmation. The bishop elect, impatient of delay, was unwilling to expect the pope's bull of approbation; wherein, because of the small number of bishops in the *Indies*, 'tis usual to allow one only bishop, contrary to the general practice, to consecrate another. He therefore, for the more speedy attaining his dignity, put the question to the college of *Jesuits* at *Cordova*, whether the usual form might not be dispens'd with; and, by reason of the great distance, the pope's consent be taken for granted. The college answer'd, 'Twas contrary to the opinions of the learned, and decrees of councils. But he was too hasty to be stopp'd; and being consecrated by one bishop, without expecting the pope's bull, repair'd to his church of *Paraguay*; which was the ground of an eager controversy, which being carried high,

VOL. IV.

spread thro' the world, and was the subject of a doleful history writ by another hand, and not to be handled by me: yet I must not omit to mention some slanders rais'd upon this occasion, and afterwards clear'd, which I will deliver all at one view. The new bishop's dislike to the society being known abroad, their enemies laid hold of this opportunity to revive the ancient forgotten calumnies, the chief whereof was a fabulous story of the gold of *Urvaica*, long since exploded, and then again given out thro' all *Christendom*. For the better understanding of the whole, we will look back to the original of it. Many years before this time, one *Bonaventure*, an *Indian* of the meaner sort, having liv'd some time in the port of *Buenos Ayres*, went away first among the wandering infidels, and afterwards to the colony of the *Japevians* on the *Urvaica*, where he ran away with another man's wife, and, being taken, was publicly whipp'd, for an example to the other converts. Being sent again to *Buenos Ayres*, he there, I know not by whose instigation, framed a plausible story about gold found by the *Jesuits* near the river *Urvaica*, that he impos'd upon men of good sense; for he confidently affirm'd he had wrought a long time in *Urvaica* at accus'd of digging of gold; and, that there was such plenty, that in three days a man might fill a half-bushel with pure gold-dust. He said further, that he had been tempted to hide a great parcel of gold for his own use, being resolv'd to run away, but that being betray'd by his fellow, he was by the fathers whipp'd and banish'd. When he had told this story, he describ'd the place and nature of the gold mines so particularly, and ly'd so artificially, that the whole matter appear'd more than credible, and many affirm'd there was no doubt to be made of the truth of it. The society, to clear its reputation, complain'd to the proper judges, and prevail'd to have the business examin'd. The magistrates did their duty, and, after much enquiry, *Stephen de Avila*, governor of *Buenos Ayres*, publicly declar'd, and writ to the king's council at *Madrid*, that the report spread abroad concerning the gold of *Urvaica* was a meer fiction of idle men, and the enemies of the society. Thus that fable was suppress'd for some time, till some time after the impostor reviv'd it among some new-come *Europeans* that were greedy of gold, and had the impudence to carry it to *Hacinibus de Lara*, the new governor of *Buenos Ayres*. The governor, tho' he did not altogether give credit to it, wish'd it were true, and could not resolve what to conclude. As he stood thus doubtful, he receiv'd letters from *Paraguay*, in which the bishop affirm'd 'twas certainly

9 D

made

**TECHO**, made out there were gold mines near *Urvaica*. The impostor rejoic'd to see his lye confirm'd by the bishop, and the governor churling after gold made all possible haste to set out in search of it. Accordingly he began his journey of two hundred leagues up the river *Parana*, attended by forty soldiers, and *Martin de Vera*, lord of a gold mine in *Peru*, and a most skilful man at trying of metals. *Bonaventure* the informer was order'd to follow him, but he knowing he had a bad cause in hand, slipp'd away in the journey. The governor somewhat discourag'd by his flight, still held on his journey, being nobly receiv'd in the towns built by the society, and tho' to them he conceal'd the cause of his coming, yet privately enquir'd by his interpreters among the *Indians*, where the gold was found.

This being known, *F. Diaslanus*, superior of the fathers in *Parana* and *Urvaica*, petition'd him that he would publicly inquire concerning the gold mines, and appoint a day to try that cause, that the society might be clear'd from the scandal. The governor granted his request, and at the same time encourag'd the soldiers with hopes of great rewards to discover the mines. They left no stone unturn'd to find out the gold, and some of them travell'd several day's journey with an *Indian* who promis'd to discover the mines, but were only laugh'd at when they return'd, having found nothing but some bright shining snails. In the mean while letters were brought the governor from the city of the *Assumption*, both from the governor and bishop of that province, both of them owning they could make out nothing certain concerning the gold of *Urvaica*. This enrag'd the governor of *Buenos Ayres* to see himself impos'd upon, and so honourable an order abus'd; yet he was perplex'd about the flight of *Bonaventure*, and the society wish'd he might be found, and so all doubts taken away. This happen'd as they had desir'd, he was taken in the town of the *Japeirovians*, and brought in irons to the governor, who asking him in friendly manner to discover the gold he had so much talk'd of, he deny'd he had ever spoke of any such things, and stood positively in the denial. The governor, to whom he had often told the story, in a passion order'd him to be rack'd, and even there he persisted in his denial. Nothing being extorted he was condemn'd to death, but the fathers interceding, for him he had two hundred lashes given him, and was banish'd the province for ever. Not so satisfy'd, the enemies of the society sent letters to the king's council at *Madrid*, reviving this imposture, whereupon one *Garabito*, of the royal council of *Peru*, was appointed to ex-

amine it again, who having brought the informers to confess the forgery, fin'd some and banish'd others. Yet malice stopp'd not here, but the charge being renew'd in *Spain*, the king sent *D. John de Velasco* governor of *Paraguay* to examine further into it, with the title of his inspector; he repairing to the river *Urvaica*, and having narrowly sifted the matter, and convicted all the accusers of manifest forgery, impos'd heavy fines on them, the fathers interceding that their punishment might not be severer. Thus this slander cast upon the society was quite expung'd almost twenty years after it was first cast upon them, and been carry'd so far that all the fathers who were not *Spaniards*, had like to have been disgracefully sent out of the provinces of *Parana* and *Urvaica* into *Europe*; for they had added to the rest of the fiction, that the fathers who were not *Spaniards*, had sent a vast quantity of gold to the *French* and *Portuguese* enemies to *Spain*; but the foundation of the calumny failing, this superstructure of course fell to the ground. Nor did the wicked practices end here, for the invention above mention'd failing, the society was accus'd of dissuading the converts from paying tribute to the king, but the same *D. John de Velasco* clear'd them of this imputation upon strict inquiry made, and writ honourably to the king in their behalf. The ground of this accusation, was the fathers protecting the *Indians* from being made slaves to private persons, the dread whereof was the main thing that obstructed the conversion of those poor souls. Besides, the king to encourage those people to embrace the faith, had allow'd all that should be baptiz'd, to be free from paying any tribute for twenty years after they were baptiz'd; and his majesty well knew that those poor people being continually harass'd by the *Mamelucs*, and in arms to defend themselves, could not be expected to pay any tribute, but ought rather to be supported and maintain'd. This reflection was also taken away by the converts themselves, who when the twenty years of grace were expir'd, and they had a little respite from the *Mamelucs*, freely promis'd to pay the tribute to the king. Since we have gone so far, we must go through with all the calumnies rais'd against the society, and finish this matter in a few words. The enemies of the society further alledg'd, that the king was at a great expence in sending fathers over to *Paraguay* to no advantage; which imputation could not be of any force, where it was visible such a vast tract of land had been converted to the faith, and reduced under the dominion of his catholic majesty, by their only labours and sufferings.

This

This failing, it was further whisper'd in the ears of the magistrates, that they did not teach the converts sound doctrine. To make this out, they urg'd that the fathers in rendering the names of God, the Son of God and Mother of God into the *Guaranian* language, made use of prophane words formerly apply'd to their superstitions. To wipe this off, it was prov'd that the society made use of the same words all other orders had made use of before their coming into those parts; and that they were the same that had been always us'd in *Brasil*, between the language of which province and the *Guaranian*, there is great affinity; and therefore a synod held at *Lima*, and approv'd by the pope, clear'd the honour of the society in this case, as in the others that had been done before. The last accusation was, that the society disown'd the consecration of the bishop of *Paraguay*, for the reasons mention'd at the beginning of this section, and therefore not to be repeated in this place, and this was objected to them as schismatical, till the pope declaring, that the bishop so consecrated had no jurisdiction, the society was clear'd from that imputation of schism; but before all these slanders could be remov'd, the bishop of *Paraguay* had great strugglings with the society, which do not at all belong to this history, and therefore we will proceed to put an end to the little that remains.

into the  
province  
of *Itatina*.

Great disorders were committed this same year 1644, in the colony of the *Potensians* of the province of *Itatina*, the natives at the instigation of *Niandubazurcius*, presuming to mutiny, and openly disobey the fathers, who offering to reprimand them for their insolence, were not only abus'd in words, but struck. For *Borobebus*, nephew to *Niandubazurcius*, after *F. Mannea* had been ill treated by another, hit him in the face with a cudgel; and another wounded *F. Arenos* on the head. *F. Badia* reproving their base proceedings, *Niandubazurcius* himself gave him very ill language, declaring, *He would transmit those customs he had receiv'd from his ancestors to posterity*. *Nantabagua*, another nephew of *Niandubazurcius*, enrag'd because one of the fathers had taken away the rod of his office as a punishment for his offence, interrupted the sermon in the church, stirring up the people to revolt, and railing against the doctrine of the fathers, as opposite to the manners and customs of their forefathers, prevail'd with all the audience to forsake the preacher. From that time the fathers commands, the authority having been thus debas'd, were made no account of; they themselves were scorn'd by all degrees, no honour was given to religious things, no body was left to attend the fathers even in

the church. The fathers having in vain try'd fair words and threats, finding it necessary to take a harsher course, artfully drew *Niandubazurcius*'s son and two nephews out of the town, and had them convey'd to the town of the *Japevians* on the river *Urubaica*, two hundred leagues distant, that it might not be easie for them to come back. The heads being remov'd, the face of things immediately chang'd. The people flock'd to the church, and perform'd all christian duties, all lewdness and barbarous customs were banish'd, and virtue and submission succeeded in their place. Many heathens who were before kept back by *Niandubazurcius*'s ill practices, resorted to the town and embraced the faith. Many infidels daily resorted to the town, which gave hopes of greater success; but none so much rejoiced the fathers, as some *Gentiles* from the other side of the river *Paraguay*, where the fathers had not yet been; who came to acquaint them, that abundance of their countrymen, being expos'd to the continual incursions of the *Guacurians*, were inclin'd to forsake their own country, and come over into the lands about that town. Besides *Guairamina*, nephew to *Paratiquin* the greatest man among the *Guirapos*, coming to the fathers, and counting to them according to the custom of the country, what nations were on both sides the *Paraguay*, inflam'd them with a desire of extending the empire of Christ beyond that river.

Hitherto the fathers of the province of *Itatina*, by reason of their small numbers, the invasions of the *Mamelucos* and troubles among the converts, had kept themselves within this side the river *Paraguay*; but Attempt having now obtained peace at home, and the fa- being increas'd in numbers, they were desirous to carry the gospel beyond that river, knowing by information given from many, that the vast tract which extends an hundred and fifty leagues between *Itatina* and *Peru*, was very full of *Indian* villages, where the christian faith was not yet profess'd, and where many towns might be built, if the society were once admitted. But this was a difficult province, as being much infested with forcerers and apostates, and therefore required a man of experience and resolution. For this reason *F. Laquercius*, the provincial, knowing *F. Romero* to be fit for any such undertaking, order'd him to the province of *Itatina*, and with all speed to pass the river. He being come unto his province, consulted with the other fathers and principal converts, who all resolv'd the attempt ought to be made without delay, and accordingly he set out in the year 1645, attended by *F. Vanjurk* and some faithful converts of both towns; and passing the *Paraguay*, the twenty

**T**he second day after his setting out, came unto the first village of the *Indians*, where he found many, who having before heard of the society, were not ill dispos'd to receive the faith. He would have gone further in hopes of a more plentiful harvest, but was held back by his own company, and the natives, who affirm'd he would ruin all if he was too hasty. For this reason he settled with *Curapato*, a *Cacique* of great fame in the first villages; and many resorting to him from the neighbouring parts, he mark'd out the ground for a town, built a chappel under the invocation of *S. Barbara*, erected a cross, and began to declare the first principles of religion to the people. Finding the heathens inclinable to embrace christianity, he writ to the provincial, desiring him to send, with all speed, some able persons to assist him in the work so happily begun. This done, he set away all the converts but six, to their towns, and *F. Vanjurk* to the city of the *Assumption*, for necessary tools to build a town. It happened at that time, one *Guiraguera*, a heathen from some remote part, was come to the same place, on account of trade, whom *F. Romero* laboured to win, and he craftily promised to use his endeavours to reduce his country people to the new town; but being a cruel and deceitful man, he made it his business when he came thither, to incense them against the christian preachers. Many, who had fled out of *Peru* and other parts to live more at liberty, seconded him; and above all, one *Mborosenius* an impostor, who being skill'd in sorcery, assumed the title of a deity. It was easy to persuade one *Tucumbaius*, who was appointed to manage the design of murdering the father, and he taking *Guiraguera* and forty more assassins with him, set out, as if they were to desire to be baptiz'd. To secure him that he might not escape their hands, they sent out before to acquaint him with their coming, and that the design of it was to embrace the faith. *F. Romero* was warned of the danger, and advised to fly, but he despising that which look'd like fear, went out to meet them, and having exhorted them to embrace the opportunity, offer'd them of being admitted into the number of the sons of God, gave them some presents, and went away to say mass. *Tucumbaius*, thinking no time was to be lost, gave the signal to the murderers; one of them gave them three blows on the head with his club, which laid him flat on the ground. The rest of them murder'd one *Fernandez* the father's companion, as yet only a novice, and one *Gonzalo* a convert; which done, perceiving the father was still alive, they ript open his belly, pull'd out his tongue, cut his throat, chopt off his fin-

gers, and thrust them into his belly, superstitiously believing that would prevent any revenge being taken for murder committed. Then they plundered all they found, and whilst they were fore employ'd, the other five converts fled, and all of them return'd safe home, who gave an account of what had happened. When the murderers were gone, the natives of the place returning home from their country affairs, were extremely griev'd at this action; and having laid the dead bodies decently together, men and women, as is the custom of the country, made dismal howling in their turns, like singing in a choir, and then were silent by fits, which are the funeral ceremonies; and thus they committed them to the ground, till seven months after those same heathens put the bones of the father, and his companions into several coffins, and sent them honourably to the fathers in the province of *Itatina*.

At this time, that is, the year 1645, State of there were in the province of *Paraguay*, a- the pro-  
vance. about two hundred fathers distributed into nine colleges, and twenty four residences among the *Indians*. Of an hundred priests but few serv'd the *Spaniards*, being always taken up with the *Blacks* and *Indians*, governing the fodalities of the *Spaniards*, and teaching in the schools. Many liv'd altogether among the *Indians*, and others were at certain times sent out of the colleges upon apostolick missions; for as *F. Aquariva*, the provincial, foretold, the province of *Paraguay* is not conspicuous for many towns, but that defect is made amends, for by these frequent excursions to disseminate the gospel, yet many new expeditions have been put by and obstructed, by the small number there is of fathers, and the invasions of the *Mamelucs*: This scarcity of fathers has been in a great measure caus'd by the false calumnies before spoken of, cast upon them, which has caus'd the stopping of many in *Europe* that were to have been sent over. And to say the truth, there has been a great reason in these latter times, to hope for a plentiful spiritual harvest, were there but labourers to ply the work; and the two provincials *F. Lupercius* and *F. Ferrusius*, were forward enough to promote it; so that though it has not been possible to build towns to sociate in, yet has brought many of the scatter'd *Indians* into the flock of Christ. The provinces of *Parana* and *Urvaica* now flourish'd under the care of the fathers; that of *Itatina* was again pester'd by the *Mameluc* robbers; and that of *Cabaquina*, tho' few souls were gain'd there, by reason of the obstinacy of the natives, was still possess'd by two residences, in hopes of mollifying those hard hearts. It would be tedious, and from our purpose to speak

Speak the praises of those many worthy fathers dispers'd through the province; yet we cannot but admire the bounty of the catholic king, who spares no cost to promote its good, sending over, feeding, maintaining, and defending preachers to instruct those people, for which the society, in its general assembly, decreed his majesty their

thanks, and order'd him to be pray'd for, *TENO*, which is perform'd in a particular manner in *Paraguay*. And here we will give rest to our pen, wishing *Philip the Great*, as a reward of his zeal in propagating the faith, long and happy reign here, and an everlasting kingdom hereafter.

*This paragraph was omitted in Page 662, and must be inserted after the break in the last column, which the reader is desired to take notice of.*

*Francis de Alfaro*, the king's visitor throughout south America, by his majesty's order, utterly took away the abuse of personal service, setting the *Indians* at full liberty, and delivering them from all oppression. But because many of the *Indians* of *Paraguay* had nothing to pay as tribute, he therefore order'd, that in lieu of it, they shall serve one month in their year, but if the *Spaniards* would make use of them any longer, they should have them as hired servants, upon their own free will, and paying them their wages. He enacted other laws for the common benefit of the *Spaniards*, which the king afterwards ratify'd, and continue to this day in force, saving only that his majesty allow'd two months service instead of the one we said *Alfaro* had appointed. And to the end the heathens

for the future might not be deterr'd from embracing the faith, for fear of being seized and put to trouble, the country of *Parana*, the *Guaicureans* and *Guaia*, were put under the direction of the *Jesuits*, upon condition the *Indians* being brought unto towns, should not, upon any account, be given to private men, by way, as they call it, of *Encomienda*; that is, to be entrusted with, or rather to lord it over them. The fathers were order'd to be maintained at the king's cost; and it is remarkable, That *Alfaro* assigning every one of those that should be so employ'd, the same allowance that was given to the curates of the *Indians* in *Peru*, the provincial, *F. James Torres*, oppos'd it, saying the fourth part of that allowance was enough for religious men, who were to live sparingly.

EIGHT ENGLISH-MEN,

Left by Mischance in

# GREENLAND,

A N N O 1630.

## Nine Months and Twelve Days:

With a True Relation of all their Miseries, the Shifts and Hardships they were put to, their Food, &c. Such as neither Heathen nor Christian ever before endured.

With a Description of the chief Places and Ravities of that barren and cold Country. Faithfully reported by Edward Pellham, one of the Eight Men aforesaid. As also with a Map of Greenland.

---

*To the Right Worshipful Sir John Merick, Governor of the worshipful Company of Muscovy Merchants; Sir Hugh Hamerly, Knight and Alderman of the City of London; and to the Worshipful Mr. Alderman Freeman, Captain William Goodlet; and to all the rest of the Worshipful Assistants and Adventurers in the said famous Company: Edward Pellham dedicateth both this and his future Labours.*

*Right Worshipful and most famous Merchants,*

**T**H E hard adventure my poor self and fellows underwent in your worship's service, is a great deal pleasanter for others to read, than it was for us to endure. However hard, we have now endured it; and if ever after-ages shall speak of it (as the world still doth of the Dutch-men's hard winter in *Nova Zembla*;) thus much of the voyage shall redound to your honours, that it was done by your servants. This may also return to our country's good; that if the first inhabiting of a country by a prince's subjects (which is the king of *Spain's* best title to his *Indies*) doth take possession of it for their sovereign: then is *Greenland*, by a second right, taken *Livery* and *Seisin* of for his majesty's use; his subjects being the first that ever did (and I believe the last that ever will) inhabit there. Many a rich return may your worships in general, and the brave adventurers in particular, receive from this and all other places: and may your servants be ever hereafter warned to take heed by our harms. *God send your worships long life, and much honour, and sufficient wealth to maintain both.* This is the hearty prayer of your worship's poor servant,

EDWARD PELLHAM.

TO THE  
**R E A D E R.**

**C**ourteous Reader: that God may have the only glory of this our deliverance, give me leave to look back unto that voyage which the Dutch-men made into Nova Zembla, in the year 1596. In which place, they having been (like our selves) overtaken with the winter, were there forced to stay it out as we were. Which being an action so famous all the world over, encourag'd me both to publish this of ours, as also now to draw out some comparisons with them; that so our deliverance and God's glory may appear both the more gracious and the greater.

This Nova Zembla stands in the degree 76, north latitude: our wintering place is in 77 degrees and 40 minutes, that is, almost two degrees nearer the north pole than they were; and so much therefore the colder. The Dutch were furnish'd with all things necessary both for life and health; had no want of any thing: bread, beer, and wine, they had good, and good store. Victuals they had God's plenty; and apparel both for present clothing, and for shift too: and all this they brought with them in their ship. We (God knows) wanted all these; bread, beer, and wine we had none. As for meat, our greatest and chiefest feeding was the Whale frittars, and those mouldy too; the loathsomest meat in the world. For our venison, 'twas hard to find, but a great deal harder to get: and for our third sort of provision, the bears, 'twas a measuring cast which should be eaten first, we or the bears, when we first saw one another: and we perceived by them, that they had as good hopes to devour us as we to kill them. The Dutch kill'd bears, 'tis true: but it was for their skins, not for their flesh. The Dutch had a surgeon in their company; we none but the great physician to take care of and cure us. They had the benefit of bathing and purging: we of neither. They had their ship at hand to befriend them; we had here perished, had not other ships fetcht us off. They had card and compass, we no direction.

If the Dutch complain'd there of the extremity of the cold (as well they might) and that when in building their house, they (as carpenters use to do) put the iron nails into their mouths, they there froze, and stuck so fast, that they brought off the skin and forced blood: How cold, think you, were we, that were fain to maintain two fires to keep our very mortar from freezing. The Dutch complain'd, that their walls were frozen two inches thick on the inside, for all their fire: and if ours were not so, 'twas our pains and industry at first in building. The Dutch-mens cloaths froze upon their backs, and their shoes were like barns upon their feet: but that was their own ignorance; for they had sea-coals enough with them, if they had known how to use them. If their drink and sack were so hard frozen into lumps of ice, that they were fain to cut it out; how much harder was it for us, that were forced to make hot irons our best toasts to warm the snow withal, for our morning's draughts? they used heated stones and billets to their feet and bodies, to warm them: which, though an hard shift, yet was it better than we had any.

Lay now all these together, the distance of place, we being many miles more into the cold than they: the want both of meat and cloaths; and that the house we lived in, we had but three days respite to build for nine months to come; and then may the world see, that the Dutch had the better provisions, and we the abler bodies. If therefore the Dutch-mens deliverance were worthily accounted a wonder; ours can amount to little less than a miracle. The greater therefore our deliverance, the greater must be God's glory. And that's the authors's purpose in publishing of it. God keep the readers from the like dangers. So prays he that endured what he here writes of.

EDWARD PELLHAM.

The names of the men thus staying in Greenland, for nine months  
and twelve days.

**W**illiam Fakeley, gunner; Edward Pellham, gunner's mate, the author of this relation; John Wise, and Robert Goodfellow, seamen; Thomas Ayres, whale-cutter; Henry Bett, cooper; John Dawes, and Richard Kellet, landmen.

## God's Power and Providence in the Preservation of eight men in Greenland, nine months and twelve days.

*But we had the sentence of death in our selves, that we should not trust in our selves, but in God which raiseth the dead.*

*Who deliver'd us from so great a death, and doth deliver : In whom we trust that he will yet deliver us. 2 Cor. 1. ver. 9, 10.*

PELL-  
HAM.

**G**REENLAND is a country very far northward, situated in seventy seven degrees, and forty minutes, that is, within twelve degrees and twenty minutes of the very north pole it self. The land is *wonderful mountainous*; the mountains *all the year long full of ice and snow*: the plains in part bare in summer time. There grows *neither tree nor herb* in it, except *scurvy-grass* and *ferrel*. The sea is as barren as the land, affording *no fish but whales, sea-horses, seals, and another small fish*. And hither there is a yearly fleet of *English* sent. *We eight men* therefore being employ'd in the service of the right worshipful company of *Muscovy* merchants, in the good ship called the *Salutation of London*, were bound for this *Greenland* aforesaid, to make a voyage upon *whales* or *sea-horses*, for the advantage of the merchants, and the good of the commonwealth. We set sail from *London* the first day of *May*, 1630, and having a fair gale, we quickly left the fertile banks of *England's* pleasant shoars behind us. After which, setting our comely sails to this supposed prosperous gale, and ranging thro' the boisterous billows of the rugged seas, by the help and gracious assistance of Almighty God, we safely arriv'd at our desired port, in *Greenland*, the eleventh of *June* following. Whereupon having moored our ships, and carried our cask ashore, we, with all expedition, fell to the fitting up of our shallops, with all things necessary for our intended voyage. We were in company three ships; all which were then appointed by the order of our captain, captain *William Goodler*, to stay at the *Foreland*, until the fifteenth of *July*; with resolution, that if we could not by that time make a voyage according to our expectation, then, to send one ship to the eastward, unto a fishing place some *fourscore* leagues from thence; whither, at the latter end of the year, the

*whales* use more frequently to resort. A second of the three ships was designed for *Green-barbor*, a place some fifteen leagues distant to the *southward* there to try her skill and fortune, if it were possible there to make a voyage. The third ship (which was the same wherein we were) was appointed to stay at the *Foreland*, until the twentieth of *August*. But the captain having made a great voyage at *Bell Sound*, dispatches a shallop towards our ship, with a command unto us to come to him at *Bell Sound* aforesaid: his purpose being, both to have us take in some of his *Trane-Oyl*, as also by joyning our forces together, to make the fleet so much the stronger for the defence of the merchants goods homeward bound, the *Dunkirkers* being very strong and rife at sea in those days. Upon the eighth day of *August* (thereupon) leaving the *Foreland*, we directed our course to the *southward*, towards *Green-barbor*, there to take in twenty of our men, which had out of our ship's company been sent into the lesser ship, for the furtherance of her voyage.

But the wind being now contrary, our ship could no way lye our course. The fifteenth day being calm and clear, and our ship now in the *Offing*, some four leagues from *Black-point*, and about five from the *Maidens-papps* (which is a place famous, both for very good and for great store of *venison*;) our master sent us eight men here named, altogether in a shallop for the hunting and killing of some venison for the ships provision. We thus leaving the ship, and having taken a brace of dogs along with us, and furnish'd our selves with a snap-hance, two lances, and a tinder-box; we directed our course towards the shoar, where in four hours we arriv'd, the weather being at that time fair and clear, and every way seasonable for the performance of our present intentions. That day we laid fourteen tall and nimble deer along; and

and being very weary and thoroughly tired, first with rowing, and now with hunting, we fell to eat such victuals as we had brought along, agreeing to take our rest for that night, and the next day to make an end of our hunting, and so fairly to return to our ship again. But the next day, as it pleased God, the weather falling out something thick, and much ice in the *Offing* betwixt the shoar and the ship (by reason of a southerly wind driving along the coast) our ship was forced to far to stand off into the sea, to be clear of the ice, that we had quite lost the sight of her: neither could we assure our selves, whether she were inclos'd in the drift ice or not: And the weather still growing thicker and thicker, we thought it our best course to hunt along the shoar, and so to go for *Green-barbor*, there to stay aboard the ship with the rest of our men, until our own ship should come into the port.

Coasting thus along towards *Green-barbor*, we kill'd eight Deer more; and so at last having well loaded our shallop with venison, we still kept on our course towards *Green-barbor*: Where arriving upon the seventeenth day, we found (to our great wonderment) that the ship was departed thence, together with our twenty men aforesaid. That which increas'd our admiration was, for that we knew they had not victuals sufficient abroad, to serve them (by proportion) homewards bound: Which made us again to wonder, what should be the reason of their so sudden departure.

Perceiving our selves thus frustrated of our expectation, and having now but bare three days (according to appointment) to the uttermost expiration of our limited time for our departure out of the country; we thought it our best course to make all possible speed to get to *Bell-Sound*, unto our captain, fearing that a little delay might bring a great deal of danger. For the lightening therefore of our shallop, that she might make the better way through the waters, we heaved our venison over-board, and cast it all into the sea. Having thus forsaken *Green-barbor*, with a longing desire to recover *Bell-Sound* (from thence distant some sixteen leagues to the southward) that night we were got half way about the point of the *Nesse*, or point of land called *Low-Nesse*: But the darkness or misty fog increasing fast upon us, it was impossible for us to get further; even there between two rocks we cove from the seventeenth day at night, until the eighteenth day at noon. At which time the weather being somewhat clearer (though very thick still) we left the *Nesse* behind us, still desirous to recover *Bell-Sound*: But having never a compass to direct our course by, nor any of our company that was pilot

Vol. IV.

sufficient to know the land when he saw it, *PELL-* we were fain to grapple in the dark (as it *HAM.* were) like a blind man for his way, and so over-shot *Bell-Point* at least ten leagues to the southward, toward *Horn-Second*.

Some of us in the mean time knowing that it was impossible to be so long a rowing and sailing of eight leagues (for we did both row and sail) made enquiry, *How the barbor lay in?* whereunto there was a ready answer made, *That it lay east in.* Taking the matter therefore into our better consideration, some of us judged, that it could not possibly be further to the *Southward* (our reason being, our observation of the land's rounding away and trending towards the eastward) and resolved thereupon to row no further on that course, for the finding of *Bell-Sound*. And though we were again persuaded by *William Fakely* our gunner (a proper seaman, though no skilful mariner, who had been in the country five or six times before, which none of our scamen had been) that it was further to the southward: Yet we, trusting better to our own reasons than to his persuasions, again return'd towards the *Northward*, which was our best and directest course indeed for the finding of *Bell-Sound*. Steering of which course, we were now come within two miles of *Bell-Point*; and the weather being fair and clear, we presently decryed the tops of the lofty mountains. *William Fakely* thereupon looking about him, presently cries out unto us, *That we were all this while upon a wrong course*: Upon hearing of which words some of our company (yea the most) were persuaded, to wend about the boat's head the second time, unto the southward: Which one action was the main and only cause of our too late repentance, though for mine own part (as it is well known) I never gave consent unto their counsel.

And thus upon the fatal 20th day of *August* (which was the utmost day of our limited time for staying in the country) we again returned again quite the contrary way, namely to the southward. Thus utterly uncertain when and where to find the *Sound*, a thousand sad imaginations overtook our perplexed minds, all of us assuredly knowing, that a million of miseries would of necessity ensue, if we found not the ships, whereby to save our passage. In this distracted time of our thoughts, we were now again the second time run as far to the Southward as at the first; and finding by all reason thereupon, how that there was no likelihood at all of finding any such place further to the southward, we wended the shallop the second time unto the northward. *William Fakely* hereupon, being unwilling to condescend unto our agreement, still persuaded us, that *That could not possibly be*

9 F

PELL-our course: But we not trusting any longer  
H.A.M. unto his unskilful persuasions (though all in  
him was out of good will, and ilron conceit  
of his being in the right) bent our  
course to the northward; and he not con-  
senting to steer any longer, I took the oar  
out of his hand to steer the boat withal.  
The weather all this while continued fair and  
clear, and it pleased God at that very in-  
stant of time, to send the wind easterly:  
which advantage we thankfully apprehend-  
ing, presently set sail. The wind increas'd  
fresh and large, and our shallop swiftly run-  
ning, we arrived the one and twentieth day  
at *Bell-Point*, where we found the wind  
right out of the *Sound* at east north-east,  
so fiercely blowing, that we could not pos-  
sibly row to windwards; but being forced  
to take in our sail, we were fain to betake  
our selves unto our oars, by help of which  
we recovered some two miles within the  
shoar, where we were constrained for that  
time to *Cove*, or else to drive to *Leewards*.

Thus finding this to be the very place  
we had all this while sought for (he now  
also agreeing thereunto) we forthwith sought  
out and found an harbor for our shallop;  
and having brought her thereunto, two of  
our men were presently dispatch'd over  
land unto the *Tent* at *Bell-Sound*, to see if  
the ships were still there; of which, by  
reason of the time being expired, and the  
opportunity of the present fair wind, we  
were much afraid. The *tent* being distant  
ten miles at the least from our shallop, our  
men at their coming thither finding the ships  
to be departed out of the road, and not be-  
ing certain, whether or not they might be  
at *Bottle Cove* (three leagues distant on the  
other side of the *Sound*) riding there under  
the *Loom* of the land; again returned unto  
us with this sad news. The storm of wind  
hitherto continuing, about midnight fell  
stark calm; whereupon we, unwilling to  
lose our first opportunity, departed towards  
*Bottle Cove*, betwixt hope and fear of find-  
ing the ships there; whither coming the  
two and twentieth, and finding the ships  
departed, we, having neither *pilot*, *plat*,  
nor *compass* for our directors on the east-  
ward, found our selves (God be knoweth)  
to have little hope of any delivery out of  
that apparent danger. Our fears increas'd  
upon us, even whilst we consulted whether  
it were safest for us either to go or stay. If  
go, then thought we upon the dangers in  
sailing, by reason of much ice in the way;  
as also of the difficulty in finding the place,  
when we should come thereabouts. If we  
resolved still to remain at *Bell-Sound*, then  
we thought that no other thing could be  
look'd for, but a miserable and a pining  
death, seeing there appear'd no possibility

of inhabiting there, or to endure so long,  
so darksome and so bitter a winter.

And thus were our thoughts at that time  
distracted, thus were our fears increas'd;  
nor were they useless fears altogether.  
*Well we knew that neither christian or hea-  
then people had ever before inhabited those de-  
solate and intemperate climates.* This also,  
to increase our fears, had we certainly heard;  
how that the merchants, having in former  
times much desired, and that with proffer  
of great rewards for the hazarding of their  
lives, and of sufficient furniture and provi-  
sion of all things that might be thought  
necessary for such an undertaking, to any  
that would venture to winter in those parts,  
could never yet find any so hardy, as to expose  
their lives to so hazardous an undertaking:  
Yea, notwithstanding these proffers had been  
mad: both unto mariners of good experi-  
ence, and of noble resolutions, and also  
unto divers other bold spirits; yet had the  
action of wintering in those parts never by  
any been hitherto undertaken. This also  
had we heard, how that the company of  
*Muscovy* merchants, having once procured  
the reprieve of some malefactors, that had  
here at home been convicted by law for some  
heinous crimes committed; and that both  
with promise of pardon for their faults,  
and with addition of rewards also, if so be  
they would undertake to remain in *Green-  
land* but one whole year, and that every  
way provided for us, both of cloaths, vic-  
tuals, and all things else, that might any  
way be needful for their preservation: These  
poor wretches hearing of this large proffer,  
and fearing present execution at home, re-  
solved to make trial of the adventure. The  
time of year being come, and the ships re-  
ady to depart, these condemned creatures are  
embarked, who after a certain space there ar-  
riving, and taking a view of the desolateness  
of the place, they conceiv'd such a  
horror and inward fear in their hearts, as  
they resolved rather to return for England,  
to make satisfaction with their lives for their  
former faults committed, than there to re-  
main, though with assured hope of gaining  
their pardon: Infomuch as the time of year  
being come, that the ships were to depart  
from these barren shoars, they made known  
their full intent unto the captain; who be-  
ing a pitiful and a merciful gentleman,  
would not by force constrain him to stay in  
that place, which was so contrary to their  
minds; but having made his voyage by  
the time expired, he again embarked and  
brought them over with him into England;  
where, through the intercession and means of  
the worshipful company of *Muscovy* mer-  
chants, they escaped that death which they  
had before been condemned unto. The re-  
membrance

membrance of these two former stories, as also of a third (more terrible than both the former, for that it was likely to be our own case) more miserably now affrighted us; and that was the lamentable and unmanly ends of nine good and able men, left in the same place heretofore by the self same master that now left us behind; who all dy'd miserably upon the place, being cruelly disfigur'd after their deaths by the savage bears and hungry foxes, which are not only the civillest, but also the only inhabitants of that comfortless country: The lamentable ends and miscarriage of which men, had been enough indeed to have daunted the spirits of the most noble resolution.

All these fearful examples presenting themselves before our eyes, at this place of *Bottle Cove* aforesaid, made us, like amazed men, to stand looking one upon another, all of us, as it were, beholding in the present, the future calamities both in himself and of his fellows. And thus like men already metamorphos'd into the ice of the country, and already pass'd both our senses and reason, stood we with the eyes of pity beholding one another.

Nor was it other men's examples and miscarriages and fears alone, that made us amazed, but it was the consideration of our want of all necessary provision for the life of man, that already struck us to the heart: For we were not only unprovided both of cloaths to keep us warm, and of food to prevent the wrath of cruel famine: but utterly destitute also we were of a sufficient house, wherein to shrowd and shelter our selves from the chilling cold. Thus for a space standing all mute and silent, weighing with our selves the misery we were already fallen into, and knowing delay in these extremities to be the mother of all dangers, we began to conceive hope even out of the depth of despair. Rowing up our benumbed senses therefore, we now lay our heads and counsels together, to bethink our selves of the likeliest course for our preservation in that place; seeing that all hopes of gaining our passage into *England* were then quite frustrate. Shaking off therefore all childish and effeminate fears, it pleas'd God to give us hearts like men, to arm our selves with a resolution to do our best for the resisting of that monster of desperation. An agreement thereupon by a general consent of the whole company we then enter'd into, to take the opportunity of the next fair weather, and go for *Green-barbor*, to hunt and kill venison for part of our own winter provision.

Having thus agreed amongst our selves, the 25th day of *August*, the weather and wind being both fair, we directed our course towards *Green-barbor*, some sixteen

leagues (as I before told you) distant from *Pell-Bell-Sound*; and the wind being fresh and fair, within the space of twelve hours we there arrived. Upon which place being now landed, the first thing we did, was to make us a tent with the sail of our shallop, pitch'd up, and spread upon our oars; a sorry one (God knows) though it were, yet under it we resolv'd to rest our selves that night, to refresh our bodies with such food as we there had, and the next day to return again unto our hunting. The weather that night proving fair and clear, we made our sleep the shorter: (and alas what men could sleep in that extremity!) and fitting our selves and shallop the best we might, to *Cole's-Park* we went, a place some two leagues distant from us, and well known unto *Thomas Ayres*, that was one of our company, to be well stor'd with venison. Coming ashore at which place, though we found not so many deer as we indeed expected, yet seven we killed the same day, and four bears to boot; which we also intended to eat.

But the weather beginning now to overcast, and not likely to continue good for hunting; we that night returned again unto *Green-barbor*: where making us a tent of our sail and oars (as is before described) we fell to eat such meat as God had sent us, and betook our selves to our rest upon it. Having rested our selves awhile, and now finding the weather to clear up, we broke off our sleep for that time, fitting our selves and two dogs again to go a hunting; leaving *William Vakely* and *John Dawes* behind us in the tent at *Green-barbor*, as our cooks (for the time) dress some meat that we had, for our refreshment at our return.

Departing thus from the tent, we rowed towards *Cole's-Park*; in the way whither, upon the side of a hill, by the sea-side, we espied seven deer feeding, whereupon presently ashore we went, and with our dogs kill'd six of them, after which, the weather again overcasting, we thought it to little purpose to go any further at that time, but resolv'd to hunt all along the side of that hill, and so at night return to our tent. Going thus along, we kill'd six deer more; which we had no sooner done, but it began to blow and rain, and to be very dark; whereupon we halted towards the tent, there intending to refresh our selves with victuals, and with rest, for that night, and the next day to return again unto our hunting. This purpose of ours was, by the foul weather the next day hindred; for it fell so black, so cold, and so windy, that we found it no way fitting for our purpose. Lading therefore our own shallop with bears and venison, and another shallop which we there found

PELL-HAM. found haled up, and left by the ship's company, as every year they use to do. Lading this other shallop, I say, with the graves of the whales that had been there *boil'd this present year* (which we there found in heaps hung upon the ground) we dividing our selves into two equal companies, that is to say, *William Fakely* with one seaman and two landmen with him, betaking themselves unto one shallop; and *Edward Pellham* with another seaman and two landmen more with him, going into t'other shallop; we all committed our selves unto the sea, intending with the next fair weather to go to *Bell-Sound* unto our tent; which was the place we set up our rest upon, to remain there all the winter.

Towards *Bell-Sound* therefore we went, with a purpose there to lay up our store of what victuals we had already gotten together, and with the next fair wind to come hither again, to try if 'twere possible for us there to provide our selves of some more venison for our winter provision.

Having thus laden both our shallops, appointed our company, and all ready now for our departure, we were overtaken with the night, and there forced to stay upon the place. The next day was *Sunday*; wherefore we thought fit to sanctify the rest of it, and to stay our selves there until *Monday*, and to make the best use we could of that good day, taking the best course we could for the serving of God Almighty, altho' we had not so much as a book amongst us all the whole time that we stay'd in that country.

The *Sabbath* day being shut up by the approaching night, we betook our selves to our rest, sleeping until the sun awaken'd us by his beginning to shew himself upon the *Monday* morning. The day was no sooner peep'd, but up we got, fitting our selves and business for our departure. The weather was fair and clear at the first, but after some four hours rowing the sky began so to overcast, and the wind to blow so hard, that we could not possibly get to *Bell-Sound* that night, but *cov'd* half way until the next morning, at which time we recover'd *Bottle Cove*; to which place when we were once come, we found the wind (then at *south-west*) to blow so hard that it was impossible for us to reach *Bell-Sound*, but were forced to stay at *Bottle Cove* for that night. Our shallops were made fast one to another, with a rope fastening the *head* of the one unto the *stern* of t'other; and so casting our *grabnel* or *anchor* overboard, we left them riding in the *Cove*.

But see now what a mischance, for the trial of our patience, and for the making of us to rely more upon his providence than upon any outward means of our own.

God now suffer'd to befall us. We being now all ashore, the south-west wind blew so hard, and right into the *Cove*, that it made the sea go high; our anchor also coming home at the same time, both our shallops casting along the shore, sunk presently in the sea, wetting by this means our whole provision, the weather withal beating some of it out of the boats, which we found swimming up and down the shore: for, coming out of our tent in the mean time, judge you what a sight this was unto us, to see by mischance the best part of our provision (the only hope of our lives) to be in danger utterly to be lost, or at least spoil'd with the sea-water, for which we had taken such pains, and run such adventures in the getting. In this our misery we saw no way but one (and that a very desperate one) namely, to run presently into the *high-wrought* sea, getting by that means into our shallops to save the remainder of our provisions, ready now to be wash'd quite away by the billows. A *balser* thereupon we got, which fastening unto our shallops, we with a *crabb* or *captang*, by main force of hand, heav'd 'em out of the water upon the shore. This done, all along the sea-side we go, seeking there and taking up such of our provisions as were swam away from our shallops. Having by this means glean'd up all that could be gotten together, we resolv'd from thenceforth to let our boats lie upon the shore till such time as the weather should prove fair and better, and then to go over unto *Bell-Sound*.

The 3d of *September*, the weather proving fair and good, we forthwith launch'd our shallops into the water, and in them we that day got into *Bell-Sound*. Thither so soon as we were come, our first business was, to take our provision out of our shallops into the tent; our next, to take a particular view of the place, and of the great tent especially, as being the place of our habitation for the ensuing winter. This which we call the *Tent* was a kind of house (indeed) built of timber and boards very substantially, and cover'd with *Flemish* tiles, by the men of which nation it had, in the time of their trading thither, been built: fourcore foot long it is, and in breadth fifty. The use of it was, for the coopers employ'd for the service of the company, to work, lodge, and live in, all the while they make casks for the putting up of the train-oil. Our view being taken, we found the weather beginning to alter so strangely, and the nights and frosts so to grow upon us, that we durst not adventure upon another hunting voyage unto *Green-harbor*, fearing the *Sound* would be so frozen that we should never be able to get back to our tent again. By land it was (we knew) in vain

We being  
ind blew so

reen-harbor, fear-  
so frozen that we  
get back to our  
was (we knew) in  
vain

vain for us to think of returning ; for the land is so mountainous that there's no travelling that way.

Things being at this pass with us, we bethought our selves of building another smaller tent with all expedition : the place must of necessity be within the greater tent. With our best wits therefore taking a view of the place, we resolv'd upon the south side. Taking down another lesser tent therefore (built for the land-men hard by the other, wherein, in time of year, they lay whilst they made their oil) from thence we fetch'd our materials : that tent furnish'd us with an hundred and fifty deal-boards, besides posts or stanchions, and rafters. From three chimneys of the furnaces wherein they used to boil their oils, we brought a thousand bricks : there also found we three hogheads of very fine lime, of which stuff we also fetch'd another hoghead from Bottle Cove, on the other side of the Sound, some three leagues distant. Mingling this lime with the sand of the sea-shore, we made very excellent good mortar for the laying of our bricks : falling to work whereupon, the weather was so extrem cold, as that we were fain to make two fires, to keep our mortar from freezing. William Fakely and my self undertaking the masonry, began to raise a wall of one brick thickness, against the inner planks of the side of the tent. Whilst we were laying of these bricks, the rest of our company were otherwise employ'd, every one of 'em, some in taking 'em down, others in making of 'em clean, and in bringing 'em in baskets into the tent ; some in making mortar, and hewing of boards to build the other side withal ; and two others all the while in slaying of our venison. And thus having built the two uttermost sides of the tent with bricks and mortar, and our bricks now almost spent, we were enforced to build the other two sides with boards, and that in this manner : first, we nail'd our deal-boards on one side of the post or stanchion, to the thickness of one foot ; and on the other side in like manner ; and so filling up the hollow place between with sand, it became so tight and warm, as not the least breath of air could possibly annoy us. Our chimney's vent was into the greater tent, being the breadth of one deal-board, and four foot long. The length of this our tent was twenty foot, and the breadth sixteen ; the height ten, our ceiling being deal-boards five or six times double, the middle of one joining so close to the shut of the other, that no wind could possibly get between. As for our door, besides our making it so close as possibly it could shut, we lined it moreover with a bed that we found lying there, which came over both the opening and the shutting of

VOL. IV.

it. As for windows, we made none at all, PELL- so that our light we brought in thro' the greater tent, by removing two or three tiles in the eaves, which light came to us thro' the vent of our chimney. Our next work was, to set up four cabins, billeting our selves two and two in a cabin. Our beds were the deer's skins dry'd, which we found to be extraordinary warm, and a very comfortable kind of lodging to us in our distress. Our next care then was for firing to dress our meat withal, and for keeping away the cold. Examining therefore all the shallops that had been left ashore there by the ships, we found seven of 'em very crazy, and not serviceable for the next year ; those we made bold withal, brake 'em up, and carried 'em into our house, stowing 'em over the beams in manner of a floor, intending also to stow the rest of our firing over them, so to make the outer tent the warmer, and to keep the snow from driving thro' the tiles into the tent, which snow would otherwise have cover'd every thing, and have hinder'd us in coming at what we wanted. When the weather was now grown cold, and the days short (or rather no day at all) we made bold to have some empty casks that were there left the year before, to the quantity of one hundred tun at least : we also made use of some planks, and of two old coolers (wherein they cool'd their oil) and of whatsoever might well be spar'd without damnifying of the voyage the next year. Thus having got together all the firing that we could possibly make, except we would make spoil of the shallops and coolers that were there, which might easily have overthrown the next year's voyage, to the great hindrance of the worshipful company, whose servants we being, were every way careful of their profit. Comparing therefore the small quantity of our wood, together with the coldness of the weather, and the length of time that there we were likely to abide, we cast about to husband our stock as thrifely as we could, deviating to try a new conclusion : our trial was this. When we raked up our fire at night, with a good quantity of ashes and of embers, we put into the midst of it a piece of elm-wood, where, after it had lain sixteen hours, we at our opening of it found great store of ice upon it ; whereupon we made a common practice of it ever after. It never went out for eight months together, or thereabouts.

Having thus provided both our house and firing, upon the 12th of September a small quantity of drift-ice came driving to and fro in the Sound. Early in the morning therefore we arose, and looking every where abroad, we at last espied two sea-horses lying asleep upon a piece of ice ; presently thereupon taking up an old harping-

9 G

iron

PULL-iron that there lay in the tent, and fastening  
HAM, a grapple-ropo unto it, out launch'd we our  
boat to row towards them. Coming some-  
thing near 'em, we perceiv'd 'em to be fast  
asleep; which my self, then steering the  
boat, first perceiving, spake to the rowers  
to hold still their oars, for fear of awaking  
'em with the crafhing of the ice, and I skul-  
ling the boat easily along, came so near at  
length unto 'em, that the *shallops o'en touch'd*  
*one of 'em*: at which instant *William Fekely*  
being ready with his *barping-iron*, heav'd it  
so strongly into the old one, that he quite  
disturb'd her of her rest; after which she  
receiving five or six thrusts with our lances,  
fell into a sounder sleep of death. Thus  
having dispatch'd the old one, the younger  
being loth to leave her dam, continued  
swimming so long about our boat, that  
without our lances we kill'd her also. Hal-  
ling 'em both after this into the boat, we  
row'd ashore, flay'd our *sea-borjes*, cut 'em  
in pieces: *roast and eat 'em*. The 19th of  
the same month we *saw other sea-borjes sleep-*  
*ing also in like manner upon several pieces*  
of ice, but the weather being cold, they  
desir'd not to sleep so much as before, and  
therefore could we kill but one of them, of  
which we being right glad, we return'd again  
into our tent.

The nights at this time, and the cold  
weather, engreasing so fast upon us, that we  
were out of all hopes of getting any more  
food before the next spring, our only hopes  
were, to kill a *beare* now and then, that  
might by chance wander that way. The  
next day therefore taking an exacter survey  
of all our victuals, and finding our propor-  
tion too small by half for our time and  
company, we agreed among our selves to  
come to *allowance*, that is, to *stint our selves*  
to one *reasonable meal a day*, and to keep  
*Wednesdays and Fridays fasting-days*, ex-  
cepting from the *\* fritters or greaves* of the  
*whale* (a very loathsome meat) of which  
we allow'd our selves sufficient to suffice  
our present hunger; and at this diet we  
continued some three months, or there-  
abouts.

\* These  
be the  
scraps of  
the fat of  
the whale,  
which are  
flung a-  
way after

the oil is gotten out of it.

Having by this time finish'd whatever  
we possibly could invent, for our preserva-  
tion in that desolate desert, our clothes and  
shoes also were so worn and torn (all to  
pieces almost) that we must of necessity in-  
vent some new device for their reparations.  
Of *rope-yarn* therefore we made us *thread*,  
and of *whale-bones* needles to *sew our clothes*  
*withal*. The nights were waxed very long,  
and by the 10th of *October* the cold so vio-  
lent, that the *sea was frozen over*; which  
had been enough to have daunted the most  
assured resolutions: at which time our busi-

ness being over, and nothing now to exer-  
cise our minds upon, our heads began then  
to be troubled with a thousand sorts of ima-  
ginations: then had we leisure (more than  
enough) to complain our selves of our pre-  
sent and most miserable conditions: then  
had we time to bewail our wives and chil-  
dren at home, and to imagine what news  
our unfortunate misfortunes must needs be  
unto them: then thought we of our pa-  
rents also, and what a cutting corrosive it  
would be to them, to hear of the untimely  
deaths of their children. Other whiles  
again we reviv'd our selves with some com-  
fort that our friends might take, in hoping  
that it might please God to preserve us  
(even in this poor estate) until the next year.  
Sometimes did we vary our griefs, com-  
plaining one while of the cruelty of our  
*master*, that would offer to leave us to these  
distresses; and then presently fell we, not  
only to excuse him, but to lament both  
him and his company, fearing they had  
been overtaken by the ice, and miserably  
that way perish'd.

Thus tormented in mind with our doubts,  
our fears, and our griefs; and in our bod-  
ies with hunger, colds, and wants; that  
hideous monster desperation began now to  
present his ugly face unto us; he now  
pursued us, he now labour'd to seize upon  
us. Thus finding our selves in a *labyrinth*  
as 'twere of a perpetual misery, we thought  
it not best to give too much way unto our  
griefs, fearing they also would most of all  
have wrought upon our weakness. Our  
prayers we now redoubled unto the *Almigh-*  
*ty*, for strength and patience in these our  
miseries; and the *Lord* graciously listen'd  
unto us, and granted these our petitions:  
by his assistance therefore we shook off these  
thoughts, and cheer'd up our selves again,  
to use the best means for our preserva-  
tion.

Now therefore began we to think upon  
our *venison*, and the preserving of that, and  
how to order our firing in this cold weather.  
For fear therefore our firing should fail us  
at the end of the year, we thought best to  
roast every day half a *deer*, and to *stow* it  
in hogheads: which we putting now in  
practice, we forthwith fill'd three hogheads  
and an half, leaving so much *raw* as would  
*serve to roast every sabbath-day a quarter*;  
and so for *Christmas-day*, and the like.

This conclusion being made amongst us,  
fell we then again to bethink us of our mi-  
series, both past and to come; and how  
(tho' if it pleas'd God to give us life) yet  
should we live as banish'd men, not only  
from our friends, but from all other com-  
pany. Then thought we of the pinching  
cold, and of the pining hunger; these were  
our thoughts, this our discourse, to pass the  
time

time withal: but, as if all this misery had been too little, we presently found another increase of it; for, examining our provisions once more, we found that all our *fritters* of the *subale* were almost spoil'd with the wet that they had taken; after which, by lying so close together, they are now grown mouldy; and our *bear* and *venison* we perceiv'd again not to mount to such a quantity, as to allow us five meals a week; whereupon we were fain to shorten our stomachs of one meal more, so that for the space of three months after that, we for four days in the week fed upon the unsavoury and mouldy fritters, and *pothor* three we fasted it with bear and venison. But, as if 'twere not enough for us to want meat, we now began to want light also: all our meals prov'd suppers now, for little light could we see, even the glorious sun (as if unwilling to behold our miseries) masking his lovely face from us, under the sable veil of coal-black night: thus, from the fourteenth of October till the third of February, we never saw the sun; nor did he all that time ever so much as peep above the horizon; but the moon we saw at all times, day and night (when the clouds obscur'd her not) shining as bright as the doth in England. The sky, 'tis true, is very much troubled with thick and black weather all the winter-time, so that then we could not see the Moon, nor could discern what point of the compass she bore upon us. A kind of daylight we had indeed, which glimmer'd for eight hours a day unto us, in October time I mean; for from thence unto the first of December even that light was shorten'd ten or twelve minutes a day constantly; so that from the first of December till the twentieth there appear'd no light at all, but all was one continued night. All that we could perceive was, that in a clear season, now and then there appear'd a little glare of white, like some shew of day, towards the south, but no light at all: and this continued till the first of January, by which time we might perceive the day a little to encrease. All this darksome time no certainty could we have when it should be day, or when night, only my self, out of my own little judgment, kept the observation of it thus: first, bearing in mind the number of the *Epaich*, I made my addition by a day suppos'd (tho' not absolutely to be known by reason of the darkness) by which I judg'd of the age of the moon; and this gave me my rule of the passing of the time; so that at the coming of the ships into the port, I told 'em the very day of the month, as directly as they themselves could tell me.

At the beginning of this darksome, irksome time, we fought some means of preserving light amongst us; finding therefore

a piece of sheet-lead over a seam of one of PELL the coolers, that we ripp'd off, and made three lamps of it, which maintaining with oil that we found in the cooper's tent, and rope-yarn serving us instead of candlewicks, we kept 'em continually burning; and this was a great comfort to us in our extremity. Thus did we our best to preserve our selves, but all this could not secure us, for we in our own thoughts accounted our selves but dead men, and that our tent was then our darksome dungeon, and we did but wait our day of trial by our judge, to know whether we should live or die. Our extremities being so many, made us sometimes in impatient speeches to break forth against the causers of our miseries; but then again our consciences telling us of our own evil deservings, we took it either for a punishment upon us for our former wicked lives, or else for an example of God's mercy in our wonderful deliverance: humbling our selves therefore under the mighty hand of God, we cast down our selves before him in prayer two or three times a day, which course we constantly held all the time of our misery.

The new year now begun, as the days began to lengthen, so the cold began to strengthen, which cold came at last to that extremity, as that it would raise blisters in our flesh, as if we had been burnt with fire; and if we touch'd iron at any time, 'twould stick to our fingers like bird-lime. Sometimes, if we went but out a-doors to fetch in a little water, the cold would nip us in such sort, that it made us as sore as if we had been beaten in some cruel manner. All the first part of the winter we found water under the ice that lay upon the *Bache* on the sea-shore, which water issued out of an high bay or cliff of ice, and ran into the hollow of the *Bache*, there remaining with a thick ice over it; which ice we at one certain place daily digging thro' with pick-axes, took so much water as serv'd for our drinking.

This continued with us until the tenth of January, and then we were fain to make shift with snow-water, which we melted by putting hot irons into it; and this was our drink until the twentieth of May following.

By the last of January were the days grown to some seven or eight hours long; and then we again took another view of our victuals, which we now found to grow so short, that it could no way last us above six weeks longer; and this bred a further fear of famine amongst us; but our recourse was in this, as in other our extremities, unto Almighty God, who had helps we knew, tho' we saw no hopes: and thus spent our time until the third of February. This prov'd a marvellous cold day, yet a fair and

PELL- and clear one, about the middle whereof,  
 HAM. all clouds now quite dispers'd, and night's  
 fable curtain drawn, *Aurora* with her golden face smil'd once again upon us, at her rising out of her bed; for now the glorious sun with his glittering beams began to gild the highest tops of the lofty mountains: the brightness of the sun, and the whiteness of the snow, both together was such, as that it was able to have reviv'd a dying spirit: but, to make a new addition to our new joy, we might perceive two bears (a she one with her cubb) now coming towards our tent; whereupon we strait arming our selves with our lances, issued out of our tent to await her coming. She soon cast her greedy eyes upon us, and with full hope of devouring us, she made the more haste unto us, but with our hearty lances we gave her such a welcome, as that she fell down upon the ground, tumbling up and down, and biting the very snow for anger. Her cubb seeing this, by flight escap'd us. The weather was now so cold, that longer we were not able to stay abroad: retiring therefore into our tent, we first warm'd our selves, and then out again to draw the dead bear in unto us. We slay'd her, cut her into pieces of a stone weight or thereabouts, which serv'd us for our dinners: and upon this bear we fed some twenty days, for she was very good flesh, and better than our venison. This only mischance we had with her, that upon the eating of her liver our very skins peel'd off: for my own part, I being sick before, by eating of that liver, tho' I lost my skin, yet recover'd I my health upon it. She being spent, either we must seek some other meat, or else fall aboard our roast venison in the cask, which we were very loth to do for fear of famishing, if so be that should be thus spent before the fleet came out of *England*. Amidst these our fears, it pleas'd God to send divers bears into our tent, some forty at least as we accounted, of which number we kill'd seven; that is to say, the second of *March* one, the fourth another, and the tenth a wonderful great bear, six foot high at least; all which we slay'd, and roasted upon wooden spits (having no better kitchen-furniture than that, and a frying-pan which we found in the tent.) They were as good savoury meat as any beef could be. Having thus gotten good store of such food, we kept not our selves now to such streight allowance as before, but eat frequently two or three meals a day, which began to encrease strength and ability of body in us.

By this the cheerful days so fast encreas'd that the several sorts of fowls, which had all the winter-time avoided those quarters, began now again to resort thither, unto their summer-abiding. The sixteenth of

*March*, one of our two mastiff-dogs went out of the tent from us in the morning, but from that day to this he never more return'd to us, nor could we ever hear what was become of him. The fowls that I before spake of, constantly use every spring-time to resort unto that coast, being us'd to breed there most abundantly; their food is a certain kind of small fishes. Yearly, upon the abundant coming of these fowls, the foxes, which had all this winter kept their burroughs under the rocks, began now to come abroad and seek for their livings; for them we set up three traps like rat-traps, and baited 'em with the skins of these fowls, which we had found upon the snow, they falling there in their flight from the hill, whereupon they bred, towards the sea: for this fowl being about the bigness of a duck, bath her legs placed so close unto her rump, as that when they alight once upon the land, they are very hardly (if ever) able to get up again, by reason of the misplacing of their legs, and the weight of their bodies; but being in the water, they raise themselves with their pinions well enough. After we had made these traps, and let 'em apart one from another in the snow, we caught fifty foxes in 'em, all which we roasted, and found very good meat of them. Then took we a bear's skin, and laying the fleshy side upward, we made springs of whalebone, wherewith we caught about sixty of those fowls, about the bigness of a pigeon.

Thus continued we until the first of *May*, and the weather then growing warm, we were now pretty able to go abroad to seek for more provisions. Every day therefore abroad we went, but nothing could we encounter withal until the 24th of *May*; when espying a buck, we thought to have kill'd him with our dog, but he was grown so fat and lazy that he could not pull down the deer. Seeking further out therefore, we found abundance of willocks-eggs (which is a fowl about the bigness of a duck) of which eggs, tho' there were great store, yet we, being but two of us together, brought but thirty of 'em to the tent that day, thinking the next day to fetch a thousand more of 'em, but the day prov'd so cold, with so much easterly wind, that we could not stir out of our tent.

Staying at home therefore upon the 25th of *May*, we for that day omitted our ordinary custom. Our order of late (since the fair weather) was every day, or every second day, to go up to the top of a mountain, to spy if we could discern the water in the sea, which until the day before we had not seen; at which time a storm of wind coming out of the sea, brake the main ice within the *Sound*; after which, the wind coming

coming easterly, carried all the ice into the sea, and clear'd the Sound a great way, altho' not near the shore at first, seeing the clear water came not near our tent by three miles at least.

This 25th of May therefore, we all day staying in the tent, there came two ships of Hull into the Sound, who knowing that there had been men left there the year before, the master (full of desire to know whether we were alive or dead) mann'd out a shallop from the ship, with order to row as far up the Sound as they could, and then to hale up their shallop and travel over land upon the snow, unto the tent. These men, at their coming ashore, found the shallop, which we had haled from our tent into the water, with a purpose to go seek some fra-horses the next fair weather, the shallop being then already fitted with all necessaries for that enterprize. This sight brought them into a quandary; and tho' this encounter made 'em hope, yet their admiration made them doubt, that it was not possible for us still to remain alive. Taking therefore our lances out of the boat, toward the tent they come, we never so much as perceiving them, for we were all gather'd together now about to go to prayers in the inner tent, only Thomas Ayers was not yet come in to us out of the greater tent. The Hull-men now coming near our tent, haled it with the usual word of the sea, crying *Hey*; he answer'd again with *Ho*; which sudden answer almost amaz'd 'em all, causing them to stand still, half afraid at the matter: but we within, hearing of them, joyfully came out of the tent, all black as we were with the smoak, and with our clothes all tatter'd with wearing. This uncouth sight made them further amaz'd at us; but perceiving us to be the very men left there all the year, with joyful hearts embracing us, and we them again, they came with us into our tent. Coming thus in to us, we shew'd 'em the courtesie of the house, and gave 'em such victuals as we had, which was venison roasted four months before, and a cup of cold water, which, for novelty sake, they kindly accepted of us.

Then fell we to ask them what news; and of the state of the land at home; and when the London fleet would come; to all which they return'd us the best answers they could. Agreeing then to leave the tent, with them we went to their shallop, and so aboard the ship, where we were welcom'd after the heartiest and kindest English manner; and there we stay'd our selves until the coming of the London fleet, which we much long'd for, hoping by them to hear from our friends in England. We were told that they would be there the next day, but it

VOL. IV.

was full three days e're they came, which seem'd to us as tedious a three days as any we had yet endur'd, so much we now desir'd to hear from our friends, our wives, and children.

The 28th of May the London fleet came into the port, to our great comfort; aboard the admiral we went, unto the right noble captain, captain William Goodler, who is worthy to be honour'd by all seamen for his courtesie and bounty. This is the gentleman that's every year chief commander of this fleet; and right worthy he is so to be, being a very wife man, and an expert mariner as most be in England, none disprais'd. Unto this gentleman right welcome we were, and joyfully by him receiv'd, he giving order, that we should have any thing that was in the ship that might do us good and encrease our strength; of his own charges giving us apparel also, to the value of twenty pounds worth.

Thus, after fourteen days of refreshment, we grew perfectly well all of us; whereupon the noble captain sent William Fokely and John Wise (Majon's own apprentice) and Thomas Ayers the whale-cutter, with Robert Goodfellow, unto master Majon's ship, according as themselves desir'd: but thinking there to be as kindly welcom'd as the lost *Prodigal*, these poor men, after their enduring of so much misery, which, thro' his means partly, they had undergone, no sooner came aboard his ship, but he most unkindly call'd 'em *Runaways*, with other harsh and unchristian terms, far enough from the civility of an honest man. Noble captain Goodler understanding all these passages, was right sorry for 'em, resolving to send for them again, but that the weather prov'd so bad and uncertain. I for mine own part remain'd with the captain still at *Bottle-Cove*, according to mine own desire; as for the rest of us that stay'd with him, he prefer'd the land-men to row in the shallops, for the killing of the whales, freeing them thereby from their toilsome labour ashore, bettering their means besides. And all these favours did this worthy gentleman for us.

Thus were we well contented now to stay there till the 20th of August, hoping then to return into our native country; which day of departure being come, and we embark'd, with joyful hearts we set sail thro' the foaming ocean; and tho' cross'd sometimes with contrary winds homeward bound, yet our proper ships came at last safely to an anchor in the river of Thames, to our great joy and comfort, and the merchants benefit. And thus, by the blessing of God, came we all eight of us well home, safe and sound; where the worshipful company, our masters, the Muscovy merchants, have since

*A Journey of John Baptift Merin, Phil.  
& Med. Doct. to the Mines of Hungary;  
with an account of his Observations made  
there, in relation to them, and subterra-  
neous passages in general.*

MERIN.  
w

**A**N extraordinary desire of learn-  
ing, and a curiosity of seeing  
things never known to me be-  
fore, having made me to under-  
take a journey into *Flanders, Germany, Bo-  
hemia, and Austria*, in the year 1615, I  
stay'd a few days at *Vienna*, having the op-  
portunity of conversing with several learn'd  
men in those parts; they told me such mi-  
raculous things of the mines of *Hungary*  
and *Transylvania* (the most famous in *Eu-  
rope*) that I was seiz'd with a most ardent  
desire of taking a full view of 'em, maugre  
all the dangers that were represented to me  
in so troublesome a journey; because I con-  
tinually reflected upon the words of *Paracel-  
sus*, that *Mines are the best schools of philo-  
sophers*. With this resolution I took passage  
in a boat that was carrying some troops to

*Presburgh Polineum* (*Presburgh*) the chief city of  
the capi- *Hungary*, left to the christians upon the  
tal city of *Danube*, about ten leagues distant from  
*Hungary* *Vienna*, and as many from the *Turkish*  
territories. 'Tis to be observ'd, that it is  
very dangerous travelling in *Hungary*, espe-  
cially for strangers, who being easily distin-  
guish'd from the *Hungarians* by their ha-  
bits, are but little below'd by them, by  
reason they're in the *Turkish* wars frequen-  
tly afflicted with foreign soldiers, which  
makes the natives, for the most part, live  
in wooden huts, or cottages of straw, with  
household-stuff in proportion; most of the  
cities of *Hungary* have no other houses, the  
inhabitants leading a most miserable life;  
yet the nobility of *Hungary* are great ad-  
mirers of strangers, especially the *French*,  
by reason of their bravery, they having  
given frequent proofs of it against the *Turks*  
with good success. But, above all, 'tis  
most dangerous travelling into the moun-  
tains (or *Upper Hungary*) which contain the  
gold, silver, and copper mines, about thir-

ty leagues distant from *Presburgh*; for all  
the summer long, whilst the trees are co-  
ver'd with leaves, and consequently afford  
shelter for robbers, without being oblig'd  
to make any fires (as they must in the win-  
ter) these vermin haunt the woods in whole  
troops, in hopes of lighting upon some of  
the gold and silver that's carried from the  
mines to the imperial mint at *Cremnitz*,  
when they're sure to kill all they meet with  
upon such an occasion.

After a stay of four days at *Presburgh*, I  
bought my self a horse, in order to go along  
with four waggons bound for the upper  
mines at *Newbeufel*, leaving the greatest  
part of my ready money with Mr. *Paul*  
*Lenich*, a physician at *Presburgh*, to serve  
me upon any emergency, in case I should  
be robb'd by the way, and escape with  
life.

Thus prepar'd, I came safely to *New-  
beufel*, seated upon the river *Gran*, where  
having deliver'd my letters of recommen-  
dation from Dr. *Mussinger*, one of the em-  
peror's privy-counsellors, to the most noble  
*Matthias Bloerzim*, the only Roman catho-  
lick in those parts, and overseer of the  
mines, I was very kindly receiv'd by that  
honourable person, which made me tarry  
there for some weeks; during which time  
I took a full view of the copper mines (the  
largest and richest in all *Hungary*) and all  
their subterraneous passages. I was told  
here, that *Paracelsus* dwelt in this place for *Paracel-  
sus* liv'd  
a considerable time, built a laboratory here, near the  
wherein he made several experiments upon mines in  
vitriol, antimony, cinnabar, copper, silver, *Hungary*.  
and gold, and being just upon his departure  
for *Transylvania*, presented his host (who was  
a goldsmith) with a piece of copper trans-  
muted into silver; whence 'tis that an ori-  
ginal picture of *Paracelsus* is shew'd to stran-  
gers to this day, in the same house.

Having

Hungary

The rich-  
est gold  
mines.

The sil-  
ver mines  
of Schem-  
nitz.

Having provided myself here with an interpreter, a learned and honest chymist, we travelled more northward to *Voisau*; by the way we saw divers rivulets which carried some gold dust along with their currents; my interpreter also shew'd me several hills, whither, as he said, many strangers, but especially *Italians* and *Poles*, come every year private to gather rubies, and granate-stones, which done, they stop up secretly the entrance of the mine, and make the best shift they can to get off, to avoid the danger of being surpriz'd by the way, by divers troops of stragglers, who come that way upon the same errand, and commonly kill one another without mercy.

After two days journey, we came safely to *Voisau*, where I lodg'd at the house of a certain noble *Hungarian*, who was the proprietor of these mines; the gold whereof is valued to the fineness of twenty two carats; and containing not the least mixture of any other metal, it is esteem'd the richest and purest gold mine in all *Hungary*. After some stay there, which I spent for the most part in viewing the mines; being fore-warned by an honest inhabitant, that a company of rogues intended to waylay me on the top of a certain hill, called the *Devil's Wedding*, I returned immediately towards *Newbeusel's* where being provided with a convoy of ten soldiers (for fear of the robbers) we continued our journey to the city of *Schemnitz*, partly to view the mines there, and to pay a visit to Dr. *John Ruland*, physician in ordinary of that city, and son to the famous *Martin Ruland*; where I met with a most generous reception: from the most noble *Hudalric Reitter*, governor of these mines, who gave orders to shew me these mines, which in 1612 had been visited by my old friend Dr. *John Beguin*: this is a rich silver mine, mixt with some small quantity of gold, but contains no other metal.

At my departure, being provided with recommendatory letters from the governor of the mines and a guard of soldiers, I pursued my journey to *Crennitz*, a city famous for the adjacent gold mines, and its enjoying the prerogative of the imperial mint; where a vast quantity of the *Hungarian* gold and silver is coin'd yearly: I was most kindly entertain'd here for whole five months, by the noble *George Fiesls* of *Leichenbergh*, governor of these mines, and his beloved spouse *Ann* of *Reisingerin*; and also by their special care conducted into all the descents of the mines, where I had sufficient leisure to take a full view, and make exact observations of all the engines both within and without the mines;

water-channels, and offices, where they prepare and separate the metals.

The first day of *December* (at the beginning of a severe winter, which continued for three months after) I left *Crennitz*, in order to my return into *France*; solely against the will of my generous benefactors, whose names I could not pass by in silence without ingratitude, notwithstanding the difference of religion. I returned to *Paris* in *March* 1616, after a very difficult and tedious journey, being forced to travel a great way about through *Switzerland*, and thence by the way of *Lyons*, by reason of the armies that were then in motion in *Lorrain*.

Thus much of our journey; we will now proceed to give you a short account of the mines and other subterraneous places.

Those that resolve to enter the mines, ought to pull off their own cloaths, and instead thereof, make use of the miners habits, made of some very coarse stuff. Thus prepar'd (like *Æracles*) they shew you two ways or passages, one shorter and easier, the other more difficult and much longer; the first (called by them the *Well*) is form'd like a chimney, of about six foot long, and two broad, dug with incredible pains and patience to the bottom of the mine, and supported with square large fir-trees, closely joyned to one another, which grow hereabouts in vast plenty.

Through this passage it is they draw up the oar; and in some mines where they are troubled with much water, they bring it up in vast quantities of water by the help of ropes and wheels, managed either by horses or water-mills. This water is drawn up in bags made of oxes hides, because any other substance would not be able to endure or resist the corrosive exhalations of the mines. Through the same passage the miners (three or four in company) are often let down with their lighted lamps, sitting with their buttocks in a leather seat, fastened with an iron hook to the top: A surprizing spectacle, considering that this passage is always fill'd with hot and stinking vapours, without intermission, which are often so strong, that they suffocate: the light of the lamps, though the cotton is generally twist'd together an inch thick; the greatest danger is then, perhaps part of the leather-seat, and of the rope or the hook that holds it together, being corroded by the sharp vapours, and press'd by the weight, sometimes tumbles these wretched *Lutberans* (like *Corab*, *Dabban* and *Abram*, about three or four hundred fathoms deep) into an infernal pit, and so puts an end to their miserable days.

Two dif-  
ferent  
ways into  
the mines.  
The first  
passage.

The  
mines  
send forth  
continual  
exhalati-  
ons.  
the inhab-  
itants  
near the  
mines,  
and the  
miners are  
*Luthe-  
rans*.

As

**MERIN.** As to this, that as they descend, there rises at the same time, a bag full of oar upwards, which if it happen to fall by some accident or other (as it often does) they are crush'd to pieces by their weight.

The second passage.

The second passage is made under ground like a mine, and therefore both longer and more difficult; cut like an alley out of the rocks, through which you must pass sometimes by steps, sometimes by ladders, sometimes in an upright posture, sometimes almost crawling upon all four, with a great deal of pain, till you come to the bottom of the mine. I remember I spent three or four hours in thus visiting the mines of *Neubeufel*. This way, besides that it is very troublesome, and not without some danger; it often happening, that either the under supporters placed betwixt the rocks or the steps, being putrify'd by the corroding vapours, happen to give way, the persons within the passage are buried under the earth.

The exhalations putrify the wood in the mines.

Hence it is, that the overseers or governors of the imperial mines, are obliged to visit in person three or four times a year, all the passages in these mines, to take a view of the veins, water-courses, the passages and their supporters, with all other things thereunto belonging, and to take effectual care of them. These overseers always descend through this last passage, and so do most of the miners; thus I have seen above one hundred and fifty of them descend every fourth hour, with their lamps in the upper mines of *Neubeufel*.

Besides this, both these passages have some other uses, viz. the free inspiration and expiration of the air, without which the miners must needs be choaked in a little time.

The air is convey'd through the last passage into the several places where the miners are at work, by the help of several wooden funnels and windows, to be shut or opened as occasion requires; which passing from thence forcibly through many holes into the first passage, is forced up like as through a chimney into the open air; these venomous exhalations (more rarify'd than the air) consequently cause there both a continual ventilation and swift exhalation of the noxious vapours; thence it is, that at the entrance of this passage, the air is excessive hot by its mixture with the ascending vapours, though just before it has passed through the coldest region of the mines.

The air forces the exhalations out of the mines.

This they have been taught by necessity and experience, founded upon very good reason, viz. To force out with the air, the venomous antimonial, mercurial, saline and arsenical spirits, mixed with the vapours, so pernicious to the brains, heart and lungs: hence it is, that the miners,

after having penetrated into the first region of the earth, are sensible of the cool air (for they always work naked) and breathe freely enough.

However, notwithstanding all these contrivances, they are not absolutely delivered of the ill effects of these exhalations, though the same are in some measure mitigated, it being a great rarity to see one of these miners come to the age of fifty, most of them either dying very young, or soon after they come to a manly age; and commonly by a consumption, their lungs being by degrees corroded by the acrimonious particles of these exhalations. This is the reason why they cannot stay above four hours at a time in the mines, but must be ventilated by the fresh air to recover themselves; it being certain, that were the free passage of the fresh air stopped for one quarter of an hour in the deep mines, not for the one of the workmen would escape with life; which I speak upon the credit of the head managers of the mines, who, by their frequent experience, are the surest judges in the case. Hence it is, that these miners marry their children at fifteen years of age, to furnish a constant supply of work-men; and it is almost incredible, to believe how these young people multiply, of which I made a particular observation in the copper mines of *Neubeufel*, where I saw above fifty such young husbands.

Dangerous vapours in the mines.

The external air necessary for the preservation of the miners.

The miners short-lived.

It being left to my choice, which of the two ways I would chuse, I did not care to pitch upon the first, by reason of its vast perpendicular descent, and because there was nothing to be seen in that passage from the top to the bottom but fir-trees that supported it; but chusing the last, went in the company of four or five miners, provided with lamps, torches, and a good bottle of strong liquor, through the second passage to the bottom of the mines.

But not to detain you with a long narration of all the particular mines I had occasion to see; I will content my self to give you an account only of the gold mines of *Cremnitz* (being deeper than the rest) into which I descended in *July*, in the hottest and driest season: and though most of the deepest mines are of the same contrivance, or very near the same, yet will I not pass by in silence, that ever I met with any thing worth taking notice of in the other mines.

At the first entrance into the last of the two passages, you find it not hot (as you do in the first) but rather cold, of which we were sufficiently sensible, notwithstanding we passed through divers freight passages; having no other cloaths but such as the miners usually wear, about us, we were the more

more sensible of the cold, as we came to enter into a moist and clayish place, impregnated with a vitriolate spring, which the miners recommended to me as very salubrious, especially in agues, a thing likely enough to be true, considering it belongs to gold oar; I found the water very cool upon the tongue, and somewhat alstringent: the spring does not rise up to the surface of the earth. Thence we came into the concavities, where the miners were at work, where they shew'd us how the vein of oar did grow betwixt two tables, as they call it. Descending still till we came to eighty fathoms deep, we found it pretty warm, and the heat increasing still as we went lower and lower; the first time I went down in the mines, I was both surprized and rejoiced at this alteration of cold into heat, which made me ask the head miner, whence this heat proceeded? he replied, from the inferior regions, which are always hot: I ask'd him further, whether it was the same in all mines? he answer'd, it was so, at least in all the mines of a considerable depth; where, after you have passed through the cold region, you come to the hot one at a certain depth; and which way soever you dig after that, you are never sensible more of the least cold, but only of heat; this putting me in mind of the central heat, sometimes mentioned by the chymical authors. I ask'd him further, whether the nearer they came to the center of the earth, they found the more heat? he answer'd, that they had never observed any thing like it, but only when now and then they happened to light upon a vein of some very hot mineral. He added, that at certain seasons of the year, as in winter and summer, they found the heat increase, but that did not depend on their depth, since the same was observable in all mines; and all the head miners that ever I asked upon this account, agreeing in the same answer, this gave me sufficient occasion to meditate upon the matter, before I could find out the true reason of this heat, which the miners themselves, according to their own confession, were ignorant of.

But to proceed further: As we went deeper and deeper, finding the heat still encrease, beyond whatever I had observed in any other mine before; I asked the head miner the reason, who told me, that a vitriolate vein underneath us was the occasion of this sudden encrease of heat; and to make good his words, he carried us somewhat lower, into a large concavity, surrounded on all sides with a green vitriol, where the heat was so intense, and the vapours so sharp, that I was ready to faint with sweating, and my tongue and mouth seem'd to be all blister'd; which made me

VOL. IV.

wonder how it was possible for the miners to <sup>MERIN.</sup> work here. If you ask me whether this vitriol is the best? I answer yes, for tho' the Hungarian mines produce also a blew vitriol, Two sorts which is likewise very good, yet the green of vitriol found in the gold mines exceeds the other; green and blew.  
and it is great pity that neither of them, no more than the most excellent Hurgarian antimony, found in these gold mines, is transported into foreign parts.

Passing forward we found on the sides of The Hur- the passage beyond this concavity a certain garian an- alerous substance, whereof I scrap'd off about timony half a pound with my fingers, and found the belt.  
it, as I came to the first region in my return, to grow hard and dry in the cold; and as it was not transparent, I judge it both by its colour and substance to be rather a sulphur than a vitriol. Such like veins of Vitriol are sometimes to be met with in the first region of the mountains, as well as those of sulphur, and even there always produce a certain degree of heat.

Having afterwards taken a good draught out of our mines of plate, we pass'd thro' several passages and concavities, which had afforded a considerable quantity of gold-oar for many ages past; the head miner told us, that where-ever it happens that a rich vein of gold or silver is stop'd (as it often is) by certain hard rocks (whether they are only interrupted or quite lost they distinguish by certain signs) they make use of a certain mathematical instrument; by which means, and the consulting of certain tables of inclinations, they judge unto what side of the mine the vein runs, and consequently which way they must trace it; an art not to be despised by the curious: I afterwards got A particu- lar instru- ment of the miners  
sight of such an instrument, made of brass, divided into certain circles, with divers needles touch'd by the magnet, like those in the sea compass.

Advancing still deeper and deeper, we heard the miners at work with their hammers and pick-axes, and coming soon after to them, we could not without a great deal of compassion look upon the misery of these poor subterraneous wretches, almost naked, working without intermission among the hard rocks, which they are sometimes forc'd The rocks made plia- ble by fire.  
to render tolerably pliable by strong fires, though the fire in these subterraneous places never breaks out into a flame, as it does upon the surface of the earth. We asked the poor labourers how they did in a place so much infected with the mineral spirits and exhalations; they answer'd, they did pretty well at present, but that when instead of a serene air, the weather was going to change into cloudy and tempestuous weather, they were much afflicted with more and grosser exhalations, arising from the inferior parts, which mixing with the air,

MERIN, did very much afflict their lungs, and stifled the light of their lamps. Nay, would of-  
 W the mines sometimes quite extinguish them; so that they were certainly the first and truest prophets of the imminent change of the weather.

the belt  
 prophets  
 of wea-  
 ther.

A thing well worth observation, which seems to agree with what has been asserted by us in another place, viz. That the vapours which produce the thick clouds, and smart showers of rains, are not generated in the superior region of the earth; but arise much deeper. And as these vapours do not ascend in such quantities, nor at all times, but only at certain intervals, it is reasonable to conjecture, that these extraordinary productions of the vapours descend in the various positions and aspects of the stars; and that therefore the ancients were not in the wrong, when they left to us certain rules to judge of the alterations of the weather by the influence of the planets.

Some rea-  
 son for a  
 astrology.

I asked them further, whether, whilst they are at work in these subterraneous solitary places, they did not now and then see some apparitions of spirits or demons: One of the miners answer'd, that he had seen sometimes such like demons in the shape of little negro boys, but that, besides the first fright and a little prattling to the miners, they never did them the least harm, tho' sometimes they would extinguish their lamps.

Subterra-  
 neous de-  
 mons.

I asked them at last, what it was they most fear'd in the mines? They reply'd an earthquake; for, said they, tho' the mines, by reason of their openings upwards, are not easily subject to these convulsive motions, yet in case the neighbouring earth be shaken by an earthquake, and the same be in the least communicated to the mines, they must of necessity totally overthrow them, by reason of their many concavities, and bring all that is in it under the ruins.

This mine is, of all the deep mines that ever I saw, the freest from waters, for some of them are much pester'd with them; as for instance those of *Schemnitz*, which being full of springs in the first region, the water from thence distills to the inferior parts, and there gathering into pools, is not without great labour and expence carried from thence, partly by means of bags made of the hides of oxen, and partly by long wooden pipes of fir-trees, a great number of men and horses being employ'd day and night, without light, in drawing of it up: These poor wretches are so hardly put to it with continual drawing, that in case the head miner finds them, by the increase of the waters, to have been negligent in their duty, they are miserably beaten, till they redouble their labour, to make an amends for what they have lost before.

Subterra-  
 neous wa-  
 ters very  
 trouble-  
 some to  
 miners.

Among these poor wretches I found two young *Polanders* of very good extraction working stark naked; seeing these unfortunate creatures in so much want in the midst of gold and silver mines, and fit objects of our charity, I gave them something at their request; for, tho' they are oblig'd every four hours either to ascend from, or descend into, the mines, they have no more than thirty or forty *Hungarians*, i. e. twelve or fifteen *French* *Sous* allowance per week; a poor salary indeed; and if they are discovered to embezzel the least thing belonging to the mines, they are sure to meet most severe punishment.

Among other things, I asked the head miner of the *Schemnitz* work, whether in digging in the mines they did not sometimes meet with some rivulets, pools or collections of waters? He told me, that hitherto they had met with none in the *Hungarian* veins, but that he believed they were now and then to be seen in other mines. He added that the springs arising so frequently on the surface of the mountains, were evident demonstrations of their having their sources in the subterraneous passages, to be like, in my opinion, the same rivulets we see above ground, as are to be met with in the great concavities of the high mountains; to wit, abundance of small rivulets and springs, gather'd by the continual droppings of water, that break out into several places, and meeting in the subterraneous channels, made by nature itself from the beginning, or opened by the force of the waters, produce those sources of rivers we see above ground: Or perhaps these waters being percolated thro' the porous parts of the earth, at last by the gathering of many small channels, turn into a considerable river.

Rivulets  
 under  
 ground.

It is by this means, I suppose, that the large and deep subterraneous river, which furnishes the famous well of the castle of *Charleville* with water, after it has run for a considerable time with a swift current very deep underneath the hollow secrets towards the west, turns at last into a considerable river, tho' it is unknown to this day where these waters discharge themselves at last. Perhaps these waters, as well as those of the sea and some rivers, may be swallowed up again by certain subterraneous passages.

I asked further, whether they had not observed any peculiar virtues in the waters thus distilling from the gold and silver oar? I was answer'd, that the miners were very 'fraid of drinking them, but whether they had any peculiar virtues, that they were not able to tell; but for my part, I can scarce persuade my self, that these subterraneous waters should not attract or retain some of these metals and other places they meet with in

 of *Char-  
 leville*.

The sub-  
 terraneous  
 waters not  
 without  
 virtue.

in their passage, just as the chymical liquors partake of the virtue of the medicines that are pass'd into them by way of infusion. Hence it is, that the virtues of some springs are known to us, whereas the true quantities of others remain hitherto undecided, by reason of the great variety of the metals, minerals and precious stones, the spirits whereof are communicated and mixed with these waters.

Upon this occasion I can't forbear to relate to you what hapned to me. A certain Hungarian nobleman, who was proprietor of the gold mine of *Wolfsau*, having presented me with some stones out of that mine, I took one of them, of about a pound weight, reduced into a small powder, and putting it into a glass alembick distill'd it out of the ashes: it produced about two ounces of a mineral water, of a most odoriferous scent, and extremely cordial, the like I never met before: The dregs I put into a crucible, which by a violent calcination produced about the value of half a ducat of gold, of twenty two *Carats*; besides a certain quantity of yellow flowers, not unlike a sulphur. When I considered the quantity of water produced out of a stone, and its odoriferous scent, I began to bewail the want of men of ingenuity in or near these mines, with whose assistance the virtues, which lie questionless hidden in these waters, impregnated with the spirituous substance of these metals and minerals, might be brought to light, for the benefit of mankind.

It also frequently happens that the subterraneous waters carry along with them the colour or tincture of the minerals through which they pass. Thus in the mines at *Neubensfel* you see a rivulet issuing out at the foot of the mountain as green as the vitriol it self contained in these copper mines,

which being convey'd from one receptacle *MERIN*. to another, they separate out of these waters, by this way of filtration, a considerable quantity of *Verdigreese*; but of these subterraneous waters I shall have occasion to treat more at large in a peculiar treatise of the secrets of generation; there, among other things, I intend to treat of the rise of these waters to the tops of the mountains.

But to return to the poor miners, in the *Sremnitz* mine: After we had taken a view of all the various turns and veins of gold, we came to the very bottom of the first passage, where they fill the leather bags with the oar, to be drawn up to the surface of the mountains. The head miner would have persuaded me to return back through this passage, but I excusing the matter, he went that way alone, leaving me to the management of his men, who conducted me thro' the same passage I came in. I asked him the reason why he would not go along with me; he told me that being much tired, and in a sweat, he durst not venture the sudden alteration out of the hot into the cold region of that passage, which I found true by experience; it being scarce to be imagined what effect this sudden change has upon a body covered only with a slight miner's habit, during the passage through the cold region of the mine; from whence we were no sooner got out, but we were welcom'd by ten or twelve miners, whose civilities we recompensed by a piece of money to drink our healths. Thus, with faces more like dead than living men, being conducted into the head miner's house, and well rubb'd with cloths before a good fire, we chang'd our cloaths, and being invited by the governor to partake of a dinner, he prepared a courie for such strangers as came to visit the mines, we took our leave both of the mines and the jolly company.

Singular  
virtues of  
the mineral  
waters.

An

*An Account of the Cape of Good Hope  
and the Hottentotes, the Natives of that Country,  
by William Ten Rhyne, Native of Deventry,  
Physician in Ordinary, and a Member of the Council  
of Justice, to the Dutch East-India Company ;  
with some Animadversions upon the same, by Henry  
Secreta a Zevorzit. Translated from the Latin  
Original, printed at Schaffhausen in Switzer-  
land.*

TEN  
RHYNE.

**T**HE ninth of *October* 1673. we sail'd with S. S. W. wind, steering our course S. E. we discover'd land at thirty two degrees, but foggy (as usually it is) as we approach'd the shoar ; and sounding the depth we found a hundred and twenty fathoms water. But whilst we were flattering our selves with hopes of coming to the so long expected shoar, the wind turning against us, to's'd us up and down, in the sea, till the thirteenth of the same month ; then sailing with a S. E. wind, we came to an anchor in a sandy bottom, in the bay of *Saldanba*, extending it self in form of a half-moon, and of a quite different position than what it is represented in the maps, either by the carelessness of the engraver, or ignorance of the author, having no other congruity with their description, except that the bay had a pointed kind of a promontory at both ends ; but the islands are neither so numerous nor of the same situation (differing four points in the compass) as they represent them, and appear under various colours. Being very desirous to refresh our selves after so long a fatigue, the captain and I and the factor, went ashore on this point of *Africa*, accompanied only by some few seamen that managed our boat ; casting about my eyes with a great deal of eagerness in this country, unknown to us before, I saw a vast ridge of mountains, which encloses the bay with many hanging rocks, which being well stor'd with divers sorts of plants, seem'd to imitate the *Hanging Gardens*, or *Semiramis*, or *Alcinoe*, and appeared to me like the *Elysian fields*, tho' in a desert : I gather'd a good quantity of these plants, in order to present them to our *Herbalists*. I was surpriz'd to see in this desert such a vast

Their arrival at the Cape of Good Hope.

The bay of Saldanba.

quantity of aloes, which, I believe, could amount to no less than some thousand pounds weight. Night made us return to our crazy ship, and as we were returning from the land, we observed the sea near the rocky shoar almost covered with haddocks ; being extremely satisfied we had escap'd this without the least danger, as having in full remembrance what happen'd to eight *Dutch-men* sometime before, who being employ'd in the pursuit of some sea-horses, were cut to pieces by the natives.

Being got safe aboard, we set sail the next morning again, with a fair N. W. wind, and passing by the *Dassen* islands, defended only by a small garrison ; it has got its name from the great number of sea-rabbits taken there, and produces some pasture for sheep.

The fourteenth of *October* towards evening, we came to an anchor, with a moderate gale from the south to west, and twenty three fathoms water ; the next day, viz. the fifteenth, the wind at N. W. we repass'd in sight of the *Rabbit* isle about eight leagues distant from our port on the *Cape of Good Hope*, eight from the *Dassen*, and about fifteen from the bay of *Saldanba*, according to the mensuration of the maps, having a high rock to be seen at a great distance ; there several exil'd prisoners were employ'd in burning of muske-shells, to make lime for the island. This isle produces abundance of *Chamelons*, lesser than those of the *Indies*, as also all sorts of insects, serpents, and spiders as big as a man's fist.

About four o'clock in the afternoon we discovered the table bay, having lost abundance of men in this voyage ; and being invited the next day to dine with the governor, as we were rowing towards the sandy shoar we were entangled among a vast

vast quantity of *Sea Alkaner*, commonly called *Brembastin* (a plant of that bigness that one single one would have filled our boat) a certain mark to those that approach the *African* coast near the *Cape of Good Hope*, as are likewise a certain kind of small whitish sea-gulls. Besides the many other reasons we had to be extremely delighted with the sight of land, after so tedious a voyage, the novelty of a place so little known among the ancients, did not a little raise our curiosity to make the best inquiry we could of this country. All what they say material upon this head tends only to this ; that a certain emperor coming from the *Mountains of the Moon* to the *Cape of Good Hope*, erected an empire here ; which being afterwards divided into four kingdoms were

known by the name of *Measopatu*.

TEN

I will not pretend to trace the whole foundation of their history, having confined my self to the narrow limits of a journal ; whether these nations owe their original to *Cham* the son of *Noah*, or to certain *Arabians* (the posterity of *Shem*) that pass'd into *Africk*, or whether some of the natives of *Africk*, grown numerous by degrees, and not able to subsist in such numbers in a barren soil, sent certain colonies to this uttermost point of *Africk* ; to trace, I say, these matters, being beyond our scope, we will not content our selves with giving you an account of their manner of living and commerce, after we have told you something of its situation and constitution.

# CHAP. I.

## Of the situation of the Cape of Good Hope.

THE promontory, known by the name of the *Cape of Good Hope*, is situated at the southernmost point of *Africk*. Its longitude, in respect of the streights of *Gibraltar*, is 39 degrees 25 minutes ; and its latitude, in respect of the *Hesperian Promontory*, or *Gourda'u* (known by the name of *Cape Verde*) 34 deg. 30 min.

It was first discover'd by *Vasco de Gama*, 1491. (by the encouragement of *John*, then king of *Portugal*) who met there nothing but cragged mountains, as high as *Olympus* it self, scarce producing any thing for the sustenance of human life : Those unfortunate wretches, who are obliged to inhabit here, having scarce any thing to feed upon, but what is produced with a great deal of pains, in a barren soil and very ill climate ; affording scarce any thing but brambles and briars, wherewith the mountains are cover'd on all sides. As there are few plains, so there grows but little corn ; the only plains of note are, that known by the name of *Babale Plain* (or the field of battle) being about three leagues in compass, and the other called, by the *Dutch*, *Buffle Vacht*, or the *Buffers Plain*, seated upon the ascent of a high mountain ; whether beyond that the country be plain or mountainous is not known hitherto.

The mountain that lies close by our part is call'd the *Table Mount*, from its flatness on the top, and serves for a guide to the mountaineers in those parts. Its height is reckon'd to be about five leagues. Certain it is (as I found by my own experience) that its ascent is very steep, for it cost me a hearty sweat before we came to the top of it ; being obliged to pass in my way up vast multitudes of various shrubs and plants,

VOL. IV.

and among the rest saw a whole forest of the laky *Palmitre* (the roots wherof grew crosswise, like a net-work) extending it self in two branches to the foot of the mountain ; stor'd with prodigious numbers of baboons. In our return (towards evening) we were sadly pester'd, or rather frighted, with a kind of fiery meteor, which seem'd to move in the air like large sparks of fire ; I endeavour'd to catch them with my hands, but finding them not palpable, I was convinced that they were sulphurous meteors engender'd in the fens, not unlike the sulphurous excrement we see in the night-time pass thro' the air.

The next adjacent mountain is call'd the *Lyons Mount*, from the shape which resembles that beast, not from the roaring of the winds (like a lion) as *Mercator* would have it, who affirms, that this cape is subject to such frequent and terrible tempests, that nobody, unless in case of the highest necessity, dares to cast anchor her, whereas it is now sufficiently known, that this cape serves the *European* ships for a constant place of refreshment, and a safe port ; tho' it must be own'd, that this coast is much infested by storms.

Divers rivers are, as it were, the product of these mountains. The first is called the *Butter* river. (2.) The *Kaffernal's* river. (3.) The *Mountain* river. (4.) The *Endless* river ; it raises in the mountains, but its extent is unknown hitherto. (5.) The *Broad* river, extremely pleasant, by reason of the many delightful trees that stand upon its banks, but very shallow. (6.) The *Fenny* river ; all which have very clear, sweet and wholesome waters, their springs being purify'd by the heat of the climate.

Vere.

TEN RHYNE. The 1st of November we took a view of the company's garden, which furnishes the ships that come to anchor here, with all the East-Indies sorts of refreshments, where we saw whole walks and orchards of lemons, citrons and orange trees; parted by rosemary and laurel hedges, not inferior in height to most of our European trees. A pleasant brook having its rise at the foot of the adjacent mountain, waters this garden, and slides its current among the green hedges.

From hence casting my eyes towards the adjacent mountains, I could plainly discern (tho' at a considerable distance) the original cause of the south-east wind, which put me in mind of the mountains, where *Aeolus* is said to have his seat, and detain the winds in prison. For it is observable, that whenever thick clouds appear on and about the tops of the adjacent high mountains, they are the fore-runners of severe storms, which are more or less strong, according to the extent, thickness, or position of the clouds; of this I have taken frequent notice in the clouds, that us'd to arise upon the table-mountain, which were always follow'd by heavy and long tempests.

Thus, it is certain, that tho' the stars never vary in their course, they don't communicate the same quality to the air; it having been observ'd, that at the same time there blows quite another wind ashore, as there does at sea; nay, what is more, two or three different winds blow at once in different parts of the bay, all which must be attributed to the different position of the mountains, in respect to the several parts of the bay. Nothing is more common here, than to find a certain mountain near the table-mountain (called from thence the *Devil's Mount*) to be all over stormy, whilst the circumjacent country is blest with fair and calm weather.

Thence it is that I am verily persuaded, that in case our sailors would make more exact observations for the future, of the different effects of the various situation of places, our navigation might be founded upon more certain rules than now it is; which makes them have recourse to unknown causes, and the instability of the tides in certain places. For what other reasons can be alledged for these constant winds (called *Monsoons*) but the high mountains which are constantly cover'd with snow, it being certain, that these winds continue to blow whilst the snows are melting; that there being no other cause to be alledged in these places where the wind blows always from one corner, or changes but once a year, than the distinction of the mountains, or the annual concurrence of the sun. It must however be confess'd, that such spacious fenns,

the receptacles of vapours, may not a little contribute towards these winds.

Therefore our seamen would do well to observe the different constitutions and situations of places, with the same care as they do commonly the tides, or return and reflux of the sea, which vary according to the situations of the bays, havens, or capes; of this variation I had sufficient experience in our passage through the channel, betwixt the port of *St. Malo*, on the *French* shoar; and the isle of *Wight*, occasioned by a ridge of rocks near cape *La Hague*, on the coast of *Normandy*. But the discussion of this spinous question concerning these *Monsoons*, or certain variations of the winds, may not only depend (as well near home as in distinct places) from the sun's approach to, or removal from these parts, but also from the different seasons of the year.

But it is a much greater secret to know the true origin of the continual south-east winds, which blowing almost without intermission in divers parts of the world, and especially on the *Cape of Good Hope*; we may address our selves to *Oedipus* himself, to find out the different situations of the mountains in reference to the plains, which occasions these winds.

If \* *Descartes*, when he set up for a re-<sup>Philos.</sup> former of philology, had been convinc-<sup>Part 4.</sup> ed of these experiments, he would not have<sup>Sett. 49.</sup> been put to the trouble to have his whole<sup>And Isaac</sup> recourse to the moon; for, as the effects of<sup>Vossius de</sup> nature don't depend on general causes, so<sup>motu mar-</sup> it is with the tides, or flux and reflux of the seas, which cannot be truly explained in all its circumstances, by the hypothesis of *Descartes*; there being a vast difference betwixt these tides on the coast of *Genoa*, and on the coast of *Tuscany*; in the *Baltick Sea*, they are very different from both; and are most violent in the gulph of *Faquet*, in the channel near *Nova Francia*, or *New France*, and in the streights of *Babana* in the bay of *Mexico*. The same might be said of his hypothesis of the magnetick virtue, were it not that our purpose is confined to the description of the rivers, mountains, and other things worth our observation in this part of *Africk*.

About five leagues beyond our fort, is the *Salt-Bay*, having got its name from the vast quantity of salt that is digg'd near it, and therefore may rather be reckon'd of the kind of *stone-salt* than of *sea-salt*; it does not always keep the same figure; and tho' it be cut out of the ground in vast pieces, yet is it easily reduced to powder; it is generally white in the oar, though sometimes it proves blackish, but is soon whitened by the heat of the sun in the summer-season; it is somewhat more pungent than our common

The Devil's Mount.

mon salt, but nevertheless as proper for use.  
 Probl. Sec. Perhaps the experiment try'd in Aristotle's  
 23. Probl. time, might take place here with good suc-

cess; viz. That if you dig near the sea TEN  
 shoar, to meet at first with fresh water; and RHYNE.  
 if you dig deeper, with salt water.

*mong the rest, a certain fish call'd the*  
*Swimmerly Parepus, and Stautilus, by Pliny;*  
 but my design of keeping my self within  
 the limits of an epitome, will not permit  
 me to give you a particular account of all;  
 I will only add, that one day as I was walk-  
 ing along upon the very brink of the sea-  
 shoar, to examine the several products of  
 the sea, I did light upon some small crea-  
 tures sticking to the rocks very close, with  
 their feet, representing by the excretion of  
 their fibres, our *roses*, whence they are cal-  
 led by the *Dutch, Klipperjen* or *Roekrojes*.

TEN  
RHYNE.  
W

## CHAP. V.

## Of the insects or venomous animals.

THESE are numberless on the *Cape of Good Hope*; the most noted are *spanish-flies*, *butter-flies*, *glow-worms* and *locusts* of divers kinds; *cornworms* of divers colours, and *spiders* with many legs of the bigness of a man's fist; *ants* and *pismires* that bury themselves under the food they have gather'd; I saw whole millions of them in heaps on the mountains.

Their serpents here differ in bigness, shape, and venom; the vipers are as large again here as in *France*; *salamanders*, *scorpions*, long *ear-wigs*, *lizards*, and *toads*: discoursing one day with the governor of the fort, about these toads, and how surprized I was to observe them three times bigger than ours, with two long feet trailing behind, like *otters*; he shew'd me a certain sea-fish full of prickles, not unlike a toad, with long feet joyn'd to the outside of the belly; he told me that these did bring forth the toads, which I was sufficiently convinc'd of afterwards by my

own experience: I remember, that when I dissected one of these creatures, in the presence of the governor, I found its lungs very large, but the other like those of ordinary *toads* and *frogs*.

The rest of these kind of creatures either did not come to my sight, or, if they did, it was superficially, that in that short time I stay'd there, I could not take exact notice of them. To conclude, I am inclined to *Aristotle's* opinion, \* viz. That *Asia* produces the fiercest beasts, *Europe* the strongest, and *Africk* the most different kinds, which questionless has given birth to the proverb, *that Africk always affords some new thing or another*. For the want of fresh water in this hot climate, draws in the wild beasts in great numbers to the banks of the river; they copulate promiscuously, and so engender several new kinds. But this must be understood of the deserts of *Africk*, which otherwise is watered by many great rivers.

## CHAP. VI.

## Of their plants.

BUT as my genius did lead me more to the knowledge of plants, than any other thing to be met with here, I was very curious in examining such of them, as this (though otherwise barren country) produces in great plenty. Near the sea-shoar I met with abundance of the *Kali*, (a herb so highly esteem'd both among the ancients and modern authors) as I found in the vallies great store and variety of secret *broom-beats*, of divers sorts, of *sea-green*, *dog-onion* and *daffidil*, with heads of the bigness of an ordinary man's head; some whereof I have sent long ago into *Holland*; in the night they have a smell like the *geranium* or *storkbill*.

Among the mountains you find a certain tree here (more fragrant than all the rest) the wood whereof is so hard, that the *Dutch* have given it the name of *iron-wood*, but is used only for fuel. These mountains also produce whole woods of shrubs, abundance of *aloes*, and very good *scammony*; in the gardens they have your *Indian nightshade*, and a most delicious kind of *melons* (call'd erroneously *water-lemons*) by the

*Dutch*) affording the best refreshment in the world, to the ships that touch here in their passage to or from the *Indies*.

It is observable, that the *lower palmtree*, (called *Piram* by the *Malayans*, and *Armifas* by the *Arabians*) as well as the *coco-tree*, never bear blossom without, but only within the two *tropicks*; and that (if those who speak by experience may be credited) in those countries that are nearest to the equinoctial, they thrive best, and their fruits prove either lesser or bigger, according as they are nearer or more remote from the said equinoctial line, and decrease both in quantity and quality accordingly. Thus you find but few of these palm-trees, and those without fruits, on the *Cape of Good Hope*; and in *Bengale*, without the *tropicks*, the same pears and apples as we have in *Holland*, but no *coco* or *palm-trees*; but at *Melquetti* (a place in the kingdom of *Bengale*) and in *Persia* (near the *tropicks*) these trees grow, but bear no fruit except what is very insipid and dry, whereas, near the equinoctial, they prove larger and very juicy.

CHAP. VII.

Of the different seasons of the year.

THE cold does not exert its rigour here : hails are very rare, nor are the rivers congeal'd with ice : the greatest extremity of the winter scarce ever raising here beyond a white frost.

For you must know, that we have not four, but only two seasons of the year (as well as over the *Indies*.) The winter is one continued rainy season, as the summer is one unintermittent draught, but both accompanied with violent storms: for at the same time we enjoy the pleasantness of the summer heat in *Holland*, they are continu-

ally afflicted with rains here; and whilst the sun there approaches to the *equinoctial line*, it recedes from thence, on this cape, by a continual course.

As for instance, if you pitch upon a certain place in *Holland*, as *Amsterdam*, the *Cape of Good Hope* is 17 deg. 51 Min. beyond it in its latitude, but 11 deg. 30 min. beyond it, in respect of its longitude. For in *October* (the beginning of the summer here) when the trees cast their leaves in *Holland*, the fields and gardens begin to be cover'd with grafs and herbs.

CHAP. VIII.

Of the Hottentotes, the native inhabitants of this country.

THIS name belongs to different nations. The first are called *Essequaes*, who claim the first rank, as well in respect of their number as of their stature (being like *Demi-Giants*) and strength, which is the reason that they will quarrel with the *Namaquaes*, their neighbours, upon the least occasion. They inhabit the inland country for one hundred and fifty leagues, as far as it is known to us; they don't care to engage with us for fear of our fire-locks: for the rest, they live after the same manner as the other inhabitants on the *Cape of Good Hope*. Our governor of the fort sends yearly certain persons among them, with some tobacco and some brass toys, which they exchange with them for cattle.

The second are the *Namaquaes*, who have this particular to themselves, that, whereas the other inhabitants cover their privities with fox or goat-skins, these make use of baskets, made of elephants teeth, for the same purpose. Their bucklers are proof against the strongest arrows. The third are the *Souffas*, living most after the same

manner as the *Hottentotes* under our jurisdiction. The fourth, the *Sonquas*, who having been (for just occasions) despoiled of their cattle, by our country-men, have ever since dwell'd in the woods, and lived by hunting. Fifth, next to these dwell the *Gregoriques*; and next to them, sixth, the *Honnimas*, with whom we are always at enmity, by reason of the divers murders committed by them upon our country-men. Their chieftain, named *Honnimas*, was then very aged and lame, but a stout fellow. Seventh, those who inhabit next to the tent, and are conversant there, we make use of as auxiliaries against the other *Barbarians*; their chieftain's name is called *Claes*, and his lieutenant captain *Cuyper*, both bold and brave soldiers. I have often seen them with their ragged crew at their heels; and they scarce ever appear without an attendance of six or seven servants, yet would the last never refuse a piece of tobacco when offer'd him which I us'd to do now and then, and to discourse with him in *French*.

CHAP. IX.

Of their neighbours.

IT'S unknown hitherto, what sort of people borders upon the country of the *Hottentotes*; for what some have related of the *Negroes* (commonly called *Cassirs*) is founded only upon hearsay. Thus I remember, that one of our corporals being sent out with six soldiers to view the utmost borders of the *Hottentotes*, told us that some of these *Hottentotes* (whose names were not

heard of as yet among us) had informed him, betwixt them and the said *Negroes* was a very broad river, which they us'd to pass in small canoes or boats, made out of the trunks of large trees hollow'd out, for the exchange of their commodities. But the *Hottentotes* have no settled limits amongit one another.

nificant

## C H A P. X.

*Of the shape and make of their bodies.*

**A**S all mankind has a certain instinct or inclination (besides the disposition depending on his native country) so it is next to a miracle, that during so many ages, each nation has retained certain lineaments or features, which, as they are infallible signs of their dispositions, so they shew a vast difference betwixt several nations.

The *Hottentotes* being very much sunburnt, have generally a tawny skin, though some of them have a tolerable white skin; but blackness is the greatest beauty among them; for the rest they either strew a certain earth, of various colours, upon their heads, or mix the same with suet, and so besmear their hair and faces, which they look upon as a singular ornament; for there is a certain mountain here, which furnishes them with materials for divers colours, which, if rightly manag'd, would turn to a good account.

As many as I ever had opportunity to see, appear'd to me slender and tall, shap'd with strong knotted joints, and well set, with flat noses (such as most *Africans* and *Asiatics* have) and bended fore-heads; large thick lips, curl'd hair, woolly and cut or shav'd in different figures. They appear for the most part naked, having only a piece of leather, like an apron, hanging down before from their breasts.

The women are distinguish'd from the men by their deformity, being generally round shoulder'd, and have this peculiar, among all other nations, that out of their

privities you see two labels hanging down, like part of a man's yard (as now and then some of our *European* women are subject to the relaxation, or hanging out of the *Clitoris*) of these they are so proud, that if a stranger happens to come into one of their cabbins, or huts (call'd *Kralles*) they will take aside the leathern apron, and shew them to the stranger. I remember that one of our surgeons opening the body of one of those women, that had hang'd her self, found these protuberancies quite relaxed and hanging below her privities; two nipples in one of her breasts, and divers stones in her cawl. Upon this occasion our governor of the fort told us, that he had a stone taken out of one of the testicles of a man, which being as bright as a crystal he had it set in a ring; but one of the *Negro* kings being very desirous to have it, because he look'd upon it as a great antidote, he had presented him with it; which seems to intimate, that scarce any part of our bodies are without stones. They have this common with the *Negroes* and *Egyptians*, that as they anoint themselves with oil, so these do with grease, especially their heads, upon which they strew the ashes of a certain herb, commonly call'd by them *Boucbou*, an office that belongs here to the wives to perform to their husbands. They slit their ear-lips cross-wise, in which they wear a piece of tobacco-pipe, and the better fort ear-rings or coral.

## C H A P. XI.

*Of their garments.*

**T**HE use of woollen cloaths is not known among them, though they are now and then pinch'd with cold, against which they preserve themselves with ox and sheep skins, or of wild beasts. This garment, both of the gentlemen and plebeians, is nothing else but a leathern vest, reaching down to their knees (call'd by them *Karos*, and used instead of an under-bed) the only thing to defend themselves with against the cold. These are made sometimes of cows or sheep skins, sometimes of panther or goat skins, with this difference only, that the common people cover their privities with a piece of ox skin, the gentlemen do it with the skin of an otter. In this point they seem to follow the foot-steps of

*Hercules*, who whilst he dwelt upon earth, and convers'd among nations, never made use but of one single skin for his garment, and one club. During the rainy season, they wear on their heads a kind of hat, or peaked cap, of leather, fitted close to their foreheads, and reaching down below their eyes. About their necks they hang a pouch, wherein they keep the head of their arrows, and sometimes their tobacco. Their arms, both above and below the elbow, they adorn with rings of elephants teeth, on which sometimes they fasten their pouches. For the rest, they appear naked, except that some few wear a kind of bullocks hides under their feet, which in case of necessity are boil'd or broil'd, and serve them for food.

The

Call  
Hot  
not  
breSee  
Iust  
Apo

The women's vests, as well as their aprons (which cover their privities) are made of sheep skins, they being more solicitous to cover the same in publick than the men. On their heads they wear such another peak'd cap, like the men's shoes they never use, and instead of stockings wrap about their legs some dry osier, or dry'd guts, or perhaps the shreds of a bullock's hide.

The chief ornament they delight in most is, to shave the hair of their head. (like

as we do our shagged dogs) into several figures of their fuller half-moon or stars. On their foreheads they wear coral-beeds, notch'd shells, brags money, the bones of cows, twisted hair, &c. All, unless those that are very poor, have about their necks collars or necklaces of coral, glass or brass beads, which they exchange with the Dutch for their cattle. About their elbows they commonly wear rings of ivory, and about their breasts bracelets of brags.

## CHAP. XII.

### Of their dwelling.

THEIR dwellings are only little huts (call'd *Krallen*) for as they are forc'd to change their dwelling places, for the better conveniency of feeding their cattle, in a desert place, so they cannot have any fix'd habitations. These cabbins have but one entrance, arch'd on the top; the coverings and walls being made of the leaves of the *African Sword Grass* (the head whereof they make use of instead of bread) twisted so closely together as to keep out the most severe rains and cold. The largest posts, rafters and lathes, are made of the boughs or twigs of trees. Every man digs a hole in his hut, wherein he throws a sheep skin to wrap himself in, which serves instead of a bed, wherein he is laid in the same posture as a child in the womb; the wife lies in another hole next to his side.

In the huts they now and then entertain fourteen or fifteen persons at once; they commonly rank them on the hills in the fields, or near the banks of the rivers, among the trees, in a kind of circle or enclosure, at five or six paces distance from one another, wherein they preserve their cattle, rather against the attempts of the wild beasts than an enemy.

When they are to change their habitations, the captain gives them the signal by a great fire; the women manage all the household-stuff and other utensils, which they put in leathern bags, and carry them upon their shoulders; the huts they load upon the backs of the oxen, which serve for the same use when their husbands go in to the wars to carry their baggage.

## CHAP. XIII.

### Of their household-stuff.

TO give your self the true idea of their household-stuff, you must call to mind the primitive ages, when *Crates*, of *Thebes*, gave all he had to the people, changing the most pleasant gardens, and well peopled towns, for a fatchel and staff, the only equipage belonging to the *Cynicks*, and now to the *Hottentotes*, who in this point tread exactly in the footsteps of *Diogenes* and *Antisthenes*; these inconsiderable implements being by them in as much esteem as the imperial robes to an emperor, a crown to a king, the mitre to a bishop, or the augural staff to the ancient toothfayers; and as *Diogenes* (when he was contending with the great king of *Macedon*, about the greatness of his empire) gloried in

his bag and staff, instead of the other's scepter and thrones, so these *Hottentotes* are absolutely contented with their mean condition. However, they make use of drinking cups, of shells gather'd on the sea-shoar, or of tortoise-shells, after they have eaten the flesh; they call them *Sivigoes*, and roast them in the ashes, or exchange them for tobacco; for want of these they drink fair water out of their hands, like as the *Cynick* did. Their meat they dress sometimes, by roasting it, upon a tile, sometimes under the ashes, and oftentimes eat it raw; some of the better sort use earthen pots and vessels, or pieces of trees hollow'd, in which they put their meat.

## CHAP.

## C H A P. XIV.

## Of their genius and temper.

**T**HEIR innate barbarity, their idle and solitary life, join'd with the want of knowledge and true virtue, makes them prone to all manner of vices, as levity, inconstancy, lust, deceits, perfidioufness, and most shameful debaucheries. They are so bloody in their inclinations as to exercise their cruelties upon their vanquish'd enemies, after their death, by striking their arrows and weapons into their dead carcases; they are so much addicted to theft, that one neighbour does not stick to enrich himself by stealing the cattle of another; and as in reference to their chastity they have quite abandon'd the foot-steps of their ancestors, in the time of *Scipio the African*; their lasciviousness is always accompany'd by the most unaccountable slothfulness; for they neither sow nor reap, neither trouble themselves about what they shall eat or drink the next day, but wallowing almost in their own dirt; therefore if you have occasion to employ any of them, you must take them when they are hungry, and be sure to perform your promise. Their inordinate way of living and lust, makes them grow old before their time, and makes their bodies grow crazy and weak; and as they keep no regular account of their age, so nothing certain is to be determined of the length of their lives; for what their disorderly way of living takes from them on one side, their forc'd sobriety (for want of necessaries) makes amends for on the other hand, living for the most part upon herbs; however it is, the general opinion is, that scarce ever any of them live above a hundred years.

They are so greedy of tobacco, from their cradles, that children before they come to the age of eight months (as I have often seen my self) smoak it; and most of them (tho' otherwise tame enough) will work a

whole day for a piece of this weed.

As they look upon the women as despicable creatures, so they are not allow'd to eat any beef or fresh milk, but only mutton, and that very sparingly; they are, nevertheless, nice in their palate, and remember a great while what has pleas'd them or not; for the rest, they live without fear, contented with their own, whether they be rich or poor in cattle.

Among all these vices, they retain one good quality, that is, if one of their neighbours has, by mischance, lost his own cattle, they will stock him again, perhaps with a calf and a sheep. They are not easily removed from their own opinion; gold and silver they don't value at the same rate as other men do; for where there is no use, there is no greediness after money; and ignorance of vice is more prevailing than all the precepts of virtue; an instance, that a mild climate often produces very rugged spirits, tho' they are very crafty with all their ignorance.

Whilst I tarried here, I had the opportunity to talk sometimes with three women of the *Hottentotes*; one named *Eve*, was a civil person, and would discourse very rationally; as she was well versed in the *Dutch* and *Portuguese* languages, so I learned from her diverse secrets relating to this nation; the second, named *Cornelia*, being turn'd christian, and married to a *Dutch* surgeon, did lead a very scandalous life, and therefore was several times banished the fort; the third, named *Sarah*, was the same I told you before to have been dissected by our surgeon, having hang'd her self, because a curst *Dutchman* had debauch'd her, under pretence of marriage, but left her afterwards.

## C H A P. XV.

## Of their manners.

**A**S these barbarous pagans live without laws, so they only follow their instinct without controul. Their manner of sitting is just like the posture of a child in the womb, bending their heads betwixt both knees, which they embrace with their arms. They despise the female sex; mourn three days for their deceased friends, which both

sexes spend in terrible howlings and lamentations, about the huts of the deceased. They bury their dead in a hole under ground, and cover it with a stone. In copulation they choofe to perform it from behind, the woman lying upon one side, something higher than the men, scarce differing in this point from the brutes.

## C H A P.

C H A P. XVI.

*Their way of living.*

AS nature prompts them to luxury, so their poverty forces them to temperance; hence it is, that they have no varieties at their tables; but instead of bread, make use of the *suord-grafs* \* which the women dig out of the *fenns*, for the women take all the pains here, they provide food, they look after the house or hut, and after the cattle, &c. Upon any extraordinary occasion, of a wedding, lying-in of a woman, or such like, they will perhaps kill an ox, a sheep (if they can't light upon such venison) for to entertain their friends; † the leaves of the *sea-green* of different kinds, are also much in use among them; for the rest they feed upon cows and sheep's milk, which the women gather early in the morning, and make very good butter of it. They flea a bird with feathers and all, then turning the skin with the feathers upward, they tie it to a stick or cane, and therewith stir the milk, till the serous part of the milk is separated from the oleagenous substance; the butter-milk they eat, and sometimes wash their hands with.

\* Of this there are divers sorts described in another treatise.

† Call'd wild figs by the Dutch.

Cheese they neither love, nor know how to make; their ordinary liquors for ordinary drinking, are milk and water; they

feed upon no fishes but what have scales, and consequently no eels, nor any of the testaceous kind, such as oysters, &c. The fish they most delight in, is a certain sweet kind of *bream* \* with very thick scales; \* Call'd they are all, without distinction of age or sex, the *Hottentotes* such admirers of tobacco, that, tho' they are at variance with one another, they will hand about the tobacco-pipe without exceptions.

This country produces a certain kind of *African arva* root (or *lake stobbin*) of so venomous and corroding a quality, that it not only bites upon, but also blisters the tongue. These *Hottentotes* have a way of separating the pernicious sulphur by the fire, which binds the volatile corroding salt; and thus to render it fit for food: The *bedge-bogs* (which are strangely shaped here) mightily delight in this root; they not only feed upon the dry'd and powder'd skins of beasts (after they have used them a considerable time instead of shoes) but also upon excrements mixed with some other things; this they do without the least distinction of civility, not excepting even their king, the head of a crew of miserable beggarly wretches, as almost all the *Negroes* are.

C H A P. XVII.

*Their manner of making war.*

Nothing is more barbarous than this country, where the rugged climate, and rocky mountains seem to have produced men of their own kind, who applying all their thoughts to mischief and fraud, are of a far different temper from the *Europeans*, being very prone to quarrel, or to beguile a man upon very frivolous occasions. Their arms (besides the leathern jacket which serves instead of a shield) are bows and arrows; these are of two sorts, for these call'd by them *Affigaves*, are a kind of dart which they know how to manage with such dexterity, that at forty paces distance they will exactly hit the mark: The other is a kind of a javelin, which throwing twice or thrice round their heads, they strike with vast strength into their enemies. They have a way of poisoning these weapons in the following manner: They take a viper or some other venomous serpent; which being enraged, they put the point of the weapon into its mouth, and tie it for fear of falling out; this done, they, to encrease the virulence of the poison, cut off the head of the

viper, under whose jaws the bladders, which are the reservatories of the poison, lie conceal'd; this poison may be taken without danger, but if communicated by the sting of the creature, is mortal, as many of our people have found to their cost. The best remedy against it is, to beat the affected place with a small stick, and afterwards to suck it.

Their chief strength lies in a surprise; having been taught by the lions (which are very numerous here) that it is safest to appear without their lurking holes in bad weather; when our fire-arms are generally out of order, they follow their foot-steps, and lurking among the woods, send their darts from thence among our people; but if they happen to meet them in clear weather, and in the open fields, they set a huge cry, and immediately retreat to the woods, or thorny hills, from whence they may fight at a distance, by the help of their bows and arrows.

If they happen to be much superior in number, they fall on with terrible cries, like

TEN like mad-men ; but notwithstanding the RHYNE inequality of their number, they seldom care to come in reach of our fire-arms, whereas if they engage with their own country-men, they will press upon one another : I think it may justly be apply'd to the *Hottentotes* what *Florus* says of the *Gauls*, viz. *That their souls are as fierce as the wild beasts, and their bodies beyond the bulk of men ;* but that it had been found by experience, that as at the first onset they fell on with a more than man-like courage, so if once repulsed, they retreat like women. It seems, as if their bodies, bred among the cloudy mountains, had retained some resemblance to the snow, which melts with the least heat ; as their fierce and barbarous inclinations seem to have a relation to the rocks and woods they inhabit.

Their leaders or chieftains, they call

captains, being not distinguished from the rest by their arms, except that his staff has two knobs, and his vest is somewhat cleaner than the common soldiers ; but he never appears abroad without five or six old fellows, who are supposed to be his advisers upon all occasions, as the *Romans* committed the management of arms to the younger fort, but chose the senate out of the elders.

We were at that time engaged in a war with one of their captains, named *Honomai*, because our forces had, not long before our arrival, taken from them above two thousand oxen and cows, besides sheep ; and we were at that time bringing our auxiliaries into the field, under captain *Claes* and *Cuyper*, to attempt a second irruption. Their wives they employ upon messages, and if any of them are taken prisoners, they are dismiss'd without a ransom.

## CHAP. XVIII.

### Their way of trafficking.

AS all their riches and substance consist in their cattle, this is the only commodity they exchange with our people. Commonly the governor of the fort sends a doctor or two accompany'd by some soldiers, and provided with good store of *Virginia* tobacco, or rather of the black and worse sort (which they esteem most) with some beads of coral, glass or copper, and some quantity of *aquavite* (whereof they are great lovers) which they purchase for their oxen, sheep, and sometimes for several panther skins. Their way of exchange is thus : Our merchants, offer a piece of tobacco, of about two spans in length for an ox or a sheep, always adding a piece by little and little ; (a custom always observed among them, without which they think themselves not oblig'd to the bargain :) at last they will ask also a certain quantity of *aquavite*, the value whereof must be deducted from the quantity of tobacco, which they value less by a fourth part at least ; but at the first meeting our factors always present them with a piece of this weed, which they seem to retaliate by a present of a sheep ; by this means they exchange sometimes a hundred or two hundred oxen (besides sheep) at one time. Our governor sends his factors no more than once a year to the *Essequas*, to make them the more eager after the tobacco ; they commonly present our factors with the best mutton at their meeting. But care must be taken not to

let these barbarians see your whole stock, for fear of being kill'd by them, upon that account ; as was likely to have happen'd to some of our people, who were in great danger of being all slain by the brother of the king of the *Essequas*, had they not been forewarn'd of the danger. by the old king himself, whose son now reigns, and lives in a good correspondence with us. But they never exchange a white ox cow (following perhaps in this point, their ancestors, the *Egyptians*, who worshipp'd *Isis* under the shape of a cow) which being among them like our bell-weather ; it is thus constantly wish'd, that the great captain (meaning God) may bless them with a white ox.

The ordinary meeting places of these merchants are. (1.) Near the horse-guard, placed upon our utmost borders. (2.) At the pits near the river, the boundary of the *Hottentotes* country under the *Dutch* jurisdiction on that side. (3.) On the other side of the mountain, in the same part of the country. (4.) Near the *Hafferbutts* river. (5.) Near the *leak-butts*. (6.) Near the *butier* river. (7.) At the *endless* river. (8.) Near *Jacob Ragen's* tree. (9.) Near the *geese-butts*. (10.) Near the *broad* river. (11.) At the *paradise*, a place so call'd from its pleasant situation, but wants good springs, because the water is tainted therabouts with a white clayish mixture. The 12th and last, is near the *budsel-bay*, about a hundred and thirty six leagues from the fort.

## CHAP.

CHAP. XIX.

*Their manner of dancing.*

THEY delight so much in dancing, or rather skipping, that their chief religious ceremonies seem to consist in the activity of their bodies; for, when they see the moon rising, they meet together; and whilst the men strike all at once their feet against the ground, by turns with a very grave air, the women clap their hands, and sing certain tunes to them. If they happen to look into a looking-glass in one of our houses, they are so delighted with their own shape (*Narcissus* like) that they fall a dancing, and seldom leave off till they drop down (quite tired) upon the floor; as I have often observed in a certain *Hollendale*, who was a servant in our lodgings.

CHAP. XX.

*Of their religion.*

AS brutish and barbarous as this nation is, yet are there among them some few foot steps of the knowledge of a *supream being*; for whenever they see the heavens covered with black clouds, when it thunders or lightens, you shall hear them say, *The great captain is angry*; and if they have kill'd any of our people, and dread our revenge, they will say in broken *Dutch*, *What shall we do? The Dutch-men (say they) will kill us: But if they kill me, I will go directly to our great captain, who will make me a present of white oxen.* Thus when it

is a very serene day, they say, *Our great captain will present us with white oxen.* For the rest, they seem to agree with the ancient *Egyptians*, and other pagans in this point, that they look upon the *sun* and *moon* as Gods; \* for they adore the *sun* by gazing \* See *Pliny* upon it stedfastly at rising and setting; *some*, <sup>to in Cratylus and Pliny, l. 1.</sup> times they will sit down near the river side and throw abundance of little balls of clay <sup>c. 8.</sup> into the water, which, they say, they do in honour of the *sun*: The *moon* they worship with dancing, as we told you before.

CHAP. XXI.

*Of their magistrates.*

THERE is not a village or plantation of huts so inconsiderable, but that has its own *prefect* to acknowledge the captains for their superiors, who are the *supream* governors of their respective nations; the *Ellequas* being the only people that are ruled by a king. All things are govern'd

according to their pleasure, none of their subjects ever daring to attempt the least thing against the commands of their captains. When they are to change their habitations, the *prefects* give the signal, but in case of a marriage, they must obtain leave of their captain.

CHAP. XXII.

*Of their peculiar laws and customs.*

THO' these barbarians are not restrain'd either by any written law or fear of God, they by a blind instinct follow the customs of their ancestors: Thus, if a woman happens to bring forth twins, a male and female, they immediately kill the last, differing in this from the *Scythians*, who kill'd all the males among the *Amazons*; and from the ancient *Carthaginians*, who us'd to sacrifice male children alive to *Saturn*.

They cut out one of the testicles of all their male children, immediately after they are born, to make them run with the more swiftness. The women cut as many

joints off their fingers, as they have had husbands, beginning with the first joint of the little finger; They allow of polygamy, like the *Mabometans*: Their industry (such as it is) is founded only upon their inclinations, without any legal compulsion. They know no other punishment of murder, but the revenge of the friends of the deceased, who never cease to pursue the murderer, till they have found him out, and then beat him with their clubs, and at last kill him with their javelins, nay, frequently exercise their cruelties upon their dead bodies. Other crimes, as adultery, theft, and such like,

TEN like, are made good by way of retaliation. RHYNE. They have one peculiar custom, if a young lad happens to fall sick, they kill a fat ox, which they feast upon, but the paunch and other entrails they hang about the patient's

neck, till being putrify'd, and falling off of course, they must be devour'd by some old man or other. Their successions are limited by the ordinary law of inheritance, especially among the *Essequas*.

## C H A P. XXIII.

*Of their marriages.*

SUCH as have an intention to marry together, having obtained their parents consent, apply themselves to their captain, who giving his consent, they marry at pleasure, tho' sometimes all their subsistence consists only in a club, an ox to carry their hut upon, a milch cow, and perhaps ten or twelve sheep, some whereof certainly are kill'd for the wedding feast. The richer fort marry as many wives as they think fit,

and in case of dislike, divorce themselves. These commonly kill two or three oxen, and a many sheep for the feast; the flesh, after it is parted from the skin, they expose a little in the air, and then boil it in its own fat in their earthen pots, the guts being roasted in the ashes; they treat their friends with these dainties, and spend the day merrily, according to their own way.

## C H A P. XXIV.

*Of the education of their children.*

WHEN their child-bearing women have an easy labour, they manage all the natural ligaments with sufficient skill, and without much difficulty; but in case they are afflicted with a hard labour, they make use of a certain herb, endow'd with the virtue of expelling the fruit; the true name or knowledge of which I could never learn from them, neither by entreaties nor promises, they alledging that they were strictly forbidden to discover it. Their time of lying in is soon over, and they bring up their babes after a very ugly manner; for after they have kept them about two or three

weeks at home, without any swathing clouts, they tie them to their backs; and at four months of age they begin to smok tobacco, and in four months more they put them upon their feet; then they have a jacket given them (as I have been informed by some who lived five years there.) At the age of eight or nine years, they begin to be accustom'd to the use of arms; their parents generally affix a piece of meat to a post, which they must hit with their arrows before they are permitted to eat the least victuals.

## C H A P. XXV.

*Of their handicraft trades.*

YOU may as well look for jewels in a hog-sty as artificers among this barbarous generation; however, they have a kind of taylor among them, who sew their skins (their ordinary apparel) with needles of iron (for, as I am informed, they have very good mines of that metal) or ivory, their thread being nothing but the twisted nerves of beasts. And considering that they shave their heads in divers figures, it is manifest, that besides taylor and barbers, they are also artificers in iron-work; these are the

main things they glory in with so much self-conceit, that when I once shew'd one of their captains a very well-wrought watch, and shew'd him the use thereof, he told me, *That questionless the Hottentotes could make such another.* They have also a certain musical instrument, of the same shape and use as our pipes. Some of them pretend also to magick, and would make us believe, that they can draw the fish to the bait with the sound of their pipes.

## C H A P. XXVI.

*Of their physick.*

I F we are obliged to the brutes for the discovery of several wholesome remedies; as to the dogs for emetics, to the Egyptian

bird *Ibis* for clysters, for phlebotomy to the sea-horse, for the use of ditany or garden ginger to the goats, of the swallow-wort to the

swallows,

swallows, of fennel to the roots of the narrow small root leav'd plantain, the toads, of the rue to the weasel, of the reganium to the flork, of the ground-ivy to the white bear, and of the use of the artichoke to the pig; what wonder is it, if these *Hottentotes*, tho' never so brutish, have their own way of curing distempers; I don't say all distempers, but like *Podalinus* and *Macbaon*, in the *Trojan* war, who were chiefly employ'd about surgery, if we may believe *Celsus*. See *Homers* *Suction* and *Unction* are two chief, if not the only remedy us'd among the *Hottentotes*; their main dread being from the poison of arrows or venomous beasts: If they are wounded by them, they beat the afflicted part with a small stick, till it be deprived of all sense; then they scarifie and suck it till the blood follows. This way of curing (which *Severinus* in his *chirurgery* recommends as efficacious) is different, according to the different natures of the poison, and according to the different continuance of the beating and suction, it being certain that the scorpions, who are not so venomous here as in *Spain*, *Italy* and *France*, don't sting so deep as the creature they call the *Thou-sand-feet*. If you squeeze his tail just above the sting, it emits a bright drop out of his crooked sting, unless he has stung some body not long before, which is not much more hurtful than the sting of our bees; his sting is not very soon replenish'd with the poisonous matter, and when he stings it is as if you were touch'd by a stone; but the *thou-sand-feet* being very corrosive, communicate very sharp poison: Of the vipers we have

had occasion to speak before. If the wound proves malignant, or there be the least suspicion of a gangreen, they cut it out with the sharp points of their arrows; and if it has infected a member, they cut it off immediately. All contusions they cure by unctions (with beef or mutton suet, for want of any other ointment) afterwards scarifie the part and suck it till they draw the blood thro' the skin. The rheumatism they cure in the same manner, except that they expose the part (after it is well anointed with the suet) before the fire, that the particles thereof may force out the moribidick matter, by their being attenuated before the fire, and then they go to sucking. Among the vegetables they are acquainted with very few physical plants but those of the best, which as I told you before, I cannot learn from them at any rate. This makes me admire how some can boast of I know not what secrets they have attained to among so treacherous a generation as the *Hottentotes*. They have a way of curing the colick by a certain aromatick root, almost in instant. They also stamp a kind of date (as I suppose) called by them *dacha*, which they afterwards make into a paste, and being dry'd in the sun, use it as most of the *Mahometans* do the *anison* or *opium*, and has the same effect upon them. They never cut the navel strings of new born children, but only tie it close till it falls of itself. This is all I was able to learn of a certain woman of the *Hottentotes*, the rest being so cunning as not to discover any thing of this nature.

## CHAP. XXVII.

### Of their language.

IF you should hear them speak, or rather chatter, in their own dialect, you would certainly believe, that you were gone back to the *Pythagorean* age, when the birds used to converse together, by way of discourse; it being certain, that their speaking is only an inarticulate noise, and no real voice, every word ending with a kind of whistle, by the tongues clapping so close to the palate; whence some have judg'd, that by this shrill noise, occasion'd by the touching of the palate, they did express their vowels, whereas they pronounced the consonants much lower in the throat, and framed them together by drawing together their lips in an orbicular figure. Certain it is, that they can't converse with any other nation in their own language; for all the time that the *Dutch* have been settled here, there was never yet one *European* who could attain to any perfection in their lan-

guage, tho' many of the *Hottentotes*, that dwell near the fort, have learned a kind of broken *Dutch*, differing from ours chiefly in the termination of words, which commonly end in *kom*, as *tabakkom*, *tabacco*, *kortom*, a shore or portion, *borom*, to bear. As they are but barren in roots, or original words, so they abound in *epithets*: Thus they call all sorts of birds *courcour*, with the addition of a proper *epithite*; as for instance, *camma courcour*, a water-fowl, whether it be a duck, a cormorant, or sea-gull; *sickom* (a belgicifin, such as they frequently use among them) *courcour*, a young bird; *gratom courcour*, a large bird, by which, however, in a strict sense, they understand the *ostrich*. They have also learn'd some words by their former correspondence with other nations; as for instance, from the *English* the words *doggues* signifying a dog.

TEN

RHYNE. The original Hottentote words, which occur at present to my memory, are,

Onkay, a Dutchman; gamma, a lion; aqua, a horse; ouka, a wolf; nabba, a rhinoceros; goedi, a sheep; boeba, an ox or cow; debilita, heifers; sirigoes, tortoises; dacha, the name of an hypnotick plant; dimi, honey; chou, air; ecy, fire; kou, thunder; doudou, the road; ey, glass beads; equa, wood; kiny, a club; fou, a pot; bouchou, the ashes of plants.

Some corrupt Dutch words, are,

Boemakem goet, gun-powder; boebaisibi-er, milk; karos, a vest or waistcoat; kral-

len, a hut or cabin; and many more of the same kind.

Of their numbers.

Cui, one; tem, two; nona, three; acka, four; corro, five; guicbi, six, &c.

These they multiply by the addition of others, by joining them with other words, which if they should be heard by any foreigner, he will be ready to confess, as well as I, that they are so odd as not to be describ'd in writing.

William Ten Rhyne.

## A Draught of the Streights of Gibraltar,

WITH

Some Observations upon the Currents there-  
unto belonging.

By Captain RICHARD BOLLAND.

July 24. 1675.

BOLLAND.

WE weigh'd anchor out of Tangier bay near eight in the morning, the wind at S. S. W. off the shore, very moderate; before ten, the tide of ebb then setting to the westward, had drove us down the length of Jews river; which having observ'd, that I might something more improve my judgment on the tides and currents in these parts, I then produced this draught of the Streights mouth of Gibraltar, which I had drawn some time before, having often cross'd over from the one shore to the other, as also anchor'd several boats half a league distant from one another, that they have reach'd one third of the channel over, having on board of each of 'em watches for time, logs to inform the turning of the tide, and several other conveniences proper for those observations; by which means I gain'd some experience how the tides set, their time and distance from the shore, as also where the current, which has its constant indraught into the streights, if extremes of wind occasion no alteration,

does commence from the tides. Having thus gather'd these collections, I drew this draught, as 'tis here demonstrated at large, and calculated the tables thereupon placed, which are for every day in the moon's age, that is, from full to change, and from the change to the full; so that looking upon these tables, you are inform'd, at all times, when the tides flow to the eastward, and ebb to the westward, upon both shores. Our ship having thus drove contrary to our course, that day being the twelfth of the moon's age, I found in the table for the setting upon the African shore, that the tide began to flow to the eastward at 10 a-clock and 21 min. By this time the wind sprang up fresh easterly, and increas'd so furiously that we were forced to reef our top-sails, having now the advantage of the tide: here the current in the middle, as also the tide upon the Spanish shore, which began that day to flow to the eastward at 11 of the clock and 16 minutes. Thus happen'd the time so opportunely, that standing the nearer both the shores was the greater advantage, making no more than three boards,

we weather'd the easternmost point of *Gibraltar* above two leagues. Thus did we make a clear experiment of the truth of these tables and draught. The same advantage may be made in turning out of the *Streights* with a *westerly* wind, only stopping the tide of flood, if weather will permit. For want of experience in the tides and currents here, this age has produced too many examples of the loss both of men of war, and of merchant-men. I remember, in the year 1673, Sir *John Lawson*, in the *Resolution*, having been in the *Levant*, coming near to *Gibraltar* in the night, the current having set us over close on board the *Spanish* shore, we made the highland of *Gibraltar* for *Apes-bill* upon the *Barbary* shore, which had like to have prov'd of very dangerous consequence, our course being right over the low-land, which general *Blake* had intention of cutting thro', to have made an island. Having heard many disputes concerning tides and currents, I will here, in few words, give my opinion of 'em. And first of tides, which, as is observ'd, have a dependency upon the motion, encrease, and decrease of the moon.

It flows in the bay of *Tangier*, and so upon the *Barbary* shore, as far as *Apes-bill*, south-west and by south, one quarter after two a-clock, full and change of the moon, high water. The *Moors* and *Spaniards*, upon each of their native shores, in the *Streights* mouth of *Gibraltar*, thus account the tides: when the moon appears in their horizon upon her rising, the tide sets away to the westward, and continues till her coming to the meridian; which having pass'd, the tide begins to flow to the eastward. I cannot be so positive in my opinion as some are, that the moon has an absolute influence upon the government of tides, and therefore shall lay down my reasons with submission to better judgments. If the moon's attraction be so powerful upon the waters, why do they not follow her motion round the world? At prince *Rupert's* bay, within three leagues off *Apes-bill*, in the *Streights* mouth of *Gibraltar*, the tide rises perpendicular upon the springs nine foot. At *Bucama*, upon the *Barbary* shore, twenty leagues to the eastward, there's scarce any knowledge of a tide; so that in so short a distance the moon's influence upon the water ceases. At *Cape Spartel*, which is the westernmost part of the *African* shore, it flows south-south-west a very strong tide. Five or six leagues west-south-west into the sea, there is no appearance of either ebbing or flowing: so that here, to the westward into the ocean, as also to the eastward mention'd before, in the *Mediterranean*, the waters have no dependence upon the moon. These

demonstrations, with many others which might be laid down, induce me to the opinion, that the moon's change, full, and quarter, as also her motion, are particular signs to inform our judgments, rather than of any power she has on the waters, or their dependence on her. The great master of philosophy drowned himself, because he could not apprehend the cause of tides; but his example cannot be so prevalent with all, as to put a period to other mens enquiries into this subject. I hope 'twill be allow'd that a sailor, by his experience in this age, may better know the shifting of tides in several parts than *Aristotle*, tho' not the cause; which since no man has attain'd to, but only conjectural notions, I hope mine will be the more excusable. The holy writ mentions a chaos, or first matter, which was a confusion or disorder'd mass of all the elements, wherein God Almighty divided the earth from the water, which division naturally put the waters in motion by a reverse, or retreat, from their first position: after that the earth was made dry land, the waters return'd to seek their former place, and to claim their dominion over the more solid and consistent bodies, by which ambition they rais'd themselves up to the high-water mark, where they were restrain'd and bounded by the heavenly power; so that, being able to advance no higher, they return'd to the ebbing; and, ever since, it might be God Almighty's providential will, for the convenience of man, to continue the same motion of the waters. I have no other reason or apology to make for this my opinion, than that in most parts of the known world the waters have the strength of their motion near to the shores, and at sea scarce any thing at all, but what's occasion'd by winds. Which brings me to the course of currents, that have no dependency upon the moon, having observ'd principally three sorts of currents or streams, occasion'd by a trade-wind; the indraught of bays, as that of *Biscay*, and the gulph of *Lions*; a forcible stream betwixt two high lands coming from the ocean, as the current proceeding from the *Streights* mouth of *Gibraltar*, where, in the middle part (demonstrated upon the draught between the two lines *MM*) the current has its continual passage into the *Mediterranean*, if not alter'd by some extrem of weather: and altho' I know some are of a contrary opinion, yet there's nothing that resembles truth more than demonstration upon matter of fact. In nine years that I have liv'd and sail'd from *Tangier*, I did never see any ships in the middle of the *Streights*, happening then to be calm, or little wind, but was infallibly driven in, if she could not reach the side of ebb upon

BOL.

LAND

nei-

BOULNE neither shore. This, I suppose, may be LAND. sufficient to demonstrate, that there's a vast sluice of water hurried into the *Streights*. At *Constantinople*, out of the *Black-Sea*, it runs into the *Mediterranean* a forcible stream, and many large rivers fall into the same seas; the question is, What becomes of all this water? The tides flow six hours, and ebb the same space, so that probably they return what they bring in. The earth, no doubt, on all shores, does drink in and is moisten'd by the sea; the sun has its attractive influence on the waters: I have often observ'd at sea, where the strength of the exhalation has happen'd (tho' there was not one breath of wind) that it was dangerous to come near that part with a boat; and, on the contrary, when the clouds have

been overcharg'd or loaden, they have broken out, and fallen violently down; which we commonly call *Spouts*. But all these can't reach near the water that lets unto the *Mediterranean*, so that there must necessarily be some evacuation; and it seems most reasonable, that as the *Streights* mouth of *Gibraltar* has its continual indraught aloft, so the superficial part thereof may have its recourse back again below. To know the certainty of this, 'twere but stopping with a stream-anchor in the middle of the *Streights*, possibly it may require three or four hundred fathom warp: your ship being brought up, the current running strongly to the eastward, brings it to wind-head to the westward.

#### The Description of the Sounding-boat for Currents.

WHEN having the lead, which I have made, as the draught here demonstrates, with springs in the inner part, a bladder hook'd upon the outside, which has a dependency upon those springs, so that the lead striking the ground, off flies the bladder from the lead, and all the way in its rising to the superficies of the water, 'tis drove which way soever the current does set, your ship being stopp'd by her anchor; if the current set out of the *Streights* below, then will the bladder rise ahead of the ship, contrary to the current aloft. Now, where your ship is anchor'd in three hundred fathom water, I will suppose it flows into the *Streights* an hundred fathom deep from the surface, and from that two hundred fathom to the bottom, it runs out to the westward. To know the certainty of this, or what depth it sets contrary, I have here drawn the draught of a square drag-fail at the boat's bow, with weights of lead at the lower part, to depress the fail downward;

so turning the boat loose, you lower the fail unto the water, and which way soever the stream runs, 'twill draw along the boat. If it returns out of the *Mediterranean* at one hundred fathoms deep, the fail being lower'd to that, then 'twill not fail of dragging your boat contrary to the current aloft. Thus might the experiment be made to the satisfaction of the curious.

The sounding-boat for currents in the draught, N<sup>o</sup> 2, there's the form of a fail mark'd G, which has two yards, one aloft, t'other below; by which means, if my judgment fails me not, 'twill stand so fair, as to keep full within less than three points of the compass. In the hold of the same boat, mark'd F, I have form'd a sort of work, which gives a true account of the boat's way by her motion, hoping it may prove of general use, more in particular to draughts-men, whose care ought to be in laying down capes and head-lands, exactly to the distance.

# The Sounding Lead for Tides and Currents

- A. Is the Lead.
- B. Is a Springe within the Lead.
- C. Is an Iron that goes through the  
barrell of a Gun.
- D. Is a bladder that depends upon the  
Springe which being forced up  
sticks off from the Lead.
- E. Is the foot of the Iron which  
when it strikes upon the ground  
forces the maine Springe and  
then off, flies the Bladder.
